AN

EXPOSITORY LEXICON

OF

MEDICINE AND THE ALLIED SCIENCES.

VOL. V.

P. Contraction of *Pugillus*.

Also, a contraction of *Papilla*, optic.

Also, a contraction of *Pars*, or *Partes*.

Also, a symbol of *Phosphorus*.

P.Æ. Contraction of *Partes æquales*.

P.B. Abbreviation for *Pharmacopœia Britannica*; more often written *B.P.* or *B.Ph.* (British *Pharmacopœia*).

P.Bor. Abbreviation for *Pharmacopœia Borussica*, the Prussian *Pharmacopœia*.

P.D. Abbreviation for *Pharmacopœia Dublinensis*, the Dublin *Pharmacopœia*.

P.e. Abbreviation for *Pars equalis*.

P.E. Abbreviation for *Pharmacopœia Edinensis*, the Edinburgh *Pharmacopœia*.

P.G. Abbreviation for *Pharmacopœia Germanica*.

P.L. Abbreviation for *Pharmacopœia Londinensis*.

P.P. *Med. Pharm.* Abbreviation for *Præparatus*.

P.Ph. Abbreviation for *Paris Pharmacopœia*.

Pabulum. (L. *pabulum*, from Aryan root *pa*, to feed.) Food.

P.vitæ. (L. *vita*, life.) An old term for the principle which is the foundation of nutrition, in like manner as oxygen is the foundation of respiration.

Pacay. The fruit of *Prosopis dulcis*.

Pacchioni, Antonio. An Italian anatomist, born at Reggio in 1665, died in Rome in 1726.

P., corpuscles of. (L. *corpusculum*, a small body. I. *corpuscoli del Pacchioni*.) The *Pacchionian bodies*.

P., glands of. (F. *glandes de Pacchioni*.) The *Pacchionian bodies*.

P., granulations of. (L. *granulum*, a small grain. G. *Pacchioni'sche Granulationen*.) The *Pacchionian bodies*.

Pacchionian. Relating to *Pacchioni*.

P. bodies. (F. *glandes de Pacchioni*; I. *corpuscoli del Pacchioni*; G. *Pacchioni'sche Körper*, P. *Granulationen*, *Arachnoidaltzotten*, Luschka.) Villous outgrowths from the arachnoid membrane of the cranium, especially frequent in the neighbourhood of the superior longitudinal sinus; they are pear-shaped or spheroidal and have a thin stalk; they increase in size as years advance, passing through holes in the dura mater and projecting into the sinus or lying in the Pacchionian fossæ of the skull bones. They are enlargements of the arachnoid villi, and consist of springy connective-tissue,

continuous with the subarachnoid tissue and covered with a membrane continuous with the arachnoid; they can be injected from their pedicles. It has been suggested by Gaskell that they are possibly homologous with the liver of an Arthropod.

P. depres'sions. See *Fossæ*, *Pacchionian*.

P. fos'sæ. (I. *depressioni del Pacchioni*; G. *Pacchioni'sche Gruben*.) See *Fossæ*, *Pacchionian*.

Paccia'num. Old term, Gr. anal. Πακκιανόν, for a collyrium mentioned by Aëtius and Galen.

Pachæ'mia. See *Pachyhæmia*.

Pachan'drous. (Παχύς, thick; ἀνήρ, a male. F. *pachandre*.) Having thick stamens.

Pacheablepharo'sis. See *Pachyblepharosis*.

Pach'etos. (Πάχετος.) The same as *Laqueus*.

Pachi'ra. A Genus of the Nat. Ord. *Sterculiaceæ*.

P. aquat'ica, Aubl. (L. *aquaticus*, living in water.) The *Carolinea princeps*.

Pachis'mus. (Παχύς, thick, large. F. *pachisme*.) Massiveness, extreme fatness.

Pach'nè. Old term for the sabulous contents of the urine.

Pacho'meter. (Παχύς, thick; μέτρον, a measure. F. *pachomètre*; G. *Dickmesser*.) An instrument for measuring the thickness of a body. Employed by Benoit to designate an instrument for measuring the thickness of the glass of a mirror.

Pachulo'sis. (Παχυλός, thickish.) Sir Erasmus Wilson's term for a skin disease in which there is hypertrophy of the epidermis.

Pachyæ'ma. See *Pachyhæmia*.

Pachyan'drous. See *Pachandrous*.

Pachybleph'aron. (Παχύς, thick; βλέφαρον, the eyelid. F. *pachyblepharon*; I. *pachiblefaroni*; G. *Augenliderschwiele*.) A thickened condition of the borders of the eyelids, from chronic inflammation, or from serofulous disease, or from obstruction of the Meibomian glands.

Pachyblepharo'sis. (Παχύς; βλέφαρον. F. *pachyblepharose*; I. *pachyblefaroni*.) The same as *Pachyblepharon*.

Pachycarp'ous. (Παχύς; καρπός, fruit. F. *pachycarpe*; G. *dickfruchtig*.) Having thick, large fruit.

Pachycephalla. (Παχύς; κεφαλή, the head. F. *pachycephalie*; I. *pachiocephalia*.) A condition in which the skull is very thick.

PACHYCEPHALIC—PACHYMENINGITIS

Pachycephalic. (Παχύς; κεφαλή. *F. pachycephale.*) Relating to *Pachycephalia*.

Pachycephalus. (Παχύς; κεφαλή.) One having a thick skull from synostosis of the parietal and occipital bones.

Pachycholia. (Παχύς; χολή, bile. *F. pachycholie.*) Great thickness of the bile.

Pachychymia. Παχύς, thick; χυμός, juice.) Having thick humours or juices.

Pachychymous. Relating to *Pachychymia*.

Pachycnemous. (Παχύς, thick; κνήμη, the leg. *F. pachycneme.*) Having thick legs.

Pachycolic. Relating to *Pachycholia*.

Pachydactilia. (Παχύς; δάκτυλος, a finger. *F. pachydactylie*; *I. pachidactilia*.) The condition of being *Pachydactylous*.

Pachydactylous. (Παχύς; δάκτυλος. *F. pachydactyle.*) Having thick, fleshy fingers.

Pachyderma. (Παχύς; δέρμα, the skin.) Thickness of the skin.

P. vulvæ. (*L. vulva*, the female external genitals.) Same as *Elephantiasis vulvæ*.

Pachydermata. (Παχύς; δέρμα, the skin. *F. pachydermes*; *I. pachydermi*; *G. Dickhäuter*.) An Order of Mammalia comprehending the elephant, rhinoceros, horse, pig, and such like; now included in the Order *Ungulata*.

Pachydermatocèle. (Παχύς; δέρμα, the skin; κύλη, a tumour. *F. pachydermatocèle*; *I. pachidermatocèle*.) Valentine Mott's term for a hypertrophy of the corium and subcutaneous areolar tissue, generally congenital, commencing as a small dark spot or mole, and growing into a soft, slightly vascular, creased, breast-like tumour.

Pachydermatous. (Παχύς; δέρμα. *F. pachyderme*; *G. dickhäutig*.) Thick skinned.

Pachydermia. (Παχύς; δέρμα. *F. pachydermie*; *I. pachidermia*; *G. Pachydermie*.) Thickening of the skin.

Also, a synonym of *Elephantiasis*.

Also, a synonym of *Myxœdema*.

P. lactiflua. (*L. lac*, milk; *fluo*, to flow.) The form of *Elephantiasis arabum* in which there is a discharge of milky lymph.

P. lactiflua scroti. (*L. scrotum*.) The same as *Lymph-scrotum*.

P. laryngis. (Λάρυγξ, the upper part of the windpipe.) Virchow's term for a form of papillary growth in the larynx.

P. lymphangeiectatica. The form of *Lymphangeiectasis* called *Lymph-scrotum*.

P. verrucosa. (*L. verruca*, a wart.) Virchow's term for a warty epidermic growth.

Pachydermous. See *Pachydermatous*.

Pachygastrous. (Παχύς, thick; γαστήρ, the belly. *F. pachygastre*; *G. dickbauchig*.) Having a large abdomen.

Pachyglossous. (Παχύς; γλῶσσα, the tongue. *F. pachyglosse*; *G. dickzungig*.) Having a thick tongue.

Pachyhæmia. (Παχύς; αἷμα, blood. *F. pachymie*.) Thickness of the blood.

Pachyhæmic. (Παχύς; αἷμα.) Relating to *Pachyhæmia*.

Pachyhæmous. (Παχύς; αἷμα.) Having thick blood.

Pachyhymenia. (Παχύς; ὑμήν, a membrane. *F. pachymenie*.) Thickening of the skin.

Pachyhymenic. (Παχύς; ὑμήν.) Thick-skinned.

Pachylo'sis. See *Pachulosis*.

Pachy'ma. Fries. (Παχύς, thick.) A Genus of the Family *Lycoperdaceæ*, Order *Gasteromycetes*.

P. co'cos, Fries. The *Lycoperdon solidum*, Gronovius.

P. tu'ber re'gium, Fries. (*L. tuber*, a truffle; *rex*, a king.) Hab. Moluccas. Used in diarrhoea and fevers.

Pachyme'nia. Same as *Pachyhymenia*.

Pachyme'nic. Same as *Pachyhymenic*.

Pachymeningi'tis. (Παχύς, thick; μήνιγξ, a membrane. *F. pachymeningite*; *I. pachymeningite*.) Inflammation of the thick membrane, or dura mater, of the central nervous system, cerebral or spinal.

It is not now usual to describe separately *pachymeningitis*, *arachnitis* or inflammation of the arachnoid, and *leptomeningitis* or inflammation of the pia mater. Various diseases of the skull-bones may give rise to inflammation, ulceration, or sloughing of the corresponding part of the dura mater. But the local affection is only the immediate forerunner of diffused leptomeningitis or of a cerebral abscess.

P. cerebra'lis exter'na. (*L. cerebrum*, the brain; *externus*, outward.) Inflammation of the thick, outer, periosteal layer of the cranial dura mater, usually resulting from injury to, or from caries or necrosis of, the bony cranium. The affected layer becomes red and swollen, pus forms between it and the bone or between it and the inner layer, or there may be adhesion of the dura mater and the bone with osteophytic growths from the latter. There are generally fever, headache, and delirium, and occasionally convulsions.

P. cerebra'lis inter'na. (*L. cerebrum*; *internus*, within.) Inflammation of the inner layer of the cranial dura mater, usually extension of the external form in which pus has resulted.

A hæmorrhagic form is known as *Hæmatoma of dura mater*, or *P. (cerebralis) interna hæmorrhagica*.

P. cervica'lis hypertroph'ica. A disease characterised by a chronic thickening of the dura mater, regarded by Charcot as another form of *progressive muscular atrophy combined with spastic paraplegia* (*amyotrophie deutéropathique*).

The thickened dura mater and arachnoid firmly adhere to the cord, compressing it and surrounding and pressing on the nerve-roots coming off at the level of the lesion, generally the nerves of the brachial plexus. There is progressive wasting of the muscles of the upper limbs, with rigidity of the lower limbs.

The ulnar and median nerves are specially involved, the wrist consequently becoming extended. The musculo-spiral nerve escapes. According to Charcot, the skin of the arms and upper part of the trunk often becomes anæsthetic, and the rigid lower limbs do not appear to waste.

The disease is especially characterised by an *early stage* lasting two or three months, during which there are severe pains in the neck and occiput, a sort of rigidity of the cervical muscles, tingling and numbness in the upper limbs, and occasionally bullous eruptions. It is not always incurable. It does not spread to the medulla and cause bulbar paralysis. At last there may be loss of power over the sphincters, and bed-sores may form.

P. chron'ica hæmorrhag'ica. The same as *Hæmatoma of dura mater*.

P. inter'na hæmorrhag'ica. See *P. cereb'ralis interna*.

P. spina'lis exter'na. (L. *spina*, the spine; *externus*, outward.) Inflammation of the outer layer of the spinal dura mater, usually the result of external violence or of the extension of disease, such as caries of bone or suppuration. There may be simple inflammation with redness, an opacity of the membrane with effusion of lymph, or there may be infiltration of pus, or caseous material may be deposited on the outer surface of the dura mater; the disease may spread to the inner layer, or there may be adhesion to the bones. The symptoms vary a good deal; among the most prominent are stiffness of the spinal muscles, and pain in the back increased by movement and spreading along the track of the nerves involved in the inflamed structures; hyperæsthesia and spasm are not uncommon, followed by anæsthesia and paresis.

Pachyme'ninx. (Παχύς; μήνιγξ.) The Dura mater.

Pachyn'sis. (Πάχυνσις, a thickening. F. *pachynse*; G. *Verdickung*.) A thickening; an enlargement; obesity.

Pachyntic. (Παχυντικός, having the power of thickening. F. *pachyntique*; G. *verdickend*.) Having the power of thickening the humours or fluids of the body.

Also, fleshy or fat.

Pachyntica. Medicines having the action called *Pachyntic*.

Pachyo'tous. (Παχύς, thick; οὖς, the ear. F. *pachyote*; G. *dickohrig*.) Having thick, large ears.

Pachypelviperoni'tis. (Παχύς; pelvis; peritonitis.) Pelvic peritonitis with thick fibrous deposit upon the uterus.

Pachyphyl'ous. (Παχύς; φύλλον, a leaf. F. *pachyphylle*; G. *dickblättrig*.) Having thick leaves.

Pachypodous. (Παχύς; πούς, a foot. F. *pachypode*; G. *dickfüssig*.) Having large, thick feet.

Pachyry. Same as *Pachury*.

Pachys'mus. (Παχυσμός, stoutness.) Obesity.

Pachytes. (Παχύτης, thickness.) A synonym of *Pachyblepharon*.

Also, a synonym of *Obesity*.

Pachytic. (Παχύτης.) Thick, fleshy, fat. Also, the same as *Pachyntic*.

Pachytrichous. (Παχύς; τρίξ, the hair. F. *pachytrique*; G. *dichhaarig*.) Having thick hair.

Pachyvaginali'tis. (F. *pachyvaginalite*; from Παχύς; tunica vaginalis.) Inflammation of the tunica vaginalis of the testicle.

Pacific congress springs. United States of America, California, Santa Clara County. Athermal, alkaline, saline, chalybeate waters, containing sodium carbonate 123.35 grains, calcium carbonate 17.29, iron bicarbonate 14.03, sodium sulphate 12.14, sodium chloride 119.16, with 49.88 grains of alumina and silica, in a gallon.

Pac'ni, Filippo. An Italian anatomist, born in Pistoja in 1812, died in Florence in 1883.

P., corpuscles of. See *Pacinian corpuscles*.

P.'s meth'od of artificial respira'tion. A mode of producing respiratory movements in an asphyxiated newly-born child. The

patient is placed on his back, the operator standing at the head with the hands in the axillæ, the shoulders are pulled upwards and forwards, and then allowed to fall back.

Pac'nian. Relating to *Pacini, Filippo*.

P. bod'ies. See *P. corpuscles*.

P. corpuscles. (L. *corpusculum*, a small body. F. *corpuscules de Pacini*; I. *corpuscoli di Pacini*; G. *Pacini'sche Körperchen*.) A form of the end-bulbs of nerves, being the oval seed-like bodies attached by a stalk to the subcutaneous nerves of the palm and sole, to those of some of the abdominal sympathetic plexuses, and to those of the corpora cavernosa and prostate of man; they are also found in the mesentery of the cat, and on the nerves over the tibia of the rabbit. They are about 1.3 mm. long, and somewhat less in width, and consist of the simple axis-cylinder of a medullated nerve fibre in a central cylindrical clear space surrounded by thirty or forty concentric layers of connective tissue, each lined with endothelium, and continuous as to the outer layers with the thickened perineurium, or sheath of Henle, or the nerve branch to which it is the termination. The axis-cylinder in the central space is surrounded by a transparent substance containing along its periphery rows of spherical nuclei, and is continuous to the upper end of the space, where it terminates in a dilated extremity or in several short branches, each of which has a terminal granular thickening. The layers of the capsule are each considered as a separate capsule, and consist from within outwards of a single layer of flattened, nucleated endothelium, and of fine connective tissue fibres lying in a hyaline ground substance.

Pack. (Mid. E. *pakke*; Low L. *paccus*, through the Latin from Aryan root *pak*, to fasten. F. *paquet*; I. *pacco*; S. *fardo*; G. *Pack*.) A bundle.

Also (F. *emballer, empaqueter*; I. *imballare, impacchettare*; S. *empaquetar*; G. *packen*), to make into a bundle.

In Medicine, to envelope a sick person in a wet sheet with dry blankets on the outside, so as to induce perspiration.

Packet. (Old F. *paquet*; from Low L. *paccus*, a bundle; from Aryan root *pak*, to fasten. F. *paquet*; I. *pacchetto*; S. *paquete*; G. *Packet*.) A small bundle.

P. coc'ci. (*Coccus*. G. *Packerkokken*.) A synonym of *Sarcina*.

Pack'fong. Chinese white copper; an alloy of copper, nickel, and zinc, with a trace of iron, which has for several hundred years been made in China and India. It was formerly used for dial-plates, thermometer-scales, &c.; but now German silver is generally used for such purposes.

Pack'ing. The Therapeutical operation described under *Pack*.

Pack'tong. See *Packfong*.

Pacour'ia. A Genus of the Nat. Order *Apocynaceæ*.

P. guianen'sis, Aublet. A species which supplies caoutchouc.

Pacouri'na. A Genus of the Nat. Order *Compositæ*.

P. edu'lis, Aubl. (L. *edulis*, eatable.) Hab. Cayenne. Receptacle and entire plant esculent.

Pacourinop'sis. A Genus of the Nat. Order *Compositæ*.

P. integrifolia, Cass. (L. *integer*, entire; *folium*, a leaf.) Same as *Pacourina edulis*.

Paculosis. See *Pachulosis*.

Pad. (Of Celtic or Scandinavian origin from the root *put*, to bulge out. F. *bourrelet*; I. *cuscinetto*; S. *cojin*; G. *Wulst*.) A small cushion.

P. of corpus callosum. (L. *corpus*, a body; *callosus*, thick-skinned.) The *Splenium*.

Padanoon. The same as *Bit-noben*.

Pad'y. (Malay *padi*; Canarese *bhatta*, rice in the husk; from Sanskrit *bhaktā*, boiled rice.) The grain of rice enclosed in the husk.

Padus. A Genus of the Nat. Order *Rosaceæ*.

Also, the *Prunus padus*.

P. avium. The *Prunus avium*.

P. laurocerasus. The *Prunus lauro-cerasus*.

Pædago'gia. (Παις, a child; ἀγωγή, a guiding. F. *pédagogie*.) The training of young people.

Pædan'chonē. (Παις; ἀγχόνη, a throttling.) Severn's term for a fatal form of sorethroat or quinsy.

Pædarthrocacē. (Παις; ἄρθρον, a joint; κάκη, evil. F. *pædarthrocace*; I. *pædarthrocace*; S. *pædarthrocace*.) Joint-evil; serofulous disease of the joints in children.

Especially applied to the disease formerly called *Spina ventosa*.

Pædatrophia. (Παις; ἀτροφία, wasting.) Atrophy of children. A synonym of *Tabes mesenterica*.

P. glandulosa. (Gland.) Atrophy produced by *Scrofula*.

Pæderastia. (Παιδεραστία; from παις; ἐραστεύω, to love. F. *péderastie*; G. *Knabenschändung*.) Sodomy with a boy.

Pæderastic. Relating to *Pæderastia*.

Pæderia. A Genus of the Nat. Order *Rubiaceæ*.

P. foetida, Linn. (L. *foetidus*, stinking.) Hab. India, Japan. Root emetic; alliaceous leaves used in decoction for retention of urine.

Pæderota. A Genus of the Nat. Order *Scrophulariaceæ*.

P. virginica. The *Leptandra virginica*.

Pædeusis. (Παιδευσίς, the process of the rearing of a child. F. *pédeusie*; G. *Kindererziehung*.) The education of children.

Pædia. (Παιδεία, the rearing of a child.) The bringing up, physical and moral, of children.

Pædiaphtha. (Παιδίον, a little child; ἄφθα, ulceration in the mouth. F. *pédiaphthe*.) A synonym of *Thrush*.

Pædiatria. (Παιδίον, a little child; ἰατρία, medical treatment. F. *pédiatrie*.) The treatment of children's diseases and disorders.

Pædiatric. Relating to *Pædiatrias*.

Pædiatrica. Same as *Pædiatrics*.

Pædiatrics. (Παις; ἰατρική, medicine.) Same as *Pædiatria*.

Pædiatrophia. Same as *Pædotrophy*.

Pædication. (L. *pædico*, from Gr. παιδικά, a darling.) The committal of sodomy with a boy.

Pædici. (Παιδικός, of a child.) Farr's term for the developmental affections of children.

Pædicterus. (Παις; ἰκτερος, the jaundice.) Same as *Icterus neonatorum*.

Pædiometer. (Παιδίον, a little child; μέτρον, a measure. F. *pédiomètre*.) An instrument for measuring a child.

Pædion. (Παιδίον.) A young child.

Pædiopathy. Same as *Pædopathy*.

Pædiotrophy. (Παιδιοτροφία, to rear children.) Same as *Pædotrophy*.

Pædium. Same as *Pædion*.

Pædobaromacrometer. (Παις, a child; βάρος, weight; μακρός, long, large; μέτρον, a measure. F. *pædobaromacromètre*.) An instrument for measuring the weight and size of an infant.

Pædobarometer. (Παις; βάρος; μέτρον. F. *pædobaromètre*.) An instrument for ascertaining the weight of a child.

Pædogenēsis. (Παις; γένεσις, generation.) Sexual reproduction by means of parents in the larval stage of development.

Pædometer. (Παις; μέτρον.) Same as *Pædiometer*.

Pædonosology. (Παις; νόσος, disease. F. *pædonosologie*.) The account of the diseases of children.

Pædonosos. (Παις; νόσος. A disease of a child.

Pædonosus. Same as *Pædonosos*.

Pædopæa. (Παιδοποιείω, to beget children.) The procreation of children.

Pædopathy. (Παις; πάθος, disease.) The pathology of childhood.

Pædophlebotomy. (Παις; φλέψ, a vein; τομή, a cutting. F. *pædophlébotomie*.) The opening of a vein in a child for the purpose of letting blood.

Pædophlysis. (Παις; φλύσις, a breaking out. F. *pædophlyse*.) A vesicular eruption in a child.

Pædophthisis. (Παις; φθίσις, a wasting.) A wasting disease of children, be it pulmonary consumption or *tabes mesenterica*.

Pædopus. (Παις, a child; πούς, a foot. G. *Knabenfuss*.) The foot of a child.

Pædopyra americana. (Παις; πυρ, fever heat.) Eisenmann's term for *Cholera infantum*.

Pædostathmion. (Παις; σταθμίον, a standard weight.) An instrument for ascertaining the weight of a child.

Pædotribes. (Παιδοτρίβης, one who teaches boys wrestling and other exercises.) A gymnastic master.

Pædotrophium. (Παιδοτροφίεω.) A foundling hospital.

Pædotrophy. (Παιδοτροφία, the rearing of children; from παις; τρέφω, to nourish. F. *pédotrophie*.) The branch of medicine which is concerned with the rearing of children.

Pæcosynē. (Παιηοσύνη, from Παιάν, the physician of the gods.) The healing art.

Pæon. (Παιάν.) A physician.

Pæonia. (Παιωνία, the pæony, from παίων, from παιάν.) A Genus of the Tribe *Pæoniæ*, Nat. Order *Ranunculaceæ*.

P. corallina, Linn. (L. *corallium*, red coral.) Female pæony. Used as *P. officinalis*.

P. feminea. (L. *femineus*, feminine.) The *P. corallina*.

P. loba'ta. (L. *lobus*, a lobe.) The *P. officinalis*.

P. mas'cula. (L. *masculus*, male.) The *P. officinalis*.

P. mou'tan, Sims. Hab. China. Employed in hæmorrhages and menstrual disorders; used to procure abortion.

P. nemoralis. (L. *nemoralis*, belonging to the woods.) The *P. officinalis*.

PEONIEÆ—PAIR

P. officina'lis, Retzius. (L. *officina*, a shop. F. *pivoine*; I. *peonia*; G. *Pfingstrose*, *Gichtrose*.) The root and seeds have been used in intermittent fever, epilepsy, and amenorrhœa; and the seeds, as an emetic and cathartic; the flowers were made into calmative waters and syrups.

Pæoniæ'æ. (*Pæonia*.) A Tribe of the Nat. Order *Ranunculaceæ*, having an imbricate calyx, and fruit consisting of two to five follicles with a cup-shaped disc.

Pæonic. (Παιωνικός, healing; from Παιάν, the physician of the gods.) Medical; healing.

Pæonicö. (Παιωνικός.) The medical art.

Pæonin. (*Pæonia*.) Synonym for *Coralin*, red.

Pæony. The plants of the Genus *Pæonia*.

Pæpalë. (Παιπάλη, reduplicated from πάλη, pollen.) The finest meal.

Also, a term for *Pollen*.

Paganina. Old term in the Spagyric pharmacopœia for powdered meconium, which was used as a remedy for epilepsy.

Pagapoplexia. See *Pagoplexia*.

Pagenstecher, Alexander. A German ophthalmologist, born at Wallau, near Wiesbaden, in 1828; died in 1879.

P's ointment. Hydrargyrum oxidum flavum grains 1 to 3, vaseline a drachm.

Pag'et, Sir James. An English surgeon, born at Great Yarmouth in 1814, and now living.

P's disease. An eczematoid disease of the nipple, first described by Paget in 1874 as having the appearance of a florid, intensely red, raw surface, very finely granular, exuding a copious, clear, yellowish, viscid fluid which dries to a scab; it is frequently followed by cancer of the mammary gland; sometimes the surface is dry and scaly, and resembles psoriasis. The nature of the disease is not settled. Butlin has described the extension of the proliferation of the nipple epidermis into the mouths of the galactophorous ducts, whereby the columnar cells become spheroidal, and thence into the lactiferous ducts and alveoli, when the cancer becomes developed. Thin considers that the earliest change is a cancerous disease at the mouths of the galactophorous ducts which, by the exudation of an ichorous fluid, produces the eczematous condition of the skin of the nipple.

Pagils. The *Primula veris*.

Pagina. (L. *pagina*, a written page.) The side of a leaf of a book.

Pagiorheumatis'mus. (Πάγιος, steadfast; *rheumatism*.) Long-lasting rheumatism.

Pagliari's hæmostatic. (F. *eau de Pagliari*.) The *Aqua hæmostatica*.

P's styptic. (Στυπτικός, astringent.) The *Aqua hæmostatica*.

Pagoplexia. (Πάγος, first; πλῆξις, a stroke.) The benumbing of a beast of burden from cold.

Also, a synonym of *Frostbite*.

Pag'os. (Πάγος, that which is firmly fixed.) The scum on the surface of milk.

Also, any *Pellicle*.

Also, the *Peritonæum*.

Pago'sa springs. United States of America, Colorado, Conejos County. Thermal waters from four springs, having a temperature of 148° F. (64·44° C.); spring No. 1 contains

sodium carbonate 4·7 grains, calcium carbonate 59, magnesium carbonate 4·85, lithium carbonate ·71, sodium sulphate 221·66, potassium sulphate 7·13, sodium chloride 29·25, and silica 5·7 grains in a gallon. The rest are very similar in composition.

Pagu'rus. (Πάγουρος, a kind of crab.) A Genus of the Tribe *Anomura*, Order *Decapoda*.

P. Bernhar'dus. The hermit crab, occasionally used as food.

P. streblony'a. The *P. Bernhardus*.

Pah'gun spring. United States of America, Arizona, Mohave County. A thermal mineral water, having a temperature of 100° F. (37·77° C.)

Paidia. See *Pædia*.

Paidici. See *Pædici*.

Paidion. See *Pædion*.

Paidonosology. See *Pædonosology*.

Pai'gil. See *Peagle*.

Pail. (Mid. E. *paile*, *payle*; Old F. *paele*, a little pan; from L. *patella*, a small pan; dim. of *patera*, a flat dish. F. *seau*; I. *secchia*; S. *cubo*; G. *Eimer*.) A large open vessel of wood or other substance.

P. sys'tem. The Goux system. A mode of removing refuse by putting the excreta into pails containing stable litter, or sawdust, or other similar material, with admixture with any fluid.

Pain. (Mid. E. *peine*, *peyne*; from F. *peine*; from L. *pæna*, punishment; Gr. *ποινή*, penalty. F. *douleur*; I. *dolore*; S. *dolor*; G. *Schmerz*.) Bodily suffering.

P.s, after. See *After pains*.

P.s, la'bour. See *Labour pains*.

P.s, la'bour, false. Painful, irregular contractions of the uterus, unaccompanied by any yielding of the cervix, not uncommonly occurring just before labour. They are often due to local irritation, such as dyspepsia or fæcal accumulation.

P.s la'bour, spu'rious. The same as *P.s, labour, false*.

P., sun. A term for *Hemicrania* when it lasts only as long as the sun is above the horizon.

Pain'ful. (*Pain*. F. *douloureux*; I. *doloroso*; S. *dolorido*; G. *schmerzlich*.) Full of pain.

P. point. See *Point, painful*.

P. subcuta'neous tu'mour. (L. *sub*, under; *cutis*, the skin; *tumor*, a swelling.) A small fibromatous growth connected with a nerve.

Pain'less. Without *Pain*.

Paint. (Mid. E. *peinten*; Old F. *peint*, *paint*; from L. *pingo*, to paint. F. *peindre*; I. *pingere*; S. *pintar*; G. *malen*, *austreichen*.) To colour.

Also (F. *couleur*; I. *colore*; S. *pintura*; G. *Farbe*), colouring-stuff.

P., In'dian. The *Hydrastis canadensis*.

Also, the *Sanguinaria canadensis*.

P., i'odine. The *Linimentum iodi*.

P., yel'low. The *Hydrastis canadensis*.

Paint Lick min'er'al well. United States of America, Kentucky, Garrard County. A weak saline water.

Painter. (*Paint*. F. *peintre*; I. *pittore*; S. *pintor*; G. *Maler*.) One who paints.

P's col'ic. (F. *colique des peintres*; I. *colica dei pittori*; G. *Malerkolik*.) The same as *Colic*, lead.

Pair. (Mid. E. *peire*, *peyre*; F. *paire*;

from *L. par*, equal. *I. pajo*; *S. par*; *G. Paar*.) A couple.

P. of nerves. (*F. paire de nerfs*; *I. pajo di nervi*; *G. Nervenpaar*.) The two nerves of either side which are homologous in origin.

Pak'fong. See *Packfong*.

Pala'ceous. (*L. pala*, a spade. *F. palacé*.) Shovel-like. Applied to leaves and other structures with a marginal attachment.

Palæolith'ic. (*Παλαιός*; *λίθος*, a stone. *F. paléolithique*.) Relating to the older stone period of prehistoric time.

Palæology. (*Παλαιός*, old; *λόγος*, a discourse. *F. paléologie*.) The account of antiquities.

Palæontog'raphy. (*Παλαιός*; *ὄντα*, the things which actually exist; *γράφω*, to write. *F. paléontographie*.) The description of extinct and fossil organised beings.

Palæontolog'ical. (*F. paléontologique*.) Relating to *Palæontology*.

Palæontology. (*Παλαιός*; *ὄντα*, the things which actually exist; *λόγος*, an account. *F. paléontologie*; *I. paleontologia*; *S. paleontologia*; *G. Paläontologie*.) The account of extinct and fossil organised beings.

Palæophytog'raphy. (*Παλαιός*; *φυτόν*, a plant; *γράφω*, to write.) An account of fossil plants.

Palæozo'ic. (*Παλαιός*; *ζῶον*, an animal. *F. paléozoïque*.) Relating to fossil animals.

Palæozoöl'ogy. (*Παλαιός*; *ζῶον*; *λόγος*, an account.) The science of fossil animals.

Palama. (*Παλάμη*, the palm of the hand. *F. palame*.) Illiger's term for the interdigital membrane of some Mammals.

Also, the interdigital membrane of web-footed birds.

Pal'amë. (*Παλάμη*.) The palm of the hand.

Palamosyphilol'epis. (*Παλάμη*; *syphilis*; *λεπίς*, a scale.) Syphilitic psoriasis of the palm of the hand.

Palamoth'e'ca. (*Παλάμη*; *θήκη*, a case. *F. palamothèque*.) Illiger's term for the epidermis of the *Palama*.

Pala'tal. Relating to, or connected with, the *Palate*.

P. plate. (*G. Gaumenplatte*.) The *Palatine process*.

P. pro'cess. See *Palatine process*.

P. tri'angles. See *Triangles, palatal*.

Palate. (*Mid. E. palet, palase*; Old *F. palat*; from *L. palatum*, the palate. *F. palais*; *I. palato*; *S. paladar*; *G. Gaumen*.) The roof of the mouth, which separates it from the nasal fossæ. The front part is the *P., hard*; the hinder part with a free edge is the *P., soft*.

P., arches of. See under *Arch*.

P., artif'cial. An instrument of caoutchouc, or metal, or other substance, for the closing of the aperture in a cleft palate.

P. bone. (*F. os palatin*; *I. osso palatino*; *G. Gaumenbein*.) A very irregular, thin bone, consisting of two portions united at a right angle, a horizontal or palate plate and a vertical or nasal plate. The palate plate or process is four-sided, and forms on each side the hinder part of the hard palate; in front, it articulates with the palate process of the superior maxillary bone; behind, it forms a concave free border to which the soft palate is attached; its inner border unites with its fellow of the opposite side, and its outer edge is formed by the springing

of the vertical plate, and is grooved by a deep notch forming part of the posterior palatine canal; its upper surface forms the hinder part of the floor of the nasal fossa, and its lower surface forms part of the roof of the mouth. The vertical plate is thin, and forms part of the lateral wall of the nose; in front, it is in contact with the hinder part of the inner surface of the superior maxillary bone, and behind, it is in contact with the internal pterygoid plate of the sphenoid bone. On its inner surface is a horizontal ridge, the inferior turbinal crest, for the attachment of the inferior turbinal bone, and higher up, the superior turbinal crest for the middle turbinal bone. The outer surface is rough for attachment to the superior maxillary bone, and marked by a groove which assists in forming the posterior palatine canal behind, which is a smooth surface, forming part of the pterygo-maxillary fissure, having above it a roughened surface for articulation with the inner surface of the pterygoid process of the sphenoid bone; the front edge of this surface consists of a thin projecting plate, the maxillary process, which overlaps the orifice of the antrum. At the junction of the horizontal and vertical plates, extending outwards and backwards, is the pyramidal process, which projects into the space between the external and internal plates of the sphenoid bone. Bending inwards and upwards from the posterior surface of the upper part of the vertical plate is the sphenoidal process, its upper surface touching the sphenoid bone at the base of its internal pterygoid plates, its inner surface forming part of the nasal fossa, and its outer smooth surface helping to form the pterygo-maxillary fossa. At the upper end of the anterior margin of the vertical plate is the orbital process with its two free and three articulating surfaces; of the former, the upper forms the hinder part of the floor of the orbit, and the outer forms part of the sphenomaxillary fossa; its articulating surfaces are in front for the superior maxillary bone, within for the ethmoid, and behind for the sphenoid. Between these two latter processes is the sphenopalatine notch.

The palate bone is formed in the pterygoquadrate cartilage from one centre of ossification at the junction of the horizontal and vertical plates, which appears about the seventh week.

P., cleft. See *Cleft palate*.

P., fall'ing down of. A term for a relaxed uvula.

P., false. The same as *P., artificial*.

P., fis'sured. See *P., cleft*.

P., hard. (*G. harter Gaumen*.) The anterior two-thirds of the palate, consisting of the palatine processes of the superior maxillary and palate bones covered by periosteum, and a thick, pale, corrugated mucous membrane, separated from the bone by the palatine glands. Its arteries are branches of the internal maxillary artery; its veins anastomose freely with those of the soft palate, some traverse the posterior palatine canal, but the chief pass through the anterior palatine canal to join the anterior veins of the Schneiderian membrane; the lymphatics are very delicate; they communicate at the sides and in front with those of the gums, and behind with those of the lower surface of the soft palate; they terminate in small vessels which pass round the tonsils to glands lying on the borders of the thyro-hyoid membrane; the

PALATIFORM—PALATOGLOSSUS

nerves are derived from the sphenopalatine ganglion.

P.-my'ograph. (Μῦς, a muscle; γράφω, to write.) An instrument for recording graphically the movements of the soft palate during the act of producing sounds.

P. process of palate bone. (G. Gaumenfortsatz des Gaumenbeins.) See *P. bone*.

P. process of superior maxillary bone. (F. apophyse palatine du maxillaire supérieur; G. Gaumenfortsatz des Oberkieferbeins.) See *Maxillary bone, superior*.

P., soft. The *Velum pendulum palati*.

P., split. The same as *P., cleft*.

Palatiform. (L. *palatum*, the palate; *forma*, shape. F. *palatiforme*; G. *Gaumenförmig*.) Having the shape of a palate.

Applied by Kirby to the tongue of insects where it forms the inferior surface of the lip.

Palatine. (F. *palatin*; I. *palatino*; S. *palatino*.) Relating to the *Palate*.

P. arch. (F. *voûte palatine*.) The *Palate*.

P. arches. See *Palate, arches of*.

P. artery, ascending. (F. *artère palatine ascendante*; G. *aufsteigende Gaumenschlagader*.) A branch of the facial artery below the jaw, or occasionally of the common carotid artery; it ascends between the stylopharyngeus and the styloglossus muscles which it supplies; reaching the upper part of the wall of the pharynx it gives branches to the superior constrictor of the pharynx, the tonsils, and the Eustachian tube; and accompanying the levator palati to the soft palate it is distributed to the structures connected therewith. It anastomoses with its fellow, with the descending palatine artery, and with the ascending pharyngeal artery.

P. artery, descending. (F. *artère palatine supérieure*; G. *absteigende Gaumenschlagader*.) A branch of the internal maxillary artery in the sphenomaxillary fossa; it traverses the posterior palatine canal, runs along the hard palate, to the structures of which it is distributed, and terminates in a small vessel which passes through the incisor foramen to anastomose with the naso-palatine artery.

P. artery, inferior. (L. *inferior*, lower.) The *P. artery, ascending*.

P. artery of pharyngeal. A large branch of the ascending pharyngeal artery which supplies the soft palate, and anastomoses freely with its fellow of the opposite side.

P. artery, superior. (L. *superior*, upper. F. *artère palatine supérieure*.) The *P. artery, descending*.

P. bone. See *Palate bone*.

P. button-hole. A slit made in the soft palate to facilitate the removal of a polypus in the posterior nares.

P. canal, anterior. See *Canal, palatine, anterior*.

P. canal, descend'ing. See *Canal, palatine, posterior*.

P. canal, poste'rior. See *Canal, palatine, posterior*.

P. cells. The cells formed by the junction of the palatine bone with the ethmoid bone.

P. ducts. The same as *P. canals*.

P. foramen, ante'rior. (L. *foramen*, a hole; *anterior*, in front.) The *Foramen, incisive*.

P. foramen, poste'rior. (L. *foramen*; *posterior*, hinder.) The lower opening of the *Canal, palatine, posterior*.

P. fos'sa. (F. *fosse palatine*.) See *Fossa palatina*.

P. glands. See *Glands, palatine*.

P. mem'brane. (L. *membrana*, a thin skin.) The mucous membrane which covers the roof of the mouth, including the soft palate.

P. nerve, ante'rior. (L. *anterior*, in front. F. *nerf palatin antérieur*; G. *vorderer Gaumennerv*.) One of the descending branches of the sphenopalatine ganglion, whence it descends to the posterior palatine canal which it traverses to reach the hard palate; in the canal it gives off the inferior nasal nerve, a fine filament for the mucous membrane of the antrum, and a branch for the supply of the soft palate; at the exit from the canal it bifurcates and divides into many branches which run in canals of the bony palate and supply its mucous membrane and that of the gums.

P. nerve, exter'nal. (F. *nerf palatin moyen*.) The smallest of the descending branches of Meckel's ganglion. It traverses the external palatine canal, to the tonsils and outer part of the soft palate.

P. nerve, large. (F. *grand nerf palatin*.) The *P. nerve, anterior*.

P. nerve, poste'rior. (L. *posterior*, hinder.) It traverses the lesser palatine canal, and supplies the soft palate, tonsils, uvula, levator palati, and azygos uvulae.

P. nerve, small. (F. *nerf palatin petit*.) The *P. nerve, posterior*.

P. process of superior maxillary bone. See *Maxillary bone, superior*.

P. rid'ges. (G. *Gaumenleisten*.) The central ridge and the lateral corrugations of the mucous membrane of the hard palate; they are more marked in the human foetus and in some of the lower animals, than in the human adult.

P. sec'tor. See *Sector, palatine*.

P. spine. (F. *épine palatin*; G. *Gaumenfortsatz*.) The *Nasal spine, posterior*.

P. ster'tor. See *Stertor, palatine*.

P. su'ture. See *Suture, palatine*.

P. su'ture, trans'verse. See *Suture, palatine transverse*.

P. vein, infe'rior. (L. *inferior*, lower. F. *veine palatine inférieure*; G. *untere Gaumenschlagader*.) A vein which collects blood from the circumtonsillar venous plexus and from the soft palate, and descends by the lateral wall of the pharynx to one of the neighbouring branches of the facial vein or the facial vein itself.

P. vein, super'ior. (L. *superior*, upper. F. *veine palatine supérieure*; G. *obere Gaumenschlagader*.) A vein which accompanies the superior palatine artery, and empties into the pterygoid venous plexus.

Palati'tis. (L. *palatum*, the palate. F. *palatite*; I. *palatitide*; G. *Gaumenentzündung*.) Inflammation of the mucous membrane of both hard and soft palate. A form of *Stomatitis*.

Palatoglos'sal. (L. *palatum*; Gr. γλῶσσα, the tongue.) Relating to the palate and the tongue.

P. fold. The anterior pillar of the fauces.

Palatoglos'sus. (L. *palatum*; Gr. γλῶσσα, the tongue. F. *glosso-staphylin*; I. *palato-glosso*; G. *Zungengaumemuskel*.) A thin layer of pale muscular fibres which arises from the root of the tongue in connection with the transverse muscular fibres of the latter, and with the fasciculi of the styloglossus, and, traversing the anterior pillar of the fauces, ends in the sub-

PALATOGNATHUS—PALICUREA

mucous tissue of the velum pendulum palati in union with its fellow of the opposite side. They contract the isthmus of the glottis, and by elevating the tongue force the bolus of food backwards into the pharynx.

Palatognathus. (L. *palatum*; Gr. γνάθος, the jaw.) One who has a cleft palate.

Palato-labial. (L. *palatum*; *labialis*, belonging to the lip.) Relating to the palate and the lips.

P. artery. (F. *artère palato-labiale*, Chaussier.) The *Facial artery*.

Palato-maxillary. (L. *palatum*; *maxilla*, the lower jaw.) Relating to the palate and the lower jaw.

P. arch. The *Maxillary process, superior*.

P. artery. The *Palatine artery, superior*.

Palato-pharyngeal. (L. *palatum*; Gr. φάρυγξ, the gullet.) Relating to the palate and the pharynx.

P. fold. The posterior pillar of the fauces.

Palatopharyngeus. (L. *palatum*; Gr. φάρυγξ, the gullet. F. *pharyngo-staphylin*, *palato-pharyngien*; I. *palato-faringeo*; S. *palato-faringeo*; G. *Schlundgaumennuskel*.) An ill-defined set of muscular fibres lying in the posterior pillar of the fauces. It arises by three fasciculi: one proceeding from the posterior angle of the cartilage of the Eustachian tube, the *Salpingopharyngeus* of Santorini; a second from the aponeurosis of the velum pendulum palati; and a third, much larger than either of the others, from the same aponeurosis. After traversing the posterior pillar of the fauces, it expands and terminates by three sets of fibres: an internal set which interlace with those of the opposite in the postero-median portion of the pharynx and also in the median part of the velum; a middle set which are connected with the fibrous layer of the pharynx near the cricoid cartilage; and an external set which are attached along with, but in front of, the fibres of the stylopharyngeus to the posterior border of the thyroid cartilage. It derives its nerve-supply from the pharyngeal plexus. It draws the velum downwards and the pharynx upwards.

Palatopharyngolaryngeus. (L. *palatum*; Gr. φάρυγξ; λάρυγξ, the upper part of the windpipe.) The *Palatopharyngeus*.

Palatoplasty. (L. *palatum*; Gr. πλάσσω, to form.) The same as *Uraniscoplasty*.

Palatorrhaphy. (L. *palatum*; Gr. ραφή, a seam. F. *palatorrhapie*.) The suturing of a cleft palate.

Palatosalpingeus. (L. *palatum*; Gr. σάλπιγξ, a war-trumpet. F. *palato-salpingien*; I. *palato-salpingiano*; S. *palato-salpingeo*.) The *Tensor palati*.

Palatoschisis. (L. *palatum*; Gr. σχίσις, a cleaving.) Cleft palate.

Palatostaphylinus. (L. *palatum*; Gr. σταφυλή, the uvula. F. *palato-staphylin*; I. *palato-stafilino*; S. *palato-estafilino*; G. *Zapfenmuskel*.) Each half of the *Azygos uvulae*.

Palato-uvularis. (L. *palatum*; *uvula*.) The *Azygos uvulae*.

Palatum. The *Palate*.

P. durum. (L. *durus*, hard.) See *Palate, hard*.

P. fissum. (L. *fissus*, cleft.) See *Cleft-palate*.

P. mobilē. (L. *mobilis*, moveable.) The *Palate, soft*.

P. mollē. (L. *mollis*, soft.) The *Palate, soft*.

P. osseum. (L. *osseus*, bony.) The *Palate, hard*.

P. pendulum. The *Velum pendulum palati*.

P. stabilē. (L. *stabilis*, form.) The *Palate, hard*.

Pale. (Mid. E. *palē*; Old F. *pale*, *palle*, *pasle*; from L. *pallidus*, pale. F. *pâle*; I. *pallido*; S. *palido*; G. *bläss*, *bleich*.) Colourless.

P. bark. See *Cinchona pallida*.

P. laurel. The *Kalmia glauca*.

P. rose. (F. *rose pâle*; I. *rosa pallida*.) The *Rosa centifolia*.

Palē. (Πάλη, the finest meal.) Pollen.

Palea. (L. *palea*, chaff. F. *paillette*; I. *palea*, *pagliacola*; S. *pajita*; G. *Spreublättchen*, *Spreu*.) Chaff consisting of short, linear, obtuse, dry scales.

P. Cabotii. A Javan fern. Filaments of stem used as a mechanical styptic.

Paleaceous. (L. *palea*, chaff. F. *paleacé*; I. *paleaceo*; S. *paleaceo*; G. *Spreuartig*, *Spreutragend*.) Bearing chaff, or small scales like chaff.

Paleæ Cibo'tii. The same as *Pili Cibo'tii*.

Paleiform. (L. *palea*; *forma*, shape. F. *paleiforme*; G. *Spreuformig*.) Like chaff.

Paleiness. (F. *pâleur*; I. *pallore*; S. *palidez*; G. *Blässe*.) Whiteness of the complexion. The same as *Pallor*.

Paleole. (Dim. of L. *palea*, chaff. F. *paleole*.) A synonym of *Glumellule*.

Paleoliferous. (*Paleole*; L. *fero*, to bear. F. *paleolifère*.) Bearing paleoles.

Paleolithic. See *Paleolithie*.

Paleontology. See *Paleontology*.

Pal'estine buck thorn. The *Rhamnus paliurus*.

Palfyn, Johan'nes. A Dutch surgeon, born at Kortryk in 1650, died in Ghent in 1730.

P.'s for'ceps. See *Forceps, midwifery, Palfyn's*.

Pali plague. A malignant fever resembling plague observed first in Pali, afterwards spreading throughout Rajputana in 1836, and especially characterised by hæmoptysis.

Palicou'rea officinalis, Mart. (L. *officina*, a shop.) Hab. Brazil. Used as a diuretic.

P. diuretica, Mart. Used as *P. officinalis*.

P. longifolia, H. B. and K. (L. *longus*, long; *folium*, a leaf.) Used as *P. officinalis*.

P. sonans, Mart. (L. *sono*, to sound.) Used as *P. officinalis*.

P. speciosa, H. B. and Kunth. (L. *speciosus*, handsome.) Goldshrub. Hab. Brazil. Used as an antisypilitic; in large doses, poisonous.

P. strepens, Mart. (L. *strepo*, to make a noise.) Used as *P. officinalis*.

P. sulphurea, De Cand. Hab. Peru. A bitter tonic.

Palicurea. A Genus of the Nat. Order *Rubineæ*.

P. crocea. (L. *croceus*, saffron-coloured.) Hab. West Indies. An emetic.

P. densiflora. (L. *densus*, crowded.) Said to supply *Coto bark*.

PALIMBOLOUS—PALMA

P. Marcgraavii, St. Hilaire. Hab. Brazil. Poisonous; used to kill rats.

Palimboldous. (Παλιμβολος, reversed; from πάλιν, backwards; βάλλω, to cast.) Frequently changing; applied to diseases whose symptoms are very inconstant.

Palimpsesta. (Παλιμπισσα, reboiled pitch; from πάλιν, again; πίσσα, pitch.) Dry pitch.

Palincote'sis. (Παλιγκότησις, the breaking out afresh; from πάλιν; κότος, rancour.) The relapse of a disease; the breaking out again of a wound.

Palin'dromē. (Παλινδρομή.) The same as *Palindromia*.

Palindrom'ia. (Παλινδρομία, a running back; from πάλιν, back; δρόμος, a course. F. *palindromie*; I. *palindromia*; S. *palindromia*; G. *Rückfall*.) An old term for a supposed regurgitation of peccant humours towards the internal organs.

Also, the recurrence of a paroxysm, or the relapse of a disease.

Palingene'sia. (Παλιγγενεσία, new-birth; from πάλιν, again; γένεσις, an origin. F. *palingénésie*; I. *palingenesia*; S. *palingenesia*; G. *Wiedergeburt*.) Regeneration.

Palingenesis. (Πάλιν; γένεσις.) The same as *Palingenesia*.

Palinod'ia. (Παλινοδία, a retracing one's path; from πάλιν; ὁδός, a way. F. *palinodie*.) A return or relapse of a disease.

Palinurus vulgaris. See under *Crawfish*.

Palirrhœ'a. (Παλirroia, a reflux; from πάλιν; ροία, a flow.) The relapse of a disease.

Pallurus. A Genus of the Nat. Order *Rhamnaceæ*.

P. aculeatus. (L. *aculeatus*, furnished with prickles.) Hab. South Europe. Root and leaves astringent; seeds diuretic.

Palladium. (*Pallas*, the Planet. F. *palladium*; I. *palladio*; S. *palladio*; G. *Palladium*.) Symbol Pd; atomic weight 106.2. A metal discovered by Wollaston in 1803 in platinum ore; it is also found in gold alloys. It is a whitish, hard, very malleable, ductile metal, having a sp. gr. of 11.4 at 22.5° C. (72.5° F.) It is dimorphous, occurring native in the form of small regular octahedrons and in small hexagonal tables. It does not oxidise in the air. It is used for the graduated surfaces of astronomical instruments, and as a substitute for gold in dentistry.

Palleal. See *Pallial*.

Palle'nis. A Genus of the Nat. Order *Compositæ*.

P. spino'sa, Cass. (L. *spina*, a thorn.) Yellow starwort. Used as a vulnerary in buboes and other inguinal swellings.

Pallial. (F. *palléale*.) Relating to the *Pallium* or *Mantle*.

P. cavity. The space enclosed between the lobes of the mantle of Mollusca, divided in some animals into a larger, branchial and a smaller, supra-branchial chamber.

P. impres'sion. (L. *impressio*, a pressing into. F. *impression palléale*.) The same as *P. line*.

P. line. (F. *ligne palléale*.) The impression made by the attachment of the muscular fibres of the mantle or pallium to the shell of Molluscs.

P. s'inus. (L. *sinus*, a gulf.) A deep

indentation of the hinder edge of the pallial line to receive the siphon.

Palliate. (L. *palliatum*, cloaked; from *pallium*, a mantle. F. *pallier*; I. *palliare*; S. *palliar*; G. *bemanteln*.) To cloak; to mitigate.

Pallia'tion. (*Palliate*. F. *palliation*; I. *palliamento*; S. *paliacion*; G. *Bemäntelung*.) Mitigation; alleviation.

Palliative. (*Palliate*. F. *palliatif*; I. *palliativo*; S. *paliativo*; G. *bemäntelnd*.) Cloaking, relieving, or alleviating, as distinct from healing.

Also (G. *Palliativmittel*), a substance which is able to alleviate or mitigate disease or pain.

P. treat'ment. (F. *traitement palliatif*.) That treatment of an incurable disease which attempts relief of pain and moderation of distressing symptoms.

Pallidiflorous. (L. *pallidus*, pale; *flos*, a flower. F. *pallidiflore*; G. *bleichblumig*.) Having pale flowers.

Palliobranch'iate. (L. *pallium*, a mantle; Gr. βράγχια, the gills. F. *palliobranchié*.) De Blainville's term for those Molluscs which have the branchiæ applied to the inner surface of the lobes of the mantle or pallium.

Pallium. (L. *pallium*, a Greek cloak. F. *manteau*; I. *mantello*; G. *Mantel*.) The *Mantle* of Mollusca.

Also, the upper point of the feathers of Aves.

P. cerebri. (L. *cerebrum*, the brain.) The *Mantle* of the hemisphere vesicle.

Pallor. (L. *pallor*, paleness; from *paleo*, to be pale. F. *pâleur*; I. *pallore*; S. *pallidez*; G. *Blässe*.) Paleness.

P. lu'teus. (L. *luteus*, yellow.) The same as *Chlorosis*.

P. vir'ginum. (L. *virgo*, a virgin.) The same as *Chlorosis*.

Palm. (Mid. E. *paume*; from L. *palma*; Gr. παλάμη. F. *paume*; I. *palma*; S. *palma*; G. *Handteller*, *Handfläche*.) The flat inner surface of the hand, having the thenar and hypothenar eminences on either side, and the fingers and wrist-joint below and above.

Also (Sax. *palm*; from L. *palma*. F. *palmier*; I. *palmizio*; S. *palmera*; G. *Palmbaum*), the plants of the Nat. Order *Palmaceæ*, so-called from their flat, palmate leaves.

P. but'ter. Same as *P. oil*.

P. cab'bage. The *Areca oleracea*.

P. carnau'ba. The *Corypha cerifera*.

P., Doum. The *Hyphæne thebaica*.

P., gomut'to. The *Arenga saccharifera*.

P., guin'ea. The *Elais guineensis*.

P., oil. The *Elais guineensis*.

P. oil. (F. *huile de palme*; I. *olio di palma*; G. *Palmöl*.) An oil obtained from the seeds of *Cocos butyracea*, *Elais guineensis*, and other species.

P., sa'go. The *Sagus vinifera*.

P. sug'ar. See *Jaggery*.

P. tree. Any tree of the Nat. Order *Palmaceæ*.

P. wax. The product of the species of *Ceroxylon*.

P. wine. The fermented juice of the *Caryota urens*, *Elais guineensis*, and other palms.

Pal'ma. (L. *palma*, a palm-tree.) A Genus of the Nat. Order *Palmaceæ*.

P. a'dy. See *Ady*.

P. Chris'ti. (L. *Christus*, Christ.) The *Ricinus communis*.

PALMA—PALMATE

P. co'cos. The *Cocos nucifera*.
P. da'ctylif'era. The *Phoenix dactylifera*.
P. hu'milis. (L. *humilis*, lowly.) The *Musa paradisaica*.
P. in'dica vina'ria secun'da. (L. *indicus*, Indian; *vinarius*, belonging to wine; *secundus*, next.) The *Arenga saccharifera*.
P. oleo'sa. (L. *oleum*, oil.) The *Elais guineensis*.
P. pruni'fera. (L. *prunus*, a plum; *fero*, to bear.) The *Chamærops humilis*.
P. unguentario'rum. (L. *unguentarius*, a perfumer.) The same as *Myrobalan*.
Pal'ma. (L. *palma*.) The *Palm* of the hand; also, a branch of a tree.
P. ma'nus. (L. *manus*, the hand.) The *Palm* of the hand.
Palma'ceæ. (L. *palma*, a palm tree.) A Nat. Order of the Cohort *Palmales*, being unbranched or, rarely, dichotomously branched trees or shrubs, with terminal leaves having sheathing stalks, hermaphrodite or unisexual flowers on a branched spadix, inferior perianth of the whorls, each with three parts; 1 to 3 carpels usually united, superior ovary, solitary ovule, sometimes two, and minute embryo in a depression in the fleshy or horny albumen.
Pal'mæ. Nominative plural of L. *palma*, a branch of a tree.
P. u'teri plica'tæ. (L. *uterus*, the womb; *plicatus*, folded.) The branched striæ on the inner surface of the neck of the womb.
Palma'les. (L. *palma*, a palm tree.) A Cohort of the Sub-series *Syncarpæ*, being monocotyledonous shrubs or trees, with unisexual or hermaphrodite flowers on a branched spadix enclosed in a spathe; two-whorled perianth in three segments, usually green; indehescence, 1—2 seeded fruit, and albuminous seed.
Pal'mar. (L. *palmaris*; from *palma*, the palm of the hand. F. *palmaire*; I. *palmare*; S. *palmar*; G. *hohlhandig*, zu *Palme* gehörig.) Relating to the *Palm* of the hand; relating to a *Palm tree*.
P. aponeuro'sis. (Ἀπνεύρωσις, the end of a muscle. F. *aponévrose palmaire*.) The *Fascia, palmar*.
P. arch, cu'bial. (Cubit, the ulna. F. *arcade palmaire cubitale*.) The *P. arch, superficial*.
P. arch, deep. (F. *arcade palmaire profonde*, *petite arcade palmaire*, Chaussier; G. *tiefer Hohlhandbogen*.) The palmar termination of the radial artery, commencing at the upper end of the first interosseous space, crossing the palm between the flexor tendons and the interossei muscles, and joining the deep branch of the ulnar artery. It gives off recurrent branches which anastomose with those of the anterior carpal arch, descending branches, the palmar interosseous arteries, and the superior perforating arteries.
P. arch, ra'dial. (Radius. F. *arcade palmaire radiale*.) The *Palmar arch, deep*.
P. arch, super'ficial. (L. *superficies*, the surface of a thing. F. *arcade palmaire superficielle*; G. *Oberflächlicher hohlhandbogen*.) The palmar termination of the ulnar artery, commencing at the distal border of the anterior annular ligament of the wrist, crossing the palm between the palmar fascia and the flexor tendons towards the middle of the thenar eminence, and joining the superficialis volæ, or the radialis indicis, or both. It gives off twigs to the super-

ficial muscles, the integument of the palm, and the digital arteries.
P. ar'tery, deep. The *P. arch, deep*.
P. ar'tery, super'ficial. The *P. arch, superficial*.
P. cuta'neous nerve of me'dian. (L. *cutis*, the skin; *medius*, middle. F. *nerf palmaire cutané*; I. *nervus palmaris cutaneus*.) This branch pierces the fascia close to the anterior annular ligament of the wrist, and ends in the palmar integument, communicating with the corresponding branch of the ulnar.
P. cuta'neous nerve of ul'nar. It lies on the ulnar artery and passes with it to the hand, where it supplies part of the integument, joining with the corresponding branch of the median.
P. dig'ital ar'teries. See *Digital arteries of hand, palmar*.
P. fas'cia. See *Fascia, palmar*.
P. folds. (F. *folis de locomotion*.) See *Palm, lines of*.
P. interos'seous ar'teries. See *Interosseous arteries of hand, deep palmar and superficial palmar*.
P. interos'seous mus'cles. See *Interosseous muscles of hand, palmar*.
P. lig'aments. See *Ligaments, palmar*.
P. nerves. See *P. cutaneous nerve*.
P. re'gion. (F. *region palmaire*.) The region of the palm of the hand.
P. veins. These form a fine plexus in the palm, giving rise to the median and anterior ulnar veins of the forearm.
Palma'ris. See *Palmar*.
P. anti'cus. (L. *anticus*, in front.) The *Flexor carpi radialis*.
P. brev'is. (L. *brevis*, short. F. *petit palmaire, palmaire cutané*; G. *kleiner Hohlhandmuskel*.) A thin, flat, rectangular, subcutaneous muscle arising from the anterior annular ligament of the wrist and from the inner margin of the palmar fascia by six or eight long slender tendons, from which muscular fasciculi proceed transversely across the hand to be inserted into the deep surface of the skin at the inner border of the palm.
P. cuta'neus. (L. *cutaneus*, belonging to the skin. F. *palmaire cutané*.) The *P. brevis*.
P. grac'ilis. (L. *gracilis*, slender. F. *palmaire grêle*.) The *P. longus*.
P. gran'dis. (L. *grandis*, great. F. *grand palmaire*; I. *palmaris grande*.) The *P. longus*.
P. inter'nus. (L. *internus*, within.) The *Flexor carpi radialis*.
P. long'us. (L. *longus*, long. F. *long palmaire, petit palmaire, epitrochlo-metacarpien*, Chaussier; I. *piccolo palmaris*; G. *Handsehnen-spanner*.) A small, short muscle with a long tendon, arising from the internal condyle of the humerus and the intermuscular septum, and inserted into the palmar fascia at the front of the wrist. It sometimes sends a slip to the small thumb muscles.
P. long'us bicauda'tus. (L. *longus*; *bis*, twice; *cauda*, a tail.) A variation of the *P. longus* described by Gruber, which is inserted by two tendons.
P. mag'nus. (L. *magnus*, great. I. *palmaris grande*.) The *Flexor carpi radialis*.
Pal'mate. (L. *palmatus*, from *palma*. F. *palmé*; I. *palmato*; S. *palmado*; G. *gefingert, handförmig*.) Shaped like the hand.

PALMATIFID—PALO

In Botany, applied to leaves or other parts which are more or less cleft between the nerves so as to resemble the hand with palm and fingers.

In Zoology, applied to animals which have the digits connected by a membrane.

Palma'tifid. (L. *palma*, the palm of the hand; *fido*, to cleave. F. *palmatifide*; G. *handspaltig*.) De Candolle's term for leaves which are deeply cleft to half their depth.

Palmatiflo'rous. (L. *palmatius*; *flos*, a flower. F. *palmatiflore*; G. *handblumig*.) Cassini's term for capitula composed of flowers with palmate corollæ.

Palmatifol'ious. (L. *palmatius*; *folium*, a leaf. F. *palmatifolié*; G. *handblätterig*.) Having palmate leaves.

Palma'tiform. (L. *palmatius*; *forma*, shape. F. *palmatiforme*; G. *handförmig*.) Somewhat palmate.

Palmatilo'bate. (L. *palmatius*; *lobate*. F. *palmatilobé*; G. *handlappig*.) De Candolle's term for leaves the lobes of which are palmate.

Palmatinerv'ate. (L. *palmatius*; *nervus*, a nerve. F. *palmatinervé*.) Applied to a leaf the nervures of which are palmate.

Palmatipart'ite. (L. *palmatius*; *partitus*, divided. F. *palmatipartite*; G. *handtheilig*.) De Candolle's term for a leaf divided by palmate lobes.

Palmatise'cted. (L. *palmatius*; *sectus*, cut. F. *palmatiséqué*; G. *handschnittig*.) De Candolle's term for a leaf which is divided into palmate lobes.

Pal'mature. (L. *palma*, the palm of the hand.) The condition of being *Palmate*.

P. of fingers. Adhesion of the fingers to each other. See *Web-fingers*.

Palmet'to, saw. The *Chamærops serratula*.

Pal'mic. (Παλμός, a quivering motion.) Relating to *Palpitation*.

Pal'mic. (L. *palma*, a palm.) Relating to a *Palm tree*.

P. ac'id. (F. *acide palmique*.) A colourless, crystallisable acid, solid at ordinary temperatures, melting at 50° C., prepared by saponification of *Palmin* or of castor-oil (Littre.)

Palmi'colous. (L. *palma*, a palm tree; *colo*, to inhabit. F. *palmicole*; G. *palmbewohnend*.) Living upon palm trees.

Palmicorn'ate. (L. *palma*; *cornu*, a horn. F. *palmicorne*; G. *handgehörnt*.) Having a palmate horn, or antenna, or filament.

Palmi'folious. (L. *palma*, a palm tree; *folium*, a leaf. F. *palmi'folié*; G. *handblätterig*.) Having palmate leaves.

Pal'miform. (L. *palma*, the palm of the hand; *forma*, shape. F. *palmi'forme*; I. *palmi'forme*; S. *palmi'forme*; G. *handförmig*, *palmi'förmig*.) Having the shape of the palm of the hand.

Pal'min. (F. *palmin*; I. *palmina*; S. *palmina*; G. *Palmin*.) A solid substance obtained by Boudet on heating castor oil with hyponitric acid.

Palminerv'ate. (L. *palma*, the palm of the hand; *nervus*, a nerve. F. *palminerve*; G. *handnervig*.) Applied to a leaf the nerves of which radiate like the fingers of a hand.

Pal'mipede. (L. *palma*; *pes*, a foot. F. *pal'mipéde*; I. *pal'mipede*; S. *pal'mipede*; G. *handfüssig*.) Having a palmate or webbed foot.

Pal'mipedes. (L. *palma*; *pes*. F.

pal'mipédes; G. *Schwimmvogel*.) An Order of the Class *Aves* having webbed feet, and otherwise fitted for an aquatic life.

Palmiphalang'il. (L. *palma*; *phalanx*. F. *palmi-phalangiens*.) The *Lumbricales manus*.

Pal'mistry. (L. *palma*, the palm of the hand.) Fortune-telling, from a consideration of the lines and elevations on the palm of the hand.

Pal'mitate. A salt of *Palmitic acid*.

Pal'mites. (L. *palma*, a palm tree.) Wine in which dates have been infused.

Pal'mitic. (L. *palma*, a palm tree. F. *palmitique*.) Relating to the *Palm tree* or to *Palmitin*.

P. ac'id. (F. *acide palmitique*; I. *acido palmitico*; G. *Palmitinsäure*.) C₁₆H₃₂O₂. A substance discovered by Frémy in palm oil. It occurs in nacreous scales.

Pal'mitin. (L. *palma*, a palm tree. F. *palmitine*; I. *palmitina*; G. *Palmitin*.) C₃H₅(C₁₆H₃₁O₂)₃. Tripalmitate of glyceryl.

Pal'mityl. (Υλη, the stuff of which a thing is made.) The hypothetical radical of *Palmitic acid*.

Palmomantei'a. (Παλμός, a quivering motion; *μαντεία*, prophesying.) Divination from observation of pulsations of the heart and arteries, of quivering of muscles, and of movements of the intestines.

Palmoplan'tar. (L. *palma*, the palm of the hand; *planta*, the sole of the foot. F. *palmoplantaire*.) Storr's term for those mammals that have the extremities of the hind limbs formed like hands.

Pal'mos. (Παλμός.) An old term for *Palpitation*.

Also, a synonym of *Subsultus*.

Palmo'scopy. (Παλμός; σκοπέω, to observe. F. *palmoscopie*.) The investigation of the beating of the heart and pulse.

Also, the foretelling of events from observation of the heart and pulse beats.

Pal'mula. (Dim. of L. *palma*, the palm of the hand. F. *pal'mule*.) A little hand; a small organ having a palmate shape.

Also (L. *palma*, a palm tree), a term for the fruit of the date-palm.

Pal'mulate. (F. *palmulé*.) Having a *Pal'mula*.

Pal'mule. The same as *Pal'mula*.

Pal'mus. The same as *Pal'mos*.

P. cor'dis. (L. *cor*, the heart.) *Palpitation* of the heart.

P. plumbar'ius. (L. *plumbum*, lead.) Tremors produced by chronic lead poisoning.

P. vom'itus. (L. *vomitus*, a vomiting.) Vomiting.

Palmy'ra springs. United States of America, Wisconsin, Jefferson County. An alkaline water from twenty-five sources; the springs used have much the same composition; the one called Zenobia's Fountain contains calcium bicarbonate 12.85 grains, and magnesium bicarbonate 10.14 grains in a gallon; the others contain less magnesium bicarbonate; the amount of sodium bicarbonate does not exceed 1.5 grain in any of them.

Palmy'ra tree. The *Borassus flabelliformis*.

Pa'lo. (S. *palo*, a stick.) The stem or root of a plant.

P. de calentu'ras. (S. *de*, of; *calenturas*, chills and fever.) The *Cinchona tree*.

P. de va'ca. (*S. de; vaca*, a cow.) The *Trosimum galactodendron*.

P. de velas. (*S. de; velas*, a watch; from the ancient use of candles as time-pieces.) The candle tree, *Parmentiera cerifera*.

Palo Pin to mineral well. United States of America, Texas, Palo Pinto County. One of about 140 different springs in the same neighbourhood containing calcium carbonate 2.08 grains, magnesium carbonate 4.66, sodium sulphate 150.05, calcium sulphate 6.55, magnesium sulphate 18.84, sodium chloride 23.98, potassium chloride 1.28, calcium chloride 5.58, aluminium oxide 1.54, and silica 1.86 grains in a gallon.

Palpate. Possessing a *Palpus*.

Also (*L. palpo*), to employ *Palpation*.

Palpation. (*L. palpatio*, a stroking; from *palpo*, for *palpo*, to touch softly; from Aryan root *spar*, to quiver. *F. palpation*; *I. palpazione*; *S. palpamiento*; *G. Betastung*.) The gentle feeling, by means of the fingers, of an internal organ through the integument, for the purpose of ascertaining its size, form, and consistence.

Palpatometry. (*L. palpatio*; *Gr. μέτρον*, a measure.) Estimation of the tenderness produced by palpation, by means of an instrument with a graduated scale recording the amount of pressure.

Palpebra. (*L. palpebra*, an eyelid; from *palpo*, to touch softly. *F. paupière*; *I. palpebra*; *S. palpado*; *G. Augenlid*.) An *Eye lid*.

P. fico'sa. (*L. ficus*, a fig.) A synonym of *Trachoma*.

P. inferior. (*L. inferior*, lower.) The lower *Eye lid*.

P. inferior extrorsum flexa. (*L. inferior*; *extrorsum*, outward; *flexus*, bent.) A synonym of *Ectropium*.

P. major. (*L. major*, greater.) The upper *Eye lid*.

P. minor. (*L. minor*, less.) The lower *Eye lid*.

P. superior. (*L. superior*, upper.) The upper *Eye lid*.

P. tertia. (*L. tertius*, third.) The *Plica semilunaris*.

Palpebræ superioris primus. (*L. palpebra*; *superior*, upper; *primus*, first.) The *Levator palpebræ superioris*.

Palpebral. (*L. palpebralis*, of the eyelids. *F. palpebral*; *I. palpebrale*; *S. palpebral*.) Belonging, or relating, to the palpebræ or eyelids.

P. arch, inferior. (*L. inferior*, lower. *F. arcade palpebrale inférieure*.) The arch formed by the inferior palpebral artery in the lower eyelid.

P. arch, superior. (*L. superior*, upper. *F. arcade palpebrale supérieure*.) The arch formed by the superior palpebral artery in the upper eyelid.

P. artery, inferior. (*L. inferior*, lower. *F. artère palpebrale inférieure*; *I. arteria palpebrale inferior*; *G. untere Augensidsschlagader*.) A branch of the ophthalmic artery arising near the pulley of the obliquus superior, descending vertically behind the tendon of the orbicularis palpebrarum, and forming an arch in the lower eyelid with the palpebral branch of the lacrimal artery immediately below the eyelashes and between the tarsal cartilage and the orbicularis palpebrarum. From the arch arise ascending twigs to supply the skin, the

orbicularis palpebrarum, the Meibomian glands, the ciliary glands, and the conjunctiva; and descending branches which supply the muscles, and anastomose with the infraorbital artery,

P. artery of superficial temporal. The *Orbital branch*.

P. artery, superior. (*L. superior*, upper. *F. artère palpebrale supérieure*; *I. arteria palpebrale superiore*; *G. obere Augensidsschlagader*.) A branch of the ophthalmic artery arising near to, or by a common trunk with, the inferior palpebral artery, descending vertically for a short distance, and then forming an arch in the upper eyelid with the palpebral branch of the superficial temporal artery just above the eyelashes and between the tarsal cartilage and the orbicularis palpebrarum. It gives off descending branches to the Meibomian glands, the tarsal conjunctiva, and the skin, and ascending branches to the substance of the eyelid.

P. cartilage. The same as *Tarsal cartilage*.

P. conjunctiva. The *Conjunctiva palpebræ*.

P. fas'cia. (*L. fascia*, a band. *F. ligament palpebral*.) The *Ligament, tarsal, of eyelids*.

P. fis'sure. See *Fissure, palpebral*.

P. fold. The *Conjunctival fold*.

P. fol'licles. (*L. folliculus*, a small bag. *F. follicules palpebraux*.) The *Meibomian glands*.

P. flux, pu'riform. (*L. flux*, a flow; *pus*, matter; *forma*, likeness.) A puriform discharge from inflamed Meibomian glands.

P. lig'aments. See *Ligamenta palpebralia*.

Also, see *Ligament, tarsal, of eyelids*.

P. muscle. (*F. muscle palpebral*; *G. Augensidmuskel*.) The *Orbicularis palpebrarum*.

P. muscle, inferior. (*L. inferior*, lower.) The thin, non-striated edge of the orbicularis, inserted into the tarsal cartilage and connected with the fascia of the inferior rectus.

P. muscle, superior. (*L. superior*, upper.) The *Orbital-palpebralis*.

P. nerves, inferior. (*L. inferior*, lower.) Two small twigs, an inner and an outer, arising from the superior maxillary nerve.

P. nerves, superior. (*L. superior*, upper.) Small twigs from the supratrochlear and supraorbital branches of the frontal nerve.

P. re'gion. The region of the *Palpebræ* or eyelids.

P. veins, external. Small veins joining the orbital branch of the temporal vein.

P. veins, inferior. (*L. inferior*, lower. *G. untere Augensidblutader*.) Two or three small veins collecting blood from the lower eyelid and the adjacent cheek, and emptying into the facial vein below the orbit.

P. veins, superior. (*L. superior*, upper. *G. obere Augensidblutader*.) Small veins collecting blood from the upper eyelid, and emptying into the angular vein.

Palpebralis. The *Orbicularis palpebrarum*.

P. infe'rior. See *Palpebral muscle, inferior*.

P. supe'rior. See *Palpebral muscle, superior*.

Palpebra'rum ape'riens rec'tus. (*L. palpebra*, an eyelid; *aperio*, to open; *rectus*, straight.) The *Levator palpebræ superioris*.

PALPEBRATE—PAMPLEGIA

P. duo mus'culi. (L. *duo*, two; *musculus*, a muscle.) The *Orbicularis palpebrarum*.

Palpebrate. (L. *palpebratus*, part. of *palpebro*, to wink frequently.) Having eyelids; also, to wink.

Palpebra'tion. (L. *palpebratio*, a blinking.) The act of winking; the same as *Nictitation*.

Palpebrofron'tal. (L. *palpebrum*, an eyelid; *frons*, the forehead. F. *palpebrofrontal*, Chausser.) The *Frontal nerve*.

Also, the *Frontal muscle*.

Palpebrum. Same as *Palpebra*.

Palpi. Nom. plural of *Palpus*.

Palpiferous. (*Palpus*; L. *fero*, to bear. F. *palpifère*; G. *fressspitzetragend*.) Bearing, or possessing, a *Palpus*.

Palpiform. (*Palpus*; L. *forma*, shape. F. *palpiform*; G. *fressspitzeförmig*.) Having the form of a *Palpus*.

Palpig'erous. (*Palpus*; L. *gero*, to bear. F. *palpigère*; G. *fressspitzetragend*.) Bearing a *Palpus*.

Palpitate. (L. *palpito*, to move frequently and quickly; from *palpo*, to move quickly. F. *palpiter*; I. *palpitare*; S. *palpitar*; G. *klopfen, palpitiren*.) To throb.

Palpita'tio. The same as *Palpitation*.

P. arteriar'um. (L. *arteria*, an artery.) Throbbing of the arteries.

P. cor'dis trepidans. (L. *cor*, the heart; *trepidans*, trembling.) Rapid and feeble throbbing of the heart.

P. membro'rum. (L. *membra*, the limbs.) Gaubius's term for involuntary shaking of the legs.

Palpita'tion. (F. *palpitation*; from L. *palpitatio*; from *palpito*. I. *palpitazione*; S. *palpitation*; G. *Herzklopfen*.) Throbbing of the heart, from increased force of the beats; the frequency is also increased. It occurs in many affections, and may be either reflex or due to disease of the heart.

Palpus. (L. *palpus*, a stroking; from *palpo*, for *spalpo*, to touch softly; from Aryan root *spar*, to quiver. F. *palpe*; I. *palpo*; S. *palpo*; G. *Palpe, Fühler*.) An articulated, mobile filament attached to the jaws of Crustacea, Arachnida, and Insecta.

P. la'bial. The palpus affixed to the labium in *Insecta*.

P. maxil'lary. The palpus attached to the maxilla in *Arthropods*.

Palsy. (Mid. E. *palesy*, *parlesy*; F. *paralysie*; from L. *paralysis*; from Gr. *παράλυσις*, palsy.) The same as *Paralysis*.

P., Bell's. (Sir Charles Bell.) See *Bell's paralysis*.

P., creep'ing. A term for *Atrophy, progressive muscular*.

P., cros'sed. See *Hemiplegia, crossed*.

P., crutch. See *Crutch palsy*.

P., fa'cial. (L. *facies*, the face.) See *Paralysis, facial*.

P., fa'cial, mim'ic. See *Mimic facial palsy*.

P., ham'mer. Paralysis of the muscles of the arm and shoulder caused by excessive use of the hammer.

P., histrion'ic. See *Paralysis, histrionic*.

P., hyster'ical. See *Paralysis, hysterical*.

P., lead. See *Lead palsy*.

P., mercu'rial. See *Mercurial paralysis*.

P., metal'lic. See *Lead palsy* and *Mercurial paralysis*.

P., painter's. The same as *Lead palsy*.

P., pen. See *Scrivener's palsy*.

P., psy'chical. (Ψυχικός, belonging to the soul.) The same as *Paralysis, hysterical*.

P., scribe. (L. *scribo*, to write.) The same as *Scrivener's palsy*.

P., semp'stress's. See *Sempstress's palsy*.

P., sha'king. See *Paralysis agitans*.

P., sha'king mercur'ial. See *Mercurial tremor*.

P., trans'verse. (L. *transversus*, turned across.) The same as *Hemiplegia, crossed*.

P., trem'bling. The same as *Paralysis agitans*.

P., wast'ing. The same as *Atrophy, progressive muscular*.

P.-wort. The *Primula veris*.

Also, the *Caltha palustris*.

P., writ'er's. See *Scrivener's palsy*.

Pal'ta tree. The *Persea gratissima*.

Palu'dal. (L. *palus*, a swamp. F. *paludéen*; I. *paludale*; S. *paludoso*; G. *sumpfig*.) Relating to a swamp or marsh.

P. fe'ver. See *Fever, paludal*.

Paluda'pium. (L. *palus*; *apium*, parsley.) The *Apium graveolens*.

Palude'in. (F. *paludéine*.) The mucus of the snail, *Paludina vivipara*, which is made into a soothing pectoral syrup.

Palu'dic. (L. *palus*, a swamp. F. *paludique*.) The same as *Paludal*.

Paludic'olous. (L. *palus*; *colo*, to inhabit. F. *paludicole*; G. *sumpfbewohnend*.) Inhabiting, or growing in, a marsh.

Palud'ina. (L. *palus*, a swamp. F. *paludine*.) A Genus of the Order *Prosobranchiata*, Class *Mollusca*.

P. vivip'ara, Linn. (L. *vivus*, living; *pario*, to bring forth.) A fresh-water snail, the mucus of which has been used to make a soothing syrup.

Paludism. (F. *paludisme*; from L. *palus*, a marsh.) The condition of ill-health produced by exposure to marsh miasmata.

Palu'dose. (L. *palus*. F. *paludeux*; I. *paludoso*.) The same as *Paludal*.

Palus. (L. *palus*, a marsh.) A swamp; a marsh.

Also (L. *palus*, a stake), the *Penis*.

P. sanc'tus. (L. *sanctus*, holy.) *Guaicum wood*.

Palu'stral. The same as *Paludal*.

Pambio'ma. See *Panbioma*.

Pam'pathes. (Παμπαθής, all-suffering.) An old term for a compound plaster of cinnabar for scirrhus tumours.

Pampel'mus. The shaddock, *Citrus decumana*.

Pamphil'ion. (Πάμφιλιος, beloved of all.) The name of a white plaster described by Galen.

Pamphob'ia. Same as *Panophobia* or as *Pantophobia*.

Pampin'iform. (L. *pampinus*, a tendril; *forma*, shape. F. *pampiniforme*; I. *pampiniforme*; S. *pampiniforme*; G. *rankenartig*.) Tendril-shaped.

P. bod'y. The *Plexus pampiniforme*.

P. plex'us. See *Plexus pampiniforme*.

Pamp'inus. (L. *pampinus*.) The tendril of a vine.

Pample'gia. (Πᾶς, all; πληγή, a stroke.) General paralysis.

Pampora. The thick vanilla of the Spanish colonies.

Panacea. (L. *panacea*; Gr. πανάκεια, a universal remedy; from πανακής, all-healing; from πᾶς, all; ἄκος, a cure. F. *panacée*; I. *panacea*; S. *panacea*; G. *Panacee*, *Allgemein-mittel*.) A remedy for all ills.

P. anglica. (Mod. L. *anglicus*, English. F. *panacée anglaise*.) Carbonate of magnesia mixed with carbonate of lime.

P. du'cis holsa'tiæ. (L. *dux*, a duke; Mod. L. *Holsatia*, Holstein.) Sulphate of potash.

P. duplica'ta. (L. *duplicatus*, two-fold.) Sulphate of potash.

P. Glauberi. (Glauber.) Sulphate of soda.

P. holsa'tica. (Mod. L. *Holsatia*, Holstein.) Sulphate of potash.

P. laps'o'rum. (L. *lapsus*, a fall.) The *Arnica montana*.

P. mercuria'lis. (Mercury.) Calomel nine times sublimed.

P. mercu'rii ru'bri. (Mercury; L. *ruber*, red.) Nitric oxide of mercury.

P. minera'lis specifi'cum vir-gin'eum. (Mineral; L. *specificus*, particular; *virgo*, a virgin.) The *Pulvis Viennensis albus virgineus*.

P. of the moun'tain. The *Heracleum panaces*.

P. pec'toris. (L. *pectus*, the chest.) The *Glechoma hederacea*.

P. soluti'va. (L. *solutus*, loose.) Mag-nesia.

P. springs. United States of America, North Carolina, Halifax County. A weak chaly-beate water.

P. vegetab'ilis. (Vegetable.) Saffron.

Pan'acon. C₂₂H₁₉O₈. A substance formed by the action of concentrated sulphuric acid on *Panaquilon*, which then, with the formation of a purple colour, breaks up into a carbonate, pan-acon, and water.

Pana'da. (S. *panado*, bread macerated in water, for sick persons; from *pan*, bread. F. *panade*; I. *panata*; G. *Panade*.) Bread soaked or boiled with water to a pulpy consistence.

Pana'do. See *Panada*.

Panale'thes. (Παναληθής, all-true.) A black cephalic plaster mentioned by Aëtius.

Pan'ama bark. The same as *Quillaja bark*.

P. fe'ver. Term used in Panama, some-times for *Malarial fever*, sometimes for *Yellow fever*, both of them occurring there.

P. paral'ysis. (Παράλυσις, palsy. G. *Panamalähmung*.) A term for *Beriberi*.

Pana'quilon. (F. *panaquilone*.) C₂₄H₂₅O₁₈. An amorphous, sweet substance, found in ginseng by Garrigues (1854).

Panaric'ium. (L. *panaricium*; cor-rupted from *paronychia*; Gr. παρωνυχία, a whitlow.) A *Whitlow*.

P. tendino'sum. The same as *Paronychia tendinosa*.

Pan'aris. (F. *panaris*; from L. *panari-cium*, corrupted from *paronychia*. I. *patereccio*.) A *Whitlow*.

P. analge'sica. (ἀ, negative; ἄλγησις, the sense of pain. F. *maladie de Morvan*, *panaris analgésique*.) *Morvan's disease*. A disease of the central nervous system, characterised by analgesia and partial paralysis, accompanied by trophic changes, of the upper limb (Billings).

Panarit'ium. See *Panaricium*.

Panarium. The same as *Panaricium*.

Panarthrit'is. (Πᾶς; *Arthritis*.) In-flammation of all the tissues of a joint.

Pan'ary. (L. *panis*, bread. F. *panaire*.) Relating to bread.

P. fermenta'tion. The fermentation which takes place in dough during the making of bread.

Panatel'la. The same as *Panada*.

Pan'ax. (Πάναξ, the plant which sup-plies opoponax.) A Genus of the Nat. Order *Araliaceæ*.

P. ani'sum. (Ἄνισον, anise.) Used as an aromatic.

P. cochlea'tum. (L. *cochlea*, a snail-shell.) An aromatic.

P. co'loni. The same as *Stachys palus-tris*.

P. costi'num. (Κόστος, a root used as spice.) The *Pastinaca opoponax*.

P. frutico'sum. Linn. (L. *frutex*, a shrub.) Hab. Java. A diuretic.

P. gin'seng. (*Ginseng*, a Chinese word signifying wonder of the world.) The *P. quinque-folium*.

P. heracle'um. (L. *Heracleum*, a town of Macedonia.) The *Pastinaca opoponax*.

P. pastina'cea. The *Pastinaca op-oponax*.

P. moroto'tani. Aubl. Hab. Cayenne. The whole plant is aromatic.

P. quinquefol'ium. Linn. (L. *quinque*, five; *folium*, a leaf.) Hab. North America. Exported to China as ginseng. Root sweet, and slightly aromatic. Employed as a cordial, alexi-teric, and aphrodisiac.

P. schin'seng. Nees. The *P. ginseng*.

P. undula'ta. Pers. The *P. morototani*.

Panbio'ma. (Πᾶς, all; βίος, life.) The general principle of life.

Panblas'tic. (Πᾶς; βλαστός, a shoot.) Arising in, or connected with, all the layers of the blastoderm.

Panca'ga. The *Hydrocotyle asiatica*.

Panchres'ton. (Πάγχρηστος, good for all work. F. *panchreste*; I. *pancresto*; S. *pan-cresto*; G. *Panchrestum*.) A *panacea*.

Panchres'tous. (Πάγχρηστος.) Uni-versally useful.

Panchres'tum chi'næ. Labarraque's term for a preparation of cinchona bark contain-ing both quinine and cinchonine.

Panchry'sos. (Παγχρύσεος, all-golden.) A collyrium mentioned by Paulus Ægineta.

Panchymag'ogue. (Πᾶς, all; χυμός, juice; ἄγω, to drive out. F. *panchymagogue*; I. *panchimagogo*; S. *panchimagogo*; G. *Panchymagogum*.) A medicine anciently believed to drive out all peccant humours.

Panchymago'gum. A *Panchyma-gogue*.

P. minera'lë. (Mineral.) Calomel.

Pancænon'osus. (Πᾶς, all; κοινός, common to; νόσος, disease.) An epidemic dis-ease.

Pancænon'usos. (Πᾶς; κοινός; νοῦσος, disease.) An epidemic disease.

Pancæ'nous. (Πᾶς; κοινός.) Epi-demic.

Pancratic. (Παγκρατής, all powerful.) Very powerful.

P. mi'croscope. See *Microscope*, *pan-cratic*.

PANCRATIUM—PANCREATIC

Pancra'tium. (Παγκράτιον; from *παγκρατής*, all-powerful.) An exercise of the Greek youths, which combined wrestling and boxing.

Also, a Genus of the Nat. Order *Amaryllidaceae*.

Also, the *Scilla maritima* or *S. pancratium*.

P. cicho'rium. The *Cichorium intybus*.

P. marit'imum, Linn. (*L. maritimus*, belonging to the sea.) Said to be emetic.

Pancreas. (Πάγκρεας, the sweetbread; from *πᾶς*, all; *κρέας*, flesh. *F. pancreas*; *I. pancreas*; *S. pancreas*; *G. Pankreas*, *Bauchspeicheldrüse*, *Gekrösdrüse*, *Magendrüse*.) A long, flat, compound racemose gland, of reddish-cream colour, lying across the hinder wall of the abdomen in front of the first lumbar vertebra, behind the stomach, above the superior mesenteric artery, and below the celiac axis. It is 15 to 16 or 18 cm. long, and 1.5 to 1.8 cm. thick; it is very variable in weight, averaging 70 grammes in the male and 60 grammes in the female, but in some cases reaching 80 or 90 grammes or more. Its right end, the *head*, is embraced by the duodenum; its left end, the *tail*, is in contact with the spleen; the intermediate part, or *body*, connecting the two, is constricted at its junction with the head by a furrow on the posterior surface and the inferior border, for the *vena portæ* and the superior mesenteric vessels. The anterior surface of the head, somewhat concave, is in contact with the stomach and with the first portion of the duodenum; the posterior surface lies on the *vena cava inferior* and on the *vena portæ*, which separate it from the right pillar of the diaphragm and the vertebral column; it presents a furrow for the *ductus communis choledochus* above and on the right. The body lies on the mesenteric vessels, the aorta, the left pillar of the diaphragm, the left adrenal, and the splenic vein; the tail lies on the left kidney and touches the spleen. The upper border is furrowed for the splenic artery, and at the neck is in contact with the celiac axis and the solar plexus. The lower border corresponds to the third part of the duodenum, the superior mesenteric vessels, and the inferior mesenteric vein. The gland discharges its secretion by means of the *Pancreatic duct* into the duodenum. It receives its blood supply from the splenic artery, the hepatic artery, and the superior mesenteric artery; its veins open into the splenic and the superior mesenteric veins; its lymphatics empty into the lumbar lymphatics, and its nerve supply is derived from the solar plexus. It consists of cells forming tubular alveoli, which are collected into lobules and then into lobes separated by connective tissue derived from a somewhat indistinct capsule. Its secretion is the *Pancreatic juice*.

P., acces'sory duct of. (*L. accessus*, an approach. *G. Nebenpancreas*.) An accessory duct sometimes present, passing from the head of the gland and opening separately into the duodenum.

P., an'imal mat'ter of. (*F. matière animale du pancréas*, Leuret.) The same as *Pancreatin*.

P., bod'y of. (*F. corps du pancréas*.) See *Pancreas*.

P., fat'ty degenera'tion of. This occurs occasionally, but is not of clinical interest.

P., head of. (*F. tête du pancréas*; *G.*

Kopf der Bauchspeicheldrüse.) The enlarged right extremity of the pancreas.

P., lobes of. The pancreas is similar in structure to the salivary glands, but its lobes and lobules are less compact.

P., lymphatics of. These join the lumbar lymphatics and glands.

P. min'us. (*L. minus*, less.) The same as *Aselli, pancreas of*.

P., neck of. (*F. col du pancréas*.) Santorini's term for the constricted portion of the pancreas between the head and the body, the constriction being produced by the furrows for the *vena portæ* and the mesenteric vessels.

P. of Aselli. See *Aselli, pancreas of*.

P. par'vum. (*L. parvus*, small.) The same as *Aselli, pancreas of*.

P. par'vum Winslow'ii. In some cases the lower part of the head of the pancreas, which curves round behind and partially embraces the superior mesenteric artery and vein, is marked off from the rest of the gland. This separated portion was named by Winslow *Pancreas parvum*. See *Aselli, pancreas of*.

P. pty'alín. See under *Ptyalin*.

P., sec'ond. A synonym of *Brunner's glands*.

P. secundar'ium. See *P., second*.

P. succenturia'tus. (*L. succenturio*, to receive as a substitute.) A term for *Brunner's glands*.

P., tail of. (*F. queue du pancréas*; *G. Schwanz der Bauchspeicheldrüse*.) The narrower or left end of the pancreas.

P. Winslow'ii. (*Winslow*.) The same as *Aselli, pancreas of*.

Pancreat'al'gia. (Πάγκρεας; ἄλγος, pain. *F. pancréatâlgie*; *I. pancreatalgia*; *S. pancreatalgia*; *G. Bauchspeicheldrüsen-schmerz*.) Pain in the pancreas.

Pancreat'emphrax'is. (Πάγκρεας; ἔμφραξις, a stopping. *F. pancréatēmpfraxis*; *I. pancreatemfrassi*; *S. pancreatemfraxis*; *G. Bauchspeicheldrüsenverstopfung*.) Obstruction, or engorgement, of the pancreas.

Pancreat'helco'sis. (Πάγκρεας; ἑλκωσις, ulceration. *F. pancréatēlcose*.) Ulceration of the pancreas.

Pancreat'ic. (Πάγκρεας. *F. pancréatique*; *I. pancreatico*; *S. pancreatico*; *G. pankreatisch*.) Relating to the *Pancreas*.

P. ar'teries. Branches of the *Splenic artery*, variable both in number and size, given off downwards to the pancreas, and supplying its body and tail. There is often one of larger size than the rest running in the direction of the pancreatic duct, called *Arteria pancreatic magna*.

P. canal'. (*L. canalis*, a pipe. *F. canal pancréatique*.) The *P. duct*.

P. di'astase. (Διάστασις, separation.) Roberts' term for *Amylopsin*.

P. diges'tion. See *P. juice*; also, *Duodenal digestion*.

P. duct. See *Ductus pancreaticus*.

P. duct, ac'cessory. See *Ductus pancreaticus accessorius*.

P. emul'sion. (*L. emulgeo*, to milk out.) This is prepared from the pig's pancreas by mixing it with lard and pounding in water, straining, and then exhausting with ether. From the ethereal solution of pancreatised lard the ether is distilled, and the substance is then mixed and emulsified by shaking with rectified spirit and water. To flavour it, and also to prevent its de-

composition, oil of cloves is added. It is given in doses of 1 to 3 drachms, in milk and water with a little spirit, two hours after meals, in diseases associated with inability to assimilate oils and fats. See under *Pancreatin*.

P. juice. (F. *suc pancréatique*; I. *succo pancreatico*; G. *Bauchspeichel, Bauchspeicheldrüsensaft*.) The secretion of the *Pancreas*. It is a clear, viscid, alkaline fluid, differing from most of the other digestive juices by the comparatively large amount of proteids it contains. The constituents of quite fresh pancreatic juice are albumin, a proteid allied to myosin, fats and soaps in small amount, sodium carbonate (to which its alkalinity is due), and water. The average amount of solids is probably 2 to 5 per cent. Pancreatic juice converts starch into sugar (chiefly maltose); it first dissolves proteids and then converts them into peptone; it emulsifies fats, and splits up neutral fats into their respective fatty acids and glycerin; it also curdles milk. The actions on these three classes of food-stuffs seem to be due to three separate and distinct ferments: *amyllopsin*, acting on starch; *trypsin*, on proteids; and *steapsin*, splitting up neutral fats. The emulsifying action appears to be due mainly to the presence of alkalies and alkali-albumin. The precipitation of the casein, causing curdling of milk, is due to a fourth distinct ferment.

P. juice, active matter of. (F. *matière active du suc pancréatique*, Cl. Bernard.) The same as *Pancreatin*.

P. juice, albumen of. (F. *albumine du suc pancréatique*, Tiedemann and Gmelin.) The same as *Pancreatin*.

P. juice, salivary matter of. (L. *saliva*, spittle. F. *matière salivaire du suc pancréatique*.) The same as *Pancreatin*.

P. lobe of liver. (F. *lobe pancréatique du foie*.) The *Lobe of liver*, *Spigelian*.

P. matter. (F. *matière pancréatique*.) The same as *Pancreatin*.

P. mucus. (L. *mucus*, slime. F. *mucus pancréatique*.) The same as *Pancreatin*.

P. nerves. See *Pancreatic plexus*.

P. plexus. (L. *plexus*, a weaving. F. *plexus pancréatique*; G. *Bauchspeicheldrüsengeflecht*.) A subsidiary nerve plexus derived from the splenic plexus.

P. sarcoma of Abernethy. See *Sarcoma, pancreatic*.

P. veins. Veins passing upwards from the pancreas to open into the *Splenic vein*.

Pancreaticoduodenal artery. The same as *P. artery, superior*.

P. artery, inferior. (L. *inferior*, lower. F. *artère pancréatico-duodénale inférieure*; G. *untere Zwölffingerdarmschlagader*.) A branch of the first intestinal branch of the superior mesenteric, which runs along the concave border of the duodenum to anastomose with the superior duodenal artery.

P. artery, superior. (L. *superior*, upper. F. *artère pancréatico-duodénale*; G. *obere Zwölffingerdarmschlagader*.) One of the terminal branches of the gastro-duodenal branch of the hepatic artery. It runs along the inner margin of the duodenum, between it and the pancreas, both of which it supplies, and anastomoses with the inferior pancreaticoduodenal artery.

P. plexus. (L. *plexus*, a weaving.) A sympathetic nerve plexus lying between the pancreas and the duodenum.

P. vein. A vein receiving factors from the pancreas and duodenum, and opening into the portal vein.

Pancreaticosplen'ic. Relating to the *Pancreas* and the *Spleen*.

P. ligament. (L. *ligamentum*, a band.) The *P. omentum*.

P. omentum. A fold of peritoneum connecting the tail of the pancreas with the lower third of the inner surface of the spleen.

Pan'creatin. (Πάγκρεας. F. *pancréatine*; I. *pancreatina*; S. *pancreatina*; G. *Pankreatin*.) This term has been applied to various preparations from the *Pancreas*. See *Pancreatinum*.

Pancreatinum. An extract of the pancreas, containing its active principles, and having a digestive action similar to that of natural pancreatic juice. It is prepared as follows:—Finely-minced fresh bullock's pancreas is macerated for twenty-four hours in water slightly acidified by hydrochloric acid. It is then macerated in pure water. The liquids are strained, filtered, neutralised with calcium carbonate, filtered again, and then an equal part of alcohol (95 per cent.) is mixed with them. A precipitate is formed, which is washed with weak alcohol, pressed between sheets of bibulous paper, and finally dried without the aid of heat (Professor Scheffer, 1875). This extract is a transparent, yellow, friable substance, almost entirely soluble in water. The solution is a clear, yellowish, neutral liquid, forming white precipitates on heating, and on the addition of alcohol. Hydrochloric acid also forms with it a precipitate. *Pancreatinum* is given therapeutically in certain kinds of dyspepsia. 1. In infants suffering from dyspepsia with inability to digest milk. 2. In phthisical patients who are unable to digest any kind of fat, even cod-liver oil. 3. In cases of jaundice in which fat is not digested. 4. In cases of intestinal dyspepsia as distinguished from gastric dyspepsia, in which pain, flatulence, vomiting, and diarrhoea come on two or three hours after meals. 5. In those diseases in which the imperfect digestion of albuminous foods is an essential factor; rickets, scrofula, diabetes, pernicious and simple anæmia, &c. Given either by the mouth as an emulsion, or better, by the rectum. See *Leube's nutrient enema*.

Pan'creatized farina'ceous food. *Benger's food*. It is made of wheat flour which is first partly converted into dextrin by dry cooking, and then mixed with a pancreatic extract. Mixed with milk it is used for infants and invalids; artificial digestion of both the food and the milk takes place, and can be stopped at the required stage by boiling the mixture.

Pancreatit'is. (Πάγκρεας. F. *pancréatite*; I. *pancreatite*; S. *pancreatitis*; G. *Bauchspeicheldrüsenentzündung*.) Inflammation of the pancreas.

Pancreato-dodecadactylæ'us. (Πάγκρεας; δωδεκά, twelve; δάκτυλος, a finger.) The same as *Pancreatico-duodenal*.

Pan'creatoid. (Πάγκρεας; εἶδος, likeness. F. *pancreatöide*; G. *bauchspeicheldrüsenähnlich*.) Resembling the pancreas in appearance.

Pancreat'omy. (Πάγκρεας; τομή, section.) Extirpation of the pancreas.

Pancreaton'cus. (Πάγκρεας; ὄγκος, mass. F. *pancréatoncie*; G. *Bauchspeichel-*

PANCREATORRHAGIA—PANICLE

drüsengeschwulst.) A hard tumour of the pancreas.

Pancreatorrhag'ia. (Πάγκρεας; ῥήγνυμι, to burst forth. F. *pancréatorrhagie.*) A sudden discharge, for example, of blood, from the pancreas.

Pancrec'tomy. (Πάγκρεας; ἐκτομή, a cutting out.) Extirpation of the pancreas.

Pancre'nē. (Πās, all; κρήνη, a well.) "Pancreas Pancrene" is the title of a work on the pancreas by Bernhard Swalbe or Swalwe, in which he opposed the idea that Intermitent Fever had its seat in that organ. (Amsterdam, 1668.)

Pancreopath'ia. (Πάγκρεας; πάθος, disease.) Disease of the pancreas.

Pan'creum. The same as *Pancreas*.

Pandalit'ium. A corruption of *Panaritium*.

Panda'lum. An old term for a kind of soothing pectoral lozenge.

Pandana'ceæ. A Nat. Order of the Cohort *Aiales*, being the Screw-pine order. They are palm-like trees or shrubs, with amplexicaul leaves, numerous unisexual or polygamous flowers on a spadix, numerous stamens with two- to four-celled anthers, one-celled ovary with parietal placentæ and minute embryo.

Panda'nus. A Genus of the Nat. Order *Pandanaceæ*.

P. odoratis'simus, Willd. (L. *odoratus*, fragrant.) Hab. India. A distilled water obtained from the perfumed flowers of this species is used as a stimulant and diaphoretic.

Pandarit'ium. The same as *Pandalitium*.

Pandemia. (F. *pandémie*; from πās, all; δῆμος, the people. I. *pandemia*; S. *pandemia*; G. *Pandemie*.) A disease which attacks a large number of people at the same time over an extended area.

Pandem'ic. (Πās; δῆμος. F. *pandémique*; I. *pandemico*; G. *pandemisch*.) Attacking a large number of people over a large area at one time.

Pandem'ious. The same as *Pandemic*.

Pan'demy. The same as *Pandemia*.

Pander, Heinrich Christian von. A Russian anatomist, born at Riga in 1794, died in 1865.

P.'s lay'ers. (F. *feuillets de Pander*.) The layers of the blastoderm, which he discovered in 1817.

P.'s nu'cleus. (L. *nucleus*, a kernel. G. *Pander'scher Kern*.) See under *Nucleus*.

Pander'mite. A mineral found at Panderma, on the Black Sea. It occurs in snow-white fine-grained fragments, enclosed in gypsum, lying under a formation consisting of alternating layers of brown clay and calcareous slate. Its composition is represented by the formula $2\text{CaO} \cdot 3\text{B}_2\text{O}_3 + 3\text{H}_2\text{O}$.

Pandicula'tion. (L. *pandiculus*, to stretch oneself. F. *pandiculation*; I. *pandiculazione*; S. *pandiculacion*; G. *Dehnen, Recken*.) An automatic movement of the body, consisting of the extension of the legs, the elevation and stretching of the arms, and the drawing back of the head and trunk accompanied by yawning. Such movements occur before and after sleeping; in some nervous affections; and at the accession of a paroxysm of ague.

Pandocel'um. (Πανδοκεῖον, a house for the reception of strangers.) A general hospital for all kinds of cases.

Pandocel'um. See *Pandocelium*.

Pandochi'um. (Πανδοχείον.) The same as *Pandocelium*.

Pand'urate. (F. *panduré*.) The same as *Panduriform*.

Pandurifoliate. (L. *pandura*; from Gr. πανδοῦρα, a musical instrument with three strings, of the nature of a fiddle; L. *folium*, a leaf. F. *pandurifolié*.) Having fiddle-shaped leaves.

Pandu'riform. (L. *pandura*; forma, shape. F. *panduriforme*; I. *panduriforme*; S. *panduriforme*; G. *geigenförmig*.) Fiddle-shaped.

In Botany, applied to an oblong leaf which is contracted in the middle and rounded at the base and apex.

Pan'duroïd. (Πανδοῦρα, a musical instrument with three strings; εἶδος, likeness. F. *panduroïde*; G. *geigenähnlich*.) Resembling a fiddle in shape.

Pang. (Probably a Celtic word, and originally *prang*, or *prong*. F. *angoisse*; I. *angoscia*; S. *angustia*; G. *Pein, Schmerz*.) A very sharp and acute pain.

P., breast. A synonym of *Angina pectoris*.

P., breast, suffocative. (L. *suffoco*, to choke.) A synonym of *Angina pectoris*.

P., brow. A synonym of *Hemicrania*.

Pangen'esis. (Πās, all; γένεσις, generation. F. *pangénèse*; I. *pangenesi*.) Darwin's term for the theory that within the germ of every living organism are contained the germs of all its future parts, and also the germs of all its descendants.

Pangia'ceæ. Blume's term for a part of the *Bixaceæ*.

Panhidro'sis. (Πās; ιδρώς, sweating.) General sweating over the whole body.

Panhistophy'ton. (Πās, all; ιστός, a tissue; φυτόν, a plant.) A Genus of schizomycetous *Fungi*.

P. ova'tum, Lebert. The *Micrococcus ovatus*.

Panhydro'meter. (Πās; ὕδωρ, water; μέτρον, a measure.) Mester's term for an instrument for measuring the specific gravity of any liquid.

Panhy'grous. (Πās; ὑγρός, moist.) Moistness or dampness of the whole surface.

Panhyperæ'mia. (Πās; ὑπέρ, above; αἷμα, blood.) Plethora, fulness of blood.

Panhysterec'tomy. (Πās; ὑστέρα, the womb; ἐκτομή, a cutting out.) The removal of the entire womb.

Panic. (Πανικόν, panic; from πανικός, of or for the god Πάν, Pan, who was supposed to inspire the sounds heard by night in mountains and valleys, and hence to be the cause of sudden and groundless fear; Πάν probably originally meant protector, and was derived from the Aryan root *pa*, to protect. F. *panique*; I. *panico*; S. *miedo panico*; G. *panischer Schrecken*.) Sudden, overpowering fear, occurring without known, or from insufficient, cause; it affects animals as well as men.

Panic. The name of the plants of the Genus *Panicum*, especially the *P. glaucum*.

P. grass, Ital'ian. (F. *panio d'Italie*.) The *Panicum italicum*.

Pan'icle. (L. *panicula*, a tuft; from *panus*, an ear of millet. F. *panicule*; I. *panicolo*, *panocha*; S. *panicula*; G. *Rispe*.) The form of inflorescence in which the secondary axes of a

PANICLED—PANNUS

raceme produce tertiary axes, and so on till the ultimate subdivisions bear the flowers, as in *Yucca gloriosa*.

Panicled. The same as *Paniculate*.

P. wolfsbane. The *Aconitum paniculatum*.

Paniculate. (F. *paniculé*; L. *paniculato*; S. *paniculado*; G. *rispenförmig*.) Having the flowers disposed in a *Panicle*.

Paniculiform. (L. *panicula*; forma, shape. F. *paniculiforme*; G. *rispenförmig*.) Having the form of a *Panicle*.

Panicum. (L. *panicum*, a kind of millet.) A Genus of the Nat. Order *Graminaceæ*.

P. americanum. The *Penicillaria spicata*.

P. dactylon. The *Cynodon dactylon*.

P. dichotomum. The *Pennisetum dichotomum*.

P. frumenta'ceum, Linn. (L. *frumentum*, grain.) Hab. India. Seeds used for food.

P. glaucum, Linn. (*Panic.*) Hab. Europe. Seeds used as food.

P. italicum, Linn. (F. *panio d'Italie*, millet a grappe, setaire.) The *Setaria italica*.

P. jumentorum, Linn. (L. *jumentum*, a beast of burden, especially a mule or an ass. F. *grand panic.*) Guinea grass. Used as fodder for cattle.

P. millia'ceum, Linn. (L. *milium*, millet. F. *millet ordinaire*.) Indian millet. Hab. India. Husked seeds used as food.

P. milium. The same as *P. miliaceum*.

P. pilosum, Linn. (L. *pilosus*, shaggy.) Hab. India. Seeds used as food.

Panidrosis. See *Panhidrosis*.

Panification. (L. *panis*; facio, to make. F. *panification*; I. *panificazione*; G. *Brotbereitung*.) The making of bread.

Panis. (L. *panis*, bread; from Aryan root *pa*, to feed. F. *pain*; I. *pane*; S. *pan*; G. *Brod*.) Bread.

P. biscoc'tus. (L. *biscoc'tus*, twice cooked.) Biscuit.

P. canica'ceus. The same as *Canicæ*.

P. cibari'us. (L. *ciba*, food.) Bread made from unsifted flour.

P. cuculi. (L. *cuculus*, the cuckoo.) The *Oxalis acetosella*.

P. domes'ticus. (L. *domesticus*, pertaining to the house.) Bread made from unsifted flour.

P. furfura'ceus. Brown or bran bread.

P. lotus. (*Lotus*, the Egyptian plant from the seed of which bread was made.) A kind of bread recommended by Galen and Orbasius as a diet in fevers.

P. mas'sa. Sugar-cake.

P. mi'ca. Bread crumb.

P. nauti'cus. Sea biscuit.

P. porci'nus. (L. *porcinus*, relating to swine. F. *pain de porc*; I. *pane porcino*; G. *Schweinsbrod*.) The *Cyclamen europæum*.

P. Sancti Mar'ci. (L. *sanctus*, holy; Marcus, Mark.) St. Mark's bread; made of decorticated almonds, sugar, and rose-water.

P. secundari'us. (L. *secundarius*, belonging to the second class.) Bread made of unsifted flour.

P. tos'tus. Toast.

P. triti'ceus. Wheat bread.

Pani'vorous. (L. *panis*; voro, to devour.) Subsisting on bread.

Panmix'ia. (Πᾶς, all; μίξις, a mingling;

from μίγνυμι, to mix.) A term introduced by Weissmann to describe the degeneration of organs that have become useless to the species, owing to altered external circumstances. He considers that this degeneration is not due to disease; but to the fact that natural selection exerts no influence upon the organ.

Pan'na. The *Aspidium athamanticum*. A fern used in South Africa as an anthelmintic.

P. africa'na. Syn. for *Panna*.

Pannecro'tomy. (Πᾶς; νεκρός, a dead body; τομή, section.) Dissection of the whole body.

Panneuri'tis. (Πᾶς, all; νῆρον, a nerve.) A general inflammation of the nerves.

P. epidem'ica. (Ἐπιδημία, an epidemic.) A synonym of *Beriberi*.

Pann'externe. (F. *pannexterne*; from L. *pannus*, a piece of cloth; *externus*, outward.) Mirbel's term for the outer layer of the pericarp.

Pan'ni. (L. *pannus*.) The old swathing clothes of a new-born child.

Pan'nicle. The same as *Panniculus*.

Pannic'ula. (L. *panniculus*, a small garment.) Illiger's term for the velvety covering of the growing horn of a stag.

Pann'icule. The same as *Panniculus*.

Pannic'ulus. (L. *panniculus*, a small garment; dim. of *pannus*, a piece of cloth. F. *pannicule*; I. *pannicolo*; S. *panicolo*; G. *Fleischhaut*.) A membrane.

Also, a synonym of *Pterygium*.

P. adipo'sus. (L. *adiposus*, fatty. F. *pannicule adipeux*, *p. gras*; I. *pannicolo adiposo*.) The subcutaneous areolar tissue, which contains fat.

P. carno'sus. (L. *carnosus*, fleshy. F. *pannicule charnu*; I. *pannicolo carnosus*; G. *Fleischhaut*.) A thin, subcutaneous layer of striated muscular fibres, found more or less extensively in many mammals, especially on the ventral surface, and attached to the subcutaneous areolar tissue.

P. cor'dis. (L. *cor*, the heart.) The *Pericardium*.

P. hymenæ'us. The *Hymen*.

P. vir'ginis. (L. *virgo*, a virgin.) The *Hymen*.

Pann'iiform. (L. *pannus*; forma, shape. F. *panniiforme*; G. *tuchähnlich*.) Having the appearance of cloth.

Applied by Desvaux to the structure of some lichens.

Pann'interne. (L. *pannus*; *internus*, within.) Mirbel's term for the internal layer of the pericarp.

Pannosity. (F. *pannosité*; from L. *pannus*.) Softness of skin, such that it resembles a very soft piece of thickish cloth.

Pan'nus. (L. *pannus*, a piece of cloth. F. *pannus*, *panne*; I. *panno*; G. *Augenfell*.) A vascular condition of the anterior layers of the cornea, with infiltration and thickening of the same, due partly to mechanical irritation caused by granular lids, and partly to infiltration, the result of direct infection.

Also, an irregular mark on the skin.

Also, a tent in a wound.

Also, a pledget of lint for a wound.

P. cras'sus. (L. *crassus*, thick.) A very vascular and opaque pannus.

P. hepatic'us. (Ἡπαρ, the liver.) A synonym of *Chloasma*.

P. herpet'icus. *Phlyctenular ophthalmia*

in which there are numerous vesicles which become pustular.

P. lenticular'is. (L. *lens*, a lentil.) A synonym of *Ephelis*.

P., phlycten'ular. (Φλύκταινα, a blister.) The vascularisation of the cornea by an irregular, superficial network of vessels on a hazy surface, secondary to the recurrence of multiple vascular corneal ulcers in *Phlyctenular ophthalmia*.

P. scrofulo'sus. (*Scrofula*.) *Herpes corneæ* in which the vesicles are very numerous.

P. ten'uis. (L. *tenuis*, thin.) A thin, non-vascular pannus.

P. trachomato'sus. *Pannus* consequent upon granular ophthalmia, or *Trachoma*.

P., traumati'c. (Τραυματικός, of wounds.) Pannus caused by external injury.

Pano'chia. Term for inguinal bubo, used by Fallopius, de Morb. Gall., i, 90, p. 758.

Panod'ic. (Πās, all; ὁδός, a way.) Marshall Hall's term for the capacity of nerve-force to act from any one point of the diastaltic or spinal nervous system to every other point in all directions.

Panopho'bia. (Πāv, the god Pan; φόβος, fear. F. *Panophobia*.) Sudden fear or panic, which was supposed to be inspired by Pan.

Also, the same as *Pantophobia*.

Panophthalmia. (F. *panophtalmie*.) The same as *Panophthalmitis*.

Panophthalmitis. (Πās, all; ὁφθαλμος, the eye. F. *panophtalmie*; I. *panot-talmitide*; G. *Panophthalmie*.) An inflammation of the whole of the structures of the eyeball.

P., pur'ulent. (L. *pus*.) An acute, destructive, suppurative inflammation of the eyeball. Two varieties. (1) It occurs in pyæmia, and, apparently without cause, in eyes that have been blind for a long time from glaucoma or disease of the cornea. (2) It occurs as *Traumatic panophthalmitis*.

P., traumati'c. A form of *P., purulent* secondary to penetrating wounds of the eyeball, especially those involving the ciliary region.

Panotitis. (Πās; οὖς, the ear.) Inflammation of the middle and internal ear simultaneously.

Panpho'bia. See *Panophobia*.

Panple'gia. (Πās, all; πληγή, a stroke.) General paralysis.

Pansclero'sis. (Πās; σκλήρωσις, an induration.) Complete induration of a part.

Panspermia. (Πās; σπερμά, seed. F. *panspermie*; I. *panspermia*; S. *panspermia*; G. *Panspermie*.) The physiological system according to which there are germs disseminated through all space which develop when they encounter a suitable soil.

P., atmospher'ic. (F. *panspermie atmosphérique*.) The pathological system according to which there are morbid germs disseminated through the atmosphere which are the origin of many diseases in living beings, and of all fermentations.

Pansper'mic. Relating to *Panspermia*.
Pansper'mist. A believer in the doctrine of *Panspermia*.

Pansper'mium. (Πās; σπερμά.) The chief or elementary principle of matter.

Pansper'my. See *Panspermia*.

Pansphyg'mograph. (Πās; σφυγμός, the pulse; γράφω, to write.) An instrument devised by Brondgeest, consisting of two

pairs of *Marey's tambours*. One receiving tambour is placed over the spot where the heart's impulse is felt, and the other, over a distant artery, and thus a cardiogram and sphygmogram are obtained simultaneously.

Pan'sy. (F. *pensée*, a thought; from L. *penso*, to ponder. I. *viola del pensiero*; S. *pensamiento*; G. *Stiefmütterchen*.) The *Viola tricolor*.

Pansymmet'ria. (Πās, all; συμμετρία, due proportion. F. *pansymmetrie*.) Universal symmetry.

Pantagogue. (Πās; ἄγω, to drive out. F. *gantagogue*; I. *gantagogo*; S. *gantagogo*.) The same as *Panchymagogue*.

Pantamorphia. (Πās; ἄ, neg; μορφή, form. F. *phantamorphie*.) Universal asymmetry; complete deformity.

Pantamor'phic. (Πās; ἄ; μορφή.) Generally deformed.

Pantanencepha'lia. (Πās; ἄν, neg.; ἐγκέφαλος, the brain.) The complete absence of the brain in a monstrosity.

Pantankyloblepharon. (Πās; ἀγκύλη, a thong; βλέφαρον, the eyelid.) Complete ankyloblepharon; entire adhesion of the eyelids to each other and to the eyeball.

Pantapho'bia. (Πās; ἄ, neg.; φόβος, fear.) Absolute fearlessness.

Panta'scia. (Πās; ἄ; σκιά, a shadow.) Complete absence of shadow.

Pantatroph'ia. (Πās; ἄ; τροφή, nourishment. F. *phantatrophie*.) Complete in-nutrition; general atrophy.

Panta'trophous. (Πās; ἄ; τροφή.) Without nutrition.

Panthod'ic. The same as *Panodic*.

Pantices. (L. *pantex*.) The bowels.

Pantico'sa. A health resort on the Spanish side of the Pyrenees, 5,800 feet above the sea-level. Noted for its thermal sulphur springs.

Panting. (Part of E. *pant*, M. E. *pan-ten*, of uncertain origin. F. *pan-telant*; I. *ane-lito*; G. *keichend*.) Breathing quickly and with some difficulty.

Pantæoperitto'ma. (Παντοῖος, of all sorts; περίττωμα, that which is over and above.) General overgrowth.

Panto'gamy. (Πās; γάμος, marriage. F. *gantgamie*; I. *gantgamia*; S. *gantgamia*; G. *ungebundene Geschlechtbefriedigung*.) The social condition in which each member of one sex may have sexual intercourse with anyone of the other promiscuously.

Pantoganglii'tis. (Πās, all; γάγγλιον, a nerve-knot.) A term for malignant cholera, introduced on the assumption that it was caused by inflammation of all the sympathetic ganglia.

Pantol'mius. (Πάντολμος, all-daring.) A substance, mentioned by Paulus Ægineta, which destroyed fleshy excrescences, without pain.

Pantomor'phia. (Πās; μορφή, form.) General symmetry.

Pantopela'gian. (Πās; πέλαγος, the sea. F. *gantopélagien*.) Frequenting all seas, or the whole sea; applied by Fleurien to such birds as the albatross and the stormy petrel.

Pantoperitto'sis. The same as *Pantæoperittoma*.

Panto'phagous. (Πās; φάγω. F. *gantophage*; G. *allesfressend*.) Using indiscriminately all kinds of food.

Panto'phagy. (Πās; φάγω, to eat.

PANTOPHOBIA—PAPAVERIS CAPSULÆ

F. pantophagie. The capacity of eating and enjoying all sorts of food.

Pantophobia. (Παντοφόβος, all-fearing; from πᾶς; φόβος, fear. *F. pantophobie*; *I. pantofobia*; *S. pantofobia*; *G. Furchtsamkeit.*) A form of monomania characterised by causeless or excessive terror.

Also, a synonym of *Hydrophobia*.

Pantophobic. (Πᾶς; φόβος. *F. pantophobique.*) Relating to *Pantophobia*.

Pantophobous. (Παντοφόβος, all-fearing.) Afflicted with *Pantophobia*.

Pantoplethora. (Πᾶς; πληθώρα, fulness.) General fulness of the blood-vessels.

Pantozoötia. See *Panzoötia*.

Panus. (*L. panus*, the thread wound upon a shuttle, a swelling.) A non-suppurating, but inflamed, subcutaneous lymphatic gland.

P. faucium. (*L. fauces*, the throat.) Inflamed and swollen glands in the mouth and throat.

P. inguinalis. (*L. inguen*, the groin.) The same as *Bubo*.

Pan'grous. (Πᾶς, all; ὑγρός, moist. *F. panygre.*) Universally perspiring.

Panzoötia. (Πᾶς; ζῷον, an animal.) A disease affecting a large number of animals over a considerable tract of country.

Panzoötic. Relating to *Panzoötia*.

Also, the same as *Panzoötia*.

Pao pereiro. The *Geissospermum Vellosii*. See *Pereiro bark*.

Pap. (Mid. E. *pappe*; Old Swed. *pap*, the breast. *F. mamelle*; *G. Brustwarze.*) The nipple of the female breast or udder, or anything resembling it.

Also (*F. bouillie*; *G. Brei, Kinderbrei*), soft, pulpy food for children.

P. of the throat. The *Uvula*.

Papa'in. (*F. papaine*; *I. papaina.*) A preparation from the juice of the *Papaw*. A whitish, amorphous powder, containing a proteolytic ferment, which differs from *Pepsin* in being active in an alkaline or neutral as well as in an acid solution. Used in dyspepsia with gastric fermentation. It is given in doses of 1 to 8 grains, suspended in water.

P. elix'ir. Extra Pharm. Given in doses of 1 drachm with meals.

P. et cocaïnæ trochis'ci. Extra Pharm. Each containing one fifth grain of *Papain* and one tenth grain of *Cocain*.

P. glyceri'num. Extra Pharm. *Papain* dissolved in glycerin, slightly acidulated with hydrochloric acid. Dose, 1 drachm.

P., pigment of. Extra Pharm. Has been used mixed with borax and water, in the proportion 12 grains of the pigment, 5 grains of borax, and 2 drachms of water, for the removal of warts, and also to dissolve false membrane in diphtheria.

P. trochis'ci. Extra Pharm. Dose, half a grain.

Pap'arch. The *Momordica charantia*.

Papas america'nus. The *Solanum tuberosum*.

Papa'ver. (*L. papaver*, the poppy.) A Genus of the Nat. Order *Papaveraceæ*.

P. al'bum, Linn. (*L. albus*, white.) A variety of *P. somniferum* with white seeds.

P. argemo'në, Linn. (Αργεμώνη, a kind of poppy.) Long-headed bastard poppy. Hab. Europe. Leaves applied to inflamed parts; yellow juice used in the treatment of corneal opacities.

P. cerea'lë. (*L. cerealis*, relating to corn.) The *P. rhæas*.

P. cornicula'tum. (*L. corniculum*, a little horn.) The *Chelidonium majus*.

P. errat'icum. The *P. rhæas*.

P. errat'icum cap'itë oblon'go his'pido. (*L. erraticus*, wandering; *caput*, the head; *oblongus*, oblong; *hispidus*, shaggy.) The *P. argemone*.

P. errat'icum majus. (*L. erraticus*; *major*, greater.) The *P. rhæas*.

P. horten'së, Bauhin. (*L. hortensis*, belonging to a garden.) The *P. somniferum*.

P. lu'teum. (*L. luteus*, yellow.) The *Chelidonium majus*.

P. ni'grum. (*L. niger*, black.) A variety of the *P. somniferum* with black seeds.

P. officina'lë, Gmelin. (*L. officina*, a shop.) The *P. somniferum*.

P. rhœ'as, Linn. (Ροιὰς, a kind of poppy. *F. coquelicot*; *I. papavero selvatico*; *S. ababol*; *G. Klatschrose.*) The red poppy or corn rose. Hab. Europe. Petals, said to be slightly anodyne, used as a colouring agent in medicine.

P. ru'brum. (*L. ruber*, red.) The *P. rhæas*.

P. somni'ferum, Linn. (*L. somnus*, sleep; *fero*, to bear. *F. pavot blanc*, *p. des jardins*; *I. papavero*; *S. adormidera*; *G. Mohn, Gartenmohn.*) The white poppy. Hab. Europe, originally, Asia. Supplies *Opium*.

Papavera'ceæ. (*L. papaver*, a poppy.) A Natural Order of the flowering plants in the division *Thalamifloræ*. They are herbs, with regular flowers having two sepals, and, usually 4, hypogynous, free petals. The stamens are hypogynous, free, and indefinite. The carpels are united, and the ovules have a parietal placentation. Fruit, a capsule, and generally opening by valves.

Papavera'ceous. (*L. papaver. F. papaveracë*; *G. mohnartig.*) Relating to, or like, the *Papaveraceæ*.

Papavera'ceum. (*L. papaver.*) An opiate.

Papaver'culum. (*L. papaver.*) A synonym of *Meconin*.

Papaver'ic. (*L. papaver. F. papaverique.*) Relating to the *Papaver*.

P. ac'id. (*F. acide papaverique.*) $C_{16}H_{13}NO_7$. An acid obtained by oxidation of *Papaverin* by means of potassium permanganate. It occurs in microscopic crystals, melting at 233° F., and breaking up into carbonic acid and pyropapaveric acid. These crystals are soluble in strong tartaric acid, amyl alcohol, and very dilute hydrochloric acid.

Papa'verine. $C_{20}H_{21}NO_4$. (*F. papavérine*; *I. papaverina.*) One of the alkaloids present in *Opium*. Discovered by von Merck in 1848. It possibly acts like *Morphine*.

Also, the name was formerly given to what is now known as *Codein*.

Papa'veris capsulæ. B. Ph. (*L. capsula*, a small box.) The capsules, gathered when nearly ripe, and dried, of the *Papaver somniferum*, grown in Britain. Globular or somewhat oblong capsules, yellowish-brown, sometimes with black spots. The stigmata are set upon them in a stellate manner. Internally are arranged the thin parietal placentæ. The seeds, many in number, are small and reniform, and vary in colour from light grey to nearly black. The capsules contain a small quantity of opium. Preparations: *Decoctum*, *Extractum*, and *Syrupus* (q. v.).

Papaw'. The fruit of the *Carica papaya*.

P. tree. The *Carica papaya*.

Papa'ya. See *Carica papaya*.

Papaya'ceæ. A Tribe of the *Passifloraceæ*, containing the Genera *Carica* and *Jacaratia*.

Pap'per, acetate of lead. Filter paper soaked in a solution of acetate of lead, and dried. Used in chemical testing.

P., antirheumat'ic. See *Charta antirheumatica*.

P., arsen'ical. *Arsenical cigarettes.* Prepared by soaking a sheet of white paper in sodium arseniate, 1 part; distilled water, 30 parts. This sheet of paper is then dried, and divided into 20 equal parts, each of which is to contain 5 centigrammes of the arseniate (Fr. Codex).

P., bib'ulous. See *Bibulous paper*.

P. birch. The *Betula papyracea*.

P., blis'tering. The *Charta cantharidis*, *C. epispastica*, B. Ph.

P., caut'erizing. (F. *papier à cautères*.) *Charta ad cauteris.* Paper spread over with a mixture of Venice turpentine, Burgundy pitch, and wax (Fr. Codex).

P., chem'ical. (F. *papier chimique*.) *Charta chemica.* Tissue-paper that has been rendered impermeable by a mixture of 100 parts of linseed oil, 10 of garlic, 80 of oil of turpentine, 40 of ferric oxide, and 15 of lead carbonate that has been pounded up with oil. Over the paper thus prepared a plaster is then spread, composed of 200 parts of olive oil, 100 of red lead, and 6 of yellow wax (Fr. Codex).

P., fil'ter. See *Filter paper*.

P., hygrometric. (G. *Papierhygrometer*.) Blotting-paper, soaked in an aqueous solution of cobalt chloride, sodium chloride, gum arabic, and glycerin or calcium chloride, and afterwards dried. In damp air this paper appears pink, in very dry air blue, and in intermediate conditions of the air as regards moisture, some intermediate colour.

P., lit'mus. (F. *papier Joseph*.) See *Litmus paper*.

P., medicated. See *P., arsenical*, *p., nitre*, and *p., ozone*.

P., mus'tard. The *Charta sinapis*, B. Ph.

P., nitre. (F. *papier nitré*.) *Charta nitrata.* Prepared by saturating blotting-paper with a solution of nitre, and afterwards drying it. Made of three strengths: 30, 40, and 60 grains to the ounce. Used in asthma. The papers are burnt, and the fumes inhaled.

P., o'zone. Paper saturated with a mixture of chlorate and nitrate of potassium. Used in the same way as *P., nitre*.

P., ozonomet'ric. See *Ozonometer*.

P., parch'ment. Prepared by immersing unsized paper in a cold mixture of 2 parts of strong sulphuric acid to 1 of water, by which it is converted into amyloid material, then thoroughly washing in water, and finally, in weak ammonia. Parchment paper is translucent and waterproof; it may be boiled in water without disintegration, and it is much stronger than ordinary paper. It is used for tying over preserves, for luggage labels, and for making dialysers.

P., sen'sitized. Paper that has acquired the property of becoming readily changed in colour under certain conditions, or by the action of certain reagents, by being previously satu-

rated with a solution of a salt of silver, gold, platinum, palladium, or iridium.

P., sin'apised. The *Charta sinapis*, B. Ph.

P., tur'meric. See *Turmeric paper*.

Papilion'a'ceæ. (L. *papilio*, a butterfly.) A Sub-order of the Leguminosæ. Leaves stipulate, often terminating in tendrils; flower perfect, some species have a resemblance to a butterfly; calyx five-toothed, corolla composed of five petals inserted in the base of the calyx, free, the posterior called the standard, embracing the two alæ or wings, within which are the two adnate anterior petals forming the keel. Stamens ten. Fruit, a pod, opening in two valves.

Papilion'a'ceous. (L. *papilio*. F. *papilionacé*; I. *papilionaceo*; S. *papilionaceo*; G. *schmetterlingsartig*.) Resembling a plant of the *Papilionaceæ*. Also, resembling a butterfly.

Papilla. (L. *papilla*, a nipple. F. *papille*; I. *papilla*; S. *papila*; G. *Warze*.) The Nipple.

Also, anything resembling a nipple, as the papillæ of the tongue, or the conical projections on the pollen-grains of plants.

Also, a diminutive of *Papula*.

P. acus'tica basilar'is. The same as *Corti*, organ of.

P. basilar'is. The same as *Corti*, organ of.

P., conges'tion. (Also called *Choked disc* and *Engorged papilla*. F. *papille engorgée*; I. *papilla delti stasi*; G. *Stauungspapille*.) A term less used now than formerly to indicate a *Papillitis* or *Optic neuritis*, in which there is great congestion and œdema of the disc. All cases of inflammation of the *Optic disc* are now usually designated *Papillitis*.

P., denti'nal. See *Papilla, dental*.

P. duode'ni. Situated about four inches below the pylorus, on the inner and posterior part of the duodenum, and immediately below one of the valvulæ conniventes. At its apex is the common orifice of the biliary and pancreatic ducts.

P., engorged'. The same as *P., conges-tion*.

P., hair. See *Hair papilla*.

P., lach'rymal. See *Lacrymal papilla*.

P. mam'mæ. (L. *mamma*, the female breast.) The nipple.

P. ner'vi opt'ici. The *Disc, optic*.

P., op'tic. The *Disc, optic*.

P. palati'na. (L. *palatum*, the palate.) An eminence on the palate immediately behind the anterior palatine foramen.

P. pi'lli. (L. *pilus*, a hair.) The *Hair papilla*.

P. re'nis. (L. *ren*, the kidney.) See *Kidney, papilla of*.

P. saliva'lis bucca'lis. (L. *saliva*; *bucca*, the cheek.) An eminence upon the inner side of the cheek opposite the second molar tooth, at the apex of which Stenson's duct terminates.

P. saliva'lis infe'rior. The sublingual caruncle.

P. saliva'lis supe'rior. The *P. salivalis buccalis*.

P. semilunar'is. (L. *semi*, half; *luna*, the moon.) The *Crista acustica*.

P. sublingua'lis. (L. *sub*, under; *lingua*, the tongue.) The sublingual caruncle.

P. umbilica'lis. (L. *umbilicus*, the navel.) The stump of the umbilical cord at the bottom of the navel.

Papillæ. Nominative plural of *Papilla*.

PAPILLARIS—PAPILLARY

P. arcua'tæ. (L. *arcuatus*, bent; from *arcus*, a bow.) The same as *Papillæ filiformes*.

P. calyciformes. (L. *calyx*, a cup; *forma*, likeness.) The *P. circumvallatæ*.

P. capita'tæ. (L. *caput*, the head.) The *P. circumvallatæ*.

P. circumvalla'tæ. (L. *circum*, around; *vallum*, a rampart.) The circumvallate papillæ of the tongue. They are a series of elevations of the mucous membrane of the tongue arranged in a row on the dorsum, forming a V-shaped figure at the apex of which is the foramen cæcum. Each elevation is surrounded by a circular depression or trench, around which there is an annular elevation. Taste-buds are abundant on the adjacent sides of the trench, and the ducts of glands frequently open into it.

P. clava'tæ. (L. *clavus*, a club.) The fungiform papillæ of the tongue.

P. conicæ. (Kῶνος, a cone.) The conical papillæ of the tongue. These are the most numerous, and are arranged in rows covering the whole of the dorsum of the tongue, except where circumvallate or fungiform papillæ occur. They are conical or cylindrical processes of mucous membrane. The secondary papillæ are often elongated, with the epithelium over them much thickened, so that the summit of the papillæ is beset by thread-like processes. These are often called filiform papillæ.

P. coralliformes. (L. *corallum*, red coral; *forma*, likeness.) The filiform papillæ.

P. cor'il. (L. *corium*, skin.) The papillæ of the corium. See *Skin, papillæ of*.

P. cutis. (L. *cutis*, the skin.) The papillæ of the skin. See *Skin, papillæ of*.

P., dental. (L. *dens*, a tooth.) Small elevations of vascular embryonic tissue appearing about the eighth week of intra-uterine life, which are surrounded by the enamel organ. The papillæ and the enamel organs in relation with them develop into the temporary teeth. See *Teeth*.

P. filiformes. (L. *filum*, a thread; *forma*, likeness.) The filiform papillæ of the tongue. They are a variety of the *Papillæ conicæ*.

P. folia'tæ. (L. *folium*, a leaf.) An organ found at each side of the base of the tongue in the rabbit and kindred species, consisting of folds of mucous membrane, on the adjacent sides of which taste-buds are very numerous. In man, an area presenting five longitudinal folds also containing taste-buds, situated in front of the anterior pillar of the fauces, is considered to be homologous with the papillæ foliatæ of the rabbit.

P. fungiformes. (L. *fungus*; *forma*, a likeness.) The fungiform papillæ of the tongue. They are round or club-shaped elevations of a deep red colour, which are most abundant at the tip and sides of the tongue. Many of them possess taste-buds.

P. gustus. (L. *gustus*, a tasting.) The gustatory papillæ of the tongue, which are principally the fungiform and circumvallate papillæ.

P., hemispher'ical. (ἡμισφαίριον, half; σφαῖρα, a ball.) These are papillæ which have a rounded summit and are hemispherical when viewed sideways. They are a variety of the conical papillæ. See *Papillæ conicæ*.

P. interocular'es. (L. *inter*, between; *loculus*, a little place, dim. of *locus*.) The same as the *Papillæ foliatæ*.

P. lachryma'lis. See *Lacrimal papilla*.

P. lenticular'es. (L. *lenticula*, dim. of *lens*, a lentil.) The *Papillæ circumvallatæ*.

P. lin'guæ. (L. *lingua*, the tongue.) See *P. of tongue*.

P. maximæ. (L. *maximus*, greatest.) The *P. circumvallatæ*, which are the largest papillæ of the tongue.

P. me'diæ. (L. *medius*, the middle.) The *P. fungiformes*, which are intermediate in size between the circumvallate and conical papillæ.

P. min'imæ. (L. *minimus*, least.) The *P. conicæ*, which are the smallest of the papillæ of the tongue.

P. mino'res. (L. *minor*, less.) The *P. conicæ*.

P. mucosæ. A name given to the *P. circumvallatæ*.

P. ner'veæ. (L. *nervus*, a nerve.) The *Pacinian bodies*.

P., nerv'ous. (L. *nervus*. F. *papilles nerveuses*; I. *papille nervosi*; G. *Warzen nervöse*.) The papillæ which contain Pacinian bodies.

P. obtu'sæ. (L. *obtusus*, blunt.) The *Papillæ fungiformes*.

P. of kid'ney. See *Kidney, papillæ of*.

P. of mu'cous mem'branes. Minute processes of the corium, covered by epithelium, which contain nerves and loops of capillary vessels. They are best seen in the tongue.

P. of skin. See *Skin, papillæ of*.

P. of tongue. Small elevations found over the anterior two thirds of the dorsum of the tongue, of which there are three varieties: circumvallate, fungiform, and conical papillæ. See *P. circumvallatæ*, &c.

In addition to those which are visible to the naked eye, there are secondary papillæ of minute size covering the tongue, which correspond to the papillæ of the skin, and receive each a nerve and a loop of capillary vessels.

P. petiola'tæ. (*Petiole*, botanical term for leaf stalk; from L. *petiolus*, a little foot.) The *P. circumvallatæ*.

P. pyramida'les. (Πύραμις, a pyramid.) The *P. conicæ*.

P. rena'les. See *Kidney, papillæ of*.

P. re'num. (L. *ren*, the kidney.) See *Kidney, papillæ of*.

P. semilenticular'es. (L. *semi*, half; *lenticula*, dim. of *lens*, a lentil.) The fungiform papillæ.

P. tac'tus. (L. *tactus*; from *tango*, to touch.) The tactile papillæ of the skin. A term applied to those papillæ which possess tactile corpuscles, and which generally do not receive special blood-supply. They are concerned in the perception of touch.

P. trunca'tæ. (L. *truncatus*; from *trunco*, to cut off.) The circumvallate papillæ of the tongue.

P. valla'tæ. (L. *vallum*, a rampart.) See *P. circumvallatæ*.

P., vas'cular. (L. *vasculus*, a little vessel.) Papillæ of the skin which contain capillary blood-vessels, but no tactile corpuscles.

P. villo'sæ. (L. *villosus*, shaggy.) The filiform papillæ of the tongue.

Papillar'is. The same as *Papillary*.

P. her'ba. (L. *herba*, green grass.) The *Lapsana communis*.

Papill'ary. (F. *papillaire*; from L. *papilla*, a nipple. I. *papillare*; S. *papilar*; G.

PAPILLATE—PAPULE

warzig.) Resembling a nipple; relating to the nipple.

P. bod'y. The Skin, papillary layer of.

P. caruncles. (L. *caruncula*, a little piece of flesh.) The Kidney, papilla of.

P. muscles. See *Musculi papillares*.

P. tu'mour. (L. *tumor*, a swelling.) See *Papilloma*.

Papillate. (L. *papilla*. F. *papillé*; G. *warzig*.) Having papillæ, as the stigmata of *Lactuca*.

Papillated. (L. *papilla*.) Covered with papillæ.

Papil'iform. (L. *papilla*; *forma*, shape. F. *papilliforme*; G. *warzenförmig*.) Having the appearance of a papilla or nipple.

P. em'incences. Small elevations upon the wall of the membranous labyrinth of the ear.

Papillo'ma. (L. *papilla*. F. *papillome*; G. *Papillom*.) A tumour of the skin or mucous membrane, which consists of a hypertrophy of a papilla, and is generally covered with a layer of thickened epidermis or epithelium. Papillomata upon mucous surfaces are found in the mouth, the lower part of rectum, in the bladder, and on the conjunctiva. Upon the skin, the papillomata include several diverse conditions; corns, warts, condylomata, and the warty growths in gonorrhœa. They are non-malignant, and are composed entirely of a hypertrophy of the normal elements of the tissues from which they develop.

P. diffu'sum. (L. *diffusus*, wide, extended; from *diffundo*.) Multiple and diffuse papillomata which appear on the legs and buttocks. They may be fused into extensive masses of hypertrophied skin.

P., mu'cous. (Μύκος, slime.) The form of papilloma which appears on mucous surfaces.

P., neuropath'ic. (Νεύρον, a nerve; πάθος, suffering. G. *Nervennävus*.) A term applied by Gerhard to the cases in which papillomatous growths appear limited to the area of distribution of a nerve filament.

P. neuroticum. A peculiar disease allied to warts, in which papillomata, made up of hypertrophied papillæ covered with horny epidermis, appear over various parts of the skin. Those occurring on the back and sides have been found to follow the course of the cutaneous spinal nerves. There is no pain associated with them.

P. zymot'icum. See *Yaws*.

Papillose. (L. *papillosus*. F. *papilleux*.) Syn. of *Papillated* and *Papillous*.

Papillous. (L. *papilla*. F. *papilleux*; G. *warzig*.) Beset with papillæ.

Papin, Denis. A French physician, born in 1647, died in 1714.

P.'s diges'ter. (F. *digesteur de Papin*, *marmite de Papin*.) See *Digester*.

Pap'meat. Another name for *Pap*.

Papoose'. The word for an infant among the North American Indians.

P. root. The *Carulophyllum thalictroides*.

Pappea. (Karl Pappe, a Leipzig botanist.) A Genus of the Nat. Order *Sapindaceæ*.

P. capen'sis. Occurs in Caffreland as a small tree. The fruit, called the *Wild plum*, yields a kind of wine by fermentation, and also vinegar. The kernel contains an oil which has, when taken internally, a slightly purgative action; externally, this oil has been used as an application for *Tinea tonsurans*.

Pappi'ferous. (L. *pappus*, the woolly, hairy seed of certain plants; *fero*, to bear. F. *pappifère*; G. *federchenträgend*.) Bearing *Pappus*.

Pap'piform. (L. *pappus*; *forma*, shape. F. *pappiforme*; G. *federchenförmig*.) Having the appearance of *Pappus*.

Pappo'phorous. (Πάππος, the down on certain seeds; *φορέω*, to bear. F. *pappophore*; G. *federchenträgend*.) Bearing tufts of down, or *Pappus*.

Pap'pose. (Πάππος.) Covered with *Pappus*.

Pap-pox. Syn. of *Cow-pox*.

Pap'pus. (L. *pappus*; Gr. *πάππος*, seed-down. F. *pappe*, *aigrette*; I. *pennachino*; G. *Federchen*, *Samenkrone*.) Thistle-down. The hair-like appendages of the fruit in many *Compositæ* which assist in the dissemination of the seed.

Also, the downy hair of the skin and cheeks.

P. america'nus. The *Solanum tuberosum*.

Pappy. Like *pap*, succulent.

Pap'ula. See *Papule*.

P. a'gria. The same as *Lichen agrius*.

P. fera. (L. *ferus*, wild.) The same as *Herpes exedens*.

Also applied to *Lupus vulgaris* and *Lichen agrius*.

P. lenticular'is. The same as *Fever*, *lenticular*.

P. miliar'is. The same as *Miliary fever*; also, *Sudamina*.

P. milifor'mis. (L. *milium*, a millet seed; *forma*, shape.) The same as *Sudamina*.

P. typho'sa. The rose spots of enteric or typhoid fever.

Pap'ulæ. Nominative plural of *Papula*. A term for *Lichen*.

P. Celsi. Celsus describes two kinds of papules, the one being small and easily cured, and the other called *Agria*. His treatment for the former kind was to rub them daily with "jejuna saliva." See *Papula agria*.

P. sic'cæ. (L. *siccus*, dry.) A synonym of *Lichen*.

P. sudora'les. (L. *sudor*, sweat.) The same as *Sudamina*.

P. sudor'is. (L. *sudor*.) The same as *Miliary fever*; also, *Sudamina*.

Papular. (L. *papula*, a pimple.) Belonging to, or resembling, a *Papule*.

P. ac'në. See *Acne punctata*.

P. ec'zema. See *Eczema papulosum*.

P. syph'ilide. See *Syphilide*.

P. urticar'ia. See *Lichen urticatus*.

Papula'tion. (F. *papulation*; from L. *papula*.) The stage at which the formation of papules occurs in some eruptive diseases.

Pap'ule. (L. *papula*, a pimple; a diminutive from a base *pap*, to swell. F. *papule*; I. *papula*; S. *papula*; G. *Papel*, *Knötchen*.) A small, solid, somewhat acuminate swelling of the skin, varying in size from a pin's head to a pea. The minute anatomy and pathology of papules are very various; they may be inflammatory and due to a local hyperæmia and exudation which may break down or be absorbed; they may be due to local hypertrophy of the superficial layers of the epidermis around a hair-follicle; or they may be developed in connection with a sebaceous gland, accompanied by accumulation of sebaceous matter. In some cases, papules may be associated with a local hæmorrhage, as in *Purpura papulosa*.

PAPULIFEROUS—PARABOLA

Also, in Botany, De Candolle's term for such structures as the sessile glands on the *Mesembryanthemum crystallinum*, which consist of one secreting cell lying above the epidermis.

P., hypertrophic. A form of *P.*, mucous sometimes present in syphilis, in which there occurs a great increase in size, giving rise to warty growth. These are sometimes called vegetating papules.

P., moist. The same as *P.*, mucous.

P., mu'cous. A form of papule occurring in regions where folds of skin come into contact, especially where there are abundant sweat or sebaceous glands. They are common over the nates, perinæum, and axillæ. They vary in size. The surface is moist, and covered with a mucoid secretion. See also *Condyloma*.

P., neuropath'ic. (G. *Nervennävus*, Gerhardt.) A form of nævus, the distribution and extent of which corresponds to that of a cutaneous nerve.

P., squa'mous. A papule in which there is desquamation of the superficial layers of epidermis over the surface. Squamous papules are common in syphilis.

Papuliferous. (L. *papula*; *fero*, to bear. F. *papulifère*.) Bearing papules, as the *Mesembryanthemum crystallinum*.

Pap'ulose. (L. *papula*. F. *papuleux*; S. *papuloso*; G. *papulös*.) Having, or covered with, papules.

Pap-wort. A name for *Dog's mercury*.

Papyra'ceous. (*Papyrus*. F. *papyracé*; I. *papyraceo*; S. *papyraceo*; G. *papierartig*.) Like paper in texture and thinness.

P. bone. A term for the ethmoid bone, and especially its outer part.

P. fœ'tus. See *Fœtus*, *papyraceous*.

Papyrif'eous. (L. *papyrus*; *fero*, to bear. F. *papyrifère*; G. *papiertragend*.) Bearing paper or something resembling paper, as the bark of *Betula papyrifera*.

Papyrine. (L. *papyrus*. F. *papyrin*; G. *papierartig*.) Resembling paper.

Papyrus. (L. *papyrus*; Gr. *πάπυρος*.) The paper-reed, *Cyperus papyrus*.

Also, the writing-paper of the ancients, which was made from this reed by cutting the pith into strips, wetting these, and pressing them together.

Also, rope made from this reed.

P. antiquo'rum. The paper of the ancients. See *Papyrus*.

Pa'quelin's cau'tery. See *Thermocautery*.

Par. (L. *par*, equal, a pair. F. *paire*; I. *pajo*; S. *par*; G. *Paar*.) A pair.

P. nervo'rum. (L. *nervus*, a nerve.) A pair of nerves.

P. no'nus. (L. *nonus*, the ninth.) The two hypoglossal nerves.

P. op'ticum nervo'rum. The two optic nerves.

P. pri'mum nervo'rum cer'ebr'i. (L. *primus*, first; *nervus*, a nerve; *cerebrum*, the brain.) The two olfactory lobes.

P. quar'tum nervo'rum. (L. *quartus*, fourth.) The two trochlear nerves.

P. quin'tum nervo'rum. (L. *quintus*, fifth.) The two trigeminal nerves.

P. secun'dum nervo'rum. (L. *secundus*, second.) The two optic nerves.

P. sept'imum nervo'rum. (L. *septimus*, seventh.) The two facial nerves.

P. ter'tium nervo'rum. (L. *tertius*, third.) The two oculo-motor nerves.

P. trigem'inum nervo'rum. (L. *trigeminus*, three born at a birth.) The two trigeminal nerves.

P. triumfuniculo'rum nervo'rum. (L. *tres*, *trium*, three; *funiculus*, a cord.) The two trifacial nerves.

P. va'gum nervo'rum. (L. *vagus*, wandering.) The two pneumogastric nerves.

P. viso'rium nervo'rum. (L. *visor*, one who sees.) The two optic nerves.

Para. (Παρά, beside.) A prefix applied to substitution-products of certain derivatives of benzene, to express the supposed arrangement of the atoms in the molecule. When two radicals are substituted for two of the hydrogen atoms in a benzene molecule, so that they are on opposite angles of the benzene-ring, they are said to be in the para- position. See also *Benzene*.

The abbreviations two *para*, three *para*, &c. (L. *pario*, to bring forth), are used to indicate the number of children a woman has borne.

See also *Multipara*, *Primipara*.

P. cress. The *Spilanthes oleracea*.

P. nut. The fruit of *Bertholletia excelsa*. It contains crystalloids, which are compounds of proteid with magnesia, soda, &c.

P. sarsaparilla. A mealy sarsaparilla root from Rio Negro, or Brazil.

Para-anæsthe'sia. (Παρά, beside; άν, without; αίσθησις, feeling.) Anæsthesia of both sides of the body.

Parabanic acid. (F. *acide parabanique*; I. *acido parabanico*; S. *acido parabanico*; G. *Parabansäure*.) C₃H₂N₂O₃. A dibasic acid, produced by the action of nitric acid on uric acid. It crystallizes in colourless prisms, which dissolve readily in water. When boiled with dilute acids it is converted into urea and oxalic acid; hence it is sometimes called *Oxalyl urea*.

Parablast. (*Parablasta*. F. *parablaste*; I. *parablasto*; G. *Nebendotter*.) 1. A special layer of the mesoblast described by His, and believed by him to be the origin of both vascular and connective tissue. It appears to arise at the peripheral portion of the blastoderm from the cells of the germinal wall. 2. The nutritive yolk, as distinguished from the formative yolk, or archiblast.

Parablas'ta. (Παρά, alongside of; βλαστός, a sprout. F. *parablaste*.) A sucker or offshoot.

Also, Eisenmann's term for a disease which is accompanied by anatomical changes in the tissues.

Parablas'tic. Pertaining to the *Parablast*.

P. cells. His maintains that the blood-vessels, blood, and connective-tissue are not developed from true mesoblastic cells, but from certain wandering cells from the margin of the blastoderm between the epiblast and the hypoblast, derived from the elements of the white yolk outside the position of the embryo. These wandering cells he terms *parablastic*, in contradistinction to the *archiblastic cells*, which belong to the three embryonic layers.

Parableps'is. (Παράβλεψις, a looking askance.) False vision.

Parableps'y. The same as *Parablepsis*.

Para'bola. (Παραβολή, a placing beside; from παραβάλλω, to throw beside. F. *parabole*;

PARABOLANUS—PARACENTESIS

I. parabola; **S. parabola**; **G. Parabel**.) The conic section which has its axis parallel to the side of the cone.

Parabol'anus. (Παράβολος, venture-some. **F. parabolaïn**; **I. parabolano**; **S. parabolano**; **G. Parabolane**.) Term used during the 3rd, 4th, and 5th centuries for one who devoted himself to attendance on the sick, as a lay assistant to the clergy, and particularly during the time of epidemics and of plague.

Parabol'ic. (Παραβολή. **F. parabolique**; **I. parabolico**; **S. parabolico**; **G. parabolisch**.) Relating to, or like, a *Parabola*.

In Botany, applied to oblong leaves which are rounded at each extremity and become narrower from base to summit.

P. illuminator. A parabolic mirror used to form a black ground illuminator for microscopic specimens. See under *Illuminator*.

P. spec'ulum. See under *Speculum*.

Parabromacetan'ilide. $C_6NH(C_2H_3O)H.HBr.H_2$. Antiseptin. A substance prepared by treating parabromaniline with excess of acetyl chloride, washing with water, and then dissolving in alcohol and recrystallizing out. It crystallizes in large, many-faced prisms; slightly soluble in hot water, soluble in alcohol.

Parabu'llia. (Παρά, aside; βουλή, will.) Leupoldt's term for a mental affection consisting in disturbance of the will capacity.

Parabux'ine. $C_{24}H_{48}N_2O$. An alkaloid obtained from the bark of *Buxus sempervirens*.

Parabys'ma. (Παράβυσμα, stuffing.) Term employed by Good (as Genus iv of Order *Splanchnica*) for a localised swelling of the abdomen from indurated enlargement of one of the chylipoietic viscera; divided into *P. hepaticum*, *P. splenicum*, &c.

P. lie'nis. (L. *lien*, the spleen.) Engorgement of the spleen.

P. mesenter'icum. The same as *Tabes mesenterica*.

Parabys'tia. (Παράβυστος, stuffed in.) The same as *Parabysma*.

Paracanth'oses. (Παρά; ἄκανθα, a prickle; from ἀκή, a point or edge.) Term for diseases associated with morbid growth of the prickle-cell layer of the skin.

Par'acarp. (Παρά, beside; καρπός, fruit. **F. paracarpe**; **I. paracarp**; **S. paracarp**; **G. Afterfrucht**.) Link's term for an aborted ovary and for that which in male flowers, by abortion, takes the place of an ovary.

Paracar'pium. The same as *Paracarp*.

Paracary. A name for the *Peltodon radicans*.

Paraca'sein. *Gluten-casein*.

Paracellulose. (Παρά; cellulose.) A variety of *Cellulose*, occurring in the cellular tissue of the wood and in the pith of plants. It is characterised chemically by being insoluble in Millon's reagent, except after heating to 140° F. for several hours.

Paracels'ian. Of, or belonging to, or a follower of, *Paracelsus*.

Paracel'sist. The same as *Paracelsian*.

Paracel'sus. A famous physician, who was born in 1493, practised in Basle, Alsace, and afterwards in Switzerland, and died in 1541 in Salzburg. Although ignorant of physiology and anatomy, he practised medicine with comparative success, having accumulated a store of ideas and observations in the course of wide travel. He

used opium, antimony, and mercury largely, and was the first to administer mercury in syphilis.

Paracente'sis. (Παρακέντησις, a tapping for dropsy; a couching for cataract. **F. paracentèse**; **I. paracentesi**; **S. paracentesis**; **G. Anstechen, Abzapfung**.) The operation of tapping or making an opening into a cavity for the removal of fluid contained therein.

P. abdom'inis. (L. *abdomen*, the belly. **F. paracentèse abdominale**; **G. Bauchstich**.) The operation of tapping the peritoneal cavity for the removal of free fluid in *Ascites*; in very rare cases, tapping for the outlet of free gas from the peritoneal cavity. It is performed with a trocar and cannula, and the spot chosen for the puncture is in the linea alba, midway between the umbilicus and pubes.

There are certain points of great importance which must be attended to. (1) The trocar and cannula and the surface of the patient's abdomen must be most carefully cleaned and rendered completely aseptic. (2) The bladder must be emptied just before the operation. (3) The region in which the puncture is to be made must be percussed and be made out to yield an absolutely dull note. (4) The position of the patient must be carefully arranged, in order that, firstly, the fluid shall gravitate into that part of the abdomen where the cannula is to be inserted; and, secondly, the patient shall be supported and not sitting upright, so that the danger of syncope may be avoided. (5) A many-tailed bandage should be arranged in position and gradually drawn together and fastened, so as to keep up uniform gentle pressure as the fluid runs away.

Dr. Reginald Southey employs a very fine cannula, perforated by several lateral openings and fitted with a small metal shield to keep it fixed in position after insertion. On to the external end of the cannula, which is bulbous in shape, a long rubber tube is fitted to convey away the fluid. The point of the trocar is thrust through the rubber tube into the cannula and, on its being withdrawn after puncture of the abdomen, the valve-like opening thus made in the india-rubber closes up at once. The advantages Dr. Southey claims for his method are (1) simplicity, (2) painlessness, (3) avoidance of the danger of syncope, and (4) the doing away with the necessity of an abdominal bandage.

P. cap'itis. (L. *caput*, the head.) The operation of tapping one of the lateral ventricles of the cerebrum through the anterior fontanelle, in *Chronic hydrocephalus*. A very fine trocar is used. It is pushed through the anterior fontanelle, just to one side of the middle line, to avoid the longitudinal sinus, its direction being obliquely towards one side, so as to hit off the lateral ventricle. A vacuum should not be produced till the needle has been passed far enough to reach the ventricle.

P. cor'neæ. (Cornea. **F. paracentèse de la cornée**.) Paracentesis of the anterior chamber of the eye. This is done in the treatment of corneal ulcer and iritis, and occasionally to give temporary relief in glaucoma. Performed by means of a paracentesis needle or, in cases of corneal ulcer, with a cataract knife, the incision being carried through the whole thickness of the cornea and just beyond the limits of the ulcer at each end.

P. pericar'dii. (Περί, around; καρδία, the heart. **F. paracentèse du péricarde**.) The

operation of tapping the pericardium, performed in cases of *Hydrops pericardii* where the patient is in danger of death from pressure. It is most safely done by means of a fine aspirator, which is inserted into the chest in the fifth left interspace, and from two to two and a half inches from the left margin of the sternum. A vacuum is made directly the point of the needle is inserted.

P. thora'cis. (L. *thorax*, the chest. F. *paracentèse de la poitrine*; G. *Bruststich*.)

The operation of tapping the pleural cavity for the removal of pus or serum or, very occasionally, air, performed with the aspirator. A small incision is first made through the skin, at the lower border of the sixth rib and parallel to it, between two serrations of the serratus magnus in the mid-axillary line. The skin is then pulled upwards so that the incision corresponds with the lower part of the fifth space. The trocar is now plunged into the pleural cavity, being first slipped over the upper margin of the sixth rib, so as to avoid the intercostal artery and nerve lying below the fifth rib. If severe pain be complained of, the cannula must be withdrawn, and the operation repeated after a few days if necessary. Thorough antiseptic precautions must be taken throughout the operation.

P. vesicæ. (L. *vesica*, the bladder. F. *incision de la vessie*.) This term is used in two senses: (1) as meaning *aspiration* of an over-distended bladder, the trocar being passed in immediately above the pubes; (2) as meaning *tapping* the bladder, either above the pubes, or through the rectum immediately above the prostate. Paracentesis vesicæ is sometimes necessary in complete rupture of the urethra, in cases of impermeable stricture, and in cases of enlarged prostate.

Paracenteterion. (Παρακεντητήριον, from παρακεντέω, to pierce.) An instrument for performing *Paracentesis*.

Especially applied to a small trocar employed by Nuck for paracentesis corneæ.

Paracentetic. Relating to *Paracentesis*.

Paracentic'ion. An instrument for the performance of *Paracentesis*.

Paracentr'al. (Παρά, alongside of; centre. F. *paracentral*.) At the side of the centre.

P. lobe. The *Lobulus cerebri paracentralis*.

P. sul'cus. (L. *sulcus*, a furrow.) A sulcus extending upwards from the calloso-marginal fissure.

Paraceph'alians. (Παρά; κεφαλή. F. *paracephalien*; S. *paracephalico*.) A Family of monsters that have an imperfectly-formed head, and an absence of a great part of the thoracic and abdominal viscera. The limbs are imperfect, either in general contour or in the number of digits of the manus and pes.

Paraceph'alus. (Παρά, amiss; κεφαλή, the head. F. *paracephale*.) Isid. Geoffroy St. Hilaire's term for a Genus of monstrosities with a badly-formed, large head, distinct face, with a mouth and rudimentary sensorial organs, and thoracic limbs.

Paracer'cus. (Παρά, besides; κέρκος, the tail. F. *paracerque*.) Illiger's term for the long feathers which in some birds, as the peacock, grow from the lower part of the back and hide the tail.

Parachor'dals. (Παρά, besides; χορδή, a cord.) Cartilaginous plates on each side of the anterior extremity of the notochord. The parachordals with the cephalic portion of the notochord form the basilar plate, which supports the hind- and mid-brain of the fœtus.

Parachroë'a. (Παρά, amiss; χροιά, the colour of the skin.) A morbid change of the colour of the skin, especially of the face.

Parachroma. (Παρά; χρώμα, the colour of a surface.) Faulty perception of colours.

Parachromatobleps'ia. (Παρά; χρώμα; βλέψις, sight.) The seeing of false colours.

Parachron'ic. (Παρά, amiss; χρόνος, time.) Unseasonable; at the wrong time.

Parach'roöus. (Παράχροος, of false colour, faded.) Of an altered colour, faded.

Parachro'sis. (Παρά, amiss; χρώσις, a colouring.) False colouring.

Parachymo'sis. (Παρά; χέω, to pour out.) Faulty secretion.

Paracine'ma. (Παρακινέω, to move aside.) A synonym of *Dislocation*.

Paracine'ses. (Παρακίνησις, from παρακινέω, to excite violently. F. *paracineses*.) Diseases of the motor system of nerves; morbid movements of voluntary muscles.

Paracine'sis. (Παρακίνησις.) The production of a dislocation.

Paracine'tic. Relating to *Paracinesis*.

Paracma'sis. (Παρακμάζω, to be past the prime.) Synonym for *Paracme*.

Paracmast'ic. (Παρακμαστικός, past its prime. F. *paracmastique*; G. *parakmatisch*.) Past the prime or the time of vigour; past the crisis.

Parac'më. (Παρακμή.) The point at which the prime is past; the commencement of old age; the beginning of the decline of vigour; the period in a fever after the occurrence of the crisis.

Parac'oë. (Παρακοή, that which has been heard imperfectly.) Imperfect or incorrect hearing.

Also, the hearing of imaginary sounds.

Also, dulness of hearing.

Paracolle'tic. (Παρακολλητικός, joining at the edges; from παρακολλάω, to glue on.) Capable of sticking together; agglutinant.

Paracolp'itis. (Παρά; κόλπος, the vagina.) An inflammation beginning by the side of the vagina, and spreading to its walls. It is accompanied by great swelling. Matthews Duncan speaks of it as being erysipelalous.

P. dis'secans. (L. *disseco*, to cut up.) A variety of paracolpitis which results in suppuration, so that the vagina becomes separated from the surrounding parts.

Paracolp'ium. (Παρά; κόλπος, the womb.) The connective tissue around the vagina.

Paracon'dyloid pro'cess. (Παρά; κόνδυλος, a knuckle.) A name given by Uhde to a process of the occipital bone occasionally present on the outer side of the condyle, which articulates with the transverse process of the atlas.

Para'conine. (Παρά; conine.) $C_8H_{15}N$. An artificial variety of *Conine*, prepared by a long and complicated process from butyric aldehyde and alcoholic ammonia. It differs from natural conine in some of its chemical reactions, and also in having a greater coefficient of ex-

pansion, in being less soluble in water, and in not acting on polarised light.

Paracopë. (Παρακοπή, infatuation; from παρακόπτω, to strike the mind awry.) The slight delirium of fever.

Paracop'ic. Of, or belonging to, *Paracope*.

Paracopt'ic. Of, or belonging to, *Paracope*.

Paracorolla. (Παρά, beside; corolla. *F. paracorolle*; *L. paracorolla*; *S. paracorola*; *G. Nebenblumenkrone*.) Link's term for the part of the flower inside the corolla, as of the narcissus.

Paracou'sia. The same as *Paracusis*.

Paracre'sol. $C_6H_4<\begin{smallmatrix} OH \\ CH_3 \end{smallmatrix}$ Hydroxyl-toluol. One of the tolyl alcohols found in urine, and occurring in it as kresol sulphate of potassium, $C_7H_7O.SO_3K$. It is also one of the products of the fractional distillation of coal-tar. It occurs in colourless prisms, melting at 36° F. and boiling at 198° F.; only sparingly soluble in water.

Para'crises. (Παρά, amiss; κρίσις, a separating.) Diseases of secretion.

Paracru'sis. (Παράκρουσις, striking a false note.) Slight delirium.

Paracrus'tic. Relating to *Paracrusis*.

Paracu'sis. (Παρακούω, to hear imperfectly. *F. paracousie*; *L. paracusis*; *S. paracusis*; *G. Falschhören*.) Defective hearing; perverted hearing.

P.a'cris. (*L. acer*, piercing.) The painfully acute sense of hearing which occurs in some diseases.

P. duplica'ta. (*L. duplicatus*, two-fold. *F. paracousie double*.) Double hearing, the time of the perception of the same sound being different for the two ears.

P. imaginaria. (*L. imaginarius*, fancied.) A synonym of *Tinnitus aurium*.

P. imperfec'ta. (*L. imperfectus*, incomplete.) Inability to hear sounds distinctly except in the presence of other sounds.

P. lo'ci. (*L. locus*, a place.) Failure to recognise the direction from which a sound proceeds.

P. obtu'sa. (*L. obtusus*, blunt.) Dulness of hearing.

P. oxycot'a. See *Oxycoia*.

P. pervers'sa. (*L. perversus*, turned the wrong way.) That form of deafness in which sounds can only be distinguished in the presence of other and louder sounds.

P. sur'ditas. (*L. surditas*, deafness.) Loss of hearing.

P. Willis'ii. (Robert Willis.) Synonym for *P. perversa*.

Paracyan'ic acid. (Παρά; cyanic acid. *F. acide paracyanique*.) Berzelius's term for *Fulminic acid* (q. v.).

Paracyanogen. (*F. paracyanogène*; *L. paracyanogeo*; *G. Paracyanogen*.) An isomeric modification of *cyanogen*. When cyanogen is prepared from mercuric cyanide, paracyanogen is formed in small amount. It is a dark brown substance, insoluble in water, and is probably a polymer of cyanogen. When paracyanogen is calcined in an atmosphere which does not act upon it, cyanogen is again formed.

Paracycle'ses. (Παρά, amiss; κύκλῃσις, a revolution.) Disorders of the circulation of the blood.

Paracy'e'sis. (Παρά, beside; κύησις, conception. *F. paracyésie*; *L. paraciesa*; *S. paraciesa*.) Extra-uterine pregnancy.

P. abor'tus. (*L. abortus*, a miscarriage.) Premature termination of *Paracyesis*.

P. tubar'ia. (*L. tuba*, a trumpet.) Extra-uterine conception in the Fallopian tube.

Paracynan'chë. (Παρά, beside; κυνάγκη, sorethroat. *F. paracynancie*; *L. paracynancia*.) An anomalous form of quinsy; an inflammation of the structures near the tonsil.

Paracyst'is. The same as *Parurocystis*.

Paracystium. (Παρά; κύστις, a bladder.) The connective-tissue round the bladder.

Paradactylus. (Παρά, near; δάκτυλος, a finger. *F. paradactyle*.) Illiger's term for the lateral portions of the toes of birds.

Paradeni'tis. (Παρά; ἀδήν, a gland.) Inflammation round a lymphatic gland.

Paradid'y'mis. (Παρά, beside; δίδυμος, the testicle. *F. paradidymie*.) The *Organ of Giraaldès*.

Paradise. (*F. paradis*; *L. paradisus*; *Gr. παράδεισος*, an enclosed part; Old Pers. *pairidaēza*, a place walled in; from *pairi*, around; *diz*, to mould; from Sanscrit root *dih*, to knead. *L. paradiso*; *S. paraiso*; *G. Paradies*.) The Garden of Eden; heaven.

P. ap'ple. The fruit of *Citrus paradisi*.

P., grains of. See *Grains of Paradise*.

Paradox'ia sexual'is. (Παράδοξία; from παράδοξος, contrary to opinion, marvellous; *L. sexus*, a sex.) Sexual precocity; masturbation in childhood.

Paradoxical contraction of mus'cle. (Παράδοξος, contrary to opinion; *L. contractus*, past. part. of *contrahere*, to draw together.) This is a secondary muscular contraction, excited by a nerve in the state of electrotonus. If the sciatic nerve in a frog be divided above, and one of its two branches, *e. g.* the peroneal, divided below, and the cut end of the latter be stimulated with the constant current, the muscles supplied by the other (tibial) branch will contract. No contraction takes place if the peroneal nerve be ligatured. The contraction is due to electrotonus induced in one branch by the current acting as a stimulus to the adjacent fibres of the other branch, above the point of division.

P. pulse. See *Pulsus paradoxus*.

Paraëllag'ic acid. (Παρά; ellagic.) Synonym for *Rufigallic acid*.

Para-epidid'y'mis. The same as *Paradidymis*.

Paræsthe'sia. (Παρά; αἰσθησις, perception by the senses. *F. paræsthésie*.) A hallucination of any of the senses, sight, hearing, taste, by whatever cause produced.

P. of larynx. A feeling as of a foreign body, or of constriction, or heat, &c., is common in hysteria; it is also common after the removal of a foreign body. In true paræsthesia, the mucous membrane of the larynx is either normal or anæmic; in the latter case it may be that the paræsthesia is a forerunner of laryngeal phthisis.

P. of pharynx. The *Globus hystericus*.

P. olfacto'ria. (*L. olfacio*, to smell.) See *Parosmia*.

P. sexua'lis. (*L. sexus*, a sex.) A perversion of the sexual feelings.

Paræsthe'sis. The same as *Paræsthesia*.

P. audi'tus flac'ca. (*L. auditus*, hearing;

flacca, flaccid.) An abnormally large and pendulous condition of the lobule of the ear, usually congenital.

Paræsthetic. Relating to, or in a condition of, *Paræsthesia*.

Paræthenar. See *Parathenar*.

Paraffin. (L. *parum*, little; *affinis*, connected with. F. *paraffine*; I. *parafina*; S. *parafina*; G. *Parafin*.) A hydrocarbon discovered in the dry distillation of wood by Reichenbach in 1830. It occurs as a colourless, wax-like solid at ordinary temperatures. See *Paraffinum durum*.

P., hard. See *Paraffinum durum*.

P., jelly. Synonym for *Paraffinum molle*.

P. series. (L. *series*, a succession, chain.) The series C_nH_{2n+2} . Before 1848, none of the hydrocarbons of this series were distinctly known, except *Marsh-gas*, the first term of the series. In 1848, Kolbe's researches on the electrolysis of the fatty acids, and Frankland's on the action of zinc on the iodides of the alcohol radicals, opened a new field. The hydrocarbons obtained were considered as the free radicals of the alcohols. Gerhardt, however, proposed to double their formulae, to bring them into co-ordination with Avogadro's law, and he considered them to be homologues of marsh-gas. Frankland also discovered what he believed to be a distinct series of hydrocarbons, obtained by the replacement of the iodine in the iodide of the alcohol radical by hydrogen. He assumed these hydrides to be the true homologues of marsh-gas. In 1862, Pelouze and Cahours showed that American petroleum consisted almost entirely of a mixture of homologous hydrocarbons of the series C_nH_{2n+2} , and Schorlemmer found the same in the distillation-products of cannel coal. The monochlorinated substitution-products of these hydrocarbons were shown to be really the chlorides of the alcohol radicals from which alcohols and other derivatives may be obtained, and the hydrocarbons themselves to be hydrides. It was, later, found that all distinctions between the hydrides and the radicals themselves broke down. The lower members of the paraffin series are extremely volatile liquids. With each increment of CH_2 the boiling-point rises regularly, and thus the highest members of the series are crystalline solids. Reichenbach discovered, in 1830, a mixture of the highest members in wood-tar. The substance he found he believed to be a definite chemical compound, and from its inactive properties he called it *Paraffin*. In the cold, the paraffins are not acted on by chromic acid, strong nitric acid, sulphuric acid, nor by a mixture of the two latter acids. Heated with chromic, or dilute nitric acid, or with a mixture of dilute sulphuric acid and manganic dioxide, they become slowly oxidised, and converted almost entirely into carbonic dioxide and water. Nitric acid together with heat decomposes them, forming small quantities of fatty acids, succinic acid, and nitrates. By the action of chromic acid and heat a small amount of acetic acid is formed. Chlorine, in daylight, acts on these hydrocarbons slowly, and forms substitution-derivatives; first mono-derivates, and by further action with nascent chlorine, higher derivatives. Bromine yields similar products, but less readily than chlorine.

P., soft. See *Paraffinum molle*.

P., solid. *Paraffinum durum*.

P. wax. *Paraffinum durum*.

Paraffinum durum, B.Ph. (L. *durus*, hard.) A mixture of several of the higher members of the *Paraffin series*, i. e. those which have a high boiling-point. Obtained generally by distilling shale, and purifying the solid substance obtained by the action of a low temperature on the oils that come over during distillation. It is a translucent, whitish, greasy, crystalline solid; is tasteless and inodorous; melts at 110° to 145° F.; and burns with a bright flame, leaving no residue behind. It is soluble in ether, chloroform, and benzol.

P. molle, B.Ph. (L. *mollis*, soft. F. *paraffine*, *petroléine*; I. *parafina*; S. *parafina*; G. *Parafin*.) It is a semi-solid mixture of some of the more fluid members of the *Paraffin series*, and is generally prepared by purification of the less volatile portions of *Petroleum*. A white or yellow, soft and greasy, translucent substance, tasteless, and of neutral reaction. It is insoluble in water, and melts at 95° to 105° F. Used as a basis for ointments.

Parafibrin. (Παρά, near to; fibrin. F. *parafibrine*; I. *parafibrina*.) Polli's term for a supposed modification of fibrin occurring in certain morbid conditions.

Paraformaldehyde. A polymeric form of *Methyl*, or *Formic*, aldehyde.

Parafumaric acid. (Παρά.) A synonym of *Maleic acid*.

Paragene'sia. (Παρά; γένεσις, origin. F. *paragénésie*.) A term applied by Broca to the comparative sterility of hybrids, which consists in their being sterile with similar hybrids, but fertile with members of either parent species.

Paragenesis. See *Paragenesia*.

Parageusia. (Παρά, amiss; γεύσις, the sense of taste. F. *parageustie*; I. *parageusia*; S. *parageustia*.) Perversion of the sense of taste.

Parageusis. The same as *Parageusia*.

Parageustia. The same as *Parageusia*.

Paragle'nal. Term for the coracoid bone or cartilage in Fishes; also used as an adjective.

Paraglin. The same as *Smilacin*.

Paraglobin. The same as *Paraglobulin*.

Paraglobulin. (Παρά, beside; globulin. F. *paraglobuline*.) A proteid belonging to the family of *Globulins*; obtained as a granular, slightly viscid precipitate from blood-plasma by the addition of magnesium sulphate to the point of saturation, after precipitation and removal by means of sodium chloride of all the *Fibrinogen* from the blood-plasma. It is more readily obtained by diluting blood-serum ten-fold with water, and then passing through it a current of carbon dioxide. The precipitate is separated by decanting and filtering, and washed on the filter with water containing carbon dioxide in solution. Paraglobulin can be precipitated from its solution in dilute sodium chloride by a very dilute solution of acetic acid, less than 1 per 1000. If a stronger solution be used, acid-albumin is formed. Paraglobulin occurs not only in blood-serum, but also in white blood corpuscles, and to a slight extent in the stroma of red blood corpuscles; in connective tissue, the cornea, aqueous humour, lymph and chyle, as well as in serous fluids.

Paraglossa. (Παρά, amiss; γλῶσσα, the tongue. F. *paraglosse*; I. *paraglossa*; S. *paraglossa*; G. *Zungenvorfall*.) Swelling, usually with partial protrusion, of the tongue.

PARAGLOSSIA—PARALLEL

Also, disease of parts in the neighbourhood of the tongue, causing prolapse.

Also, in *Entomol.*, either of the two appendages of the ligula, situated on each side of the glossa.

P. adhesi'va. Good's term for a form of paraglossa in which the tongue is adherent to surrounding parts.

P. deglutito'ria. (L. *de*, down; *glutio*, to swallow. F. *Renversement de la langue*; G. *Rückbiegung der Zunge*.) Term used by Sauvages for an apparent doubling back of the tongue on itself.

P. fræna'ta. (Good.) Tongue-tie.

Paragloss'ia. Term for *Glossitis*, *parenchymatous*. See *Paraglossa*.

Parag'nathus. (Παρά, at the side; γνάθος, the jaw. F. *paragnathe*.) A Genus of monstrosities possessing a double jaw.

Parag'oë. (Παραγωγή, a leading by.) The replacement of a displaced part; the reduction of a dislocation.

Paragompho'sis. (Παρά, amiss; γόμφωσις, a bolting together. F. *paragomphose*; I. *paragomfosi*; S. *paragomfosis*; G. *Paragomphosis*.) The impaction of the foetal head in the pelvis.

Paraguay. A republic of South America.

P. tea. The same as *Maté*.

Parahypno'sis. (Παρά; ύπνος, sleep.) An abnormal sleep, such as that induced by hypnotism; the sleep of a somnambulist.

Parai'ba. Brazilian name for the *Simaruba versicolor*.

Paraidro'sis. See *Paridrosis*.

Parai'so springs. Monterey County, California. There is a hot soda spring, 120° F., and a hot sulphur spring, 114° F. Analysis of the hot soda spring: carbonate of lime 1.43 grains, carbonate of soda 4.23, chloride of sodium 3.50, chloride of potassium 0.35, sulphate of lime 4.32, sulphate of soda 35.50, magnesia a trace, alumina and iron 1.60, silica 2.63, organic matter 5.25; total, 58.80 grains in one gallon.

Paraitacon'ic ac'id. Synonym for *Citraconic acid*.

Parakerato'ses. (Παρά; κέρας, horn.) Skin diseases which present abnormal development of the horny layer of the epidermis.

Parakine'sia. (Παρά; κίνησις, motion.) Irregular or peculiar movement.

Paralactic acid. (F. *acide paralactique*; I. *acido paralattico*.) The more abundant of the two constituents of *Sarcolactic acid*, the other being probably the true *Ethylene-lactic acid*. Paralactic acid is dextro-rotatory, and forms well-crystallised salts. To separate the two acids, sarcolactic acid made from meat-extract is saturated with zinc carbonate, and the concentrated solution is then precipitated with a large excess of 90 per cent. alcohol. The paralactate is thus thrown down as a mass of small, colourless crystals, which are purified by a process of washing and recrystallisation. Paralactic acid, when heated to 140° F. or 150° F. is split up into formic acid and acetic aldehyde. It is found in the colloidal secretion of the thyroid gland (Moscatelli), and in the lymphatic glands receiving the lymphatic vessels from the thyroid. (Hirschler.)

Paralalia. (Παρά, amiss; λαλία, talking. F. *paralalie*.) Lordat's term for defective articulation.

P. nasa'lis. (L. *nasalis*, belonging to the nose.) Speaking through the nose.

P. rhinopho'nia. The same as *P. nasalis*.

Paralam'psis. (Παράλαμψις, a shining spot on the cornea; for παράληψις, from παραλάμπω, to shine near. F. *paralampsie*; I. *paralampsi*; S. *paralampsia*; G. *perlmutterartiger Hornhautfleck*.) A pearly-looking opacity of the cornea, a variety of *Albugo* or *Leucoma*.

Paralbu'min. (Παρά, beside; albumin. F. *paralbumine*; I. *paralbumina*; S. *paralbumina*; G. *Paralbumin*.) Scherer's term for a form of albumin found together with *Metalbumin* in ovarian cysts. By means of strong alcohol they may be precipitated from the ropy solution they form in the fluid of the cyst, and the precipitate so obtained is soluble in water. Hammarsten considers *Metalbumin* to be a mixture of *Paralbumin* and other proteids.

Paraldehy'dum, Martindale's Extra Pharm. A polymer of aldehyde. It is made by treating *Aldehyde* with sulphuric or nitric acid, and at ordinary temperatures is a colourless liquid. When cooled below 50° F., like glacial acetic acid, it crystallises. It smells and tastes like aldehyde, but does not cause the same suffocation when respired. It is soluble 1 in 10 of water. *Paraldehyde* is probably the important therapeutic agent in *Spiritus ætheris nitrosi*, B. Ph. Its action differs from that of *Chloral*, to which it is very similar, in diminishing the frequency, but strengthening the beats, of the heart. It causes marked diuresis; but does not affect the skin, nor give rise to headache nor digestive disturbance. It is given as a narcotic in cases of heart disease where chloral is contra-indicated. Dose, 30 to 60 min.

See also *Metaldehyde*.

P., cap'sules of, Ex. Ph. Each contains 3 min. of paraldehyde.

P., elix'ir of, Ex. Ph. Paraldehyde 240 parts, glycerine 240, rectified spirit 480, oil of cinnamon 4, oil of bitter orange 8, saccharin 1 part. Dose, 1 to 3 drachms.

Paralere'ma. (Παραλήρημα, silly talk.) Slight delirium.

Paralere'sis. (Παραλήρησις, a talking foolishly.) Delirium.

Paralere'ous. (Παράληρος, talking foolishly.) Delirious.

Paralex'ia. (Παρά, badly; λέξις, speaking. G. *Paralexie*.) A form of sensory aphasia in which there is a difficulty of reading, though the power of writing from dictation is retained.

Paralge'sia. (Παρά; ἀλγησις, sense of pain.) Diminished sensibility to pain.

Paralgia, cuta'neous. (Παρά; ἄλγος, pain.) A term applied to certain anomalous painful or disagreeable sensations, such as itching, creeping, burning, &c., referred to the skin, when the excitability of the cutaneous nerves is increased, as in inflammatory conditions of the skin.

Parallag'é. (Παραλλαγή, a passing from hand to hand, a changing.) An old term for wandering of the mind.

Parallag'ma. (Παράλλαγμα, alternation.) A change in the situation of bones or parts of bones, as when one fragment of a fractured bone rides over another.

Parallax'is. (Παράλλαξις, alternation. F. *parallaxe*; S. *paralase*.) The overlapping of two fragments of a broken bone.

Par'allel. (Παράλληλος, side by side;

PARALLELA—PARALYSIS

from παρά, beside; ἀλλήλος, one another.) Side by side; hence, alike. Parallel straight lines are defined in an axiom of Euclid as "those straight lines that will never meet, though produced ever so far both ways."

P. fissure. See *Parallel sulcus*.

P. law. (G. *Parallelgesetz*, Fechner.) A law enunciated by Fechner, which is a converse of Weber's law. If the stimuli remain constant and the sensibility of an organ be altered, according to the parallel law, the perceptible difference between the stimuli remains unaltered. This is probably only approximately correct.

P. sulcus. The superior temporo-sphenoidal sulcus, which is parallel to the Sylvian fissure.

Parallela. An old term for a scaly eruption on the palms of the hands; probably *Psoriasis palmaris*.

Parallel'ic. (F. *parallélique*.) Relating to that which is *Parallel*.

Parallelinervate. (*Parallel*; L. *nervus*, a nerve. F. *parallélinervé*.) Applied to a leaf the nervures of which are equidistant from each other.

Parallelinervous. The same as *Parallelinervate*.

Parallelism. The state or condition of being *Parallel*; similarity.

P. of disease. Term introduced by Harden, of Georgia, to denote the tendency of some diseases to simulate others.

Parallelive'nous. (*Parallel*; L. *vena*, a vein. F. *paralleliveiné*; G. *gleichweitend-dericht*.) The same as *Parallelinervate*.

Paralog'ia. (Παράλογος, beyond reason.) Slight delirium; slight madness.

Paraloph'ia. (Παραλοφία, the back of the horse's neck where the mane grows.) The lower and lateral part of the neck.

Paralych'nion. (Παρά, alongside of; λυχνεῖον, a lamp-stand.) A protection from the glare of a light; a lampshade.

Paralysiorheumaticus. (*Paralysis*; *rheumatism*.) Paralytic rheumatism.

Paralysis. (L. *paralysis*; Gr. παρά-λυσις, a loosening by the side, palsy; from παρά-λυω, to loose from the side; from παρά, beside; λύω, to loosen. F. *paralytie*; I. *paralisi*; S. *paralisis*; G. *Lähmung*, *Paralyse*.) Palsy; loss of power over some part of the body. The inability to produce contraction of muscle is called motor paralysis, in opposition to loss of sensation, which is sometimes called sensory paralysis. The various forms of motor paralysis group themselves under four main heads: (1) encephalic; (2) spinal; (3) peripheral; (4) and lastly, that due to idiopathic disease of the muscles.

The encephalic form may be due to various causes, viz.: to psychical defect, as in hysterical paralysis; to organic disease of the motor area of the brain, as in cortical tumours; to a solution of continuity or injury to the motor fibres in the motor tract, as in ordinary hemiplegia.

The spinal forms of paralysis may be produced by lesions of the whole thickness of the cord, with paraplegia as a result; disease or degeneration of the anterior polar cells of the grey matter, as in infantile palsy; and also by lesions of the anterior roots of spinal nerves consequent upon disease of the spinal membranes.

The peripheral forms of paralysis, e.g. that due to peripheral neuritis, are due to inflamma-

tion, injury, or other lesion of the trunks of spinal nerves.

Disease of the muscles themselves, independently of disordered or defective innervation, is thought by some to be the cause of pseudohypertrophic paralysis.

Paralysis is accompanied by wasting of the muscles, if the motor nerve supplying them be injured, or if the anterior polar cells in the grey matter of the cord from which this nerve arises degenerate or be destroyed.

P., acute' ascend'ing. (L. *acutus*, sharp; *ascendo*, to mount up). The same as *Landry's paralysis*.

P., acute' spinal. (L. *spina*, the backbone.) The same as *Acute atrophic paralysis*.

P. ag'itans. (L. *agitans*, part. of *agito*, to put in frequent motion. F. *paralytie agitante*; G. *Schüttellähmung*.) Shaking palsy, under which name it was first described by Parkinson. By Sauvages, it was termed *Scelotyrbe festinans*, and by Good, *Synclonus ballismus*. A disease occurring in elderly persons, characterised by tremors of the limbs, and weakness and rigidity of muscles. The causation and pathology of this disease are not understood at present. It is more common in men than women, and is rarely manifest until past middle life; when once established, it is incurable. The tremors of paralysis agitans are fine oscillatory movements of the fingers, wrist, and even the whole arm, and they are regular in time and in extent. In the early stages they can be controlled for a short time, and are less marked during voluntary movements; later, they are more persistent. They are worse during excitement. The stiffness and rigidity may precede, but usually follow, the onset of the tremors, affecting the muscles of the back, neck, and limbs, and producing a characteristic attitude; the head being thrown forwards, the arms and legs slightly bent, whilst the toes are extended; on account of this the patient finds a difficulty in maintaining his equilibrium, and he frequently tends to fall forward. Such a patient may have difficulty in walking, but once started may be obliged to run and be unable to stop himself: this condition is sometimes termed festination. In addition to these symptoms the patient frequently complains of exhaustion, and his speech may become unduly slow. The mental faculties are not affected, though the patient may be somewhat irritable. The treatment of paralysis agitans is unsatisfactory, and nearly all cases slowly progress until the patient dies of some intercurrent disease.

P. agitans mercuria'lis. See *Mercurial tremors*.

P., altern'ate. (L. *alternus*, alternate; from *alter*, one of two.) Paralysis, of motion on the one side and sensation on the other.

P., atroph'ic. (Ατροφία, want of nourishment.) Spinal paralysis with wasting of muscles; anterior polio-myelitis. See *P., atrophic*, *acute*, also *Progressive muscular atrophy*.

P., atroph'ic, acute. (L. *acutus*, sharp. F. *paralytie de l'enfance*, *myélite antérieure aiguë*; G. *Kinderlähmung*.) Though acute atrophic paralysis is most common in children under the age of four years, it sometimes occurs in adults. Boys are more subject to the disease than girls. It occurs most frequently in summer, and is sometimes attributed to chill or over-

PARALYSIS

exertion. It may complicate convalescence from some acute febrile disease.

The course of the disease may be divided into four stages :

(1) The prodromal stage usually presents some degree of fever, possibly accompanied by convulsions. The attack of fever may last from two to seven days, but sometimes is absent altogether.

(2) The stage of maintenance. Paralysis of one limb, occasionally of two, suddenly sets in. Reflexes are entirely absent. The paralysed muscles waste rapidly, and present marked reaction of degeneration. There is no loss of sensation, although the limb is perfectly helpless and flaccid; growth is lessened, the surface of the limb is cold, and presents a livid appearance. In rare cases all the limbs are affected successively.

(3) At the end of about a month, or perhaps in a shorter time, the third stage, that of improvement, usually sets in. The wasted muscles begin to regain their size and strength, especially in the case of the arms and upper part of the trunk. Complete recovery is, however, rare; there is usually but slight improvement after the lapse of three months.

(4) Stage of deformity. Owing to contractions of unopposed muscles, deformities are frequently produced, such as talipes equino-varus. The limb affected, or a portion of it, may remain shrunken and powerless throughout.

Though to the naked eye there may be no perceptible change, it is found microscopically that the disease is due to an acute inflammation of the anterior horns of grey matter in the region of the spinal cord corresponding to the limb affected, resulting in a variable amount of injury to the pyramidal cells contained in that part of the cord. Hence the name "Acute anterior polio-myelitis."

P., atroph'ic, chron'ic diffus'd. (*Ἀτροφία*; *χρονικός*, concerning time; *L. diffundo*, to scatter abroad. *F. paralysie générale spinale antérieure subaiguë*.) *Polio-myelitis anterior subacuta et chronica*. A chronic or subacute paralysis, resembling acute atrophic paralysis in its local characters, but with more diffused distribution, and occurring in adults rather than children. The symptoms are due to a chronic anterior polio-myelitis, which results in destruction of the anterior polar ganglion cells, followed by secondary degeneration of the motor nerves with wasting of the muscles. It usually begins in the lower limbs, and may extend upwards to the arms and trunk in the course of a few days; in other cases the paralysis extends very slowly. The limbs are flaccid and helpless, and the muscles present reaction of degeneration, and subsequently waste. Recovery may be complete or only partial; rarely, the bulbar nuclei may be involved, and a fatal termination occur after the lapse of a year or two. The disease is readily distinguished from progressive muscular atrophy, in that the incidence of the paralysis and its extent and progress differ greatly; but the diffuse and chronic variety of lead poisoning may closely resemble it.

P., Bell's. Facial paralysis due to peripheral lesion of the facial nerve, described by Sir Charles Bell. See *P., facial*.

P., bul'bar. (*Βολβός*, a bulb. *F. paralysie bulbaire, paralysie labio-glosso-laryngée*.) A paralysis of those muscles which receive in-

nervation from nerves arising from the nuclei in the medulla, or "bulb." There are two varieties, respectively described under the headings *P., bulbar, acute* and *P., bulbar, progressive*.

P., bul'bar, acute. (*L. acutus*, sharp.) The symptoms of acute bulbar paralysis correspond to those of the progressive form of the disease, but have an acute onset and rapidly tend to a fatal termination. The lesions which may destroy the bulbar nuclei and produce bulbar symptoms are various; but the disease is commonly due to softening dependent upon atheromatous arteries in elderly people, which may or may not be accompanied by hæmorrhage.

P., bul'bar, progres'sive. (*L. progres'sus*; from *progredior*, to march forwards. *F. paralysie glosso-labio-laryngée*; *G. progressive Bulbar-paralysie*.) A disease characterised by symmetrical paralysis of the lips, tongue, and larynx; having an insidious onset, and tending to progress to a fatal termination in the course of one to three years. It is frequently secondary to progressive muscular atrophy or disseminated sclerosis, and may occur as a complication of amyotrophic lateral sclerosis. No definite cause of this disease can be ascertained in most cases; it has been known to follow undue exposure to cold. It commonly appears in adults, after the age of forty, and in males more frequently than females. The earliest symptom is usually defective speech, which differs according to the part first affected; in paralysis of the lips, B, P, and M are pronounced badly; of the tongue, R, SH, L, D, and T; and when the soft palate suffers, the speech acquires a nasal tone. Speech becomes, later, quite unintelligible. When the disease is developed, the tongue lies flaccid in the floor of the mouth and cannot be protruded, the lips are helpless, the lower part of the face is devoid of expression, and the muscles of the larynx and soft palate become paralysed. Owing to the paralysis of the lips, the mouth remains open, the saliva runs out, and mastication is performed with difficulty. In advanced cases deglutition is impossible; the attempt to swallow liquids results in some of the liquid running into the air passages; owing to the laryngeal palsy, and consequent inability to cough, this is not properly expelled, hence food-pneumonia is a not infrequent complication. At first, respiration is unaffected; but in some cases dyspnoea becomes a prominent symptom, and the respiratory movements are observed to be feeble. There is no defect of sensation, and intelligence and memory remain intact. The muscles are wasted, in advanced cases, and the motor nerves to them, degenerated. The nuclei of origin of these nerves are degenerated, and under the microscope the ganglion cells therein are atrophied. All the nuclei on the floor of the fourth ventricle suffer, especially the hypoglossal and spinal accessory nuclei, the nucleus of the vagus, and the lower facial nucleus. The prognosis is utterly bad. In the early stages the disease may be difficult to distinguish from defective articulation due to other cerebral disease; and, in some cases, other causes of paralysis of the hypoglossal or facial nerves may be a source of difficulty in diagnosis.

P., cer'ebral. (*L. cerebrum*, the brain.) *Hemiplegia*.

P., cer'ebral, direct. Direct or ordinary *Hemiplegia*.

P., cer'ebral, infant'ile. (*L. infans*,

PARALYSIS

an infant. *G. cerebrale Kinderlähmung.*) See *Hemiplegia, spastic infantile.*

P., cor'tical. *Hemiplegia, cortical.*

P., crossed. *Hemiplegia, crossed.*

P., crutch. (An Old E. word, probably derived from Anglo-Sax. *orice*, a crutch or staff.) A paralysis of the arm produced by the pressure of a crutch, either upon the branches of the brachial plexus, or, as some think, upon the axillary vessels, leading to impairment of the blood supply of the nerves. The musculo-spiral nerve alone frequently suffers. Synonym, *Crutch palsy.*

P., Cruveilhier's. The same as *Progressive muscular atrophy.* See *Cruveilhier's atrophy.*

P., diphtherit'ic. See *Diphtheritic paralysis.*

P., Duchenne's. The same as *P., pseudohypertrophic*, which was first described by Duchenne of Boulogne in 1861.

P., essen'tial. (*L. essentia*, the being or essence of a thing. *F. paralysie essentielle.*) A name given to infantile paralysis before its pathology was understood, and when it was thought to be independent of any nervous lesion.

P., fa'cial. (*L. facialis*; from *facies*, a face. *F. paralysie faciale.*) A paralysis of the muscles of the face due to a lesion of the facial nerve, or of its nucleus in the pons, or in that part of the motor tract which contains the fibres passing from the motor area concerned in movements of the face. The various forms of facial paralysis may be conveniently divided into two divisions; those of peripheral origin and due to a lesion of the facial nerve, and those of central origin dependent upon lesion of the brain. Facial palsy due to peripheral disease of the nerve was first described by Sir Chas. Bell, and is frequently called Bell's palsy. The common cause of this is exposure to cold; it may be also due to disease of the temporal bone injuring the nerve in its course through the aqueduct of Fallopius, as by necrosis of the petrous bone occurring in otitis, or any injury to the nerve from a blow, or pressure by tumour. It may occur in syphilis. The whole of the muscles supplied by the facial suffer, so that one side of the face is flaccid and immobile; the patient is unable to close the eye on the affected side, and on attempting to do so the eye-ball rotates up under the upper lid; the mouth is drawn to the opposite side in all active movements of the facial muscles, there is no power of frowning on the palsied side, and mastication is difficult on account of the food collecting in the palsied cheek; there is generally impairment of taste on the affected side and tip of the tongue, due to implication of the chorda tympani; the muscles present well-marked reaction of degeneration, and waste rapidly unless recovery occurs early. The prognosis of that form following exposure is good, and recovery is generally complete, though protracted, both in this variety and in that due to syphilis; when due to necrosis of the petrous portion of the temporal bone, the condition is permanent. Double facial palsy, or diplegia facialis, is a very rare affection; both sides of the face are flaccid and devoid of expression, hence the name "masked face" sometimes given to this affection. It is commonly due either to a central lesion affecting the nuclei of both facial nerves, or to meningitis of the base of the

brain implicating the roots of both facial nerves, which latter may be of syphilitic origin; the affection has also been observed in diphtheria. Facial paralysis produced by a central lesion affecting the motor tract above the nuclei in the pons is usually a part of hemiplegia; it differs materially from the preceding form, as the upper part of the face almost completely escapes, the eye can be closed, and there is no reaction of degeneration, nor wasting. See *Hemiplegia.* A paralysis of the lower part of the face is also present in lesions of the lower nucleus of the facial nerve in the medulla, occurring in bulbar paralysis. See *P., bulbar.*

P., gen'eral, of insane'. (*L. in*, not; *sanus*, of sound mind. *F. paralysie générale progressive.*) A disease usually affecting persons near the prime of life, and characterised by a stage of mental excitement with exalted delusions, followed by dementia; it is accompanied by a varying amount of loss of muscular power, and usually ends fatally in about three years. The causation of general paralysis is obscure. It is much more common in men than in women, and commences usually between the ages of forty and fifty. Most patients have previously "lived hard," and indulged in much dissipation. It has been ascribed to syphilis, sexual excess, alcoholism, injury, business excitement, and anxiety, any of which may be factors in its causation. It has no constant morbid anatomy. Occasionally the dura mater is thickened and adherent; the pia mater is frequently adherent to the convolutions, which are often greatly wasted; fluid in the lateral ventricles is common. Under the microscope there is generally an increase of connective tissue; there may be a large migration of leucocytes in the perivascular sheaths of the capillary vessels; and the cortical nerve cells, particularly the pyramidal cells of the third layer, may be degenerated.

General paralysis is usually divided into three stages: a *first stage*, of extravagance and altered moral conduct; a *second stage*, with distinct mental and motor symptoms; and a *third stage*, of dementia and paralysis. These stages are not sharply defined from each other. The onset of this disease is generally insidious, the commonest early symptoms being some moral alteration, with failure of memory and judgment; the pupils may be contracted or unequal. During the first stage the patient may be extravagant in any direction, or may be irritable or morose. During the second stage the characteristic symptoms are developed. The signs and symptoms of general paralysis are so numerous and its clinical features so dissimilar in different cases, that only some of the commoner ones will be mentioned. Exalted delusions, as of the possession of great riches, strength, and ability are common. Tremors of the tongue and hands, slurring articulation, and shaky hand-writing with bad spelling, are all frequent symptoms. The pupils are generally unequal. The gait is shuffling; but where associated with tabes, it is high-stepping and ataxic. Convulsions generally occur, and these may be the dividing line between the second and third stage. Patients are also liable to maniacal, rarely melancholic, attacks, and it is of the utmost importance to place them under suitable care as early as possible. Succeeding the excitement there is often an appearance of recovery; the patient becomes quieter, and may get fat, but is as a rule weak-minded and is liable

PARALYSIS

to occasional convulsions. During the third stage, muscular weakness increases, the dementia is progressive, control of the sphincters is lost, bed-sores are common, the patient becomes bed-ridden, diarrhoea frequently occurs, and death ensues, usually in two to five years from the onset. When once established, the prognosis is hopeless; but with care and good nursing, life may be greatly prolonged though no improvement in the mental or bodily condition occurs.

P., glos'so-la'bio-larynge'al. Syn. for *P., bulbar*.

P., glos'so-larynge'al. The same as *P., glosso-labio-laryngeal*.

P., glos'so-pharynge'al. The same as *P., glosso-labio-laryngeal*.

P., hemiple'gica. The same as *Hemiplegia*.

P. her'ba. A name given to the *Primula vera*, on account of a supposed virtue in curing palsies.

P., histrion'ic. (L. *histrionicus*; from *histrion*, a player or actor.) Bell's facial palsy, so named because the power of facial expression is lost.

P., hyster'ical. A paralysis of a limb or certain groups of muscles (see *Hysteria*) without any anatomical lesion in the nervous system or muscles, and usually associated with other hysterical manifestations. There is no wasting or reaction of degeneration in the affected muscles. See *Paraplegia, hysterical*; *Aphonia, hysterical*.

P., infan'tile. (L. *infans*, an infant. *F. paralysis infantile*.) Acute atrophic paralysis in infants is often called infantile paralysis, because the greater number of cases occur in children under three years of age.

P. insano'rum. (L. *insanorum*; from *insanus*, of unsound mind.) The same as *P., general, of insane*.

P. intesti'ni rect'i. (Gen. of *L. intestinum*, a gut; *recti*, gen. of *rectus*, straight.) Paralysis of the rectum.

P., larynge'al. See under *Laryngeal*.

P., lo'cal. (L. *localis*, belonging to a place.) Loss of power over a few muscles only.

P., mastica'tory. Paralysis of the muscles of mastication occurring in lesions of the motor part of the fifth cranial nerve.

P. metal'lica. (L. *metallum*, a metal.) An old name for lead palsy.

P., myogen'ic. (Mūs, a muscle; γενεά, birth. *F. paralysis myogénique*.) The same as acute atrophic paralysis. It received this name before the pathology of the disease was recognised, and because it was thought to be primarily a disease of the muscles.

P., myopath'ic. Paralysis from disease of the muscles themselves.

P., myosclerot'ic. (Mūs, muscle; σκληρός, hard. *F. paralysis myosclérotique*.) The same as *P., pseudo-hypertrophic*.

P. notario'rum. (Gen. plural of *L. notarius*, a short-hand writer.) Writers' cramp.

P., nu'clear. Any paralysis due to a lesion of nerve-nuclei.

P., obstet'rical. (L. *obstetrix*, a midwife.) A paralysis in an infant due to injury received during parturition.

P. of the brain. See *P., cerebral*.

P., paraple'gica. The same as *Paraplegia*.

P., peri'pheral. (Περιφέρεια; περί, around; φέρω, to carry.) Paralysis due to

disease of the peripheral nerves, as opposed to that due to disease of the brain or spinal cord. See *Neuritis*.

P., peripher'ic. (Περιφέρεια.) An old name for progressive muscular atrophy.

Also, the same as *P., peripheral*.

P., phonet'ic. *Aphonia, paralytic*.

P., post-convul'sive. (L. *post*, after; *convulsio*, a spasm.) Muscular weakness or paralysis following convulsions. A temporary paralysis often follows severe epileptic convulsions, more marked on the side that has been principally affected.

P., pseudohypertroph'ic. (Ψευδής, false; ὑπέρ, signifying excessive; τροφή, nourishment. *F. paralysis pseudohypertrophique*.) A progressive paralysis, in which certain muscles are greatly increased in size, on account of an interstitial deposit of fat and connective tissue, the muscle fibres themselves being wasted. Pseudohypertrophic paralysis is much more common in boys than girls. It is sometimes hereditary through the mother, and though it is usually manifested in early childhood it is often congenital. Cases which develop later, progress more slowly. The earliest symptom of the disease is muscular weakness, which may be overlooked in infants, but in older children results in a peculiar attitude: the abdomen is thrust forward owing to increased antero-posterior curve of the spine, which is seen only when the child is erect; he walks with a waddling gait. There is no difficulty in stooping, but the attempt to regain the erect posture fails without the assistance of the arms; so that if no object of support be at hand, the child as it were climbs up his own legs. There is considerable weakness of the muscles of the legs, trunk, and upper limbs, accompanied for the most part by wasting; but a remarkable increase in the size of certain muscles is a peculiar feature of this disease; both calves are greatly enlarged, and the muscle is harder and firmer than natural; the glutei, infrapinati, and other muscles are sometimes similarly affected; these muscles stand out conspicuously, compared with the general wasting. The muscles do not give the reaction of degeneration. The general health does not suffer. Deformities, such as talipes equinus, may develop as the wasting progresses. When once established the disease is progressive, the enlarged muscles eventually waste, and the paralysis extends; and though the patient may live for years, he lies helpless and bedridden, until carried off by some intercurrent disease. The muscles of the calves are enlarged, not on account of any new development of muscle, but through an increase in connective tissue and an abundant deposit of fat; the muscular fibres themselves degenerate and disappear. It is doubtful whether there is any change in the nervous structures antecedent to the development of the disease of the muscles.

P., psych'ical. (Ψυχή, the spirit, soul.) A paralysis dependent upon psychical defect, and not upon disease of the cortical motor areas or of the motor tract. Hysterical paralysis may be considered a psychical paralysis.

P., re'flex. (L. *reflexus*, part. of *reflecto*, to turn back.) Loss of power, due to peripheral irritation. See *Paraplegia, reflex*.

Cases of considerable loss of power in the arm have been found to be dependent upon the irritation of carious teeth (Salter, Guy's Hosp. Reports, 1868).

PARALYTIC—PARAMETRITIS

P., regres'sive. (L. *regressus*, a return.) The same as *P., atrophic, acute*.

P., satur'nine. (L. *Saturnus*, Saturn.) Lead palsy, so called because Saturn was the symbol of the alchemist for lead.

P., scorbu'tica. (From *scorbutus*, a Latinised form of G. *Scharbock*, scurvy.) The same as *Pellagra*.

P., sen'sory. (L. *sensus*, the faculty of perceiving.) The same as loss of sensation, or *Anæsthesia*.

P., spastic. (Σπασμός, a spasm.) Weakness of a part accompanied by muscular spasm. Spastic conditions of muscles are mostly due to a degeneration of the motor tract in the brain and spinal cord. This may either be secondary to a lesion of that tract or of the motor areas in the cortex, or it may be due to a primary degeneration of the white fibres forming the motor tract. See *Hemiplegia, spastic*.

P., spastic, spinal. (Σπασμός; L. *spina*, the backbone.) See *Sclerosis, lateral*.

P., spinal, gen'eral subacute. Duchenne's name for *P., atrophic, chronic, diffused*.

P. spina'lis. (L. *spinalis*; from *spina*, the backbone.) The same as *Paraplegia*.

P. trem'ula. (Fem. of L. *tremulus*, quivering.) The same as *P. agitans*.

P. vacillans. (From *vacillo*, to stagger.) The same as *Chorea*.

P. venena'ta. (L. *veneno*, to poison.) Paralysis produced by poisons, e.g. lead, mercury.

Paralytic. (F. *paralytique*; I. *paralitico*; S. *paralitico*; G. *paralitisches*.) Affected with, or pertaining to, paralysis.

P. demen'tia. (L. *dementia*; de, neg; mens, the mind. F. *démence paralytique, paralysie générale*.) A name sometimes given to general paralysis of the insane, also, to the third stage of that disease. See *Paralysis, general, of insane*.

P. id'iotcy. A form of idiocy associated with hemiplegia or monoplegia, the affected limbs being drawn up, contracted, and wasted. The paralysis may arise from some lesion of the wall of the blood-vessel in childhood, a tubercular deposit or some other growth, inflammation of one side of the brain, or want of development. A special type has been described, in which one hemisphere of the cerebrum is considerably less than the other, from great flattening of the corresponding temporal bone.

P. insan'ity. This term is used as meaning insanity associated with paralysis, other than general paralysis of the insane. The paralysis may follow upon apoplexy, or be associated with paralysis agitans or locomotor ataxy.

P. secre'tion. The continuous secretion that goes on in some glands after complete section of their secretory nerves, the sympathetic nerve-supply remaining intact, and that comes to an end only as the gland-tissue degenerates. The fluid thus secreted is thin and watery, and the characteristic properties of the normal gland secretion are only feebly manifested in it.

Paramalic acid. The same as *Fumaric acid*.

Paramastitis. (Παρά; μαστός, the mamma.) Inflammation of the connective tissue in the neighbourhood of the breast.

Paramastoid. The jugular process of the occipital bone.

Paramecium. See *Paramæcium*.

Parame'dian. (Παρά; L. *medius*, the middle.) By the side of the middle-line.

P. sul'cus. (L. *sulcus*, a furrow.) An ill-defined longitudinal sulcus in the spinal cord, which separates the posterior median from the posterior external column.

Paramenia. (Παρά; μήνες, the menses. F. *paraménie*.) Disordered or irregular menstruation.

P. diffic'ilis. (L. *difficilis*, difficult.) The same as *Dysmenorrhæa*.

P. profu'sa. (L. *profusus*, excessive.) An old name for *Menorrhagia*.

P. super'flua. (L. *superfluus*, overflowing.) Menorrhagia.

Paramenisperm'ine. An alkaloid left as an insoluble residue after the extraction of *menispermine*, and obtained by extracting with alcohol and crystallising out from the alcoholic solution. It is insoluble in water.

Paramerion. (Παρά; μηρός, the thigh. F. *paramérion*.) An old name for the inner part of the thigh.

Paramerium. The same as *Paramerion*.

Paramesos. (Παρά; μέσος, the middle. F. *paramèse*; G. *Ringfinger*.) The ring-finger.

Paramesos. The same as *Paramesos*.

Parametric. (Παρά; μήτρα, the womb.) In the neighbourhood, or by the side, of the uterus.

P. ab'scess. See under *Parametritis*.

P. phleg'mon. (Φλεγμονή, inflammation beneath the skin, a swelling.) Term for a form of parametritis in which the inflammation is acute and the swelling very marked.

Parametritis. (Παρά; μήτρα, the womb. F. *paramétrite*; I. *parametríte*.) An inflammation of the connective tissue of the pelvis by the side of the uterus and upper part of the vagina, usually occurring during the puerperal state, and dependent upon septic infection. The term is sometimes limited to inflammation of the connective tissue about the cervix and upper part of the vagina. It may also follow operations upon the neck of the womb, or the introduction of tents. The onset of parametritis is usually sudden, and is generally accompanied by a rapid rise of temperature with a feeling of chilliness. There is often pain in the back and during micturition, and slight metrostaxis sometimes occurs. Upon examination, the uterus is found to be displaced, generally to one side, by a phlegmonous mass of exudation which may obliterate the lateral fornix on that side. The mass extends outwards between the layers of the broad ligament, and, when large, is immoveable, on account of the implication of the fascia of the pelvic wall; in other cases the inflammation may extend into the iliac fossa, or along the psoas muscle; in the latter case a difficulty of completely extending the thigh is often produced. The course of parametritis is usually towards spontaneous recovery; under the influence of rest the exudation is absorbed, and it is then sometimes found that, after cicatrization, the uterus has become drawn over towards the affected side. Sometimes, however, the inflammatory products break down, and an abscess results; this increases in size till it bursts, which it may do into the vagina, bladder, or rectum, or under Poupert's ligament. The abscess may also pass upwards behind the kidney. A certain amount of perimetritis is

PARAMETRIUM—PARAPECTIC

generally associated with parametritis; in the rare event of the rupture of an abscess into the peritoneum, severe peritonitis is produced. The phlegmon characteristic of this disease resembles in its anatomy other inflammatory affections of connective tissue; it is undoubtedly due to infection by micro-organisms.

P. atrophicans. (Ἀτροφος, ill fed, decayed.) A term used by Matthews Duncan for a form of parametritis in which, without suppuration, the parametric connective tissue becomes hard and gristle-like, fixing the uterus, and usually causing a neuralgia.

P. chronica atrophicans circumscripta. A chronic inflammation affecting, to a circumscribed extent, the pelvic connective tissue. It may be caused by affections of the rectum, bladder, or uterus. Its results are displacements of the uterus, compression of veins, and catarrh of the cervix, with consequent nervous irritation from pressure. The prognosis is fairly good.

P. chronica atrophicans diffusa. The inflammation is said to start from the base of the broad ligaments of the uterus; it becomes widely spread. The results are the same in kind as, but greater in degree than, those of *P. chronica atrophicans circumscripta*; and the prognosis is less favourable.

P. posterior. Term used by Schultze for inflammation of the utero-sacral ligaments.

P., remote. A form of parametritis, described by Matthews Duncan, in which abscesses form in places more or less remote from the site of the disease.

Parametrium. (Παρά; μήτρα.) The connective tissue by the side of the uterus and vagina, including that between the layers of the broad ligament.

Paramim'ia. (Παρά; μιμεῖσθαι, to imitate. *G. Paramimie.*) A disordered or incorrect expression of ideas by means of gestures, or a want of accord between the words spoken and the gestures accompanying them.

Paramitom. (Παρά; μίτος, a thread.) The liquid part of the protoplasm enveloping the reticulum of protoplasmic threads.

Paramnesia. (Παρά; ἀ, without; μνήσις, memory. *F. paramnésie*; *I. paramnesia*; *G. Paramnesie.*) Lordat's name for a perverted memory of the meaning of words, which may be associated with misplacement of the letters of a word.

Paramo de Ruiz. A town in New Granada noted for its mineral waters, which are remarkable for containing free hydrochloric and sulphuric acids.

Paramœcium coli. (Παρά; μοιχός, an adulterer (?)). The same as *Balantridium coli*. When this parasitic infusorian was first discovered by Malmsten it was called paramœcium on account of its likeness to that species.

Paramorphia. (Παρά; μορφή, form.) An old name for that which possesses a morbid structure.

Also, the same as *Paramorphine*.

Paramorphine. The same as *Thebaine*.

Paramylum. (Παρά; amyllum.) A carbohydrate closely allied to starch, or amyllum, and, like it, a member of the so-called third division of carbohydrates, the formula of which is $(C_6H_{10}O_5)_n$. It occurs in granules resembling those of starch, in the flagellate *Euglena viridis*.

Paramyoclon'us multiplex.

(Παρά; μῦς, a muscle; κλόνος, a tumult. *L. multiplex*, manifold.) A form of symmetrical convulsions, ceasing during sleep, described first by Friedreich. They do not prevent voluntary movement.

Paramyosin'ogen. (Παρά; *Myosinogen.*) A proteid contained in muscle-plasma. It becomes coagulated at a temperature of 47° C., and is insoluble in sodium chloride and magnesium sulphate.

Paramy'otone, ataxic, Gowers. (Παρά; μῦς; μῶς, a muscle; τόνος, a stretching.) An acquired nervous disease, characterised by persistent tonic spasm like the transient spasm in Thomsen's disease, associated with ataxy, weakness, and some amount of anæsthesia. In the case cited by Gowers, the disease was found to begin gradually in the legs, then to invade the arms six months later, and to increase more rapidly in the latter.

P., congenital. An affection described by Eulenberg, occurring in certain families, somewhat allied to Thomsen's disease in its general characters, and equally obscure, but differing greatly in its special peculiarities. The symptom is tonic spasm lasting from a quarter of an hour to several hours, excited chiefly by cold, the rigidity being followed by transient weakness of the affected muscles. The muscles affected are those of the face, and to a somewhat less degree, those of the legs and arms.

Paranephritic. (Παρά, beside; νεφρός, the kidney. *F. paranéphritique.*) Relating to the *Paranephros*.

Paranephritis. (*F. paranéphrite.*) Inflammation of the paranephros or suprarenal body. See *Suprarenal bodies, inflammation of*.

Paranephros. (Παρά; νεφρός, the kidneys. *F. capsule surrénale*; *I. capsula suprarenale*; *G. Nebenniere.*) The suprarenal body.

Parangi. A skin disease prevalent in Ceylon, resembling *Yaws*.

Paranœ'a. The same as *Paranoia*.

Paranœ'ic. Affected with, or relating to, *paranœa*.

Paranoi'a. (Παράνοια, madness, folly. *G. Wahnsinn.*) An old term for mental weakness or instability; also, delirium, dementia, monomania, and other forms of mental derangement.

Paranoi'ac. Affected with, or pertaining to, *Paranoia*.

Paranu'cleus. (Παρά; nucleus.) The modern name for what has been erroneously termed *Nucleolus* (q. v.). Also termed *Endoplastule*.

Paranym'phus. (Παρά; νύμφη, a bride. *F. paranymphe.*) Originally he who led the bride to her husband's house. Afterwards, in the old schools of medicine, a discourse mentioning the licentiate's qualifications given at the close of his curriculum. (*Dunglison.*)

Parapar'esis. (Παρά; πάρεσις, from παρῆμι, to let fall.) The same as a partial or incomplete paraplegia.

Parapath'ia. (Παρά; πάθος, feeling, affection.) The same as *Pathomania*.

Parape'chyon. (Παρά; πῆχυς, the ulna.) An old term for the radius.

Parapectic acid. (*G. Parapektinsäure.*) An acid formed, together with metapectic acid, from pectin or pectic acid, by pro-

longed boiling, by the action of acids or alkalis, or by the action of pectose.

Parapectin. (Παρά; pectin. G. *Parapectin*.) A neutral substance, non-crystallisable, very soluble in water, but insoluble in alcohol. It is formed by the action of boiling water upon pectin, from which it differs only in being precipitated from its aqueous solution by neutral acetate of lead. See *Pectin*.

Parapectone. (Παρά; peptone. A substance resembling syntonin, or acid-albumin, in its general characters. It is thrown down as a precipitate on neutralising the product of the action of gastric juice on egg- or serum-albumin. (Foster.)

Parapetal. (Παρά; πέταλον, a leaf, or petal. F. *parapétale*; I. *parapetalo*; S. *parapetalo*; G. *Afterkronenblatt*.) An appendage to a petal (Möench). Also, leaf-like structures situated within the petals and resembling them (Link); these are in reality modified stamens.

Paraphasia. (Παρά; ἀφασία, speechlessness. F. *paraphasie*.) A form of disordered speech due to disease of the brain, and characterised by the incorrect use of words, so that the words spoken do not express that which is intended.

Paraphia. (Παρά; ἀφή, the sense of touch. F. *paraphie*.) Disordered tactile sense.

Paraphimosis. (Παρά; φίμος, a muzzle. F. *paraphimosis*; I. *parafimosi*; G. *Paraphimosis*, *spanischer Kragen*.) The condition of strangulation of the glans penis by a tight prepuce, either in congenital or acquired *Phimosis*, which has been forcibly drawn back behind it.

Paraphobia. The same as *Hydrophobia*.

Paraphonia. (Παρά; φωνή, the voice. F. *paraphonie*; I. *parafonia*; S. *parafonia*; G. *Stimmfehler*.) A disorder of the voice; an alteration in the character or quality of the voice.

P. clangens. (L. *clangens*, clanging.) A shrill or harsh voice.

P. nasalis. (L. *nasus*, a nose.) A voice with a nasal tone.

P. palatina. (L. *palatum*, the palate.) The altered voice of a person with cleft palate.

P. puberum. (L., gen. of *puberes*, adults.) The alteration in the voice of boys which occurs at puberty.

P. rauca. (L. *raucus*, hoarse.) A term for a harsh, hoarse voice.

Paraphora. (Παραφορά, madness.) A term used by Hippocrates for slight delirium; also, a mild form of insanity.

Paraphrasia. (Παρά; φράσις, speech. F. *paraphrasie*.) Incoherent, or disordered, speech.

Paraphrenesis. (Παρά; φρήν, the mind.) An old term for dementia; also, for delirium.

Also, the same as *Paraphrenitis*.

Paraphrenia. The same as *Paraphrenitis*.

Paraphrenitis. (Παρά; φρήν. F. *paraphrénésie*; I. *parafrenesia*; S. *parafrenesis*; G. *Paraphrenitis*.) An old term for inflammation of the diaphragm, which was thought to be invariably accompanied by delirium; also applied to delirium supposed to be produced in this way.

Paraphrone'sis. (Παραφρόνησις.) The same as *Paraphrosyne*.

Paraphron'ia. (Παραφρονία.) The same as *Paraphrosyne*.

Paraphrosynè. (Παραφροσύνη, a wandering of the mind. F. *paraphrosyne*; I. *parafronesi*; G. *Paraphronesis*.) An old term for febrile delirium.

P. calentura. (L. *calco*, to be hot.) Applied by Sauvages to a furious delirium observed among sailors in the tropics. It was first described by Spanish writers; but it is probable that the delirium they described was due to various causes, such as sunstroke, fevers, or meningitis.

Paraphyllia. (Παρά; φύλλον, a leaf.) Appendages of the calyx or under the perianth in certain flowers (Möench). Also, stipules or other foliaceous appendages to leaves (Link).

Paraphysis. (Παρά; φύω, to grow. F. *paraphyse*; G. *Nebenwachs*.) 1. The lateral process of a vertebra.

2. A sucker or off-shoot of a root.

3. One of the sterile filaments that form, together with the fertilised filaments or ascogonium, the hymenium in Ascomycetes.

4. Hair-like organs occurring at the insertion of the sexual organs in Muscinæ.

Paraphyte. (Παραφύω, to grow beside. F. *paraphyte*; G. *Paraphyte*.) Eisenmann's name for any disease characterised by a new growth, as in hydatid or polypus.

Parapicoline. (Παρά; picoline.) The name given by Anderson to a basic substance, polymeric with *Picoline* (q. v.), and formed from it by the action of sodium. The sodium and picoline must be heated together to the boiling-point for several days; the parapicoline is then found as a brown, hard mass, in combination with the sodium. The mass is decomposed by water into soda and an oily substance containing the *Parapicoline*.

Paraplasma. (Παρά; πλάσσω, to mould, fashion.) Used in three different senses: 1, meaning *Heteroplasm* (q. v.); 2, malformation; 3, used by Flemming to designate the substance that fills the reticular meshes of protoplasm. (Billings.)

Paraplastic. Pertaining to *Paraplasma*.

Paraplectic. (Παράπληκτος, stricken aside. F. *paraplectique*.) Paralysed.

Also, attacked by *Paraplegia*.

Also, tending to produce palsy.

Paraplegia. (Παραπληγία; from παραπλήσσω, to strike on one side. F. *paraplégie*; I. *paraplegia*; S. *paraplegia*; G. *Paraplegia*, *Querlähmung*.) The clinical name for the symptoms accompanying an affection of the spinal cord which results in paralysis of the lower part of the body, associated with impairment of sensation. The area of the paralysis and of the sensory defect depend upon the site of the lesion. When the lesion involves the whole thickness of the cord, complete paraplegia results; i.e. there is total loss of power over all muscles innervated by motor nerves passing from the cord below the level of the lesion, combined with anæsthesia over the area supplied by sensory nerves passing into the cord below this level.

P. dolorosa. (L. *dolor*, pain.) A name applied by Cruveilhier, *paraplégie douloureuse*, to cases in which growths in the spinal column give rise to a number of symptoms, of which radiating pains along the course of nerves are the most prominent. The pains may be slight

PARAPLEGIC—PARASITE

at first; but, later on, they become very severe, and are increased by even the slightest movement. There is generally cutaneous hyperæsthesia, followed by cutaneous anæsthesia. When the motor nerves are affected, muscular contractures result, with paralysis and wasting. Symptoms of compression develop, similar to those in caries, but coming on much more rapidly. The distribution of the pains and paralysis will depend on the position of the growth, which may occur in any part of the spinal column. The earlier symptoms appear to be caused by inflammation, rarely infiltration, the later, by pressure.

Paraplegic. (Παραπλήγια. F. *paraplegique*; I. *paraplegico*; G. *paraplegisch*.) Relating to, or affected with, paraplegia.

Parapleuritis. (Παρά; πλευρόν, the side. F. *parapleurésie*; I. *parapleurisia*; S. *parapleurisia*; G. *Parapleuritis*.) A slight degree of pleuritis; also, applied to pleurodynia.

Paraplexia. (Παραπληξία; from παρά, and πλῆσσω, to strike. F. *paraplexie*; I. *paraplessia*.) The same as *Paraplegia* according to some, or as *Parapoplexia* according to others.

Parapole'sis. (Παρά; ποίησις, a making. F. *parapoïèse*; G. *Parapoese*.) Eisenmann's term for disturbance of a function, such as nutrition.

Parapophysis. (Παρά; ἀποφύω, to bud. F. *parapophyse*; I. *parapofisi*; G. *Parapophysie*.) The capitular process of a vertebra. In man it is situated close to the body, separated from it by the neuro-central suture.

Parapoplexia. Παρά; ἀποπληξία, a stroke. F. *parapoplexie*; I. *parapoplessia*.) A slight attack of apoplexy.

Also, an attack simulating apoplexy.

Paraproctitis. Inflammation of the *Paraproctium*.

Paraproc'tium. (Παρά; πρωκτός, the anus.) The connective tissue supporting the rectum.

Paraps'is. (Παρά; ἅπτομαι, to touch. F. *parapsis*.) A disordered sense of touch, giving false perceptions.

P. ex'pers. (L. *expers*, devoid of.) Anæsthesia.

P. illus'o'ria. (L. *illudo*, to play upon.) Disordered sensations giving rise to illusions.

P. prur'itus. (L. *prurio*, to itch.) Itching.

Parapyram'id'al sul'cus. A name given to a slight furrow in the medulla, which joins the antero-lateral sulcus and the anterior median fissure.

Parar'abin. (Παρά; arabin.) A modification of *arabin*, from which it is distinguished by not yielding sugar on treatment with dilute acids. It is prepared from carrots or beet-root by pressure, exhaustion of the pulp with water and alcohol, digestion of the residue with a one per cent. solution of hydrochloric acid, followed by boiling and precipitation by alcohol.

Pararabin forms a jelly with water, dissolving in acids, but precipitated by alcohol and alkalis. It is converted into arabin by heating with an alkali. Agar-agar, the Chinese vegetable jelly, is composed of pararabin.

Pararectal. (Παρά, rectum.) By the side of the rectum.

P. pouch. A name sometimes given to the peritoneal pouch on either side of the upper part of the rectum, formed by the reflection of the peritoneum from the rectum to the parietes of the pelvis.

Pararhotacis'mus. (Παρά; 'P; L. *taceo*, to be silent.) An inability to pronounce the letter R properly.

Parar'ma. (A shortened form from παράρρημα, a curtain; from παρά; ῥύομαι.) The same as *Fimbria*.

Pararrhyth'mus. (Παρά; ῥυθμός, *rhythm*. F. *pararrhythme*, adj.) Irregular. An old epithet applied to a pulse the rhythm of which was considered not to be suited to the age of the individual.

Pararthre'ma. (Παρά; ἄρθρον, the socket of a joint. F. *pararthre'me*; I. *pararthrema*.) An old term for an incomplete dislocation; subluxation.

Pararth'ria. (Παρά; ἀρθρώω, to speak distinctly.) Defective or disordered speech, in which articulation is difficult.

Pararthroma. The same as *Pararthrema*.

Pararthro'sis. (Παρά; ἄρθρον.) The formation of *Pararthrema*.

Parasacch'arose. (Παρά; saccharose.) A substance formed from *Saccharose* or *Saccharon* (cane-sugar) by a special fermentation of its aqueous solution with the addition of phosphate of sodium or ammonium; it is isomeric with saccharose; it is not hygrometric, but is very readily soluble in water; it has a slight reducing action on potassio-tartrate of copper. *Parasaccharose* is more strongly dextro-rotatory than *Saccharose*.

Parasal'icyl. (Παρά; salicyl.) See *Salicyl*.

Parasalpingi'tis. (Παρά; σάλπιγξ.) Inflammation of the connective tissue about the Fallopian tube or *Salpinx*.

Parascepas'tra. (Παρά; σκεπάζω, to cover.) A term used by Galen, παρασκεπάστρα, for a cap or bandage covering the entire head.

Parasceu'ë. (Παρά; σκενή, apparatus.) A term for preparatory action or apparatus.

Para'schides. (Παρασχίδες; from παρά; σκίζω, to cleave. F. *paraschides*.) The fragments in a comminuted fracture of bone.

Parasecre'tion. (Παρά; secretion.) Excessive, or continuous, secretion.

Paraseis'ma. (Παράσεισμα; from παρά; σεισμός, a shaking. F. *paraséisme*.) A swinging of the arms to exercise them.

Parasino'id'al spa'ces. (G. *Parasinoidealräume*.) The spaces in the dura mater, near the longitudinal sinus, which contain the Pacchionian bodies, and into which the cerebral veins discharge.

Parasi'ta. (From παράσιτος, one who lives at another's expense.) A parasite. Also, as nom. plural n. of adj. *parasitus*, applied by Latreille to an order of insects, characterised by their parasitic habits; also, applied to 1, an Order of Crustacea; 2, a Family of Arachnida.

Parasite. (Παράσιτος, one who lives at another's expense; from παρασιτώ, to eat beside. F. *parasite*; I. *parasito*; G. *Parasit*, *Schmarotzer*.) A parasite is an organism which inhabits, or is attached to, another organism, for the purpose of obtaining

PARASITE

nutriment at the latter's expense. The parasite is necessarily smaller than its host. Some animals are, moreover, only occasionally parasitic, either when the opportunity occurs, as the leech, or during some part of their life-history, as the larva of *musca vomitoria*. Some parasites also are temporary, some, permanent. The former, such as the common flea, generally possess highly specialised organs; the latter are often very little differentiated in structure, and may, like the tape-worms, possess no alimentary canal, and consist of little more than reproductive organs. A parasite may be animal or vegetable, and either kind may infest an animal or vegetable host.

List of Human Parasites :—

ANIMAL.

A. PROTOZOA.

- I. *AMŒBÆ*.—*Amœba coli* (" *Amœba dysenteriae* ").
- II. *INFUSORIA CILIATA*.—*Balantidium coli*, originally described by Malmsten as "*Paramœcium coli*."
- III. *INFUSORIA FLAGELLATA*.—*Bodo hominis* ("*Cercomonas hominis*" of Davaine), *Trichomonas intestinalis*, and *T. vaginalis*.
- IV. *GREGARINIDÆ*.—Apparently closely related to the spores or pseudonavicellæ of these, are the psorosperms detected in the liver of the human subject.

Protozoa have also been detected in the sputa of whooping-cough, including a form which Deischler provisionally refers to *Balantidium coli* (*Zeitschr. Wiss. Zool.*, Bd. 48).

B. METAZOA.

Subkingdom, VERMES.

The greater number of human parasites belong to this subkingdom.

Class 1.—NEMATODA.

- | | |
|---|-----------------------------------|
| <i>Oxyuris vermicularis.</i> | <i>Filaria sanguinis hominis.</i> |
| <i>Ascaris lumbricoides.</i> | <i>Filaria medinensis.</i> |
| <i>Trichina spiralis.</i> | <i>Filaria lentis, vel oculi.</i> |
| <i>Anchylostoma duodenale, vel Sclerostoma duodenale.</i> | <i>Ascaris mystax.</i> |
| <i>Anguillula stercoralis.</i> | <i>Strongylus bronchialis.</i> |
| <i>Anguillula intestinalis.</i> | <i>Eustrongylus gigas.</i> |

Class 2.—CESTODA.

Family A. *Tæniadæ*.

- | | |
|----------------------------|---------------------------|
| <i>Tænia solium,</i> | <i>T. acanthotrias,</i> |
| and its cysticercus. | and its cysticercus. |
| <i>T. saginata.</i> | <i>T. marginata.</i> |
| <i>T. nana.</i> | <i>T. echinococcus</i> |
| <i>T. flavopunctata.</i> | (as <i>hydatid</i>). |
| <i>T. madagascarensis.</i> | <i>T. mediocanellata.</i> |
| <i>T. cucumerina.</i> | <i>T. lophosoma.</i> |
| | <i>T. elliptica.</i> |

Family B. *Pseudophyllidæ*.

- Bothriocephalus latus.*
B. cristatus.
B. cordatus.

Class 3.—TREMATODA.

Subclass A. *Monogenea*.

Polystomidæ.

- | | |
|------------------------------|--------------------------------|
| <i>Hexathyridium pingui-</i> | <i>Polystoma pingui-</i> |
| <i>cola.</i> | <i>Pentastoma tænioides.</i> |
| <i>H. venarum.</i> | <i>Pentastoma constrictum.</i> |
| <i>Tetrastoma renale.</i> | |

Subclass B. *Digenea*.

α. Monostomidæ.

Monostomum lentis.

β. Distomidæ.

- | | |
|-----------------------------|-----------------------------|
| <i>Fasciola hepatica.</i> | <i>Distoma capense.</i> |
| <i>Distoma lanceolatum.</i> | <i>D. spatulatum.</i> |
| <i>D. ophthalmobium.</i> | <i>D. endemicum.</i> |
| <i>D. heterophyes.</i> | <i>D. hepatis innocuum.</i> |
| <i>D. crassum.</i> | <i>D. Rathousi?</i> |
| <i>D. sienense.</i> | <i>Bilharzia hæmatobia.</i> |

Class 4.—ANNELIDA.

Order, *Hirudinea*.

Genus, *Hirudo*.

(For different species, see under *Hirudo*.)

Subkingdom, ARTHROPODA.

Class 1.—ARACHNIDA.

Order, *Acarina*.

- Acarus cellaris.*
A. dysentericus.
A. marginatus.
Sarcoptes scabiei.
Demodex folliculorum.
Argas chincbe.
A. reflexus.
A. persicus.
Ixodes reduvius.
I. ricinus.

Class 2.—INSECTA.

Order A. *Neuroptera*.

Genus α. *Pulex*.

- Pulex irritans.*
P. penetrans.

Genus β. *Cimex*.—*C. lectularius*.

Order B. *Rhynchota* (Hemiptera).

Genus, *Phthirus* (Pediculus).

- Phthirus pubis.*
P. capitis (termed *Pediculus tabescentium*, when occurring on the heads of patients suffering from wasting illnesses).

P. corporis, vel vestimenti.

Order C. *Diptera*.

Larva of *Lucilia hominivorax* (see *Peenash*).

- Culex pipiens.*
Simulia? (the mosquito of the French.)
Æstrus hominis.
Anthomyia canicularis.

VEGETABLE.

FUNGI.

Order 1.—SCHIZOMYCETES.

- α. Spherobacteria or Micrococci. — *Sarcina ventriculi*.
- β. Microbacteria or Bacteria. (For species, see under *Bacterium*.)
- γ. Desmobacteria or Bacilli. (For species, see under *Bacillus*.)
- δ. Spirilla. (See under *Spirillum*.)
- ε. Spirochæte. — *Leptothrix buccalis*.

Order 2.—SACCHAROMYCETES.

- Torula cerevisiæ.*
Oidium albicans vel Saccharomyces mycoderma.

Order 3.—ACTINOMYCETES.

- Actinomyces* (Ray fungus).
Chionyphe Carteri? (in *Mycetoma*).

PARASITIC—PARATROPE

Order 4.—HYPHOMYCETES.

Achorion Schönleinii.
Trichophyton tonsurans.
Microsporon furfur.
M. minutissimum (von Bärensprung).
Trichophyton sporuloides.
Microsporon Adouini.
Aspergillus.

Parasitic cysts. See *Cysticercus*.

Parasitica. The Order *Parasita*; also, a subsection of the *Hymenoptera*.

Parasiticide. (L. *parasita*; *cædo*, to kill.) A remedy that kills a parasite or parasites. See *Anthelmintics*.

Parasitifer. (L. *parasita*; *fero*, to carry.) The "host," or organism that nourishes a *Parasite*.

Parasitism. Term for the state or condition of an organised being that lives upon another living body, whether the former draws its nourishment from the latter or not.

Parasitogeny. (*Parasite*; Gr. γίγνομαι, to be born.) The condition favouring the development and reproduction of parasites.

Parasorbic acid. (F. *acide parasorbique*.) $C_6H_8O_2$. An oily, acid liquid obtained from mountain-ash berries.

Paraspadia. (Παρά; σπάω, to draw out.) A condition of the penis in which there is a lateral opening into the urethra.

Paraspadiaëus. One who has *Paraspadia*.

Paraspadius. A synonym of *Paraspadiaëus*.

Parasphagis. (Παρά; σφαγή, the throat. F. *parasphage*.) An old term for that part of the root of the neck containing the trachea.

Parastadus. (Παραστάς, a colonnade. F. *parastade*.) Botanical term; applied by Link to the sterile filaments situated between the petals and stamens, as in *Passiflora*.

Parastamen. The same as *Parastemon*.

Parastannic oxide. (Παρά; L. *stannum*, tin.) A name applied by Berzelius to calcined stannic oxide, which differs from the ordinary oxide in its properties, though it has the same composition.

Parastata. (Παραστάτης, the testicles; originally, one who stands by.) An old term for the various openings through which the semen is conveyed to the urethra; also applied to the prostate gland; also, by Hippocrates, to the epididymis.

P. adenoides. The prostate gland.

P. cirroides. The epididymis.

P. varicosus. Term applied by Rufus of Ephesus to the Fallopian tube; by other writers, to the epididymis.

Parastatadenitis. (*Parastata*; Gr. ἀδὴν, a gland. F. *parastatadénite*.) Inflammation of the prostate gland, *Prostatitis*.

Parastatititis. (*Parastata*, the prostate gland.) The same as *Parastatadenitis*.
Also, *Epididymitis*.

Parastemon. (Παρά; στήμων, a stamen. F. *parastème*.) A floral appendage resembling a stamen in appearance, but having a different function.

Parastichy. (Παρά, alongside; στίχος, a row.) The serial arrangement of lateral organs in a plant, in two or more directions crossing one another.

Parastramma. (Παραστρέφω, to

distort. F. *parastremppe*; G. *Verdrehung*.) A convulsive spasm, distorting the face or mouth.

Parastremma. The same as *Parastramma*.

Parastrepsis. (Παραστρέφω; from στρέφω, to twist, or dislocate. F. *subluxation*.) Swediaur's term for a partial dislocation or subluxation.

Parastyle. (Παρά; στῦλος, a pillar. F. *parastyle*; I. *parastilo*; G. *Aftergriffel*.) A part of a flower resembling a pistil, but possessing different functions.

Parasynanchē. The same as *Paracynanche*.

Parasynovitis. (From παρά; *synovitis*.) An inflammation of the connective tissue in the neighbourhood of the synovial membrane of a joint.

Parasystolē. (Παρά; συστολή, a contraction.) An interval between the systole and following diastole, or between the diastole and following systole, in the cardiac cycle.

Paratarisia. (Παρά; τάσος, a flat surface.) The same as *Tarsoectopia*.

Paratarsium. (F. *paratarse*; G. *Laufseite*.) Term applied to the lateral part of the tarsus of birds, between the articulation of the knee and that of the foot.

Paratartaric acid. The same as *Racemic acid*.

Parateresiomania. (Παρατήρησις, an observing closely; μανία, madness. F. *paratérésionanie*; G. *Beobachtungswuth*.) The Furor observandi, a passion for close observation.

Parathenar. (Παρά; θέναρ, the hollow of the hand or foot. F. *parathénar*; G. *Nebenklöpfer*.) Applied by Winslow to a portion of the abductor of the little toe, the *Parathenar major*; also, to the short flexor of the little toe, which he called the *Parathenar minor*.

Parathymia. (Παρά; θυμός, the mind. F. *parathymie*; G. *Parathymie*.) An overstrained condition of the mind; brain-fag.

Parathymic. Relating to *Parathymia*.

Paratomium. (Παρά; τομή; from τέμνω, to cut. F. *paratome*; G. *Kieferseite*.) Applied by Illiger to the lateral part of the upper jaw of birds, including the edge.

Para'tomous. (*Paratomium*.) Mineral. Applied to cleavage when its planes are parallel with those of the fundamental figure, or are inclined to the axis.

Paraton'ia. (Παρά; τόνος, a stretching. F. *paratonie*; G. *Paratonie*.) An overstrained condition, or abnormal stretching; also, spasm.

Paraton'ic. Relating to *Paratonia*.

Paratopia. (Παρά; τόπος, a place. F. *paratopie*; G. *Paratopie*.) A displacement of organs; also, *luxation*; also, in the plural, *Paratopie*, diseases characterised by displacement of organs.

Paratop'ic. Relating to *Paratopia*.

Paratrimma. (Παρά; τρίβω, to rub. F. *parastremppe*; G. *Afterfratt*.) An inflammation produced by rubbing, as in riding on horseback; chafing.

Paratripsis. (Παρά; τρίψις, a rubbing. F. *paratripsie*; G. *Aneinanderreiben*.) Friction.

Paratrip'tic. Of, or belonging to, *Paratripsis*.

Paratropè. (Παρά; τροπή, a turn. F. *paratrope*; G. *Abseitwenden*.) A distortion, or alteration.

PARATROPHIC—PAREMPTOSIS

Paratroph'ic. Of, or belonging to, *Paratrophy*.

Para'trophy. (Παρά; τροφή. *F. paratrophie*; *G. Paratrophie*.) A malnutrition; also, hypertrophy.

Paratrop'ic. Of, or belonging to, *Paratropé*.

Paratu'do. See *Gomphrena*.

Parauché'nium. (Παρά; αὐχίν, the neck. *F. parauchène*.) Term applied by Illiger to the lateral region of the neck.

Paravagin'itis. (Παρά; *L. vagina*, a sheath.) The same as *Paracolpitis*.

Paravesi'cal. (Παρά; *L. vesica*, a bladder.) Beside the bladder.

P. pouch. The peritoneal pouch on either side of the bladder, the boundary edges of which form the so-called lateral false ligament. See *Ligaments of bladder, false*.

Paraxan'thine. (Παρά; *xanthine*.) A substance obtained by Salomon, who gives its formula as $C_{15}H_{17}N_9O_4$, from normal human urine, having a resemblance to the members of the *Xanthine* group.

Parax'ial. (Παρά, by the side of; ἄξων, an axle.) Developed by the side of the axis, or vertebral column.

P. mus'cles. The muscles developed by the side of the vertebral column.

Parazō'on. (Παρά; ζῶον, an animal.) An animal or vegetable organism parasitic upon an animal.

Parazygo'sis. (Παρά; ζύγωσις.) The condition of a double monster which is united above the umbilicus, whether dorsally, ventrally, or laterally, but has four lower limbs.

Par'chemin, bru'it de. (*F. parchemin*, parchment; *bruit*, noise.) Pericardial friction-sound, heard in *Pericarditis* before the occurrence of pericardial effusion, or throughout the disease in the so-called dry pericarditis. So named from its likeness to the sound made by the rubbing together of two pieces of parchment.

Parch'ment. (Περγαμηνή, parchment; from *Pergamos*, the ancient Troy, now called *Bermago*, in Asia Minor. It was in this city that parchment was first used, by Crates of Mallos, about 160 B.C., when the supply of *Biblus* from Egypt was stopped by Ptolemy. *F. parchemin*; *L. pergamina*; *G. Pergament*.) The skin, usually of the sheep or goat, prepared for writing on, by a process of tanning, polishing with pumice-stone, and rendering impermeable to ink by treatment with some resinous substance.

P., veg'etable. See *Paper, parchment*.

Parch'ment skin. See *Xeroderma*.

Parchment'ed. Term applied to a hard, tough condition of the skin in certain diseases, and also to the indurated cicatrices of certain varieties of *Hard chancre*.

Pardac'tyle. (*L. par*, equal; *Gr. δάκτυλος*, a finger. *F. pardactyle*; *G. gleich-fingert*.) Term applied to those birds that have the toes equal in length.

Pardalian'ches. (Πάρδαλις, a panther; ἄγχω, to strangle.) A name for the *Aconitum napellus*.

Pardalian'chum. The same as *Pardalianches*.

Pareccelo'ma. (Παρά, near; ἐκ, out of; κοιλώω, to hollow. *F. pareccélome*.) Term for one morbid sinus near another.

Pareccelo'sis. Formation of a *Parecceloma*.

Parec'crisis. (Παρά, badly; ἐκκρίνω, to secrete. *F. pareccrise*.) A term for disordered secretion.

Parec'tama. (Παρεκτείνω, to stretch out beside. *F. parcetâme*.) Excessive extension or stretching of a part.

Also used for dilatation, as of the heart.

Parec'tamic. Of, or belonging to, *Parectama*.

Parectasis. The same as *Parectama*.

Parecte'nia. (Παρεκτείνω, to stretch out beside.) The same as *Parectama*.

Paregor'ic. (Παρηγορώ, to assuage. *G. schmerzstillend*.) Assuaging, anodyne; term applied to a medicine that mitigates or assuages pain.

Also used as meaning *Paregoric elixir*.

P. elix'ir. See under *Elixir*.

Parei'a. (Παρεία, the cheek; from παρά. *L. gena*; *F. joue*; *G. Bakke*.) Old term for the cheek.

Parei'ra bra'va. (*G. Grieswurzel*.) Term used in England and in the United States for the official root (see *Pareira radix*) of *Chondrodendron tomentosum*, a plant belonging to the Family of the *Menispermaceæ*, and a native of Brazil and Peru. The root was formerly supposed to be obtained from the *Cissampelos pareira*; this was a medical plant indigenous to Tropical America, but never exported.

Parei'ræ ra'dix. *B. Ph.* The dried root of *Chondrodendron tomentosum*. It occurs in long, cylindrical, somewhat twisted pieces, one or two inches in diameter. The root is enclosed in a thin, brownish-black bark, marked externally by transverse ridges and fissures and longitudinal furrows. It is brownish-grey internally, and is made up of circles of porous wood, separated by medullary rays into wedge-shaped pieces. It has a bitter taste, but no odour. Pareira root contains starch, resin, and a bitter alkaloid, *pelosine*, which is possibly identical with the *beberine* of *bebeeru* bark, *Nectandra cortex*. Its physiological action is but little known; but it is believed to be tonic, laxative, and mildly diuretic. It is given empirically in inflammatory affections of the urinary tract. Doses: of the Decoctum, 1—2 fl. oz.; of the Extractum, 10—30 grains; and of the Extractum liquidum, ½—2 fl. dr.

Parelectro'nomy. (Παρά, contrary to; ἤλεκτρον, amber; νόμος, law.) Name applied by DuBois Reymond to the weakened condition of the electrical current of muscle, while the natural transverse section at the tendinous ends is maintained. The condition is due to the presence of an opposite current across the natural transverse section.

Pare'lia. See *Parhelium*.

Parel'la. See *Lecanora parella*.

Parel'lic ac'id. $C_6H_6O_4$. Schunck isolated two distinct acids from the *Lecanora parella*, *Lecanoric* and *Parellic acid*. The latter was obtained as a yellow substance with a bitter taste. By oxidation with nitric acid it is converted into *Oxalic acid*.

Paremp'tosis. (Παρά, beyond; ἐμπτωσις, a falling upon. *F. paremp'tose*; *L. par-emptosi*.) Term for an intervening or intruding into an unusual place. Also applied by Erasistratus to the *Error loci* (q. v.). Galen described under this term an occlusion which, he said, oc-

PARENCEPHALIS—PARERETHISM

casually took place, of the optic foramen by the presence of a *humor*, causing blindness.

Parencephalis. (Παρά; ἐγκέφαλος, the brain. F. *cervelet, parencéphale*; I. *parencefalo*; G. *Hirnein, das kleine Gehirn*.) Old term for the *Cerebellum*.

Parencephali'tis. (*Parencephalis*. F. *parencéphalite*; I. *parencefalite*.) Term for inflammation of the *cerebellum*.

Parenceph'alocele. (*Parencephalis*; Gr. κήλη, a tumour.) A soft, irreducible, occasionally somewhat painful, indolent swelling, protruding through an opening in the occipital bone. It is a hernia *cerebelli*, which is most commonly congenital, and points to a delayed ossification of the occipital bone. Its diagnosis from other tumours in this region is manifestly of the utmost clinical importance.

Parenceph'alus. The same as *Parencephalis*.

Paren'chyma. (Παρέγχυμα, anything poured in beside, an effusion. F. *parenchyme*; I. *parenchyma*; G. *Drüsenfleisch, Parenchym*.) The name given by Erasistratus to the special substance of the lungs, liver, spleen, and kidneys, supposed then to be formed of effused and coagulated blood strained through the pores of the blood-vessels. The special tissue of glandular organs, originally so called because it was thought to be an effusion from the blood-vessels. The word *parenchyma* designates a group of tissues, but not all the tissues, of an organ; it is synonymous neither with *tissue* nor with the special substance of each anatomical element. The *parenchymata* of glandular organs are vascular, usually composed of tubes or closed vesicles lined with an epithelium, and often more complex than are the so-called *tissues proper*. The epithelium in the *parenchymata* is simply applied to the internal surface of the connective tissue lining the tubes or closed vesicles; it may thus die, become detached and afterwards renewed in parts, as at the surface of a *mucosa*, without any lesion of the tissue of which it forms a part. The cells of this epithelium elaborate the characteristic secretion of their special gland. The *parenchymata* are only renewed imperfectly, if at all, after removal of a portion of their substance.

In Botany, the primitive and typical form of fundamental tissue. A tissue made of large, roundish, polyhedral or prismatic cells, enclosed in a cell-wall and containing a lining of living protoplasm and a nucleus. The space in the cell not filled up by protoplasm contains watery sap, and often, also, various products of assimilation and metabolism. Intercellular spaces are often present.

P., elongated. The form of plant parenchyma the cells of which are much longer than broad, being cylindrical, or prismatic, or fusiform. It occurs in the stems of *Monocotyledons*.

P., flat'tened. The same as *P., tabular*.

P., isodiametric. (ἴσος, equal to; διαμετρέω, to measure through.) The form of plant parenchyma in which the cells are cubical.

P., mu'riform. (L. *murus*, a wall; *forma*, shape.) A variety of *P., tabular* in which the cells are arranged like bricks in a wall. It occurs in the medullary rays of the stems of *Dicotyledons*.

P., o'val. The same as *P., round*.

P., palisade'. A form of parenchyma found in green leaves beneath the upper epi-

dermis. Its cells are elongated vertically, but narrow and crowded together horizontally.

P., polyhed'ral. (Πολύεδρος, with many bases.) The same as *P., regular*.

P., reg'ular. A form of plant parenchyma having closely-set cubical cells without intervening cell-spaces. It occurs in pith.

P., round. The form of plant parenchyma in which the cells are more or less rounded, and touch each other by part of their periphery only, so that spaces are left between them. It occurs in the succulent parts of plants.

P., spon'giform. (L. *spongia*, a sponge; *forma*, shape. G. *Schwammparenchym*.) The same as *P., spongy*.

P., spon'gy. This forms the under half of green leaves. It is composed of roundish cells, furnished with fairly large intracellular spaces, or with outgrowths which touch adjoining cells.

P., stel'late. The same as *P., spongy*.

P., tab'ular. The form of plant parenchyma in which the cells are flattened, and adherent by their edges. It occurs in the epidermis of the leaf and its derivatives.

Paren'chymal. Relating, or belonging, to *Parenchyma*.

Parenchymata. Plural of *Parenchyma*. An Order of the *Entozoa*. See *Parenchymatosa*.

Parenchymat'ic. The same as *Parenchymatous*.

Parenchymat'i'tis. (*Parenchyma*. F. *parenchymatite*.) Inflammation of the *Parenchyma*.

Parenchymato'sa. (*Parenchyma*.) Applied by Cuvier and Schweigger to an Order of the *Entozoa*, comprehending those whose bodies contain, in their parenchyma, the viscera indistinct and sometimes very little apparent.

Parenchym'atose. (F. *parenchymateux*.) Term applied to parts, or organs, that are formed of parenchyma.

Parenchym'atous. (F. *parenchymateux*; I. *parenchymatoso*; G. *parenchymatös*.) Of, or belonging to, the *Parenchyma*.

Parenchymepati'tis. (*Parenchyma*; *hepatitis*, inflammation of the liver. F. *parenchymépatite*.) Parenchymatous inflammation of the liver.

Paren'chysis. (Παρά; ἐγχέω, to pour in. F. *parenchyse*; G. *Nebenherfüllen*.) A falling in beside; an infiltration. Formerly applied to the supposed mode of formation of *Parenchyma*.

Parencra'nis. (Παρά; κρανιον, the skull.) An incorrect term for *Parencephalis*.

Par'ent cell. (F. *cellule-mère*.) See under *Cell*.

Parepidid'y'mis. (Παρά; epididymis. F. *parépididyme*.) The Organ of *Giraldès*. See under *Giraldès*.

Parepithym'ia. (Παρά, badly; ἐπιθυμία, a longing. F. *parépithymie*; G. *Parépithymie*.) A term for a mental condition characterised by morbidly changed or depraved desires.

Parepithym'ic. Of, or belonging to, *Parepithymia*.

Parereth'isis. (Παρά, beyond; ἐρεθίζω, to rouse to anger. F. *paréréthésis*.) Term for abnormal excitement; an unusual, irritated condition of an external part.

Parer'ethism. See *Parerethisis*.

Parer'gon. (Παρά; ἔργον, work. G. *Nebenwerk.*) Term for a by-work, or secondary business; an appendage.

Parer'gy. The same as *Parergon*.

Pares'ifying. (*Paresis*; L. *facio*, I make.) Producing paresis or paralysis.

Pares'is. (Πάρεσις, a slackening of strength; from παρίημι, to relax. F. *parésie*; I. *paresi*; G. *die unvollkommene Lähmung*.) Partial paralysis.

Paresthe'sis. (F. *paresthésie*; I. *parestesia*.) The same as *Paræsthesia*, or *Paræsthesia*.

Paretic. (F. *parétique*; I. *paretico*; G. *nachgebend, paretisch*.) Of, or belonging to, *Paresis*.

P. dement'ia. Syn. for *Paralysis, general, of insane*.

Paret'ica, exarthro'sis. See *Exarthrosis paretica*.

Pareu'nia. (Παρά; εὐνή, a bed.) The act of coition.

Parey'ra. The same as *Pareira brava*.

Parhæma'sia. (Παρά; αἷμα.) Young's name for any disease of the vascular system.

Parhel'ia. Plural of *Parhelion*.

Parhel'ion. (Παρά, near or against; ἥλιος, the sun. F. *parélie*; G. *Nebensonne*.) Term for the simultaneous appearance of many representations (*Parahelia*) of the true sun. A phenomenon of Optics the theory of which consists in that of the mirage. See *Paraselenia*.

Parhelium. The same as *Parhelion*.

Parhidro'sis. See *Paridrosis*.

Par'icn. $C_{16}H_{12}N_2O$. An alkaloid first discovered by Winekler in a bark resembling that of cinchona. Howard and Flückiger threw doubt on the existence of this alkaloid, until Hesse discovered it also in the bark of *Cinchona succirubra*, and succeeded in isolating it. It has the peculiarity of being precipitated from a weak salt solution by bicarbonate of soda. By the discovery of the sparing solubility of its sulphate in dilute sulphuric acid, its separation from the other alkaloids in the bark was effected. It occurs as a pale yellow, amorphous powder, soluble in alcohol and ether, but only sparingly in water, and melting at 136° F. All its salts are amorphous.

Parid'æø. A Tribe of the *Smilacææ*, to which belongs the *Paris quadrifolia*.

Paridin. $C_{16}H_{26}O_7$. So named by Waltz, who discovered it in the stem and root of *Paris quadrifolia*, occurring in company with paristypnin, as a crystalline glucoside of the formula $C_{16}H_{20}O_7$. Paridin occurs in white, silky needles of neutral reaction, and having a sharp, but not bitter taste; readily soluble in alcohol, with difficulty in ether and water. By boiling with dilute sulphuric acid, paridin becomes split up into glucose and paridol, $C_{26}H_{46}O_9$, a soft, fusible substance, turning red with sulphuric acid.

Par'idol. See under *Paridin*.

Paridro'sis. (Παρά; ιδρώς, sweat. F. *paridrose*; G. *Schweissfrist*.) Secretion of sweat of an abnormal kind. See *Chromhidrosis*, *Osmidrosis*. Term used by Ritzen for the period of sweating.

Par'iera. The *Pareira brava*.

Par'ies. (L. *par*, a pair.) The wall of a house. In Anatomy, applied, in the plural, to the walls or sides of any cavity, these being spoken of as the *Parietes* of the cavity.

Pari'etal. (L. *parietalis*; from *paries*, a

wall. F. *pariétal*; I. *parietale*.) Relating to the wall or side of a cavity. The parietal bone.

P. an'gle of Bro'ca. An angle formed on the surface of the skull by two straight lines drawn from the *Auricular point*, one to the *Bregma*, and the other to the *Lambda*.

P. an'gle of Lis'sauer. (G. *Krummungswinkel des Scheitelbeins*.) The angle included between two straight lines drawn from the most prominent point on the parietal bone to the *Bregma* and *Lambda* respectively.

P. an'gle of Quat'refages. (F. *angle pariétal*.) Used in craniometry to express the projection of points on the parietal bone with reference to the zygomatic arch. There are two such angles. The anterior parietal angle is measured by two imaginary straight lines drawn from the most prominent point of the zygomatic arch through the *Stephanion* on each side and produced to meet one another; the posterior is included by lines drawn from the same point through the most prominent point on the parietal eminence of each side.

P. arc. The arc measured on the surface of the skull from the *Bregma* to the *Lambda*.

P. arch'es. (G. *Scheitelbogen*.) The arched, external surface of those cerebral convolutions that curve round the posterior end of the horizontal limb of the Sylvian fissure. Not very well marked in man.

P. a'rea. That area of the surface of the skull which lies between the frontal and occipital areas, and above the *Suture, lateral longitudinal*.

P. ar'teries. Branches of the middle cerebral which supply the outer surface of the temporal lobe of the cerebrum, the convolutions of the island of Reil, and the parietal lobe. (Duret.)

P. bone. (F. *pariétal*; I. *ossa parietale*; G. *Scheitelbein*.) The two parietal bones form a considerable part of the roof of the skull. They are quadrilateral, convex externally, and concave internally, slightly thicker above than below. The anterior inferior angle is the most projecting. Near the middle of the outer surface is the parietal eminence; below this is the temporal line, curved with its convexity upwards, bounding below the somewhat flattened temporal surface, which forms part of the temporal fossa. Near the postero-superior angle is the parietal foramen. The inner, concave surface, the deepest part of which, corresponding to the parietal eminence externally, is called the parietal fossa, is marked by shallow depressions corresponding to cerebral convolutions, and by narrow grooves branching upwards and backwards from the lower border for the middle meningeal artery and its branches. A slight depression along the upper border forms with that of the opposite bone a groove for the longitudinal sinus, and a depression at the postero-inferior angle forms a small part of the groove for the lateral sinus. Near the upper border, especially in the skulls of old people, are the small irregular pits lodging the Pacchionian bodies. The anterior border articulates with the frontal bone, slightly overlapping it inferiorly, but overlapped by it superiorly. The inferior border is overlapped anteriorly by the great wing of the sphenoid, posteriorly by the squamous portion of the temporal, the serrated part behind this articulating with the mastoid portion of the temporal. The posterior border articulates with the occipital. The superior border articulates with its fellow of the

PARIETALIA—PARIETO

opposite side. The bone is ossified from a single nucleus, in membrane; the nucleus appearing about the seventh week of foetal life. The *P. eminence* is very marked in early life.

P. convolutions. (F. *circonvolutions pariétales*; I. *circonvoluzioni parietali*; G. *Windungen des Scheitellappens*.) The *Gyri parietales*. These constitute the parietal lobe of the cerebrum. They are three in number: 1. The ascending parietal convolution passes upwards and backwards by the side of the central sulcus. 2. The superior and 3. Inferior parietal convolutions are separated by the intraparietal sulcus from one another, and by the postcentral sulcus from the ascending parietal convolution. In the great longitudinal fissure of the cerebrum, the superior parietal convolution is continued as the quadrate lobe or *Præcuneus*. The inferior parietal convolution winds posteriorly round the end of the parallel sulcus, and joins the middle temporal convolution, being here called the *Angular gyrus*. Above, it abuts upon the posterior limb of the Sylvian fissure, and is here called the *Supra-marginal gyrus*.

P. diameters. (G. *Interparietalbreiten*.) These are: 1. The *Biparietal diameter*, or distance between the parietal protuberances on the two sides. 2. The *Inferior parietal diameter*, between a point on the root of the zygoma on each side, vertically over the *Auricular point*; this is oftener spoken of as the *Bizygomatic diameter*; it is important as being the maximum transverse diameter of the base of the foetal skull. 3. The *Maximum parietal diameter*, not necessarily coinciding with the biparietal. (Topinard.)

P. em'innence. (F. *bosse pariétale*; I. *bozza parietale*; G. *Scheitelhöcker*.) The most prominent and convex part of the external surface of the parietal bone.

P. em'issary vein. The *Emissarium parietale*. A small vein passing through the parietal foramen, and connecting the superior longitudinal sinus and one of the parietal veins of the scalp.

P. eye. In *Lacertilia* and in *Cyclostome fishes*, the anterior or dorsal lobe of the *Pineal body* becomes developed into an eye, which lies centrally, in the parietal foramen. This organ is known to have existed in many extinct fishes and in groups of extinct reptiles. It was first accurately described by de Graaf in 1886. (Spencer, *Quart. Journ. Micros. Sci.*, vol. 27. Beard, *ibid.*, July, 1888. Leydig, *Abstract Zool. Record*, 1890, Article "*Reptilia*," p. 3.)

P. flexure. (G. *Kopfbeuge*.) The bend that occurs in the development of the brain in the embryo, at the most projecting part of the *Mesencephalon*.

P. foramen. (F. *trou pariétal*; I. *forame parietale*; G. *Scheitelbeinloch*.) A small aperture usually present near the postero-superior angle of the parietal bone, giving exit to the *P. emissary vein*.

P. fos'sa. Term for the deepest portion of the concave, inner surface of the parietal bone.

P. lobe. (G. *Scheitellappen*.) Situated at the posterior and superior part of the cerebral hemisphere. The convex or external surface is bounded in front by the central sulcus; below, by the posterior limb of the Sylvian fissure and the temporal lobe; behind, by the parieto-occipital fissure, the occipital lobe, and the transverse occipital sulcus. The median surface is bounded

below by the subparietal sulcus and falciform lobe; behind, by the parieto-occipital fissure; and in front, by the ascending portion of the callosomarginal sulcus.

P. lob'ules. See *Lobulus cerebri parietalis* superior and inferior.

P. mes'oblast. See *Mesoblast*.

P. nerves. Branches of the auriculotemporal nerve supplying the parotid gland.

P. notch. The *Incisura parietalis*. The angle between the squamous and mastoid parts of the temporal bone, which receives the postero-inferior angle of the parietal bone.

P. pericar'dium. See *Pericardium*.

P. peritone'um. See *Peritoneum*.

P. placen'ta. See *Placenta*.

P. pleu'ra. See *Pleura*.

P. protu'berance. The same as *P. eminence*.

P. quad'rangle. (G. *Parietalviereck*.) The quadrangle formed by straight lines joining the two sphenia and the two entomia. (von Török.)

P. sec'tor. An area in the median plane of the skull included between two straight lines drawn from the horizon, one to the bregma, and the other to the lambda, and the portion of the convex surface included between the bregma and lambda. (Lissauer.)

P. seg'ment. The *Septum valvulare* Lieutandii. (G. *Scheidewandlappen*.) The posterior of the two segments of the mitral valve of the heart.

P. sul'cus. See *Sulcus interparietalis*.

P. throm'bus. A thrombus situated on the wall of the heart or of a blood-vessel.

P. ver'tebra. See *Cranial vertebra*.

Parietalia. (Nom. pl. n. of *L. parietalis*.) A term applied to the bones that together form the cranial vault.

Parietar'ia. (L. *paries*, a wall. F. *pariétaire*; G. *Glaskraut*.) A Linn. Genus of plants, Class *Polygamia*, Order *Monœcia*. The wall pellitory; so called because it grows on old walls.

P. diffu'sa. A plant belonging to the Genus *Parietaria*. It contains nitre, and has hence been used medicinally as a diuretic, and also in external applications.

P. erec'ta. Also contains nitre, and has been used therapeutically in the same way as *P. diffusa*.

P. lusitan'ica. Species of *Parietaria* used medicinally in Persia.

P. officina'lis. (F. *pariétaire commun*; G. *officinelles Glaskraut*.) Systematic name for the wall pellitory, formerly esteemed astringent and diuretic.

P. pennsylvan'ica. The American pellitory. A small plant which flowers from June to August. Used as a diuretic; believed formerly also to be emmenagogue.

Pari'etes. Nom. plural of *Paries*.

Pariet'ic acid. Thomson's name for the acid obtained from *Parmelia parietina*; since found to be really *Chrysophanic acid*.

Pari'etin. The same as *Usnic acid*.

Pari'eto-hæm'al arch. The *Hyoid arch*.

Pari'eto-ju'gal in'dex. The ratio of the greatest transverse diameter of the skull, or maximum parietal diameter, to the bizygomatic diameter; the latter being taken as 100.

Pari'eto-mas'toid su'ture. The

irregular, deeply dentate suture between the inferior border of the parietal bone above, and the superior border of the mastoid portion of the temporal bone below.

Parieto-occipital fissure. (F. *scissura occipitalis*; I. *scissura occipito-parietale*.) The *Fissura parieto-occipitalis*. A deep fissure appearing in each cerebral hemisphere, mainly on its median surface, passing downwards and slightly forwards, and joining the calcarine fissure. Its upper end corresponds roughly with the lambdoid suture of the cranium. The small part of this fissure which passes on to the upper surface of the hemisphere is called the *External parieto-occipital fissure*.

Parieto-sphenoidal artery. The *Inferior parietal artery*.

P. notch. The *Incisura parieto-sphenoidalis*. The slight depression usually present at the antero-superior extremity of the squamous portion of the temporal bone, in close proximity to both the parietal bone and the great wing of the sphenoid.

Parieto-temporal suture. The *Sutura parieto-temporalis*. The suture between the parietal and temporal bones, divided into the *Squamo-parietal* and *Parieto-mastoid* sutures.

Pariglin. (F. *parigline*; I. *pariglina*; G. *Parigline*.) The same as *Smilacin*, a colourless, crystalline, neutral substance, closely allied to *Saponin*, and found in the root of *Smilax officinalis*, the Jamaica sarsaparilla. A name given by its discoverer, Pallotta.

Parillin. (F. *parilline*.) A name for *Pariglin*, given by Pelletou.

P., yellow. The *Menispermum canadense*.

Parin. The same as *Paridin*.

Parinervate. (L. *par*, equal; *nervus*, a nerve. F. *parinervié*; G. *gleichspannadericht*.) Applied by Raspail to the superior *palea* in the *Graminaceæ*, which is marked by two equal nerves, situated one on each side of the centre.

Paripennate. (L. *par*, equal; *penna*, a wing. F. *paripenne*; G. *gleichgeflügelt*.) Term applied to a pennate leaf the leaflets of which are attached in pairs to the common petiole, to the end of which there is neither *cirrus* nor solitary leaflet, as in the *Cicer arietinum*.

Paris. (*Paris*, the son of Priam and Hecuba. F. *pariselle*; G. *Pariskraut*.) A Linn. Genus of plants, Class *Octandria*, Order *Tetragynia*; also, the herb *Paris*, *P. quadrifolia*.

P. blue. Sometimes used for pure *Prussian blue*; lately used for a very pure blue colour obtained when aniline and tannic chloride are heated together.

P. chalybeate springs. (Χάλυψ, steel.) At Paris, in Lawrence County, Missouri, U.S.

P. green. See *Schweinfurt's green*.

P. quadrifolia. A plant of the Tribe *Parideæ*, Nat. Order *Smilacææ*. It is acrid, poisonous, and narcotic. The leaves, root, and berries were formerly employed medicinally as anodyne and emetic. Popularly considered to be aphrodisiac; hence its name "True Love."

P. red. Term both for red sulphide of mercury and red lead; also, for very finely divided ferric oxide, used for polishing optical glasses, gold and silver ornaments, &c.

P. white. A white, soft chalk, elutriated to a fine powder.

P. yellow. *Chromate of lead*.

Parisactic. (F. *parisactique*.) Of, or belonging to, *Parisagogè*.

Parisagogè intestino'rum. (Παρισάγω, to bring in secretly. F. *paréigoge*; G. *Ineinandererschließen*.) *Intussusception* of the bowels.

Paris'thmia. (Nom. plural. Παρά; ισθμός, the fauces.) Old term for the glands of the fauces, that is, the tonsils; and also used by Hippocrates for *Tonsillitis*, or inflammation of these glands.

Paristhmic. (F. *paristhmique*.) Of, or belonging to, the *Paristhmia*, or tonsils.

Paristhmion. A tonsil. See also *Paristhmia*.

Paristhmiotome. (Παρίσθμια; τομή, a cutting.) Name for an old instrument for cutting out or scarifying the tonsils.

Paristhmitis. Inflammation of the *Paristhmia*, or tonsils.

Paristyp'hin. See under *Paridin*.

Pariswort. The *Trillium latifolium*.

Parity. (L. *par*, equal. F. *parité*.) Similarity, resemblance.

Also (L. *pario*, to bring forth), capability of bearing children.

Park leaves. A common name for the *Hypericum androsæmum*, all-heal, or St. Peter's-wort.

Park'esin. (After *Parkes*.) A substitute for caoutchouc, made up of a mixture of linseed oil and sulphide of chlorine with a solution of collodium in nitrobenzol. (*Real Encyclopædie der Pharmacie*, Geissler and Möller.)

Parkinson, James. An English physician of the early part of this century.

P.'s disease. *Paralysis agitans*; so called because Parkinson, in 1817, was the first to recognise its clinical features.

Parmacit'y. A corruption of *Spermaceti*. See *Cetaceum*.

Parmel red. A colouring matter contained together with *P. yellow* in *Parmelia parietina*.

P. yellow. See *P. red*.

Parmelia islandica. A name for the *Cetraria islandica*.

P. pariet'na. The *Lichen parietinus*, or yellow wall lichen, which grows abundantly on trees and walls. *Chrysophanic acid* was first obtained from this lichen by Schrader, in 1819.

P. plica'ta. The *Lichen roccella*. See *Lichen*.

Parmelia'ceæ. Applied by Fries, Eschweiler, and Reichenbach to a tribe of the *Lichenes*, having the *Parmelia* for their type.

Parmeliæ. Term applied by Zenker to the *Parmeliaceæ*.

Parmentie'ra cerifera. (L. *cera*, wax; *fero*, to carry. S. *palo de velas*.) The *Candle tree*. Nat. Order *Crescentiaceæ*. It grows in the forests of the Chagres Valley, and is used as fodder for cattle. It has a long, cylindrical fruit, supposed to resemble a candle.

Parnas'sia palustris. The *Grass of Parnassus*. An indigenous plant. It is a bitter and astringent herb, and was formerly used as a diuretic, and in the treatment of ophthalmia. In Sweden, a decoction of it is added to beer on account of its supposed stomachic properties.

Parnas'siææ. An Order of plants, all of which are perennial glabrous herbs, indigenous in

PARNASSUS—PARORASIS

the temperate and cool parts of the Northern Hemisphere, especially North America.

Parnassus, grass of. See *Parnassia palustris*.

P. springs. Red Creek springs. Natural springs at Red Creek, Pueblo County, in Colorado. Some are simple saline, others carbonated, and others sulphurated.

Paroärion. (Παρά; oärion.) The *Parovarium*.

Paroccip'ital. (Παρά; occipital.) By the side of the occipital. Term for the *Jugular process* of the occipital bone. It forms a separate bone in some of the apes.

P. fis'sure. The posterior part of the inter-parietal fissure was so named by Wilder.

Parocheteu'sis. (Παροχετεύω, to turn off into a side channel.) Old term for *Derivation*.

Parodin'ia. (Παρά, badly; ὥδης, the pain of childbirth.) The same as *Dystocia*.

P. perversa. (L. *perversus*, turned the wrong way.) An abnormal presentation of the foetus during labour.

Parodon'tis. (Παρά, near; ὀδοός, a tooth. F. *parodontie*.) The same as *Parulis*.

Par'odyn. (Παρά, contrary to; ὀδύνη, pain.) A synonym for *Antipyrin*, proposed by Nicot, and arising as did the other two synonyms, *Anodynin* and *Analgesin*, from his fondness for inventing new terms.

Parodyn'ia. See *Parodin'ia*.

Parœ'nia. (Παρά; οἶνος, wine. F. *parœnie*.) An act committed under the influence of wine.

Parol'ivary bod'y. (Παρά, beside; olivary.) The *Root-zone, anterior*.

Parom'phaloccele. (Παρά; ὀμφαλός, the navel; κήλη, a tumour. F. *paromphalocèle*; I. *paronfalocèle*; G. *Nebennabelbruch*.) A hernia near the umbilicus.

Paron'iria. (Παρά; ὄνειρος, a dream. F. *paronirie*.) Disturbance of sleep by disagreeable dreams.

P. am'bulans. (L. *ambulo*, to walk.) Somnambulism.

P. sal'ax. (L. *salax*, lust-provoking.) Nocturnal emission of semen.

Paronœ'a. See *Paranœa*.

Paronych'ia. (Παρά; ὄνυξ, the nail. F. *paronychie*; I. *paronichia*; G. *Nagelgeschwür*.) *Whitlow*. An erysipelatous inflammation of the fingers. Sometimes it occurs spontaneously in cachectic constitutions, or it arises from the irritation of scratches, or inoculation of the part with poisonous matters. It is commonest in spring, at which time it is occasionally almost epidemic. Four degrees of *Paronych'ia* are usually described: 1. The inflammation begins in or immediately beneath the cutis. A drop of pus forms, which burrows into the areolar tissue of the pulp of the finger. It may pass on to 2, 3, or 4. 2. Begins in the fibrous fat of the pulp of the finger. 3. A thecal abscess is formed, either primarily or secondarily, by the burrowing of pus into the tendon-sheath. 4. Begins or extends beneath the periosteum of the ungual phalanx, causing necrosis.

Also, old name for the *Erophila vulgaris*, or whitlow grass.

P. cellulo'sa. Term for degree No. 2 of *Paronych'ia*.

P. digit'ium. Another name for *Paronych'ia* (Quincy). See also *Digitium*.

P. latera'lis. See *Onychogryphosis*.

P. osseo'sa. Term for degree No. 4 of *Paronych'ia*.

P. syphilit'ica. See *Dactylitis syphilitica*.

P. tendino'sa. The third degree of whitlow or *Paronych'ia*, in which an abscess forms in the tendon-sheath of a finger, or, more rarely, a toe.

P. ungua'lis. Term for degree No. 1 of *Paronych'ia*.

P. ungular'is o'vium maligna. Malignant paronych'ia in sheep; *Rot-foot*.

Paronych'is. *Paronych'ia*.

Paronych'i'tis. The same as *Paronych'ia*.

Paroöphori'tis. (Παρά; oöphoritis.) Inflammation round the ovary.

Paroöph'oron. (Παρά; oöphoron. F. *paroöphore*.) The *Parovarium*.

Paropho'bia. A term for *Hydrophobia*; probably a corruption of *Panophobia*.

Parophthalm'ia. (Παρά; ὀφθαλμία. F. *parophthalmie*; I. *paroftalmia*.) Inflammation of the tissues surrounding the eyeball.

Parophthalmon'cus. (Παρά; ὀφθαλμός, the eye; ὄγκος, a tumour. F. *parophthalmoncie*.) A tumour near the eye.

Paro'piæ. (Παρά; ὤψ, the eye. F. *paropies*.) Old term for the outer angles of the eyes. See *Canthus*.

Parop'ium. (Παρά, beside; ὤψ, the eye. F. *paropion*; G. *Augenschirm*.) An eye-shade. Also, a blinder for a horse.

Paroplex'ia. (Παρά; πλήσσω, to strike.) *Paraplegia*.

Parops'ia. A Genus of the *Passifloraceæ*.

Parops'is. (Παρά, badly; ὄψις, vision. F. *paropsis*; I. *paropsia*; G. *falsche Sehen*.) Generic term for disordered vision, introduced by Dr. Good.

P. amauro'sis. See *Amaurosis*.

P. cataract'a. See *Cataract*.

P. glauco'sis. (Γλαύκωσις, blindness.) See *Glaucoma*.

P. illuso'ria. See *Metamorphopsia*.

P. latera'lis. See *Dysopsia lateralis*.

P. longin'qua. (L. *longinquus*, distant.) *Presbyopia*.

P. luci'fuga. (L. *lux*, light; *fugio*, to flee.) *Nyctalopia*.

P. nocti'fuga. (L. *nox*, night; *fugio*, to flee.) A syn. of *Hemeralopia*.

P. propin'qua. (L. *propinquus*, near.) *Myopia*.

P. staphylo'ma. See *Staphyloma*.

P. staphylo'ma purulen'tum. *Hyppopyon*.

P. staphylo'ma sim'plex. (L. *simplex*.) *Hydrophthalmos*.

P. strabis'mus. *Strabismus*.

P. synezi'sis. *Synezisis pupillæ*.

Paropte'sis. (Παρά; ὀπτάω, to roast. F. *paroptése*.) The giving of a hot-air bath to a patient.

Parop'tic. (Παρά, about; ὀπτομαι, to see.) Applied by Gœthe to the colours produced by the diffraction of light.

Paroquet. A place in Bullitt County, Kentucky, noted for its saline sulphur springs.

Parora'sis. (Παρά, badly; ὀράω, to see.) Old term for weak or disordered vision (Galen); also, for hallucination (Fernelius); also, *Achromatopsia* (Dunghlison).

PARORCHIDIUM—PAROVARIAL

Parorchidium. (Παρά, badly; ὄρχιδιον; ὄρχις, the testes. F. *parorchidis*; I. *parorchidia*; G. *Leistenhoden*.) Malposition of the testicle.

Parorchido-enterocele. (Ἐντερον, an intestine; κήλη, a tumour.) An inguinal hernia of the intestine complicated with a misplaced testicle.

Parorganum. (Παρά, near; ὄργανον, the material of a work.) Term for a substance in which there is an accidental resemblance to organic structure.

Parosmia. (Παρά, from; ὁσμή, a smell.) The same as *Parosphresis*.

Parosphresis. (Παρά; ὁσφρησις, a smelling.) A morbid, perverted sense of smell.

Parostia. (Παρά, badly; ὀστέον, a bone.) Good's term for defective ossification.

P. flexilis. (L. *flexilis*, pliant, flexible.) A syn. of *Mollities ossium*.

P. fragilis. (L. *fragilis*, easily broken.) A syn. of *Fragilitas ossium*.

Parotitis. (Παρά; otitis.) A term for inflammation in connection with the periosteum.

Parostosis. (Παρά; ὀστίον.) The formation of bone external to the periosteum, as in connective tissue, or the sheaths of blood-vessels.

Parotiae. See *Paropiae*.

Parotic. (F. *parotique*; I. *parotico*.) The same as *Parotid*.

P. process. A process in the skull of the *Teleostei*, formed by the union of the *Pterotic* and *Epiotic* bones.

Parotid. (Παρά, near; οὖς, the ear. F. *parotidien*; I. *parotideo*.) Near the ear.

Also, the *Parotid gland*.

P. aponeurosis. See *P. fascia*.

P. arteries. Small twigs from the external carotid supplying the gland as this artery passes through it.

P. duct. See *Stenson, duct of*.

P. fascia. (L. *fascia*, a band or swathe.) See *Fascia, parotid*.

P. gland. (F. *parotide*; I. *parotide*; G. *Ohrspeicheldrüse*.) *Glandula parotis*. The largest of the three salivary glands, situated on the side of the face in front of the ear, and extending deeply into the space behind the ramus of the lower jaw. The outer surface, convex and lobulated, is covered by skin and fascia and in part by the platysma myoides. Above, the gland is bounded by the zygoma; below, by an imaginary horizontal line from the base of the lower jaw to the anterior edge of the sterno-mastoid. The anterior edge stretches forwards on the masseter muscle. Its duct (see *Stenson, duct of*) passes forwards from its anterior border. There is often a small, separated part of the gland in connection with the duct, called *Glandula socia parotidis*. The deep part of the gland extends far inwards between the mastoid process and the ramus of the jaw. Above, it occupies the posterior part of the glenoid cavity; below and behind, it rests on the styloid process and the attached muscles and touches the digastric muscle; and, in front, it passes some way between the external and internal pterygoid muscles, under the ramus of the jaw. The external carotid artery and temporo-maxillary vein pass through the gland, the former dividing into the temporal and internal maxillary arteries. The facial nerve passes through the

gland from behind forwards, and some branches of the great auricular nerve pierce it.

P. gland, accessory. The *Glandula socia parotidis*.

P. gland, secretion of. See *Saliva, secretion of*, and *Salivary glands, serous*.

P. gland, tumours of. These are not so common as tumours upon the gland or in its vicinity. See *P. tumours*.

P. lymphatic glands. *Glandulae auriculares anteriores*. A small collection of lymphatic glands lying in the substance of the parotid gland, and superficially in front of the ear.

P. tumours. These are tumours of the parotid region. They may be either simple or malignant. The simple tumours are peculiar; they usually consist of mixed cartilage, mucous tissue, and fibrous tissue, and sometimes also gland-tissue. Malignant parotid tumours are most commonly encephaloid cancers, more rarely scirrhus cancers, or spindle- or round-celled sarcomata.

P. veins. Small veins passing out of the parotid gland to join the *Facial vein*.

Parotidean plexus. (L. *plecto*, to interweave.) See *Pes anserinus*.

Parotideo-masseteric fascia. See *Fascia, parotideo-masseteric*.

Parotides. A syn. of *Cynanche parotidea*.

Parotiditis. The same as *Parotitis*.

Parotidoncus. (Παρωτίς; ὄγκος, a tumour. F. *parotoncie*; I. *parotuncia*; G. *Halsmandeln*.) Term for *Mumps*.

Parotine. (*Parotid*.) Dr. W. Farr's term for the specific contagious principle of *Mumps*.

Parotis. (Παρά; οὖς.) The *Parotid gland*.

Also, an old term for a swelling of the parotid gland, either inflammatory or due to a new growth in the gland.

P. accessoria. The *Socia parotidis*.

P. contagiosa. (L. *contagio*.) Term for *Cynanche parotidea*.

P. epidemica. The same as *P. contagiosa*.

P. sero-so-glu'tinē tumens. (L. *serum*, whey; *gluten*, glue; *tumeo*, to swell.) The same as *P. contagiosa*.

P. spuria. (L. *spurius*, illegitimate.) The same as *P. contagiosa*.

Parotitic. Belonging to *Parotitis*.

Parotitis. (*Parotis*. F. *parotidite*; I. *parotidite* or *parotite*; G. *Ohrspeicheldrüsenentzündung*.) Inflammation of the parotid gland, either specific (mumps), or simple.

Also, inflammation of the neighbouring lymphatic glands. This is common in the course of, or following upon, some of the specific fevers, notably, enteric, typhus, and puerperal fevers.

P. epidemica. The same as *Parotis epidemica*.

P. erysipelato'sa. The same as *Parotis epidemica*.

P. polymor'pha. The same as *Parotis epidemica*.

P. specif'ica. The same as *Parotis epidemica*.

Parous. (L. *pario*, to bring forth.) Having brought forth one or more children.

Parovar'ial. A term applied to cysts of the broad ligament which are not developed in

PAROVARIAN—PARS

connection with the *Parovarium*. (Varieties given under *Parovarian cysts*.)

Parovarian. Relating, or belonging, to the *Parovarium*.

P. cysts. (Κύστις, the bladder, or, in general, a bag.) Varieties: 1. A small, usually pedunculated, cyst is often developed at the outer extremity of the horizontal tube (efferent duct) of the parovarium, lined with a layer of endothelial cells. The pedicle is not very vascular, and thus this variety of cyst never becomes very large. When non-pedunculated, it may become enlarged, separate the layers of the broad ligament, and form a large, unilocular, true parovarian cyst. It comes in contact, as it enlarges, with the ovarian fimbria of the Fallopian tube, and stretches the fimbria, and finally, the tube itself. At this stage it cannot be distinguished from 3. 2. Small cysts are often present, usually adherent to the anterior layer of the broad ligament, far away from the parovarium. They may be either pedunculated or sessile. The large simple cyst with a transparent, thin wall, lined with endothelium and containing a clear watery fluid, which is usually termed parovarian, is developed from one of these small cysts. 3. A cystoid degeneration of the broad ligament sometimes occurs, apparently from the effect of local œdema or congestion, commonly in cases where there is a large uterine fibroid. This cyst, also termed parovarian, as it enlarges, pushes the parovarium inwards, and often stretches the Fallopian tube to an enormous extent. 4. Cysts sometimes develop in connection with the vertical tubes of the parovarium. When perfectly developed, they are lined with ciliated epithelium. They tend to develop solid papillary growths from their inner walls, and they generally contain a clear, watery fluid. When they become very large, the cilia of their lining epithelial cells usually disappear. These cysts, when they contain papillary growths, spread rapidly. When a cyst-wall bursts, the papillary growths spread freely into the peritoneal cavity and over the Fallopian tube and uterus. These papillary cysts are not common.

P. tu'mours. See *P. cysts*.

Parovarium. (More correctly *Paro-ov-arium*. Παρά; ovarium.) So named by Kobelt. This organ was first described by Rosenmüller. It is composed of a group of scattered tubules between the two layers of the broad ligament of the uterus, lying transversely between the Fallopian tube and ovary, lined with epithelium, but without external openings. These tubules converge, but do not meet, towards their ovarian end, and are united somewhat indistinctly by a fairly large longitudinal tube, which is prolonged downwards for some distance. (See *Duct*, Gärtner's). The parovarium is essentially homologous with the *Epididymis* of the male.

Paroxyn'tic. The same as *Paroxysmal*.

Par'oxysm. (Παροξύω, to sharpen, excite. *F. paroxysme*; *I. paroxismo*; *G. Paroxysmus*.) A periodical fit, or attack of a disease, or certain symptoms that occur periodically; the increase of symptoms to a maximum, with the succeeding decline.

Paroxys'mal. Belonging to a *Paroxysm*; coming on in paroxysms.

P. day. The day on which a paroxysm of a disease occurs.

P. sneez'ing. A symptom in *Coryza*, periodic.

Paroxys'mus. A paroxysm.

P. fe'brilis. (*L. febris*, a fever.) Term for *Pyrexia*.

Par'rot, Jules. A French physician of the present century.

P.'s nodes. Local thickenings of certain bones occurring as a result of osteophytic disease (Parrot) in congenital syphilis. The parts usually thus affected are the outer table of the skull around the anterior fontanelle and along the interfrontal and sagittal sutures, and the ends of certain long bones, namely, the lower end of the humerus, ulna, femur and tibia.

Parrot's corn. Common name for the seeds of the *Carthamus tinctorius*.

Pars. (*L. pars*, a part.) Term for the external genital organs.

P. acetabular'is. The *Acetabulum*.

P. ascen'dens. (*L. ascendo*, to climb up.) Term for the vertical plate of the palate bone.

P. basilar'is. (*L. basilaris*; from *basis*, a base.) The basilar portion of the occipital bone.

P. bulbo'sa ure'thræ. The bulbous portion of the urethra.

P. carno'sa ure'thræ. The membranous portion of the urethra.

P. cartilagin'ea tu'bæ. The cartilaginous part of the *Eustachian tube*.

P. caverno'sa ure'thræ. The spongy portion of the urethra.

P. chorda'lis. (*L. chorda*, a gut-string.) That part of the base of the skull between the foramen magnum behind, and the sella turcica of the sphenoid in front, including the basi-occipital and basi-sphenoid. This part of the base of the skull was occupied originally, in the fœtus, by the *Notochord*.

P. ciliar'is. See *Ciliary zone*.

P. ciliar'is hyaloïd'ea. (Υαλοειδής, glassy.) The same as *P. ciliaris*.

P. conjunctiva'lis cor'næ. The epithelial layer covering the cornea, which is a continuation of the conjunctiva.

P. cor'poris. (*L. corpus*, the body.) The external genital organs.

P. cuneifor'mis teg'minis tym'pani. The anterior part of the *Tegmen tympani*.

P. descen'dens substan'tiæ perfora'tæ anti'cæ me'diæ. Name for the *Lamina terminalis*.

P. fronta'lis. The squamous or anterior part of the frontal bone, which forms the forehead and anterior portions of the temples.

P. horizonta'lis. The horizontal plate of the palate bone.

P. horizonta'lis duode'ni. The third, transverse, or oblique portion of the duodenum.

P. infe'rior ped'is. The sole of the foot.

P. interfascia'lis ure'thræ. The membranous portion of the urethra.

P. interme'dia. Name given by Kobelt to a venous plexus, in the female, lying between the glans of the clitoris and the part corresponding to the urethral bulb of the male. This plexus he considered to be the homologue of the male corpus spongiosum.

Also, the slender fasciculus of nerve lying between the facial and auditory nerves at the lower edge of the pons, and joining the former nerve in the auditory canal.

P. irid'ica ret'inæ. See *P. retinalis iridis*.

P. irid'ica u'veæ. See *P. uvealis iridis*.
P. malar'is. (G. *Wagenplatte*.) The main, or central, portion of the malar bone, excluding the processes, which forms the prominence of the cheek.
P. mammilar'is. The same as *P. mastoidea*.
P. mastoid'ea. The mastoid portion of the temporal bone.
P. membrana'cea sep'ti. The upper part of the interventricular septum of the heart, which is the last part of the septum to close during development, and which remains comparatively thin and membranous.
P. membrana'cea ure'thræ. See *Urethra*, membranous portion of.
P. muscular'is ure'thræ. The same as *P. membranacea ure'thræ*.
P. nas'al'is. The two horizontal portions of the frontal bone lying between the two orbital plates, and separated from one another by a space into which fits the cribriform plate of the ethmoid. These portions are irregular on the inferior surface, and form the roofs of the ethmoidal cells, and of the anterior and posterior internal orbital canal on each side.
Also, name for the vertical plate of the palate bone.
P. natura'lis medic'inæ. A term for *Physiology*.
P. nu'da. The membranous portion of the urethra.
P. obli'qua ascen'dens duode'ni. The third, transverse, or oblique portion of the duodenum.
P. obsce'na. (L. *obsceus*, disgusting, offensive.) Term for the external genital organs.
P. occipita'lis. The supra-occipital portion of the occipital bone. See *Occipital bone*.
P. oss'ea tu'bæ. The osseous part of the *Eustachian tube*.
P. palati'na. The horizontal plate of the palate bone.
P. papillar'is. Term for the papillary layer of the true skin, or derma.
P. pelvi'na ure'thræ. Term for the membranous portion of the urethra.
P. perinea'lis ure'thræ. Term for the spongy portion of the urethra.
P. perpendicular'is. Term for the squamous portion of the frontal bone.
Also, term for the vertical plate of the palate bone.
P. petro'sa. The petrous portion of the temporal bone.
P. pri'ma as'peræ arte'riæ. The *Larynx*. See *Arteria aspera*.
P. prostat'ica ure'thræ. The prostatic portion of the urethra.
P. pylor'ica. The pyloric portion of the stomach.
P. pyramida'lis os'sis tem'poris. The petro-mastoid portion of the temporal bone, consisting of the petrous and mastoid parts, which are already united at birth.
P. reticular'is. Term for the reticular layer of the skin.
P. retina'lis i'ridis. The epithelial portion of the iris; that part which is developed from the second optic vesicle.
P. Rivini. Helmholtz's name for that part of the tympanic membrane usually called *Membrana flaccida*, or Shrapnell's membrane,

given on account of the so-called *Foramen Rivini* occurring in this situation.
P. sclera'lis cor'neæ. Term for *Bowman's membrane*.
P. spongio'sa ure'thræ. The spongy portion of the urethra.
P. squamo'sa. The squamous portion of the temporal bone.
P. transver'sa duode'ni. The third portion of the *Duodenum*.
P. triangular'is. Term for the anterior part of the third cerebral convolution.
P. tympan'ica. The tympanic portion of the temporal bone.
P. urethra'lis levato'ris a'ni. Erroneous name used by Luschka for those fibres of the *Transversus perinei profundus* that loop round the urethra.
P. uvea'lis cor'neæ. Term for *Descemet's membrane*.
P. uvea'lis i'ridis. The external or connective tissue layer of the iris.
P. va'ga. Term for the *Vagus* or *Pneumo-gastric nerve*.
P. vi'rilis. The penis.
Parsley. (F. *persil*; I. *prezzemolo*; G. *Petersilie*.) See *Petroselinum sativum*.
P., break'stone. See *Alchemilla arvensis*.
P. cam'phor. A stearopten of the composition $C_{12}H_{14}O_4$, obtained from the volatile oil of the *Parsley*.
P., hem'lock. See *Conioselinum canadense*.
P., Macedo'nian. See *Bubon macedonicum*.
P., moun'tain, black. See *Athamanta oreoselinum*.
P., pi'ert. (F. *perrer la pierre*, to pierce the stone.) See *Alchemilla arvensis*.
P., pol'son. A name for the *Conium maculatum*.
P., spot'ted. The same as *P., poison*.
P., stone. Common name for the Genus *Sison*.
P., wa'ter. The *Cicuta maculata*.
Parsnip. (F. *panais*; I. *pastinaca*; G. *Pastinake*.) The Genus *Pastinaca*.
Also, *Pastinaca sativa*, the common parsnip.
P., cow. The *Heracleum spondylium*.
P., cree'ping wa'ter. The *Sium nodiflorum*.
P., crow. The *Taraxacum officinale*.
P., gar'den. The *Pastinaca sativa*.
P., mead'ow. The *Thapsium barbinode*.
P., wa'ter, com'mon. The *Sium latifolium*.
Par'son's disease'. Another name for exophthalmic goitre. (Billings.) See *Graves' disease*.
Part. æq. Abbreviation, often used in prescriptions, for *Partes æquales*, equal parts.
Par'tes. (Nom. plural of L. *pars*, a part.) The genital organs.
P. generatio'ni inservien'tes. (L. *generatio*; from *genero*, to beget; *inservio*, to serve.) The same as *Partes*.
P. genita'les. The same as *Partes*.
P. jugular'es. The condylar portions of the occipital bone, or *Exoccipitals*.
P. latera'les na'si. The *Ala nasi*.
P. latera'les os'sis occip'itis. The same as *P. jugulares*.
P. nervo'sæ. (L. *nervosus*; from *nervus*;

from Gr. *νῆρον*, a sinew, and later, after the time of Aristotle, a nerve.) Term among the ancients for tendons and ligaments.

P. obscæ'næ. The same as *Pars obscæna*.

P. orbita'les. The orbital plates of the frontal bone.

Parthenei'a. (Παρθενεία, virginity, maidenhood.) Virginity.

Parthenias trum. (Dim. of *Parthenium*, the tansy.) A name for the *Matricaria parthenium*.

Parthenic acid. A non-crystallisable acid occurring in combination with *Parthenine* in the *Parthenium hysterophorus*.

Partheniæ. Name applied by Lessing to a section of the *Senecionidæ* having the *Parthenium* for their type.

Parthenine. $C_{19}H_{25}NO_6$. A crystallisable alkaloid, occurring in combination with *Parthenic acid* in the *Parthenium hysterophorus*. It is a febrifuge, and its action is very similar to that of quinine.

Parthenious. (Παρθένος, a virgin. F. *parthénie*.) Pertaining to a virgin. Applied to the disease *Chlorosis*.

Parthenis. The same as *Parthenium*.

Parthenium. A Genus of the *Compositæ*.

Also, the *Matricaria parthenium*.

P. febrifugum. (L. *febris*, a fever; *fugo*, to put to flight.) The *Matricaria parthenium*.

P. hysterophorus. (Ύστερα, the womb; φορός, bearing.) The West Indian mugwort. It grows in the West Indies, Louisiana, and Florida. It contains the alkaloid *Parthenine*.

P. integrifolium. (L. *integer*, entire; *folium*, a leaf.) A perennial herb growing in the south-western parts of the United States. An infusion of the bitter flowering tops is used as an antiperiodic.

P. mas. The *Tanacetum vulgare*.

Parthenius morbus. See *Morbus parthenius*.

Parthenochlorosis. (Παρθένος, a virgin; *chlorosis*. F. *parthénochlorosis*; G. *Bleichsucht*.) See *Chlorosis*.

Parthenogalactozemia. (Παρθένος; γάλα, milk; ζημία, loss. F. *parthénogalactozémie*.) The escape of milk from the breasts of young girls or maidens.

Parthenogenesis. (Παρθένος; γένεσις, birth. F. *parthénogénèse*; I. *parthenogenesi*; G. *Parthenogenesie*.) Virgin-reproduction.

In Zoology, the development of a new individual by the formation of a bud or detached overgrowth, or from an egg-cell that requires no fertilisation.

In Botany, the formation of embryos by the female reproductive organs without fertilisation. In such cases, it is now generally considered that the so-called female organs are not, strictly speaking, female, since they contain within themselves all that is necessary for development.

P., male. Bot. The asexual development of a complete organism from the male element of its progenitor, without contact or conjugation with the female element. It occurs in some low vegetable organisms.

Parthenogenet'ic. Relating to *Parthenogenesis*.

Parthenology. (Παρθένος; λόγος, a discourse.) The discussion, or consideration, of the state of virginity in health and disease.

Partheno'nosus. (Παρθένος; νόσος, a disease.) Another term for *Chlorosis*.

Partial. Applied in Botany to partitions that do not completely divide the pericarpial cavity into separate compartments.

P. metamorphoses. The metamorphoses of insects that, during the course of their existence, undergo little or no change of general form, but only acquire new external parts; as the *Hemiptera*, *Orthoptera*, and many of the *Neuroptera*.

P. pressure. If two or more gases are mixed in a closed space over a fluid, since the different gases existing in a gaseous mixture exert no pressure upon each other, the several gases become absorbed. The weight of each absorbed is proportional to the pressure which would be exerted upon that gas if it were the only gas in the space; this pressure is called the *Partial pressure* of a gas. (Bunsen.)

P.re'flexes. Reflex movements occurring in a muscle, or small group of muscles, from irritation.

Particles. (L. *particula*, a small part.) Supposing ponderable matter to be continuously subdivided into smaller and smaller portions, until the last stage of division is reached in which it is possible to recognise the aggregate condition of the matter thus acted on, the finely-divided portions of matter thus supposed to be formed are called *Particles*.

P., prim'itive, of muscles. Term for the *Sarcous elements* of Bowman.

Particulæ sanguinis. Term for the blood-corpuscles.

Partite. (L. *partio*, to divide; from *pars*, a part. F. *partité*; G. *getheilt*.) Divided into parts.

Partridge. (Πέρδιξ. F. *perdrix*; G. *Rebuhn*.) The *Perdix cinerea* and *Perdix rubra*. Formerly, according to Aldrovand, used in medicine. Used now as food.

P. berry. The berry of the *Mitchella repens*.

Also, the berry of the *Gaultheria procumbens*.

P. pea. The *Cassia chamæcrista*.

Parts, the. Term for the external genital organs.

Partu'rient. (L. *parturiens*, bringing forth. G. *gebärend*.) Bringing forth young.

Also, term for an oxytocic drug.

P. ap'oplexy. A puerperal disease occurring in cows. The secretion of milk is arrested, there is some fever, and the brain becomes congested.

P. canal'. The canal formed by the dilated cervix uteri and vagina through which the foetus passes during *Parturition*.

P. line. The axis of the *P. canal*.

P. state. The *Puerperium*.

Parturientes dolo'res. The pains of bringing forth. Labour-pains.

Parturifa'cient. (L. *facio*, to make.) Tending to bring on labour.

Parturiometer, Lea'man's. (L. *parturio*; Gr. μέτρον, a measure.) An instrument for indicating the effective movement of the advancing part of the ovum or foetus at any moment during parturition. It consists of a metallic cylinder in which is a spring accurately made to measure force in pounds. The pressure is conveyed to the spring by a plunger terminating externally in a concave disc which is placed against the advancing part of the

ovum. The effective movement is indicated on a scale.

Parturition. (F. *part*; I. *parto*; G. *Geburt*.) The process of expulsion of the fœtus and placenta from the uterus. See *Labour*.

P., dry. See *Labour, dry*.

Parturium vanum. (L. *vanus*, empty, fruitless.) See *Labour, spurious*.

Partus abactio. (L. *pario*, to bring forth; *abactus*, driven out from.) *Abortion*.

P. abactus. The same as *P. abactio*.

P. Cæsar'us. Cæsar'ian section.

P. difficilis. Difficult labour.

P. emortuus. (L. *e*, out; *mortuus*, dead, from *morior*.) Term for *Stillbirth*.

P. intempestivus. (L. *intempestivus*, untimely.) Term for *Labour, premature*.

P. laboriosus. (L. *laboriosus*, toilsome.) See *Dystocia*.

P. præcox. (L. *præcox*, ripe before the time.) See *Labour, premature*.

P. præmaturus. The same as *P. præcox*.

P. serotinus. (L. *serotinus*, late ripe.) The same as *Opsiotocia*.

P. siccus. (L. *siccus*, dry.) See *Labour, dry*.

Parulidodontitis. (*Parulis*; *odontitis*. F. *parulidodontite*.) Inflammation of the tooth with gum-boil.

Parulis. (Παρά, οὖλον, the gum. F. *parulie*; I. *parulide*; G. *Zahnfleischgeschwür*.) Inflammation or abscess of the gum; gum-boil.

Also, an ulcer of the gum, with thickened margins.

Parumbilical. (Παρά; L. *umbilicus*, the navel.) Close to the umbilicus.

P. veins. Name given by Schiff to one or two small veins passing downwards from the left division of the portal vein, along the round ligament of the liver, forming connections, towards the umbilicus, with the epigastric veins. In certain pathological conditions, when the portal branches are obstructed, these parumbilical branches become greatly enlarged, and set up a collateral circulation.

Paruria. (Παρά, badly; οὐρέω, to pass urine. F. *parurie*.) Disordered micturition, or *Dysuria*.

P. incont'ens. (L. *incontinens*, not retaining.) *Enuresis*.

P. incont'ens aquosa. (L. *aquosus*, abounding in water.) Term for *Diabetes insipidus*.

P. in'ops. (L. *inops*, destitute.) Suppression of urine.

P. mellita. (L. *mellitus*, honey-like.) *Diabetes mellitus*.

P. retentio'nis. (L. *retentio*, a holding in.) Retention of urine.

P. retentio'nis rena'lis. (L. *renes*, the kidneys.) The same as *P. retentionis*.

P. retentio'nis vesica'lis. (L. *vesica*, the bladder.) The same as *P. retentionis*.

P. stillat'ia. (L. *stillatim*, drop by drop; from *stilla*, a drop.) *Strangury*.

P. stillat'ia mucosa. *Cystirrhœa*.

Paruric. Belonging to *Paruria*.

Parurocystis. (Παρά; οὖρον, urine; κύστις, the bladder. F. *parurocyste*; G. *Nebenblase*.) An appendage or sacculus of the urinary bladder.

Parviflorous. (L. *parvus*, small; *flos*,

floris, a flower.) Having small flowers. The same as *Micranthous*.

Parvifolious. (L. *parvus*; *folium*, a leaf. F. *parvifolié*; G. *kleinblättrig*.) Having small leaves.

Parvipoas. Coues' name for the *psaos parvus* muscle.

Parvirostrate. (L. *parvus*; *rostrum*, a beak. F. *parviroste*; G. *kleinschnabell*.) Having a slender beak.

Parvoline. C₉H₁₃N. 1. The first ptomaine analysed; discovered by Etard and Gautier in 1881, and obtained from putrefying mackerel and horse-flesh. It occurs as an oily, amber-coloured liquid, smelling like hawthorn, boiling just below 200° F. It is slightly soluble in water, readily soluble in alcohol, ether, and chloroform.

2. Waage obtained a substance probably identical with the above, by heating a mixture of ammonia and propionic acid in a sealed tube.

3. A substance (C₁₈H₁₅N, Robin) not yet thoroughly isolated, obtained from some bituminous schists, which are rich in animal fossils.

Parvules. (L. *parvulus*, very small.) An American speciality, similar in all respects to "granules;" made up with a fixed, but very small, quantity of some active drug.

Paryg'ron. (Πάρυγρος, moist.) Term employed by Galen for a moist preparation used for allaying local inflammation.

Pas'cal, Blaise. A French physicist. Born 1623, died 1662.

P.'s law. The law, in Hydrostatics, of equality of pressures. It is enunciated as follows:—"Pressure exerted anywhere upon a mass of liquid is transmitted undiminished in all directions, and acts with the same force on all equal surfaces, and in a direction at right angles to those surfaces."

Pas'cium. (L. *pasco*, to feed.) Old name for *Pabulum*, or food, as applied to man; also for pasture, as applied to beasts.

Pasi'phylus. (Πάς, all; φίλος, beloved, grateful.) Old name for a dry plaster inducing the formation of a scab. It consisted of vitriol, sandarach, misy, and chalcitis, according to Aëtius.

Pas'ma. (Πάσσω, to sprinkle over.) The same as *Catapasma*.

Paso de Robles springs. San Luis Obispo County, California. There are five hot sulphur springs, three cold sulphur springs, and one chalybeate spring. The waters are recommended as alkaline-sulphur thermal waters. As baths, they are used for chronic skin diseases and rheumatism. Analysis of the main hot sulphur spring:—Sulphate of lime 3.21 grains, sulphate of potash 0.88, sulphate of soda 7.85, peroxide of iron 0.36, carbonate of magnesia 0.92, carbonate of soda 50.74, iodides and bromides traces, alumina 0.12, silica 0.44, organic matter 1.64; total, 83.44 grains. Carbonic acid, 10.50, sulphuretted hydrogen 4.55 cubic inches, in one imperial gallon.

Paspalum. (Πασπάλη, the finest meal.) The Tribe *Panicææ*, of the Order *Gramineæ*. Several species are cultivated for their small grain, which is used as food in India, &c.

Pasque-flower. (Passequer, or pasche-flower. Anglo-Sax. *pascha*, Easter; L. *pascha*; Gr. *πάσχα*, the passover; Heb. *pesach*, a passing over.) The *Anemone pulsatilla*; called *Pasque* because it flowers about Easter.

Pas'sa. (Nom. fem. of *passus*.) An epithet applied to *Uva*, a grape, to signify a dried grape, or raisin.

Also, used by Paracelsus for *Paronychia*, or whitlow.

P. corinthi'aca. (L. *passus*, dried.) The raisin or dried fruit of the *Vitis corinthiaca*.

Pas'salus. (Πάσσαλος, a peg. F. *passale*.) Applied by G. Allman to the calyx of a flower when entire.

Passambio. The *Rio vinaigro*.

Passavan'tic. (Πάς, all; αβαίνω, to dry up. F. *passavantiqne*.) Drying up; applied formerly as an epithet for a certain powder described by Schröderus, which, by causing purgation, dried up the tissues.

Pass'er. (L. *passer*, a sparrow.) A Genus of the *Passeridæ*, including the two English species *P. domesticus*, the common house-sparrow, and *P. montanus*, the tree-sparrow.

Pass'eres. (Nom. plural of *passer*.) A Group of birds, including the whole of the so-called Passerine birds, and now divided into three Families, *Eurylaemidæ*, *Pseudoscines*, and *Passeridæ*. (Fürbringer and Gadow.)

Passerid'æ. A Family of the *Passeres* (Fürbringer and Gadow) including the three Sub-families, *Oligomyodi*, *Tracheophones*, and *Poly-myodi*. Also called *Oscines*, formerly *Passerinæ*.

Passer'ina. (L. *passer*, a sparrow; on account of its beaked seed.) A Genus of the *Thymelacææ*.

P. tartonra'l'ra. (F. *passerine de tartonraire, trintanelle malherbe*.) The bark of this species is said to have an epispastic local action. An ointment is prepared from the bark in the same way as the ointment of *Mezereon*, and is said to be more active than the latter.

P. tinctor'ia. A species the root of which furnishes a yellow dye.

Passer'ina. A term, now being gradually given up, used to designate a Subfamily of the *Passeridæ*, now generally called *Oscines*. It includes all the true singing birds. See *Passeridæ*.

Pass'erine birds. A general term for the *Passeres*.

Passer'ini's decoction. A preparation similar to *Decoctum Zitzmanni*.

Passibility, great. (L. *passus*, from *pator*, to suffer; *habilis*, able.) Term for *Hyperæsthesia*.

Passiflo'ra. (L. *passio*, passion; *flos*, *floris*, a flower. F. *passiflore*; G. *Passionsblume*.) Term substituted by Linnæus for *Flos passionis*, so called on account of the cross-shaped stigma. A Genus of the *Passifloracææ*, chiefly confined to Tropical America, several species of which have active qualities.

P. edu'lis. A South American species. The fruit is edible.

P. fœ'tida. Has been used as a pectoral, antispasmodic, and emmenagogue.

P. incarna'ta. A plant of the Southern United States. The fruit is known as maypops. The juice expressed from the leaves of this species and those of *P. lutea*, and afterwards dried and powdered, has been given in tetanus and in neuralgia. According to Phares, *P. lutea* and *P. incarnata* have been used by him (in the United States) with great success in the treatment of tetanus neonatorum and neuralgic affections, and an extract of the root as "an application to chancres, irritable piles, erysipelas, and recent burns." An extract made from the leaves has

been given in powder, in doses of 1 to 4 teaspoonfuls.

P. laurifo'lia. The bay-leaved passion-flower, a native of Surinam. Its fruit grows to the size of a small lemon, which it rather closely resembles; it has a delicious smell and flavour, quenches thirst, is stomachic, and has been used as an anthelmintic.

P. lu'tea. (L. *luteus*, dyed with the herb lutum; golden-yellow.) A plant growing in the Southern United States. Uses, see *P. incarnata*.

P. lyræfo'lia. Used as a diuretic.

P. malifor'mis. The fruit of this plant, called also the apple-shaped granadilla, is considered a delicacy in the West Indies.

P. quadrangular'is. A native of the West Indies. The fruit is edible; but the root, used in small doses as a vermifuge, is believed to be a narcotic poison.

P. ru'bra. Hab. West Indies. The flowers are used for their narcotic action.

Passiflora'cææ. (*Passiflora*.) An order of plants mostly inhabiting the Tropical parts of the New World, rarer in Asia, Australia, and Tropical Africa. The pulpy aril of plants of this order is used in America in making cooling drinks.

Passiflo'rin. (F. *passiflorine*.) An alkaloid little known, which Ricord-Madiana has obtained from the roots of the *Passiflora*.

Pas'sio. (L. from *pator*, to suffer.) Old term for a disease.

P. cadiv'a. (L. *cadivus*; from *cado*, to fall.) The "Falling sickness." Term for *Epilepsy*.

P. cardi'aca. See *Cardiac passion*.

P. choler'ica. *Cholera*.

P. coeli'aca. See *Celiac passion*.

P. felli'flua. (L. *fel*, *fellis*, gall, or poison; *fluo*, to flow.) *Cholera*.

P. hæmopto'ica. *Hæmoptysis*.

P. hypochondri'aca. *Hypochondriasis*.

P. hyster'ica. See *Hysterical passion*.

P. ili'aca. See *Iliac passion*.

P. ischiad'ica. *Sciatica*.

P. pleurit'ica. *Pleurisy*.

P. stomach'ica. *Dyspepsia*.

P. ventriculo'sa. *Lientery*.

P. vomico'flua. (L. *vomica*, an abscess; *fluo*, to flow.) Term for *Phthisis pulmonalis*.

Pas'sion. (L. *passio*. F. *passion*; G. *Zuneigung*.) An active affection or emotion of the mind, as rage, terror, &c.

Also, suffering caused by a disease, as *Cardiac passion*, &c.

P.-flow'er. The *Clematis passiflora*.

P.-flow'er, bay-leaved. See *Passiflora laurifolia*.

Passio'nes an'imi. (L.) Affections of the mind.

Pas'sions. Old name for *Bistorta*.

Pass'ive. (L. *passivus*; from *pator*, to suffer, undergo.) Used by pathologists to distinguish those conditions of hyperæmia, dropsy, &c., sometimes called mechanical or venous, which are due to a diminution of the force propelling the blood-stream, or to direct obstruction to its return from the part.

P. clot. Term given by Broca to the clot formed in an aneurism, consequent upon the arrest of the blood-stream. It is the same kind of clot as that formed in shed blood.

P. hæm'orrhage. See *Hæmorrhage*, *passive*.

P. insufficiency of muscles. Shown by muscles acting on joints. In certain positions of the joint, the muscle may become so stretched as to act like a rigid strap, and prevent or limit the action of other muscles; e. g. the gastrocnemius, when the knee is fully extended, will not allow of complete dorsal flexion of the foot. This is called *Passive insufficiency*.

P. movement. Surgical term for movement exerted, not by the patient himself, but by another person.

Pas'sugg. In the Graubündt Canton, Switzerland, noted for its three cold mineral springs. The *Neue Belvedra* and the *Theophilusquelle*, the waters of both of which are acid, contain in 1000 parts, sodium bicarbonate .32 and 1.91, calcium bicarbonate 2.09 and 1.02, respectively. The *Ulricusquelle*, the water of which is salt, contains in 1000 parts, sodium chloride .82, sodium bicarbonate 5.38, and calcium bicarbonate 1.03, besides iodine and bromine.

Pas'sula. (Contraction of *passa uvula*, dim. from *passa uva*, a dried grape. F. *raisin sec*; G. *Rosine*.) A raisin, or dried grape.

P. major. A Malaga raisin, the fruit of the *Vitis vinifera*.

P. mi'nor. A Corinthian raisin, or currant.

Pas'sulæ laxati'væ. Much used in many places as a laxative for children. Prepared by allowing 100 parts of washed and dried currants to absorb a mixture of 30 parts of Inf. sennæ co. and 30 parts of Aqua cinnamomi, at a temperature of 25° C. The currants are then spread on parchment paper, and dried in an oven.

Pas'sulate. Epithet applied to certain medicines of which raisins form the chief ingredient.

Pas'sum. (*Passa*.) A name for raisin wine.

Pas'sus. (L. *passus*, dried.) Made sweet, and dried by exposure to the sun.

Also, full of wrinkles; applied to the grape.

Also (L. *pando*, *passum*, to extend), a step, or pace.

Pas'sy. A village near Paris, noted for its five cold mineral springs. The *Eau dépurée* contains in 1000 parts, sodium chloride .727, magnesium sulphate 2.589, calcium sulphate 4.82, and ferrous sulphate .13; the *Old Spring*, Nos. I and II, contain in 1000 parts, sodium chloride .193 and .309, calcium sulphate 1.62 and 2.819, ferrous sulphate .039 and .056; the *New Spring*, Nos. I and II, contain in 1000 parts, sodium chloride .359 and .338, calcium sulphate 1.536 and 2.774, ferrous sulphate .045 and .412, respectively. The water of these springs is given internally as a tonic and astringent.

Pas'ta. (Παστή, the fem. of παστός, sprinkled as with salt.) This name was originally applied to a confection supposed to remove the cause of leanness. See *Paste*.

P. Ab'boti. Used for cauterising the nerve of a tooth preparatory to stopping. See *Arsenical paste*.

P. ad combustio'nes. (L. *comburo*, *combustum*, to burn up.) 50 parts of blue talc powder, mixed with 10 of bicarbonate of soda and 10 of glycerine, and enough water to make a thick paste. Used as a local application for burns of the skin (Geissler and Möller).

P. althææ'æ. (*Althæa officinalis*.) See *Paste, marshmallow*.

P. amygdali'na. The *Confectio amygdalæ*.

P. am'yli. See *Starch paste*.

P. bo'li al'bæ. Bolus alba or Kaolin. See *Paste, kaolin*.

P. cac'ao. The same as *Chocolate*.

P. cac'ao cum ar'rowroot. 400 parts of *P. cacao*, 300 of sugar, 300 of arrowroot, and 1 of *Elæosaccharum vanilli*, G. Ph.

P. cac'ao cum car'rageen. 100 parts of Gelatina carrageen, 400 of sugar, and 500 of *P. cacao*. See *Carrageen moss*.

P. cac'ao cum extrac'to car'nis. 50 parts of Ext. carnis heated in a porcelain vessel in a steam bath with 470 parts of sugar to a dry powder, and added to 500 parts of melted *P. cacao*.

P. cac'ao cum extrac'to chi'næ. 2½ parts of Ext. chinæ spir., G. Ph., 10 of Cinnamon cortex, 2½ of *Zingiberis rhizoma*, 485 of sugar, and 500 of *P. cacao*.

P. cac'ao cum extrac'to mal'ti. 300 parts of Ext. malti siccum, G. Ph., 400 of sugar, and 400 of *P. cacao*.

P. cac'ao cum liche'ne islan'dico. 100 parts of Gelatina lichenis islandici saccharata sicca, G. Ph., 450 of sugar, and 450 of *P. cacao*.

P. cac'ao cum sal'ep. 50 parts of Pulv. salep, G. Ph., 450 of sugar, 500 of *P. cacao*.

P. cac'ao ferra'ta. 50 parts of Ferri oxyd. saccharati sol., G. Ph., 450 of sugar, 500 of *P. cacao*, 2 of *Elæosacch. vanilli*, G. Ph. It contains .15 per cent. of iron.

P. cac'ao purgati'va. 200 parts of Magnesia usta, G. Ph., carefully mixed with 400 of sugar and added to a mixture of melted *P. cacao* 300 parts, and Ol. ricini 100 parts.

P. cacaoti'na. (Geissler and Möller.) The same as *P. cacao*.

P. canquo'i'ni. *Paste of zinc chloride*.

P. carbol'ica. Lister. 5 parts of Acid. carbol., 50 of Ol. olive, and enough of Creta præparata to make a thick paste.

P. caus'tica viennen'sis. See *Vienna paste*.

P. de dac'tylis. (L. *dactylus*, a date; Gr. δάκτυλος, a finger.) See *Paste, date*.

P. de juju'bis. See *Paste of jujubes*.

P. emulsi'va. (L. *emulgeo*, to milk out.) The *Confectio amygdalæ*.

P. glycyrrhi'zæ gumma'ta et ani'sa'ta. A compound paste, made up of extract of liquorice, gum senegal, sugar, Florence orris-root, and volatile oil of anise. It is used as a demulcent.

P. guara'na. See *Guarana*.

P. gummo'sa. The *P. althææ*.

P. io'di et am'yli. Starch 1 oz., glycerine 2 oz., water 6 oz. These are boiled together, and, when almost cold, there is added solution of iodine 1 oz.

P. liche'nis. See *Paste of Iceland moss*.

P. Londinen'sis. See *London paste*.

P. paullin'æ. *Guarana*.

P. pectora'lis. 100 parts of *Species pectorales* are macerated for twelve hours with 1000 of water; 600 parts of gum arabic and 400 of sugar are added, and the mixture is wrapped in thick flannel, and steamed. .5 parts of Ext. opii dissolved in 20 of Aq. amygdalæ amaræ, G. Ph., are further added, and the mixture is treated in the same way as the *Massa de jujubis*.

PASTÆTUM—PASTINACA

P. plum'bica. (L. *plumbum*, lead.) Heat 50 parts of powdered lead oxide with 80 of acetum, B. Ph., to the consistence of a paste, and add 10 parts, either of glycerine, or Ol. lini.

P. pro tactu. (L. *tactus*, a touch.) Soft soap 2 oz., glycerine 2 oz., carbolic acid 1 dr., mixed and strained; to this is added rectified spirit 2 dr.

P. regia. An ancient kind of sugar-cake containing almonds.

P. zin'ci. Mix carefully 50 parts of zinc oxide, 2 of salicylic acid, 15 of rice-starch, 15 of glycerine, and 140 of water, and heat them for a short time in a steam-bath. Used locally for eczema. Lassar has made a very similar paste with 2 parts of salicylic acid, 25 of zinc oxide, 25 of starch, and 50 of vaseline.

Pastæ'tum. (Παστή. F. *pastête*; G. *Fleischbrod.*) A kind of pasty. The same as *Artocreas*.

Pastau's linimen'tum styraci-num. 30 parts of prepared storax, 60 of olive oil. The prepared storax is heated with a third the quantity of rectified spirit in a water-bath, and the olive oil is then added. Used locally for *Scabies*.

Paste'. (*Pasta*.) A soft, consistent pharmaceutical preparation, made with sugar, and gum or mucilage.

Also, a viscid, tenacious mixture, usually of flour and water, for sticking on labels, &c.

P., ar'senic. See *Arsenical paste*.

P., Cagliar'i. *Macaroni*.

P., Can'quoin's. See *P., chloride of zinc*.

P., caust'ic. The same as *P., Canquoin's*.

P., chlo'ride of zinc. A caustic paste, used to destroy epithelioma, rodent ulcer, &c. It is prepared by dissolving 32 parts of zinc chloride in 4 of water, adding 8 parts of zinc oxide, and 24 of wheat-flour, and drying the mixture thoroughly. (Fr. Codex.)

P., Cos'ter's. See *Coster's paste*.

P., date. Composed of dates, gum arabic, sugar, orange-flower water, and water. (P. Ph.) It is used as a demulcent.

P., dex'trin. 100 parts of dextrin, 100 of glycerine, and 100 of water, mixed, and heated for half an hour in a steam-bath. Used as a basis for local applications, especially in skin affections.

P., Ital'ian. *Macaroni*.

P., Landol'fi's. See *Landolfi's paste*.

P., Lon'don. See *London paste*. It has been applied to growths in the larynx, enlarged tonsils, &c.

P., Man'ec's. See *Manec's paste*.

P. of Ice'land moss. (F. *pâte de lichen*.) Made by boiling Iceland moss (*Cetraria islandica*) to the requisite consistence, and then adding sugar and gum arabic.

P. of Ice'land moss, o'plated. (F. *pâte de lichen opacée*.) This contains, in addition, opium 1-3 gr. to 1 oz.

P. of ju'jubes. See *Massa de jujubis*.

P., sen'na. Made by thoroughly beating up together figs and powdered senna to the consistence of a confection, and covering the mass with sugar.

P., tooth. See *Dentifricium*.

P., Vien'na. See *Vienna paste*.

P., Ward's. The *Confectio piperis*, B. Ph.

Pas'tern. (O. F. *pasturon*; from *pasture*, a tether; so called because the horse was tethered round this joint when let out to pasture. F.

paturon; I. *pastoia*; G. *Fessel*.) The part of the tarsus between the fetlock-joint and the hoof in the horse.

Pasteur', Lou'is. A very eminent French chemist and scientific discoverer, born at Dôle (Jura), December 27th, 1822, now living (1892).

P.'s flu'id. Dissolve, in 100 parts of distilled water, 10 of pure cane-sugar, 1 of ammonium tartrate, and the ash of 1 part of yeast. Used as a nutrient material for the artificial cultivation of micro-organisms.

P.'s septicæ'mia. See *Septicæmia*, *Pasteur's*.

Pasteurisa'tion. (G. *Pasteurisirén*.) The sterilisation of milk or wine, by which the contained micro-organisms are destroyed, and decomposition is thus prevented.

Pas'teurism. The whole process involved in protective or preventive inoculation as carried out by Pasteur, with a virus which has been attenuated artificially, either by means of artificial culture-media or by inoculations through a series of living animals. The patient who is inoculated has the disease in question in a modified and mild form, and is thus rendered insusceptible to an attack of the unmodified disease. The word has also been used for an entirely distinct process, namely, that of curative inoculations for a disease which has already shown itself, as, for example, Koch's treatment for tuberculosis.

Pas'til. (L. *pastillus*, a lozenge; dim. of *panis*, bread. F. *pastille*; I. *pastiglia*; G. *Pastille*.) A mixture of nitre with various aromatic substances, made into different shapes, and slowly burnt for the purpose of fumigation.

Also, a lozenge, or troche (*Trochiscus*).

P.s, fu'migating. (L. *fumigo*.) See *Pastil*.

P.s of Renan'dot. See *Pilula de hydrargyro, scammonio et aloë*.

P.s, Vich'y. Name for *Trochisci sodii bicarbonatis*.

Pastille'. The same as *Pastil*.

Pastill'i. (Nom. plural of *pastillus*.) The same as *Trochisci*. See *Pastil*.

P. digest'i'vi Darcet'ii. Name for *Trochisci sodii bicarbonatis*.

P. emeti'næ pectora'les. See *Trochisci emetinæ pectorales*.

P. fausti'ni. Described by Paulus Ægineta as made up of "auri pigmentum," sandarach and quick-lime, burnt paper, and pimento berries. Used as a caustic for exuberant granulation-tissue.

P. fuman'tes. Fumigating pastils; containing benzoin, balsam of Tolu, &c.

P. men'thæ piperi'tæ. Peppermint drops.

White sugar, peppermint water, distilled water, of each two ounces. Boil to the consistence of an electuary. Take, of fine white sugar in powder, four ounces, of vol. oil of peppermint, half a drachm. Mix, add the electuary while warm. Drop it on marble, and dry the drops. (P. Ph.)

Pastillum. See *Pastil*.

Pastina'ca. (Dim. of L. *pasta*; from *pastus*, food. F. *panais*; G. *Pastinake*.) A Genus of plants belonging to the Order *Digynia*. The *Parsnip*.

Also, an old name, used as far back as Pliny the younger, for some species of Sting-ray.

P. altis'sima. The *P. opoponax*.

P. anethum. The *Anethum graveolens*.

P. graveolens. The same as *P. anethum*.

P. hasta'ta. The American Sting-ray, a fish which is one source of *Oleum raia* (q. v.).

P., oil of. An ethereal oil, contained in the proportion of 2 to 2.5 per cent. in the fruit of *P. sativa*. Obtained by distillation, it appears as a yellow liquid with a pleasant smell, of sp. gr. .87, and boiling at 220° to 250° F. It consists mainly of ethyl butyrate.

P. opa'ca. (*L. opacus*, darkened.) The *P. sativa*.

P. opop'onax. The systematic name of the plant formerly supposed to yield the gum-resin *Opoponax*, which latter, however, is now referred to the *Opoponax chironium*.

P. praten'sis. The *P. sativa*.

P. sat'iva. The parsnip. It has been given as a diuretic and demulcent in calculous complaints.

P. sylves'tris. The *P. sativa*.

P. sylves'tris tenuifolia officinarum. The *Daucus carota*.

Pastina'cin. The name given by Wittstein to a volatile alkaloid, the properties of which are not yet known, obtained by distilling the fresh seeds of *Pastinaca sativa* with a dilute solution of potash; found also by A. R. Porter in the root of *Simulatifolium*.

Pasto-resin. Origin unknown. Imported from South America, where the Pasto Indians use it for varnishing wood. (Bous-singault.) It is viscid and can be pulled out into tenacious fibres, which gradually become hard, but not brittle. Heated to about 100° C., it becomes elastic, ignites, and burns with a smoky flame.

Pas'toril meat-ex'tract. One of the imitations of *Liebig's extractum carnis*.

Patagium. (Πατάγιον, a hood attached to an upper garment. *F. patagion*; *G. Flug-haut*.) Applied by Illiger to the membrane that performs the function of a wing in the *Cheiroptera*; by Kirby, to two horny scales which, in the *Lepidoptera*, are fixed, one to either side of the trunk exactly behind the head, and covered by a long tuft of hair.

Patch, mu'cous. See *Mucous patches*.

P., o'paline. The same as *P., mucous*.

P., smo'ker's. A small, slightly raised, smooth patch, either red or covered with a yellowish crust, occurring in smokers, on the dorsum of the tongue, at the spot where the end of the pipe usually rests. The inside of the cheeks sometimes becomes affected in the same way. The patch is neither painful nor tender. The disease sometimes spreads until it becomes identical with *Leukoplakia*.

P.s, white. 1. Term for *Leukoplakia*. 2. Smooth patches seen in tertiary syphilis, occurring on mucous membranes, and due to the peeling off of opaque epithelium over a deposit of lymph. (Dunglison).

Patchouli. (A Bengalese word, corruption of "Patchey-elley," the leaves of the "Patchey." In the Malabar dialect, *ouli*, a leaf, and *patchei*, green.) Spelt also *Patchouly*. The dried tops of the *Pogostemon patchouli*. They are used in the manufacture of the scent, *Patchouli*.

P. cam'phor. See under *P. oil*.

P. oil. An ethereal oil distilled from the *Pogostemon patchouli*. It is yellow to brownish-

yellow in colour, and has a most penetrating and lasting odour. It contains a hydrocarbon boiling at 257° F. It is a viscid oil, boils at 282°—294° F., and separates out on standing as *Patchouly camphor*, $C_{15}H_{28}O$, in hexagonal prisms, insoluble in water, soluble in alcohol and ether.

Patchoulin. $C_{15}H_{24}$. A hydrocarbon prepared from *Patchouli camphor*, either by heating it to 100° F. for some hours with glacial acetic acid and acetic anhydride, or by the action of acids. It boils at 252°—258° F. under 743 mm. pressure. It has no smell when pure, but a resinous smell when oxidised. It is strongly lævo-rotatory.

Patchou'ly. See *Patchouli*.

Patella. (Dim. of *L. patina*, a pan, from its shape. *L. rotula*; *F. rotule*; *I. rotula*; *G. Kniescheibe*.) The knee-pan. This bone is situated at the front of the knee-joint. Inferiorly it is attached by a ligament or tendon, *ligamentum patellæ*, to the tibia, and superiorly, to the quadriceps tendon, in which it may be considered to be developed as a sesamoid bone. It has the form of a triangle with the base upwards, and is compressed antero-posteriorly. Its anterior surface is subcutaneous, having a bursa between it and the skin. The deep surface is coated, except at the inferior angle, with cartilage, for articulation with the femur, and is divided by a vertical elevation; the part external to this is the larger, and is concave transversely, the internal part is convex. This surface articulates with the condyles of the femur.

In Zoölogy (*F. patelle*, *moule*; *G. Teller-muschel*), a Genus of the *Gasteropoda mollusca*, inhabiting a univalve shell; a limpet.

In Botany (*F. patelle*), a plain receptacle having a distinct border to the *thallus*, as in the *Lecidea*.

P. brachia'lis. The *Os patellare*.

P., disloca'tion of. This is not common. It may occur outwards, inwards, vertically or edgewise, or upwards. The reduction may be easy, but in some cases has been impracticable.

P. fix'a. The *Olecranon*.

P., frac'ture of. Usually from indirect violence by sudden action of the extensors of the thigh in an attempt to save a fall. This fracture is transverse, and may unite by ligament or bone, usually the former. Where the fragments are separated by more than about an inch and a half, they unite by thickened aponeurosis only (Adams). The fracture occurring from direct violence is comminuted or simply longitudinal, and osseous union readily occurs.

Patella'cea. Term applied by Menke to a Family of the *Gasteropoda*, having the *Patella* as their type.

Patell'ar fos'sa. The depression on the trochlea of the femur which receives the patella.

P. plex'us. A nerve-plexus in front of the knee, formed by the union of the internal saphenous and middle and internal cutaneous nerves.

P. re'flex. See *Knee-jerk*.

Patellar'ia scrupo'sa. The *Urceolaria scruposa*.

Patellar'ic ac'id. $C_{17}H_{26}O_{10}$. An acid first isolated from the *Patellaria scruposa* by Weigelt, in 1869. It occurs as a mass of small, colourless crystals, of acid reaction and strongly bitter taste; soluble, hardly at all in water, with

PATELLARY—PATHOLYSIS

difficulty in carbon bisulphide, readily in alcohol, amyl alcohol, ether, and chloroform. Of its salts, only those of the alkalies are soluble in water.

Patellary fos'sa. The *Fossa hyaloidea*.

Patel'late. In Zoölogy, applied to the Tubulipora patellata, a polyp with an orbicular expansion.

In Conchology, the Solarium patellatum is an orbicular and discoid shell, the internal aspect of which is like a small plate.

In Entomology, applied by Kirby to the two anterior tarsi of insects, when they have certain joints dilated in the form of orbicular plates.

Patelliform. (L. *patella*, a small dish; *forma*, likeness. F. *patelliforme*; G. *schüssel-förmig*.) Of the shape of a *patella*, or small dish.

Patelloi'dean. The same as *Patelliform*.

Patel'lule. (Dim. of *Patella*. F. *patellule*; G. *Schüsselchen*.) Botanical term synonymous with *Patella*.

Pa'tency of the fora'men ova'lë. (L. *pateo*, to be open.) See *Cyanosis*.

Pa'tent. (L. *pateo*, to be open. F. *patent*; G. *offen*.) Wide open, evident, public.

P. gold. A double salt of chloride of lead.

P. green. A compound of copper and arsenic salts.

P. medicine. A medicine for the sale of which the manufacturer obtains from Government an exclusive privilege, under the patent law. A specification of his invention must be registered at the Patent Office.

Many so-called patent medicines are not patented; and a considerable number contain such poisons as opium, belladonna, strychnine, &c., but are sold without a poison label (1893).

P. yellow. A pigment containing the chloride and protoxide of lead; also termed "Mineral yellow."

Pa'ter om'nium viven'tium. (Lit., "father of all living.") An old term for the penis.

Pa'tera Diog'enis. (L. *patera*, a bowl.) See *Diogenes-cup*.

Pater'na dela Rive'ra. In Spain. This place is noted for a thermal spring, the water of which is at a temperature of 19.4° C. The water contains sulphuretted hydrogen .017 parts, sodium chloride 6.076, magnesium sulphate 5.2, and calcium sulphate 3.3 in 1000 parts.

Pa'ternoster peas. The seeds of the *Abrus precatorius*, and usually known as *Jequirity*.

Pathe'ma. (Πάθος, suffering, sickness. F. *pathème*; G. *Leidenschaft*.) Suffering, or disease. See *Passion*.

Pathematic. Belonging to *Pathema*.

Pathematology. (*Pathema*; λόγος, a discourse. F. *pathématologie*; G. *Pathematologie*.) A term for *Pathology*.

Pathengenetic. (Πάθος, sickness; ἐγγενής, inborn.) Resulting from, or produced by, disease.

Pathetic insan'ity. (Παθητικός, belonging to πάθος, impassioned.) One of Dr. Arnold's ("Observations on Insanity," 1782) three main divisions of insanity. He divided insanity into Ideal, Notional, and Pathetic; the last included the varieties of *Melancholia*.

P. mus'cle. The *Obliquus superior* muscle of the eyeball, so named because it was fancifully supposed to express, by its action, the passions and affections.

P. nerve. So called because it supplies the *Pathetic muscle*. See *Nerve, trochlear*.

Path'etism. (Παθητικός.) Term for *Magnetism, animal*.

Path'ic. (Παθικός, remaining passive. F. *pathique*; G. *etwaserdulidend*.) Remaining passive.

Also (πάθος), morbid suffering.

Also, term for one who allows the crime of sodomy to be practised upon him.

P. re'flexes. Reflex movements induced by the stimulation of afferent nerve-fibres.

Pathisother'apy. See *Isoopathother-apy*.

Pathoamine'. A basic, usually poisonous, substance, found in the urinary bladder in various pathological conditions. Also termed *Selmi*.

Pathocrati'a. (Παθοκράτεια, self-restraint. F. *pathocratie*.) Self-restraint.

Patho'ctonus. (Πάθος, passion; κτείνω, to kill. F. *pathocone*.) Restraining the passions.

Pathogen'esis. (Πάθος, an affection, disease; γένεσις, origin. F. *pathogénésie, pathogénie*; I. *patogenia, patogenesis*; G. *Pathogenesie*.) The origin, or production, of disease.

Pathogenetic. The same as *Pathogenic*.

Pathogen'ic. Giving rise to disease; also, thriving in the midst of disease.

Patho'genous. Syn. of *Pathogenic*.

Patho'geny. *Pathogenesis*.

Pathognomon'ic. (Πάθος, disease; γνώμων, a judge. F. *pathognomonique*; I. *patognomonico*; G. *pathognomonisch*.) A term for the peculiar and characteristic symptom or symptoms of any disease.

Pathognos'tic. (Πάθος; γινώσκω, to know.) The same as *Pathognomonic*.

Pathograph'ical. Belonging to *Pathography*.

Pathography. (Πάθος; γραφή, a writing.) A history or description of disease.

Patholog'ical. (Παθολογικός, treating of diseases. F. *pathologique*; I. *patologico*; G. *pathologisch*.) Belonging, or relating, to *Pathology*; also, diseased, or the result of disease.

P. ana'tomy. See under *Anatomy*.

P. histo'logy. The *Histology* of diseased tissues.

Pathologist. One who specially studies *Pathology*.

Pathology. (Πάθος, disease; λόγος, a discourse. F. *pathologie*; I. *patologia*; G. *Pathologie*.) The consideration of diseases, their nature, course, and effects; in other words, the natural history of disease. Divided into General and Special; the latter being again divided into *Medical* and *Surgical*.

P., cell'ular. See *Cellular pathology*.

P., geograph'ical. That branch of *Pathology* which deals with the geographical distribution of diseases.

P., hu'moral. See *Humoral pathology*.

P., solid. See *Solidism*.

Patholysis. (Πάθος; λύω, to loosen.) The decomposition, under the influence of disease, of chemical compounds in the living body.

Pathoma'nia. (Πάθος, affection, any violent feeling; μανία, madness.) *Insanity, moral.*

Pathomyotom'ia. (Πάθος, affection; μῦς, a muscle; τομή, a cutting.) The title of a book written by Dr. John Bulwer, 1649, so called because it was "a dissection of the significative muscles of the affections of the mind." (Dunglison.)

Pathonom'ia. (Πάθος; νόμος, law.) The study and classification of the laws of disease.

Pathopatridal'gia. (Πάθος; πατρίς, one's native land; ἄλγος, pain. *F. pathopatridalgia*; *I. patopatridalgia*; *G. Heimweh.*) A term for *Nostalgia*, or home-sickness.

Pathope'ous. Belonging to *Pathopœia*.

Pathophobia. (Πάθος; φόβος, terror. *I. patofobia.*) This term has been proposed for *Hypochondriasis*, because of the patient's idea that he is ill, or going to be ill.

Pathopœia. (Πάθος; ποιέω, to make. *F. pathopœie.*) See *Pathopoesis*.

Pathopoetic. Relating to *Pathopoesis*.

Pathopoesis. (Πάθος, suffering; ποιέω, to make. *F. pathopœse*; *I. patopoesi.*) The production of disease.

Patience dock. The *Rumex patientia*.

Patient. (*L. patiens*, suffering.) Usually, a sick person under the charge of a doctor; sometimes, merely a sick person.

Patientia. (*L. patiens*; *patior*, to suffer.) The specific name of Monk's rhubarb, *Rumex patientia*.

Patientia musculus. See *Musculus patientia*.

Patina. The hard, blue-green deposit of cupric carbonate, of the same composition as *malachite*, which forms on copper or bronze that has been exposed to moist air or earth for a long time. An artificial imitation is made by wetting the metal with dilute acetic acid, nitrate of copper, salt of sorrel, &c., and then leaving it exposed to the air.

Patné. (Πάτνη, φάτνη, or πάβνη, a manger or crib.) Term for *Alveolus*.

Pat'ornar'ium. (*L. pateo*, to be open; *nares*, the nostrils.) The opening or cavity of the nostrils.

Pat'os. (Πάτος, dirt.) Old name for *sordes* of the body, that is, sweat mingled with dust, as of the wrestlers and athlete in the gymnasium; considered by Oribasius to be the best application for inflammation of the breast or the nipple.

Patrad'jik. Another name for *Hypati* (q. v.).

Patratio. (*L. patrare*, to accomplish.) Term for *Coition*.

Patrimon'ium. (*L. patrimonium*, an inherited estate.) An old term fancifully used by D. Ludovicus for the male genitals.

Patrin'ia jataman'si. (Named *Patrinia* after E. L. M. Patrin, a naturalist and traveller of Lyons.) The same as *Nard, Indian*.

Patrum cortex. The Bark of the Fathers; a name for *Cinchona*, because made known in Europe by the Jesuits.

Pattalus. (Πατταλίας, a second year stag, when his horns begin to shoot; from πάτταλος or πάσσαλος, a peg. *F. pattale*; *G. Spiess.*) Illiger's term for the yet unbranched, solid horn of a young ruminant.

Patterson's powder. A powder

composed of a mixture of magnesia and sub-nitrate of bismuth.

Pat'ulous. (*L. pateo*, to be open.) Wide open.

Patur'sa. A name for *Syphilis* used by early writers of the sixteenth century, and said by Freund to have been given because it was the name for syphilis among the Indians.

Pau. The capital of the department of the Lower Pyrenees, situated inland, 50 miles from Bayonne. The spring there is mild, and cold winds are very rare. It is recommended as a winter resort for people with chronic bronchial and laryngeal affections. It is considered too changeable for consumptive and rheumatic patients.

Pauciartic'ulated. (*L. paucus*, few; *articulus*, a joint. *F. pauciarticulé*; *G. arm-gelenckt.*) Applied to *antennæ* when composed of a small number of joints.

Pauciden'tate. (*L. dentatus*; from *dens*, a tooth. *F. paucidenté*; *G. armzähmig.*) Applied to leaves slightly dentated, having only one or two teeth at their summit.

Pauciflo'rous. (*L. paucus*, few; *flos*, *floris*, a flower. *F. pauciflore*; *I. paucifloro*; *S. paucifloro*; *G. wenigblumig.*) Bearing few flowers.

Paucifoli'ate. (*L. paucus*; *folium*, a leaf. *F. paucifolié*; *G. armblättrig.*) Bearing few leaves.

Pauci'jugate. (*L. jugum*, a yoke. *F. paucijugué*; *G. armgejochet.*) Term applied to a compound leaf which is formed of only four or five pairs of folioles. Koch gave this epithet to *Umbelliferae*, of which each carpel of the fruit bears only five prominent lines.

Pauciradi'ate. (*L. radius*, a ray. *F. pauciradié*; *G. armstrahlig.*) Applied to the *umbel*, when it contains only a small number of rays; also to a plant whose stigma is composed of few rays.

Pauciru'gous. (*L. ruga*, a wrinkle. *F. paucirugueux*; *G. wenigerunzelt.*) Presenting few wrinkles or rugæ.

Paucise'riate. (*L. series*, a row. *F. paucisérié*; *G. armreihig.*) *Bot.* Divided into a small number of rows.

Paucispi'rate. (*L. spira*, a spire. *F. paucispiré*; *G. armgeviunden.*) Applied to the *operculum* of the *Mollusca*, when it is formed of only one or two turns of a spire, increasing rapidly in breadth, the summit being nearly central.

Paul's bet'ony. Name for the common speedwell, *Veronica officinalis*.

Paul'a. (Παῦλα, a means of stopping, or bringing to an end.) Old name for a plaster efficacious against buboes and glandular swellings in the neck, according to Paulus Ægineta.

Paulada'da. Term for a species of *Terra sigillata* found in Italy, formerly sold by the mountebanks who, boasting themselves to be descended of the family of St. Paul, named it *Terra sigillata Melitea* or *Sancti Pauli*. See also *Bole*.

Paul'i Beto'nia. The *Veronica officinalis*.

Paul'ina confec'tio. (*L. confectio*, a preparing.) A name for the *Aristarchi antidotus Paulina*.

Paullin'ia. (After C. F. Paullini, a professor of Botany in Copenhagen. Born 1643, died 1712.) A name for *Guarana*.

PAUNCH—PEA

Also, a Genus of the Sapindaceæ (Paulliniæ), many species of which are used medicinally where they are native.

P. africa'na. Used as a hæmostatic.

P. asiatica. Used as a bitter and febrifuge.

P. curu'ru. Nat. Order Sapindaceæ. The juice of this plant is used by the savages of Guiana for poisoning their arrows.

P. mexica'na. Used as a depurant.

P. pinna'ta. Used for the same purpose as *P. cururu*.

P. sor'bilis. A Brazilian climbing plant, from which *guarana* is prepared.

P. triterna'ta. Used for the same purpose as *P. cururu* and *P. pinnata*.

Paunch. (M. E. *paunche*; O. F. *panche*. L. *pantex*, the paunch. Root unknown. F. *panse*.) The first stomach, or *rumen*, of Ruminants.

Paunon'ta. (Παύω, to allay.) Term for *Sedatives*.

Pause of the heart. (*Pausis*.) The time in the cardiac cycle during which the heart-muscle is relaxing, corresponding to the time of the ventricular diastole. The whole cycle being taken as one second, the period of relaxation is 4-10th sec.; the auricular systole occupying 2-10th sec., and the ventricular systole, the remaining 4-10th sec.

Pausime'nia. (*Pausis*; μῆνες, plural of μῆν, originally, months, hence the menses of women.) The *Menopause*.

Paus'is. (Παύω, to make to cease. F. *pause*; G. *Pause*.) A pause; ceasing from a work.

Pava'na. See *Lignum pavanæ*.

Pavate'. A name for the *Pavetta indica*.

Pavement epithelium. See *Epithelium, pavement*.

Pavetta indica. A Malabar shrub, Nat. Order Rubiaceæ. See *Mulleamothe*.

Pavette'. The *Pavetta indica*.

Pavietin. C₁₀H₈O₅, Rochleden. See *Frazetin*.

Pavlin. C₆₃H₇₀O₄₁. See *Frazin*.

Pavilion. (F. *pavillon*, a tent; L. *papilionem*, acc. of *papilio*, a butterfly; a reduplicated form of the base *pal*, meaning to vibrate.) A large tent.

Also, a small building separate from, but in dependence upon, a main building.

Also, in Anatomy, a structure shaped like a tent.

P. of ear. Term for the *Pinna* of the ear.

P. of Fallo'pian tube. The outer, or fimbriated end. See *Fallopian tube*.

P., Tar'nier's. A pavilion designed by Tarnier of Paris for lying-in patients. There are eight small rooms on two floors, each room being accessible only by passing through the open air. Corners are rounded off, and walls and floors are made of impermeable concrete.

Pavimentose. (*Pavimentum*. F. *pavimenteux*; G. *gepflastert*.) A geological term for that which has abundance of the material of which pavements are formed; e. g., the lava of volvic, of which the Paris footpaths are made.

Pavimentum. (L. *pavimentum*, rammed, well beaten, as floors.) A floor or pavement.

P. cer'ebri. The base of the brain.

P. or'bitæ. The floor of the orbit.

Pavi'na. The *Æsculus hippocastanum*.

Pavitation. (L. *pavor*, fear.) Tremulousness from fear.

Pa'vo. (L. *pavo*, a peacock. F. *paon*; G. *Pfan*.) A Genus of the Order Gallinaceæ. The peacock.

P. crista'tus. (L. *cristatus*, crested.) The pea-fowl. It was formerly used both in medicine and as food, and was called *Avis medica*, as described by Aldrovand.

Pavonia odora'ta. A plant belonging to the Order Malvaceæ. Its root is aromatic and febrifuge.

Pav'or. (L. *pavor*, fear. F. *gale*; G. *Kratze*.) An old term for *Scabies*.

Also, *Panophobia*.

P. noctur'nus. Term for night-terrors.

Pavy's disease'. The recurrence of traces of albumen in the urine at more or less regular intervals which chiefly correspond to the periods of digestion, in persons who are apparently in good health, and whose kidneys appear to be perfectly sound. Described by Dr. Pavy as "cyclic albuminuria." Also called intermittent, or physiological albuminuria.

P's solution. A solution used either as a qualitative, or quantitative test for sugar in urine. Composition: Copper sulphate 16 grains, potassium tartrate 32 grains, caustic potash 64 grains, water 1 ounce. Either grape-sugar or maltose will reduce the copper and remove the blue colour of the solution; half a grain of grape-sugar will reduce all the copper in 100 milligrammes of the solution.

P's test. A qualitative test for the presence of sugar. An alkaline solution of ammonio-tartrate of copper is used. This is first boiled, and then a few drops of the fluid supposed to contain sugar are added. If sugar be present, the copper solution is reduced, and a yellow or reddish precipitate is formed.

Paw'paw. The same as *Papaw*.

Paxcare'te. A place in Spain which gives its name to a kind of sherry.

Pax'wax. See *Nucha*.

Paxywaxy'. See *Nucha*.

Payta-bark. One of the varieties of *Cinchona pallidæ* cortex. It is obtained from the Peruvian sea-port Payta.

Pay'tamine. An amorphous alkaloid, isomeric with *Paytine* and obtained with it from *Payta-bark*.

Pay'tine. An alkaloid obtained together with *Paytamine* from *Payta-bark*. As obtained crystallised out of a solution in alcohol or ether, it occurs in colourless crystals, melting at 156° F. Hesse gives for it the formula C₂₁H₂₄N₂O + H₂O. It is readily soluble in alcohol, ether and chloroform, and sparingly in water, and its crystals are lævo-rotatory. Calcium chloride solution gives with it a dark red colouration, afterwards changing to blue.

Payton. Also called *Snowden*. A place in Douglas Co., Oregon, noted for its alkaline mineral spring.

Paz'ahar. See *Bezoar*.

Pb. The chemical symbol for *Plumbum*.

Pd. The chemical symbol for *Palladium*.

Pea. (F. *pois*; G. *Erbse*.) Common name for the seed of *Pisum sativum*, also, for the plant itself. The composition of the seed has been investigated and, in common green-peas, dried and shelled, has been found to be 57.7 per cent. of starch, dextrin and sugar, 21.7 of

nitrogenous legumin, 1.9 of fatty matter, 2.8 of ash, 3.2 of cellulose, and 12.7 of water.

P.s for is'sues. Small balls of tow or flax, rolled up with gum-water and wax. Occasionally, irritants were added, e. g. savin, or copper sulphate, or pips from unripe Curaçoa oranges.

P.-fowl. (M. E. *fowl*; Anglo-Sax. *fugol*, a bird. F. *paon criste*; G. *Pfau*, *Pfauhenne*.) The *Pavo cristatus*.

P., garden. The *Pisum sativum*.

P., ground squir'el. The *Jeffersonia diphylla*.

P., hoar'y. The *Galega virginiana*.

P., love. The *Abrus precatorius*.

P. nut. The *Arachis hypogæa*.

P., par'tridge. The *Cassia chamæcrista*.

P., tur'key. The *Galega virginiana*.

Peach. (M. E. *peche*, *peshe*; Low L. *pesca*; L. *persicum*, a peach, so called because growing on the *Persicus*, or *Persica arbor*, the Persian tree or peach-tree. F. *pêche*; G. *Pfirsiche*.) The *Malum persicum*, or fruit of the *Amygdalus persica*.

P. brand'y. A brandy distilled from the fermented juice of the fruit of *Amygdalus persica*; in wide use in the U. S. of North America.

P. tree. (F. *pêcher*; G. *Pfirsichbaum*.) The *Amygdalus persica*.

P.-wood. Said to be derived from a species of *Casalpinia*. See *Nicaragua*.

Peach'wort. Name commonly used in America for the *Polygonum persicaria*.

Pea'gle. A common name for the cowslip, *Primula veris*.

Péan's for'ceps. A special kind of surgical pressure-forceps used for stopping hæmorrhage in operations, especially of the abdomen. Made first, under M. Péan's directions, in 1868.

P.'s exci'sion of pylo'rus. This operation was first performed on the human subject by Péan in 1879. The patient survived only five days. See *Pylorus, excision of*.

P.'s operation. The operation, introduced by Péan, of laparotomy for the removal of uterine fibroids.

Pear. (M. E. *pere*; Anglo-Sax. *pera* or *peru*. L. *pirum*; F. *poire*; I. *pera*; G. *Birne*.) The fruit of *Pyrus communis*.

P., al'ligator. The *Persea gratissima*.

P., an'chovy. The *Grias cauliflora*.

P., avoca'do. The *Persea gratissima*.

P.-tree. The *Pyrus communis*.

Pearl. (M. E. *perle*; probably from Low L. *perula*, for *pirula*, dim. of L. *pirum*, a pear. F. *perle*; G. *Perle*.) A spherical concretion, highly prized as an ornament, formed within the shell of the pearl-oyster. The formation is pathological, and is due to irritation from the introduction of foreign bodies. The mother-of-pearl or inner layer of the shell accumulates round these foreign bodies in concentric layers, instead of forming thin layers over the inner surface of the shell. The pearl is composed of calcium carbonate. It was formerly given internally as an astringent in the form of powder. The most valuable pearl fisheries are round the Ceylon coast, and in the Persian Gulf near Olmutz. See also *Margarita*.

P.-ash. (From its pearly-white colour. F. *carbonate potassique du commerce*; G. *rohes Kohlensaures Kali*.) Impure carbonate of pot-

ash, prepared from crude commercial potash by dissolving in the smallest possible amount of cold water, allowing time for subsidence of impurities, and then evaporating the clear solution.

P. bar'ley. The seed of *Hordeum distichon* deprived of its coats, and then rounded off and polished in a mill. See *Hordeum decortiatum*.

P. disease', the. (F. *phtisie calcaire*, *pommelière*; I. *lisiperlacea*; G. *Perlsucht*.) Tuberculosis of the serous membranes in cattle.

P. eye. "Pearl in the eye." An old term for *Cataract*.

P. mi'ca. The same as *Margarita*.

P., moth'er of. See *Mater perlarum*.

P. plant. The *Lithospermum officinale*.

P. sa'go. This is prepared by passing the previously wetted meal through a sieve, and drying by prolonged stirring over a fire. It forms minute grains.

P. tu'mour. A name for *Cholesteatoma*; also, for *Psammoma*; also, for *Pearl disease, the*.

P. white. See *Bismuth oxychloride*. According to some, *Bismuthi subnitras*.

P.-wort. The *Lithospermum officinale*.

Pearly. Resembling a *Pearl*.

P. bod'ies. The "bird's nest" collection of cells found in epitheliomata. Also called cell-nests, or epithelial pearls.

P. disease'. Syn. of *Pearl disease*.

P. everlast'ing. The *Antennaria margaritacea*.

P. tu'bercle. Pathology. A synonym of *Grutum*.

P. tu'mour. The same as *Pearl tumour*.

Pear'son, Rich'ard. An English physician and medical author. Born 1765, died 1836.

P.'s li'quor arsenica'lis. A solution of .05 parts of arseniate of sodium in 30 parts of distilled water.

Pear'son's springs. Lake County, California. There are five springs, all cold: a soda, a sulphur, a soda and sulphur, and two gas springs. The action of the waters is purgative. No analysis has been given.

Peas'lee's opera'tion. A form of partial amputation of the cervix uteri, or *Trachelotomy*.

Peat. (Properly, *beat*; from M. E. *beten*, to replenish a fire; Anglo-Sax. *bétan*.) The product of the natural changes of dead plant-tissues occurring in soils where there is stagnant water or where there is a very moist atmosphere. These remains gradually accumulate, and often form beds of large extent, varying in depth from a few inches to many feet. Peat varies in colour from light brown, where it consists almost wholly of the withered residue of plants, to black, where the organised structure of the plant may still be recognisable. Peat contains a large quantity of water, and this constitutes its chief disadvantage as a fuel. By dry distillation it is entirely decomposed, and yields gaseous products, tarry matters, a watery liquid, and a carbonaceous residue; these products are intermediate in their general characters between the corresponding distillation-products obtained from wood, and those obtained from coal. It contains sulphuric, phosphoric and humic acids; and it has been used for making poultices and for preparing medicinal baths.

Pé'brine. (Fr.) A disease of silkworms,

PECAN NUT—PECTINIROSTRATE

due to the *Micrococcus ovatus*. Also called *Petechia*.

Pecan' nut. See *Hickory nut*.

Pec'can nut. The same as *Pecan nut*.

Pec'cant. (L. *peccans*, pres. part. of *peccare*, to sin. G. *verdorben*.) Vitiating, morbid. Used especially by the "Humoral" pathologists, in respect of the bodily humours.

Pec'co. (Signifying, in Chinese, "white hair.") A name for the youngest leaves of the tea plant. See *Thea sinensis*.

Pech blende. *Uranium oxide*.

Pechegue'ra. (Span.) A rapidly fatal pulmonary disease of infants, occurring in South America.

Pechiag'ra. See *Pechyagra*.

Pechurim bean. See *Pichurim bean*.

Pechyag'ra. (Πῆχυς, the forearm; ἄγροα, a catching. F. *péchyagre*.) Old term for gout of the forearm.

Pechys. (Πῆχυς, the forearm. F. *cubit*; G. *Ellenbogen*.) Old term for forearm.

Pechytyr'bē. (Πῆχυς; τὸ ῥβη, disorder.) Old name for *Scurvy*. (Forest.)

Pec'ora. Nom. plural of *Pecus* (q. v.).

Pecquet, Jean. An eminent French anatomist and surgeon of Dieppe. Born 1622, died 1674.

P., duct of. The *Thoracic duct*.

P., res'ervoir of. The *Receptaculum chyli*.

Pectase. An organic albuminoid ferment found in unripe fruits and roots, which determines the *Pectic fermentation*. It occurs in a soluble form in the carrot and beet, and in an insoluble form in acid fruits. Precipitated by alcohol, soluble pectase becomes insoluble, but is still active.

Pectate. Term for any salt of pectic acid.

Pect'en. (L., from *pectare*, to comb hair.) A comb.

Also, a term for the *Os pubis*, which is a distinct bone in the foetus; so called from its supposed likeness to an ancient comb.

Also, a vascular fold of the choroid present in the eye of reptiles and birds, analogous to the processus falciformis in the eye of fishes, and apparently having an important relation to the nutrition of the retina and contents of the eyeball.

Also, an active, lamellibranchiate mollusc, the *Scallop*.

P. den'tium. Term for a row of teeth.

P. ma'nus. Term for the *Metacarpus*.

P. os'sis pu'bis. The pubic crest.

P. pu'bicum. The pubic crest.

P. ven'eris. The *Scandix cerefolium*.

Pectic. (Πηκτός, congealed.) Belonging to a coagulum.

P. ac'id. An acid obtained by treating gum-tragacanth with one per cent. hydrochloric acid, precipitating with baryta, and decomposing the precipitate with hydrochloric acid. Frémy prepared pectic acid from fruits. It belongs to the class of pectous substances, which are probably gelatinising carbohydrates. (E. Reichart.)

P. fermenta'tion. This is brought about by *Pectose*, which converts the *pectin* of unripe fruits, &c., into *Pectic* and *Pectosic acids*.

Pectides. (Πηκτός, congealed, thickened.) The congealed part of a fluid (Krauss); jelly, gelatine.

Pectin. (Πηκτός, congealed. F. *pectine*;

the *grossalin* of Guibourt.) The gelatinising agent in vegetable juices. It is a white, neutral, non-crystallisable substance, soluble in water and insoluble in alcohol. It is converted by acids into metapeptic acid, by pectose, into pectosic acid, by boiling water, into parapectin.

Pectina'ceous. The same as *Pectinous*.

Pectina'us. The same as *Pectineus*.

Pectina'lis. The *Pectineus* muscle.

Pectinate. (L. *Pectinatus*, from *pecten*. G. *kammförmig*.) Comb-shaped; term applied to leaves.

P. lig'ament of i'ris. The trabecular connective tissue filling up the angle between the iris and cornea for a short distance from their point of union.

Pectinated. The same as *Pectinate*.

P. mus'cles. See *Musculi pectinati*.

Pectina'to-pin'nate. (L. *pectinatus*, from *pecten*; *pinnatus*, from *pinna*, a feather. F. *pectinatopenné*.) Applied to a linear leaf that has, on each side, small, regular and rather deep incisions.

Pectina'tus. The *Pectineus* muscle.

Pectin'æ. A family of the *Elatobranchii*, having the *Pecten* for their type. (Menke.)

Pectine'al. (L. *pectinalis*, belonging to the *pecten*, or os pubis.) Belonging to the os pubis.

P. bur'sa. The bursa situated under the tendon of insertion of the pectineus.

P. fas'cia. A process of the fascia lata of the thigh which covers the pectineus and adductor longus, and is attached to the pubic crest.

Pectine'o-fem'oral band. The *Ligamentum pubo-femorale*.

Pectine'us. (*Pecten*, the os pubis. F. *pectiné*; L. *pettineo*; G. *Kamm-muskel*.) Belonging to the os pubis. Term for a flat, oblong muscle arising from the ilio-pectineal eminence and the bone just in front of this, and inserted by a flat tendon into the femur just behind the small trochanter, and into the upper part of the line leading from the small trochanter to the linea aspera. Supplied by a constant branch from the anterior crural nerve, and by an inconstant branch from the obturator nerve.

Pectinibran'chiate. (L. *pecten*, a comb; *branchiatus*, having *branchiæ*.) Having comb-like branchiæ; applied to an Order of the *Mollusca gasteropoda*, in which the branchiæ are made up of narrow segments laid parallel to each other like the teeth of a comb.

Pectinico'r'nate. (L. *pecten*, a comb; *cornatus*, from *cornu*, a horn. G. *kammhornig*.) Applied to an insect having pectinated *antennæ*, or horns.

Pectini'dæ. Name applied by Lamarck and Latreille to the *Pectinææ*.

Pectini'ferous. (L. *pecten*; *fero*, to bear.) *Zoöl.* Comb-bearing.

Pectinifo'lious. (L. *pecten*; *folium*, a leaf. G. *kammblättrig*.) Having *pectinate* leaves.

Pectin'iform. (L. *pecten*; *forma*, shape.) Comb-shaped.

P. sep'tum. The median dorso-ventral and longitudinal connective tissue septum between the two corpora cavernosa of the penis.

Pectiniro'strate. (L. *pecten*, a comb; *rostratus*, from *rostrum*, a beak. G. *kamm-*

PECTINOID—PECTUNCULUS

schnabelt.) Having a comb-shaped snout or beak; term applied to certain fishes.

Pectinoid. (*Pecten*; termination, *oid*, from *eidōs*; form, likeness. *F. pectinoïde*; *G. kammähnlich.*) Resembling one of the shells termed *Pecten*.

Pectinous. (From *pectin*.) Belonging to, or resembling, *Pectin*.

Pectoral. (*L. pectus, pectoris*, the chest.) Belonging to the chest. In Ichthyology, applied to those fins that correspond to the anterior extremities of quadrupeds, the *Pectorals*, or *Pectoral fins*.

P. aorta. Term for *Aorta, thoracic*.

P. arch. The shoulder-girdle.

P. cutaneous nerves. The cutaneous divisions of the *P. intercostal nerves*.

P. decoction. The same as *Decoctum hordei compositum*, *B. Ph.*

P. flowers. Name for the *capitula* of the *Tussilago* and *Gnaphalium dioicum* which contain a gummy matter and an astringent bitter principle, are sedative, and are used as *bechics* under the above name.

P. fremitus. See *Fremitus, pectoral*.

P. fruits. Term for a mixture of equal parts of dates, jujubes, Corinthian raisins, and figs cut up together. Given as a demulcent for sore throats.

P. girdle. The shoulder-girdle.

P. glands. A group of the axillary lymphatic glands lying at the lower border of the pectorales muscles, on the serratus magnus near the long thoracic artery, and receiving the lymphatics from the mamma and front of the chest.

P. intercostal nerves. Name applied to the upper six intercostal nerves, because they supply only the thorax.

P. laminae. *Zoöl.* Syn. for *coxæ*. See *Coxa*.

P. limb. (*F. membre thoracique*; *I. arto toracico*; *G. Brustglied*.) The upper limb, so named because it is attached to the trunk by means of the *P. arch*.

P. moss. The *Lichen pulmonarius*.

P. muscles. The *Pectorales*.

P. nerves. The *Thoracic nerves*.

P. ridge. The outer lip of the bicipital groove of the humerus; so named because the tendon of insertion of the pectoralis major is attached to it.

P. tea. (*L. species pectorales. G. Brustthee.*) A mixture used in the preparation of a special demulcent infusion, prepared, according to the *P. G.*, from a mixture of liquorice, althæa, orris-root, colt's-foot, anise, and mullein flowers; also made from a mixture of althæa, mullein, mallow, colt's-foot, mouse-ear, poppy, and violet flowers (*Fr. Codex*).

P. tubercle. Name for the roughened anterior surface of the inner half of the clavicle, to which the pectoralis major is attached.

Pectoralè. (*L. pectoralis, -e*, pertaining to the breast.) Term for a *Corset*.

Pectorales. (Nom. plural of *L. pectoralis*.) Term usually denoting the *Pectoralis major* and *P. minor* together.

P. pedicula'ti. (*L. pediculus*, a foot-stalk.) Having pediculate pectorals; applied to a Family of the *Acanthopterygii*, because in them the carpal bones form a kind of base for the support of the pectoral fins.

Pectoralis major muscle. (*F. grand pectoral*; *I. grande pectorale*; *G. grosser*

Brustmuskel.) A large fan-shaped muscle forming the main fleshy mass of the chest on either side. It consists of a *clavicular* portion arising from the anterior surface of the inner half of the clavicle, and a *sterno-costal* portion arising from the anterior surface of the sternum, the upper six rib-cartilages, and the aponeurosis of the obliquus externus abdominis. It is inserted by a flat tendon of two layers into the *pectoral ridge* of the humerus. Its nerve-supply is from the internal and external anterior thoracic branches of the brachial plexus.

P. minimus muscle. An extra muscle sometimes present, which arises from the first rib and is inserted into the coracoid process of the scapula. (*Gruber*.)

P. minor muscle. (*F. petit pectoral*; *I. piccolo pettorale*; *G. kleiner Brustmuskel*.) A flat, triangular muscle situated beneath the *P. major*, arising at its base by tendinous slips from the upper margins and a portion of the external surfaces of the third, fourth, and fifth ribs near their cartilages, and inserted at its apex by a narrow tendon into the anterior half of the inner border and upper surface of the coracoid process. Its nerve is from the internal anterior thoracic branch of the brachial plexus.

Pectorals. (*L. pectoralis*, pertaining to the breast.) Drugs used in the treatment of chest-affections; also used in the same sense as *Pectorales*.

Pectoriloquism. *Pectoriloquy*.

Pectoriloquous broncho'phony. Term for *Pectoriloquy*.

Pectoriloquy. (*L. pectus, pectoris*, the chest; *loquor*, to speak. *F. pectoriloquie*; *I. pettoriloquia*; *G. Brustreden*.) The distinct transmission through the chest-wall to the ear (whether directly or by the stethoscope) of articulate sounds. When the voice is used, *Bronchophony* usually accompanies pectoriloquy; but when the words are whispered, pectoriloquy (by some, termed *Whispering pectoriloquy*) alone is heard, and is thus more distinct. Pectoriloquy is a sign of the presence of consolidation or a cavity near the surface of the lung; but a very similar sound (*F. pectoriloquie aphonique*) is occasionally heard over a sero-fibrinous pleuritic effusion. (*Douglas Powell*.) Pectoriloquy may be heard in health, over a bronchus ending near the surface, in a thin person. This term, as well as *Bronchophony*, was invented by Laennec, who made three artificial divisions of pectoriloquy; perfect, imperfect, and doubtful.

P. whispering. See *Pectoriloquy*.

Pectorosus. (*L. pectus, pectoris*, the chest.) Broad, or large-chested.

Pecto'sate. (*Pectose*.) Generic term for all salts of *Pectosic acid*. They are non-crystallisable, gelatinous bodies.

Pectose. A substance occurring in green fruits, carrots, &c., mixed with the cellulose. It is insoluble in water, but becomes converted into the soluble *Pectin* by the action of heat or weak acids.

Pecto'sic acid. An acid formed, and precipitated in a gelatinous state, by the addition of pectase or an alkali to a solution of pectin. It is soluble in boiling water, very slightly in hot water below the boiling-point; and, on cooling, it resumes its gelatinous state. By the action of pectase or of alkalies, or by boiling, it becomes converted into pectic acid.

Pectunculus. (Dim. of *Pectus*.)

PECTUS—PEDICULARIA

Arnold's term for a row of minute longitudinal furrows along the wall of the aqueduct of Sylvius, visible under a low magnifying power.

Pectus. (L. *pectus*, *pectoris*; from Gr. *πηκτός*, made out of pieces joined; jointed.) The thorax, or chest. In insects, the ventral surface of the thorax, which was formerly divided, for the purpose of description, into *antepectus*, *mediopectus*, and *postpectus*.

P. carina'tum. (L. *carina*, a keel.) See *Carina*.

Pectus'culum. (Dim. of L. *pectus*, from likeness in shape to the side of a thorax.) Old term for the *Metatarsus*. (Turton).

Peculium. (L. *peculium*; dim. of *pecunia*, money; a small private property.) Term for the penis.

Pecus. (L. *pecus*, *pecoris*. Apparently allied to *πέκος*, wool, and to *πέκω*, to comb, or shear; and so *pecus* was probably first applied to sheep.) Cattle. The *Pecora* include all *Herbivora*; Linnæus applied the term exclusively to the *Ruminantia*.

Pedag'ra. Old term for *Tartar*, impure acid tartrate of potash.

Ped'al. (L. *pedalis*; from *pes*, a foot.) Relating to the foot.

P. aponeuro'sis. See *Fascia dorsalis pedis*.

P. artery. The *Dorsalis pedis* artery.

P. gang'lia. The infra-oesophageal nervous ganglia of *Mollusca*.

Pedalia'ceæ. (Lindley.) The same as *Pedalineæ*.

Pedaliform. (L. *pedalis*; *forma*, likeness.) Applied by De Candolle to leaves whose nervures have no vessels, and whose cellular tissue is disposed similarly to the nervures of *Pedalinervate* leaves.

Pedali'neæ. (L. *pedalis*; from *pes*, a foot.) A Suborder of the *Gesneraceæ*.

Pedalinervate. (L. *pedalis*; *nervus*, a nerve or sinew.) Applied by De Candolle to leaves in which the longitudinal nervure remains quite short, but from each side of it two strong lateral nervures diverge, presenting little or no nervure on the external side, but on the internal, or upper surface of the leaf, giving off secondary nervures which run nearly parallel to one another.

Peda'lum. (L. *pedalis*; from *pes*, a foot. F. *pédalion*; G. *Schwanzfinne*.) Illiger's term for a horizontal dermal appendage of the caudal extremity in *Cetacea*.

Also, in *Bot.*, a Genus of the Suborder *Pedalineæ*.

P. mu'rex. Order *Gesneraceæ*; Suborder *Pedalineæ*. Hab., East Indies. A large, succulent, herbaceous plant, the seeds and leaves of which contain much mucilage, and are used in the treatment of urinary diseases.

Ped'ate. (*Pedatus*; from L. *pes*, a foot.) Shaped like a bird's claw.

Pedat'ifid. (L. *pedatus*; *findo*, to cleave. G. *fusszersaltend*.) De Candolle's term for leaves that have pedate nervures, and are divided into lobes for nearly half their length.

Pedatiform. The same as *Pedaliform*.

Peda'tion. (*Pedatio*; from L. *pes*, a foot.) Fabricius' term to denote the way in which the tarsus of insects is developed, the number of articulated pieces of which it is made up, and the form and uses of the different parts.

Pedatipar'tite. (L. *pes*; *partitus*,

from *pars*, a part. G. *fussgetheilt*.) De Candolle's term for a leaf with pedate nervures and lobes divided beyond the middle, the parenchyma being uninterrupted.

Pedatisected. (L. *pes*; *seco*, to cut. G. *fussgeschnitten*.) De Candolle's term for leaves with pedate nervures, and with lobes separate almost to the middle, the parenchyma being interrupted.

Ped'erast. One who practises *Pederasty*.

Pederastic. Pertaining to *Pederasty*.

Pederasty. See *Pæderastia*.

Pederist. The same as *Pederast*.

Pede'sis. (Πηδάω, to leap.) The beating of the heart; pulsation.

Also, applied by Jevons to *Brownian movement*.

Pedest'res. (Nom. plural of L. adj. *pedester*, on foot.) Applied by Scopoli to the *Diptera*; by Gravenhorst, to a Tribe of the *Ichneumonidæ*, corresponding to the *Apterous Ichneumonidæ* of Fabricius.

Pedeth'mos. (Πηδάω, to leap.) Old term for pulsation.

Also, the same as *Subsultus*.

Pedetic. Belonging to *Pedesis*.

P. move'ment. *Brownian movement*.

Pediæ'us exter'nus. Term for the *Extensor brevis digitorum pedis*.

P. inter'nus. The *Flexor brevis digitorum pedis*.

Ped'ial. (L. *pes*, *pedis*, a foot.) An epithet applied to the feathers that grow on the feet of some birds.

Pedial'gia. (Πεδιον, the metatarsus; ἄλγος, pain.) Pain in the sole of the foot. As a neuralgia of the foot (*Pédionalgie*), this occurred on a large scale in 1762 at Savigliano in Piedmont, and in 1806 among the soldiers at Padua. (Dunglison.)

Pediaris. The same as *Pedate*.

Pediatria. See *Pædiatria*.

Ped'icel. (L. *pedicellus*, dim. of *pediculus*, a flower-stalk.) *Bot.* A foot-stalk or pedicel; that is, the partial flower-stalk, or the ultimate division of a general flower-stalk which immediately bears the flower or flowers. Applied also to the capillary support of the *urn* in mosses. *Zoöl.* Applied by Kirby to the second joint of the *antennæ* in insects.

Pedicellar'ia. (*Pedicellus*, a pedicel.) In *Echinodermata*, a small, bifid, pincer-like dermal appendage.

Pedicella'ta. (Nom. plural of *pedicellatum*.) Having a *Pedicel*. Cuvier's term for an Order of the *Radiata echinodermata*, the individuals of which have hundreds of small *tentacula*, or organs of progression.

Pedicel'lule. (Dim. of *pedicel*.) H. Cassini's term for the filiform support that serves as a *Pedicel* to the ovary of certain *Synanthereæ*.

Ped'icle. (L. *pediculus*, a little foot, dim. of *pes*, a foot. F. *pédicule*; I. *pediccinolo*; G. *Stiel*.) A stalk; used especially for the stalk of a tumour.

P., neu'ral. Term for *Neural arch*.

P. of ver'tebra. The narrow, thickened portion of the neural arch between the lamina and the body of the vertebra.

P., vitel'line. The *Vitelline duct*.

Pedicular. (L. *pediculus*, a louse.) Belonging to the *Pediculus*.

Pedicular'ia. (L. *pediculus*, a little foot.) The *Delphinium staphisagria*.

Also, term for *Pediculosis*.

Pedicular'is. The louseworts, a Genus of the *Scrophulariaceæ*.

Pediculated. (L. *pediculus*, a foot-stalk. G. *gestielt*.) Having a foot-stalk, or foot-stalks.

In Pathology, the same as *Pedunculated*.

Pediculation. (*Pediculus*, a louse.) *Phtheiriasis*.

Pediculi'dæ. Principal Family of Sub-order *Parasitica*.

Pediculi'dea. (Nom. plural. of *pediculideum*.) Leach's name for a Family of apterous insects, of which the type is *Pediculus*, and which corresponds to Latreille's *Parasita*.

Pediculina. The same as *Pediculidæ*; also, a term for *Lice*. (Century Dict.)

Pediculine. Pertaining to *Pediculina*.

Pediculoph'bia. (*Pediculus*; φόβος, fear.) Term for a morbid dread of *Pediculosis*, associated with the delusion of its being present when it is not so in reality.

Pediculo'sis. (*Pediculus*.) The same as *Phtheiriasis*.

Pediculus. (Dim. of L. *pes*, a foot; in the case of the louse, from its many small feet, and of a foot-stalk, because the flower or leaf is supported on it as on a foot. F. *pedicule*; G. *Stiel*.) The foot-stalk of a flower, leaf, or fruit.

Also (F. *pou*; I. *pidocchio*; G. *Laus*), a Genus of the Order *Hemiptera*; wingless, parasitic, non-metamorphosing insects, which live on the surface of the body, feeding by suction on the blood and the cutaneous secretions.

P. cap'itis. The Louse, head. This is considerably smaller than *P. vestimenti* seu *corporis*, being about 2 mm. by 1 mm., and its legs are larger in proportion to its body. The abdomen is distinctly divided into seven segments. It propagates with extreme rapidity. The females deposit their ova in capsules which they fix to the hairs; these capsules are called *nits*. It produces eczema by irritation; abundant crusts are formed, and the hairs become glued together.

P. cor'poris. See *P. vestimenti*.

P. inguina'lis. (L. *inguen*, the groin.) The same as *P. pubis*.

P. palpebrar'um. The louse of the eyelashes; a doubtful variety, generally considered to be identical with *P. pubis*.

P. pu'bis. Also called *Pthirus pubis*. The crab-louse; about 1 mm. by 1 mm., or sometimes rather longer. The body is nearly square; the six legs are furnished with claws. The eggs are affixed to the pubic hairs close to the skin. Like the other species, it causes itching and often gives rise to eczema. It has also been found among the hairs of the whiskers and beard and armpits, and of the legs and thighs, and also those of the eyebrows and eyelashes.

P. tabescen'tium. (L. *tabescens*, wasting; lit. "of the wasting," i. e. of those who are wasting from illness.) The Louse, distemper. This is pale yellow, has a rounded head and long antennæ, a large, quadrangular thorax, and large abdomen, the segments of which are closely united. It is possibly British.

P. vestimen'ti. (L. *vestimentum*, clothing.) Also called *P. corporis*, and, sometimes, *P. vestimentorum*. The Louse, body. It is from half a line to two lines long, whitish in colour, with a long body and broad abdomen, the margins of which are lobulated, and beset with minute hairs. The thorax is narrow, and carries three pairs of

legs, which are hairy, jointed, and furnished with claws. The insect hides among the folds of the underclothing, and causes extreme itching when feeding upon the skin. It often causes a pruriginous eruption, usually round the waist, and on the neck, back, and shoulders, in which parts the underclothes usually lie in folds, and in these the shining, opaque-yellow eggs are deposited. Any chronic skin disease favours the life and propagation of these insects.

Pedicure. (L. *pes*; cura, care.) The surgical care and treatment of the feet; also, one who carries out such treatment.

Ped'icus. (L. *pes*, *pedis*, a foot.) Name for the *Extensor brevis digitorum pedis* muscle.

Pedi'fera. (Nom. plural. L. *pes*; fero, to bear.) Applied to a Family of the *Mollusca*, established by Rafinesque, which comprehends those in which the foot is large, compressed, tendinous, and not byssiferous.

Pedi'ferous. (*Pes*; fero.) Provided with feet, as the ovary in certain *Synanthereæ*, &c.

Also applied to an animal that has feet or analogous appendages.

Pedi'form. (L. *pes*; forma, likeness.) Applied to a part, as the *palpus* of the spider, the shape of which somewhat resembles that of a foot.

Pedigam'bra. The same as *Ysambræ*.

Pedilan'thus tithymalo'i'des. (Πέδιλον, a boot; ἄνθος, a flower; τιθύμαλος, euphorbia; terminal, οἶδες, from εἶδος, form.) A West Indian plant. Order *Euphorbiaceæ*. Called *Jewbush*; also, *Ipecacuanha*. Used for amenorrhœa and, in Curaçoa, as a decoction, for gonorrhœa.

Pedilated. Bearing a *Pedile*.

Pedile. (L. *pes*.) Mirbel's name for a sort of slender support formed, in the *Synanthereæ*, by the shrinking of the limb of the calyx to the bottom of the *pappus*, as in *Tragopogon*.

Pedilu'vium. (L. *pes*; lavo, to wash.) A foot-bath.

P., cold. Has been used to stop a commencing inflammation. The feet are held for several hours in water kept at a low temperature.

P., hot. Employed as a derivative, in ophthalmia, anginal attacks, headaches, &c.

Pedi'manous. (L. *pes*; manus, a hand.) Hand-footed. Vicq d'Azyr's term for a Family, the *Pedimani*, of the *Mammifera*, which have an opposable hallux.

Pedi'meter. See *Pedometer*.

Ped'iolus. (Dim. of *pes*.) See *Petiole*.

Pedion. (Πέδιον, a plain; from πέδιον, the earth.) The sole of the foot. The plantar surface of the metatarsus, according to Galen; the tarsus, according to Bartholin; used by Casp. Hofmannus for the metatarsus.

Pedional'gia. See *Pedialgia*.

Pedioneural'gia. See *Pedialgia*.

Pedipal'pus. (L. *pes*; palpus.) Name given by Cuvier, Latreille, and Lamarck to a Family, the *Pedipalpi*, of the *Arachnida*, comprehending those that have palpi in the form of a claw or arm.

Also, Leach's term for that part of the mouth in *Crustacea*, called by Fabricius the exterior palpus, and by Latreille, the exterior foot-jaw.

Pedisymptomatic. See *Podosympomatic*.

Ped'ium. (Πέδιον, a plain.) See *Pedion*.

PEDOGENESIS—PEGU

Pedogen'esis. (Παις, a child; *genesis*.) Also spelt *Pædogenesis*. Reproduction by means of larvæ.

Pedo'meter. (L. *pes*; Gr. μέτρον, a measure.) An instrument for recording the number of paces walked.

Pedonosology. See *Pædonosology*.

Ped'ora. (Πῆδον, the earth; from the same origin as ποῦς, ποδός, a foot.) Old term for *sordes* of the eyes, ears, and feet.

Pedo'trophy. See *Pædotrophy*.

Peduncle. (L. *pedunculus*, a foot-stalk, dim. of *pes*, a foot. F. *pedoncule*; I. *peduncolo*; G. *Stiel*.) The foot-stalk of a flower or fruit, but not of a leaf. See *Petiole*.

Also, in Anatomy, any stalk-like process by which an organ or part of an organ is attached.

P.s, inferior, of cerebellum. The *Restiform bodies*.

P.s of brain. The *P.s of cerebrum*.

P.s of cerebellum. See *Cerebellum*, *peduncles of*.

P.s of cer'ebrium. The *Crura cerebri*.

P.s of cor'pus callo'sum. See *Corpus callosum*.

P.s of medul'la oblonga'ta. The *Restiform bodies*.

P.s of op'tic thal'amus. Term sometimes used for the radiating fibres passing out from the optic thalamus along the outer medullary lamina to join the fibres of the internal capsule, and to pass thence to the surface of the hemispheres. They have been described as four sets: *anterior, inferior or internal, posterior, and superior*.

P.s of pi'neal gland. See *Pineal gland*, *peduncles of*.

P.s of sep'tum lu'cidum. Reichert's term for a band of white fibres in front of the septum lucidum on each side, passing upwards to join the corpus callosum.

P., ol'ivary. See *Olivary peduncle*.

Pedun'cular. 1. De Candolle's term for *Cirri* that give origin to abortive peduncles, as in *Vitis*. 2. That which has long peduncles; relating to a peduncle or peduncles.

P. arteries. Small vessels supplying the *Crura cerebri*, or *Cerebral peduncles*, derived from the posterior communicating and either the posterior cerebral or choroid arteries.

P. lam'inæ. Term for the pineal gland together with the portion of its stalk which is solid, that is, above the pineal recess in the roof of the third ventricle.

P. lobe of cerebel'lum. The same as *Flocculus*.

P. sul'ci. The lateral sulci of the crus cerebri which separate *crusta* from *tegmen'tum*. The inner is also named *Sulcus pedunculi medialis* or *oculo-motor sulcus*; and the outer, *Sulcus lateralis mesencephali*.

P. tract. The same as *Pyramidal tract*.

Pedun'culated. (*Peduncle*.) Attached to a peduncle.

P. hydat'id. Term for *Morgagni*, *hydatid of*.

Pedun'culi conar'ii. (Nom. plural of *Pedunculus*.) See *Pineal gland*, *peduncles of*.

Pedun'culus. A *Peduncle*; also, a person somewhat splay-footed.

P. cerebel'li infe'rior. Term for either of the *Restiform bodies*.

P. cerebel'li me'dius. The *Cerebellum*, *middle peduncle of*.

P. cerebel'li supe'rior. The *Cerebellum*, *superior peduncle of*.

P. cer'ebri me'dius. The *Cerebrum*, *middle peduncle of*.

P. cer'ebri supe'rior. The *Cerebrum*, *superior peduncle of*.

P. conar'ii. See *Pineal gland*, *peduncles of*.

P. cor'poris mamillar'is. A superficial bundle of white fibres connecting the two corpora mamillaria across the middle line.

P. flocculi. The same as *pedicle of flocculus*. See *Flocculus*.

P. gan'glii haben'ulæ. The bundle of nerve-fibres sent from this ganglion to the interpeduncular ganglion. See *Ganglion of habenula*.

P. hypophys'eos cerebri. Term for the infundibulum, or peduncle of the *hypophysis* or pituitary body.

P. medul'lae oblonga'tæ. Term for either of the *Restiform bodies*.

P. nu'clei globo'si. The narrow, stalk-like anterior portion of the *nucleus globosus* of the cerebellum.

P. oli'væ. See *Olivary peduncle*.

P. pulmo'nis. Term for *Lung*, *root of*.

P. sep'ti pellu'cidi. See *peduncles of Septum lucidum*.

P. substan'tiæ ni'græ. Term for the white fibres of the *crusta* of the crus cerebri which pass upward to the *caudate nucleus* of the corpus striatum.

Pee'nash. Name applied in the Tropics to the disease caused by the larvæ of *Lucilia hominivorax*, when deposited in the nose. See *Lucilia hominivorax*.

Pega. (Πηγή.) See *Pege*.

Peganelæ'on. (Πήγανον, rue; έλαιον, oil.) Old term for *Oil of rue*.

Pegane'rum. (Πήγανον, rue.) Old term for a plaster in which rue was used; described by Paulus Aegineta and by Aëtius.

Peg'anite. Native aluminium phosphate from Strigis, near Freiberg in Saxony.

Peganum. (Πήγανον, rue; from πήγνυμι, to make hard; so named because the whole plant and seed are dry and hard.) The Genus *Ruta*.

P. har'mala. The Assyrian wild rue, similar in properties to *Ruta graveolens*.

Peg'é. (Πηγή, a spring; hence metaphor., "πηγαί (pl.) κλαυμάτων, δακρύων," the source, or fount, of tears, *i. e.* the eyes.) Old name for the inner *Canthus* of the eye.

Pegelog'ia. See *Pegologia*.

Peg-leg. (F. *pilon*.) The form of artificial wooden leg which consists of a socket and a slightly tapering, turned stick, enlarged at the lower end into a sort of peg.

Peg'li. A winter resort for invalids, in the Riviera, about one mile to the west of Genoa.

Peg'ma. (Πήγνυμι, to make hard.) A concretion, as, for example, a gall-stone or urinary calculus.

Pegmatic. (Πήγμα, a coagulum.) Relating to, or causing, coagulation.

Pegology. (Πηγή, a spring; λόγος, a discourse. F. *pégologie*; G. *Quellenlehre*.) The hygienic application of the uses of springs.

Pegomanti'a. (Πηγή, a fountain; μαντεία, prophesying.) Term for divination based on the condition of springs.

Pegu catechu. The *Catechu* of the U.S. Ph.

Peg'wood. The *Euonymus atropurpureus*.

Peiden. A town in the canton Grisons, Switzerland. It has two mineral springs. The *Frauenquelle* contains, in 1000 parts, and at a temperature of 16° C., sodium sulphate .39 parts, magnesium sulphate 1.2, bicarbonate of calcium 2.11, and bicarbonate of iron .04. The *St. Luciusquelle* contains, in 1000 parts, of the same salts as the above, .95, .35, 1.79, and .02 parts, respectively, at a temperature of 9° C.

Peina. (Πείνα, hunger.) Old term for *fames*, or hunger.

Peinaleous. Belonging to *Peina*.

Peinatic. The same as *Peinaleous*.

Peinē. See *Peina*.

Peinothérapie. (Πείνα, hunger; θεραπεία, a remedy.) Hunger-cure.

Peira. (Πείρα, an experience gained by an attempt or trial.) Old term for *Empiricism*.

Peirama. (Πείραμα, a trial. F. *peirame*; G. *Erfahrungssatz*.) Old term for the result of experience.

Peiramology. (Πείραμα; λόγος, a discourse.) The doctrine of experience.

Peira'sis. (Πείρασις, an attempt.) An attempt, experiment.

Peirasma. See *Peirama*.

Peissenberg. A town in Bavaria, in which there is a spring, the *Sulzbrunnen*, or "Brine spring," containing .006 parts of sulphuretted hydrogen per 1000.

Pejo. In the Southern Tyrol, noted for its chalybeate spring, which contains, in 1000 parts, 2.2 of stable ingredients, of which .18 parts consist of carbonate of iron.

Pekan'-nut. See *Peccan nut*.

Pela. Chinese name for *China wax*.

Pela'da. (Origin uncertain. F. *pelade*; I. *pelatina*.) Applied to varieties of *Alopecia*, especially to syphilitic alopecia.

Pelade'. See *Pelada*.

Pelade'ro. (Sp. *peladera*, shedding of the hair. So called from its causing loss of hair and nails in animals after eating it, and of beak and claws in birds.) The ergot of maize, *Paspalum ciliare*, occurring in Columbia, giving rise to the disease *Pelatina*.

Pela'gia. Term for a scaly eruption of the hands or legs, also, of the face; possibly the same as *Pellagra*.

Pela'gian. (L. *pelagus*, the open sea; the same as Gr. πέλαιος.) Applied to shells met with at various depths in the open sea.

Also, to birds that seek their food out at sea.

Pela'gic. (Πέλαιος, the deep sea.) Marine. Also, Brongniart's term for soils, including those of a sedimentous kind, either from the deep sea, from the chalk, or calcareous from the gryphite exclusively.

Pelagra. See *Pellagra*.

Pelargonic acid. (G. *Pelargon-säure*.) $C_9H_{17}O_2$. It exists in the volatile oil of *Pelargonium roseum*. It is formed, among several volatile acids, when nitric acid is distilled with either *choloic* or *oleic* acid; also by oxidation of oil of *rue* by nitric acid; also in small quantity, together with many other volatile acids, in the putrefaction of *yeast*. It is a colourless, oily acid, solidifying at 10° F., and boiling at 260° F. It has a slight butyric acid smell. It is slightly soluble in water, readily in ether and alcohol.

Pelargonium. (Πελαργός, a stork; from the appearance of its capsules.) A Genus of plants of the Order *Geraniaceæ*, from several of which are obtained *pelargonic acid* and an essence used to adulterate otto of roses.

P. anceps. (L. *anceps*, two-headed.) A South African plant. The Malays use a decoction of this plant for amenorrhœa, and as an ebolic.

P. antidysentericum. Native of South Africa. Used for dysentery by the natives, who boil it in milk.

P. cuculla'tum. (L. *cucullus*, a cowl.) A plant native to Table Mountain, Africa. Given, as decoction, in colic, suppression of urine, and Bright's disease. See *Herba althææ*.

P. roseum. This, as well as several of the other species, has been distilled to make an essence which is used to adulterate otto of roses, and is called oil of rose-geranium.

P. tris'te. A plant growing at the Cape of Good Hope. The root is astringent, and is also useful as an anthelmintic.

Pelar'gonyl. Chem. Also termed *Ennyl*, and *Nonyl*. The radical C_9H_{19} .

Pelar'ium. (Πήλος, clay; so named from its consistence.) Old name for a certain *collyrium* described by Aëtius, according to Goræus and Paulus Ægineta; also, for a plaster made of the dross of silver.

Pelati'na. The same as *Pelada*.

Also, a disease allied to gangrenous ergotism, occurring in Columbia, and believed to arise from eating maize which is infested with the *peladero*, or ergot of maize.

Pelecanidæ. A family of the *Palmipedes*, having the pelican as their type.

Peleca'nus. (Πελεκάνω, to hew with an axe.) The pelican; a bird originally so called, because supposed to use its beak like an axe.

Also, old name for an instrument used for extracting teeth, having a curved extremity like a pelican's beak, described by Paré.

Pelias be'rus. The *Viper cherssea* of Cuvier.

Pelican. See *Pelecanus*.

P. flower. Name for *Aristolochia serpentaria*.

Peli'cidē. Term for *Mel coctum*.

Pelicochirometre'sis. See *Pelycochirometresis*.

Pelico'logy. (Πέλιξ or πελίκη, a wooden bowl, the *pelvis*; λόγος, a discourse.) A discourse or lecture treating of the *pelvis*.

Pelico'meter. (Πέλιξ or πελίκη, a wooden bowl.) See *Pelvimeter*.

Pelidno'ma. See *Pelioma*.

Pelidnophidro'sis. (Πελιδνός, livid; ἐφίδρωσις, a perspiring.) Copious sweating, with lividity.

Pelid'nos. (Πελιδνός, livid.) Discoloured by extravasated blood; livid.

Pelidnosyphilopsy'drax. (*Pelidnos*; *syphilopsydrax*.) Term for a livid *Syphilopsydrax*.

Peli'oma. (Πελίωμα or πελιδνωμα, a livid spot from extravasated blood.) Old term for a livid patch due to extravasated blood.

Pel'ios. The same as *Pelidnos*.

Pelio'sis. (Πελίωσις, extravasation of blood, or a livid spot. F. *pélioise*; I. *peliiosi*; G. *Blutfleckenkrankheit*.) The formation of *Pelioma*. Also used for *Pelioma*; also, for *Purpura*.

PELLA—PELORION

P. hæmorrhag'ica. *Purpura hæmorrhagica.*

P. rheumat'ica. (F. *pélioze rhéumatismale.*) *Purpura rheumatica.*

Pel'la. (Πέλλα, a hide.) The skin; also, the prepuce.

Pella'cia. (F. *allotriophagie.*) Old term for *Pica*.

Pella'gra. (Πέλλα, a hide; ἄγρᾱ, a catching. F. *pellagre*; G. *mailändische Rose.*) An endemic disease observed in Lombardy, probably due to eating diseased maize. There is a chronic desquamative erythema of the skin, accompanied by neuroses and digestive troubles. See also *Mal de rose*.

Pellagreuse', Fol'ie. French term for the chronic cerebro-spinal symptoms occurring in *Pellagra*, which are somewhat like those of a late stage of general paralysis of the insane.

Pellag'ri's morphine reaction. Used as a qualitative test for the presence of morphine in a solution. A purple colour is obtained by adding one drop of concentrated sulphuric acid to a solution of morphine in concentrated hydrochloric acid.

Pella'grin. A person suffering from *Pellagra*.

Pella'grous. Pertaining to, or suffering from, *Pellagra*.

Pellar'sis. A Latinised term for *Pellagra*.

Pelle di Lix'a. (F. *peau de poisson.*) Italian name for a kind of confluent small-pox occurring in Brazil. The eruption begins on the face, which is the only region where pustules develop. On the limbs and trunk, small black spots occur in place of pustules, and in other places the skin becomes hard and scaly like that of fishes. In many parts the skin becomes slightly raised into large, shallow bullæ, which, when they burst, leave considerable excoriations. The malady very rarely lasts longer than seven days. In many cases there is a continuous state of stupor, in some there is muttering delirium, in some the intellect remains clear.

Pellen'tia medicamenta. (L. *pello*, to drive; *medicamentum*, a remedy.) Remedies given to favour the catamenial flow, the hæmorrhoidal discharge, or the expulsion of the fœtus.

Pellet, homœopath'ic. Term for the small globules so commonly used by homœopaths.

Pellet's solution. Used for the quantitative estimation of glucose. It consists of 68·7 grammes of copper sulphate, 200 of sodium chloride, 100 of absolutely dry sodium carbonate, and 6·87 of ammonium chloride, dissolved in hot water, the solution being diluted to the volume of one litre. 100 c.c. correspond to 0·05 grammes of glucose.

Pellet'ier, Pierre' Joseph. An eminent chemist of Paris. Born 1788, died 1842. He was the discoverer of the active principles of several plants; pelletierine (named after him), strychnine, quinine, &c.

Pelletierine. (After *Pelletier*.) The alkaloid of the pomegranate, *Punica granatum*. It is obtained from the powdered bark by mixing with milk of lime to form a thick paste, washing with water, shaking up with chloroform, treating the chloroform solution with a dilute acid, and evaporating the salt of the alkaloid thus obtained in a vacuum over concentrated sulphuric acid. The free alkaloid is obtained

by adding potassium carbonate to a solution of one of the salts of the former, and shaking up with chloroform. Dose, 3 to 6 grains. The sulphate, nitrate and hydrochlorate of pelletierine are crystalline, very hygroscopic, substances. Action, see *Granati radici cortex*.

Pelletier'ina. *Pelletierine*.

Pelletier'inae hydrobro'mas. (Ex. Ph.) A viscid, brown liquid. It has been found useful in ophthalmoplegia. Dose, 5 to 8 grains.

P. sul'phas. (Ex. Ph.) Obtained as a brown, viscid liquid, readily soluble in water. Used as a vermifuge for the tapeworm, in a dose of 5 to 8 grains, taken on an empty stomach, and followed up by a dose of jalap. It has been also recommended (5 gr. sub cutem) for Menière's disease, hydrophobia, tetanus, &c.

P. tan'nas. (Ex. Ph.) Obtained as a greyish amorphous powder. It is insoluble in water. Given for tapeworm in one dose of 8 grains, usually followed by a dose of castor oil. Galeozowski states that it has occasionally caused diplopia, when administered internally.

Pel'licle. (*Pellicula*. F. *pellicule*; I. *pellicola*; G. *Häutchen*.) A thin film, or very delicate membrane.

Pellic'ula. (Dim. of L. *pellis*, a hide.) A pellicle.

P. o'vi. See *Membrana putaminis*.

P. sum'ma. Term for the *Epidermis*.

P. supe'rior. The same as *P. summa*.

Pellic'ulæ cor'dis. (Nom. pl. of *Pellicula*.) The valves of the heart.

Pellic'ular. Of the nature of a *Pellicle*.

P. enter'itis. See *Enteritis, pellicular*.

Pellionella. See *Tinea pellionella*.

Pel'lis. (Πέλλα, a hide.) The *Cutis*, or skin.

P. sum'ma. Term for the *Epidermis*.

Pel'litory. (S. *pelitre*. L. *pyrethrum*; Gr. *πύρεθρον*, a hot, spicy plant, the feverfew.) See *Xanthoxylum fraxineum*.

P. Amer'ican. The *Parietaria pennsylvanica*.

P. bas'tard. The *Achillea ptarmica*.

P. of Spain. The *Anacyclus pyrethrum*.

P., wall. The *Parietaria officinalis*.

Pel'lous. (Πέλλος, dusky.) Dusky; term applied to the skin.

Pellu'cid. (L. *pellucidus*; from *perluceo*, to shine through.) Transparent, or semi-transparent.

P. zone. See *Zona pellucida*.

Pel'ma. (Πέλμα, the sole of the foot.) Old name for the sole of the foot.

Also, name formerly used for the stalk of an apple.

Also applied by Hippocrates to an artificial sole of leather or other material.

Pel'matogram. (Πέλμα, -ατος, the sole of the foot; γράμμα, a written character.) Term for a foot-print.

Pelohæ'mia. (Πέλος, or πελλός, dark-coloured; αἷμα, blood. F. *pélohémie*; I. *pe-loemia*.) A thickened, dark condition of the blood, said to occur in patients suffering from gangrene.

Pel'or. (Πέλωρ, a monster.) A monster, either very large, or with excessive development of some part.

Pelo'riades. (Πελωριάς, the giant-mussel.) Term for very large oysters.

Peloric. Belonging to *Pelor*, monstrous.

Pelo'rion. The same as *Pelor*.

Pel'oron. The same as *Pelor*.

Pel'osin. $C_{18}H_{21}NO_3$. A bitter alkaloid found in the root of *Parseira brava*, closely allied to or identical with *Bebeerin* and the same as *Cissampelin*. Its physiological action has not been investigated; but it is known to be bitter, and is believed to be laxative and diuretic. It is obtained from the root by exhausting with dilute sulphuric acid, precipitating with a moderate amount of sodium carbonate, dissolving the precipitate in ether, and evaporating the solution. It forms a transparent, amorphous solid, insoluble in water, slightly alkaline, inodorous, but having a bitter-sweet taste.

Pelta. (Πέλτη, a small shield without a rim.) Name given to a variety of the *Calyculius*, called the shield, which is the fruit in lichens.

Pelta'lis cartila'go. (*Pelta*.) Term used for both the *thyroid* and *xiphoid* cartilages.

Peltan'dra virgin'ica. (Πέλτη, a kind of small shield; άνήρ, άνδρός, a man, the sign for an *anther*.) The *Virginian arum*, or *Wampee*, Order *Araceæ*. The seeds and the fresh root are acrid and stimulant; the root is also said to be diuretic and diaphoretic.

Peltate. (*Pelta*.) Shield-shaped, having the stalk inserted into the disk of the leaf instead of into its base.

Peltid'ea amplis'sima. (Πέλτη, a kind of small shield.) The *Peltigera canina*.

P. aptho'sa. The *Peltigera apthosa*.

P. cani'na. The same as *P. amplissima*.

P. leucorrhiz'a. The *P. amplissima*.

P. mala'cea. The *P. amplissima*.

P. spu'ria. The *P. amplissima*.

Peltifo'lous. (*Pelta*; *L. folium*, a leaf.) Having *peltate* leaves.

Peltiform. (*Pelta*; *L. forma*, likeness.) Applied to *apothecia* that are shield-shaped; also, in Mineralogy, to *couches* or beds that are convex, and inclined on the slope of a mountain.

Peltigera cani'na. A cryptogamous plant, Order *Lichenes*. It was long thought to be a cure for *Rabies*, hence the name *canina*. It has also been used in asthma and in acute mania.

P. aptho'sa. (From *apthia*.) This species is supposed to be cathartic and anthelmintic.

Pel'todon rad'icans. Hab., Brazil. This plant is used as an antidote for snake-bites, and in asthma.

Pel'toid. (Πέλτη, a small shield without a rim; είδος, form.) Shield-like.

Pelu'dé. The same as *Pelicide*.

Pel'vco-peritonitis. The same as *Pelvic peritonitis*.

Pel'vic. (*Pelvis*.) Belonging to the *pelvis*.

P. ab'scess. See *Perimetric abscess*, also *Parametric abscess*.

P. aponeuro'sis. See *Fascia, pelvic*.

P. arch. (*G. Beckengurtel*.) The *Pelvis*.

P. articula'tions. The various joints of the *Pelvis*.

P. ax'is. See *Pelvis, axis of*.

P. ban'dage. A strong belt used after rupture of pelvic articulations.

P. brim. See *Pelvis, inlet of*.

P. brim, in'dex of. See *Index, pelvic*.

P. canal'. See *Pelvis, canal of*.

P. can'cer. Term introduced by Matthews Duncan for cancer affecting the pelvic brim, arising in the bones or elsewhere.

P. cav'ity. See *Pelvis, cavity of*.

P. cellul'itis. See *Parametritis*.

P. connective tis'sue. This includes the *Fascia, pelvic*, and the loose subperitonea connective tissue round the neck of the uterus and between the layers of the broad ligament.

P. contrac'tion, ab'solute. Used to denote a contracted pelvis with a true conjugate of less than 2.75 inches.

P. contrac'tion, rel'ative. Determined by the relation of the foetal head to the pelvis, and by its position, size, and malleability.

P. dia'meters. See *Pelvis, diameters of*.

P. di'aphragm. See *Diaphragma pelvis*.

P. fas'cia. See *Fascia, pelvic*.

P. floor, projec'tion of. Term for the amount of projection of the pelvic floor in sagittal mesial section, beyond the antero-posterior diameter of the outlet.

P. floor, seg'ments of. Term employed in Obstetrics and Gynaecology. These segments are two, the *pubic* and *sacral*. The pubic segment consists of the bladder, urethra, anterior wall of the vagina and peritoneum covering the bladder. It is attached in front to the pubes. The sacral segment consists of the rectum, and perineum, together with muscles and connective tissue, and is attached behind to the sacrum and coccyx.

P. gir'dle. See *P. arch*.

Also, term for *P. bandage*.

P. glands. Under this name are included the following lymphatic glands:—1. The gland at the isthmus uteri (*Championnière*). 2. The hypogastric glands. 3. The sacral glands. 4. The collection of small glands at the obturator foramen ("obturator gland" of Guérin). The lymphatic vessels from all the above open into the lumbar glands.

P. hæmatoc'ele. Term restricted by some, and especially by Matthews Duncan, to an effusion of blood into the *recto-uterine* pouch of the peritoneum; by others, used to include also *P. hæmatoma*, as defined below. See *Hæmatoc'ele, pelvic*.

P. hæmato'ma. Term often used as synonymous with *Hæmatoc'ele, pelvic*; restricted by Matthews Duncan to effusion of blood into the connective tissue between the two layers of the broad ligament of the uterus.

P. her'nia. See *Hernia, pelvic*.

P. in'dex. See *Index, pelvic*.

P. inflamma'tion. See *Parametritis* and *Perimetritis*.

P. lie. The relation of the longitudinal axis of the foetus to that of the uterus, at the beginning of labour, in cases where the pelvic extremity of the foetus is downwards.

P. limb. The lower or hinder extremity.

P. meas'urements. See *Pelvimetry*.

P. mem'bers. Term for the lower or hinder extremities.

P. out'let. See *Pelvis, outlet of*.

P. periton'itis. See *Perimetritis*.

P. plex'us. (*G. unteres Beckengeflecht*.) The inferior hypogastric plexus of the sympathetic, or the continuation of the *hypogastric plexus* downwards on the internal iliac artery. There are thus two pelvic plexuses, one on each side; they are situated by the side of the rectum, and of the vagina also in the female. The nerves of the two sides communicate frequently, forming small enlargements where they meet; they

PELVICELLULITIS—PELVIS

are also joined by spinal branches, and by some offsets of the sacral ganglia. From the plexus many nerves are distributed to the viscera of the pelvis, corresponding with the branches of the internal iliac artery, and joining to form secondary plexuses, hæmorrhoidal, vesical, &c.

P. presenta'tion. A *Presentation* in which the fœtus lies with its long axis corresponding roughly with that of the uterus, but with its head upwards. It includes breech presentation and the two sub-varieties of this, namely, knee and foot presentation. See *Breech presentation*, *Presentation*, *foot*, and *Presentation*, *knee*.

P. re'gion, anté'rior. A term for the region including the lower part of the hypogastrium, and extending laterally to the anterior edge of the tensor fasciæ femoris on either side.

P. strait. The outlet of the pelvis as spoken of in Obstetrics. It is considered as bounded behind, not, as is the anatomical outlet, by the tip of the coccyx; but by the lower end of the sacrum.

P. sur'face of il'ium. The internal surface, which faces the so-called cavity of the false pelvis (see *P. cavity*), and to which the iliacus muscle is attached.

P. throm'bus. See *P. hæmatoma*.

P. tu'mour, sanguine'ous. See *P. hæmatocœle*.

P. ver'sion. See *Version*, *pelvic*.

Pelvicelluli'tis. *Pelvic cellulitis*.

Pel'vicle. (*Pelviculus*, dim. of *pelvis*.) A little pelvis.

Pelvicology. See *Pelvicology*.

Pelvic'ula oculi. (Dim. of *pelvis*.) Term for the orbit.

Pelvi'dymus. (L. *pelvis*; Gr. δύω, to get into, or mix with.) A double monster, joined at the pelvis but separate above.

Pel'viform. (L. *pelvis*; *forma*, likeness.) Pelvis-shaped.

Pelvi'graphy. (L. *pelvis*; Gr. γράφος = γράμμα, a drawing.) The making of a drawing of the outline of the pelvic wall.

Pelvimensura'tio. The same as *Pelvicometresis*.

Pelvimeta'tio. The same as *Pelvicmensuration*.

Pelvi'meter. (L. *pelvis*; Gr. μέτρον, a measure. G. *Beckenmesser*.) An instrument for measuring the diameters of the pelvis.

P., great, of Stein. This was made up of two unequal, separable arms, and was intended to be used in the same way as the *P. of Coutouly*.

P. of Bau'delocque. See *Baudelocque's pelvimeter*.

P. of Coutou'ly. An instrument resembling, in appearance, the wooden foot-measure used by shoemakers. The two branches were introduced, approximated, into the vagina, and then separated until the tip of one touched the sacral promontory, and the other, the posterior surface of the pubes. It was manifestly unjustifiable to use such an instrument on the living subject.

P. of Green'halgh. This consists of a metal rod which is attached to, and can be moved upon, a flexible metal band fitting round the hand, and which has a curved portion to embrace the radial side of the base of the index finger. When the examining index finger touches the sacrum, the rod is withdrawn, until

its curved part abuts against the back of the pubes. The hand is then withdrawn, and the length measured off along the index finger.

P. of Schul'tze. An instrument, like that of Baudelocque, used for external measurements. It can be folded up, for convenience in carrying.

P., small, of Stein. This had a graduated stem, and was intended merely to measure the antero-posterior diameter of the inlet.

Pelvimetric. Relating to *Pelvimetry*.

Pelvi'metry. (*Pelvis*; Gr. μέτρον, measurement.) The measurement of the various diameters of the pelvis. See *Pelvis*, *diameters of*.

Pelviotomy. (*Pelvis*; Gr. τομή, a cutting.) The operation of section of the pelvic bones. See *Symphysiotomy*.

Pelvipéritoni'tis. *Pelvic peritonitis*.

Pelvi-prostat'ic fas'cia. The process of the recto-vesical fascia which forms the sheath of the prostate gland.

Pel'vis. (L. *pelvis*, a basin; Gr. πῆλλις or πῆλλα, a wooden bowl.) The large bony girdle by which the lower or hind limbs articulate with the trunk. It is made up of the two ossa innominata with the sacrum and coccyx. The human pelvis is described as divided into two parts by a plane passing through the sacral promontory, the ilio-pectineal lines, and the symphysis pubis. This plane constitutes the circumference of the brim or inlet of the true pelvis which lies below it; the space above it, between the iliac fossæ, is called the false pelvis, and forms part of the abdomen. The cavity of the pelvis contains the lower bowel, the bladder, the greater part of the generative organs, together with nerves, blood-vessels, &c. The anterior wall formed by the back of the pubes is only about 1½ inches long; the posterior wall formed by the concave anterior surface of the sacrum is about 5 inches long. The outlet of the pelvis is bounded by the tuberosities of the ischia on either side, the sub-pubic arch in front, and the coccyx behind; and, between the sacrum and coccyx and the ischial tuberosity on each side, the space is bridged over in the recent state by the sacro-sciatic ligaments.

Also, certain structures resembling in shape the bony pelvis; namely, the pelvis of the kidney, and also the basal part of the calyx in *Crinoids*.

Also, a Genus of the *Mollusca*.

P. æquabil'iter jus'to ma'jor. (Lit., the pelvis uniformly and in right proportion larger, *i. e.* than normal.) An adult female pelvis uniformly larger than normal, in all its diameters. A large pelvis is generally proportionate. It occurs usually in women who are broad and have the feminine characteristics well developed, not in those who are specially tall.

P. æquabil'iter jus'to m'inor. (Lit., the pelvis uniformly and in right proportion smaller, *i. e.* than normal.) An adult female pelvis that is uniformly less than normal in all its diameters. Usually a pelvis so classed from its appearance is found, when measured, to be of slightly abnormal proportions; the conjugate is sometimes relatively contracted. It occurs most commonly in cretins, and is due to premature arrest of growth. It is sometimes associated with absence or imperfect development of the generative organs, and in these cases the bony parts

PELVIS

of the pelvis continue sometimes through adult life to be united only by cartilage.

P. au'ris. (L. *auris*, an ear.) A name for the *Tympanum*.

P. au'rium. Term sometimes used for the *Cochlea*.

P., axes of planes of. The axis of any plane of the pelvis is an imaginary line indicating the direction in which the centre of the foetal head is normally advancing during labour at the moment when it lies in that plane. Such an axis may be defined as "the tangent to the curved axis of the pelvis at the point where the latter cuts that plane" (Galabin).

P., axis of. An imaginary line indicating the direction of the foetal head as it passes through the pelvis during the first two stages of labour. The centre of the head descends almost in a straight line until it meets the lower, curved portion of the sacrum, and then passes downwards and forwards in a curved line having its concavity forwards.

P., beaked. See *P., triradiate*.

P., bones of. See *Pelvis*.

P., brim of. See *Pelvis*.

P., caout'chouc. A model of the pelvis in caoutchouc, used to illustrate changes produced in the shape of the pelvic bones in mollities ossium.

P., cavity of. (F. *cavité pelvienne*. G. *Beckenhöhle*.) The space included between the inlet and outlet of the pelvis. Spiegelberg has divided this cavity, for purposes of clinical description, into: 1, peritoneal; 2, subperitoneal; and 3, subcutaneous.

P. cer'e'br'i. A name for the *Infundibulum of the brain*.

P., circum'ference of. A measurement sometimes made round the pelvis externally, from the spine of the last lumbar vertebra, between the iliac crest and great trochanter on either side, to the symphysis pubis. It is of hardly any value.

P., connect'ive tis'sue of. See *Pelvic connective tissue*.

P., contrac'ted. The main varieties of contracted adult female pelvises are the following:

1. *Flattened pelvises*.
 - a. The simple flattened pelvis.
 - α. Reniform.
 - β. Elliptic.
 - b. The pelvis of double congenital dislocation of the hips.
 - c. The split pelvis.
2. *Generally contracted pelvises*.
 - a. The pelvis æquabiliter justo minor.
 - b. The infantile pelvis.
 - c. The generally contracted rickety pelvis.
 - d. The masculine pelvis.
3. *Triradiate pelvises*.
 - a. Malacosteon.
 - b. Rickety or pseudo-malacosteon.
4. *Oblique pelvises*.
 - a. The scoliotic oblique pelvis.
 - b. The oblique pelvis from disuse or shortening of one leg.
 - c. The oblique pelvis of Nägele.
5. *Transversely contracted pelvises*.
 - a. Robert's pelvis.
 - b. The kyphotic pelvis.
 - c. Infundibuliform pelvis.
6. *The spondylolisthetic pelvis*.
7. The pelvis whose cavity is obstructed by growths; osteo-sarcoma, carcinoma (secondary

growths), exostosis, or osteophytes (in osteoarthritis).

P., dia'meters of. Three diameters of each plane are described. The measurements here given are the average measurements of normal adult female pelvises.

Diameters of the brim.—1. The *antero-posterior* or *true conjugate* (*C. v.* = *Conjugata vera*) is measured from the centre of the promontory of the sacrum to a point on the posterior surface of the symphysis pubis half an inch below its upper border. There are three ways of directly estimating the true conjugate in the living woman. The first and most usually applicable is to introduce two fingers into the vagina and touch the promontory of the sacrum with the tip of the fore- or middle-finger. An indentation is then made with the fore-finger nail of the other hand on the spot where the radial border of the hand in the vagina touches the lower border of the symphysis pubis. The hand is then withdrawn, and the distance on it measured. From this, the *diagonal conjugate*, the true conjugate is obtained by subtracting half an inch. The second way is applicable only in cases where the abdomen is lax, its walls are thin, and the patient is not pregnant. The hand is pressed upon the abdomen just above the pubes until the tip of the middle-finger touches the promontory of the sacrum. The distance is then measured off as above. It gives a measurement slightly over the true conjugate. The third way is applicable only immediately after delivery. The whole hand, excepting the thumb, is passed into the vagina in the conjugate diameter, as far as possible; the point where it was arrested is noticed, the hand is withdrawn, and the distance measured off. In the dry pelvis, the true conjugate is directly measured from the mid-point of the promontory of the sacrum to the posterior upper border of the symphysis pubis. The true conjugate may be indirectly estimated from the *diagonal conjugate* (fairly reliable), from the *external conjugate* (unreliable), or from the general size of the pelvis, and the relation between the *distance of the spines* and the *distance of the crests*.

2. The *oblique* is measured between the point where the sacro-iliac synchondrosis cuts the brim, and the ilio-pectineal eminence of the opposite side. The right oblique diameter starts from the right synchondrosis, and the left, from the left synchondrosis.

3. The *transverse* is measured from a point on the brim halfway between the sacro-iliac synchondrosis and the pectineal eminence on one side, to the corresponding point on the other side.

4. The *diagonal conjugate* (*C. d.*) is measured from the lower border of the symphysis pubis to the centre of the promontory of the sacrum. In the normal pelvis it is three quarters of an inch longer than the true conjugate.

Diameters of the cavity.—The *antero-posterior* is measured from the mid-point of the posterior wall of the pelvis (middle of ant. surface of sacrum, i. e. at junction of second and third sacral vertebræ) to the middle of the posterior surface of the symphysis pubis.

The *oblique* is unimportant and uncertain. It is not taken between two bony points. Spiegelberg gives it from the middle of the upper edge of one great sciatic notch to the upper edge of the obturator foramen of the opposite side.

PELVIS

The *transverse* is measured between those points of the acetabula which, in the erect position, are highest. (Spiegelberg.)

The *sacro-cotyloid diameter* is measured from the sacral promontory to a point corresponding with the centre of the acetabulum on either side.

Diameters of the outlet.—The *antero-posterior* is measured from the anterior surface of the tip of the sacrum to the lower border of the symphysis pubis.

The *oblique* is unimportant and uncertain. It is measured from the middle of one great sacro-sciatic ligament to the opposite pubo-ischiadic synostosis.

The *transverse* is measured between the inner surfaces of the two tubera ischiorum.

External diameters.—The *External conjugate* (*C. e.*) is measured from the tip of the spine of the last lumbar vertebra to the front of the symphysis pubis. To obtain, roughly, the length of the true conjugate from this, in inches, subtract three.

The *distance of the spines* (*Sp. Il.*, or *Dist. Sp. Il.*) is measured between the two anterior superior iliac spines.

The *distance of the crests* (*Cr. Il.*, or *Dist. Cr. Il.*) is measured between the points of the two iliac crests which are widest apart.

The *external oblique diameter* is measured from the anterior superior iliac spine of one side to the posterior superior of the other. It is used for comparison of the two sides to detect any asymmetry.

Average measurements.—*Internal diameters*. Brim, antero-posterior, 4.25 inches; oblique, 4.8 inches; transverse, 5.2 inches.

Cavity, antero-posterior, 4.7 inches; oblique, 5.2 inches; transverse, 4.75 inches; sacro-cotyloid diameter, 3.5 inches.

Outlet, antero-posterior, 4.4 inches; oblique, 4.5 inches; transverse, 4 inches.

External diameters. External conjugate, 7½ inches. Distance of the spines, 10 inches. Distance of the crests, 10½ inches.

P., diaphragm of. Term for that part of the floor of the pelvis which is formed by the levatores ani muscles with the pelvic and anal fasciæ.

P., dilata'tion of. See *Pelvic cavity*.

P., dislocat'ions of. In consequence of severe blows upon or compression of the pelvis, the *sacro-iliac* joint, or, less frequently, the *symphysis pubis* may be dislocated. The diagnosis is readily made from the resulting deformity.

P., dwarf. It is in this form that general contraction is most usually found clearly marked. The bones are generally small and slight, and are often united by cartilage, especially the sacral vertebrae, even in adult life. The general characters of the female pelvis are well marked. It is a rare form. See *P. æquabiliter justo minor*.

P., enlarged'. Generally equally enlarged in all diameters (see *P. æquabiliter justo major*); in some cases it is relatively wide, and especially in several cases of double uterus in which it has been measured.

P., false. See *Pelvis*.

P., female. Compared with the adult male pelvis, the adult female pelvis is thinner and less strong, and the prominences for muscular attachment are less marked. It is shallower, wider, and less funnel-shaped, and the outlet is larger in proportion to the inlet, the

tubera ischiorum being farther apart. The iliac fossæ are more spread out. The pubic arch is much wider, and the perpendicular height of the symphysis is less. The sacrum is wider and less deep. The obturator foramen is more triangular. The usual shape of the brim is the outline of an obtuse "ace of hearts" (Spiegelberg); but other forms are found not infrequently which cannot be considered pathological, as parturition is not appreciably affected by them. Such are: 1. A shape markedly elliptical in the transverse diameter. 2. A shape elliptical in the antero-posterior diameter. 3. A shape which is almost circular; usually occurring in very roomy pelves. These characteristics are most marked in the Caucasian or Mediterranean race, and in the Chinese; least in Australian aborigines and the African negroes, Hottentots, and Bushmen.

P., figure-of-8 rachitic. This is a very rare form. It has the general characters of the *P.*, generally contracted, flattened, of the *reniform* variety; but there is also an inward depression at the symphysis pubis. The brim has the shape of an unequal figure of 8, the sacrum projecting inwards more than the pubes.

P., flat. The same as *P.*, flattened, simple.

P., flat'tened, simple. This variety of pelvis is contracted in its conjugate diameter, but not notably in any other diameter. It is divided into two varieties, the *elliptic* and the *reniform*. The brim of the former resembles an ellipse flattened on the posterior face; the brim of the latter is kidney-shaped from sinking inward of the sacral promontory. The latter is the commoner variety. Both kinds are probably due to slight rickets.

P., floor of. This is constituted, in the human subject, as follows: the external genitals with the skin, the superficial fascia, the deep fascia with the perineal muscles, the pelvic viscera, the obturator internus, levator ani and coccygeus of both sides, with their fasciæ, and finally, the peritoneum.

P., fracture of. This occurs only from great and direct violence, as by the passage of a cart over the pelvis, crushing in railway collisions, &c. The fracture generally occurs at the rami of the pubes and ischium in front, and across the ilium in the region of the sacro-iliac joint behind, generally on the opposite side to that of the fracture of the pubic and ischial rami. The soft parts on the side of the iliac fracture are liable to severe stretching, laceration, &c. Sometimes a portion of the iliac crest only is broken; sometimes the rami in front are broken without any posterior fracture—such partial fracture cannot arise from a crush. The bladder or urethra may be torn, as may also muscles, blood-vessels, and nerves. However good subsequent union may be, lameness is apt to result from injury to muscles at the time of fracture.

P., fun'nel-shaped'. Excluding the *P.*, *kyphotic*, this form of pelvis is extremely rare. The brim and cavity are usually of normal dimensions; but the outlet is abnormally small, especially in the transverse diameter. In shape, this variety is very like the *P.*, *infantile*.

P., gen'erally contracted. The same as *P. æquabiliter justo minor*.

P., gen'erally contracted, flat'tened. The most typical form of the rickety pelvis. There is general contraction together with flattening. The bones are usually small

PELVIS

and thin; but the antero-posterior thickness of the sacrum may be increased. The brim is more often reniform than elliptic. The pubic arch is widened, and the relative length of the transverse diameter of the brim and outlet are both increased.

P., great. The same as *P., false*.

P., inclination of. The normal dip or inclination downwards and forwards of the pelvis in the erect position. It is measured by the angle which the plane of the brim, in the erect position, makes with the horizon; this is, on an average, 60°. (Meyer.)

P., india-rubber. The same as *P., caoutchouc*.

P., infantile. An adult female pelvis that is contracted in all its diameters and approaches in general shape the pelvis of the infant. The sacrum is relatively narrow, with small alæ; its longitudinal curve is less, and the transverse concavity of its anterior surface is greater than normal; the ilia are nearly vertical (in the upright position), and their crests are hardly at all curved; the pubic arch is narrow, and the length of the conjugate is relatively small. This may be the result of any disease interfering with the general nutrition during childhood.

P., inferior. Term for true pelvis. See *Pelvis*.

P., infundibuliform. (*Infundibulum*.) The same as *P., funnel-shaped*.

P., infundibuliform, inverted. A very rare form, in which there is a contracted brim, with an outlet of normal, or even slightly increased, dimensions.

P. infundibuliformis justo major. Term for a variety of the *P. æquabiliter justo major* in which the diameters of the brim and cavity are increased, but those of the outlet are normal.

P., inlet of. See *Pelvis*.

P. inver'sa. A severe form of *P., split* (Spiegelberg).

P., kyphotic. (*Kyphosis*.) A form of transversely contracted pelvis which results from lumbar kyphosis, generally due to caries. There is often compensatory lordosis of the dorsal vertebræ; where there is no such compensation, the plane of the brim of the pelvis is nearly perpendicular to the general spinal axis, and the brim becomes consequently, in order to preserve the balance, almost horizontal. Both the longitudinal and transverse curves of the anterior surface of the sacrum are considerably increased. The antero-posterior diameter of the pelvic brim is increased; but those of the cavity and outlet are diminished. The anterior inferior iliac spines and the points of attachment of the ilio-femoral ligaments are markedly developed.

P. major. Term for the false pelvis. See *Pelvis*.

P., malacosteon. See *Malacosteon*.

See also, *P., triradiate, malacosteon*.

P., male. For differences between the male and female pelvis, see *P., female*.

P., masculin. A form of the adult female pelvis uniformly contracted, and approximating towards the male type. In marked cases, all the internal diameters may be reduced by as much as one-fourth of the normal. This form of pelvis usually occurs in strong women of a somewhat masculine type and tall in proportion to their breadth.

P., measurements of. See *P., diameters of*.

P. minor. Term for the true pelvis.

P., oblique'. There are three kinds generally described: the *P., scoliotic oblique*, the *P. oblique, from disuse or shortening of one leg*, and the *Oblique pelvis of Nägele* (see *Nägele's pelvis*).

P., oblique', from disuse' or shortening of one leg. Very similar to the scoliotic oblique pelvis. The pelvis is tilted down on the side of the shortening, the line of the body-weight is displaced towards that side, and the shortened leg is overweighted. Where one leg is useless, a similar effect is produced; but is manifested on the sound side.

P. obtecta. (L. *obtectus*, covered.) A variety of *P., kyphotic* in which the pelvic brim is roofed-in by the lumbar vertebræ, which are in a position of compensatory lordosis. This condition is present in cases where the kyphosis occurs as low as is possible. If the bodies of the lumbar vertebræ become destroyed by caries, the column sinks in, so as to become approximated to the symphysis pubis; this condition has been termed *Spondylolistema*.

P. ocular'is. See *Scaphium oculare*.

P. of double congenital "dislocation" of the hips. The pelvic inclination is increased and there is compensatory lumbar lordosis; the iliac fossæ are abnormally upright, the pelvis is moderately flattened, widened slightly at the inlet and more markedly at the outlet, and the tubera ischia are abnormally far apart. This condition hardly ever causes any obstruction in labour; but may favour the occurrence of "pendulous belly" during pregnancy.

P. of kidney. See *Kidney, pelvis of*.

P. of Nägele. See *Nägele's pelvis*.

P. of Robert. See *Robert's pelvis*.

P. of unilateral dislocation of hip.

In congenital dislocations, the sacrum inclines to the affected side, and this half of the pelvis is therefore narrower. In early-acquired dislocations, where there is much atrophy and the legs have not been used, the sacrum inclines to the affected side of the pelvis, which is also narrower than the other. In other forms of dislocation, the sacrum inclines towards the healthy side, or else remains fairly central, and the affected side of the pelvis is either wider than or as wide as the sound side. These pelves resemble those that are oblique from hip-joint disease.

P. os'teo-malac'ic. (*Osteo-malacia*.) The same as *P., triradiate malacosteon*.

P., outlet of. See *Pelvis*; also, *Pelvic strait*.

P. ova'lis. The elliptical fossa on the inner wall of the middle ear or tympanic cavity situated above the promontory. In its lower part is the *fenestra ovalis*.

P., pseudo-malacosteon. See *P., triradiate rachitic*.

P., rachit'ic. See *P., generally contracted, flattened*; *P., figure-of-8 rachitic*; and *P., triradiate rachitic*; also, *P., flattened, simple*.

P. ren'al'is. (L. *renes*, the kidneys.) Pertaining to the kidneys. See *Kidney, pelvis of*.

P., ren'iform rachit'ic. See *P., generally contracted, flattened*; also *P., flattened, simple*.

P. re'num. (Gen. of *renes*, the kidneys.) The same as *P. ren'al'is*.

P., rick'ety. The same as *P., rachitic*.

P., roofed-in. The same as *P. obtecta*.

PELVIS—PEMMICAN

P., ros'trated. (L. *rostratus*, beaked.) See *P., triradiate malacosteon*.

P., rup'ture of. This occasionally occurs during delivery, the seat of rupture being almost invariably the symphysis pubis. With this there is either a straining or a partial rupture of one or other sacro-iliac synchondrosis. The rupture is usually complete, and is most common in generally contracted pelvis; it has occurred both in instrumental and non-instrumental labours.

P., scolio'tic oblique. In consequence of scoliosis of the spine, the line of the body-weight upon the pelvis is displaced to the same side as the vertebral bodies. Thus the acetabulum becomes thrust inward on that side, and the symphysis pubis is displaced towards the other side. The ilium and the sacral wing on the over-weighted side are thicker and shorter than on the other side, the pelvic brim is pushed up on the former side, the iliac crest is higher, the iliac fossa looks more inward, and there is inward bulging opposite the acetabulum. There is usually also some flattening of the brim. See *Scoliosis*.

P., scolio'tic rachit'ic. A variety of the *P., scolio'tic oblique*, which is more markedly asymmetrical and has general rickety characters more developed.

P., skolio'tic. The same as *P., scolio'tic*.

P., small. A term for *P., true*.

P., spino'sa. (L. *spinosus*, prickly.) Also called *acanthopelys* (Kilian). A form of rickety pelvis (*P., generally contracted, flattened*) in which there is either a very sharp pubic crest, or a spine at the junction of the pubes and ilium, for the insertion of the tendon of the *psoas parvus*. These spines may be of serious danger in parturition, by causing bruising or laceration of the uterus or vagina.

P., split. In this variety of pelvis there is merely fibrous, not bony, union between the two pubes, owing to faulty development. Associated with this, ectopia vesicæ and imperfectly developed sexual organs are usually found; consequently it is not of obstetric interest, except in illustration of the action of mechanical forces in the development of the characteristic shape of the pelvis. This pelvis is relatively wide and is slightly flattened.

P., spondylolisthet'ic. In this variety, the body of the fifth lumbar vertebra is dislocated forwards upon the sacrum and occasionally downwards on the anterior surface of the latter, and the other lumbar vertebrae are carried forwards with it. The available conjugate is thus greatly diminished; it is measured from the last lumbar vertebra, or from that lumbar vertebra which is nearest to the symphysis pubis, instead of from the sacral promontory. This is an extremely rare variety. For causation, see *Spondylolisthesis*.

P., spondylolizemat'ic. (*Spondylolizema*.) See *P. oblecta*.

P., supe'rior. Term for *False pelvis*. See *Pelvis*.

P., transverse'ly contrac'ted. See under *P., funnel-shaped*, *P., kyphotic*, and *Robert's pelvis*.

P., trilo'ba. The *P., triradiate rachitic*.

P., trira'diate malacosteon. This variety is due to the pushing inward of the sacrum and acetabula in cases of *Malacosteon* or *mollities ossium*. The peculiar shape is due to the uniform and complete softening of the bones,

and to the fact that the patient (almost always an adult woman) is standing and walking during the early stages of the disease. The centre of the sacrum and the acetabula are sunk inwards, and the pelvis becomes beaked, transverse contraction predominating. The tubera ischia are also approximated. See *Malacosteon*.

P., trira'diate rachit'ic. Two varieties: 1. This is also called *Pseudo-malacosteon*; it closely resembles the *P., triradiate malacosteon*. It is produced in a form of rickets in which the softening of the bones is greater, more general, and more prolonged than in ordinary rickets. It is distinguished from the *malacosteon* by other signs of rickets, the history of the case, the firmness of the bones, the small size of the pelvis and especially of the two iliac fossæ, and by the reversal of the normal relation of the distance between the anterior superior iliac spines to that between the points on the two crests which are furthest apart. (See *P., diameters of*.) 2. *Rachitic and malacosteon*. In this, after the usual changes have occurred in a rickety pelvis, the adult pelvis becomes affected with *malacosteon*, and is changed into a soft, irregular mass.

P. ve'ra. The true pelvis. See *Pelvis*.

Pelvisa'cral. Belonging to the pelvis and sacrum.

Pelvister'nal. Resembling, or belonging to, a *Pelvisternum*.

Pelvister'num. (*Pelvis*; *sternum*.) A part of the pelvic arch supposed to be a serial homologue of the *omosternum* of the pectoral arch. It may be osseous, cartilaginous, or ligamentous. The fibro-cartilage of the human symphysis pubis is regarded as a *pelvisternum*. (Century Dictionary.)

Pelvitom'ia. See *Pelviotomy*.

Pelvitrochanter'ian. (*Pelvis*; *trochanter*.) Pertaining to the pelvis and the great trochanter of the femur.

P. re'gion. The space between the great trochanter of the femur and the pelvis posteriorly, occupied by the quadratus femoris, pyriformis and two gemelli, and the internal and external obturator muscles.

Pelycochirometre'sis. (Πέλυσ = πέλλα, a wooden bowl; χείρ, the hand; μέτρησις, a measuring.) Measurement by the hand of the available diameters of the pelvis.

Pelyco'graphy. (Πέλυσ; γραφή, a drawing or description.) The detailed description of the pelvis.

Pelyco'logy. See *Pelvicology*.

Pelyco'meter. (Πέλυσ; μέτρον, a measure.) See *Pelvimeter*.

Pelycometre'sis. (Πέλυσ, a wooden bowl; μέτρησις, a measuring.) *Pelvimetry*.

Pelycotom'ia. *Pelviotomy*.

Pelymetrum. *Pelvimeter*.

Pelyochirometre'sis. (Πέλυσ; χείρ, the hand; μέτρησις, a measuring.) See *Pelycochirometresis*.

Pelyo'meter. *Pelycometer*.

Pelyometre'sis. See *Pelycometresis*.

Pelyotom'ia. *Pelviotomy*.

Pem'ican. See *Pemmican*.

Pem'ma. (Πέμμα, dressed food of any kind.) Any kind of dressed food; but mostly used in the plural for pastry, cakes, or sweetmeats.

Pemmican. (American Indian.) A form of dried meat, containing a large proportion of nourishment in a small compass, made by drying thin slices of lean meat over the smoke of a

wood fire, pounding them, and then mixing them with nearly an equal weight of their own fat.

Pem'pelos. (Πέμπελος, an epithet for very old persons; perhaps from the same root as δυσπέμπελος, rough and strong.) An epithet applied to very old persons who have become infirm and decrepid.

Pemphig'o'des. (Pemphigus; εἶδος, form, likeness.) Full of blisters, resembling blisters (Hipp.).

Also, an ancient epithet for pyrexia accompanying Pemphigus.

Pemphi'goid. Resembling Pemphigus.

Pemphi'gous. (Pemphigus.) Having the disease Pemphigus.

Pemphi'gus. (Πέμφιξ, a blister. I. penfigo; G. Blasenausschlag.) A skin disease characterised by the formation of bullæ, sometimes on a rose-coloured or slightly injected ring of skin, sometimes on perfectly natural skin, never upon an actively inflamed or swollen surface. These bullæ are very various in size, appear irregularly over all parts of the skin, and though the contents often become turbid, they are never actually purulent. It is usually, in adults, a very chronic disease, occurring without any general constitutional disturbance, and lasting for months or years.

Also, a Genus of Plant-lice.

P. acu'tus. A form occurring nearly always in children. It usually runs its course in two or three weeks.

P. apyret'icus. (A, negative; πυρετός, a fever.) Pemphigus occurring without any rise of temperature.

P. cachec'ticus. A term for pemphigus occurring in cachectic subjects. It usually has an unfavourable if not fatal termination.

P. chron'icus. A distinguishing term for the common form of the disease as occurring in adults.

P. chron'icus mor'ta. The same as *P. morta*.

P. confer'tus. (L. confertus, thick and close together.) In this form the bullæ are in closely-set groups.

P. contagio'sus. A term used by Willan for *P. helveticus*.

P. diphtherit'icus. A variety in which round the bases of the bullæ there is a yellowish layer of epidermis resembling wash-leather.

P. dissemina'tus. In this form there are many bullæ distributed over a wide area.

P. diu'tinus. (L. diutinus, lasting.) Ordinary pemphigus in which the eruption lasts longer than usual.

P. fe'brilis. The same as *P. acutus*.

P., feigned'. The condition in which, in order to feign disease, bullæ have been artificially produced by means of strong acids, and especially nitric acid.

P. folia'ceus. A very rare form of pemphigus in which the epidermis is undermined, and the bullæ are flaccid and not much raised. These bullæ usually soon coalesce and then rupture; they are very widely distributed, and succeed one another very rapidly.

P. gangræno'sus. A fatal form, occurring in cachectic subjects. (Duhring.)

Also, term incorrectly applied to *Rupia escharotica*.

P. glandular'is. Term used by Good for *P. helveticus*.

P. gyra'tus. The bullæ are arranged in irregular, serpentine figures.

P. hæmorrhag'icus. In this form the bullæ are filled with a sanious fluid.

P. helvet'icus. According to Cullen, a name for *Sore throat, putrid*.

P. hungar'icus. Term for *Malignant pustule*.

P. infan'tilis. Term used by Good and Willan for a form of pemphigus occurring in infants a few days after birth, and proceeding to suppuration, and afterwards to ulceration and gangrene.

P. lepro'sus. Term for the formation of cutaneous bullæ which occurs during the prodromal stage of anæsthetic leprosy.

P. loca'lis. The variety in which crops of bullæ appear successively in the same region.

P. ma'jor. Term for *P. vulgaris*.

P. malig'nus. In this variety large bullæ form rapidly and then ulcerate. Hæmorrhage is not infrequent, and the general health is seriously impaired.

P. mi'nor. Another term for *P. vulgaris*.

P. mor'ta. The same as *Morta*.

P. of conjuncti'va. This is very rare. It has been seen with Pemphigus of other parts, but is not known to occur as a separate disease. There are pain, lacrymation, and photophobia, as the bulla forms; and afterwards the affected portion of conjunctiva degenerates and undergoes cicatricial contraction. Such attacks may recur until the whole conjunctiva is destroyed, and the lids have become adherent to the globe. Opacity or staphyloma of the cornea gradually results. Entropion may form. The treatment is entirely palliative.

P. prurigino'sus. (L. pruriginosus, itchy.) This term was formerly incorrectly applied by Hardy to *Herpes gestationis*. It is now applied to the variety of *P. vulgaris* in which itching and burning sensations are present in a marked degree, instead of being slight or absent.

P. serpigino'sus. The same as *P. gyratus*.

P. solitar'ius. A variety of *P. vulgaris* characterised by the successive eruption of single bullæ.

P. syphilit'icus. The eruption so called is not a true pemphigus, but simply *Syphiloderma bullosum*.

P. variolo'des. The variety of *Varicella* termed *coniformis*.

P. veg'etans. A fatal variety of pemphigus, in which a few bullæ first form, then break, and in their place warty, condyloma-like growths form.

P. vulgar'is. The commonest variety of Pemphigus.

Pem'phix. (Πέμφιξ, a blister.) The same as Pemphigus.

Pem'phix. The same as Pemphix.

Pemptæ'a fe'bris. (Πεμπταῖος, on the fifth day.) *Ague, quintan*.

Pemptæ'ous. (Πεμπταῖος.) On the fifth day; applied formerly as an epithet of intermittent fever, in which the paroxysm recurred every fifth day (*Pemptæa febris*).

Pen. (Mid. E. penne, a feather; Anglo-Sax. pinn; Low. L. penna, a quill for writing.) A large feather of the tail or wing of a bird.

Also, a quill.

Also, an internal structure found in certain

PENÆA—PENIS

of the *Cephalopoda*, homologous with the cuttle bone of Scipio; also called gladius, and calamary.

P.-feather. See *Pin-feather*.

P. pal'sy. *Scriveners' palsy*.

Penæ'a. (After *Pena*, a French botanist.) A Linn. Genus of plants, Class *Tetrandria*, Order *Monogynia*.

Also, name of a species of *Polygala*.

P. mucrona'ta. The plant which is said to yield the *Sarcocolla* brought from Arabia and Persia. See *Sarcocolla*.

P. sarcocolla. See *Sarcocolla*.

Penagu'la. In Spain. It has a sulphur spring of a temperature of 17·5° C.

Pencil-flower. The *Stylosanthes elatior*.

P.s, med'ical. (*Crayons d'azotate d'argent mittigé*. Fr. Codex.) Pencils composed of nitrate of silver mixed with various proportions, from 10 to 75 per cent., of nitrate of potassium.

P.-wood. The wood of *Juniperis communis*.

Pendactylous. The same as *Pentadactylous*.

Pendin'ski sore. See *Pendjeh sore*.

Pendjeh sore. The same as *Delhi boil*.

Penduliflorous. (L. *pendulus*, hanging; *flos, floris*, a flower.) Having pendent flowers, from incurvation of the peduncles.

Pendulifol'ious. (L. *pendulus*; *folium*, a leaf.) Having pendent leaves.

Pen'dulous. (L. *pendulus*, hanging.) Hanging down from some support.

P. abd'omen. See *Abdomen, pendulous*.

P. bel'ly. The same as *P. abdomen*.

P. uterus. The anteverted uterus occurring in *P. belly*.

Pendulum pala'ti. The *Velum pendulum palati*.

P. move'ments. *Obstet.* Term for the to-and-fro or up-and-down movements sometimes necessary in delivery by forceps, or in extraction in a breech case.

Peneanous. (Πένυς, one who works for daily bread; hence, a poor man. F. *pénéen*.) Applied by Brongniart and Omalius to a group of soils, generally poor in metalliferous beds and in the débris of organised bodies.

Penetrating. (L. *penetrare*, to make one's way into.) Entering into from without.

P. medicine. Term used for a medicine absorbed through the skin.

P. wound. A wound entering one of the visceral cavities.

Penetra'tion. (L. *penetrare*, to make one's way into.) In Physiology, and in Forensic Medicine, entrance of the male organ within the labia majora of the female. In Optics, the power of an objective to give a definition of several planes of any object at the same time.

Pengha'war. A drug used formerly as a styptic, especially in Holland, obtained from several kinds of Javan tree-ferns.

P. djam'bi. The name for the hairy stem of *Cibotium*, the East Indian tree-fern; used as a hæmostatic.

Penial. The same as *Penile*.

Penicillar'ia spica'ta. Order *Gramineæ*. The grain of this plant and of *Sorghum vulgare* form a staple food among the negroes of Africa.

Penicillate. (L. *penicillum*, a painter's brush.) Applied both in Zoölogy and Botany to

a body presenting a mass of hairs in the form of a painter's brush.

Penicilli lie'nis. (Nom. plural of L. *penicillus*; *lien*, the spleen.) Term for the tufts into which the minute arteries of the spleen break up.

Penicilliform. (L. *penicillum*; *forma*, likeness.) Arranged in a brush or tuft.

Penicill'iger. (L. *penicillum*; *gero*, to bear.) Bearing a brush or tuft of hairs.

Penicill'ium. (F. *pinceau*.) Term for a tuft-like mass of vessels or fibres spreading out from one point.

Also, a Genus of saprophytic fungi, of the Class *Ascomycetes*. The branches of the mycelium are septate, and end in a row of conidia; rarely spores are formed in asci.

P. glau'cum. Blue mould. The commonest species of all the mould-fungi. Mr. Berkeley thinks that the yeast of beer, *Torula cerevisiæ*, is a modification of *P. glaucum* due to the medium in which it is developed.

Penicill'ous. The same as *Penicillate*.

Penicill'um. See *Penicillus*.

Penicill'us. (L. *penicillum* or *penicillus*, a painter's brush.) Applied to the arrangement of minute ramifications of the vena portæ in the lobules of the liver.

Also, a pessary.

Also, a tent or pledget.

Penic'ulus. (Dim. of L. *penis*.) A tent or pledget.

Pen'ides. (See *Penidius*.) Term for *Saccharum hordeatum*.

Penid'ius. (From L. *penis*, a tail; so named from the shape.) Old term for *Saccharum penidium*, vel *hordeatum*. Its mode of preparation is described by Schröderus.

Pen'ile. Pertaining to the penis.

P. cal'culus. See *Calculus, præputial*.

P. fis'tula. See *Fistula, penile*.

P. horns. See *Penis, horny excrescences of*.

P. por'tion of ure'thra. See under *Urethra*.

P. sheath. Term for the prepuce.

Pen'is. (L. *penis*, prob. from *pendeo*, to hang down.) The male organ of copulation. It is made up of two erectile bodies, the corpora cavernosa, placed side by side, and, between and below them, the corpus spongiosum, through the length of which passes the penile part of the urethra. It is covered by loose skin and connective tissue free from fat, and, at the distal end, the skin is reflected on itself, forming the *prepuce*, the reflected layer being attached round the corona glandis (see *Glans penis*).

P., amputation of. This operation is most commonly required for cancer. Very rarely it may be required for other tumours of the penis—cysts, nævi or fibromata—when these are large. It is usually performed with the knife; though the écraseur has occasionally been used. The removal should be performed near the root of the organ, so as to be well clear of the disease, and some efficient mode of compression should be employed, in order to restrain bleeding. Contraction of the urethral opening is obviated by slitting up with scissors the projecting corpus spongiosum and urethra of the stump left after amputation, spreading out the flaps thus formed, and tying them with catgut to the skin below and corpora cavernosa above.

P. bone. (L. *os penis*. G. *Penisknochen*.)

PENITIS—PENNYROYAL

An ossification occurring in the corpora cavernosa found in many of the mammalia.

P., cancer of. Almost invariably squamous-celled epithelioma, which usually grows from the sulcus behind the glans; it affects the body of the organ only by extension. It may occur either as a papillary growth, or as a flat tubercle. Congenital phimosis is believed to predispose to this disease. The inguinal glands are affected early.

P. cer'e' bri. Old name for the *Pineal gland*.

P., clubbed'. Term for a deformity of the penis consisting in a permanent deflection towards the scrotum. It has been remedied by the operation of removing a wedge-shaped piece with the base upwards, *i. e.* dorsally, from the corpora cavernosa.

P., cru'ra of. See under *Crura*.

P., crus of. See under *Crus*.

P., erec'tion of. This is due to overfilling of the blood-vessels, so that the volume of the penis is increased four or five times, and there are also increased blood-pressure, a higher temperature, pulsatile movement with increased hardness, and erection. The first factor is dilatation of the arteries, brought about either by local nervous or by cerebral excitation, and the act is completed by the contraction of the erector penis, deep transversus perinei and the ejaculator urinæ. The congestion of blood is not complete. The dilatation of the arteries is controlled by the *Nervi erigentes*, and the centre for erection, situated in the lumbar region of the cord, is further controlled by the vaso-motor centre in the medulla.

P., facti'tious. See *Fascinum*.

P. femin'eus. The *Clitoris*.

P., gan'grene of. True idiopathic gangrene is very rare. It has generally occurred in old or broken-down subjects, or in those who have had some local affection of the penis and have been attacked by pyæmia, or by some acute fever. It is probably, in some cases, secondary to embolism. When the glans only is affected the prognosis is less grave than when the body of the organ is attacked; death is very likely to occur by hæmorrhage in the latter class of cases.

Sloughing of the integuments to a variable extent is not uncommon as the result of inflammatory phimosis or syphilitic phagedæna in cachectic subjects.

P., her'pes of. See *Herpes preputialis* and *H. progenitalis*.

P., hor'ny excres'cences of. Horny growths have been observed, springing from the glans penis.

P. lipoder'mus. (Τὸ λίπος, fat; δέρμα, the skin.) *Paraphimosis*.

P., lymphat'ics of. The *superficial* set begin in the prepuce and beneath the skin of the glans and the urethral mucous membrane, and form three vessels, one on the dorsum and one on either lateral aspect of the penis, which unite and again subdivide, and send branches to the oblique inguinal glands of the corresponding side. The *deep* set pass under the pubic arch with the pudic blood-vessels to the lymphatic glands on the internal iliac artery.

P., malforma'tions of. The penis has been seen adherent to the scrotum.

Also, see *Epispadias*, *Hypospadias*, and *Phimosis*.

P. mulle'b'ris. The *Clitoris*.

P. succeda'neus. (L. *succedaneus*, supplying the place of.) See *Fascinum*.

P., suspen'sory lig'ament of. See *Ligamentum suspensorium penis*.

P., tu'mours of. Fatty, nævoid, sebaceous and fibrous tumours have all been observed.

Peni'tis. (L. *penis*.) Inflammation of the penis.

Penja'var yam'bi. The hairs of several of the *Cyatheas* (*Filices*) from the Moluccas, used under the above name as hæmostatics. See *Penghawar djambi*.

Penj'deh ul'cer. See *Pendjeh ulcer*.

Penna. Lat. for a pen, feather, or wing.

Penna'ceous. (L. *penna*, a feather. F. *pennacé*; G. *gefiedert*.) In Botany, marked with longitudinal stains looking like feathers.

Pen'nage. (*Penna*.) The same as *Plumage*.

Pennar'ious. (*Penna*.) In Zoölogy, having folds displayed like the barbs of a feather.

Pen'rate. See *Pinnate*.

Pennat'icised. (L. *pennatus*, feathered; *cædo*, to cut.) Applied to leaves that are cut into small teeth or notches. (Mirbel.)

Pennati'ferous. (L. *penna*; *fero*, to bear.) Bearing feathers or feather-like appendages.

Pennat'ifid. (L. *pennatus*, winged or feathered; *findo*, to cleave.) Applied to leaves and bracts with pennated nervures, and divided into lobes for nearly half their length; also applied to spines which have *aculei* disposed on the two opposite sides; also, to cotyledons that are divided into many lobes.

Pennatifo'lious. Having *pennatifid* leaves.

Pennatistip'ulate. Having *pennatifid* stipules.

Pennés'elec'tro-chem'ical bath. Considerably used in France. The proportions for one bath are, sodium carbonate 300 grammes, sodium phosphate 8, sodium sulphate 5, sulphate of iron 3 grammes, and 1 gramme of each of the following, potassium bromate, calcium carbonate, alum, oil of rosemary, oil of lavender, and oil of thyme. (Dorvault.)

P.'s antiseptic flu'id. A mixture of 8 parts of carbolic acid with 2 of hydrobromic acid. (Dorvault.)

Pennicor'rate. (L. *penna*, a feather; *cornatus*, from *cornu*, a horn.) Having pennate or plumose antennæ.

Penni'ferous. (L. *penna*; *fero*.) Covered with feathers; an epithet of Blainville's for birds.

Pen'niform. (L. *penna*; *forma*.) Feather-shaped. Applied to such muscles as have fibres arranged diagonally on each side of the tendon; *e. g.* the rectus femoris.

Pen'nipede. (L. *penna*; *pes*, a foot.) Term applied to an insect whose legs are ciliated and penniform.

Pennsylva'nia, min'er'al wa'ters of. See *Bedford*, *Carlisle*, *Cresson*, *Gellitsburg*, *Minnequa*, and *York*.

P. su'mach. See *Rhus glabra*.

Pen'nule. (Dim. of *penna*.) A small feather with a short stem and with barbs reaching almost to the base.

Pennycress. See *Thlaspi*.

Pennyroy'al. (F. *pouliot*. G. *Poleimunze*.) The *Mentha pulegium*.

PENNYWORT—PENTASTOMA

P., American. See *Hedeoma pulegioides*.
P., American, oil of. See *Oleum hedeome*.

P., hart's. The *Mentha cervina*.

Pennywort. The *Cotyledon umbilicus*.

P., Asiatic. The *Hydrocotyle asiatica*.

P., marsh. The *Hydrocotyle vulgaris*.

P., wall. The *Pennywort*.

Peñon de los Baños. See *Mexico*, mineral springs of.

Pen-palsy. See *Pen palsy*.

Pensacola. A town in Florida. The climate is fairly equable and mild, and is less liable to north-easterly storms than is St. Augustine. It is recommended for a certain class of phthical cases.

Pen'sile. (L. *pensilis*, hanging down.) Hanging down.

Pensilia. (Nom. plural neuter of *pensilis*.) The external male genital organs.

Pensy. See *Pansy*.

Penta- (Πεντάς or πέντε, five.) A prefix used in Chemistry to denote the presence in a compound of five atoms of the element named.

Pentacam'arous. (Πέντας, five; καμάρα, anything with an arched covering.) Applied by Mirbel to *etairia* formed each of five *camaræ*.

Pentacan'thous. (Πέντε, five; ἀκανθα, a prickly.) Applied to a fish which has five spinous rays to one of its fins, either the dorsal or anal.

Pentacaps'ular. Bot. Having five *Capsules*.

Pentacarpell'ary. Bot. Made up of five *Carpels*.

Pentacar'pous. (Πέντας, five; καρπός, fruit. G. *fünffruchtbar*.) Epithet applied to a fruit composed of five carpels.

Pentachai'nium. (Πέντε, five; ἀ, priv.; χάλις, to open wide.) Term for a simple fruit formed by an ovary adherent to the calyx, separating, when mature, into five lobes.

Pentachel'ate. (Πέντας, five; χηλή, a hoof or claw.) Applied by Klein to a Family of the *Mammifera*, comprehending those with five hoofs.

Pentacho'tomous. (Πένταχα or πενταχῆ, in five divisions; τέμνω, to cut.) De Candolle's term for cymes in which each terminal flower has under it five bractesæ, and gives origin to five branches.

Pentacoc'cous. (Πεντάς or πέντε, five; κόκκος, a kernel.) Composed of five *Cocca*. See *Coccum*.

Pentacontahed'ric. Belonging to a *Pentacontahedrum*.

Pentacontahed'rum. (Πεντήκοντα, fifty; ἑδρα, a base.) A crystal the surface of which is made up of fifty facets.

Pentacy'elic. (Πεντάς; κύκλος, a circle.) In Botany, having five turns, or whorls.

Pentadacty'lon. (Πεντάς; δάκτυλος, a finger.) Name for the *Potentilla reptans*, or cinquefoil; also, for the *Ricinus communis*, or castor-oil plant, the leaf of which is like a hand.

Pentadac'tyle. (*Pentadactylon*). In *Comp. Anat.* 1. Having five free rays on each pectoral fin.

2. Having five divisions in each wing.

3. Having five digits to the manus, or to both the manus and pes.

Bot. Applied to leaves that have five divisions.

Pentadel'phous. (Πεντάς; ἀδελφός, a brother.) Applied to stamens, when the flower presents five androphora, each charged with many anthers.

Pentadyn'amous. (Πεντάς; δύναμις, power.) Epithet applied to a plant that has ten stamens, one five of which are longer than the other five.

Pentæsthesi'on. (Πέντε, five; αἰσθάνομαι, to perceive by the senses. G. *Fünfsinnenwerk*.) The title of a book on the five senses, published by Jul. Casserius in 1609.

Pentagyn'ia. (Πεντάς; γύνη, a woman, the symbol of the female organ in flowers.) A Class of plants in the Linnæan system the flowers of which are characterised by having five styles.

Pentagyn'ic. See *Pentagynious*.

Pentagyn'ious. (Πεντάς; γύνη, a woman, the symbol of the *Pistil*, or female organ of flowers.) Having five pistils.

Pental. C₅H₁₀. Trimethylethylene. Prepared by treating tertiary amyl alcohol with oxalic acid. It has been used as an anæsthetic, but is not a safe drug. Narcosis comes on quickly, and soon passes off. Pental boils at 38° C. Dose, 5 to 10 grains.

Pentalep'idous. (Πεντάς; λεπís, a scale.) In Zoölogy, applied to a part that bears five scales.

Penta'merous. (Πεντάς; μέρος, a part.) Bot., Zool., and Entom. Composed of five similar parts.

Pentamethylenedia'mine. Cadaverin.

Penta'myron. (Πεντάς; μύρον, a sweet oil, or ointment. F. *pentamuron*; G. *Fünfstalbe*.) Old name for an ointment described by Aëtius, containing five ingredients, namely, storax, opobalsamum, wax, gum-mastic, and unguentum nardinum.

Pentan'dria. (Πέντε, five; ἀνήρ, ἀνδρός, a man, the symbol of the stamen or male organ of flowers.) The 5th Class of plants in the Linnæan system, characterised by the flower having five stamens.

Pentan'drous. Having five stamens.

Pentane. (C₅H₁₂.) The fifth member of the *Paraffin*, or C_nH_{2n+2}, series. See also *Amyl hydride*, which is the same substance.

Pentaneu'ron. (Πεντάς; νεύρον, originally a sinew, later, a nerve.) The five-nerved; a name applied to the *Plantago lanceolata*.

Pentanthe'rous. (Πέντε; anther, from ἀνθηρός, flowery, blooming.) Applied to a plant, of whose stamens five only bear anthers.

Pentan'thous. (Πέντε; ἄνθος, a flower.) Applied to a plant each of whose peduncles bears five flowers.

Pentapharmacon. (Πεντάς; φάρμακον, a drug.) Anciently applied to any medicine consisting of five ingredients.

Pentaphyl'um. (Πεντάς; φύλλον, a leaf.) A name for the *Potentilla reptans*, or common cinquefoil.

Pentapleu'rum. (Πεντάς; πλευρόν, a rib.) The five-ribbed; a name for the *Plantago lanceolata*.

Pentar'rheneous. (Πεντάς; ἄρρην, ἄρρενος, male.) The same as *Pentandrous*.

Pentasper'mous. (Πεντάς; σπέρμα, a seed.) Term used for a fruit, or one compartment of a fruit, which contains five seeds.

Penta'stoma. (Πεντάστομος, with five

PENTASTOMIDÆ—PEPPER

mouths or openings.) The characteristic genus of the *Pentastomidæ*.

P. constrictum. (L. *constrictus*, contracted or constricted.) This is found in the larval form in the solid abdominal and thoracic organs of the human subject. It occurs in some parts of Europe, Egypt, and the West Coast of Africa. The larva is about five to eight lines in length, and one line in diameter. There are twenty to thirty irregular spiral constrictions at regular intervals. The head is flattened and square, and is marked on its ventral surface by several spots, which are in reality small claws. The caudal extremity is blunt and rounded. This larva tends to cause death from pneumonia and acute peritonitis.

P. denticulatum. The larva, or sexually immature form of *Pentastoma tænioides* (Leuckart), found in the liver and small intestines. It is only about one-eighth or one-twelfth the size of *P. constrictum*. It has an armature of integumentary spines. As it occurs endemically in Germany in the human liver, Frerichs considers it as harmless and devoid of clinical importance.

P. tænioides. This parasite is 3 or 4 inches long; it has the general structure of the *Pentastomidæ*, and it infests man and various animals. It has been found encysted in the human lungs and liver.

Pentastomidæ. The same as *Lingualulidæ*.

Penta'stomous. Having five mouths or openings.

Pentastomum denticulatum. See *Pentastoma denticulatum*.

Pentasulphide. (Πεντάς; sulphide.) A sulphide containing five atoms of sulphur.

Pentateuch, surgical. (Πεντά-τευχος, consisting of five books in one volume.) Term, by analogy, for the division into five classes, of external diseases; namely, wounds, tumours, ulcers, fractures, and dislocations.

Pentatheton. Old name for a certain plaster, mentioned by Aëtius, which was used for bruises and excoriations of the skin.

Pentathionate. (Πεντάς, five; θειον, sulphur.) Any salt of *Pentathionic acid*.

Pentathionic acid. Old term for *Dithionic acid*.

Pentatoma. (Πεντάς; τομός, cutting.) The typical genus of the *Pentastomidæ*.

Pentatomidæ. A Family of the *Heteroptera*, of very wide geographical distribution. Most of its members are plant-feeding bugs.

Pentatomum. (Πεντάς, five; τομή, a cutting.) A name for the *Potentilla reptans* or cinquefoil, because its leaves are cut into five segments.

Pentene. See *Amylene*.

Penthorum. (Πέντε; ὅρος, a limit.) A Genus of the *Crassulacæ*.

P. sedoides. (*Sedum*; Gr. εἶδος, likeness.) The Virginia stonecrop. It is astringent.

Pentico'sa. See *Panticosa*.

Pentorobus. (Πέντε, five; ὀροβος, the bitter vetch; because it has seeds like that plant.) A name, found in Dioscorides and Pliny, for the *Pæonia officinalis*.

Pen-tsa'o. A spirituous extract of unripe oranges, prepared originally by Tiedemann.

Pentyl. The same as *Amyl*.

P. acetate. See *Amyl acetate*.

P. alcohol. See *Alcohol, amylic*.

P. hydride. See *Amyl hydride*.

Pentylene. The same as *Pentyl hydride*.

Penula. (L. *panula*, or *penula*, a kind of cloak.) The *Rumen*, or paunch.

Penumbra. (L. *pene*, or *pæne*, almost; *umbra*, shade.) *Astron.* A faint shadow, or the extreme edge of a perfect shadow, as in an eclipse. *Nat. Philos.* A false shadow surrounding the true; a gradual transition from light to darkness.

Penzance. Cornwall. Considered a suitable winter residence for phthisical patients. The average temperature is 5.6° higher than that of London in winter, and 2° lower in summer.

Peony. See *Pæonia*.

Peos. (Πίος.) The *Penis*.

Peotomy. (Πίος; τομή, a cutting.) Amputation of the penis.

Pe'pa de cua'jo. Spanish name, used in Brazil and Venezuela, for the *Myristica punctata*.

Pepan'sis. (Πεπαίνω, to make ripe.) Old term for maturation, or ripening; applied to the "humours" of the body, and also to diseases.

Pepantic. See *Pepastic*.

Pepas'mus. (Πεπασμός.) Maturation, ripening; used of diseases.

Also, suppuration.

Pepastic. (Πεπαίνω, to make ripe.) Concoccting, or maturing. Formerly applied to medicines believed to promote *Pepansis*.

Pepei'rus. (Πέπειρος, ripe.) Ripe or matured. Epithet for a disease at the crisis, πέπειρος νόσος.

Peperine. See *Piperine*.

Pepita nux. (F. *fève de Sainte-Ignace*.) St. Ignatius' bean, the seed of *Strychnos Ignatii*.

Pep'lis. (Πεπλῖς.) The *Euphorbia pepilis*. Also, the same as *Peplus*.

Peplus. (Πέπλος, woven cloth.) The *Euphorbia pepilis* or *peplus*. Also, the peritoneum.

Pep'o. (Πέπων, a kind of melon.) The common pumpkin, *Cucurbita pepo*. Also, term for a fleshy, succulent pericarp, having its seeds inserted into the sides of the fruit. Also, the seeds of the *Cucurbita pepo* (U.S. Ph.).

P. lagenarius. The *Lagenaria vulgaris*.

P. vulgar'is. The *Cucurbita pepo*.

Pepon'ida. The same as *Pepo*.

Peponi'feræ. (*Pepo*; L. *fero*, to bear.) Agardh's name for a Class of Phanerogams all of which have for fruit a *Pepo*.

Peponium. The same as *Pepo*.

Peporesin. A hard substance discovered by Haeckel in the husk of the seed of *Cucurbita pepo*; it is a vermicide. (Villaret.)

Pepper. (L. *piper*.) The berries of *Piper album* and *P. nigrum*, powdered. Used as a condiment and carminative.

P., adulterations of. Of these, a great variety have been enumerated by various authors, namely: linseed-meal, rice, mustard, sago, wheat-flour, woody fibre, chillies, potato, rapeseed, spices, capsicum, maniguette, rye, chicory, powdered laurel-leaves, the stones of olives, sea-salt, bone-dust, and different mineral adulterations.

P., African. The *Capsicum annum*.

P.-agar'ic. See *Agaricus piperatus*.

P., black. The *Piper nigrum*.

PEPPERIDGE—PEPTOGENIC

P., bush, sweet. The *Clethra alnifolia*.
P., Cayenne'. The powdered berries of *Capsicum annuum*.

P., chil'l. The *Capsicum annuum*.

P., cu'bed. The *Piper cubeba*.

P., decor'ticated, Fulton's. See *Piper nigrum*.

P., dulcē. Common name for *Laurencia pinnatifida*.

P., false. The *Schinus molle*.

P., grass. The *Lepidium iberis*.

P., Guin'ea. The same as *P., Cayenne*.

P., Jama'ca. The *Eugenia pimenta*.

P., Japan'. The berries of *Fagara piperita*.

P., long. The *Piper longum*.

P., Malaguet'ta. Name applied to the seeds of several of the *Zingiberaceæ*, and also to the *Pimento*; generally used as synonymous with *Grains of Paradise*.

P., melegue'ta. The same as *P., Malaguet'ta*.

P., mush'room. The same as *P., meleguet'ta*.

P., pod. The same as *P., Cayenne*.

P., poor man's. The *Polygonum hydro-piper*.

P., root. A name for the root of *Anthemis pyrethrum*.

P., wa'ter. The same as *P., poor man's*.

P., wood. Term arising from the name used by the French workmen in Brazil for the wood of *Licaria guyanensis*, on account of its pungent dust.

Pepperidge-bush. The *Berberis vulgaris*.

Peppermint. (*F. menthe poivrée*; *I. menta piperita*; *G. Pfeffermünze*.) The *Mentha piperita*.

P. cam'phor. See *Menthol*.

P. drops. (*Rotula menthæ piperitæ*, *P. G.* *F. pastilles de menthe à la goutte*; *I. pastiglie di menta*.) See *Rotula menthæ piperitæ*, *P. G.*

P. test. Used for detecting leaks in soil-pipes. Oil of peppermint is poured down the pipe, followed by some hot water. The place of leakage is recognised by the characteristic odour of the peppermint.

P. tree. The *Eucalyptus amygdalina*.

P., wa'ter. See *Aqua menthæ piperitæ*.

Pepperpod. The *Capsicum annuum*.

P., poor man's. The *Polygonum hydro-piper*.

P., tailed'. The *Piper cubeba*.

P., turnip. The *Arum triphyllum*.

P., wall. See *Sedum*.

P., wa'ter. The *Polygonum hydropiper*.

P., wa'ter, Amer'ican. The *Polygonum punctatum*.

P., white. The *Piper album*.

Pepperwort. The *Lepidium iberis*.

Peptic. See *Peptic*.

Pepsin. (Πέπτω, later pres. for πέσσω, to cook, digest.) A constituent of the gastric juice. It is the characteristic enzyme or hydrolytic ferment that dissolves proteids in an acid medium, and is a colloid, albuminoid substance. It is formed in the chief cells of the fundus-glands of the stomach, not as pepsin itself, but as a "mother-substance," pepsinogen-substance, or *pro-pepsin*. This *pro-pepsin* has no action on proteids; but, treated with hydrochloric acid or common salt, it is changed into pepsin. The

pepsin and dilute hydrochloric acid of the gastric juice, at the temperature of the body, transform proteids into soluble and diffusible *peptone*. *Pepsin* is official in the B. Ph.

P., ac'id glyc'erine of. A mixture composed of pure pepsin 1 ounce, hydrochloric acid 2 drachms, glycerine 8 ounces, and water 12 ounces.

P. and bis'muth tab'lets. Each contains 3 grains of bismuth subnitrate added to a *Pepsin tablet*. Dose, 1 or 2 tablets. (Ex. Ph.)

P., Bou'dault's. (*F. pepsine amylicée*.) A French preparation of pepsin, in which it is mixed with starch.

P. elix'ir. See *Vinum pepsinæ*.

P. es'sence. (Liebreich's.) The curdling ferment in dilute glycerine solution; it is weakly proteolytic. Dose, 1 to 2 drachms in water, after meals. (Ex. Ph.)

Also, a name for *Vinum pepsinæ*.

P., glyc'erite of. *Glyceritum pepsinæ*. Pepsin 640 grains, hydrochloric acid 80 minims, glycerine 8 fluid ounces, purified tale 120 grains, water up to 16 fluid ounces. Each fluid drachm of the mixture is equivalent to 5 grains of pepsin. (Cooley's *Cyclopædia of Practical Receipts*, 1892.)

P., li'quid. Made in two different ways: (1) by adding water, dilute hydrochloric acid, and glycerine to *pepsina saccharata*; (2) by macerating the mucous membrane of a pig's stomach in water, dilute hydrochloric acid, and glycerine.

P., medi'cinal. (*F. pepsine medicinale*.) *Pepsin, Boudault's*.

P., sac'charated. See *Pepsina saccharata*.

P. tab'lets. Each contains 3 grains of pepsin made up with chocolate. (Ex. Ph.)

P. wine. See *Vinum pepsinæ*.

Pepsi'na. Pepsin.

P. amyla'cea. (*F. pepsine acide amylicée*, ou *poudre nutritive*.) Pepsin, B. Ph., with the addition of starch, the mixture being slightly acidulated with hydrochloric acid. Dose, 5 to 15 grains. (Ex. Ph.)

P. por'ci. (*L. porcus*, a hog.) Pepsin prepared from the stomach of the pig. See *Pepsin*.

P. sacchara'ta. Sugar of milk is added to the mucous membrane of the calf's or pig's stomach to help in its desiccation. Used preferably to ordinary pepsin in the United States. Dose, 5 to 15 grains. (Ex. Ph.)

Pepsin'ogen. (*Pepsin*; Gr. γένος, descent.) The zymogen which is continually being formed by the protoplasm of the gastric glands, and is converted, during secretion, into pepsin, and discharged from the gland-cells.

Pepsin'um. Pepsin.

P. sacchara'tum. See *Pepsina, saccharata*.

Pep'sis. (Πέπτω, to cook, digest.) Digestion.

Peptic. (Πέπτω. *F. peptique*; *I. peptico*; *G. peptisch*.) Concerned in, or promoting, digestion.

P. cells. See *Cells, peptic*.

P. glands. See *Glands, peptic*.

P. persua'der. Name for *Pilula aloes et kinæ kinæ*.

Peptogen'ic. (Πέπτω; γένεσις, origin.) Pepsin-producing. Term used for those substances which, introduced into the stomach,

stimulate the secretion of the pepsin of the gastric juice.

Pepton. Ger. for *Peptone*. *Albumen-pepton* is peptone derived from albumen.

Peptonate. (*Peptone*.) An organic metallic salt which is obtained by the action of a peptone on a metallic salt of an inorganic acid, and in which the inorganic acid-radical is replaced by the peptone-radical.

Peptonated. Transformed into peptone.

P. iron, solution of. The same as *Peptonized iron, solution of*.

Peptone. See *Peptones*.

Also, a preparation of peptones. A white or light brown powder, soluble in water, made from the proteids and albuminoids of meat, either by acidification followed by the action of heat under pressure, or by artificially digesting with *trypsin* or *pepsin*, the resulting peptone being afterwards freed from saline substances. It is used as a test for bile constituents in urine, and is also added to jelly for artificial germ-cultivation. (Ex. Ph.)

P., salt of, Bou'dault's. Mix 400 grammes of sodium chloride with water to form a thick paste, add 200 of *pepsina porci*, and dry at 40° C. Then mix another 400 of chloride of sodium with 5 of citric acid and add to the first mixture. Sift the still warm mixture, and mix the powder with 25 drops of essence of celery (*G. Sellerie-essenz*).

P. test for bile. Dissolve powdered peptone 30 grains, salicylic acid 4 grains, acetic acid 30 minims, in 8 ounces of distilled water; filter the solution until it becomes clear. Urine containing bile salts added to this solution gives an opalescence, diminishing on boiling, and completely disappearing on the addition of citric or acetic acid. For quantitative estimation, the urine is added to the extent of one-third the volume of the reagent, and the amount of opalescence gives, by comparison, the amount of bile salts. (Ex. Ph.)

P. test papers. Used for testing urine for albumen. Filter paper impregnated with peptone, potassio-mercuric iodide, potassium ferrocyanide and sodium tungstate. (Ex. Ph.)

Peptones. The soluble, diffusible bodies into which proteids are transformed in the process of gastric and pancreatic digestion. They are white, amorphous substances, readily soluble in water, forming a faintly acid solution insoluble in alcohol. With alkaline and earthy bases they form neutral compounds. Their faintly acid solutions are not coagulable by boiling, nor are they precipitated by alcohol, the mineral acids, sulphate of sodium, or neutral acetate of lead; but they are precipitated by mercuric chloride and by tannic acid. They are lævo-rotatory, and they afford the xanthoproteic reaction and give a precipitate with Millon's reagent. See also *Dyspeptone* and *Para-peptone*.

Peptonized. Transformed into peptones; usually used of artificial digestion.

P. beef. (Ex. Ph.) Prepared by artificial digestion of beef with acidified fresh gastric juice, and concentration of the product. It has the odour of beef-extract. It is too bitter to be readily taken by the mouth, but is useful as a nutritive enema.

P. beef jelly. (Ex. Ph.) A beef extract containing a large proportion of the fibrin partly digested or changed into peptone by *trypsin*. Dose, 1 teaspoonful at a time.

P. beef suppos'itories. (Ex. Ph.) Each contains about 50 grains of *P. beef*, mixed with isinglass. In this way it is possible to administer as much as 2 ounces of proteids a day.

P. bis'muth. Bismuthum peptonatum, Ex. Ph. A dry, brown powder containing 3.5 per cent. of soluble oxide of bismuth. Dose, 80 grains.

P. foods. These are given in cases where the digestion is feeble. *Tryptic* is preferable to *peptic* digestion, because the latter destroys the flavour of the food, and forms bitter bye-products. See *P. beef*, &c.

P. iron, solution of. Liquor ferri peptonati. Dried egg albumen 10 grammes, pepsin .5, solution of dialysed iron 90, syrup 30, brandy 100, distilled water to 1000 grammes. Dose, 1 to 4 drachms. Mode of preparation, see *Extra Pharmacopœia*, 1891.

Peptonizing powders. Powders containing dry pancreatic extract, with a proper amount of carbonate of soda. They are prepared and kept ready for use by various chemists.

Peptonoids of beef. Finely minced lean beef 8 ounces, pepsin 60 grains. Add to the mixture 2 drachms of dilute hydrochloric acid and 1 pint of water. Digest this for three hours at 130° F., neutralize with sodium bicarbonate, and strain. (Ex. Ph.)

Peptonum carneum cacaoti-num. In a solution of 250 grammes of peptone, dissolve, with a gentle heat, 180 of white sugar, and add to the solution 100 to 125 of powdered cocoa, free from oil. Flavour with vanilla or essence of orange. On cooling, the mass solidifies to the consistence of a firm paste. (H. Sanders.) It is dissolved, as required, in hot water or milk, and some chocolate is added.

Peptonuria. (*Peptone*; Gr. οὖρον, urine.) The presence of *peptone* in the urine. Peptone is present in some albuminous urines, and in some non-albuminous urines. It is present in cases where there is suppuration, when this is passing off; in these cases it comes from the disintegrating pus-cells. Peptonuria occurs also when many leucocytes become broken up in the blood, being common after parturition. It has no clinical significance.

Pepto'sin. A concentrated preparation of pepsin, used in America for preparing pepsin-syrup, pepsin-wine, &c.

Peptotoxin. (Πεπτός, digested; τό τοξικόν [τοξικός, belonging to the bow], poison for smearing arrows with.) A poisonous alkaloid formed from peptones during digestion, and becoming decomposed later on, as putrefaction takes place.

Per-. (*L. per*, through, also, thoroughly, completely.) In Chemistry, a prefix denoting an oxygenated compound containing the greatest possible number of atoms of oxygen that can remain in it in a state of combination, without the addition of some other element or compound-radical. Thus, *per-oxides*, *per-salts*, *per-acids*.

P. anum. By the anus.

P. infortu'nium. (*L. infortunium*, misfortune.) In Medical Jurisprudence, by misadventure; applied to excusable homicide, or death as the consequence of a lawful act done without any intention to hurt.

P. rec'tum. By the rectum.

P. saltum. (*L. saltus*, a jump.) By a jump. Term applied to the intermittent flow of the blood from a cut artery.

PERA—PERCUSSION

P. ure'thram. By the urethra.

P. vaginam. By the vagina.

P. vi'as natura'les. By the natural passages or channels.

Pe'ra. (Πήρα, a leathern pouch, especially for victuals.) Term for the stomach.

Peraceph'alus. (L. *per*, thoroughly, completely; Gr. ἀκέφαλος, without a head.) Term for a class of monsters which are not only *acephalous*, but in which there is also a complete absence of the upper extremities, the thorax also being very imperfectly developed, or even absent.

Peracute'. (L. *per*, thoroughly; *acutus*, acute.) Extremely acute.

Perarticulation. (L. *per*, thoroughly; *articulus*, a joint.) The same as *Diarthrosis*.

Peratodyn'ia. (Pera; ὀδύνη, pain.) Pain in the stomach, cardialgia.

Perbromate. A salt of *Perbromic acid*.

Perbromic acid. (L. *per*; *bromine*.) BrO_3OH . An oily, colourless liquid. It is formed by the action of bromine on perchloric acid.

Perbromide. That bromide of a polyatomic element or compound radical that contains the largest possible number of bromine atoms in combination.

Per'ca. (Πέρκη, the perch. F. *perche*; G. *Barsch*.) A Genus of the Order *Acanthopterygii*. The perch.

P. fluviat'ilis. A species of *Perca* common in European rivers; its flesh is edible, and has a pleasant flavour.

Percarburet. (L. *per*, thoroughly; *carburet*, which is the same as *carbide*.) An old term for a combination of carbon with another element, the compound containing the greatest possible number of molecules of carbon (e. g. light carburetted hydrogen is *percarburet* of hydrogen. See under *Hydrogen*).

Percarburetted. Epithet applied to an element in combination with carbon in the condition of a *Percarburet*.

Per'cepier. (F. *percer*, to pierce; *pierre*, a stone.) Old name for the *Alchemilla arvensis*, given on account of a supposed solvent action on calculus, or stone.

Per'cept. (L. *perceptus*.) In *Psychol.*, the thing perceived.

Percept'a. (L. nom. plural neuter, signifying doctrines, or principles.) A general term for *Sensations* or *Perceptions*.

Perceptible. Capable of being perceived; that is, of giving rise to *Perceptions*.

Perceptibility. (L. *perceptio*, a receiving; *habilitas*, aptitude.) Power of receiving *Perceptions*; also, sometimes used for the state of being *Perceptible*.

Perception. (L. *percipio*, to feel, perceive. G. *Wahrnehmung*.) The impression received by the cerebral cortex, with the consequent alteration in consciousness, resulting from stimulation of an afferent nerve-ending, or an organ of special sense. The mental operation of gaining knowledge from the action of any object upon the mind.

Also, used to mean simply the referring of a sensation to the object-world; that is, the giving it an objective significance. Originally, merely thought and sense in general.

Perceptive faculties. (L. *percipio*; *facultas*, capability; from *facilis*, easy.) Those

faculties that take cognizance of the existence and physical qualities of external objects.

Perceptivity. (*Perceptive*.) The power of receiving *Perceptions*; that is, of perceiving.

Perch. See *Perca*.

Per'cha lamella'ta, P. G. (*Percha*, the Malayan name for the tree *Isonandra gutta*; *lamella*, dim. of L. *lamina*, a plate of metal.) Gutta-percha formed into thin, flat, transparent sheets; also called gutta-percha paper. (G. *Gutta-perchapapier*.)

Per'chepler. Another spelling of *Percepier*.

Perchi'dæ. See *Percidæ*.

Perchlo'rate. (L. *per*, signifying completely; *chlorate*.) A salt of *Perchloric acid*.

Perchloure'thane. Chloroform, or Carbon tetrachloride.

Perchlo'ric a'cid. HClO_4 . Name given to an acid discovered by Count Stadion, in 1816, and obtained by distilling perchlorate of potassium with an equal weight of sulphuric acid diluted with a fourth part of water. Also called *Oxychloric acid*. It is formed by the decomposition of *Chloric acid* on exposure to heat or light.

Perchlo'ride. That chloride of a polyatomic base which contains in combination the greatest possible number of chlorine atoms.

P. of for'myl. A name for *Chloroform*. See *Formyl*.

Perchlo'ridum. L. form of the word *Perchloride*.

Perchlorme'thane. See *Carbon tetrachloride*.

Perchlo'ruet. Old name for *Perchloride*.

Perci'dæ. (L. *perca*, a perch.) A Family of the *Acanthopterygii*, having the *Perca* for their type.

Percip'iolum. (L. *percipio*, to perceive, comprehend.) Paracelsian term for an approved remedy.

Percola'tion. (L. *percolare*, to strain through.) The process, used especially in the preparation of the official tinctures of the B. Ph., of placing the substance, the soluble active principles of which it is desired to extract, in a powdered state in a *percolator*, and pouring over it successive quantities of menstruum, until all the soluble matters are extracted, and are present in solution in the various portions of the menstruum.

Per'colator. (L. *percolare*.) A conical vessel used for percolation.

Percuss'. To perform *Percussion*.

Percus'sion. (L. *percutio*, to strike.) The striking of one body sharply against another. Percussion has been used in Surgery in the treatment of ununited fracture of bone. See *P. in ununited fracture*.

In *Medicine*, the method of striking the surface of the body in order to produce a sound that shall indicate the condition of the subjacent organs. Medical percussion was known to Hippocrates, but was only used in abdominal diseases. It was not until the time of Auenbrugger that its use was suggested for diseases of the chest.

In *Therapeutics*, striking or tapping with the hand or with an instrument, as a part of *massage*.

PERCUTEUR—PERFORATED

P., auscul'tatory. See *Acouophonia*.
P., deep. Forceful percussion, used to throw into vibration the deeper layers of the part percussed.

P., direct'. The same as *P., immediate*.

P. ham'mer. See under *Plessor*.

P., imme'diate. This is performed by the fingers striking directly upon the surface to be percussed.

P. in un'united frac'ture. H. O. Thomas introduced percussion of the ends of the bones, by means of a copper mallet, for un-united fracture, the skin being protected over the fracture by a piece of felt. It is done under an anæsthetic, and may be continued for ten minutes. The limb is put up, as after a recent fracture, for four or six weeks.

P., me'diate. In this method, the fingers strike a plessor, placed flat upon the surface to be percussed; the plessor being either an instrument made for the purpose, generally of vulcanite, or a finger of the other hand placed in accurate approximation to the surface.

P. nois'es. Percussion sounds devoid of tone.

P. note. A percussion sound possessing tone, characterised by a certain intensity, duration, and pitch.

P. resis'tance. The sense of resistance perceptible by the percussing fingers. It is inversely proportional to the compressibility of the part percussed.

P. res'onance. The resonance produced by percussion of the fairly tense walls of an air-containing cavity. The term is used as synonymous with *P. tone*.

P. sounds. Sounds produced by percussion. In all such sounds are recognised loudness or intensity, pitch, and duration, and in some percussion sounds tone is also to be recognised.

P., super'ficial. Light or gentle percussion, used to throw into vibration only the superficial layers of the part percussed.

P. thrill. The thrill generated by deep percussion of the front of the chest, in cases in which the chest-walls are yielding. It is an invariable concomitant of the "cracked-pot sound."

P. tone. A tone, or musical sound, generated by percussion. All percussion tones are produced by resonance; hence, in percussion, the two words tone and resonance are synonymous.

P. tone, os'teal. See *Resonance, osteal*.

P.-wave. See under *Pulse*.

Per'cuteur. See *Heurteloup's percuteur*.

Perde'sis. (Πέρδσις (Hipp.); from πέρδωμαι, to break wind.) A breaking wind.

Perde'tum. Old name for the root of *Sium sisarum*.

Perdicar'ia. The same as *Perdicium*.

Perdi'ceæ. Applied by D. Don to a Tribe of the *Labiata*, having the *Perdicium* for their type.

Perdi'cium. (Πέρδιξ, a partridge; so named, because partridges were said to feed upon it.) Old name for the *Parietaria officinalis*.

Perdi'tio. (L. *perdo*, to lose, or cast away.) Old term for *Abortion*.

Per'dix. (Πέρδιξ.) See *Partridge*.

P. ciner'ea. The grey, or common partridge. This bird is found pretty generally over England and Scotland.

P. ru'bra. The red partridge. Found in some parts of England, also in various parts of Asia, Africa, and Southern Europe. It is accused, in England, of driving off the common partridge, which, it is feared, may in time become extirpated by it.

Perdo'nium. Old term for wine medicated with herbs. (Paracelsus.)

Perei'ra, Dr. Jon'athan. An eminent English pharmacologist, born 1804, died 1853.

Perei'ra. (After Dr. Pereira.) The *Geissospermum laeve*.

P. med'ica. The *Coscinium fenestratum*.

Perei'ria. The same as *Pereira medica*.

Perei'rin. A bitter alkaloid obtained, together with *geissospermin*, from the *Pao Pereiro*. It is a febrifuge.

Perei'ro. A Brazilian name for several species of native trees, whose bark has a febrifuge action. See *Pao Pereiro*.

Perem'bryo. (L. *per*; *embryo*. F. *perembryon*.) Link's name for the portion of the embryo in *Monocotyledons* which contains in its interior the radicles and plumule, not apparent externally.

Peren'chyma. (Περί, around; ἔγχυμα, that which is poured in.) Hagel's term for the cellular tissue of mature plants.

Peren'nial. (L. *perennis*, everlasting. F. *perpétuel*; G. *beständig*.) Lasting through years; generally applied to those plants the roots of which produce annually herbaceous stems which die down to the neck, or life-knot, each season.

Perennibranchia'ta. (L. *perennis*, perpetual; *branchia*, the gills.) A Group of *Amphibia* whose branchiæ persist throughout life.

Perete'rión. (Περετρίον, a borer.) An ancient kind of sharp, straight trephine mentioned by Hippocrates, one special use of which was to make an opening into the chest in cases of pleurisy.

Perez'ia. A Genus of the *Compositæ*. (Billings.)

P. adna'ta. Hab. Mexico. The rhizome and rootlets are purgative. See *Pipitzahoac*.

P. fructico'sa. A syn. for *P. adnata*.

P. na'na. Contains *Pipitzahoic acid*.

P. Wright'ii. Contains *Pipitzahoic acid*.

Perfla'tion. (L. *perflo*, to blow through.) A blowing through.

Also used for *Perspiration*.

Perfolia'ta. A name for the *Bupleurum rotundifolium*.

Perfoliate. (L. *per*, through; *folium*, a leaf.) Applied to plants whose leaves have the stem running through them; also, to opposite leaves united at their bases.

Per'forans. (L. *perforo*, to bore through. F. *perforant*; G. *durchbohrend*.) Perforating.

P. Casser'ii. Name for the *Musculocutaneous nerve* of the arm.

P. ma'nus. The *Flexor profundus digitorum* muscle.

P. mus'culus. Term used both for the *Flexor profundus digitorum* and *Flexor longus digitorum pedis* muscles.

Per'forated. (L. *perforatus*.) Bored through.

P. mem'brane. See *Fenestrated membrane*.

P. space, ante'rior. The *P. spot*, anterior.

PERFORATING—PERIARTERITIS.

P. space, poste'rior. The *P. spot, poste'rior*.

P. spot, ante'rior. See *Locus perforatus anticus*.

P. spot, poste'rior. See *Locus perforatus posticus*.

Perforating. (L. *perforo*.) Boring through.

P. ar'terles. See *Arteria perforans*, and *Arteriæ perforantes*. Also, see under separate headings.

P. cuta'neous nerve. A slender branch from the fourth sacral nerve, passing backwards through the great sacro-sciatic ligament, and then turning upwards round the lower border of the gluteus maximus, to supply the skin over its lower and inner part.

According to Schwalbe, this nerve is a branch of the *Pudic*.

P. ulcer of foot. A local disease apparently due to impairment of the nutrition of the foot, either from degeneration of the nerves leading to it, or of the corresponding part of the sensory columns in the spinal cord. It usually begins by a corn opposite the head of the first metatarsal bone. This inflames and suppurates, leaving a sinus which is found to lead down to bare bone. The disease is painless, and there is, more or less widely, anæsthesia of the foot, and perhaps also of the lower part of the leg. There is a tendency for the disease slowly to extend, sometimes perforating the foot; the whole foot is cold, and liable to profuse, foetid sweatings.

A similar ulceration has been known to affect the hand, and occasionally both feet are affected by it. The sensory nerve-fibres are mainly, if not solely, affected. (Savory and Butlin.) It is now believed to be in most cases a symptom of *Tabes dorsalis*.

P. ves'sels of bone. The vessels running in *Volkmann's canals* of bone.

Perfora'tion. (L. *perforo*, to bore through.) 1. A hole passing through the whole thickness of any structure. 2. The formation of such a hole, as through the wall of the intestine, stomach, &c. 3. Sometimes used for the operation of *trepining*. 4. In Obstetrics, the operation of making a hole through the foetal skull with the *perforator*, in the performance of *Craniotomy*.

Perforator. (L. *perforo*, to bore through.) An instrument for perforating the foetal skull in order to evacuate the contents, as a preliminary step in the operation of *craniotomy*. The perforator consists, either of two handles and two short, conical, pointed blades which can be approximated or separated at will, or of a trephine with a long handle.

P., Oldham's. See *Oldham's perforator*.

P., Simp'son's. See *Simpson's perforator*.

Perforato'rium. The same as *Perforator*.

Perfora'tus. (L. *perforo*, to bore through. F. *perforé*; G. *durchbohrt*.) Perforated.

P. Casse'rii. Name for the *Coracobrachialis muscle*.

P., mus'culus. Term for both the *flexor sublimis digitorum*, and the *flexor brevis digitorum pedis*.

Perfrica'tion. (L. *per*, through; *frico*, to rub.) A thorough rubbing or chafing of the skin.

Perfric'tio. (L. *perfrigeo*, *perfrictum*, to shiver with cold.) The same as *Perfrigerium*.

Perfrigera'tio. (L. *per*; *frigus*.) The same as *Rigor*.

Perfrige'rium. (L. *per*; *frigus*, cold. F. *perfrigerion*; G. *Durchfrieren*.) A chilling, shivering, or stiffness from cold.

Perfumed spi'rit. See *Aqua coloniensis*.

Perfu'sio. (L. *per*, through; *fundo*, *fusum*, to pour.) Perfusion, a pouring over; applied to bathings of the whole, or a part, of the body.

Perfu'sion can'nula. A two-way cannula; used for washing out internal cavities.

Pergamenta'ceous. (Περγαμηνή, parchment.) Parchment-like.

Pergular'ia. A Genus of the *Asclepiadaceæ*, growing in India, Madagascar, and the Moluccas.

P. edulis. This species yields a milky juice, which is used as a substitute for milk.

P. erec'ta. This species secretes a milky juice, of an unpleasant odour, which has a powerful narcotic action. Landerer extracted from this plant a crystalline substance, *Marsdenin*, which is closely allied to *Emetin*.

Perhydriod'uret. Old term for that *hydriodate (hydrioduret)* that contains the greatest possible proportion of hydriodic acid in the compound molecule.

Periac'inous. (Περί, round; *acinus*.) Surrounding an acinus. See *Acinus*.

Periadeni'tis. (Περί, round; ἀδήν, a gland.) Inflammation of the connective tissue round a gland.

Periære'sis. (Περί, around; αἰρέω, to take away.) A circular incision, made by the ancient surgeons, round a large abscess or tumour.

Perial'ges. (Περί, a poetic form of περί, signifying very much; ἄλγος, signifying any pain, bodily or mental. F. *périalge*.) Very painful or sad.

Perial'gia. Excessive, very acute pain. See *Perialges*.

Perial'gic. Belonging to *Perialgia*.

Periam'ma. (Περίαμμα, anything hung about the body, as an amulet.) An amulet.

Peria'nal. (Περί; L. *anus*.) The same as *Periproctio*.

Perian'dric. (Περί, round; ἀνήρ, ἀνδρός, a man; term applied to a stamen.) Applied to a *nectary* when it encircles the *stamens*.

Periangeio'ma. (Περί, round; ἀγγεῖον, a blood-vessel.) A new growth surrounding a blood-vessel.

Perianth. (Περί, round; ἄνθος, a flower. G. *Blüthendecke*.) The floral envelope, whether it consists of one whorl (as in the typical *Monocotyledons*), when it is termed *simple*, or of two whorls (constituting the *calyx* and *corolla* of typical *Dicotyledons*), when it is termed *double*.

Perian'theous. Applied to a flower that has either a simple or double *perianth*.

Perian'thian. Applied by Mirbel to *indusia* that proceed from a simple perianth. See *Indusium*.

Perian'thine. Belonging to, or characteristic of, a *perianth*.

Periap'ton. (Περίαπτος, hung about.) An amulet.

Periarteri'tis. (Περί; arteritis.)

PERIARTHRITIS—PERICARDITIS

Term for inflammation of the *tunica adventitia* of an artery.

Periarthritis. (Περί; arthritis.) Inflammation of the tissues round a joint.

Periarticular. (Περί, round; L. *articularis*, a joint.) Round a joint.

P. cartilages. Cartilages covering the circumference of an articular surface.

Periatom. (Περί, round; ἄτομος, an indivisible particle of matter.) Barcell's term for the invisible pores constituting porosity.

Periblast. (Περί, round; βλάστος, a bud or germ.) The nucleus or *endoblast*.

Periblem. A tissue lying beneath the *dermatogen* that covers the apex of the growing point in *Angiosperms*. See *Periblema*.

Periblema. (Περιβάλλω, to throw round or over.) The same as *Catablema*.

Periblepsis. (Περιβλέπω, to gaze around.) Old term for the wild expression of face of a delirious patient.

Peribleptic. Belonging to *Periblepsis*.

Peribolē. (Περιβολή, a throwing round; from περιβάλλω, to throw round.) Old term used by Hippocrates for the external dress of the body; also, for the *pericardium*; also, for the morbid cutaneous secretions, or excretions, occurring during the exanthemata and in cutaneous diseases.

Peribolic. Belonging to *Peribole*.

Peribronchitis. (Περί; bronchitis.) Inflammation of the peribronchial connective tissue.

Peribrosis. (Περιβρώσκω, to gnaw round about.) Term for an ulceration or erosion at the canthi of the eyelids, arising from the irritation due to tears, or from *ægilops*.

Peribrotic. Belonging to *Peribrosis*.

Pericæcal. (Περί; cæcum.) Round the *cæcum*.

P. abscess. See *Abscess, pericæcal*.

Pericaës. (Περικαῖς, on fire all round, burning hot.) Also written *Pericaeis* and *Perikaes*. Burning hot. An adjective used by Hippocrates to distinguish those fevers in which excessive heat is felt by the hand placed on the skin, from other fevers in which the skin does not feel specially hot.

Perical. (G. *Perical*; I. *perical*.) The French name for *Madura foot*.

Pericambium. (Περί, round; cambium.) A layer of *parenchyma* lying internal to the *endodermis* in the roots of woody plants.

Pericardiac. Belonging to the *Pericardium*.

P. arteries. Small offsets from the thoracic aorta and the internal mammary, supplying the pericardium.

P. pleura. See *Mediastinal pleura*.

P. veins. Small veins that collect the blood from the pericardium, and open, some into the vena cava superior and some into the right azygos vein.

Pericardiaco-phrenic arteries. Term for the pericardiac branches of the internal mammary artery which join offsets from the sternal branches of the same artery and others from the superior phrenic, bronchial, and intercostal arteries, to form, beneath the pleura, the *subpleural mediastinal plexus*. (Turner.)

Pericardial. The same as *Pericardiac*.

P. adhesion. A fibrous adhesion formed between the two adjacent surfaces of the peri-

cardium in pericarditis. See *Pericardium, adherent*.

P. effusions. 1. Occurring as a part of *Pericarditis*. In simple pericarditis, there is an effusion of serum between the two layers of pericardium already coated each with a layer of lymph. After a time, the fluid is usually absorbed. In purulent pericarditis, pus is effused into the pericardial sac.

2. *Hydropericardium* and *pneumo-hydropericardium*.

3. *Hæmopericardium*.

P. fluid. The lymph, small in quantity in health, secreted by the two adjacent surfaces of the pericardium. It has the usual composition of serous fluid.

P. friction. The friction between the two adjacent roughened pericardial surfaces in pericarditis. See *P. rub*.

P. rub. The friction-sound produced by the rubbing together of the two adjacent pericardial surfaces when roughened by the deposit of lymph in pericarditis. It occurs early, and usually persists throughout the disease. At first the friction-sound is usually a sort of double-shuffling sound occurring during systole and diastole, but not necessarily synchronous with the heart-sounds. Later on, the sound becomes loud and harsh, resembling the friction of two hard, roughened surfaces. It is occasionally triple. It is heard at first usually at the base, later on over the whole præcordium, and it is rendered more marked by firm pressure of the stethoscope.

P. sounds. See *P. rub*.

Pericardil, paracente'sis. See under *Paracentesis*.

Pericardio-pleural cavity. Name for that part of the *pleuro-peritoneal* cavity or body-cavity of the embryo, which contains the developing pleuræ and pericardium.

Pericardio-pneumatosis. (Πνευμάτωση, a blowing or puffing up.) The same as *Pneumopericardium*.

Pericardio-thyroides. (*Pericardium*; *thyroid*.) Name for a band of muscle that passes from the isthmus of the thyroid gland to the anterior surface of the fibrous layer of the pericardium, and is thought to be a separated fasciculus of the *sterno-thyroid* muscle.

Pericarditic. Belonging to *Pericarditis*.

Pericarditis. (*Pericardium*; terminal, -itis. F. *péricardite*; I. *pericardite*; G. *Hertzebeutelentzündung*.) Inflammation of the pericardium. It is very rarely idiopathic, nearly always occurring as a complication of acute rheumatism, Bright's disease, pleuro-pneumonia, scarlatina, or septicæmia. The characteristic symptoms are, intense pain over the præcordium and epigastrium, sometimes radiating over the chest and down the inner side of the left upper arm, accompanied by dyspnoea and pyrexia. Of the physical signs, the earliest are the friction-rub (see *Pericardial rub*) and a disturbed, trembling action of the heart. When fluid has formed, there is the characteristic increase of præcordial dullness, and often there is præcordial bulging. The heart-sounds are feeble and distant, and the apex-beat is either displaced upwards, or is impalpable.

P. exsudatoria sanguinolenta. Term for *Hæmopericardium*.

PERICARDIUM—PERICHOLECYSTITIS

P. hæmorrhagic. This variety is occasioned by the blood-vessels formed in the organised lymph in pericarditis becoming ruptured, and thus forming patches of hæmorrhage on the pericardial surfaces.

P., plastic. That variety in which the formation of plastic lymph is the characteristic process, and the effusion of serum is inappreciable or absent.

P., purulent. In this variety pus is effused into the pericardial cavity. It occurs in pyæmia and septicæmia. It is often secondary to abscess in the heart-muscle, which is frequently the result of acute necrosis of the long bones.

P., suppurative. The same as *P., purulent*.

P., tubercular. This occurs as a part of general tuberculosis. Miliary tubercles are formed in the pericardium, and in the inflammatory new tissue upon its surface.

Pericardium. (Περί, round; καρδία, the heart.) The double membranous sac in which the heart is contained. It is roughly conical, its wide base resting on the diaphragm, and its narrow upper part surrounding the trunks of the great vessels. It consists of a *fibrous*, external, and a *serous*, internal layer. The *fibrous layer* is composed of dense, interlacing fibres. It is attached below to the upper surface of the central tendon and adjoining muscle (especially on the left side) of the diaphragm. In front, two firm, ligamentous bands pass to join it, from the manubrium and ensiform process of the sternum. (Luschka.) This layer is continued upwards for some distance upon the aorta, the superior cava, the four pulmonary veins and the two divisions of the pulmonary artery; but gradually becomes indistinguishable. The *serous layer* lines the fibrous layer, and is reflected on the surface of the heart. Its parietal part is firmly adherent to the fibrous layer. It becomes reflected and continuous with the visceral part along the great vessels, about 1½ inches from the base of the heart. It completely encloses the pulmonary artery and aorta in a common tubular sheath, and is reflected upon the superior cava and the four pulmonary veins, forming a deep recess posteriorly between the junction of the right and left pulmonary veins with the left auricle. The inferior cava is only partly surrounded by this layer for the very short distance between its origin and the opening in the diaphragm through which it passes.

Also, see *P., vestigial fold of*.

P., adherent. This occurs as a result of pericarditis. It varies from the formation of a few thin filaments, to complete union between the two layers of the serous pericardium; the union in the latter case may be either by a thin layer or by a firm fibrous coat a quarter to half an inch thick. Calcareous matter is sometimes deposited in the fibrous tissue. Extensive adhesions sometimes hamper the heart's action, and give rise to dilatation and hypertrophy. The only distinctive symptoms are those of the occasionally-resulting dilatation and hypertrophy. Distinct physical signs are absent except when there are also anterior pleuro-pericardial adhesions; in such cases there is retraction of the lower part of the sternum during the ventricular systole.

P., arteries of. Branches are given off to the pericardium from the *internal mammary*

artery, and also from the *descending thoracic aorta*.

P., development of. The pericardium arises from an extension of the wall of the *cælome*, or body-cavity of the embryo, which becomes folded round each side of the developing heart, after that organ has been formed by the union of the two original tubes. See *Heart, development of*.

P. exter'num. The outer or *fibrous layer* of the pericardium.

P., flu'id of. See *Pericardial fluid*.

P. inter'num. The inner or *serous layer* of the pericardium.

P., lacera'tion of. This may occur from a severe blow on the chest. Erichsen mentions a case in which the pericardium was torn longitudinally for two or three inches, from the concussion produced by a fall.

P., veins of. See *Pericardiac veins*.

P., vesti'gial fold of. (Marshall.) A duplicature of the *serous layer* of the pericardium, including areolar tissue and fat together with nerves and blood-vessels, half or three quarters of an inch long, and from half to one inch deep. It is situated between the pulmonary artery and the subjacent pulmonary vein, and is seen when these are separated. It is developed round the left duct of Cuvier, and, in the adult, a fibrous cord, or sometimes a narrow vein, representing part of the remains of that duct, passes down in this vestigial fold to join the coronary sinus, the part of the left duct of Cuvier that still remains pervious.

P. viscera'lê. (*Visceralis*; from *L. viscera*, nom. plural of *viscus*, the internal organs.) The same as *P. internum*.

P., wounds of. It may be wounded by a stab, without injury to the heart. Collapse usually occurs, followed by inflammation and subsequent pericardial effusion. The symptoms are thoracic oppression, dyspnoea and restlessness, with a small, frequent pulse. One of the coronary vessels may be wounded, with consequent hæmopericardium; in such a case the heart-sounds are weak and remote, the impulse is probably imperceptible, and the dullness diffused. The prognosis is unfavourable.

Pericarp. (Περί, round; καρπός, fruit.) The seed-vessel in plants.

Pericarp'ial. Belonging to a *Pericarp*.

Pericentric. (Περί, round; κέντρον, the central point in a circle.) Round the centre; specially applied to the *stamens* in certain flowers.

Pericepas'trum. See *Periscepastrum*.

Pericephalic artery. (Περί-κέφαλος, tied round the head.) A name for the *External carotid*.

Perichæ'tial. Pertaining to the *Perichætium*.

Perichæ'tium. (Περί, around; χ αίτη, long, flowing hair.) The scaly sheath investing the fertile flower and the base of the foot-stalk in some mosses.

Perichar'acter. (Περί, around; χαράκτηρ (χαράσσω), an instrument for marking or engraving.) Old name for an instrument used for separating the gum from a tooth; probably similar to the modern dental *scarificator*.

Perichareia. (Περιχάρεια, exceeding joy.) Old term for sudden and vehement joy, as opposed to *Ecplexia*. (Galen.)

Pericholecystitis. (Περί; chole-

cystitis.) Inflammation of the peritoneum immediately covering the gall-bladder.

Perichol'ia. The condition of being *Pericholous*.

Per'icholous. (Περί, beyond, in excess; χολή, bile.) Having an excess of bile; hence bilious, since this condition was formerly supposed to be due to an excessive secretion of bile.

Perichondriodyn'ia. (*Perichondrium*; Gr. δόυνη, pain.) Pain referred to the *perichondrium*, that is, to the surface of any cartilage.

Perichondrit'ic. Belonging to *Perichondritis*.

Perichondrit'is. (*Perichondrium*; terminal -itis. G. *Knorpelhautentzündung*.) Inflammation of the *perichondrium*.

P. auric'ulæ. *Perichondritis* of the auricle or external ear. This is extremely painful, especially when affecting the anterior surface; when affecting the posterior surface it often results in the formation of large abscesses. The cartilage rarely becomes necrosed. The causes are similar to those of *perichondritis* in other regions.

P., larynge'al. See *Larynx*, *perichondritis* of.

P. of epiglott'is. This occurs as a secondary affection in tuberculosis, syphilis, carcinoma, &c. The onset is sudden, and is accompanied by general fever, and by dyspnoea. It results in ulceration, not in abscess with consequent necrosis.

Perichon'drium. (Περί, round; χόνδρος, gristle. F. *périchondre*; I. *pericondrio*; G. *Knorpelhaut*.) The vascular fibrous membrane covering all cartilages except those of the joints.

Perichondro'ma. (*Perichondrium*.) 1. A cartilaginous tumour that has no bony shell. 2. A tumour growing from the *perichondrium*.

Perichor'dal. (Περί, round; *chorda*, the *chorda dorsalis* or notochord.) Formed round the *chorda dorsalis* or notochord. The normal type of formation of the vertebral column in Vertebrates.

Perichoro'idal. (Περί; *choroid*.) Encircling the *choroid*.

P. space. The lymphatic space between the *choroid* and *sclerotic* of the eyeball, communicating, where the vessels and nerves pierce the *sclerotic*, with the space enclosed by *Tenon's capsule*.

Perichri'sis. (Περίχρισις, a besmearing.) Old term for a liniment.

Perichriston. (Περίχριστος; besmeared.) The same as *Perichrisis*.

Perichysis. (Περίχυσις, a pouring around.) Old term for insensible perspiration (Galen).

Periclad'ium. (Περί, round; κλάδος, a young branch.) Link's term for the widening at the base of the petioles in some plants.

Peri'clasis. (Περίκλασις, a breaking, or fissure.) Old term for a complete fracture; generally used for a compound comminuted fracture.

Pericli'nium. (Περί, round; κλίνη, a bed.) H. Cassini's term for the collection of bracts surrounding the mass of flowers in the *Synantheræ*; the "Calyx communis" of Linnaeus, and "Periphoranthium" of Richard.

Pericly'menum. (Περίκλύμενον, a

creeping kind of shrub, perhaps the honeysuckle.) The common *Honeysuckle*.

Pericne'mia. (Περί, round; κνήμη, the leg proper, the part between the knee and ankle.) Nom. sing. fem., the tibia; nom. pl. n., the parts about the leg.

Pericne'mious. Pertaining to the *Pericnemia*.

Peri'cola. (Περί, round; κολεός, a scabbard. F. *pericole*.) Pallot-Beauvois' name for *Perichatium*.

Pericolon'itis. (Περί; *colon*.) Inflammation of the sub-peritoneal connective tissue round the colon.

Pericolpi'tis. (Περί, round; κόλπος, a sinus or bag, used for the *vagina*.) Inflammation of the connective tissue round the *vagina*.

Pericon'chö. (Περί, round; κόγχη, a mussel, afterwards the eye-socket, so named from its shape.) The lining membrane or periosteum of the orbit.

Periconchi'tis. Inflammation of the *Periconche*.

Pericor'neal. (Περί; *cornea*.) Round the *cornea*.

Pericorol'late. (Περί; see *Corolla*.) Applied to a Division of the *Monopetala* with perigynous corollæ.

Pericra'nia. See *Pericranium*.

Pericranioed'ma. (Edema of the *pericranium*.)

Pericranit'is. (*Pericranium*. G. *Schädelhautentzündung*.) Inflammation of the *pericranium*.

Pericra'nium. (Περί, around; κρανιον, the skull. F. *péricrâne*; I. *pericranio*; G. *Schädelhaut*.) The periosteum of the outer surface of the skull.

Peri'culum. (I. *periculum*, a trial, experiment; from root *peri*.) Trial, risk, or danger.

Pericystit'is. (Περί; *cystitis*.) Inflammation of the connective tissue round the urinary bladder.

Pericystomatit'is. (Περί; *cystoma*.) Inflammation of the capsule of an ovarian *cystoma* or cyst.

Peridectom'ia. (Περί, around; δ interpolated; ἐκτομή (ἐκτέμνω), a cutting out.) The same as *Peritomy*.

Peridentit'is. See *Periodontitis*.

Perideræ'a. (Περί, round; δέρη, the neck.) That which is placed round the neck; applied to the winding of the umbilical cord round the neck of the fetus.

Perider'ia. The same as *Perideræa*.

Peri'derm. (*Periderma*.) A strengthened substitute for the epidermis in woody plants. It is developed from the outer side of the *Phellogen* layer.

Perider'ma. (Περί, round; δέρμα, the skin.) Used in the same sense as *Perideræa*; also, in Botany, the same as *Periderm*.

Perides'micus. (*Peridesmium*.) Term for retention of urine caused either by urethral stricture or by a ligature tied round the penis.

Peridesmi'tis. (*Peridesmium*; terminal itis. F. *péridesmite*; G. *Bänderhautentzündung*.) Inflammation of the *Peridesmium*.

Perides'mium. (Περί, around; δίσιμου or δεσμός, a band. G. *Bänderhaut*.) The areolar tissue ensheathing a ligament.

Peridia'stolé. (Περί; *diastole*.) Term for the hardly appreciable interval of time be-

PERIDIDYMIS—PERIMETER

tween the diastole of the heart and the following systole. See also *Perisystole*.

Perididymis. (Περί, round; οἱ διδύμοι, the testicles. F. *pérididyme*; I. *perididymo*.) The *Tunica albuginea testis*.

Perididymitis. (*Perididymis*, terminal *itis*.) Inflammation of the perididymis.

Peridin'ium fuscum. (Περί, round; δῖνη, a whirling; L. *fuscus*, dusky.) A *Protozoön* of the Order *Euglenæ* found in the water of some rivers, and giving them a red tinge during the summer-time; as, for example, the river Itchen at Southampton.

Peridiodynia. (Πηρίδιον, dim. from πῖρα, a leathern pouch; ὁδύνη, pain.) The same as *Perodynia*.

Peridiole. (*Peridiolum*, dim. of *peridium*.) Term for the internal *peridium*, when there are two, the one upon the other.

Peridium. (Πηρίδιον, dim. of πῖρα, a leathern pouch. F. *péridion*; G. *Peridie*, *Umschlag*.) The round, membranous seed-case of some of the mushrooms, e. g. *Lycoperdon*. (Persoon.) Applied by Link to the envelope of a fruit that is either simple or many-valved.

Peridromos. (Περιδρόμος, encompassing.) Old term for the extreme circumference of the head, measured round the hair.

Perie'ges. (Περιγής, lying in a circle.) Circular. Applied by Hippocrates, *de Dissect.* 4, to the cartilaginous rings of the *Arteria aspera*, or trachea.

Periencephalitis. (Περί; encephalitis.) The same as *Leptomeningitis*.

Perien'chyma. (Περί, around; ἔγχυμα, that which is poured in.) Hayne's term for that kind of vegetable cellular tissue found in spherical organs such as glands, perisperms, and cotyledons, where the cells are disposed without any apparent order.

Perienteritis. (Περί; enteritis.) Inflammation of the subperitoneal connective tissue surrounding the intestine.

Perienteron. (Περί, round; ἔντερον, an intestine, usually the mid-gut of the embryo.) The primitive body-cavity or *Cœloma*.

Perigangli'itis. (Περί; gangliitis.) Inflammation of the wall of the pathological cyst termed a *Ganglion*.

Perigastritis. (Περί; gastritis.) Term for inflammation of the peritoneum encircling the stomach.

Periglis'chrous. (Περί, around; γλίσχρος, sticky, gluey.) Clammy or viscid. Applied (περίγλισχρος) by Hippocrates, *Ap̄h.* iv, 53, to foulness of the teeth in fever.

Periglottis. (Περιγλωττίς, a covering of the tongue.) The epithelium of the dorsum of the tongue; also, the *Epiglottidean gland*.

Perigon. (Περί, round; γονή, offspring.) The same as *Perianth*.

Perigraphē. (Περιγραφή, a marking round. F. *périgraphie*; G. *Umschreiben*.) A delineation, marking round, or lineament. Applied by Vesalius, *de Hum. Corp. Fab.*, ii, 3, to the *lineæ transversæ* of the rectus abdominis muscle.

Perigynan'drum. (Περί, round; γυνή, a woman, the symbol of the pistil; ἀνὴρ, a man, the symbol of a stamen.) Necker's term for a floral envelope. He terms the calyx, *P. externum*, the corolla, *P. internum*, and the involucre, *P. commune*, in the *Synanthereæ*.

Perigyn'ium. (Περί, round; γυνή, a

woman, used for the female organ of flowers.) The envelope of the sexual organs in many *Hepaticæ*, forming an open sac extending from the thallus at the base of the archegonium.

Perigynous. (Περί, round; γυνή, a woman, the symbol of the pistil.) Applied to stamens when situated round the ovary, or the lower part of the pistil, or inserted into the calyx.

Perihepati'tis. (Περί; hepatitis.) A chronic inflammation of the capsule of the liver. The edge of the liver becomes greatly rounded, and the capsule becomes opaque and often separable. The tissue of the liver is usually soft and loaded with fat, it seldom becomes cirrhotic, but there is often an increase of white fibrous tissue round the course of the larger portal vessels. The liver is much reduced in size, and becomes invested by a thick, greyish, separable membrane. Perihepatitis is a frequent cause of ascites; it is rarely found in the bodies of patients killed by accident, or dying of other diseases. The kidneys are usually diseased. As to its causation little is known; Murchison stated that it sometimes began by extension of inflammation from the base of a chronic gastric ulcer.

Perihyster'ic. (Περί, round; ὑστέρα, the womb.) Round the womb. The term in common use is *Periuterine*.

Perikaës. The same as *Pericaes*.

Perikardi'tis. See *Pericarditis*.

Perilarynge'al. (Περί; laryngeal.) Round the larynx.

P. abs'cess. See *Abscess, perilaryngeal*.

Perilaryngi'tis. (Περί; laryngitis.) Inflammation of the connective tissue round the larynx. It often ends in perilaryngeal abscess.

Perilentic'ular space. (Περί; lenticular.) The space surrounding the crystalline lens of the eye, which is filled in by the free portion of the suspensory ligament of the lens, the zonule of Zinn.

Perilith. (Περί, round; λίθος, a stone.) Lamarck's term for the false epidermis of many marine shells.

Perilymph. (Περί, around; L. *lymphæ*, water.) A clear fluid, filling the osseous labyrinth, vestibule, semicircular canals, and cochlea of the internal ear.

Perilymphangei'tis. See *Perilymphangitis*.

Perilymphang'ial. (Περί; lymphangion.) Surrounding a lymphatic vessel or vessels.

P. nod'ules. Small nodules formed by localised masses of lymphoid cells round lymphatic vessels.

Perilymphangi'tis. (Περί; lymphangitis.) Inflammation of the connective tissue surrounding a lymphatic vessel.

Perimad'arous. (Περιμάδαρος.) Bald round about. Formerly applied to ulceration of the skin, in cases where the skin round the ulcer was devoid of hair.

Perimeningi'tis. (*Perimeninx*; terminal *-itis*.) Inflammation of the *Perimeninx*. See *Pachymeningitis*.

Perime'ninx. (Περί, around; μῆνιγξ, any membrane, Hipp; especially that which contains the brain. F. *perimeninge*.) The dura mater, including both its cerebral and spinal portions.

Peri'meter. (Περί, around; μέτρον, a measure.) The circumference.

Also, an instrument for measuring the dimensions of the field of vision. It is composed of a semicircular metal band revolving upon its middle point, and divided into degrees, from 0° at the middle, to 90° at each extremity. The eye to be examined is placed at the centre of the hemisphere, and the *fixation-point* is placed in the centre of the arc, at 0°. A small square piece of white paper is slowly moved along the inner surface of the arc towards the centre. The point where it comes into view is noted. The horizontal and vertical meridians and two or more intermediate ones are examined in this way. The boundary of the field is drawn on a chart, in which the sphere is projected on to a plane surface. See *Field of vision*.

P. of Aubert and Förster. The eye is placed opposite a fixed point in the middle of a semicircle. Objects are moved along the semicircle, in the different meridians of the field of vision successively, until they just disappear. The periphery of the field of vision is thus estimated.

Perimet'ric. (Περί, round; μήτρα, the womb.) Round the uterus. Term usually restricted to the part of the peritoneal cavity surrounding the uterus.

P. abs'cess. An intraperitoneal abscess in the neighbourhood of the uterus, most commonly *retro-uterine*. It may be due to disease of the uterus, the ovary, or the Fallopian tube. It occurs most commonly after abortion or delivery at term as a consequence of *Perimetritis*. It also sometimes occurs as a consequence of gonorrhœa, chill, especially at the menstrual period, venereal excess, the irritation of instruments (sounds, pessaries, tents). It usually terminates spontaneously; but it may burst into the rectum, through the anterior abdominal wall, into the bladder, uterus, or vagina, or into several of these cavities, one after the other.

Perimetri'tis. (Περί, round; μήτρα, the womb; terminal -itis.) This disease, also called *pelvic peritonitis*, is very common. It may be either serous or purulent. For its causes, see *Perimetric abscess*. Its symptoms are those of peritonitis in general, but localised to the pelvis. Peritoneal adhesions form, which may disappear, or may remain and become organised, *Adhesive perimetritis*.

P., adh'esive. See *Perimetritis*.

P., encyst'ed se'rous. A form of perimetritis in which there is an effusion of peritoneal serous fluid, which becomes encysted by the formation of peritoneal adhesions. The history is the same as that of *Perimetric abscess*; the symptoms are usually less acute. The disease may entirely disappear; it has often been mistaken for ovarian dropsy, which accounts for some of the so-called cures of that disease.

Perimetry. (*Perimeter*.) The measuring the dimensions of the field of vision by means of the *perimeter*.

Perimorpho'sis. (Περί, near, concerning; μόρφωσις, a shaping.) Term for the transformation of the *pupa* of an insect into the *chrysalis*.

Perimor'phous crys'tals. (Περί; μορφή, form.) Crystals which are made up of a nucleus of one mineral surrounded by an envelope of another.

Perimy'elitis. (Περί, round; μυελός, marrow.) The *Endosteum*.

Perimyeli'tis. Term for *Meningitis, spinal*.

Perimys'i'tis. (*Perimysium*; terminal -itis.) Inflammation of the *Perimysium*.

Perimys'ium. (Περί, round; μῦς, a muscle. 1. *perimysio*; G. *Muskelhaut*.) The connective tissue sheath surrounding a muscle, and becoming continuous with the *Endomysium*, which forms partitions between the muscular fibres.

P., inter'nal. Another name for *Endomysium*.

Per'in. (Πηρίν.) Old term for the perineum; also for the testicle, the anus, the vagina, and the peritoneum. All these later meanings are doubtful.

Perinæauxe'sis. See *Perineauxesis*.

Perinæ'occele. See *Perineoccele*.

Perinæ'um. See *Perineum*.

Perine'al. (L. *perinæalis*; from *perinæum*.) Pertaining to the perineum.

P. abs'cess. A collection of pus in the perineum, beneath the deep layer of the superficial fascia. It may burrow widely along the urethra and round the urethral bulb.

The chief forms are:—

(1) Abscess from suppuration in a lacuna or follicular gland of the spongy portion of the urethra, either from gonorrhœa or stricture.

(2) Abscess beginning in ulceration of the urethra behind a stricture.

(3) Abscess from injury by an instrument.

(4) Abscess of Cowper's gland, in gonorrhœa, or more rarely from irritation caused by a stricture.

(5) Abscess of the prostate may point in the perineum.

P. aponeuro'sis. The *P. fascia*.

P. ar'tery, superfi'cial. A branch given off by the pudic in the fore part of the ischio-rectal fossa. It passes under or over the transversus perinei muscle, and then lies beneath the superficial perineal fascia. It supplies the subjacent muscles, and divides into long branches supplying the back of the scrotum in the male, and the labium in the female, and anastomosing with the external pudic branches of the femoral artery.

P. ar'tery, trans'verse. This generally arises in common with the above, sometimes separately from the pudic. It passes inwards towards the central point of the perineum, supplies the parts between the urethral bulb and the anus, and anastomoses with its fellow of the opposite side.

P. band. A band, padded where it lies in the fold of the groin and perineum, which passes round the perineum and inner side of the upper end of the thigh, and is attached to the upper end of Liston's splint, in order to make counter-extension. See *Liston's long splint*.

P. bod'y. The mass of tissue filling up the angular space, in the female, between the lower third of the posterior wall of the vagina and the anterior wall of the rectum, its base being formed by the *perineum*.

P. canal'. The gutter-shaped pouch or passage formed, during parturition, for the child's head, by the stretching of the pelvic floor (Spiegelberg).

P. cuta'neous nerve. See *Nerve, long pudendal*.

P. cysto'tomy. See *Cystotomy*.

P. fas'cia. (F. *aponevrose du perinée*; G.

PERINEAUXESIS—PERINEUM

Dammbinde.) See *Fascia, perineal, deep*, and *F., perineal, superficial*.

P. fistula. See *Fistula, perineal*.

P. flexure of rectum. The short curve forwards made by the rectum just above the sphincters.

P. fossa. The *Fossa, ischio-rectal*.

P. hernia. See *Hernia, perineal*.

P. ischuria. Sauvages' name for retention of urine due to the pressure of a perineal tumour on the walls of the urethra.

P. laceration, central. See *Perineum, laceration of, central*.

P. ligament. The *Fascia, perineal, deep*.

P. lithotripsy. See under *Lithotripsy*.

P. nerve. The largest of the three divisions of the *pubic*. It is contained in a special sheath of the obturator fascia below the pudic vessels, along the outer wall of the ischio-rectal fossa, and it divides into deep and superficial branches. There are two *superficial perineal branches, internal and external*. The *external* or *posterior* runs along the outer part of the perineum to the scrotum (or labium), and sometimes gives a branch to the inner and upper part of the thigh. The *internal* or *anterior* branch, rather larger, runs forwards near the middle line, and divides into long slender branches going to the integument of the scrotum (or labium). The two branches communicate freely, and the external is usually connected with the inferior pudendal and inferior hæmorrhoidal nerves. The superficial perineal and inferior pudendal nerves are together called *long scrotal nerves*. The *deep* branches arise usually by one trunk and supply the perineal muscles. They supply the anterior part of the external sphincter and levator ani, the transversus perinei, the bulbo-cavernosus and the ischio-cavernosus. One branch perforates the bulbo-cavernosus and corpus spongiosum, and supplies the mucous membrane of the adjacent part of the urethra.

P. nerves, deep. See *P. nerve*.

P. nerves, superficial. See *P. nerve*.

P. region. See *Perineum*.

P. section. Division of a urethral stricture from without (*external urethrotomy*) by a perineal incision, introduced by Syme for the treatment of a urethral stricture permeable to an instrument, but not curable by catheterisation.

Perineauxesis. (*Perineum*; αύξησις, growth, increase.) Any operation for the restoration of a ruptured perineum.

Perineocele. (*Perineum*; κήλη, a tumour.) A perineal hernia.

Perineoplastic operation. (*Perineum*; Gr. πλαστικός, belonging to forming or moulding. I. *perineoplastica*; G. *Perineoplastik*.) *Perineorrhaphy*.

Perineorrhaphy. (*Perineum*; Gr. ραφή, sewing. F. *perinéorrhaphie*; G. *Perineorrhaphie*.) An operation for restoring the perineal body, useful in slight cases of prolapse of the uterus, or, in combination with *Episiotomy*, in worse cases; term used also simply for restoring a ruptured perineum.

Perineosynthesis. (*Perineum*; σύνθεσις.) Langenbeck's operation for ruptured perineum.

Perineo-vaginal. (*Perineum*; vagina.) Relating to the perineum and vagina.

P. fistula. See *Fistula, perineo-vaginal*.

Perinephric. In the region immediately surrounding the kidney. See *Perinephros*.

P. abscess. 1. This may occur secondarily to pyelitis, either from direct extension of inflammation by continuity, or by ulceration and perforation of the wall of the pelvis of the kidney, with escape of urine and pus into the perinephric connective tissue. The pus may remain localised to the loin, or may enter the sheath of the psoas muscle and pass down into the groin, and even burst into the hip-joint, or pass in front of the iliacus muscle and point just above Poupart's ligament, or burst into the intestine with escape of gas and fæces into the abscess-cavity, or it may burrow upwards into the chest beneath the internal arcuate ligament of the diaphragm, burst into the lung and discharge itself by way of the bronchi. For symptoms, see *Abscess, perinephritic*.

2. An abscess resulting from caries of the spine may be perinephric in situation; and Erichsen mentions a case where such an abscess opened into the pelvis of the kidney, simulating chronic pyelitis.

3. It appears sometimes to occur as the result of a fall or other injury to the loins, independently of laceration of the kidney. See *Abscess, perinephritic*.

Perinephritic. Relating to *Perinephritis*.

P. abscess. See *Abscess, perinephritic*; see also *Perinephric abscess*.

Perinephritis. (*Perinephros*.) Inflammation of the subperitoneal perinephric connective tissue.

Perinephros. (Περί, round; νεφρός, usually in the plur., the kidneys. G. *Nierenhaut*.) The capsule of the kidney.

Perineum. (Τό περίνεον, or περιναίον. F. *perinée*; I. *perineo*; G. *Mittelfleisch*.) In the male, the space between the anterior margin of the anus and the posterior surface of the scrotum; in the female, the space between the anterior margin of the anus and the fourchette, or posterior commissure of the labia majora. In both male and female, the perineum is bounded laterally by the ischial tuberosities. Also, term for the *Perineal body*.

P., body of. See *Perineal body*.

P., laceration of. This often occurs to the female perineum during the last part of the second stage of labour. It usually occurs where the pains are violent and the perineum greatly resists dilatation, especially therefore, in primiparæ. It varies from a slight rent in the fourchette to a complete tear of the sphincter and recto-vaginal septum. In every first labour there is unavoidably a slight internal laceration immediately below the hymen.

P., laceration of, central. This consists in a laceration or rupture of the central portion of the perineum, the anterior and posterior portions remaining intact. Birth of the child has been known to occur through such a rupture, without its becoming complete.

P., posterior. Term for that region which lies between the posterior border of the anus and the tip of the coccyx.

P., rigid. Term for a female perineum which remains rigid during the course of parturition. The condition is due to tightness of the aponeurosis and skin, especially in primiparæ, or else to the presence of cicatrices.

P., rup'ture of. The same as *P., laceration of.*

Perineuritis. (Περί; νεύρον. F. *névrité* or *perinévrite*.) Term for inflammation of the *Neurilemma*.

Perineurium. (Περί, round; νεύρον, a tendon, or nerve. F. *périnèvre*; I. *perineurio*; G. *Nervenhaut*.) The connective tissue sheath enclosing a bundle of nerve-fibres.

Perinyc'tides. (Nom. pl. of *perinyc'tis*.) Used in the same sense as *Perinyc'tis*.

Perinyc'tis. (Περί, about; νύξ, night.) The same as *Epinyc'tis*.

Periocular space. (Περί, round; I. *oculus*, an eye.) The space that surrounds the eyeball, and is between it and the wall of the orbit.

Period. (Περίοδος, a marching round.) A stated time. The time during which a disease progresses from its accession to its declension; also, those marked changes that characterise the progress of a disease, of which there are said to be five—the *invasion*, the *augment*, the *state*, or full development, the *decline*, and the *termination*.

In Physiology, formerly applied to the circulation of the blood, the *Periodus sanguinis*.

Also, a walking round and about, used in reference to disease; also, the movements of food in the body.

Lastly, there were three periods, of the sun, moon, and stars, which corresponded respectively with the three "faculties" of the body, viz. 1, vital (the sun); 2, natural (the moon); and 3, animal (the stars). These three circuits of the heavenly bodies were supposed to influence and strengthen the bodily faculties; firstly by force passing by way of the heart and arteries; secondly by way of the womb and other internal cavities, passing thence by way of the liver, &c., into all parts of the body; thirdly, by way of the brain and nerves.

The term period was also applied to the time between two attacks of intermittent fever. It was divided into two parts, the accession (*παροξυσμός*), and the remission (*ἀνεσις*).

P., ly'ing-in. The *Puerperal state*.

P.s. Term for the *Menses*.

P.s., month'ly. The same as *P.s.*

P.s. of life. Those stages through which the living organism passes to complete development and then towards dissolution; as, infancy, puberty, &c.

P., placen'tal. The time occupied in the expulsion of the placenta, *i.e.* the third stage of labour.

Per-iodate. A salt of *Per-iodic acid*.

P. of calcium. A whitish, granular powder without odour. It is slightly soluble in water, and is composed of iodic and per-iodic acids, in part combined with calcium. Its action is that of an antiseptic, deodorant, and weak germicide. Dose, 1 to 15 grains. Addition of a solution of morphine causes separation of free iodine. (Ex. Ph.)

Periodel'a. (Περιοδεία, a circuit.) The same as *Period*.

Periodeu'sis. (Περιοδευσις, or *περιοδεία*, a circuit, or travelling round about; from *περιοδεύω*, to travel round about; metaphorically, to cure by systematic regimen and medicine.) A circuit or course; term applied to the occupation of a quack or mountebank.

Periodeu'ta. The same as *Periodeutes*.

Periodeu'tes. (Περιοδευτής, one who travels round about.) A quack who perambulates the country; a quack-salver.

Periodeu'tic. Appertaining to *Periodeuta*.

Period'ic. (*Period*.) Pertaining to a period. Recurring at stated times, or periods.

In *Bot.*, applied to flowers that open and close many days in succession, at fixed periods, such movements being spoken of as *periodic*.

P. fe'ver. Term for *Malaria*.

P. law. *Chem.* This is stated thus: "The properties of the elements are periodic functions of their atomic weights."

P. move'ments. *Bot.* See main heading.

Per-iod'ic acid. (L. *per*; *iodic*.) HIO_4 . Per-iodate of hydrogen. Its basicity is doubtful; it forms salts, *per-iodates*, many of which have a very complicated chemical constitution.

Period'ical. (F. *périodique*; I. *periodico*; G. *periodisch*.) The same as *Periodic*.

P. diseas'es. Diseases characterised by symptoms that recur at definite intervals.

P. fe'ver. The same as *Periodic fever*.

Periodic'ity. (From *Period*. F. *périodicité*; I. *periodicità*; G. *Periodicität*.) Tendency to recur at definite periods.

Periodology. (Περίοδος, in the sense of a fit of intermittent fever; λόγος, word, deliberation.) The doctrine of periodicity both in health and disease.

Periodontal. (Περί, round; δόδους, δόδοντος, a tooth.) Surrounding a tooth.

P. mem'brane. The *dental periosteum*, which covers the fang of the tooth and lines the wall of the alveolus.

Periodontitis. (*Periodontal*; terminal -itis.) Inflammation of the periodontal membrane.

P. gingivar'um. (L. *gingiva*, a gum.) *Gingivitis*.

Periodon'tium. A Latinised term for *Periodontal membrane*.

Period'oscope. (Περίοδος, a period of time; σκοπέω, to look at.) *Obstet.* A dial, constructed to help in calculating the day on which labour will most probably occur, invented by Tyler Smith.

Period'uret. Old term for *Periodide*.

Peri'odus lunar'is. The lunar period. A term for the *menstrual period*.

P. mor'bi. The *type* to which any disease belongs.

P. san'guinis. Old term for the circulation of the blood.

Periodyn'ia. (Περί, around; δόδυνη, pain.) Violent and wide-spread pain. A term of the same spelling but different derivation (πήρα, a leathern pouch; δόδυνη, pain) has been used for *Cardialgia*.

Periæso'phage'al. (Περί; *æso'phageal*.) Immediately round, or surrounding, the *æso'phagus*.

Periæso'phagi'tis. (Περί; *æso'phagus*; terminal -itis.) Inflammation of the periæso'phageal connective tissue.

Periom'phacous. (Περί, around; ὀμφακώδης [from ὀμφαξ, an unripe grape, and εἶδος, likeness], sour, like unripe grapes. F. *périomphaceux*.) Full of unripeness; applied to abscesses, &c.

Per'ion. (Περί, round; ὠόν, an egg.) Term for the *Decidua*. (Breschet.)

Perioö'phor'ic. (Περί; ὠοφόρος, bear-

PERIOÖPHORITIS—PERIPENIAL

ing eggs, applied to the ovary, τὸ ὠοφόρον.) Situated in, or belonging to, the region immediately surrounding the ovary.

Perioöphoritis. (Περί; ööphoritis.) Inflammation of that part of the pelvic peritoneum contiguous to the ovary, usually occurring as a part of *Perimetritis*.

Periophthalmic. (Περί; ὀφθαλμός, the eye.) Surrounding the eyeball.

Periop'tic. (Περί; optic.) Anat. Surrounding the orbit.

Perio'ral. (Περί; L. *os, oris*, the mouth.) Surrounding the mouth.

Periorbita. (Περί; orbita, from L. *orbis*, a circle.) A term for the periosteum of the orbit; more correctly, *Periconche*.

Periorbital mem'brane. The same as *Periconche*.

Periorbitis. An incorrect term for *Periconchitis*. It ought to be *Periorbititis*.

Periorbititis. (*Periorbita*; terminal -itis.) See *Periorbitis*.

Periorchitis. (Περί, round; ὄρχις, a testis; terminal -itis.) Term for inflammation of the tunica vaginalis testis.

Perios'teal. (*Periosteum*.) Pertaining to the *Periosteum*.

P. abscess. An abscess occurring between the periosteum and the bone, generally secondary to an attack of periostitis (q. v.).

P. node. An enlargement of the bone, due to inflammation, and associated with chronic periostitis. It may either undergo ossification (*hard node*) or may tend to suppuration or caseation (*soft node*).

P. sarco'ma. The same as *Subperiosteal sarcoma* (q. v.).

P. whit'low. The same as *Paronychia osseosa*.

Periostēl'itis. See *Periostitis*.

Periosteōde'ma. (*Periosteum*; *oedema*.) Oedema of the periosteum.

Periosteoma. See *Periostoma*.

Periosteophy'ma. (Περίοστέον, the periosteum; φῦμα, or φύμα, an inflamed swelling. G. *Beinhautgeschwulst*.) A swelling of the periosteum. Also, a *Periosteophyte*.

Perios'teophyte. (Περίοστέον; φυτόν, a plant. G. *Knochenhautgewachs*.) An adventitious bony growth from the periosteum.

Periosteosis. See *Periostosis*.

Perios'teotome. The special knife used for *Periosteotomy*.

Periosteotomy. (*Periosteum*; τομή [from τέμνω, a cutting.] The operation of cutting through the periosteum.

Periosteous. The same as *Periosteal*.

Perios'teum. (Τό περίοστέον, from περί, and ὀστέον. F. *périoste*; L. *periostio*; G. *Beinhaut*.) A fibro-vascular membrane covering the bones; made up of an outer, fibrous layer, and an inner, vascular layer which is the main source of the blood-supply of the bone, and is also *osteogenetic*.

P., alve'olo-dental. The *P., dental*.

P., den'tal. Each dental alveolus is lined with a periosteum which encircles also the contained fang as high as the neck of the tooth, where it becomes blended with the dense tissue composing the gums.

P. inter'nium. The *Endosteum*.

P. orbitæ. The periosteum of the orbit.

Perios'tic. *Periosteal*; also, relating to the parts immediately surrounding a bone.

Periostit'ic. Belonging to, or the subject of, *Periostitis*.

Periostitis. (*Periosteum*; terminal -itis.) Inflammation of the periosteum.

P., acute' diffuse'. See *Necrosis, acute*.

P., acute' simple. Generally due to injury. The periosteum shows the usual appearances of inflammation, and becomes readily separable from the bone. The inflammation may end in complete resolution, or may pass on to suppuration; or, as is more usual, it may become chronic and *osteoplastic*.

P., acute' suppurative, infective, diffuse'. See *Necrosis, acute*.

P., acute' suppurative, simple, localised. This occurs as a continuation of *P., acute simple*. The pus forming between the periosteum and bone slowly perforates the former; it does not usually extend widely beneath the periosteum. There is sometimes necrosis of the exposed piece of compact bone.

P., chronic osteoplastic. It occurs from the slighter kinds of irritation, following on acute periostitis, or accompanying inflammation of the medulla or the cancellous tissue, or about diseased joints. Abundant new bone is formed beneath the periosteum, either in smooth longitudinal layers, in nodules, or in sharp processes (*osteophytes*). Billroth believes that the new bone is formed, not only from the periosteum, but also from the granulations growing out of the openings of the Haversian canals.

P., chronic suppurative. This is uncommon, and is usually only secondary to destructive changes of the subjacent bone. The periosteum becomes separated from the bone by a small quantity of curdy pus.

P., infective, and osteomyelitis. A syn. for *Necrosis, acute*.

P. osteoplastic. See *P., chronic osteoplastic*.

P., syphilitic. See *Node*.

Periosto'ma. (Περί; *ostoma* or *osteoma*.) A morbid bony growth surrounding a bone.

Periostomedullitis. (*Periosteum*; *medulla*; terminal -itis.) Term for *Periostitis* occurring with *Osteomyelitis*.

Periosto'sis. (Περί; *ostosis*. G. *Knochenhautwucherung*.) The formation of *Periosteoma*; also, disease of the periosteum.

Periostosteitis. (Περίοστέον; ὀστέον; terminal -itis.) Term for periostitis accompanied by osteitis.

Perios'tracum. (Περί; ὄστρακον, a shell.) The horny epidermic covering of the shell in many of the *Mollusca*.

Periot'ic. (Περί, round; οὖς, ὠτός, an ear.) Round the ear.

P. bone. The *petro-mastoid* portion of the temporal bone of Mammals. It is formed by the fusion of the three ossifications named respectively *prootic*, *epiotic*, and *opisthotic* (Huxley).

P. portion of tem'poral bone. The same as *P. bone*.

Peripachymeningitis. The same as *Pachymeningitis, external*.

Peripapillary. (Περί; *papilla*.) Situated round the optic *papilla*.

Periparo'ba. A plant of the Genus *Potomorphe*, Nat. Order *Piperaceæ*, native to Tropical America. The root is used as a remedy in various abdominal affections.

Peripenial mus'cle. (Περί; L. *penis*. F. *muscle péripénien*.) Sappey's name

for the subcutaneous layer of unstriped muscle-fibres surrounding the penis, and comparable with the *dartos tunic* of the scrotum.

Peripet'alæ. (Περί; πέταλον, a leaf, or any flat, leaf-like body.) Term used by Desvauz for a class of Dicotyledons in the Jussieuan system, which are polypetalous, and have perigynous stamens.

Peripet'alous. *Bot.* Mirbel's term for nectaries which surround the corolla.

Zoöl. Situated round the petal-like *ambulacra* in Echinoderms.

Peripetas'ma. (Περί; πέτασμα (πετάννυμι), anything spread.) Anything spread round as a cloak or covering; applied to the bedding of the sick.

Periphacl'tis. (*Periphacos*; terminal -itis.) Inflammation of the *Periphacos*.

Periphacos. (Περί; φακός, a lentil.) The capsule of the crystalline lens of the eye.

Peripharynge'al. (Περί; pharyngeal.) Round the pharynx.

Peripherad. (*Periphery*.) A term of Dr. Barclay's, used adverbially to signify "toward the peripheral aspect."

Peripheral. (*Periphery*. F. *périphérique*; I. *periferico*.) Pertaining to the *Periphery*.

P. akine'sia. *Akinesia* consequent upon a lesion of the motor nerves, or of the muscles; also used for akinesia due to a lesion of the anterior horns of grey matter of the spinal cord.

P. anæsthesia. See *Anæsthesia*, *peripheral*.

P. ep'ilepsy. The same as *Epilepsy*, *reflex*.

P. lay'er. (G. *Deckschichte*.) Term for the superficial part of the *molecular layer* of the cerebral cortex, which is entirely made up of medullated nerve-fibres.

P. necro'sis. See under *Necrosis*.

P. neurit'is. See *Neuritis*, *peripheral*.

P. organs. *Zoöl.* Organs which are distinct from the main part of the body, as, *e.g.*, the wings of an insect.

P. vas'cular sys'tem. General term for the *Capillaries*.

P. veins. A name for the *interlobular veins* of the liver.

Peripherally. Upon, or with respect to, the *Periphery*.

Peripheric. The same as *Peripheral*.

P. lin'ear extrac'tion. See *Cataract*, *extraction of*, *v. Gräfe's*.

Peripher'ical. The same as *Peripheral*.

Peripherit'is. (*Peripharia*, the periphery; terminal -itis.) The same as *Ophthalmoperipheritis*.

Peripherosyphilo'lepis. (*Peripharia*, the periphery; *syphilolepis*.) *Peripheral syphilolepis*.

Periphery. (L. *peripharia*, *periferia*. Gr. περιφέρεια, the circumference of a circle; περιφέρω, to carry round; F. *périphérie*; G. *Umfang*.) The circumference of a circle, ellipse, &c.; the superficial part of a solid body or organ.

Periphimo'sis. (Περί, about; φίμωσις, a muzzling.) The same as *Paraphimosi*s.

Periphlebit'ic. Belonging to *Periphlebitis*.

Periphlebit'is. (Περί; phlebitis.) Inflammation of the connective-tissue sheath of a vein.

Periphoran'thium. (Περιφέρω, to carry round; άνθος, a flower.) See *Periclinium*.

Periphore. (Περιφέρω, to carry round.) *Bot.* L. C. Richard's term for a fleshy body, quite distinct in nature from an ovary, raised from the base of the calyx, and bearing the petals and stamens attached longitudinally by their base to its internal surface.

Periphoric. Of, or belonging to, a *Periphore*. Epithet applied by A. Richard to the insertion of stamens on the surface of a *periphore*.

Periphracl'erythe'ma. (Περίφρακτος, fenced round; ἐρύθημα, redness of the skin, a blush.) Term for circumscribed *erythema*.

Periphracl'olichen. (Περίφρακτος, fenced round; λειχήν, a lichen-like eruption on the skin of animals.) Term for circumscribed *lichen*, or *herpes*.

Periphyllum. (Περί, round; φύλλον, a leaf.) Name applied by Link to the scales surrounding the ovary in the *Graminaceæ*.

Periphysis. (Περίφυσις, a growing round about.) *Bot.* A sterile filament growing from the *hymenium* in the part outside the asci, in Fungi.

Periplast. See *Periblast*.

Periplastic. Belonging to, or having the characteristics of, the *Periplast*. Also, surrounding the *Endoplast*.

Periplan'eta. (Περί; πλανήτης, a wanderer; from πλανάω, to wander.) A Genus of the Family *Blattidæ*.

P. orienta'lis. The more modern name for *Blatta orientalis* (q. v.).

Peripleumo'nia. (Περιπνευμονία, Ionic form of περιπνευμονία, inflammation of the lungs.) See *Peripneumonia*.

Peripleuri'tis. (Περί; pleuritis.) Inflammation of the areolar tissue beneath the costal pleura. It often goes on to the formation of an abscess, and has in some cases been found to occur in *Actinomyces*.

Periploca. (Περιπλέκω, to twine round about.) A Genus of twining vines, Order *Asclepiadaceæ*.

P. emet'ica. The *Hemidesmus indicus*.

P. græ'ca. The acrid, milky juice of this species, *Wolf's bane*, has been used to poison wolves.

P. in'dica. The same as *P. emetica*.

P. mauritia'na. An East Indian species. It has an emetic action; from it *Bourbon scammony* is obtained. See *Scammony*, *Bourbon*.

Periplysis. (Περίπλυσις, a washing out; περίπλυσις κοιλίας, a thin discharge from the bowels, Hipp. F. *périplyse*; G. *Auswachsung*.) *Diarrhœa*.

Peripneumo'nia. (Περιπνευμονία, inflammation of the lungs; from περί, and πνεύμων.) Term formerly used interchangeably with *Pneumonia*. Under these two terms, the ancients comprehended all acute diseases of the chest not accompanied by any marked pain in the side. Kraus considers this term as signifying more widespread inflammation of the lung than *Pneumonia*.

P. billo'sa. Term for pneumonia occurring in *Remittent*, or the so-called *Bilious*, fever.

P. catarrha'lis. The same as *P. notha*.

P. noth'a. (Νόθος, illegitimate, spurious.) An inexact term, generally used for the chronic bronchitis or winter-cough of old people.

PERIPNEUMONIC—PERISSODACTYLA

P. pituito'sa. The same as *P. vera*.

P. vera. The same as *Peripneumonia*.

Peripneumon'ic. Belonging to *Peripneumonia*.

P. catar'rh. Synonym formerly used for *Broncho-pneumonia*.

P. pern'icious fe'ver. Term for the pneumonic form of *Pernicious malarial fever*. (Trousseau.)

Peripneumon'i'tis. (*Peripneumonia*; terminal -itis.) The same as *Peripneumonia*.

Peripneum'ony. The same as *Peripneumonia*.

P., bas'tard. The same as *Peripneumonia notha*.

Peripod'ium. (Περί, about; ποός, podós, a foot.) Hedwig's term for *Perichæ-tium*.

Periportal. (Περί; portal.) Surrounding the *vena portæ*.

Periproct. (Περί; πρωκτός, the anus.) That part of the *perisoma* of an Echinoderm which immediately surrounds the anus.

Periproct'ic. (Περί, round; πρωκτός, the anus.) Round, or in the region of, the anus.

Periprocti'tis. (Περί; πρωκτός; terminal -itis.) Inflammation of the loose areolar tissue surrounding the lower part of the rectum.

Periproct'ous. The same as *Periproct'ic*.

Periprokti'tis. The same as *Periproctitis*.

Periprost'atic. (Περί; prostate.) Situated round the prostate gland.

P. abs'cess. An abscess beginning in the envelope of areolar tissue ensheathing the prostate gland. See *Prostatic abscess*.

Peripsyx'is. (Περί, about; ψύξις, a becoming cold.) A general feeling of chill.

Peripterous. (Περίπτερος, winged all round.) *Bot.* Encircled by a thin, wing-like border.

Peripto'sis. (Περί, about; πτώσις, a falling.) A term used by the school of *Empirics* (q. v.), to denote any chance or unforeseen occurrence by which they happened to light upon a new disease or upon new remedies for any disease. It represented the first of their methods of gaining knowledge.

Peripy'e'ma. (Περιπύημα [πύεω], supuration round about, Hipp.) A collection of pus round the fang of a tooth. (Foësius.)

Peripy'e'is. Περί, round; πύσις, (a suppurating.) The process of formation of *Peripyema*.

Peripylephlebi'tis. (Περί; pylephlebitis.) Inflammation of the connective tissue immediately surrounding the portal vein.

Perirec'tal. (Περί; rectal.) The same as *Periproct'ic*.

Perire'nal. (Περί; renal.) The same as *Spinephric*.

Perirhi'nal. (Περί; rhinal.) Surrounding the nose.

Perirrh'ex'is. (Περίρρηξις, a breaking off round about.) A general breaking up or failing, as of the bones, muscles, &c.

Perirrhœ'a. (Περίρρœα, to flow round, to overflow.) Afflux of the fluids of the body from all parts towards an excretory organ; as, in dropsy, of water to the bowels or kidneys. Also, *Enuresis*.

Peris. (Πήρα, a leathern pouch.) The vagina. Also, the perineum. Also, the female

perineum. Also, the anus. Also, the testis. Also, the penis, especially the glans.

Perisalping'i'tis. (Περί; salpingitis.) Inflammation of that part of the pelvic peritoneum in immediate relation with the Fallopian tube, or *Salpinx*, occurring as a part of *Perimetritis*.

Perisarc. (Περίσαρκος, surrounded with flesh.) The chitinous covering possessed by many of the *Hydrozoa*.

Periscelis. (Περίσκελής [σκέλος, the leg], a garter or anklet. *F. jarretière*.) A sort of herpes associated with considerable formation of epidermic scales, occupying the part of the leg where the garter is worn.

Periscepas'trum. (Περίσκεπάζω, to cover all round.) The same as *Parascepastra*.

Periscleri'tis. The same as *Epi-scleritis*.

Periscop'ic. (Περίσκοπέω, to look around.) Allowing of distinct vision, both axially and obliquely.

P. lens. See *Lens, periscopic*.

Periscopism. (Περίσκοπέω.) The power of distinct vision over a wide field without change of the point of sight.

Periscyphis'mos. The same as *Periscythismus* (Castellus).

Periscythis'mus. (Περίσκυθίζω, to scalp in the Scythian fashion.) Term for an old operation (περίσκυθισμός) consisting in making transverse incisions on the forehead, and triangular ones above the temples; described by Paulus Aegineta, vi, 7, Adams' Transl. vol. ii, p. 258; and Aëtius, vii, 93. It was employed for habitual weakness of the eyes, pains of the head, &c.

Periso'ma. (Περί; σῶμα, the body.) The body-wall of the *Echinodermata*.

Periso'mal. The same as *Perisomatic*.

Perisomatic. Belonging to the *Perisoma*.

Periso'mial. The same as *Perisomatic*.

Perisperm. (Περί; σπέρμα, a seed.) *Bot.* Term originally used by Jussieu for the albumen in the seeds of plants (*Endosperm*); more recently, the albumen outside the *embryo sac*.

Perisper'mic. Of, or belonging to, *Perisperm*.

Perisphal'sis. (Περίσφαλσις, an upsetting.) An old term for *circumduction*. Also, term anciently used for the replacing of a dislocated bone into the joint-socket by *circumduction* (Hipp., *de Artic.* ii, 1).

Perisphinx'is. (Περίσφιγξις, a tying tight all round.) A binding round; *ligation*.

Perispleni'tis. (Περί; splenitis.) Inflammation of the capsule of the spleen. See *Splenitis*.

Perisporan'gium. (Περί; sporangium.) The cellular membrane covering the *sporangium* in ferns.

Per'ispore. See *Perisporium*.

Perispor'ium. (Περί; σπορά, a seed.) The same as *Sporangium*.

Peris'sad. (Περισσός, more than the regular number.) *Chem.* Having a valency which is represented by an odd number.

Zoöl. Belonging to the *Perissodactyla*.

Perissarteria. See *Arterioperissia*.

Peris'sia. (Περισσείω, to be superfluous or excessive. *F. perisie*; *G. Ueberfluss*.) An overflow or excessive quantity.

Perissodac'tyla. A Suborder of the

Ungulata, comprehending those hoofed quadrupeds that have an odd number of digits.

Perissodactylate. The same as *Perissodactyle*.

Perissodactyle. (Περισσοδάκτυλος, with more than the usual number of fingers or toes.) Having an odd number of digits.

Also, epithet for an individual with a supernumerary digit or digits on the hand or foot.

Perissodactyli. The same as *Perissodactyla*.

Perissodactylic. The same as *Perissodactyle*.

Perissodactylus. (Περισσοδάκτυλος.) Term for an individual with a supernumerary digit or digits on the hand or foot.

Perisso'ma. See *Perittoma*.

Perissopractical. (Περισσός, excessive; πρακτικός, busy.) Excessively active or busy. Term applied to an overworked physician; also, to one who gives medicine in excessively large doses.

Perisso'sis. (Περίσσωσις, from περισσός, from περί, exceedingly, very much.) Excessive abundance. Also, used generally by Hipp. as synonymous with *Perittoma* (q. v.).

Perisso'tes. The same as *Perissia*.

Peristach'yum. (Περί, round; στάχυς, an ear of corn.) G. G. Panzer's term for the external envelope, *glume*, of the flower in the *Graminaceæ*.

Peristal'sis. (From *Peristaltic*.) A rhythmic, vermicular contraction of the unstriped muscular fibres of a tubular organ, travelling along the tube, and tending to press onwards its contents. It occurs most characteristically in the walls of the intestines.

Peristaltic. (Περισταλτικός [περιστέλλω], compressing; δύναμις περισταλτική, the peristaltic action of the bowels, Galen.) Belonging to *peristalsis*.

P. action. The same as *Peristalsis*.

P. action, inverted. See *Antiperistaltic*.

P. move'ments. The same as *Peristalsis*.

Peristaltically. After the manner of *Peristalsis*.

Perista'men. See *Peristemon*.

Peristamin'ia. (Περί, stamen.) A Class (the sixth of Jussieu) of dicotyledonous, apetalous plants with *perigynous* stamens.

Peristaphyl'inus. (Περί, round; σταφυλή, the uvula, when swollen at the free end so as to resemble a grape on a stalk, Hipp.) Connected with the uvula; name applied to the tensor and levator palati muscles.

P. exter'nus. The tensor, or *circumflexus, palati*.

P. infe'rior. The same as *P. externus*.

P. inter'nus. The *Levator palati*.

P. supe'rior. The same as *P. internus*.

Peristaph'ylo - pharynge'al muscle. The *Pharyngo-staphylinus* or *Palato-pharyngeus muscle*.

Peristem. A contraction of the word *Perimeristem*.

Peristemon. (Περί, round; στήμων, a thread, stamen.) The *Perianth*.

Peristera anceps. (Περιστερά, a pigeon.) The *Pelargonium anceps*.

Peristerium. (Περιστερά, a pigeon.) A name applied to the *Verbena officinalis*, because pigeons are fond of it.

Perister'na. (Περιστέρνιον, the region

round the breast.) Term for the lateral parts of the chest.

Peristeromor'phæ. (Περιστερά, a pigeon; μορφή, form.) Huxley's name for the *Columbidæ*.

Periste'thium. (Περιστήθιος, surrounding the breast; τόπ., a breast-band.) 1. In Surgery, a chest-bandage.

2. Kirby's term for the anterior piece of the *medipectus* in insects; now used as synonymous with *Mesosternum*.

3. Applied, in Ichthyology, to a species of the *Dactylati* of Duméril, the *pectus* of which has a mailed appearance.

Peristolë. (Περιστολή, clothing.) Term for the *peristaltic* movement of the intestines.

Peristoma. (Περί, round; στόμα, the mouth.) Zoöl. The margin of the mouth, or of any mouth-like opening. Also, term for the mucous membrane round the openings of the intestinal glands.

Peristomal. Belonging to a *Peristoma*; also, surrounding the mouth.

Peristom'ata. Plur. of *Peristoma*. Also, according to Lamarck, a Family of the *Gastropoda*, characterised by possessing a complete *peristome*.

Peristomatic. Belonging to, or having the characters of, a *Peristoma*.

Peristome. (*Peristoma*.) Zoöl. The same as *Peristoma*.

Bot. The fringe of hair-like appendages round the mouth of the *theca*, beneath the operculum, in mosses.

Peristom'ia. Plur. of *Peristomium*.

Peristom'ial. The same as *Peristomal*.

Peristom'ic. Characteristic of a *peristoma*. Applied by A. Richard to the insertion of stamens round the orifice of the tube of the calyx; by Mirbel, to the nectary when it spreads out on the receptacle to the line of insertion of the stamens.

Peristom'ium. The same as *Peristome*.

Peristro'ma. (Περίστρομα, a covering.) Old term for the mucous lining of the stomach and intestines.

Peristy'lic. (Περί, round; στῦλος, a pillar; terminal -ικός.) Epithet applied to the insertion of stamens between the ovary and the calyx with partial adherence to the latter, in cases where the ovary is inferior.

Perisynov'ial. (Περί, synovial.) Immediately surrounding the synovial membrane.

Perisyp'hë. See *Perisymphe*.

Perisys'phë. (Περί, about; συσφαιρόω, to round off.) Desvau's term for *Perichæitium*.

Perisys'tolë. (Περί, around; συστέλλω, to contract.) The short interval of time between the systole and the following diastole of the heart; inappreciable except when the heart's action is failing.

Perisystol'ic. Relating to the *Perisystole*.

Peri'tasis. (Περίτασις [περιτείνω], a stretching or extension all round.) Extension on all sides; a swelling in all directions.

Peritendin'eum. (Περί, round; L. tendo, tendinis, a tendon.) The vascular connective tissue sheath of a tendon, which is well supplied also with nerves and lymphatics.

Perite'riion. See *Perete'riion*.

Perites'tis. (Περί; testis.) The same as *Perididymis*.

Perite'xis. (Περίτηξις, a melting all

PERITHECIUM—PERITONITIS

round.) An old term used by Hippocrates for the passing of a continual or frequent watery discharge from the bowels or elsewhere; applied especially to the alvine discharges in dropsy.

Perithe'cium. (Περί, round;θήκη, a case.) The tough receptacle that encircles the *theca* of Fungi.

Perithelium, vas'cular. The same as *Epithelium, vascular*.

Perithora'cic. (Περί, round; θώραξ, the breast.) Round the thorax.

Peri'tomē. (Περιτομή.) Circumcision.

Peri'tomy. (Peritome.) Circumcision of the cornea. See *Syndectomy*.

Peritonæ'al'gia. (*Peritoneum*; Gr. ἄλγος, pain. F. *péritonéalgie*; G. der [nervöse] *Bauchfellschmerz*.) Peritoneal neuralgia.

Peritonæorrh'e'xis. (*Peritonæum*; Gr. ῥήξις, a rending.) Laceration of the peritoneum.

Peritonæ'um. See *Peritoneum*.

P. duplica'tum. The Great omentum.

Peritone'al. (Περιτόναιος, or περιτόμιος, -ιον, stretched over.) Appertaining to the peritoneum.

P. cav'ity. The space included between the visceral and parietal layers of the *peritoneum*.

P. fe'ver. Term for *Peritonitis*.

P. fos'sæ. See under *Fossa*.

P. hook, Ad'ams'. See *Peritoneum hook, Adams'*.

P. lig'aments. Reflections of peritoneum from the abdominal walls to certain viscera; e.g. the ligaments of the liver, the false ligaments of the bladder, &c.

P. sac. Syn. for *P. cavity*. Also, term for that part in the embryo *Echinoderm* which gives rise to the peritoneum.

Peritone'ic. The same as *Peritoneal*.

Peritoneo'clysis. (*Peritoneum*; Gr. κλύσις, a washing out, especially by a *clyster*.) Washing out of the peritoneal cavity.

Peritoneovaginal. In connection with the peritoneum and vagina.

P. fis'tula. A vaginal fistula communicating with the peritoneal cavity.

Peritone'um. (Τό περιτόνιον, or τὸ περιτόναιον, the peritoneum; literally, that which is stretched over. F. *péritoine*; I. *peritoneo*; G. *Bauchfell*.) 1. The serous membrane of the abdominal cavity. It is much the most complicated and extensive of all the serous membranes. In the male, it forms a closed sac; but in the female, the fimbriated ends of the Fallopian tubes open into its cavity. It is composed of two layers, a *parietal*, lining the abdominal wall, and a *visceral*, thinner than the parietal layer, forming a more or less complete covering for most of the abdominal and pelvic viscera. The *parietal* layer is connected with the fascia that lines the abdomen and pelvis, by the subperitoneal areolar tissue. Along the middle line of the body anteriorly, and on the under surface of the diaphragm, this layer is more firmly adherent than elsewhere.

2. The structure in the *Brachiopoda* that holds the alimentary canal suspended in the perivisceral cavity.

3. The outer layer of the digestive canal in the *Insecta*.

P., devel'opment of. With the rest of the lining of the coelome, or body-cavity, the peritoneum is developed by a superficial delami-

nation from the mesoblast. The stomach, originally placed longitudinally in the abdomen, becomes horizontal, the pylorus and duodenum passing to the right, the original left side of the primitive stomach thus becoming ventrally, and the original right side dorsally, situated. The *mesogastrium* grows rapidly and becomes doubled on itself, enclosing a cavity; and a fold of peritoneum arising from the original ventral border, now the lesser curvature of the stomach, and passing to the liver, becomes contracted round the entrance into the *cavity of the great omentum*, forming the *gastro-hepatic* or *lesser omentum*, and the *foramen of Winslow*. The dorsal fold of the great omentum only later becomes united with the transverse mesocolon, being originally quite unconnected with it. The occurrence of umbilical hernia is due to the persistence of foetal conditions, in which more or less of the intestinal canal is contained in the umbilical cord.

P.-hook, Ad'ams'. A hook consisting of a steel bar bearing two backward-bent teeth, and mounted on a handle. It is used to raise the peritoneum, for facility in opening it in abdominal operations.

P., pari'etal. See *Peritoneum*.

P., toi'let of. Term for the cleaning out of the peritoneal cavity at the completion of an abdominal operation.

P., vis'ceral. See *Peritoneum*.

Peritonit'ic. Belonging to, or affected with, *Peritonitis*.

Peritonit'is. (*Peritoneum*; terminal -itis. F. *péritonite*; G. *Bauchfellentzündung*.) Inflammation of the peritoneum. It may be either *acute* or *chronic*, and either general or local.

P., acute'. The cause is most often a lesion of or near the abdominal viscera, as, for example, ulceration of the stomach or intestines, abscess of the liver, &c. The inflammation is often set up by the passage of irritating products into the peritoneal cavity. Bright's disease is an occasional cause of peritonitis. Cold is stated to be a cause in some instances. Acute peritonitis may begin and continue as a local inflammation, resulting in an abscess. The symptoms of acute general peritonitis are constant pain, first localised afterwards diffused, with great tenderness; vomiting, later on becoming feculent; a rise of temperature to 102°, or even 104° or more (in some cases, the temperature is normal or subnormal); and a small, hard, frequent pulse. Collapse is usually a marked symptom, and hicough is very common. The bowels are usually constipated, though diarrhoea sometimes occurs. The urine is scanty, and may be retained. The disease is very fatal. In *acute circumscribed peritonitis* the constitutional symptoms are less severe, and the abdominal symptoms are more localised. The disease may subside, or an abscess may form, and burst externally, or into the chest, or one of the abdominal viscera. Its commonest causes are typhlitis, and, in the female, inflammation in connection with the uterus or its appendages. It is much less fatal than the *general* variety.

P., cel'lular. Peritonitis in which the process does not go further than hyperplasia of the endothelial cells.

P., chron'ic. This may follow upon acute peritonitis, especially when localised, or be caused by local irritation. It also sometimes occurs in

PERITONSILLAR—PERIVASCULITIS

Bright's disease. The symptoms are variable. There is usually pain, or a feeling of abdominal discomfort. Occasional vomiting may occur; there is generally constipation. Irregular fever may be present. Locally, there may be signs of fluid in the peritoneal cavity, or irregular resistance from matting together of viscera. The prognosis is, as a rule, unfavourable.

P., chronic adhesive. Chronic peritonitis in which the formation of adhesions is very marked; it may be either local or diffuse.

P., chronic hæmorrhagic. Chronic peritonitis in which there is a false membrane supplied with thin-walled vessels, hæmorrhage occurring into its substance.

P. deformans. A form of primary chronic general peritonitis of the *adhesive* kind, in which considerable thickenings of the peritoneum take place, the mesentery often contracting, and the omentum shrinking and becoming twisted. The abdominal organs that have a peritoneal covering become extensively adherent. The liquid effused may be either in small or large amount. This form of peritonitis is usually the result of great engorgement of the abdominal vessels, as in morbus cordis or hepatic disease.

P., erysipelatous. It was formerly held that erysipelas was a cause of acute peritonitis; but this is not now believed to be the case.

P., erythematous. Term for *Puerperal fever*.

P., external. Term used by J. P. Frank and by Hildenberg to denote a variety of peritonitis in which the anterior parietal peritoneum was supposed to be specially affected. There was extreme tenderness of the abdominal walls, with inflammation of the muscular and connective tissue, leading to localised swellings, with hardness and tension; and these were associated with the usual symptoms of peritonitis. It is not considered now that such a variety can be recognised clinically.

P., fibrino-purulent. Peritonitis in which there is a formation of plastic lymph, together with a certain amount of pus.

P., hepatic. *Perihepatitis*.

P., non-plastic. Term for *Puerperal fever*.

P., pelvic. See *Perimetritis*.

P., puerperal. *Puerperal fever*.

P., septic. Peritonitis consequent upon *sepsis*, either from perforation of one of the viscera, or spreading from the uterus. In this variety the pus is very foetid. The disease is extremely fatal.

P., tubercular. This is generally co-existent with tubercle elsewhere. The peritoneal surface is studded over with miliary tubercles, which are usually most numerous on the diaphragmatic peritoneum and in the flanks. The great omentum often undergoes caseous infiltration, and becomes irregularly thickened and contracted, in the form of plaques which can be felt by abdominal palpation. The intestines become matted together, and the mesentery is often affected in the same way as the omentum. Ulceration of the intestine may coexist. The mesenteric glands become involved, and may sometimes be felt. The symptoms are mainly those of chronic peritonitis. Progressive loss of flesh and strength occurs, with irregularity of the bowels; there is not usually very marked ascites. The skin round the umbilicus is sometimes red and infiltrated. The usual tendency

is towards a fatal ending, but many apparent recoveries are recorded.

P., typhohæmic. (*Typhus*; αἷμα, blood.) Term for *Puerperal fever*.

Periton'sillar abscess. The abscess that often forms in acute tonsillitis, usually round one tonsil only. The main symptoms are pain and tension. The palate in front of the tonsil bulges a good deal, on the affected side.

Peritonsillitis, suppurative. See *Tonsillitis, suppurative*.

Peritonydrocystis. (*Peritoneum*; *hydrocystis*, a hydatid.) Peritoneal hydatid.

Peritra'cheal. (Περί; *tracheal*.) Immediately surrounding the *trachea* in the *Insecta*.

Peritre'ma. (Περί; *τρῆμα*, a hole.) The minute chitinous ring often present encircling the *spiracle* in *Insects*. Also, the margin of the aperture of a univalve shell.

Peritre'matous. Belonging to *Peritrema*.

Peritropè. (Περί, about; *τροπή*, a turning round.) A turning round or whirling.

Peritropous. (*Peritropè*). *Bot.* Epithet applied by L. C. Richard to seeds directed from the axis of the fruit towards the sides of the pericarp. Also, having the radicle directed towards the side of the pericarp.

Perittarte'ria. See *Arterioperissia*.

Peritto'ma. (Περίσσωμα, Att. περίττωμα, anything over and above; especially that which remains after digestion of food, namely, excrement.) Excrement.

Peritotès. (Περιστός, or περιττός, excessive.) The same as *Perissia*.

Perityphlitic. (*Perityphlitis*.) Relating to, or affected with, *Perityphlitis*.

P. abscess. See *Abscess, perityphlitic*.

Perityphlitis. (Περί, round; *typhlitis*.) Used in two senses:

1. As synonymous with *Typhlitis*.
2. As meaning an inflammation of the connective tissue behind the cæcum, which runs a chronic course and is very seldom fatal, unless from prolonged suppuration.

Periu'terine. (Περί; *uterus*.) The same as *Perimetric*.

P. hæ'matocele. See *Hæmatocele, periuterine*.

Perivas'cular. (Περί; *vasculum*, a small vessel.) Situated round a blood-vessel.

P. canals'. See *P. sheath*.

P. lymphatics. A lymphatic vessel or close interlacement of lymphatic vessels, often found partly or wholly ensheathing an artery or vein.

P. lymphatics of spleen. See under *Spleen*.

P. sheath. The fibrous sheath which encloses the blood-vessels of the pia mater, and is formed by that membrane itself. The diameter of the lymphatic canal thus formed may be considerably larger than that of the vessel it encloses. The pia mater sends inwards a similar sheath enclosing the vessels as they pass into the brain.

P. space. See *Virchow-Robin's space*.

Perivascu'litis. (Περί; *L. vasculum*, dim. of *vas*, a small vessel; *terminal-itis*.) Inflammation of the *perivascular sheath* of a blood-vessel; especially used of the retinal vessels.

P. spec'fica. A *perivascu'litis* due to a

PERIVISCERAL—PERMEABILITY

specific germ, or to substances produced by that germ.

Perivisc'eral. (Περί; viscus.) Round the viscera.

P. cav'ity. The body-cavity of the embryo.

Perivitelline space. (Περί; vitellus.) The space in the developing ovum formed between the *zona pellucida* and *vitellus*, by the shrinking of the latter.

Periwinkle. (Mid. E. *peruenke*, a periwinkle, with dim. suffix *-le*, and insertion of *i*. Doubtless a name originally given to a twining plant, being allied to *L. vincire*, to bind. F. *pervenche*; I. *pervinca*; G. *Sinngrün*.) Bot. Name common to plants of the Genus *Vinca*.

Zoöl. (Anglo-Sax. *pinewinclan* or *wine-winclan*, sea-snails.) Any species of the Genus *Litorina*.

P., great'er. Common name for *Vinca major*.

P., les'ser. *Vinca minor*.

Perizo'ma. (Περίζωμα, a belt; from περιζώννυμι, to gird round.) A girdle. Anciently used for the diaphragm (Gorræus). Old term for a truss. Also, a term for *Herpes zoster*.

Perizo'sis. (Περίζωσις, a girding round. F. *périzose*; G. *Umgürtung*.) Used in Med. and Surg. to denote a girding or bending round.

Perizo'stra. (Περίζωστρον, a belt.) A belt or bandage.

Per'kinism. See *Metallic tractors*.

Per'kinist. One who practises or believes in *Perkinism*.

Perkinis'tic. Belonging to *Perkinism*.

Perkins' metal'lic trac'tors. See *Metallic tractors*.

Perla. (I. and S.) 1. A name for the *Margarita*, or pearl, regarded in ancient times as a panacea.

2. Formerly used to designate *Pannus*; also, a spot, *Leucoma*, on the centre of the cornea.

3. Name for a Genus of the *Perlidae*.

4. Term for a gelatin capsule. (Billings.)

Perlar'ious. (*Perla*.) Having a pearly lustre; applied to bivalve shells having pearls on their interior surface.

Applied also to a Family, *Perlaria*, of the Neuroptera, having the *Perla* for their type.

Perla'ta materia. Old term for a preparation used to cure *hypochondriasis*, according to Dan. Ludovicus, *Diss. i.*, Pharm. p. 121, in which the pearl (*perla*) was included.

Perlate acid. Bergman's name for acid phosphate of sodium.

Perla'tum medicamen'tum. Old name for any medicine of which the *Perla* was an ingredient.

Perla'tus. (*Perla*.) 1. Med. Pharm. Belonging to the *Perla*; the same as *Margaritaceus*.

2. Zoöl. Term applied to bodies that are grey like pearl, marked with white shining spots, or studded with round, pearly granulations.

3. Bot. Term applied to leaves that are raised from small, firm, round eminences; to expansions of lichens the edges of which are studded with round tubercles, like a string of pearls; and to plants with white flowers disposed in small oblong clusters.

4. Mineral. Pearly, as applied to a lustrous surface.

5. A word of the same spelling, but different derivation (L. *per*, through; *fero*, *latum*, to carry), signifies brought or carried through.

Perle. (F. and G.) A pearl.

In Pharmacy, a *globule* coated with gelatine, and containing some liquid substance, either volatile or of unpleasant taste.

P.s of A'piol. These have been given in amenorrhœa, dysmenorrhœa, and suppressio mensium. Dose, 1 or 2 perles containing 3 minims each. (Ex. Ph.)

P.s of carbol'ic ac'id. Perles made up with carbolic oil, each containing 1 grain of the acid. Dose, 1 or 2. (Ex. Ph.)

P.s of chlo'roform. Each contains 3 minims. Dose, 1 or 2. (Ex. Ph.)

P.s of ether. Each contains 3 minims. Dose, 1 to 4. (Ex. Ph.)

P.s of ether and turpentine. Given to relieve the pain of gall-stone colic. Dose, 1 to 4. (Ex. Ph.)

P.s of gual'acol. Each contains 1 minim of guaiacol dissolved in oil. Dose, 1 or 2, the maximum dose of guaiacol being 2 minims. (Ex. Ph.)

P.s of monobrom'ated cam'phor. Each perle contains 2 grains of *Camphora monobromata*. Dose, 1 to 5. (Ex. Ph.)

P.s of phos'phorated oil. Imported from France. They are prepared in three sizes, containing respectively 1-32 grain, 1-65 grain, and 1-100 grain each. Dose, 1 perle after meals. (Ex. Ph.)

P.s of sulphate of quinine'. (Pelle-tier's.) Each perle contains 1½ grain of quinine sulphate; for dose, see *Quinine sulphas*.

P.s of tar. Each contains approximately 2½ grains of *Pix liquida*. Dose, 1 or 2 perles. (Ex. Ph.)

Perli'dæ. (Nom. pl.) A tribe of pseudonopterous Insects whose type is *Perla*.

Perl'ine. Belonging to the *Perlidae*.

Permanent. (L. *per*, through; *maneo*, to remain.) Lasting throughout life; used in Botany in the same sense as *Persistent*.

P. car'tilage. (L. *cartilago perennis*. G. *bleibende Knorpel*.) See under *Cartilage*.

P. hard'ness of wa'ter. See under *Water*.

P. teeth. (F. *dents permanentes*. G. *bleibende Zähne*.) See *Dentition*, permanent and *d.*, second.

Permanganas. *Permanganate*.

Permanganate. (L. *per*, with intensive force; *manganate*.) A salt of *Permanganic acid*.

P. of cal'cium. Used for making disinfecting mouth lotions. It has but little taste.

P. of potas'sium. See *Potassii permanganas*.

P. of so'dium. See under *Sodium*.

P. of zinc. See under *Zinc*.

Permangan'ic acid. Mn_2HO_4 . This acid is obtained in aqueous solution by decomposition of the barium salt with sulphuric acid. It may be obtained pure by dissolving potassium permanganate in sulphuric acid, and distilling the greenish-yellow solution over the water-bath at 60° or 70° C. Violet vapours of pure permanganic acid appear, and then condense to form a soluble greenish-black liquid. The pure acid possesses very great oxidising power.

Permeability. (*Permeable*. F. *permeabilité*; I. *permeabilità*; G. *Durchdringlichkeit*.) The state of being permeable, that is, capable of being passed through without dislocation or breaking of parts; especially used of

substances that allow the passage of fluids. (*Century Dict.*)

Permeable. (L. *per*, through; *meo*, to pass; *habilis*, suitable.) Having the property of Permeability.

Permis'sus. (L. *permitto*, to allow to pass through.) Term for a *Licentiate*.

Permis'tio. (L. *per*, through; *misceo*, *mistum*, or *mixtum*, to mix.) The same as *Permixtio*.

Permix'tio. (L. *per*, through; *misceo*, *mixtum*, to mix.) 1. Term for a thorough mingling or mixture.

2. The same as *Coitus*.

Permutate. (L. *permuto*, to exchange.) De Candolle's epithet for flowers in which the abortion of the sexual organs determines a marked change in the appearance of the flower.

Pernambu'co wood. Peach wood, or Brazil wood; obtained from the *Cesalpinia echinata*.

Perni'cious. (L. *perniciosus*, destructive. G. *verderblich*, *schädlich*.) Destructive; tending towards a fatal issue.

P. anæ'mia. See *Anæmia*, progressive pernicious.

P. fe'ver. See *Fever*, pernicious.

P. intermit'tent fe'ver. A syn. for *Pernicious fever*. Trousseau describes three main varieties, viz. algid, burning, and sudoral. He also describes what are called the "*comitata*" group, in which there is functional disturbance of various organs, and, under this head, the following groups: apoplectic, cardialgic, choleraic, comatose, convulsive, delirious, dysenteric, gas-tralgic, hæmatemesic, hæmorrhagic, lethargic, peripneumonic, petechial and scorbutic, pleuritic, soporose, syncopic, and, finally, tetanic or epileptic.

P. malar'ial fe'ver. A syn. of *P. fever*.

Pernio. (Πέρνα; from πτέρνα, the heel.) A chilblain.

Pernocta'tio. (L. *per*, through; *nox*, *noctis*, the night.) The same as *Pervigilium*.

Perobrachi'us. (Πηρός, maimed; βραχίων, the arm.) Epithet for an individual with either congenital absence, or malformation, of the arms.

Peroceph'alus. (Πηρός, maimed; κεφαλή, the head.) Gurlt's term for a class of foetal monstrosities characterised by defective formation of the head.

Perochi'rus. (Πηρός, maimed; χείρ, the hand.) Having a malformation of one or both hands.

Perocid'ium. (F. *pérocidion*.) Necker's name for the *involucre* that surrounds the fruit of mosses.

Perocor'mus. (Πηρός, maimed; κορμός, the trunk of a tree.) Gurlt's term for defective formation of the body or trunk.

Perodactyl'eus. See *Perodactylus*.

Perodactyl'ius. The same as *Peronodactylus*.

Perodac'tylus. (Πηρός, maimed; δάκτυλος, a finger.) Having malformed fingers.

Perodyn'ia. (Πήρα, a leathern pouch, in this case the stomach; δόδυνη, pain.) The same as *Cardialgia*.

Pero'ma. (Πήρωμα, a laming or maiming of the limbs or senses.) A lame or maimed individual.

Peromel'ia. (*Peromelus*.) Congenital mutilation or defective formation of the limbs.

Pero'melus. (Πηρός, maimed; μέλος, a limb.) An individual having the deformity *Peromelia*.

Peronæ'us. See *Peroneus*.

Peronarthro'sis. (*Arthrosis*.) See *Saddle-joint*.

Perona'tus. (*Peronē*, the fibula. F. *péroné*; G. *gestiefelt*.) Epithet applied by Willdenow to the stem of the mushroom.

Per'onē. (Πηρόνη, anything pointed for piercing; afterwards used to designate both the *fibula* and the *radius*.) The *fibula*.

Perone'al. (*Peronē*.) Belonging to the *Peronē* or *fibula*.

P. artery. (F. *artère péronière*; G. *Wadenbeinarterie*.) A branch of the *posterior tibial artery*. It arises about one inch below the lower border of the popliteus muscle, passes first downwards and slightly outwards upon the *tibialis posticus*, then vertically upon the inner border of the *fibula*. At the lower end of the interosseous space it gives off its *anterior peroneal branch*, and is thence continued as the *posterior peroneal artery* over the inferior tibio-fibular joint and posterior surface of the external malleolus, breaking up into *terminal branches* running over the outer and posterior surfaces of the *os calcis*. It gives off also *muscular branches*, a *communicating branch* to the posterior tibial, and a *medullary branch* to the *fibula*.

P. artery, ante'rior. This branch arises from the *P. artery* about one inch above the ankle, passes forwards below the interosseous membrane, and then downwards in front of the lower tibio-fibular joint to the outer surface of the *tarsus*. It forms communications with the *external malleolar branch* of the posterior tibial, and, by its terminal twigs, with the *tarsal* and *posterior peroneal arteries*; and it gives off also *muscular* and *articular twigs*.

P. artery, descen'ding. The *P. artery*, posterior.

P. artery, perforating. The *P. artery*, anterior.

P. artery, poste'rior. See under *P. artery*.

P. bone. See *Peronē*.

P. commu'nicating nerve. The largest of the cutaneous branches of the *peroneal nerve*. It usually joins the short saphenous nerve in the lower half of the back of the leg; but is sometimes continued as a separate nerve, giving cutaneous branches as far as the heel and outer side of the foot.

P. groove. Term for the groove on the outer surface of the *os calcis* in which the tendon of the *peroneus longus* lies.

P. mus'cles. See under *Peroneus*.

P. nerve. See *Popliteal nerve*, external.

P. ridge. The same as *P. spine*.

P. spine. A ridge on the outer surface of the *os calcis*, separating the grooves for the respective tendons of the *peroneus longus* and *p. brevis*.

P. tubercle. The same as *P. spine*.

P. type of mus'cular atrophy. This is an affection which was fully described by Dr. Tooth in 1886, and by Charcot and Marie in the same year. It occurs in early life, frequently after an attack of measles, more in males than females, is occasionally hereditary, though more often it is members of the same generation who suffer. Wasting begins first in the *extensor longus pollicis pedis* or *extensor communis digitorum*, or in the *peronei*. As the disease

PERONEDACTYLIUS—PERONOSPORA

advances, it attacks the small muscles of the foot, then the muscles of the calf, and later those of the thigh. The muscles of the hands and arms are invaded much later. Double talipes varus and clawing of the fingers commonly result from the unequal affection of the muscles. The pathology of the disease is at present uncertain, but it seems to resemble a neuritis rather than a spinal affection, though cases occur which apparently combine both forms. Fibrillation of the muscles is usually present, together with early loss of faradic irritability and distinct reaction of degeneration.

P. veins. The two venæ comites of the *P. artery*. They open into the posterior tibial veins.

Peronedactyl'ius. See *Peronodactyl'ius*.

Perone'o-. (*Peronē*.) A prefix used to signify in connection with, or belonging to, the fibula.

P.-calca'neal. Belonging to the *peronē* and *calcaneum*.

P.-calca'neus inter'nus. See *Musculus accessorius ad muscolum accessorium*.

P.-in'fra-phalangettia'nus. (*F. phalangette*, a terminal phalanx. *F. péronéo-sous-phalangettien.*) Name applied by Chaussier in the same sense as *peroneo-phalangi'nius* by Dumas.

P.-in'fra-tarsia'nus. (*Tarsus. F. péronéo-sous-tarsien.*) Name applied by Chaussier to the *peroneus longus* muscle, because it passes from the fibula, beneath the tarsus, to the first metatarsal bone.

P.-mal'leolar. (*F. péronéomalléolaire.*) Belonging to the fibula and (external) malleolus; epithet applied by Chaussier to the external saphenous vein.

P.-phalanginia'nus. (*Phalanx. F. péronéophalanginien.*) Belonging to the fibula and a phalanx of one of the toes; applied by Dumas to the *flexor longus hallucis* muscle.

P.-su'pra-metatarsia'nus ma'jor, and min'or. (*F. péronéosus-métatarsien.*) Name applied by Chaussier to the *peroneus brevis* and *peroneus tertius* respectively, as attached, the one to the fibula, and the other to the base of the fifth metatarsal bone.

P.-su'pra-phalangettia'nus. (*F. phalangette*, a terminal phalanx. *F. péronéo-sus-phalangettien.*) Name applied by Chaussier (*Peron.-sup.-phal. communis*) to the *extensor longus digitorum pedis* muscle; also (*Peron.-sup.-phal. pollicis pedis*) to the *extensor proprius hallucis* muscle.

P.-su'pra-phalanginia'nus. Name applied by Dumas to the *extensor proprius hallucis*, the *Peron.-sup.-phal.-pollicis pedis* of Chaussier.

P.-ti'bi-su'pra-phalangettia'nus. (*F. péronéo-tibi-sus-phalangettien.*) Name applied by Dumas to the *extensor longus digitorum pedis*, the *Peron.-sup.-phal. communis* of Chaussier.

P.-tib'ial. Belonging to the *peronē* and *fibula*; the same as *Tibio-fibular*.

Perone'um. (*Peronē*.) The same as *Peronē*.

Perone'us. (*Peronē*.) Belonging to the *peronē* or fibula; used to designate the several *peronei* muscles.

P. accessor'ius. See *P. quinti digiti*.

P. anti'cus. The *P. brevis*.

P. brev'is. This muscle arises from the

lower two-thirds of the outer surface of the fibula, and from the intermuscular septum on each side of itself. Its tendon passes behind the external malleolus, and is inserted into the base of the fifth metatarsal bone. There is generally a slip from this tendon to the extensor tendon of the little toe. This muscle and the *P. longus* are both supplied by the musculo-cutaneous branch of the external popliteal nerve.

P. lon'gus. A muscle arising from the outer tuberosity of the tibia, the head and upper two-thirds of the outer surface of the fibula, from the two intermuscular septa between which it lies, and from the fascia of the leg. Its tendon passes behind the external malleolus, over the outer surface of the os calcis, along the groove in the plantar surface of the cuboid bone, and then inwards and forwards across the sole, to be inserted into the base of the first metatarsal bone, and partly into the internal cuneiform, another slip being sometimes attached to the base of the second metatarsal. Its nerve-supply is the same as that of the *P. brevis*.

P. me'dius. Term used both for the *P. brevis* and the *P. quinti digiti*.

P. post'icus. The *P. longus*.

P. post'icus brev'is. The *P. brevis*.

P. post'icus lon'gus. The *P. longus*.

P. pri'mus. The *P. longus*.

P. quar'tus. The same as *P. quinti digiti*.

P. quin'ti dig'iti. A muscle present in many mammals, arising from the external surface of the fibula just below the fibular attachment of the *peroneus longus*, and inserted into the outer side of the base of the first phalanx of the fifth toe. It is present in some human subjects (about one-third examined, Testut); but is usually represented merely by a tendinous slip between the *peroneus brevis* and the tendon of the *extensor longus* to the little toe.

P. quin'tus. The same as *P. quinti digiti*.

P. secun'dus. The *P. brevis*.

P. sex'tus. The same as *P. quinti digiti*.

P. ter'tius. A muscle arising just below the *extensor longus digitorum pedis* from the lowest fourth of the anterior surface of the fibula, from the corresponding part of the interosseous membrane, and from the intermuscular septum which separates its outer surface from the *P. brevis*; and inserted into the base of the dorsum of the fifth metatarsal bone. Its nerve-supply is from the anterior tibial nerve.

Peronodactyl'ius. The same as *Peronodactyl'ius*.

Peronodactyl'ius. (*Περόνη*, the fibula; *δάκτυλος*, a digit. *F. péronéo-dactyl'ien.*) Pertaining to the fibula and digits (of the toes); term for the *flexor longus digitorum pedis*.

Peronospora. (*Περόνη*, anything pointed; *σπορά*, a seed.) A Genus of phycomycetous Fungi, giving its name to the Order *Peronosporæ*.

P. infes'tans. Since 1845 this species has been known in all countries where the potato is grown, as the cause of the rot. It first shows itself on the leaves, which curl up, blacken, and then become dry. The fungus grows on the under surface of the leaves, and the spores drop off, get washed by the rain into the earth, and thus reach the tubers, on which they grow, finally causing them to decay. Sometimes the disease begins within the tubers. It is occasionally propagated very rapidly by zoospores, which are produced within the spores.

P. ver'ans. This species lives as a saprophyte on potato tubers; but is unable to penetrate into the living tissues of the plant.

P. vitt'cola. (De Bary.) This species is a parasite upon the vine; it was first introduced into Europe from America in 1877. Millardet has found that by repeated hybridisation of the European vine (*Vitis vinifera*) with American species, it is possible to produce a vine that can withstand this fungus and other fungi, and also the *Phylloxera*.

Peronospora'cæ. The same as *Peronosporæ*.

Peronospor'æ. (*Peronospora*.) A Family of phycomycetous *Fungi*, most of which live as parasites within living plants, but some of which live as saprophytes. They have a large, vegetative *mycelium*, and they propagate almost entirely asexually, either by non-motile gonidia or by swarm-spores.

Pero-olfactor'ius. Wilder's name for that part of the *olfactory bulb* from which the filaments of the olfactory nerve arise. (Billings.)

Peroplas'ia. (Πηρός, maimed; πλάσις, a moulding.) Malformation due to defective development.

Peropter'ës. (Πηρός, maimed; πτερόν, a wing.) Duméril's term for a Family of osseous *Holobranchii*, with complete absence of the ventral fins and a partial absence of the other fins.

Peroptery'gil. (Πηρός, maimed; πτέρυξ, πτέρυγος, a wing.) A name used by Goldfuss, Ficinus and Carus for an order of fishes without ventral fins.

Peropus. (Πηρός; πούς, ποδός, a foot.) Having a malformation of one or both feet.

Peros'is. (Πηρός, maimed.) Old term for *Læsis*; also, for a deficiency in the number of digits; also, for other organic lesions of the limbs and joints (Fœsius).

Perosmic'acid. (L. *per*, through, completely; *osmic*.) The same as *Osmic acid*.

Perosom'ous. (Πηρός, maimed; σῶμα, the body.) Having an imperfectly or badly formed body.

Perosplanch'nica. (Πηρός, maimed; σπλάγχχνον, any part of the viscera.) Congenital malformation of viscera.

Pero'tis latifolia. An Indian plant, Order *Gramineæ*. It has the reputation in India of being diuretic.

Perox'idate. The same as *Peroxidise*.

Peroxida'tion. The process of being completely oxidised.

Peroxide. (L. *per*, with intensive force; *oxide*.) That oxide which contains the greatest possible proportion of oxygen in combination with a polyvalent element or basic radical.

P. of hy'drogen. See *Hydrogen peroxide*.

P. of iron. See *Ferri peroxidum*.

P. of man'ganese. See *Manganese peroxide*.

Perox'idise. To completely oxidise; also, in a passive sense, to undergo the process of *Peroxidation*.

Perox'idum. See *Peroxide*.

Peroxyda'tus. (L. *per*; *oxidum*, or *oxydum*.) Adjective applied to a metal or other element combined with oxygen in the form of a *peroxide*.

Peroxy'dum. The same as *Peroxidum*.

Perpendicular external mus'cle of Za'glas. The vertical fibres of

the tongue which decussate with the transverse fibres and the insertions of the genio-hyo-glossus, and form curves in each half of the tongue, with their concavity outwards, the outermost fibres being the shortest.

P. line of ul'na. The longitudinal line on the posterior surface, separating an inner, smooth surface covered by the extensor carpi ulnaris, from an outer, irregular surface covered by the extensor muscles of the thumb and the extensor indicis.

P. plate of eth'moid. The central vertical plate. See *Ethmoid bone*.

Perpendic'ulum hep'atis. (L. *perpendicularum*, a plumb-line; *hepar*.) The suspensory ligament of the liver.

Perperacu'tus. (Intensive form of *peracutus*.) Excessively acute; applied to disease.

Perplex'i mor'bi. (L. *perplexus*, entangled; *morbis*, a disease.) The *Complications* of a disease.

Perplica'tion. (L. *per*, through; *plico*, to fold.) A method of arresting hæmorrhage from a cut artery, by making an incision in its sheath near the cut end of the vessel, and passing the cut end by means of forceps through the aperture in the sheath, so as to bend the vessel on itself.

Perrosin. A name for *Frankincense*.

Per'ry. (F. *poiré*; I. *sidro di pera*; G. *Birnwein*, *Birnmast*.) A vinous liquor made from pears in the same way as cider is from apples.

Per'ry county springs. Pennsylvania. Warm springs, temperature 67° F.

Per'ry springs. Pike County, Illinois. Mild alkaline waters. The *Middle* or *Magnesium Spring* contains in 1 pint, potassium carbonate .199 grains, magnesium carbonate 1.260, carbonate of iron .051, calcium carbonate 1.38, sodium sulphate .055, double silicate of potassium and sodium .33, sodium silicate .015 grains. The *Upper* or *Sulphur Spring* contains in 1 pint, potassium carbonate .181 grains, magnesium carbonate .097, carbonate of iron .04, carbonate of lime 1.715, sodium sulphate .137, double silicate of potassium and sodium .285, sodium silicate .048 grains. The *Lower* or *Iron Spring* contains in 1 pint, potassium carbonate .157 grains, magnesium carbonate .777, carbonate of iron .025, calcium carbonate 1.708, sodium sulphate .173, double silicate of potassium and sodium .431, sodium silicate .072, aluminium silicate .034 grains. They issue from the limestone, and have a flow of from 1 to 2 gallons a minute.

Per'sea. (Περσέα; L. *persea*.) An Egyptian tree whose fruit grows from the stem; also, term applied to the Genus *Laurus* (Kraus).

P. cam'fora. The *Camphora officinarum*.

P. cas'sia. The *Cinnamomum cassia*.

P. cinnamo'mum. The *Laurus cinnamomum*.

P. cube'ba. The *Cubeba officinalis*.

P. gratis'sima. The Avocado, or Alligator Pear, Order *Laurineæ*, a large South American tree sometimes more than sixty feet high, growing on the eastern slopes of the Andes. Its berry is fleshy and butyraceous (*beurre végétale*), tastes like pistachio, and is eaten with meat and spices. Many kinds of animals feed on it. Its seeds yield a black dye, used for marking linen, and the berry itself yields an oil, composed of 70 per cent. *olein* and 21.9 per cent. *palmitin* (Oude-

PERSECUTION—PERSPIRATION

mann's), used in soap-making and for illuminating purposes. The seeds are also astringent, and the leaves are considered to be useful in chest-affections, and locally for wounds.

P. pichurim. See *Pichurim* beans.

P. sas'safras. The *Sassafras officinale*.

Persecution, insan'ity of. See under *Insanity*.

Per'seite. A body resembling mannite, present in the leaves and fruit of *Laurus persea*.

Pers'ian ap'ple. A name for the *Peach*.

P. bal'sam. The *Tinctura benzoini composita*, B. Ph.

P. ber'ry. The fruit of several species of *Rhamnus*, from which is obtained a yellow dye.

P. fire. A name for *Anthrax*.

P. in'sect-pow'der. A name for the powdered flowers of *Pyrethrum carneum* and *P. roseum*, which are used to kill insects.

P. man'na. See *Manna*, *Persian*.

P. o'plum. See *Opium*, *Persian*.

P. pellitory. Name for both the *Pyrethrum carneum* and *P. roseum*. See also *Persian insect powder*.

P. tick. The *Argas persicus*.

P. ul'cer. See *Ulcers*, *endemic*.

Pers'ica. (From *Persia*, of which country the peach is a native.) A Genus of the *Rosaceæ*; also, the Peach-tree. See *Amygdalus persica*.

P. læ'vis. The Nectarine. Fruit edible, having a soft pericarp. It is probably a variety of *P. vulgaris*; but its origin is unknown.

P. vulgar'is. The peach-tree. See *Amygdalus persica*.

Persicaria. (*Persica*, the peach-tree; because its blossoms are like those of the peach.) The specific name of the *Plumbago* or leadwort. See *Polygonum persicaria*.

P. mi'nor. The *Polygonum persicaria*.

P. mit'is. (L. *mitis*, mild.) The *Polygonum persicaria*.

P. u'rens. The *Polygonum hydropiper*.

P., wand'spiked. The *Polygonum virginianum*.

P., wa'ter. The *Polygonum amphibium*.

Pers'ico. An Italian liqueur flavoured with the kernel of the peach.

Pers'icot. (L. *persicum*, a peach.) An alcoholic drink prepared by macerating the kernels of peaches, apricots, &c., with lemon peel and spices, in alcohol.

Pers'icus. (F. *persique*; G. *persisch* or *parsisch*.) Belonging to Persia, Persian; applied to the peach, *Malum persicum*. Formerly applied, *Ignis persicus*, to a disease accompanied by a burning heat; either *anthrax*, or *carbuncle*, or some disease very like these. Also, applied to the increased heat in *angina*, or sore-throat.

P., ig'nis. (*Persian fire*.) See *Ignis persicus*.

Persim'mon. The fruit of *Diospyros virginiana*, very astringent when unripe, but edible when ripe. See also *Chinese persimmon* and *Japanese persimmon*.

Persim'mon. The same as *Persimmon*.

Persis'ten, fe'bris. (L.) Persistent fever. Term for an intermittent fever with regularly-recurring paroxysms. (Hooper.)

Persis'tent. (L. *persisto*, to continue standing; hence, to persist.) Permanent. Also, in *Bot.*, evergreen; applied especially to leaves that remain on a plant one winter or longer.

P. pulp. See *Tooth pulp*, *persisten*.

P. pupil'lary mem'brane. The capsulo-pupillary membrane forms in the earlier

stages of development of the eye a complete fibro-vascular investment for the lens, having its origin in the deepest layers of the enclosed mesoblast, its blood supply coming from a branch of the central artery of the retina. It is the anterior part of this membrane which in young animals, such as kittens or puppies, closes the opening of the pupil for certain days after birth. In man, the whole membrane usually atrophies before birth; but occasionally traces are left in the form of thin bands of tissue connected with the anterior surface of the iris. This connection serves to distinguish them from remains of old iritis, as the latter are connected with the posterior surface. In rare cases, so much of the membrane may be left as to render operation necessary.

Persola'ta. The *Arctium lappa*.

Persoluta. The same as *Persolata*.

Per'sonal equa'tion. Term used in Physiology for the special reaction-time of an individual for a given stimulus. See *Reaction-time*.

Personal'ity, disor'ders of. See *Consciousness*, *double*.

Persona'ta. (L. *persona*, a mask.) Masked. A name for the *Arctium lappa*, given because, in ancient times, actors used its leaves as masks.

Personate. See *Personatus*.

Persona'tus. (L. *persona*.) Masked, disguised. Applied, in *Bot.*, to a monopetalous, irregular corolla, when the tube is expanded and the two lips are unequal and approximated so as to contract the orifice.

Perspecilla'tus. (*Perspicillum*.) Spectacled, or having an appearance round the eyes resembling that given by a pair of spectacles. Adjective applied to certain animals whose eyes are surrounded by a naked space, or by a space coloured differently from the rest of the face.

Perspicil'lum. See *Perspicillum*.

Perspicil'lum. (L.) A magnifying glass of any kind; in plural, *perspicilla*, spectacles.

Perspirabilè reten'tum. (L.) Retained perspiration. This has been cited as an important factor in the causation of some diseases, for almost as long as medicine has been studied. All efforts, however, to discover any poisonous products of perspiration have failed. The belief is grounded on the injurious effects of varnishing the whole surface in animals, and the fatality of extensive skin-burns; but the former is probably due to increased loss of heat, and the latter is possibly due to the thickening of the blood from transudation of lymph. (Tappeiner.)

P. Sanctoria'num. (After *Sanctorius*.) Term for *Perspiration*.

Perspirability. The condition of being *Perspirable*.

Perspirable. Capable of being perspired; also, capable of perspiring.

Perspiration. (L. *per*, through; *spiro*, to breathe.) 1. The process of secretion and evaporation of sweat; divided into *insensible perspiration*, in which the sweat secreted is immediately evaporated and passes off as vapour as rapidly as it is formed; and *sensible perspiration*, in which the sweat remains for an appreciable time on the surface of the skin in the form of drops of clear fluid, before becoming evaporated.

2. Used for *sweat*, the secretion of the sweat-glands. See *Sweat*.

P., insen'sible. See *Perspiration*.
P., mor'bid. (L. *morbidus*, causing disease, unwholesome.) See under *Ephidrosis*.
P., obstruc'ted. See *Adiaphoresis*.
P., retained'. See *Perspirabile retentum*.
P., sen'sible. See *Perspiration*.
Perspiratory. Belonging to *Perspiration*.
P. duct. Term for the duct of a sweat gland.
P. gland. A sweat gland.
Perspire'. (L. *per*; *spiro*.) To excrete sweat or perspiration; also, to be excreted as sweat.
Perstriction. (L. *perstringo*, *perstric-tum*, to tie tightly.) Term for arrest of hæmorrhage by ligature of the bleeding vessel.
Persudatio. (L. *per*, through; *sudatio*, a sweating.) Term for *Diapedesis*; also, for *Hæmatidrosis*.
Persulphate. That sulphate which contains the greatest possible proportion of the sulphuric acid radical (SO_4)_x in combination with a polyvalent element or basic radical.
P. of iron. *Ferrie sulphate*.
P. of mercury. *Mercuric sulphate*.
Persulphide. That sulphide of any element or basic radical which contains the greatest possible proportion of sulphur.
Persulphuretum. (L. *per*, completely, thoroughly; *sulphuretum*.) Old term for *Persulphide*.
Persultatio. (L. *persulto*, to leap through.) The same as *Persudatio*.
Pertica. (L. *pertica*, a pole.) A long pole with which to beat down fruit; also, term used for *Priapism*.
Perticallis. (*Pertica*.) Belonging to *Pertica*, in either of its two meanings.
Pertrophic. (L. *per*, with intensive force; Gr. τροφή, nourishment.) Relating to excess of nutrition.
Pertrusio mu'tua. (L. *per*, through; *trudo*, *trusum*, to thrust; *mutuus*, reciprocal, mutual.) The same as *Endosmose*. See under *Osmosis*.
Perturba'tio. (L. *perturbatio*, disturbance; also, figuratively, mental disturbance. F. *perturbation*; G. *Verwirrung*.) 1. Term applied to irregularities in the rotation of the planets as regards the direction of that rotation, consequent upon irregularity in their form and want of homogeneity of structure, so that the line representing the force of the sun's attraction does not always pass through their centre of gravity.
 2. Excessive restlessness, mental disquiet, or perturbation; disturbance of function.
P. critica. A term for the critical perturbation of the organism which constitutes the crisis of a disease.
Perturbationes an'imi. (Nom. plural of *Perturbatio*.) Disturbances of the mental faculties.
Perturba'trix, medic'na. (F. *médecine perturbatrice*.) See *Medicina perturbatrix*.
Pertu'sate. (L. *pertusus*, bored through.) Bot. Having a perforation at the apex.
Pertus'sal. Belonging to *Pertussis*.
Pertus'sia. (*Pertussis*.) Term proposed by Dr. William Farr for the "zymotic principle" of *Pertussis*.
Pertus'sis. (L. *per*, with intensive significance; *tussis*, a cough.) See *Whooping cough*.

Pertussor'ium. (L. *pertusus*, *per-tundo*, perforated; more correctly *Pertusorium*.) Term for an instrument for opening and gradually draining a cystic tumour; a sort of *trocar*.
Pertus'sus. (L. *pertusus*, perforated. F. *pertus*; G. *durchstossen*.) Epithet applied to leaves that are perforated with large, irregularly arranged openings.
Peru', balsam of. See under *Balsam*.
Peru'iferus. (*Peru*; *fero*, to bear or carry. F. *péruifère*; G. *Perubalsamtragend*.) Bearing that which is Peruvian; applied to the *Myroxylon peruiferum*.
Perula. (Dim. of *Pera*.) Med. Pathol. Term applied, according to Paracelsus, de *Pustul. Gallic. Ulcer*, &c., vii, 6, to a local affection in jaundice.
 Bot. Term applied by A. C. Richard to a kind of sac formed by the prolonged and adherent bases of two of the lobes of the *perigon* of certain species among the *Orchideæ*; by Mirbel and J. G. Zuccharini, to those envelopes of the buds of native British trees which arise from aborted leaves, as in *Daphne*, from the bases of petioles, as in *Juglans*, or from stipules, as in *Carpinus*.
Perula'tus. (*Perula*.) Epithet applied by Mirbel to an *alabastrus* of a plant when provided with a *perula*.
Perunctio. (L. *perungo*, *perunctum*, to anoint.) A general anointing of the skin.
Peru'vian bal'sam. See *Balsam of Peru*.
P. bark. See *Cinchona*.
P. ipecacuan'ha. The root of *Psychotria emetica*, sometimes substituted in commerce for the root of *Cephaelis ipecacuanha*.
P. mas'tich. See *Mastich*, *Peruvian*.
Peruvia'nus, -a, -um. Peruvian.
P. cortex. *Peruvian bark*.
Perver'sio. (L. *perverto*, *perversus*, to turn the wrong way. F. *perversion*; G. *Verkehrtheit*.) The same as *Diastremma*.
Perver'sion. (*Perversio*.) A turning the wrong way, or to wrong or abnormal uses. Term employed in Psychology to denote a change for the worse in the mental or moral characteristics of a person.
Pervigil'ium. (L. *per*, with intensive force; *vigilo*, to watch.) Disinclination for sleep; also, vigilance.
Pervin'ca. (L. *per*, through; *vinca*.) The specific name for the lesser periwinkle, *Vinca pervinca*.
Pes. (L. *pes*, *pedis*.) The foot.
P. accessor'ius. Accessory foot; term for a smooth eminence, also termed *Eminentia col-lateralis*, situated in the lateral ventricle of either cerebral hemisphere, at the junction of the descending with the posterior horn, between the hippocampus major and the hippocampus minor.
P. alexandrinus. The *Anacyclus py-rethrum*.
P. anseri'nus. (L. *anserinus*, belonging to a goose.) See *Facial nerve*. Also, old name for the *Chenopodium murale*, or goose-foot.
P. anseri'nus fas'ciæ la'tæ. A name given to the radiating fibres formed on the inner side of the knee by the insertions of the sartorius, semitendinosus, and gracilis muscles.
P. anseri'nus ma'jor. The *Pes anse-rinus*.
P. anseri'nus mi'nor. A name for the *Infraorbital plexus*.

PESSARY

P. anserinus nervi media'ni. See *Plexus anserinus nervi mediani*.

P. anti'cus. Term for *Manus*.

P. a'vis. Bird's-foot. Old name for the *Ornithopus perpusillus*.

P. calca'neus. See *Talipes calcaneus*.

P. cap'rae. (*L. capra*, a she-goat.) Goat's-foot; a name for a species of *Convolvulus*; also, for a species of *Oxalis*.

P. ca'ti. (*L. catus*, a cat.) Cat's-foot; a name for the *Antennaria dioica*.

P. ca'vus. See *Talipes cavus*.

P. columbi'nus. (*L. columba*, a dove or pigeon.) Dove's-foot; a name for the *Geranium rotundifolium*.

P. coro'næ radia'tæ. The narrow base or origin at the medulla of the *Corona radiata*, from which the fibres of the latter spread out.

P. equi'no-varus. See *Talipes equinovarus*.

P. equi'nus. (*L. equinus*, pertaining to horses.) The horse-foot, *Talipes equinus*.

P. equi'nus of Rum'phius. See *Hydrocotyle asiatica*.

P. fabri'cians. A name for *Elephantiasis arabum cruris*. (Billings.)

P. galli. Fowl's-foot. Old name for *Ranunculus*.

P. gi'gas. An affection, also called *Macropodia*, limited to one extremity, in which there is great congenital hypertrophy, mainly of the bones and the integuments. The whole foot may be equally involved, forming the *symmetrical* or *true* variety; or only certain parts of the foot may be affected, the *unsymmetrical* or *false* variety. In the latter case the disease may take the form of large fatty excrescences on the foot, or one or more toes may grow to a gigantic size, or both these conditions may be present. Large capillary *nævi* may occur, and though the arteries do not seem to be affected, the veins are usually thickened and varicose. The bones are greatly and equally enlarged in every part; but the muscles do not show much change. The tendons are greatly lengthened. There is also thickening of ligaments; and some distortion of joints may occur secondarily. No cause is known. Treatment consists mainly in carefully regulated pressure, and amputation of excrescences, or of the large toes, in unsymmetrical cases.

P. gryph'i. More commonly *Pedes gryphii*. (*F. pedes de griffon*). An instrument described and figured by Paré, as copied from Dalechamps, for the extraction of the head after decapitation of the *fœtus* in utero. It consisted of two or four strong hooks, fixed at their lower ends by a framework, so that they could be approximated and firmly held, thus enabling traction to be made.

P. hippocam'pi. (*Hippocampus*.) The anterior and lower part of the *Hippocampus major*, near its extremity, where it is notched on its edge, somewhat resembling a quadruped's paw.

P. hippocam'pi majo'ris. The same as *P. hippocampi*.

P. hippocam'pi mino'ris. A name for the *Hippocampus minor*.

P. leo'nis. Lion's-foot. The *Alchemilla vulgaris*.

P. lepori'nus. Hare's-foot. Old name for several species of *Trifolium*, and especially *T. arvensë*.

P. olfacto'rius. Wilder's term for the inner root of the *Olfactory lobe*.

P. pedun'culi. Term for the *Crusta* of the *Crus cerebri*, or cerebral peduncle.

P. pla'nus. Flat-foot. See *Talipes valgus, spurious*.

P. ti'gridis. (*L. tigris, tigridis*, a tiger.) Tiger's-foot; a name for a species of *Ipomœa*.

P. val'gus. See *Talipes valgus*.

P. var'us. See *Talipes varus*.

P. vit'uli. Calf's-foot. Old name for the *Arum maculatum*, or cuckoo-pint.

Pessary. (Low *L. pessarium*, from *L. pessus*. Gr. Πέσος, an oval-shaped stone for playing a game like our draughts; afterwards also a kind of plug of linen, resin, wax, &c., mixed with medicinal substances, to be introduced into the vagina. *F. pessaire*; *I. pessario*; *G. Mutterkranz*.) An instrument for introduction into the vagina to remedy prolapse of the uterus or of the vaginal wall. In ancient times, a topical medicine introduced into the vagina, of a cylindrical shape and about the size of an average finger, made of a small bag of linen, or of wool or cotton, steeped in medicinal substances; also, an incorporation of honey, galbanum, laudanum, wax, &c., moulded into a cylindrical form; also, simply a small vaginal *suppository*. They were also used for introduction into the cervix uteri, and often had a thread fixed to them, by which they were attached to the thigh. As more than 120 kinds of pessaries have been described at different times, it is impossible to do more here than mention a few of those in common use. Those who wish to find full accounts with drawings of the various forms of pessaries are referred to the encyclopædic dictionaries of medical science, French and English, and to instrument makers' catalogues (*e.g.* Tiemann's, of New York, which describes and figures more than 100 forms).

P., air. Gariel's pessary. See *P., Gariel's*.

P., air-ball. The same as *P., air*.

P., a'nal. An olive-shaped pessary made of pewter, which has been used in the treatment of *prolapsus ani*. They are generally of no use, as the sphincter is too much relaxed to keep them up, and, even if kept in position, they cause irritation by pressure.

P., anteflex'ion. A specially adapted vaginal pessary recommended by Thomas for the treatment of antelexion of the uterus.

P., antevers'ion cra'dle, Gally Hewitt's. This is made of vulcanite. The posterior half is like a Hodge pessary, its posterior extremity fitting into the posterior fornix and its anterior part into the anterior fornix; from this part the pessary curves down at a slightly obtuse angle, the two arms meeting in a loop similar in shape to that of a Hodge pessary, which lies against the vaginal wall at its lower opening.

P., antevers'ion, Geh'ring's. This is a pessary consisting of two arms meeting in a curve at either extremity, the whole instrument being so curved upon itself at the centre that the two halves are parallel to one another for the greater part of their length. Gehring inserts the instrument so that one extremity is in the anterior fornix, the corresponding half of the pessary partly encircling the cervix, and the other, or lower half, resting against the posterior wall of the vagina. Mundé places this pessary so that the bend at the middle is in the anterior fornix and the two extremities rest against the

PESSARIES—PESSIMA

posterior vaginal wall, their curves lying antero-posteriorly.

P., antever'sion, Thom'as'. Thomas has invented several kinds. One form is merely a Hodge pessary with a projecting pair of arms starting from near the centre of the pessary on either side and meeting in a curve, this part being passed up into the anterior fornix. This form of pessary occasionally sets up pelvic cellulitis.

P., Bor'net's "bung-hole." Short, thickish, and upright; supported by cross straps fastened to a belt. Recommended by Pozzi for hospital use, as being cheap and effective and easily cleaned.

P., Cut'ler's. Stem curved round to belt round waist, and having either a ring or a cup to support the cervix.

P., Egypt'ian. See *Egyptius pessus*.

P., Feh'ling's stem. Made of thick glass, fenestrated and so tempered that its curve can be altered when heated over a lamp. It is filled with iodoform powder kept in place by a plug of cotton wool. It should always be $\frac{1}{2}$ cm. shorter than the previously measured uterine cavity. It is kept supported by the uterine mucous membrane bulging into the fenestræ.

P., Fritsch's. Combination of Schultze's sledge-shaped pessary and Hodge's pessary; it has a hard caoutchouc cross-bar.

P., Gal'abin's antever'sion. Like a Hodge pessary with the anterior cross piece made very broad.

P., galvan'ic. Introduced by Simpson, as an intra-uterine pessary. The stem is copper for one half its length, and zinc for the other, fixed on an ovoid disc. Modified later by Noeggerath, who substituted a stem of parallel strips of copper and zinc; and later again modified by Thomas, who substituted a wire stem, on which were threaded alternate beads of copper and zinc.

P., Gar'iel's. This consisted of a hollow india-rubber ball with a small tube attached. When empty of air, it was easily passed into the vagina; then, by means of a small syringe, air was pumped in through the tube, thus expanding the ball.

P., gimblette'. (*Gimblette*, a small round cake, thickish at the edges, with a hole through the middle.) Pessary so called from resemblance to a popular form of cake.

P., Hewitt's. See *P., anteversion cradle*, of *Graily Hewitt*.

P., Hodge. This is made of vulcanite; it is in the shape of an elongated horse-shoe with a nearly straight cross-bar joining the free (lower) ends. In profile, it has a short upper, sacral curve which lies, with its concavity forwards, in the posterior fornix, and a longer, less-marked pubic curve.

P., Hodge's improved'. Made with double curve and anterior concavity to fit round the urethra. (a) Modified by A. Smith, is narrowed. (b) Modified by Thomas, thickened posteriorly, and curve accentuated.

P., Hodge, modified by Al'bert Smith. The lower half is contracted to a beak-like extremity; in profile, the pubic curve is more pronounced.

P., Hodge, modified by Thom'as. The pessary is longer, the upper bar thicker, and the sacral curve more pronounced.

P., intra-u'terine. This consists of a

straight stem, a quarter of an inch shorter than the uterine canal, attached to a flat, perforated disc. The stem is introduced into the uterus in the same way as a sound, the disc lying in the upper part of the vagina.

P., intra-u'terine, Green'halgh's. In this form, the stem is of gutta-percha, and is hollow.

P., intra-u'terine, Simp'son's. The stem in this instrument is of copper. A pessary of similar shape but with a vulcanite stem has been made, as being lighter.

P., Landow'ski's flexible pew'ter. Bent so as to have a ring at one end of the stem, and a sort of handle at the other as a support. The ring goes round the cervix. The stem being flexible, it can be used either for retro- or ante-flexion or -version.

P., Mun'dé's, for prolapsed' o'vary. This varies in shape for unilateral and bilateral prolapse. The shape is somewhat like that of a Hodge pessary, but the curves are less marked. The end which is to support the prolapsed ovary in cases of unilateral prolapse, is slightly hollowed out.

P., ring. Made of elastic caoutchouc, introduced either by fingers or by specially devised forceps. In France known as *Dumont-pallier's*, elsewhere as *Mayer's*. First invented by Meigs.

P., Ro'ser-Scanzo'ni's. Stem-pessary, or *Hysterophore*, q. v.

P., Schult'ze's. Two forms. (1) Figure-of-8, made of copper wire covered with caoutchouc, smaller loop round cervix. (2) Sledge-shaped.

P., Thom'as' antever'sion. Usual shape of a Hodge pessary, with moveable cross-piece, shaped like a horse-shoe to fit into anterior fornix.

P., Val'let's. Sledge-shaped.

P., Zwanck's. This consists of two semi-oval, perforated pieces of wood united by a hinge. From the two extremities of the hinge, two bars of metal pass down perpendicularly to the plane of the two pieces of wood when these are extended. These two bars fit together at their free end with a simple clip. To insert the pessary, the two metal bars are separated so as to fold the two pieces of wood together, the instrument is passed into the vagina with the metal bars lying antero-posteriorly, and finally the instrument is rotated through a quarter of a circle, and the bars are gently brought together and clipped, so that the two halves of wood pass respectively into the anterior and posterior fornices. The two united bars rest against the anterior vaginal wall, and have been known to cause ulceration when the instrument has not been removed regularly.

P., Zwanck's, modified by Schil'ling. In this form the two limbs of the stem are never separated; the wings are opened or closed by turning a screw to the right or left.

Pessaries, medicated. See under *Pessary*; also, under *Pessus*.

P.s., medicated, gel'atine mass for. Place 1 ounce of gelatine in 4 ounces of water for a few seconds, drain off the water, and after half an hour add 4 ounces of glycerine. Dissolve, with the aid of heat. (Ex. Ph.)

Pesse'ma. See *Pessima*.

Pes'si. Nom. plural of *Pessus*.

Pess'ima. (Πεσσόν, a draught-board.)

PESSIMISM—PESTLE

A skin disease characterised by indurated, yellowish-brown pustules universally distributed over the skin, each surrounded by an inflamed area, the whole giving an appearance somewhat resembling a draught-board. (Bergh.)

Pes'simism. (L. *pessimus*, worst.) 1. The mental habit of putting the worst possible construction upon everything, and of always exaggerating evils, and looking on them rather than on good or cheerful things. It occurs as a most prominent symptom in *Melancholia*. 2. The doctrine which embraces the mental practice stated in 1.

Pes'sula. (Dim. of *Pessus*.) The same as *Pessary*.

Pes'sulus. The same as *Pessary*. Also, in *Ornithol.*, the cartilaginous or bony rod which forms part of the *Syrinx*, lying across the lower end of the trachea.

Pes'sum. The same as *Pessus*.

Pes'sus. (Πεσρός.) A pessary. Used in the original sense of a medicated pessary or vaginal suppository, introduced into the vagina to produce the local effect of the drug used. See *Pessary*.

P. ac'idi bor'ici. Each contains 10 grains of boric acid together with oil of theobroma.

P. ac'idi tan'nici. Each contains 10 grains of tannic acid.

P. alu'minis. Each contains alum, wax, and catechu, of each 1 drachm, prepared lard 5½ drachms. (Cooley's *Cyclop. of Prac. Receipts*.)

P. atropi'næ. Made either with gelatine mass or oil of theobroma. Each contains approximately 1-20 grain of atropine. See *Pessaries, medicated, gelatine mass for*.

P. belladon'næ. Each contains, of the official extract of belladonna (the green extract) 10 grains, of white wax 22½ grains.

P. belladon'næ extrac'ti ra'dicis. Each contains ½ to 1 grain of the official *Extractum belladonnæ*. (Ex. Ph.)

P. bismu'thi oxychlor'id. Each contains 10 grains of oxychloride, and is made up with oil of theobroma. (Ex. Ph.)

P. coca'i'næ. Each contains ½ grain of cocaine made up with cacao-butter. (Ex. Ph.)

P. con'i'næ. Each is made up of conia ½ minim, *gelatine mass* 20 grains. (Ex. Ph.) See *Pessaries, medicated, gelatine mass for*.

P. iodoform'i. Identical with the *Suppositoria iodoformi*, namely, 3 grains of precipitated iodoform made up with oil of theobroma. (Ex. Ph.)

P. plum'bi iod'id. Each contains 5 grains of the iodide. (Ex. Ph.)

P. plum'bi iod'id cum atropi'na. Each contains 5 grains of lead iodide with 1-20 grain of atropine.

P. potas'sii brom'id. Each contains 10 grains of the bromide.

P. potas'sii iod'id. Ten grains of the iodide in each.

P. zin'ci ox'id. Ten grains of the oxide in each.

P. zin'ci sulphocarbola'tis. Ten grains of the sulphocarbonate in each.

Pest. See *Pestis*.

P-house. A hospital for the reception of persons suffering from any *Pestilential* malady.

Pest'ichia. (L. *pestis*, a plague; so called because symptomatic of the *Plague*.) The same as *Petechia*; sometimes also applied to the rash of all *Exanthemata*.

Pest'icia. The same as *Pestichia*.

Pes'tifer. (L. *pestis*, a plague; *fero*, to carry.) Bringing or inducing pestilence; contagious.

Pest'iferous. The same as *Pestifer*.

Pes'tilence. (*Pestis*.) A malignant, infectious disease; generally used to mean the *Plague*.

P., choler'ic. *Cholera, Asiatic*.

P., glan'dular. The *Plague*.

P., hæmogas'tric. *Yellow fever*.

P., sep'tic. The *Plague*.

P. weed. The same as *Pestilent wort*.

P. wort. See *P. weed*.

Pest'ilent. (*Pestis*.) Belonging to, or favouring, the occurrence of *Pestis*; more usually, simply poisonous, or carrying disease germs.

P. wort. (Mid. E. *wort*; Ang. Sax. *wyrt* a plant.) The butter-bur, *Tussilago petasites*.

Pestilen'tia. The same as *Pestis*.

P. hæmogas'trica. *Yellow fever*.

Pestilen'tial. The same as *Pestilent*, in its more general sense.

P. fe'ver. See *Fever, pestilential*.

Pestil'itas. (*Pestis*.) The same as *Pestis*.

Pestiloch'ia. (F. *pestilochie*.) A name for the *Aristolochia serpentaria*.

Pes'tine. (*Pestis*.) A term suggested by Dr. William Farr to designate the "specific zymotic principle" of the *Plague*.

Pes'tis. (L. *pestis*, an infectious disease, or a pestilence.) The *Plague*.

P. acutis'sima. The *Plague*.

P. adenosep'tica. (Ἀδὴν, a gland; σηπτικός, putrefying.) The *Plague*.

P. america'na. *Yellow fever*.

P. Antoninia'na. The *Plague of Antoninus*.

P. bel'lica. (L. *bellicus*, pertaining to war; cp. the term *Fever, army*.) *Typhus*.

P. bovill'a. (L. *bovillus* = *bubalus*, pertaining to oxen.) See *Cattle plague*.

P. britan'nica. The *Sweating sickness*.

P. bubonar'ia orienta'lis. (*Bubonarius*, from *bubo*.) The *Plague*.

P. contagio'sa. The *Plague*.

P. glandulo'sa. The *Plague*.

P. glossan'thrax. *Glossanthrax*.

P. inguinar'ia. (*Inguinarius* = *inguinalis*. L. *inguen*, the groin.) The *Plague*.

P. intertrop'ica. *Yellow fever*.

P. ni'gra. (L. *niger*, black. F. *peste noire*; G. *die schwarze Pestilenz*.) The *Black Plague* or *Black Death*. A form of the *Plague* which occurred during the fourteenth century, A.D., was of almost world-wide distribution, and has been estimated as having been, during its prevalence, fatal to about one-fourth of the human race existing at that time. It was especially characterised by its extreme fatality, and by the occurrence of black petechiæ of the skin.

P. occidenta'lis. *Yellow fever*.

P. orienta'lis. The *Plague*.

P. sep'tica. The *Plague*.

P. variolo'sa. (*Variola*.) *Smallpox*.

Pest'le. (*Pistillum*; from L. *pinso*, *pinsum*, *pinsum* or *pistum*, to pound or crush. F. *pilon*; I. *pestello*; G. *Stößel*.) A cylindrical instrument, usually having a wooden handle, and fitted with a stone portion for crushing, which latter is convex and slightly enlarged at the free end. It is used for crushing substances in a mortar, which is most commonly also of stone.

P., spring. A pestle which is attached to a spring above, so as to minimise the work of pounding.

Pestoid. Resembling the plague, or *pest*. (*Century Dict.*.)

Petal. (Πέταλον, a leaf. F. *pétale*; G. *Blumenblatt*.) Term for each of the coloured leaflets of the corolla of a flower.

Petala. (Nom. pl. n.) Petals. See *Petal.*

P., rhœ'ados. See *Rhœados petala*.

P., ro'sæ. See *Rosæ petala*.

Petalanthous. (Πέταλον, in the sense of a petal; άνθος, a flower. F. *pétalanthé*; G. *kronenblättrig*.) Having flowers with petals.

Petalé. (? Πέταλος, flat, from the shape of the louse.) Term for *Phtheiriasis*.

Petaliform. (*Petalum* = πέταλον, a petal; L. *forma*, likeness.) Petal-shaped.

Petaline. Relating to a petal.

Petalocer'ata. (Nom. pl. n. Πέταλον, a leaf; κέρασ, κέρατος, a horn.) Duméril's name for a Family of the *Coleoptera*, in which the antennæ are foliated at the free end.

Petalodes. (Πέταλον, a leaf; terminal -ώδες.) Having abundance of leaves or petals; applied by Hippocrates to urine that has leaf-like or scale-like bodies floating in it, a condition which he considered as indicative of ulceration of the bladder.

Petalodeus. (Incorrect form of *Petalodes*.) Epithet applied by G. Allman to flowers that have petals; by De Candolle, to double flowers formed by development into *Petals* of bractæ, as in *Hortensia*; the calyx, as in *Primula*; stamens, as in *Clematideæ*, *Ranunculaceæ*, *Aquilegia vulgaris*; or carpels, as in *Anemone nemorosa*.

Petaloid. (Πέταλον, in the sense of a petal; είδος, form.) Resembling a single petal, or a corolla.

Petaloma'nia. (Πέταλον, in the sense of a petal; μανία, madness. G. *Kronenblätttolleheit*.) Term employed by botanists to designate the tendency displayed by some plants for organs other than petals to assume the appearance of petals.

Petalopoda. (Nom. pl. n. Πέταλον, a leaf; πούς, ποδός, a foot.) Schweigger's and Eichwald's name for a Family of *Zoöphytes*, from whose homogeneous bodies project parallel tubular processes.

Petalosomata. (Nom. pl. n. Πέταλον, a leaf; σῶμα, σώματος, the body.) Duméril's name for a Family of osseous holobranchiate fishes, in which the body is flattened and lengthened out in the form of a leaf.

Petalosomi. Incorrect form for *Petalosomata*.

Petalostemonēs. (Nom. pl. f. Πέταλον, in the sense of a petal; στήμων, -ονος, a thread, hence a stamen.) Term applied by Moench and Gleditsch, and also by G. Allman, to a Class of plants in which the stamens are inserted on the corolla.

Petarku'ra. The *Gynocardia odorata*.

Petasites. (Πετασίτης, a kind of *colt's-foot*; from πέτασος, a broad-brimmed kind of hat; so named from its expanded leaves.) The specific name for the Butter-bur, or pestilent-wort, *Tussilago petasites*. It was formerly used in fevers.

P. hybrida. The same as *Petasites*.

P. major. The same as *Petasites*.

P. officinalis. The same as *Petasites*.

P. rubeus. The same as *Petasites*.

P. vulgaris. The same as *Petasites*.

Petasophorus. (Πέτασος, a broad-brimmed kind of hat; φέρω, to bear.) *Ornithol.* Having the form of a hat; also, having an appearance as of wearing a hat, either from a large tuft of feathers on each side of the neck, as in *Trochilus petasophorus*, or from spots extending behind the eyes, as in *Ornismya petasophora*.

Petaurum. (Πέταυρον, a pole or perch for fowls to roost on.) Term for a kind of swing-seat suspended from ropes, in which a person was swung backwards and forwards for the purpose of gentle exercise.

Pete'chia. (Low L. *petechia*, or *peticula*, a flea bite. F. *pétéchie*; I. *petecchia*; G. *Petechin*.) A small red spot in the skin, caused by extravasation of blood into the superficial vascular layer of the corium. It may be bright red, dark red, or purple; it does not disappear on pressure; and it is gradually absorbed, the colour changing through brown, green, and yellow. An *ecchymosis* differs from a petechia merely in being larger.

Pete'chiæ. Nom. pl. of *Petechia*.

P. si'nè febrè. Term for *Purpura simplex*.

Pete'chial. Belonging to, or made up of, petechiæ, or of red spots resembling petechiæ.

P. fe'ver. Term for *Meningitis, cerebrospinal*; also, for *Typhus*.

P. fe'ver of the hog. Swine fever.

P. scur'vy. Term for *Purpura simplex*.

P. ty'phus. (L. *Typhus exanthematicus*. G. *Petechialtyphus*.) A name for *Typhus*, in contradistinction to *Abdominal typhus* or enteric fever.

Petechiano'sis. (*Petechia*; νόσος, a disease.) Term for *Fever, petechial*; also, *Purpura hæmorrhagica*.

Pete'chiate. Having *Petechiæ*.

Peter's pills. The *Pilulæ aloës et camboyæ*.

P.'s springs. (G. *Petersquellen*.) In the town of Terek, in the province of Karbarda, Russia; hot sulphur springs.

Petersen's bag. The india-rubber bag, first recommended by Petersen of Kiel, introduced into the rectum and then distended with water, in the operation of supra-pubic lithotomy. It is of a pyriform shape, and holds about sixteen ounces.

Petersthal. In the Schwarzwald, Baden, Germany; noted for its three cold mineral springs. The *Salzquelle* contains, in 100 parts, hydrated ferric carbonate ($\text{FeH}_2(\text{CO}_3)_2$), .045 parts, carbonic acid 1366 cc.; the *Petersquelle*, .046 parts and 1330 cc.; the *Sophienquelle*, .044 parts and 1319 cc.; and also chloride of lithium .01 parts. The two former springs also contain lithium, and all three contain calcic and sodic sulphate. (*Real Encyc. der Pharm.*, Geissler and Möller).

Petic'ula. Old term for *Petechia*.

Peti'go. The same as *Impetigo*.

Peti'na. (L. *pes*, a foot.) Term for the sole of the foot.

Petiola'ceous. (*Petiole*.) Epithet applied by De Candolle to buds, when the bases of the leaf-stalks or petioles, dilated into shells, form an investiture for the young shoot, as in *Juglans regia*.

Peti'olar. (*Petiole*.) The same as *Petiolate*.

PETIOLATE—PETRO-HYOID

Pet'iolate. *Bot.* Provided with a petiole. *Anat.* and *Zoöl.* Having a stalk or peduncle resembling the *petiole* of a leaf.

Petiolation. The condition of leaves on a leaf-stalk or petiole.

Pet'iole. (*Petiolus*.) *Bot.* A leaf-stalk. *Entom.* The *Sclerite* uniting the thorax and abdomen in many insects.

Petioleanus. (*Petiole*.) Epithet applied to those organs of a plant which are formed by metamorphosis or degeneration of the petiole.

Petioled. The same as *Petiolate*.

Petiol'ular. Epithet applied to stipules of compound leaves, growing at the bases of the folioles and upon the bases of the petioles.

Petiolulate. Epithet applied to a foliole that is borne upon a petiole.

Petiolule. (Dim. of *Petiole*. *G. Blattstielchen*.) The particular petiole of each foliole of a compound leaf.

Petiolulous. Having abundance of *petiolules*; applied to a plant with very long petiolules.

Pet'iolus. (Or *Pediolus*; dim. of *L. pes, pedis*, a foot.) A *Petiole*.

P. epiglottidis. Term for the compressed, narrow base of the epiglottis.

P. mal'lei. The *manubrium* of the malleus. See *Malleus*.

Pétiot's pro'cess. A process for obtaining an increased quantity of wine from grapes. The pressed grapes are treated with solution of sugar, and the mixture is left to ferment. The resulting alcoholic liquid is either coloured with cochineal or red litmus and sold as natural wine, or else it is added to Spanish or Italian wine.

Petit, François Pourfour du. French surgeon and anatomist. Born 1718, died 1794. He first described what has been since called "*the canal of Petit*."

P., canal of. A sacculated canal which encircles the crystalline lens, occupying the interstices of its suspensory fibres, and filled during life by serous fluid, or perhaps partly by vitreous humour. It is of importance as a channel by which nourishment can reach the lens; in deep-seated diseases of the eye, this canal not infrequently becomes involved.

Petit, J. L. French surgeon. Born 1674, died 1750.

P.'s operation for her'nia. Herniotomy without opening the sac; first performed by Petit in 1718, revived of late years by Aston Key and Luke.

P., sling of. See under *Sling*.

P., tri'angle of. *Anat.* Formed immediately over the iliac crest by the gap usually present between the external oblique and latissimus dorsi: the base of the triangle is formed by the iliac crest, and its floor by the internal oblique. Through this gap a lumbar hernia occasionally protrudes.

Petit co'co. (*F. petit*, small.) Name employed in St. Domingo for the crushed seeds of *Theophrasta Jussieu*, which are there used for making bread.

P. mal. (*F.* "The little evil," as compared with *Haut mal*, or *Grand mal*.) See *Epilepsy*.

Petive'rea. (Nom. pl. n.) Bartling's name for a Tribe of the *Phytolaccaceæ*, having the Genus *Petiveria* for their type.

Petive'ria allia'cea. (*Alliaceus*, from

Allium.) A species of the American Tribe *Petiveriæ*; all the plants of this tribe have an alliaceous smell and are used as being antifebrile, diuretic, and vermifuge.

Petiveria'ceæ. The same as *Petiveria*.

Petiveriæ. The same as *Petiveria*.

Petong'. A synonym of *Packfong*.

Petra. (Πέτρα, a rock.) *Geol.* A great stone or rock.

P. sanguinar'ia. (*L. sanguinarius* [*sanguis*], pertaining to blood.) The blood-stone; a term for *Hematite*.

Petræ'leum. See *Petrelæum*.

Petræ'um. (Πετραίος, living on or among the rocks.) Name for the *Solidago virgaurea*.

Petra'logy. (Πέτρα, a rock; λόγος, a discourse.) The consideration and description of rocks.

Petra'pium. (Πέτρα, a rock; ἄπιον [*L. apium*], parsley; so called because it grows in stony places.) A name for the *Bubon macedonicum*.

Petrefac'tion. See *Petrification*.

Petrelæ'um. (Πέτρα, a rock; ἔλαιον, oil.) The same as *Petroleum*.

Petri's disinfecting powder. This is made up of 60 parts of charred peat, 40 of small coal, and 1 of coal-tar. (*Real Encyc. der Pharm.*, Geissler and Möller.)

Petri'colous. (*L. petra*, a rock; *colo*, to inhabit.) Living in rocks, as certain of the *Mollusca*.

Petrifac'tion. (*L. petra*, a stone, rock; *factum* [*facio*], made.) 1. The process of conversion of a dead organised body into a *fossil*. 2. The fossil itself. 3. The deposition of earthy salts in the tissues; more usually termed *calcification*.

Petrifica'tion. (*F. petrification*; from *L. petra*, a rock; *facio*, to make.) An older form of the word *Petrification*.

Pétrissage. (*F.*) Kneading. See under *Massage*.

Petro del por'co. The stone of the pig; Spanish name for *Bezoar hystri'cis*.

Petro-bas'ilar fis'sure. The irregular, narrow space between the body of the sphenoid bone on one side, and the petrous portion of the temporal and basilar portion of the occipital on the other; filled up in the recent state by fibro-cartilage.

Petroccip'ital. See *Petro-occipital*.

Petrodos'teon. (Πετρώδης, rocky; ὀστέον, a bone.) The *Os petrosum*, or petrous portion of the temporal bone.

Petrodos'teum. A Latinised form of the word *Petrodostion*.

Petrogno'sia. (Πέτρα, a rock; γνώσις, knowledge.) The same as *Oryctognosia* or *Mineralogy*.

Petrograph'ic. Belonging to *Petrography*.

Petro'graphy. (Πέτρα, a rock; γράφω, to write.) The same as *Petrology*; also, the art of inscribing on stone.

Petro-hy'oid. Belonging, or having relation, to the petrous portion of the temporal bone and to the hyoid bone.

P. mus'cle. A variety of the *Stylo-hyoid* muscle which arises from the petrous portion of the temporal bone. (Billings.)

Also, in *Comp. Anat.*, a set of small muscular fasciculi, present in certain of the *Batrachia*,

PETROLARDUM—PETROSAL

lying beneath the omo-hyoid, and passing from the hinder part of the skull to the hyoid bone.

Petrolar'dum. See *Petrolatum*.

Petrolari'num. See *Petrolatum*.

Petrola'tum. (U.S. Ph.) *Paraffinum molle*, B. Ph. In the U.S. Ph. two varieties are official, one boiling at 104° F., and the other at 125° F.

Petro'lei cera'tum. See *Petroleum*, *cerate of*.

Petroleum. (L. *petra*, a rock; *oleum*, oil. F. *huile de pierre*; G. *Steinöl*.) Rock oil. The general name used for the natural oily liquids existing in different parts of the earth at various depths. The natural oil is a mixture of several hydrocarbons. It has a strong bituminous smell; but specimens differ in composition. It is found in the United States, the Caucasus, round the mouth of the Danube, in Burmah, Galicia, Persia, the West Indies, Italy, Germany, Switzerland, France, and England. Its sp. gr. varies from .77 to 1.1, and its colour from pale yellow to black. North American petroleum consists chiefly of the hydrocarbons of the *Paraffin* (C_nH_{2n+2}) series; that from Baku in the Caucasus contains besides, the aromatic hydrocarbons of the series C_nH_{2n} , and small quantities of other hydrocarbons. Crude petroleum contains also small quantities of compounds containing sulphur, nitrogen, and oxygen, and may contain water and sediment. Usually the petroleum with the lowest specific gravity is the most volatile and inflammable. It is tested commercially for its specific gravity, colour, smell, the feel when it is rubbed between the fingers, and the percentage of naphtha (portion volatile below 150° F.) yielded by fractional distillation. The flashing-point and burning-point are generally used only as tests for the refined petroleum or *kerosene*, which consists of the more volatile portions of the crude oil. See *Watts' Dictionary of Chemistry* and *Thorpe's Dictionary of Applied Chemistry*.

P. al'bum. (L. *albus*, white.) White petroleum, a clear, pale-coloured variety of natural petroleum. It was formerly called *Napta alba* (Castellus).

P. barbadens'ë. See *Barbadoes tar*.

P. ben'zin. The same as *Benzin*.

P., ce'rate of. Vaseline 2 parts, paraffin (boiling at 135° to 140° F.) 1 part; these are melted and mixed, and then stirred until cold. This is used as a basis for several ointments.

P. e'ther. One of the four products into which crude petroleum is refined in Germany; being that portion which comes over at a temperature of 40° to 70° F., and has a sp. gr. of .640 to .650. The other three products are benzene, ligroin, and cleaning oil.

P. jelly. A synonym of *Vaseline*.

P., New York. See *Seneca oil*.

P. oint'ment. A synonym of *Paraffinum molle*.

P. ru'brum. (L. *ruber*, red.) Red petroleum, a species that abounds about the village of Gabian in Languedoc.

Also called *Oleum gabianum*.

P. spir'it. (U.S. Ph.) *Benzene*.

P. sulphura'tum. The same as *Balsam, sulphur, Barbadoes*. Barbadoes tar 16 ounces, flowers of sulphur 4 ounces. It has been used internally (dose, 10 to 30 minims) as an antispasmodic and sudorific, and in chest affections.

Externally, it has been used as a stimulant and detergent dressing for ulcers.

Petrolin. (*Petroleum*.) Term for the complex substance obtained by distillation of petroleum, namely, *Paraffin*.

Petrol'ina. One of the varieties of American *vaseline*.

Petro'logy. (Πέτρα; λόγος.) A study of the mineralogical composition of rocks.

Petro-mas'toid. Belonging to the petrous and mastoid portions of the temporal bone.

P. bone. The same as *Periotic bone*.

P. canal'. Name for the largest of the several canals leading from the posterior wall of the tympanum into the mastoid cells.

P. fora'men. A name for the tympanic opening of the *P. canal*.

Petromatogno'sia. (Πέτρα, a rock; μάτος, investigation; γνώσις, knowledge.) E. Fisher's term (1828) for *Mineralogy*.

Petromyzi'des. (*Petromyzon*.) Risso's name for a Family of the *Chondropterygii*, having the *Petromyzon* for their type.

Petromyzon. (Πέτρα, a rock, or stone; μύζω, to suck.) A Genus of lampreys (Order *Chondropterygii*), also called the *Petromyzontidæ*, formerly including all lampreys, but now restricted to the northern species; also, a lamprey. The *P. marinus* or true lamprey is much esteemed as food; the *P. fluviatilis* and *P. branchialis*, though equally well-flavoured, are seldom eaten.

Petro-occip'ital. Belonging to the occipital bone and the petrous portion of the temporal.

P.-o. si'nus, infe'rior. A vein running on the external surface of the base of the skull, from the foramen lacerum medium to the foramen jugulare. (Trolard.)

P.-o. si'nus, supe'rior. Trolard's name for the *Inferior petrosal sinus*.

P.-o. su'ture. The suture between the basilar portion of the occipital bone and the petrous portion of the temporal.

Petropharynge'us mus'cle. One of the occasional supernumerary elevators of the pharynx in man. It arises from the under surface of the petrous portion of the temporal bone in front of the opening of the carotid canal, and from the vaginal process, and is inserted, either into one of the constrictors of the pharynx, or, passing between the constrictors, into the fibrous layer of the pharynx.

Petro'philous. (Πέτρα, a rock; φιλέω, to love.) *Bot.* Having a preference for rocky or stony places.

Petro'sal. (*Petrosus*; from L. *petra*, a rock. F. *pétré* or *pétreux*; G. *felsicht*.) Belonging to the petrous portion of the temporal bone; also, the petrous portion itself (Owen). The *Rocher* of Cuvier.

P. bone. The same as *Periotic bone*.

P. crest. A name for the lower edge of the vaginal process of the temporal bone. (Billings.)

P. gang'lion. The same as *Petrous ganglion*.

P. nerve, external superfi'cial. (Bidder.) A nerve uniting the geniculate ganglion with the sympathetic filaments on the middle meningeal artery. It is not constant.

P. nerve, great deep. For its origin, see *P. nerve, great superficial*. It passes backwards and ends on the outer side of the carotid

PETROSALPINGOPHARYNGEUS—PETUM

artery in the filaments of the sympathetic network surrounding the vessel.

P. nerve, great superficial. One of the two branches (*motor root* of Meckel's ganglion, the other being the *P. nerve, great deep*, or *sympathetic root*) into which the *Vidian nerve* divides in the foramen lacerum medium, after emerging from the Vidian canal. It enters the cavity of the cranium on the outer side of the carotid artery, beneath the Gasserian ganglion, passes backwards to the hiatus Fallopii, lying in a groove on the petrous portion of the temporal bone, and, in the aqueduct Fallopii, joins the facial nerve.

P. nerve, small deep. (Arnold.) A branch of the *Tympanic plexus* which first runs forwards in a canal in the processus cochleariformis, and then enters the foramen lacerum medium, joining the carotid sympathetic plexus, and occasionally also, the *P. nerve, great superficial*.

P. nerve, small superficial. The name given to the tympanic branch of the glossopharyngeal after emerging from the tympanum at its upper and anterior part. It connects the *otic* and *petrous* ganglia. See *Tympanic nerve*.

P. sinus, external. A name for the *Emissarium caroticum*.

P. sinus, inferior. A sinus of the cranial dura mater passing downwards and outwards in a groove along the lower margin of the petrous portion of the temporal bone, from the cavernous sinus to the anterior division of the jugular foramen, where it opens into the beginning of the internal jugular vein. It receives the auditory veins and some inferior cerebellar veins.

P. sinus, superior. A sinus of the cranial dura mater running in a groove along the upper margin of the petrous portion of the temporal bone. It passes backwards from the cavernous sinus to the lateral sinus. It receives superior and inferior cerebellar veins and some small tympanic branches.

P. vein. A name for either the superior or inferior petrosal sinus.

Petrosalpingopharyngeus. See *Petropharyngeus*.

Petrosalpingostaphylinus. (Πέτρα; σάλπιγξ, a trumpet, used to designate the Eustachian tube; σταφυλή, a bunch of grapes, and hence, the uvula, from its likeness when swollen to a grape on a stalk.) Belonging to the *petrosal*, the Eustachian tube, and the uvula; a name for the *Levator palati* muscle.

Petroselinites. (*Petroselinum*.) Term for wine in which *petroselinum* has been steeped.

Petroselinum. (Πέτρα, a rock or stone; σέλινον, a kind of parsley. *F. persil*; *G. die gemeine Petersilie*.) A Linn. Genus of plants, Class *Pentandria*, Order *Digynia*. Juss., *Apiaceæ*. Name in the U.S. Ph. for the root of *P. sativum*, which is used as a diuretic and mild aperient; also, the *Apium petroselinum*.

P. macedonicum. The *Bubon macedonicum*.

P. sativum. Parsley. The herb and the root are used for making sauce. The juice, when expressed, is used as an emollient and diuretic.

P. vulgarë. (*L. vulgaris*, common.) The *P. sativum*.

Petrosilex. The common continental

name (the term *Eurite* is also used) for *Felstone* or *Felsite*.

Petrosiliceous. Made up of *Petrosilex*.

Petro-sphenoid ligament, anterior. The mass of fibrous tissue which, in the recent state, closes the foramen lacerum medium below.

P. ligament, posterior. A process of fibrous tissue passing between the posterior clinoid process of the sphenoid bone and the apex of the petrous portion of the temporal, and arching over the sixth cranial nerve.

Petro-sphenoidal. Belonging to the sphenoid and the petrous portion of the temporal bone.

P. suture. The suture uniting the lateral part of the posterior border of the great wing of the sphenoid with the anterior or external border of the petrous portion of the temporal bone.

Petro-squamosal. See *Petro-squamous*.

Petro-squamous. Belonging to the petrous and squamous portions of the temporal bone.

P. fissure. The same as *P. suture*.

P. sinus. An additional cranial sinus sometimes present in the dura mater, lying in a groove between the petrous and squamous portions of the temporal bone, and opening posteriorly into the lateral sinus.

P. suture. The suture separating the squamous and petrous portions of the temporal bone at birth. Traces of it are generally to be seen in the adult cranium.

Petro-staphylinus. The *Levator palati* muscle.

Petrostearin. (Πέτρα, a rock or stone; *stearin*.) The same as *Ozokerite*.

Petrosum, os. See under *Petrosus*.

Petro'sus. (*L. petra*, a rock.) Rock-like; applied to the *Petrosal*, or *Os petrosus*, the petrous portion of the temporal bone.

Petrous. (*L. petra*, a rock.) Having the hardness of a rock. Belonging to, or in relation with, the petrous portion of the temporal bone; also, the petrous portion itself.

P. bone. See *Petrous*.

P. ganglion. The lower of the two ganglia of the *glossopharyngeal nerve* in the jugular foramen. It lies in a small depression at the lower end of the groove in the petrous bone. It is two to three lines long. From it arise the tympanic nerve, and branches joining the vagus and sympathetic.

P. portion of temporal bone. See *Temporal bone*.

P. process. The same as *P. portion of temporal bone*.

P. sinuses. See *Petrosal sinus, inferior* and *P. sinus, superior*.

Pettenkofer. A German chemist of the present day.

P.'s reaction. A blood-red colour obtained by heating certain substances with cane-sugar and strong sulphuric acid. This colour is produced by the bile-acids, cholic acid, and several other bodies. It is used as a test of the presence of bile-acids. Furfur-aldehyde can be used instead of the cane-sugar.

P.'s test for bile. The same as *P.'s reaction*.

Petty-morrel. The *Aralia racemosa*.

Petum. See *Petun*.

Petun. *Petun* and *tabaco* were the two names used for tobacco by the Caribbeans, who used it as a sedative. When they smoked it, they called it *tabaco*, and when they snuffed it, *petun*. See *Nicotiana tabacum*.

Pety'a. See *Pyetia*.

Peucē. (Πεύκη, the pine or fir.) The pine or fir tree. See *Pinus*. Term sometimes used also for the *Pinus sylvestris*.

Peucea balsamea. A name for the *Pinus abies*.

Peucedan'ea. A Tribe of the *Umbelliferae*, established by De Candolle, having the *Peucedanum* for its type.

Peuced'anin. (*Peucedanum*.) A neutral bitter substance obtained from the root of *Peucedanum officinale*. It is identical with *Imperatorin*.

Peuced'anum. (Πευκέδανον, a bitter umbelliferous plant, like the hog's-fennel. See *P. officinale*.) A Linn. Genus of plants, Class *Pentandria*, Order *Digynia*.

Also, the *P. officinale*.

P. alsa'ticum. The *P. officinale*.

P. altis'simum. The *P. officinale*.

P. austri'acum. This plant has the same medicinal action and has been used for the same class of cases, as the *P. palustre*.

P. graveolens. The *Anethum graveolens*.

P. officina'lē. (F. *peucedane*; G. *Pest-fenchel*.) The hog's-fennel or sulphur-wort. The fresh root, if wounded in spring or autumn, exudes a yellow juice which dries into a solid gum-resin, retaining the smell and taste of the root. Both resin and root have been recommended as nervine and antihysterical.

P. oreoseli'num. The *Athamanta oreoselinum*.

P. palus'trē. A European plant. It has been recommended for epilepsy.

P. panicula'tum. The *P. officinale*.

P. pratens'ē. The *P. silaüs*.

P. si'laüs. *Saxifraga vulgaris*, the English meadow saxifrage. The root, leaves, and seeds were formerly used as aperient, carminative and diuretic.

P. terra'tum. The *P. officinale*.

Peuc'ine. (Πεύκη, the fir or pine-tree.) Old term for resin or pitch.

Peuc'inous. (Πεύκη.) Belonging to the fir-tree; resinous, like the fir.

Peucyl'ē. (Πεύκη, a fir-tree; ὕλη, wood, or the rough material of which anything is made.) Name given by Schweigger-Seidel to a substance obtained from the black pine.

Peumus. The same as *Boldoa*.

P. bol'dus. See *Boldoa fragrans*.

P. fra'grans. The same as *P. boldus*.

Pew'ter. (Mid. E. *pewter*, *pewtyr*; Old F. *peutre*, standing for an older form *peltre*. The original word appears in English as *spelter*. F. *étain*; G. *Zinn*, *zinnernes Geräth*.) An alloy of lead with tin or zinc, used for making mugs, &c.

Pex'in. (*Pexis*.) A name for coagulated egg-albumin.

Pex'is. (Πήξις, a congealing.) Old term for congealing, or concretion. Cp. *Pegma*.

Peyer, Jo'hann Kon'rad. A Swiss anatomist. Born 1653, died 1712.

P.'s glands. The same as *P.'s patches*.

P.'s patches. First described by Peyer in 1677. They are oblong groups of lymphoid

follicles in the walls of the small intestine. They are arranged longitudinally on the side of the intestine furthest from the mesentery, and vary from half an inch to four inches in length, and are rather less than one inch in width. Their surface is generally free from villi. Capillary vessels traverse the retiform tissue of the patches, passing mainly in lines converging towards the centre. The follicles are surrounded by lacteal plexuses. It is the Peyer's patches that are especially affected in enteric fever.

Peyer'i glandulæ. The same as *Peyer's patches*.

Peyer'ian. Belonging to, or named after, *Peyer*.

Peyrilhe. A French physician. Born 1735, died 1804.

P., elix'ir of. See *Elizir, antiscrofulous*, of *Peyrilhe*.

Pez'a. (Πίζα, the foot.) Old term for *Malleolus*; also, the sole of the foot.

Pez'iza. (Πίζα, the foot. Applied by Pliny to such fungi as grow without stalk or apparent root.) A Linn. Genus of Fungi.

P. auric'ula. The fungus called Jew's ear. See *Auricula judæ*.

Peziz'ea. A section of the *Ascomycetes*, having the *Peziza* for their type (Brongniart).

Pezizoid'ea. Persoon's name for the *Pezizeæ*.

Pfäff'ers. In the Canton of St. Gallen, Switzerland. There is in this town a warm spring (34° to 37° C.); it contains 387 parts per 1000 of solid matters.

Pfü'ger. A German physiologist and embryologist of the present day.

P.'s av'alanche the'ory. It was formerly held by Pfüger that a stimulus passing down a nerve of some length gained force during its passage, so that a weak stimulus which had to travel some distance along a nerve was more powerful at the end than an equal stimulus applied at a short distance from the muscle. This however has been entirely disproved, and is now discarded.

P.'s gas-pump. A mercury suction-pump for the extraction of the gases from blood.

P.'s law. A nerve is stimulated both at the moment of beginning and of ending of the state of *electrotonus*. When the current is closed, the stimulation occurs at the kathode, when opened, at the anode. The stimulation at the beginning of *katelectrotonus* is greater than that at the disappearance of *anelectrotonus*.

P.'s law of re'flexes. 1. The reflex movement is on the side on which the sensory nerve is stimulated, only those muscles contracting whose motor nerves arise from the same segment of the cord. 2. When the reflex takes place on the opposite side, the corresponding muscles only contract. 3. The more vigorous contractions, where they are unsymmetrical, occur on the stimulated side. 4. When reflex stimulation extends to other nerves, it is to those lying towards the medulla oblongata. 5. All the muscles of the body may be thrown into action.

P.'s sacs. The same as *P.'s tubules*.

P.'s salivary tubes. The intralobular ducts of the salivary glands, described by Pfüger.

P.'s tu'bules. The nests of cells in the ovary from which the Graafian follicles become developed. See *Ovary*.

PHACE—PHACOSYPHILIONTHUS

Phac'cē. (Φακῆ, the fruit of the lentil.)
1. The crystalline lens of the eye. 2. *Chloasma*.
3. A lens-shaped flask, used for the application of heat.

Phacecephlogis'con. (Φακός, the lentil plant; *cephlogiscon*, a name for varicella.) Term for a variety of *Varicella* in which the vesicles are lenticular in shape.

Phacellus. (Φάκελλος = φάκελος.) The same as *Phacelus*.

Phac'elus. (Φάκελος [L. *fasciculus*], a bundle.) A bundle, fasciculus.

Phacentocole. (Φακός, the lentil, hence used for the lens of the eye; *entocole*.) Dislocation of the crystalline lens of the eye into the anterior chamber.

Phachy'drops. See *Phacydropsia*.

Phachymenit'is. See *Phacymenitis*.

Phaci. (Nom. pl. of *Phacus*.) The same as *Phacia*.

Phacia. (Φακός, the lentil; also a mole or freckle, from the likeness in shape. F. *phacie*.) The same as *Lentigo*.

Phac'icous. (Φακός, the lentil; also in the sense of the crystalline lens.) Belonging to the crystalline lens; also, lentil-shaped.

Phac'ion. The same as *Phacoptisana*.

Phact'is. (Φακός, the lentil, hence the crystalline lens, from its similarity in shape to the seed; terminal -itis. F. *phacite*; G. *Linsenentzündung*.) Inflammation of the crystalline lens.

Phacocatapi'esis. (Φακός; καταπίσις, a pressing down.) Depression of the crystalline lens.

Phacocata'thesis. (Φακός; κατάθεσις, a putting down upon.) The same as *Phacocatapiesis*.

Phaco'copis. (Φακός, a lentil; κοπίς, a broad, curved knife.) Term for a scalpel with a blade shaped like the longitudinal section of a lentil.

Phaco'cyst. (*Phacocystē*.) Bot. The same as *Nucleus*.

Phacocys'tē. (Φακός, in the sense of the crystalline lens; κύστις or κύστη, a bag or pouch.) The capsule of the crystalline lens.

Phacocystec'tome. (*Phacocystē*; Gr. ἐκτομή [ἐκτέμνω], a cutting out. F. *kystotome emporte-pièce*.) The instrument used in the operation of *Phacocystectomy*.

Phacocystec'tomy. (F. *phacocystectomie*.) The operation of cutting out a part of the lens-capsule for cataract, introduced by Roquetta of Paris.

Phacocystipach'y'tēs. (*Phacocystē*; Gr. παχύτης, thickness.) Term for a thickening of the capsule of the crystalline lens.

Phacocys'tis. (Φακός; κύστις.) The same as *Phacocystē*.

Phacocysti'tis. (*Phacocystis*; terminal -itis.) Inflammation of the capsule of the crystalline lens.

Phaco'des. (Φακός, a lentil. F. *phaceux*; G. *linsenfarbig*.) Having, or full of, lentils. A term formerly applied to persons whose skin was lentil-coloured from disease.

Phacoglauco'ma. (Φακός; *glaucoma*. F. *phacoglaucome*; G. *Linsenglaukom*.) Term employed by Mackenzie [Lond. Med. Gaz., April, 1868] for a so-called "glaucoma of the crystalline lens."

Phacohy'drops. See *Phacydropsia*.

Phacohymenit'is. See *Phacymenitis*.

Phac'oid. See *Phacoides*.

Phacoidel'itis. The same as *Phacitis*.

Phacoid'es. (Φακός; εἶδος, form. F. *phacotide*; G. *linsenähnlich*.) Lentil-shaped. Formerly applied by Vesalius, *de Hum. Corp. Fab.*, vii, 14, as an epithet for the crystalline lens.

Phacoid'oscope. (Φακός; εἶδος, form, resemblance; σκοπέω, to look at.) An instrument for observing and estimating reflex images; a modification of an instrument formerly termed an ophthalmoscope. (Dunglison.)

Phacomalacia. (Φακός; μαλακός, soft.) Softening of the crystalline lens.

Phacometachore'sis. (Φακός; μεταχώρησις, a going from one place to another. F. *phacométachorèse*; G. *Linsenverschiebung*.) Dislocation of the crystalline lens.

Phaco'meter. See *Phakometer*.

Phacometoece'sis. (Φακός; μετοίκησις, change of abode, migration.) The same as *Phacometachoresis*.

Phac'onine. Fremy's name for the albuminoid substance composing the greater part of the fibres of the crystalline lens. (Littre.)

Phacopalingen'esis. (Φακός; παλιγγενεσία, new birth. F. *phacopalingénésie*; G. *Phacopalingenese*.) The reproduction of the crystalline lens.

Phac'opis. See *Phacocopis*.

Phacoplane'sis. (Φακός; πλάνησις, a leading astray.) Displacement of the crystalline lens.

Phacoplas'ma. (Φακός, the lentil; πλάσμα, anything moulded. F. *phacoplasme*.) Term for a linseed-meal poultice, *Cataplasma lini*.

Phacops'is. (Φακός, a lentil; ὄψις, appearance. G. *Linsenfleckeriger*.) Term for a person with freckles.

Phacoptisa'na. (Φακοπτισάνη, a dish of shelled or bruised lentils with barley; from φακός, a lentil, and ππισάνη, peeled barley. See Galen, *de Alim. Fac.*, i, 18.) Old term for a food composed of lentils and peeled barley.

Phacopy'o'sis. (Φακός; πύωσις, supuration.) A name formerly applied to *soft cataract*, under the mistaken idea that it was supuration of the crystalline lens.

Phac'os. (Φακός, a lentil.) The *Ervum* lens.

Phacosclero'ma. (Φακός; σκληρώμα, a hard part or induration, Hipp.) Scleroma or induration of the crystalline lens.

Phacosclero'sis. (Φακός; σκληρόω, to harden or stiffen.) The process of formation of *Phacoscleroma*.

Phac'oscope. See *Phakoscope*.

Phacoscotas'mus. (Φακός; σκοτασμός, a making dark.) The same as *Phacoscotoma*.

Phacoscoti'sis. (Φακός; σκοτιζω, to make dark.) The same as *Phacoscotoma*.

Phacoscotoma. (Φακός; σκότωμα, giddiness, a darkening.) A darkening of the crystalline lens; cataract.

Phacoscotomatous. (*Phacoscotoma*.) Belonging to *Phacoscotoma*.

Phaco'sis. (Φακός, a lentil.) The formation of freckles (cp. *Phacopsis*); also, the *Macula nigra* of the inner surface of the eyeball.

Phacosymphillon'thus. (Φακός, a lentil; *Symphillonthus*.) Term for a variety of

Syphilionthus in which the papules are lenticular.

Phacotos. (Φακός, a lentil.) Lenticular; formerly applied to an instrument, *scalpellum lenticulare*, used in fractures of the cranial bones for scraping or making smooth their edges. Also used in the same sense as *Phacoides*.

Phacus. See *Phacos*.

Phacydropsia. (Φακός, in the sense of the crystalline lens; ὕδρωψ, dropsy, Hipp. *F. phacydropsie*; *G. Phakydrops*.) Dropsy of the crystalline lens.

Phacymenitis. (Φακός, in the sense of the crystalline lens; ὑμήν, a membrane; terminal -itis. *F. phacyménite*; *G. Phakymenitis*.) The same as *Phacocystitis*.

Phadaro'des. Term for a mulberry tumour on the inner surface of the eyelid; but considered by Kraus as probably a mistake for *Psapharosis*.

Phadaro'sis. The same as *Phadarodes*.

Phædon betulæ. The Mustard Beetle, or "Black Jack." Family *Chrysomelidæ*, Division *Phytophaga*, Order *Coleoptera*. They feed together in large numbers, attacking mustard, onions, rape and *kohl rabi*, and clearing everything off the stems and stalks of these plants. It is known in Germany and France, and in N. Europe, as well as in Great Britain.

Phæ'n. See *Phen*.

Phænakis'troscope. (Φαίνω; κίστη, a box; σκοπέω, to look at.) Name applied by Plateau to an apparatus composed of a disc or a cylinder on which is fixed a series of drawings representing successive phases of one continuous movement. The disc is rapidly rotated, and on looking at it through a small opening, the impression of one picture remains on the retina until that of the next takes its place, and the appearance is of one figure in continuous movement. This apparatus was described by Cardanus in 1550. It is used as a toy under the name of *Zoetrope*.

Phænerobio'tus. See *Phanerobiotic*.

Phænicis'mus. (Φαίνω, to show.) Term for *Rubeola*.

Phænocarpous. (Φαίνω, to show; καρπός, fruit. *F. phénocarpe*.) Term applied to plants bearing fruits that are very easily seen, because of their having no adherence to neighbouring parts.

Phænocœ'lia. (Neut. pl. Φαίνω, to show; κοίλος, hollow.) Term for all those animals that have a persistent *neurocœle*, as the Vertebrata.

Phæ'nogam. (Φαίνω, to show; γάμος, the union of the sexes.) The same as *Phænogam*.

Phænogam'ia. (Neut. pl. from *Phænogam*.) The same as *Phanerogamia*.

Phænogam'ic. Flowering, or producing flowers; belonging to the *Phænogamia*.

Phænogamous. (*Phænogam*. *F. phénogame*; *G. offenbarehelig*.) The same as *Phænogamic*.

Phænology. See *Phenology*.

Phænomenogen'ia. (*Phænomenon*; γεν, the root of γένεσις, origin, source. *F. phænomenogénie*.) The generation or occurrence of phenomena, as in disease.

Phænomenogon'ia. The same as *Phænomenogenia*.

Phænomenogonolog'ia. (*Phæno-*

menogonia; λόγος, a discourse.) A discourse on the occurrence of morbid phenomena.

Phænomenograph'ia. (*Phænomenon*; γράφω, to write.) A history of morbid phenomena.

Phænomenolog'ia. (*Phænomenon*; λόγος, a discourse.) A discourse on morbid phenomena.

Phæno'menon. See *Phenomenon*.

Phænomenoscop'ia. (*Phænomenon*; σκοπέω, to look at, contemplate.) The observation and examination of morbid phenomena.

Phænophthalmotrop'ia. (Φαίνω, to show; ὀφθαλμός, the eye; τροπή [τρέπω], a turning round.) Donders' apparatus for illustrating the movements of the eyeball.

Phæno'poda. (Φαίνω, to show; πούς, podós, a foot.) Mayer's name for a Family of the *Ophidia* in which rudiments of feet are visible.

Phænoste'monis. (Φαίνω; στήμων.) The same as *Phanerostemonis*.

Phæ'ochrous. (Φαίός, dusky; χρώς, the surface.) Dusky-coloured.

Phæophthal'mus. (Φαίός, dusky; ὀφθαλμός, the eye. *F. phæophthalmé*.) Having a brown or dark eye.

Phæophyll. (Φαίός, dusky; φύλλον, a leaf.) The brown colouring-matter of the *Fucoideæ*; also called *Phyllophæin*.

Phæophylli'na. (*Phæophyll*.) See *Phæophyll*.

Phæo'pterus. (Φαίός, dusky or dun-coloured; πτερόν, a feather; later on, a wing, usually in plural, wings.) Having brown wings.

Phæore'tin. (Φαίός, dusky; ῥητίνη, resin. *F. phæorrhétine*; *G. Phäoretin*.) A resinous substance of unknown chemical composition existing in the root of plants of the Genus *Rheum*. Schlossberger and Döpping isolated it from the root in the following way: An alcoholic extract of the root was prepared, and the part of this extract which was insoluble in water was dissolved in a small quantity of alcohol of a strength of 80 per cent., and mixed with ether. A greyish brown substance was precipitated, and this was dried by pressure, and then some spirits of wine of a strength of 80 per cent. was added to it; the *Phæoretin* was found to be dissolved in this, and another constituent, *Aporetin*, remained in the undissolved portion. (H. Thoms.)

Phæ'os. (Φαίός, dusky or dun.) Brown, dusky, or dun-coloured; the same as *Fuscous*. Old epithet applied to a certain *collyrium*, from its colour.

Phæospor'æ. (Φαίός; σπόρος, a seed.) A large class of *Algæ*, which, together with the class *Fucaceæ*, embraces all the brown and greenish brown seaweeds.

Phagæ'na. (Φαγεῖν, to devour.) Ravenous hunger; also used in the same sense as *Phagedæna*.

Phagedæ'na. (Φαγέδαινα, a cancerous sore, canker; from φαγεῖν, to devour.) A process of erosion with extensive destruction, and often accompanied by sloughing of parts. See *Hospital gangrene*, and *Phagedænic chancre*.

P. gangreno'sa. Term for *Hospital gangrene*.

P. pu'tris. Sloughing phagedænic chancre. See *Phagedænic chancre*.

P., slough'ing. See *Hospital gangrene*.

P., slough'ing, of the mouth. *Cancrum oris*.

Phagedæ'nic. Belonging to, or characterised by the presence of, *Phagedæna*.

P. chancre. Phagedæna is generally believed to affect both the simple chancre and the true primary syphilitic chancre. Some surgeons believe it to be always syphilitic, either affecting a syphilitic chancre, or a soft sore in a patient who already has syphilis. Berkeley Hill stated that a considerable proportion of cases were followed by secondary symptoms. There is a tendency to erosion, with destructive inflammation of the parts affected. The rapidity of progress varies; also, in some cases it heals at one part as it advances at another (the *serpiginous sore*). In the very rapid cases, there is no healing.

Erichsen gives the following clinical division of these sores: 1. Phagedænic chancre without slough; eroding ulcer, spreading with sharp-cut edges.

2. With white slough; in this there is a thin margin of white slough.

3. With black slough; very similar to the above, except in the colour of the slough, and in its tendency to extend more rapidly.

Phagedæna most usually affects sores in debilitated and broken-down subjects, often in soldiers exhausted by a campaign. When spreading quickly, phagedænic sores give rise to much pain and general constitutional disturbance.

P. ul'cer. See *Phagedænic chancre*.

Phagedæ'nism. Term for a special morbid condition of the body which was formerly supposed to exist as the cause of *Phagedæna*.

Phagedænis'mus trop'icus. A circumscribed skin disease occurring in tropical countries. (*Real Encyc. der Pharm.* Geissler and Möller.)

Phagedænoceratodei'tis. (*Phagedæna*; *ceratodeitis*.) Term for phagedænic inflammation of the cornea.

Phagede'na. See *Phagedæna*.

Phageden'ic. See *Phagedænic*.

Phag'edenism. See *Phagedænisism*.

Phagede'nous. Resembling, or of the nature of, *Phagedæna*.

Phagocy'tal. Belonging to a *Phagocyte*.

Phag'ocyte. (Φαγεῖν, to devour; κύτος, a hollow.) Metschnikoff's name for the leucocytes concerned both in retrogressive metabolism, in which they ingest the parts to be removed in the form of fine granules, and in the destruction of bacterial organisms within the body, by the same process of ingestion.

Phagocy'tic. The same as *Phagocytal*.

Phag'ocytism. The function of a *Phagocyte*.

Phagocyto'sis. Metschnikoff's term for the process of absorption of bacterial organisms by leucocytes (*phagocytes*), which he believes to play a most important part in the production of immunity of an individual from any specific virus.

Phagoma'nia. (Φαγεῖν, to devour; μανία, madness.) An abnormal and uncontrollable craving for food, coming on in paroxysms.

Phagosyphiloch'thus. (Φαγεῖν, to devour; contr. of *syphilodochthus*.) Term for an eroding form of *Syphilodochthus*.

Phaki'tis. See *Phacitis*.

Phakohydrops'ia. See *Phacohydrops*.

Phakohymen'i'tis. See *Phacohymenitis*.

Phako'meter. (Φακός, a lentil, hence used for the crystalline lens; μέτρον, a measure.) *Lens-measurer.* A small, disc-shaped, steel instrument, with a moveable flat plate, concave at the free edge, let into the circumference, and connected with a moveable dial on the face of the instrument. The surface of the lens to be measured is pressed against the moveable plate until its centre touches the circumference of the disc, and its surface on the two sides of the centre, the ends of the free edge of the moveable plate; the number of diopters is indicated by an index round the face of the disc.

Phakoptis'anē. (Φακός; πτισάνη, peeled barley.) A food formerly given to sick persons, composed of lentils and barley, crushed and shelled, and containing more lentil than barley.

Phak'oscope. (Φακός; σκοπέω, to look at.) An apparatus invented by Helmholtz for showing the three pairs of images formed by any object in the eye (see *Purkinje-Sanson's images*), and the alteration in size and position of the middle pair, i. e. those reflected from the anterior surface of the lens, &c., during accommodation of the eye for near objects.

Phala'cra. (Φαλάκρα, baldness, a bald head.) Baldness of the head; the same as *Alopecia* and *Calvities*.

Phalacro'des. The same as *Phalacroma*.

Phalacro'ma. (Φαλάκρωμα, a bald head; also, a bald man. F. *phalacrôme*; G. *Kahlkopf*.) A bald head; also, a bald-headed person.

Phalacromat'ic. Belonging to *Phalacroma*.

Phalacro'matous. The same as *Phalacrous*.

Phalacro'sis. (Φαλακρός, bald.) Old term for the progress of *Phalacroma*, the process of becoming bald.

Phalac'rotēs. (Φαλακρότης, baldness.) The same as *Phalacra*.

Phalacrot'ic. Belonging to *Phalacrotēs*.

Phal'acrous. (Φαλακρός, bald.) Bald-headed, or very bald.

Phal'acrum. (Φαλακρός.) Old term for an instrument with a blunt, smooth extremity; a probe, according to Turton.

Phala'a. (Probably φαλός, bright.) A term, used by Basilus Valentinus Spagyricus (fifteenth century), for a universal medicine or panacea, which was really the *Mercurius philosophicus*; also, by Rolfinckius (seventeenth century), *de Purgant.* s. ii, art. 3, c. 15, for the *Tinctura jalapæ*.

Phalangæ. (L. *phalangæ*, rods slung between men's shoulders, for carrying burdens; from Gr. φαλάγγες, pl. of φάλαγξ.) The flat bars joining together the rings of the reticulate membrane of the Cochlea. (Foster.)

Phalangag'ra. (*Phalanges*, the bones of the fingers or toes; ἄγρᾱ, a catching or seizure.) Gout in a finger or toe.

Phalan'gar process. (*Phalangæ*.)

(1) The name for the projecting plates of the inner and outer rods of Corti, the outer ones being overlapped by the inner. The phalanger process of the outer rod is the beginning of the *membrana reticularis*.

(2) Also, the tapering process into which each of the cells of Deiters (outer row of outer hair cells) is prolonged upwards, and which is attached

PHALANGARTHROSIS—PHALLANASTROPHIC

to the phalangeal bar on the outside of the ring in which lies the head of the twin cell of Corti. (Foster.)

Phalangarthrit'is. (*Phalanx*; *arthrit'is*.) The same as *Phalangagra*.

Phal'ange. The same as *Phalanx*.

Also, in *Entomol.*, a joint of the tarsus in Insecta.

Also, in *Bot.*, a mass of stamens partly joined together by their filaments.

Phalange'al. Belonging to one or more of the phalanges.

P. bone. The same as *Phalanx*.

P. pro'cess. The same as *Phalanger process*.

Phalange'an. The same as *Phalangeal*.

Phalanges. (Pl. of *Phalanx*, and also of *Phalange*. *G. Gliederreihen*.) *Anat.* The small bones which make up the digits of the fingers and toes. There are three phalanges in each digit, except in the case of the thumb and great toe, which have only two each, it being generally considered that it is the phalanx of the second row, or middle phalanx, which is absent in both cases. *Entom.* and *Bot.*, see *Phalange*.

P., articula'tions of. See *Metacarpophalangeal articulations*, and *Inter-phalangeal articulations*.

P. basilar'es. The proximal or basal phalanges of the digits.

P., cuta'neous lig'a'ments of. (Cleland.) Fibrous bands springing from the edges of the phalanges, and inserted into the skin at the sides of the fingers. They keep the skin in position when the joints are flexed.

P. me'diæ. The second row of phalanges of the digits.

P. of Dei'ters. See *Lamina reticularis*.

P. of fin'gers. See under chief heading.

P. of fin'gers, exten'sors of. The *extensor communis digitorum* extends mainly the first phalanx of the fingers. The four *lumbricales* and seven *interossei*, being inserted into the expansion of the extensor tendons, have a double action, flexing the proximal phalanges, and extending the middle and distal phalanges.

P. of fin'gers, flex'ors of. The *flexor sublimis digitorum* flexes the second phalanges of the fingers, and the *flexor profundus* the third phalanges. The *lumbricales* and *interossei* flex the proximal phalanges (see under *P. of fin'gers, exten'sors of*).

P. of retic'ular lam'ina. The *P. of Dei'ters*.

P., ossifica'tion of. Each has a centre for the shaft, and an epiphysis at the proximal end. In the phalanges of the fingers, the centre for the shaft begins to ossify in the eighth or ninth week of foetal life, that for the epiphysis the third to the fifth year after birth. In the phalanges of the toes, the nucleus for the shaft appears in the ninth or tenth week, that of the epiphysis the fourth to the eighth year. They unite about the nineteenth to the twenty-first year.

P. unguicular'es. The ungual or terminal phalanges of the digits.

Phalang'ial. The same as *Phalangeal*.

Phalang'ian. The same as *Phalangial*.

Phalang'iasis. The same as *Phalangosis*.

Phalan'gic. Belonging to the *Phalanges*.

Phalan'giform. (*Phalanx*; *L. forma*,

likeness.) Term applied by Nees von Esenbeck to vegetable hairs provided with transverse septa, and slightly contracted transversely at each septum.

Phalangigra'da. (*Phalanx*; *L. gradior*, to walk.) A division, *Tylopoda* of Claus, of artiodactyl Ruminants of which the Family of *Camelidæ* forms the type. The feet are so formed that the animal walks on the phalanges.

Phalan'iggrade. Walking on the phalanges; also, belonging to the *Phalangigrada*.

Phalan'gium. (*Φαλάγγιον*, a venomous spider; also, the *Phallangium*, a plant said to cure this spider's bite. *Diosc.*) *Bot.* A generic name for various species of the *Liliaceæ* and *Iridaceæ*.

Zoöl. A Genus of the *Arachnida*.

P. esculen'tum. The *Scilla esculenta*.

Phalango'sis. (*Φάλαγξ*; *-αγγος*, a battalion of foot soldiers.) Old term for *Distichiasis*; also, for *Ptoxis*.

Phalanx. (*Φάλαγξ*.) Term for the small bones of the fingers and toes. See *Phalanges*.

P., ba'sal. A phalanx of the first or proximal row.

P., bas'ilar. The same as *P., basal*.

P., dis'tal. The *P., ungu'al*.

P., mid'dle. A phalanx of the second or middle row.

P. pri'ma. The same as *P., basal*.

P., prox'imal. The *P., basal*.

P., ter'minal. The *P., ungu'al*.

P., un'gual. The phalanx of the third or distal row, so called because it carries the *unguis* or nail.

P. unguicular'is. The same as *P., ungu'al*.

Phalarid'æ. Term of Link and Kunth for a Tribe of the *Gramineæ*, having the *Phalaris* for their type.

Phalar'is. (*Φαλός*, bright, shining; from its white, shining seed, supposed to be the *φαλ'αρός* of Dioscorides.) A Linn. Genus of plants, Class *Triandria*, Order *Digynia*.

P. arundina'cea. This species grows by rivers and ponds; the stem is edible.

P. canarien'sis. Canary-grass, the seed of which is the common food of the canary. In the Canaries, where it grows, it is ground into meal and made into a coarse kind of bread. The seeds were used by the ancients in the treatment of renal and vesical pains.

P. xizano'ides. The *Andropogon muricatus*.

Phal'era. (*Φάλος*, the forepiece of a helmet.) Term used by Galen (*φάλαραι*) metaphorically for a kind of bandage for the nose (*de Fasc. n. 52*).

Phalerocar'pus. (*Φαληρός*, having a patch of white; *καρπός*, fruit.) A Genus of the Natural Order *Vacciniaceæ* or *Ericaceæ*.

P. serpyllifo'lia. Don. (*L. serpyllum*, wild thyme; *folium*, a leaf.) White cranberry. Berries esculent.

Phallal'gia. (*Φαλλός*, the penis; *ἄλγος*, pain.) Pain in the penis.

Phallal'gic. Pertaining to *Phallalgia*.

Phallana'strophé. (*Φαλλός*, the penis; *ἀναστροφή*, a turning back.) Distortion of the penis.

Phallanastroph'ic. Belonging to *Phallanastrophe*.

Phallancylo'sis. (Φαλλός, the penis; ἀγκύλωσις, a contraction of the limbs.) A bending of the penis, as in *Chordee*.

Phallancylot'ic. Pertaining to *Phallancylosis*.

Phallaneurys'ma. (Φαλλός, the penis; ἀνεύρυσμα, a widening.) Term for a penile *aneurysm*.

Phallaneurysmat'ic. Pertaining to *Phallaneurysma*.

Phallankylo'sis. The same as *Phallancylosis*.

Phal'lic. Pertaining to the *Phallus* or penis.

Phallit'is. Inflammation of the *Phallus* or penis.

Phalloblennorrhœ'a. (Φαλλός; blennorrhœa.) Term for *Gleet*.

Phallocamps'is. (Φαλλός; κάμψις, a bending.) A curving of the penis, as in *Chordee*.

Phallocamp'tic. Belonging to *Phallocampsis*.

Phallocarcino'ma. (Φαλλός; carcinoma.) Cancer of the penis.

Phallocarcinomati'c. Of, or belonging to, *Phallocarcinoma*.

Phallocarcino'matous. The same as *Phallocarcinomatous*.

Phallocryp'sis. (Φαλλός; κρύψις, a hiding.) A shrinking or retraction of the penis; also, abnormal smallness of the penis.

Phallocryp'tic. Belonging to *Phallocrypsis*.

Phallocylot'ic. The same as *Phallancylot'ic*.

Phallosdyn'ia. (Φαλλός, the penis; δόδυνη, pain.) The same as *Phallalgia*.

Phalloid. (Φαλλός; εἶδος, likeness.) Resembling the penis in appearance.

Phalloi'deæ. (*Phallus*.) A Family of gasteromycetous Fungi, including the *Stink-horns*.

Phallon'cus. Belonging to *Phallonus*.

Phallon'cus. (Φαλλός, the penis; ὄγκος, bulk; hence used to mean a tumour.) A morbid swelling of the penis.

Phalloplast'y. (Φαλλός; πλάσσω, to mould.) Plastic operative surgery of the penis.

Phallopsoph'ia. (Φαλλός; ψόφος, a noise.) Escape of gas from the penis, per urethram.

Phallopsoph'ic. Belonging to *Phallopsophia*.

Phallorrhæ'gia. (Φαλλός, the penis; ῥήγνυμι, to burst forth.) Hæmorrhage from the penis.

Phallorrhæ'gic. Belonging to *Phallorrhagia*.

Phallorrhœ'a. (Φαλλός; ῥέω, to flow. F. *phallorrhée*; G. *Phallorrhœe*.) A discharge from the penis; urethritis with a discharge, or gonorrhœa in the male.

Phallorrhœis'chesis. (*Phallorrhœa*; Gr. ἵσχω, to check.) Term for a stopping of a gonorrhœal discharge.

Phallorrhœischet'ic. Belonging to *Phallorrhœischesis*.

Phallus. (Φαλλός, the penis, which the members of the under-mentioned Genus of fungi resemble in shape.) 1. The penis.

2. A Linn. Genus of *Fungi*.

P. esculen'tus. See *Morchella esculenta*.

P. impudic'us. (L. *impudicus*, immodest.) The common stinkhorn; a fungus which

has, even at a distance, an extremely foetid odour. Near at hand it has the odour of a volatile alkali. It has been applied locally to allay pain in the limbs, and, in the form of an infusion of the powdered fungus, for inflammatory joint-affections.

Phaneranth'e'rous. (Φανερός, visible; ἀνθηρός, used in the sense of an anther. F. *phanéranthère*; G. *offenbarstaubbentlig*.) Having anthers on the outer side.

Phaneranth'ous. (Φανερός, visible; ἄνθος, a flower. F. *phanéranthe*; G. *offenbarblumig*.) Epithet applied by Wachendorff to plants having flowers that are manifest.

Phan'er'i. (Nom. pl. of *phanerus*, a Latinized word from *φανερός*, manifest.) Term for micro-organisms that are visible under the microscope, without being treated by special reagents.

Phanerobio'tic. (Φανερός, visible; βιωτικός = βιώσιμος, possible to live.) Exhibiting distinct manifestations of life.

Phanerobio'tus. (Φανερός, visible, evident; βίος, life.) The same as *Phanerozoöus*.

Phanero'b'ius. The same as *Phanero-biotus*.

Phanerocotyledo'næ. (Φανερός, visible; κοτυληδών, any cup-shaped hollow; used to mean a *cotyledon*.) A section of the vegetable kingdom under which Agardh ranged those plants whose cotyledons were easily seen.

Phan'erogam. A flowering plant, a member of the Subkingdom *Phanerogamia*.

Phanero'gama. (Nom. pl. n. Etymology the same as that of *Phanerogamia*.) Latreille's name for a branch of the *Mollusca*, including those among which copulation is a necessary factor in the reproduction of the species.

Phanerogam'ia. (Φανερός, visible, evident; γάμος, marriage; used here in the sense of the sexual organs.) Flowering plants. A subkingdom of the vegetable kingdom, comprising plants having flowers, normally composed of whorls of leaf-like organs enclosing stamens, or ovules, or both. Fertilisation is accomplished by the union of pollen cells with the nucleus of the ovule. These plants are propagated by means of seeds.

Phanerogam'ic. Belonging to the *Phanerogamia*.

Phanerogam'ious. The same as *Phanerogamic*.

Phanero'gamous. 1. The same as *Phanerogamous*.

2. Belonging to the *Phanerogama*.

Phanero'gena. (Nom. pl. n. Φανερός, visible; γένος, stock, descent.) An Order of homogeneous rocks, the composition of which is apparent, and allows of their being certainly referred to the mineral species already determined (Haüy, Brongniart, and C. Prevost).

Phanero'genous. (F. *phanérogène*; G. *offenbarursprunglich*.) Belonging to the *Phanero-gena*.

P. tis'sue. M. Robin's name for the pulp of the teeth.

Phaneroglos'sa. (Nom. pl. n. Φανερός, visible; γλῶσσα, the tongue.) Wagler's name for a Family of the Genus *Rana*, Class *Anoura*, in contradistinction to the Family *Pipa*, which he named *Aglossa*.

Phaneroglos'sal. The same as *Phaneroglossous*.

Phaneroglos'sate. The same as *Phaneroglossous*.

Phaneroglos'sous. Belonging to the *Phaneroglossa*.

Phaneroneu'rous. (Φανερός, plain, apparent; νεῦρον, a nerve or tendon.) Having distinct or differentiated nerves.

Phanero'phorous tis'sue. (Φανερός; φέρω, to bear.) The same as *Phanero-genous tissue*.

Phan'erophyte. (Φανερός, visible; φυτόν, a plant.) Term applied by Link to the more distinct or perfect plants, as distinguished from the more imperfect, the *Cryptophyta*.

Phaneroste'monis. (Φανερός, evident; στήμων, a thread, hence a stamen.) Term applied by G. Allman to plants that have distinct stamens.

Phanerozo'ous. (Φανερός, visible; ζωή, life.) That which is distinctly alive, as opposed to *Cryptozōous*.

Pha'nion. (Φάνιον.) A little lamp or torch. Also, name for two different compound medicines described by Galen.

Phanta'sia. (Φαντασία, a making visible.) A phantasy; a false or imaginary representation or set of ideas.

Phanta'sioid. (Φαντασία; εἶδος, like.) Resembling *Phantasia*.

Phan'tasm. (Φάντασμα, an appearance, spectre; from φαντάζω, to make visible. F. *phantasme*; I. *fantasma*; G. *Trugbild*.) An imaginary representation of an object or objects not really present, the effect of morbid or altered conditions of the sense-organs or brain. Thus, it may be merely an *illusion* of the senses, the subject of the illusion realising that it is merely subjective; or it may give rise to an actual *delusion* of the mind.

Phantasmatics. (*Phantasm*.) Term for an exposition of the cause of the appearance of phantoms.

Phantasma'tion. (Dim. of φάντασμα.) A little imagine or phantom.

Phantasmatograph'ia. See *Phantasmographia*.

Phantasmatomo'ria. (Φάντασμα, -ατος, a phantasm; μωρία, folly.) An entertaining of mere childish fancies.

Phantasmatoscop'ia. See *Phantasmoscopy*.

Phantasmogen'esis. (*Phantasm*; *genesis*.) The causation of phantasms.

Phantasmogenet'ic. Giving rise to phantasms.

Phantasmograph'ia. (Φάντασμα, an image or appearance; γράφω, to write.) Zenneck's term for a history of sensible or perceptible external appearances.

Phantasmolog'ical. Belonging to *Phantasmology*.

Phantasmol'ogy. (Φάντασμα; λόγος, discussion.) The scientific study of *Phantasms*.

Phantasmophreno'sis. (Φάντασμα; φρένωσις, instruction. G. *Bildirren*.) C. H. Schultze's term for dreamy fancies occurring in the waking state.

Phantasmoscop'ia. (Φάντασμα; σκοπέω, to look at. F. *phantasmoscopie*; G. *Gespenstersehen*.) Term for the imaginary seeing of ghosts or spectres. Also, *Metamorphopsia* (Dunglison).

Phantas'tic. (Φαντασία, a making

visible.) Creating or conceiving visions or subjective appearances.

Phantas'ticon. Term used to mean either *Phantasm* or *Phantasia*.

Phantas'ton. (Φανταστός, conceiving visions or images.) Term for a mental conception or idea.

Phantas'tus. The same as *Phantastic*.

Phan'tom. (Φαντάζω, to make visible.) The same as *Phantasm*.

Also (see *Fantôme*), the name for a figure of a fetus used to illustrate the advance of the living fetus during labour.

P.s, au'ditory. Also called *auditory hallucinations*. Subjective sensations of sound, occurring as a result of changes in the auditory epithelium or in the central auditory mechanism. Such auditory phantoms are common in several forms of insanity.

P.s, oc'ular. Also called *ocular hallucinations*. Subjective sensations of light occurring when the eyes are open, and mingling with the ordinary visual perceptions. They are very marked in certain forms of delirium, especially delirium tremens.

P.s, tac'tile. Subjective tactile sensations occurring as a result of changes in the central organs.

P. tu'mours. More or less rounded abdominal swellings occurring in hysterical women, and believed by them to be actual tumours (either pregnancy or a pathological tumour). They are smooth, soft, resonant, and freely moveable, are not painful or tender, and entirely disappear, for the time, under the influence of an anæsthetic. This condition is believed to be due to paralysis of the intestines from disorder of nervous function.

Phantom'a. The same as *Phantom*.

P. obstetri'cium. (*Obstetricius*, obstetric.) See under *Phantom*.

Phanto'scopy. (*Phantom*; σκοπέω, to look at, examine.) *Retinoscopy*.

Pharbet'isin. Name for the resin obtained from the *Pharbitis nil*. Its action is very similar to that of *Jalapin*.

Pharbi'tin. The same as *Pharbetisin*.

Pharbi'tis. A Genus of the Order *Convolvulaceæ*, identical with the Genus *Ipomæa*.

P. his'pida. Hab., Tropical America. It is very similar in appearance and characters to the *P. triloba*.

P. nil. A tropical plant; also called *Ipomæa cærulea*. The seeds and resin have a hydragogue purgative action, very similar to that of *Jalap*.

P. trilo'ba. A plant native to Japan. It is purgative, containing a resin apparently identical with *Convolvulin*. It contains also an alkaloid, a yellow crystalline colouring matter, and other substances.

Phar'cidous. (Φαρκίς, a wrinkle. F. *pharcideux*; G. *runzlicht*.) Wrinkled, or full of wrinkles.

Phar'icon. (Φάρικον, some kind of poison.) Name for a simple but powerful poison employed by the ancient physicians; it is not known what special drug this was.

Pharmacel'ia. (Φαρμακεία, the using of medicines, and especially of purgatives, Hipp.) The use of drugs, especially those producing purgation. In ancient times, sometimes used in the same sense as ἡ φαρμακευτική, the knowledge of drugs; see Jac. le Mort, *Pharmac. Med. Phys.*, c. i.

Pharmace'um. (Φαρμακείον.) A druggist's shop (*Apotheka*).

Pharmaceuma. (Φαρμάκευμα = φάρμακον.) The same as *Pharmacum*.

Phar'maceus. (Φαρμακεύς, one who deals in medicines, charms, or poisons; a sorcerer, a poisoner.) The same as *Pharmacopæus*.

Pharmaceu'ta. The same as *Pharmaceus*.

Pharmaceu'tic. (Φαρμακεύω, to administer a drug. F. *pharmaceutique*; G. *pharmaceutisch*.) Belonging to pharmacy.

Pharmaceu'tica. *Pharmaceutics*.

Pharmaceu'tical. The same as *Pharmaceutic*.

P. chem'ist. A chemist who practises *Pharmaceutics*.

P. chem'istry. That branch of Chemistry which deals with the chemical compositions and reactions of drugs.

Also, see *Pharmacy*.

Pharmaceuticë. (Φαρμακευτική [τέχνη], the pharmaceutic art.) *Pharmacy*.

Pharmaceutics. (Φαρμακευτικός, medical, or connected with a *Pharmaceus*.) The art of preparing medicines.

Pharmaceu'tist. (Φαρμακευτής = φαρμακός.) An apothecary or druggist.

Pharmaceu'tria. (Φαρμακευτρία, fem. of *φαρμακευτής*; see *Pharmaceutist*.) A female druggist; a woman who deals in poisons.

Pharma'cia. See *Pharmacy*.

Pharma'cicus. (Φάρμακον, a remedy or drug.) Belonging to medicines or remedies.

Phar'macist. (Φάρμακος, in the same sense as *φαρμακευτής*.) The same as *Pharmaceutist*.

Pharmacit'es. (Φάρμακον.) An epithet applied to drugged or medicated wine.

Pharmacoba'sanus. (Φάρμακον, a drug; βάσανος, the touch-stone. F. *pharmacobasane*; G. *Arzneiprüfstein*.) Term for a prover or tester of medicines; the title of a work by Matthiolus.

Pharmacocatagrapholog'ia. (Φάρμακον, a drug; καταγράφω, to write down; λόγος, a discourse. G. *Receptschreibenkunst*.) An unwieldy term, used by J. J. Plenck, for the art of writing prescriptions.

Pharmacochym'ia. (Φάρμακον, a drug; ή χυμική [χυμός], chymistry, or chemistry.) *Pharmaceutical chemistry*.

Pharmacocollocys'tis. (Φάρμακον; *collocystis*.) A gelatinous capsule containing a drug.

Pharmaco'des. (Φάρμακον; terminal -ώδης.) Having, or full of, medicine; *pharmaceous*. Also, *poisonous*.

Pharmacodynam'ic. Belonging to *Pharmacodynamics*.

Pharmacodynam'ics. (Φάρμακον, a drug; δύναμις, power. F. *pharmacodynamique*; G. *Pharmacodynamik*.) That division of *Pharmacology* which deals with the specific properties and actions of drugs.

Pharmacodynamio'logy. (Φάρμακον, a drug; δύναμις, power; λόγος, a discourse.) The same as *Pharmacodynamics*.

Pharmacogno'sia. (Φάρμακον; a drug; γνώσις, an enquiry, hence knowledge.) The study of *simples* or crude drugs; also used in the same sense as *Pharmacognostics*.

Pharmacognos'tics. (Φάρμακον, a drug; γνωστικός, capable of knowing.) A

knowledge of the properties and actions of drugs.

Pharmacolog'ical. Belonging to *Pharmacology*.

Pharmacolog'ist. One learned in *Pharmacology*.

Pharmacology. (Φάρμακον, a drug; λόγος, a discourse.) That division of *Materia Medica* which treats of the action of drugs upon the living body (Lauder Brunton).

Pharmacoma'nia. (Φάρμακον, a drug; μανία, madness.) Excessive fondness for trying, or making use of, medicines.

Pharmacomani'acal. Afflicted with *Pharmacomania*.

Pharmacom'athy. (Φάρμακον; μάθη = μάθσις, acquiring knowledge.) The same as *Pharmacognostics*.

Pharmacometer. (Φάρμακον, a drug; μέτρον, a measure.) A medicine measure.

Pharmacome'try. (Φάρμακον, a drug; μετρέω, to measure.) The weighing or measuring of medicinal substances.

Pharmacomor'phic. (Φάρμακον; μορφή, form.) Pertaining to the appearance of drugs; applied to the ability (*Ars pharmacomorphica*) to distinguish drugs by their appearance.

Phar'macon. (Φάρμακον, a drug. G. *Arzneimittel*.) A drug or medicine.

Also, a poisonous drug, dye or paint (F. *teinture*; G. *Gift, Farbe*).

Also, a philtre or love-potion (F. *philtre*; G. *Zaubertrank*).

Also, a spice (F. *épice*; G. *Gewurz*).

Pharmacon'. (Φαρμακόν. F. *teinturerie*; G. *Farberei*.) A dye-house.

Pharmacopæ'us. See *Pharmacopæus*.

Pharmacopœ'ia. (Φάρμακον, a drug; ποιέω, to make. F. *pharmacopée*; G. *Pharmakopœe*.) Literally, the art of rightly preparing medicines. A book containing a system of directions for the identification of drugs, and for the preparation of drugs and other therapeutic remedies.

Most European countries have each their own *pharmacopœia*, which is published by authority, and fresh editions of which (with additions, erasures and alterations) are published at stated times, the last edition being authoritative. Any drug included in the last-published edition is spoken of as *official*. (For full information on the various *pharmacopœias*, see under *Pharmacopœia* in "Reference Handbook of Medical Sciences," edited by Alfred H. Buck, M.D., of New York.)

Also, term for a chemical laboratory. (*Century Dict.*)

Pharmacopœ'ial. Belonging to, or contained in, a *pharmacopœia*.

Pharmacopœ'us. (Same as *Pharmacopœia*.) The same as *Pharmacopœia*.

Pharmacopo'la. (Φαρμακοπωλείω, to sell medicines.) Old term synonymous with *Apothecarius*, not in its modern sense (see *Apothecary*); but in its ancient sense of a quack or mountebank who sells medicines, besides professing to cure diseases.

Pharmacopol'ist. A druggist.

Pharmacopo'lium. (Φαρμακοπωλείω. F. *apothicairerie*; G. *Apotheke*.) Old term for an apothecary's or druggist's shop.

Pharmacopo'sia. (Φάρμακον, a drug; πόσις, a drink. F. *pharmacoposie*; G. *Arznei-*

trinken.) Old term for any liquid medicine; also used specially for a purgative, by Hippocrates, Galen, Foësius, &c.

Pharmacosa medicamenta. (Φάρμακον.) Neut. pl. Term for medicines containing poisonous substances.

Pharmacotaxis. (Φάρμακον; τάξις, an arranging.) The prescribing and preparing of medicines.

Pharmacotheca. (Φάρμακον;θήκη, a box. F. *pharmacothèque*; G. *Arzneikiste*.) Old term for a medicine chest.

Pharmacotherapeutic. (*Pharmacotherapie*.) Belonging to *Pharmacotherapie*.

Pharmacotherapia. (Φάρμακον, a drug; θεραπεία, service done to the sick. G. *Pharmakotherapie*.) The curing of diseases by means of medicines.

Pharmacotimia. (Φάρμακον; τιμή, worth, value.) Allesandri's term for the quantitative analysis of drugs, carried out in order to estimate their commercial and therapeutic value.

Pharmac'ter. (Φαρμακτήρ = φαρμακεύς, one who deals in drugs and charms.) The same as *Pharmacopæus*.

Phar'macum. See *Pharmacoon*.

P. ad aur'es. A preparation used formerly for cleansing ulcers of the ears. It was made up of white pepper, saffron, myrrh, bitter almonds, castor, verjuice, frankincense, opium, vinegar, sulphate of iron, unguentum nardinum, and pomegranate root bark.

P. ægypti'acum. See *Ægyptium*.

P. amato'rium. (L. *amatorius*, loving.) The same as *Philtre*.

Pharmacur'gious. (Φάρμακον, a drug; ἔργον, a work; terminal -ικός.) Epithet applied by Harder, in *Apiario Obs.*, 75, to remedies selected from pharmacy.

Pharmacur'gus. (Φαρμακοῦργός = φαρμακοποιός, making medicines.) The same as *Pharmacopæus*.

Pharm'acy. (Φάρμακον, a medicine. F. *pharmacie*; G. *Pharmacie*.) That division of *Materia Medica* which includes the identifying and collecting of drugs, together with the art of preparing, from the crude drugs, medicines to be used in the treatment of diseases. It was formerly divided into *chymical pharmacy*, or *pharmaceutical chemistry*, and *Galenical pharmacy*, the latter comprehending all that part of pharmacy not included in the former.

Also, used in the sense of *Pharmacopolium*.

P. jars. Term for vases made of various sorts of earthenware, which were used in the dispensaries of convents in some places on the Continent for holding drugs, each being painted with the name of the drug to be kept in it. (*Century Dict.*)

Pharmax'is. (Φάρμαξις = φαρμακεία.) The same as *Pharmaceia*.

Pharmia'num. (Φαρμιανόν.) Old term, used by Galen, for a *Malagma*.

Pharna'ceum linea'rë. (The plant *φαρνάκειον*, named after *Pharnaces*, King of Pontus.) A plant of the Order *Portulacæ*. It is a bitter astringent, and is employed medicinally in Asia and America.

Pharyg'athron. See *Pharyngethron*.

Pharyngal'gia. (Φάρυγξ, the joint-opening of the gullet and windpipe, according to Galen; άλγος, pain. G. *Schlundkopfschmerz*.) Pain in the pharynx.

Pharyngal'gic. Belonging to *Pharyngalgia*.

Pharynge'al. (*Pharynx*, -ngis. F. *pharyngien*; I. *faringeo*.) Belonging to the pharynx.

P. aponeuro'sis. See *Pharynx*.

P. arches. See *Post-oral arches*.

P. artery, ascen'ding. The smallest named branch of the external carotid. It arises about half an inch to an inch above the origin of the external carotid, and runs straight upwards on the inner side of the internal carotid and lying on the wall of the pharynx, to the base of the skull. It gives off small pharyngeal, prevertebral, and meningeal branches.

P. artery, infe'rior. The same as *P. artery, ascending*.

P. artery, supe'rior. The *Pterygo-palatine artery*.

P. bones. Certain elements of the branchial arches in Fishes, which are divided into epipharyngeal and hypopharyngeal. Of the epipharyngeals, or superior pharyngeal bones, there are generally from one to four pairs; they correspond to the dorsal elements of the first four branchial arches, being applied to the base of the skull and articulating inferiorly with the epibranchial elements of the arches.

Of the hypobranchials, or inferior pharyngeal bones, there is generally only one pair; they are probably homologous with the ceratobranchial element of the fifth arch.

P. bur'sa. Term for a mucous crypt situated in the mid-line of the roof of the pharynx, behind the vomer and beneath the sphenoid.

P. cav'ity. See *Pharynx*.

P. clefts. The same as *Visceral clefts*.

P. fas'cia. The fascia which invests the walls of the pharynx.

P. gang'lion. A small ganglion of the sympathetic lying on the ascending pharyngeal artery near its origin (Valentin). There are often also one or more ganglia on the *pharyngeal plexus*.

P. glands. Mucous glands found in the mucous membrane lining the uppermost part of the posterior wall of the pharynx.

P. nerves. There are four sets: the pharyngeal branch of the pneumogastric; pharyngeal branches of the glossopharyngeal, and of the sympathetic; and the pharyngeal branch of the spheno-palatine ganglion, usually spoken of as the *pharyngeal nerve*. See *Ganglion, spheno-palatine*.

P. plex'us of nerves. This plexus lies on the outer surface of the middle constrictor; it is formed by the union of the pharyngeal branches of the sympathetic with those of the glossopharyngeal and pneumogastric nerves.

P. plex'us of veins. See *P. veins*.

P. slits. The same as *P. clefts*.

P. spine. See *P. tubercle*.

P. steno'sis. Constriction or narrowing of some portion of the pharynx, due to cicatricial contractions following ulceration. Syphilis is the commonest cause; but the ulceration is occasionally strumous, or it may be simple.

Stenosis commonly occurs in one or other of three places: (1) between naso- and mid-pharynx, (2) between the mouth and pharynx, (3) about the level of the hyoid bone. Of these the most serious is the third, since food may easily block completely the narrowed passage.

PHARYNGEALIA—PHARYNGO

Treatment consists in dividing the cicatricial tissues and preventing re-contraction. (Heath's *Diet. of Surg.*)

P. teeth. The teeth present on the *P. bones*.

P. ton'sil. A collection of lymphoid follicles forming a tonsil-like mass, lying across the posterior wall of the pharynx between the pharyngeal openings of the two Eustachian tubes (Köl liker).

P. tu'bercle. A small elevation in the mid-line of the inferior surface of the basilar portion of the occipital bone, to which is attached the strong median band which strengthens the fibrous wall of the pharynx, passing downwards between the recti capitis antici muscles of the two sides.

P. veins. These form a plexus covering the external surface of the pharynx, and collecting blood from the Eustachian tube, soft palate, and the prevertebral muscles, and also communicating with the pterygoid plexus on the internal surface of the internal pterygoid muscle. From the lower part of the plexus two or three veins pass downwards and open, either separately or together with the superior thyroid or lingual veins, into the common facial vein or the internal jugular.

P. voice. See under *Voice*.

Pharyngea'lia. (N. pl. of adj. *pharyngealis*, from *Pharynx*, *ossa* being understood.) The *Pharyngeal bones*.

P. inferio'ra. The inferior pharyngeal or hypopharyngeal bones.

P. superio'ra. The superior pharyngeal or epipharyngeal bones.

Pharyngec'tomy. (*Pharynx*; ἐκτομή, a cutting out.) Excision of the *Pharynx*.

Pharyngemphrac'tic. (*Pharyngemphraxis*.) Belonging to *Pharyngemphraxis*.

Pharyngemphraxis. (Φάρυγξ, the pharynx; ἐμφράξις, a stoppage. F. *pharyngemphraxis*; G. *Schlundverstopfung*.) A stoppage or obstruction of the pharynx.

Pharyng'es. Plural of *Pharynx*.

Pharyn'gethron. The same as *Pharynx*. Also, used for the *Hyoid bone* by Galen. (Gorræus.)

Pharyngeu'ry'sma. (Φάρυγξ, the pharynx; εὐρύνω, to make wide.) A morbid widening or enlargement of the pharynx.

Pharynge'us. (Φάρυγξ, -γος.) *Pharyngeal*.

Pharyn'gicus. *Pharyngeal*.

Pharyngis'mus. (*Pharynx*. F. *pharyngisme*; I. *faringismo*.) Spasm of the muscles of the pharynx.

Pharyngit'ic. Belonging to *Pharyngitis*.

Pharyngit'is. (*Pharynx*; terminal -itis. F. *pharyngite*; I. *faringite*; G. *Schlundkopffentzündung*.) Inflammation of the *Pharynx*.

P., acute. Also called *Angina simplex* or *Sore-throat*. It may be caused by cold or exposure, or may be due to constitutional causes, such as rheumatism, gout, or digestive disturbance. There is general congestion of the mucous membrane of the pharynx, and the uvula may be swollen, as also the tonsils. The symptoms are pain on swallowing, and a constant desire to clear the throat. If the larynx be involved, the voice becomes hoarse; and if the congestion spreads up the Eustachian tubes, there is slight deafness. The glands in the neck

may be enlarged, causing stiffness on movement. There is generally slight constitutional disturbance, with the temperature somewhat raised, and a quickened pulse. The disease only lasts a few days.

P. apostemato'sa. (Ἀπόστημα, an abscess.) General term for any abscess in relation with the wall of the pharynx.

P., atroph'ic. Often called *P. sicca*. The mucous membrane becomes atrophied, and is covered with a thin film of dried secretion. There may be also crusts in the naso-pharynx. The mucous glands are affected. In certain cases the disease seems to follow upon the hypertrophic form, in others the cause is unknown. It is sometimes associated with Bright's disease or diabetes (Schech.) The symptoms are dryness, and an occasional feeling as of a foreign body.

P., catarrhal. Also called *Catarrhal sore throat* and *Hospital sore throat*. It is caused by cold, or by impure air. There may be merely some dysphagia. In more severe cases there is general congestion of the pharyngeal and faucial mucous membrane; and in still worse cases (*Ulcerative pharyngitis*, or *ulcerated sore throat*) there are superficial ulcerations on the palate, tonsils, and pharyngeal walls, with raised temperature and considerable constitutional disturbance. The secretion of saliva may be either excessive or deficient.

P., chron'ic. This is divided clinically into *simple catarrhal*, *hypertrophic*, and *atrophic pharyngitis* (*P. sicca*).

P., diphtherit'ic. See *Diphtheria*.

P., follic'ular. The same as *P., hypertrophic*.

P. gangreno'sa. See *Sore throat, putrid*.

P., gran'ular. See *P., hypertrophic*.

P., hypertroph'ic. Also called granular pharyngitis or clergyman's sore throat. It is often found in those who have to use the voice constantly. The rheumatic and gouty diatheses are considered predisposing causes. Small reddish granules, up to the size of a split pea, are present over the surface of the pharynx; in some cases the whole surface is covered with red elevations. The tonsils may be a little swollen, and there is often congestion behind them. The symptoms are discomfort leading to frequent clearing of the throat, heat, soreness, occasionally a feeling as of a foreign body, and there may be slight pain on swallowing. Loss or impairment of voice is constant.

P., lat'eral. A synonym of *Pharyngitis, hypertrophic*.

P. leucæ'mica. A pharyngitis in which the inflammation spreads to the neighbouring lymphatic glands, and is accompanied by an increased proportion of leucocytes in the blood (Dunglison).

P. malig'na. See *Sore throat, putrid*.

P., sep'tic. Term for the varieties of pharyngitis that are due to absorption, either local or general, of septic matter. McBride subdivides it as follows: 1. Slight septic inflammation or *Hospital sore throat* ("Ulcerated sore throat" of Sir Morell Mackenzie). 2. *Phlegmonous* or *Erysipelatous sore throat*. 3. *Gangrenous pharyngitis*.

P. sic'ca. (L. *siccus*-, a-, um, dry.) See *P., atrophic*.

P., ul'cerative. The same as *P. maligna*.

P. ulcero'sa. *P., ulcerative*.

Pharyn'go. (Φάρυγξ, Φάρυγγος [earlier, -υγος], the joint-opening of the gullet and wind-

pipe, according to Galen.) Prefix signifying *Pharynx*.

Pharyngobran'chii. (*Pharyngo*; *branchia*.) See *Leptocardii*. The same is synonymous with *Pharyngostomi* and *Cirrostromi*.

Pharyngo'cacē. See *Cacopharyngia*.

Pharyngo'cele. (*Pharyngo*; Gr. κήλη, a tumour. G. *Schlundkopfbruch*.) Term for a dilatation of the upper end of the oesophagus, in which food may sometimes be retained in considerable quantity.

Pharyngocele'lic. Belonging to a *Pharyngocele*.

Pharyngocente'rium. (*Pharyngo*; Gr. κεντήριος, fitted for piercing. F. *pharyngocentérior*.) An instrument for puncturing the pharynx.

Pharyngoceph'alē. (*Pharyngo*; Gr. κεφαλή, the head. G. *Schlundkopf*.) Term for the upper part or head of the pharynx.

Pharyngocephal'ic. Belonging to the *Pharyngocephale*.

Pharyngocynan'chē. (*Pharyngo*; *cynanche*.) The same as *Angina Ludovici*.

Pharyngodyn'ia. (*Pharyngo*; Gr. ὀδύνη, pain. G. *Schlundkopfschmerz*.) Pain in the pharynx.

Pharyngo-epiglott'ic fold. Term for a fold of mucous membrane on each side of the base of the epiglottis, continuous with the aryteno-epiglottic fold, and passing on to the lateral wall of the pharynx.

Pharyngo-epiglott'icus. Term for occasional fibres of the stylo-pharyngeus muscle, which are inserted into the lateral borders of the epiglottis, and into the pharyngo-epiglottic fold.

Pharyngoglos'sal. (*Pharyngo*; Gr. γλῶσσα, the tongue.) The same as *Glossopharyngeal*.

Pharyngographic'ic. Belonging to *Pharyngography*.

Pharyngo'graphy. (*Pharyngo*; Gr. γραφή, a writing.) Term for a description of the anatomy of the pharynx.

Pharyngo-larynge'al. Belonging both to the pharynx and larynx.

P. cavity. A name for that part of the pharynx which is shut off from the nasal cavity by the soft palate in deglutition (Billings).

P. si'nus. Also termed *Sinus pyriformis*. A depression in the mucous membrane on the outer side of the aryteno-epiglottidean fold, between it and the lateral wall of the pharynx.

Pharyngo-laryngitis. An inflammation including both the pharynx and larynx.

Pharyngolog'ical. Belonging to *Pharyngology*.

Pharyngo'logy. (*Pharyngo*; Gr. λόγος, a discourse.) That branch of medical science which deals with the Anatomy, Pathology, Medicine, and Surgery of the *Pharynx*.

Pharyngolysis. (*Pharyngo*; Gr. λύσις, a loosening, setting free.) The same as *Pharyngoplegia*.

Pharyngolyt'ic. Belonging to *Pharyngolysis*.

Pharyngo-mastoid'eus. An occasional muscle in the human subject, described by Ketel, which arises from the deep surface of the mastoid process of the temporal bone, and is inserted into the contiguous part of the lateral wall of the pharynx.

Pharyngomyco'sis. (*Pharyngo*; *mycosis*.) The growth of a fungus, almost in-

variably *Leptothrix*, on the walls of the pharynx. See *P. leptothricia*.

P. leptothri'cia. (*Leptothrix*.) A disease described by Fränkel and Heryng, which is caused by accumulations of *leptothrix* on the walls of the pharynx. White or greyish-yellow nodules are present on the base of the tongue, the tonsils, or the pillars of the fauces. Symptoms may be absent, or there may be a sensation of dryness or pricking. The disease is very chronic and difficult to get rid of.

Pharyngo-na'sal cavity. Term for that part of the cavity of the pharynx which lies above the level of the soft palate during the act of deglutition.

Pharyngo-oesophage'al. Belonging to the pharynx and oesophagus.

Pharyngo-or'al. The same as *Buccopharyngeal*.

Pharyngo-pal'atine. Belonging to the pharynx and soft palate.

Pharyngo-palatinus. Term for the *Palato-pharyngeus*. It is also used to designate that part of the *palato-pharyngeus* muscle which is inserted into the wall of the pharynx.

Pharyngoparalysis. See *Pharyngoplegia*.

Pharyngoparalyt'ic. Belonging to *Pharyngoparalysis*.

Pharyngopath'ia. (*Pharyngo*; Gr. πάθος, suffering, sickness. G. *Rachenkrankheit*.) Disease of the pharynx or fauces.

Pharyngoperi'stolē. (*Pharyngo*; Gr. περιστολή, a dressing up.) The same as *Pharyngostenia*.

Pharyngople'gia. (*Pharyngo*; Gr. πληγή, a stroke.) Paralysis of the muscles of the pharynx.

Pharyngople'gic. Pertaining to, or the subject of, *Pharyngoplegia*.

Pharyngopletho'ra. (*Pharyngo*; Gr. πληθώρα, fullness.) A local *plethora* of the pharynx or fauces.

Pharyngopleu'ral. (*Pharyngo*; *pleural*.) Belonging both to the pharynx and to the lateral body-walls.

Pharyngorhinitis. (*Pharyngo*; *rhinitis*.) Term for inflammation of the pharyngeal and nasal cavities.

Pharyngo-rhino'scopy. (*Pharyngo*; *rhinoscopy*.) Visual examination, by means of a small mirror, of the posterior nares and upper part of the pharynx. See *Rhinoscopy*.

Pharyngorrhag'ia. (*Pharyngo*; Gr. ῥήγνυμι, to burst through.) Any sudden or considerable hæmorrhage from the pharynx.

Pharyngorrhag'ic. Belonging to *Pharyngorrhagia*.

Pharyngoscope. (*Pharyngo*; Gr. σκοπέω, to look at. I. *farinoscopio*; G. *Schlundkopfspiegel*.) A modification of the laryngoscope, for getting a view of the fauces and upper part of the pharynx.

Pharyngoscopy. (*Pharyngoscope*.) Visual examination of the pharynx.

Pharyngospasm. (*Pharyngo*; Gr. σπασμός, a convulsion. G. *Schlundkrampf*.) Spasm of the pharynx.

Pharyngospasmod'ic. Belonging to *Pharyngospasm*.

Pharyngostaphyli'nus. (*Pharyngo*; *staphylinus*, from Gr. σταφυλή, the uvula, from its likeness, when swollen, to a

grape.) Belonging to the pharynx and uvula; a name for the *Palato-pharyngeus* muscle.

Pharyngosten'ia. (*Pharyngo*; Gr. στεῖνος, a strait or difficulty. G. *Schlundverengerung*.) Constriction or stricture of the pharynx.

Pharyngo'stenous. Belonging to *Pharyngostenia*.

Pharyngo'stomi. (*Pharyngo*; στόμα, the mouth.) See *Pharyngobranchii*.

Pharyn'gotome. (See *Pharyngotomy*.) An instrument used for making an opening into the pharynx, usually into the posterior wall to open a post-pharyngeal abscess. It is shaped like a trocar and cannula, with a slight curve. The part corresponding to the trocar can be suddenly protruded.

Pharyn'gotomy. (*Pharyngo*; Gr. τομή, a cutting down. F. *pharyngotomie*; I. *faringotomia*; G. *Pharyngotomie*, *Schlundschnitt*.) An operation sometimes necessary for the removal of a foreign body impacted in the pharynx (see also *Esophagotomy*). An incision four inches long is made along the anterior edge of the left sterno-mastoid muscle. A careful dissection is made backwards, between the carotid sheath and the larynx and trachea, the omohyoid muscle being first divided. Great care is necessary to avoid the inferior and superior thyroid arteries. When the wall of the pharynx has been reached, a sound is passed through the mouth into the pharynx, and its end is cut down upon. The opening is enlarged with a probe-pointed bistoury.

P., subhy'oid. Also termed *supra-thyroid pharyngotomy*. A transverse incision is made just above the superior border of the thyroid cartilage, the pharynx being opened through the thyro-hyoid membrane. This operation is of use if the upper part of the epiglottis calls for surgical interference, or if a foreign body be lodged about that part. It is, however, rarely practised, as the incision gives very little room for the passage of instruments.

Phar'ynx. (Φάρυγξ, the joint-opening of the gullet and windpipe, according to Galen. I. *faringe*; G. *Schlundkopf*.) A sac extending from the base of the skull to the level of the lower border of the cricoid cartilage, continued at its lower end into the œsophagus, and having apertures in front, at its upper part, leading into the mouth, nose, and larynx. The soft palate extends back into it, and during the passage of food is drawn backwards by its muscles so as to completely separate the nasal cavity and uppermost part of the pharynx from the buccal cavity and lower part of the pharynx. There are seven openings into the cavity of the pharynx: above the soft palate, the two openings of the posterior nares, *choanæ narium*, at the sides, the trumpet-like openings of the right and left Eustachian tubes; below the soft palate, the buccal or mouth cavity, the superior aperture of the larynx, and the upper opening of the œsophagus. The pharynx is considerably greater from side to side than from front to back; its length is about four and a half inches. It is widest opposite the greater cornua of the hyoid bone, below which it contracts to its narrowest portion at the lower end. Its walls are formed by the pharyngeal aponeurosis, dense above, where it is attached to the base of the skull and the Eustachian tube, thin and loose below; this is covered by the *constrictor* muscles and lined

by mucous membrane. There are numerous racemose mucous glands beneath the mucous membrane, near the openings of the Eustachian tubes and the posterior nares, and lymphoid follicles are present throughout the entire pharynx. The epithelium is columnar and ciliated as far downwards as just above the base of the uvula; below that, it is squamous and stratified. The fœtal condition, in which the ciliated epithelium is more widely distributed, often persists in the recesses and gland-ducts.

P., acute' infectious phleg'mon of. Senator's name for *Sore throat*, *phlegmonous*. See also under *Pharyngitis*, *septic*.

P., anæ'mia of. A symptom occurring in general anæmia and in phthisis; in the latter disease, there is often localised congestion together with general anæmia of the pharynx (McBride).

P., anæsthe'sia of. This symptom is present in central lesions involving the glosso-pharyngeal nerve (being sometimes an early symptom in bulbar paralysis, according to Kris-haber), and in cases of inflammation of or pressure on the nerve-trunk itself, in which latter case it is unilateral. It occurs most commonly as a sequela of diphtheria; incomplete anæsthesia of the pharynx often occurs in hysteria.

P., constrict'ors of. See under *Constrictor*.

P., devel'opment of. See *Foregut*.

P., gran'ules on pos'terior wall of. These occur in children, in association with adenoid vegetations of the naso-pharynx. See *Naso-pharyngeal vegetations*.

P., hyperæsthe'sia of. This often occurs in association with gout, and alcoholic excess (McBride).

P., inflamma'tions of. See under *Pharyngitis*.

P., lymphat'ics of. From the upper part of the pharynx, the lymphatic vessels enter the group of internal maxillary glands, some of which lie upon the side wall of the pharynx. From the lower part of the pharynx, the vessels pass into the superior group of the deep cervical glands.

P., mus'cles of. See *Constrictor*, and also *Palato-pharyngeus*, and *Stylo-pharyngeus*.

P., nerves of. The pharyngeal muscles are mainly supplied by the pharyngeal branch of the vagus; but the stylo-pharyngeus is supplied by a branch from the glosso-pharyngeal nerve, and a twig from this passes through the muscle to supply the mucous membrane. Branches also pass to the pharynx from the superior cervical ganglion.

P., tu'mours of. These may be either *innocent* or *malignant*. 1. *Innocent tumours*. Of these, the commonest are papillomata, which grow from the pillars of the fauces, or the free end of the uvula. The other varieties, which are all rare, are fibromata, angiomatica, lipomata, cysts (including Echinococci), and chondromata.

2. *Malignant tumours*. Carcinoma, lympho-sarcoma (of the tonsil). Carcinoma when growing from the tonsil is generally of the glandular kind, not epitheliomatous.

Phar'yx. (Φάρυξ, a form of Φάρυγξ which appears not to have been used.) The *Pharynx*.

Phasca'ceæ. Bot. The third Order of the Class *Musci*.

Phase'. (Φάσις, an appearance. F. *phase*; I. *fase*; G. *Ansehen*.) In Astronomy, the position in which the moon or other planets appear to us at any moment. An appearance, or the manner in which anything shows itself to us; also, an era. Metaphorically, a stage in an individual's state of mind or opinions.

Phase'us. See *Phaseolus*.

Phaseol'æ. Name given by De Candolle and Ebermaier to a Tribe of the *Leguminosæ*, having the *Phaseolus* for their type.

Phaseol'ic acid. Name applied to *Phaseolin*, because, like an acid, it combines with saline bases.

Phase'olin. Name applied by Vauquelin to the crystalline exudation of a black poisonous species of haricot (*Phaseolus*) growing in the Isle of France.

Phase'olite. Unger's generic term for remains of various fossil plants, mainly leaves, supposed to belong to the *Leguminosæ*, many of them closely resembling the Genus *Phaseolus*. (*Century Dict.*)

Phase'olus. (Φάσηλος, φασήλος or φασιόλος, a sort of kidney bean. F. *haricot*; G. *Phaseole*.) A Linn. Genus of plants, Class *Diadelphica*, Order *Decandria*; now classed under the *Leguminosæ*.

P. cre'ticus. A decoction of the leaves of this plant, which is called by the Americans *Cayan* or *Cayan*, is said to restrain the bleeding from piles.

P. vulgar'is. The French, or kidney, bean plant. The unripe pods, when well boiled, are nutritious and easily digestible. The juice is sweet owing to the presence of *phaseomannite*.

Also, an Indian or American climbing dwarf herb. The young and sugary pods contain mucilage, and the seeds (*haricots*) are farinaceous and edible.

Phaseoman'nite. Term for the *Inosite* present in the juice of the kidney bean. See *Phaseolus vulgaris*; see also *Inosite*.

Phasian'dæ. Name given by Vigors to a Family of the *Gallinaceæ*, having the *Phasianus* for their type.

Phasianinæ. The pheasants proper; a Sub-family of the *Phasianidæ*.

Phasia'nus. (Φάσις, a river in Colchis or Pontus, in Asia, from the neighbourhood of which pheasants were originally brought to Europe.) The Genus *Pheasant*, Order *Gallinaceæ*.

P. col'chicus. (F. *faisan vulgaire*; G. *der gemeine Fasan*.) The common pheasant. It is now abundant in most parts of England, and in the southern and middle divisions of Scotland, and is harboured by most large land-owners for its beauty, the sport it affords, and the goodness of its flesh.

P. gal'lus. *Gallus domesticus*.

Pha'sic. Of the nature of a *Phase*.

Phasi'olus. See *Phaseolus*.

Pha'sis. *Astron.* A *Phase*.

Phas'ma. (Φάσμα, an apparition, spectre.) The same as *Phantasm*.

Pha'sol. $C_{15}H_{21}O$. A substance found in the husks of the Pea (*Pisum sativum*). It is obtained by crystallisation from alcohol, is insoluble in water, soluble in chloroform, and gives a purple colour on shaking up its solution in chloroform with sulphuric acid of a sp. gr. 1.76.

Phat'në. (Φάτην, a crib or feeding-trough for horses and oxen.) Term for *Alveolus*.

Phat'nion. The same as *Phatnë*.

Phat'nium. The same as *Phatnë*.

Phatnorrh'gia. (Phatne; ῥήγνυμι, to burst through. G. *Zahnhöhlenblutfluss*.) A sudden discharge (as, e.g., of blood) from an alveolus, or tooth-socket.

Phatnorrhag'ic. Belonging to *Phatnorrhagia*.

Phausin'ges. See *Phausinx*.

Phaus'inx. (Φαύσιγξ [φαύω, φαύζω], a blister from burning.) Old term for circular red patches (*phausinges*, nom. pl.), arising on the legs from the action of fire; also used in the plural in the same sense as *Phoides*.

Phaustia'nos. (Φαύω, in the sense of to burn.) Old name for a strongly escharotic pastil used to destroy large fleshy excrescences, described by Aëtius, ix, 49.

Pheas'ant. (Mid. E. *fesaun*, later form *fesaunt*; O. F. *faisan*. L. *Phasiana*, for *Phasiana avis*, the Phasian bird. Gr. φασιανός, a pheasant, because coming from the neighbourhood of the river Phasis [Φάσις], in Colchis, now called the Rioni, which flows from the Caucasus into the Black Sea.) The common name for the *Phasianus colchicus*.

P.'s eye. Common name for the genus of plants termed *Adonis*.

Phellan'drene. Name given by Pesci to a terpene occurring in Elemi, in the seeds of *Phellandrium aquaticum*, in oil of fennel (dextrorotatory variety), and also in oil of eucalyptus (lævorotatory variety).

Phellan'drium. (Φελλός, the cork-tree; ἀνδρῖον, dim. from ἀνὴρ, a man, in the sense of a male. L. *quercus suber*; F. *phellandre*; G. *Pferdefenchel*.) A Linn. Genus of plants, Class *Pentandria*, Order *Digynia*.

P. aquaticum. (L. *aquaticus*, belonging to the water. F. *fenouil d'eau*; G. *Wasserfenchel*.) The water-fennel or fine-leaved water-hemlock, which is narcotic. The seeds have been recommended with Peruvian bark in phthisis, and have been also given in dysentery.

Phelloderm. (Φελλός; δέρμα, the skin.) A series of concentric layers of cellular tissue in woody plants, arranged also in radial rows, which is developed from the inner side of the *Phellogen*, and acts as a support to the living parenchyma of the cortex.

Phellogen. (Φελλός; γεν, root of γεννᾶω, to beget.) The *cork-cambium* in woody plants, which is developed usually in the layer of the primary cortex cells immediately beneath the epidermis, or in the epidermis itself, or else in a layer somewhat deeper than the former. It gives rise to the *Periderm* on the outer side, and frequently to layers of tissue on the inner side constituting the *Phelloderm*.

Phellogenet'ic. Belonging to the *Phellogen*.

Phel'lyl al'cohol. A name for *Cerin*.

Phelps' box. An apparatus, invented by Phelps, an American surgeon, used in tuberculous disease of the spine, *Pott's disease*. It consists of a wooden trough to contain the head and body, continued into two shallower troughs for the legs. The sides of the trough, about six inches high for the body, are hollowed out opposite the shoulders, the floor of the trough is hollowed out at the lower end to admit of defæcation, and the leg-pieces are fitted each with a vertical foot-piece. The splint is prolonged for sixteen inches above the head, so as to allow

PHEMOS—PHENYL

of elastic extension from beneath the occiput and chin. The patient is wedged in by means of pads, and then bandaged to the apparatus.

P.'s operation. For the cure of *Talipes valgus*. It consists in section of the tendo Achillis and of the whole of the tense, contracted tissues below and in front of the internal malleolus.

Phe'mos. Old term for a medicine against dysentery, invented by Martianus, according to Aëtius, i, 9. (Gorræus.)

Phen. (*Φαῖνός*, shining. It was more correctly written *Phaen* by Gmelin.) The name first used by Laurent for the radical of *Phenol* (then supposed to be C_6H_{12}). Afterwards he applied the name *Phenyl* to it, and assigned it the formula $C_{12}H_5O$.

Phena'cetin. $C_6H_4 < \begin{smallmatrix} OC_2H_5 \\ NH(CH_2CO) \end{smallmatrix}$. Also called *Para-acet-phenetidin*. It is the acetyl derivative of the ethylic ether of paramidophenol, namely phenetidin. It occurs in white, shining crystals, without odour or taste, soluble in hot alcohol, insoluble in water, acids, alkalies and glycerine. It is an antipyretic and, at the same time, a sedative; it has been given successfully in rheumatism, neuralgia, migraine and hysteria. (Ex. Ph.) Dose, 4 to 8 grains, increased to 15 grains. It is given either suspended in mucilage, or in "cachets."

Phenacetur'ic acid. $C_{10}H_{11}NO_3$. This acid occurs normally in horses' urine, and also in the urine passed by a person after taking phenylacetic acid (Salkowski). It can be prepared by digesting phenylacetic anhydride with glycocoll and benzene.

Phen'amide. A name for *Aniline*.

Phenasso'dicus aqua solut'us. Fr. Codex. Sodiphenate dissolved in water. An aqueous solution of sodium carbolate.

Phen'ate. A salt of *Phenic acid*.

Phenazone. *Antipyrin*.

Phen'ë. A name for *Benzene*.

Phengopho'bia. (*Φέγγος*, light; *φοβέω*, to frighten.) Fear or intolerance of light; the same as *Photophobia*.

Phengophob'ic. Belonging to, or affected with, *Phengophobia*.

Phen'ic. (*Phenol*.) Obtained from coal-tar.

P. ac'id. Another name for carbolic acid, or *Phenol*.

Phen'iceous. Belonging to, or of the colour of, *Phenicin*.

Phen'icin. (*Phenicina*; Gr. *φοινίκιος*, purple-red. G. *Phoinikin*.) Name for *Indigo-carmin* by its discoverer, Crum.

P. sulpho'nic ac'id. *Indigo-monosulphonic acid*.

Phenicisulphu'ric ac'id. The same as *Phenicin sulphonic acid*.

Phen'ion. A name for the *Anemone pulsatilla*.

Phen'ol. (Either from *φαῖνός*, shining, brilliant, or, more probably, from *φοίνιξ*, purple-red.) *Carbolic acid*.

P. cam'phor. Term for camphorated phenol. See *Camphor, carbolated*.

P., i'odised. See *Iodised phenol*.

P. mer'cury. Carbolate of mercury. A whitish powder. Dose, $\frac{1}{2}$ to 2 grains daily. (Ex. Ph.)

P.-phthal'eïn. B. Ph. Phenol combined with a derivative of benzene. It forms yellowish

crystals, and is used for the preparation of *P.-phthaleïn, tincture of*.

P.-phthal'eïn, tinc'ture of. B. Ph. One part by weight of phenol-phthaleïn in 100 of proof-spirit. This is colourless, but becomes purple-red with a preparation of a fixed alkali, and is again decolourised by an excess of acid.

P. so'dique. (F.) Sodie phenol, Liq. sodii carbolatis. Its approximate composition is, in 100 parts of distilled water, 8 parts of phenol, and 4 of caustic soda. (Ex. Ph.)

P.s, the. The hydroxyl derivatives of the aromatic or benzene series of hydrocarbons. These bodies occur in the living tissues of many of the higher animals, where they combine with the sulphuric acid originating from decomposition of albuminates; the sulphuric acid is converted into a monobasic acid, and appears as an alkaline salt in the urine. See *Phenolsulphate of potassium*.

Phenolog'ical. Belonging to *Phenology*.

Pheno'logist. One who studies *Phenology*.

Pheno'logy. (Contr. of *Phenomenology*.) A branch of applied Meteorology comprehending the study of the influence of climate upon the annual cycle of animal and vegetable life. (*Century Dict.*)

Phenolsul'phate of potas'sium.

$C_6H_5 > \begin{smallmatrix} K \\ SO_4 \end{smallmatrix}$. This substance is found to be always present in human urine and that of herbivora, and in that of carnivora also, except when on an exclusive meat diet. See *Phenols*.

Phenolsulpho'nic ac'id. $C_6H_4 < \begin{smallmatrix} SO_3 \\ OH \end{smallmatrix}$.

Obtained, in colourless crystals, by dissolving carbolic acid, *phenol*, in strong sulphuric acid. Of its crystallised salts, *sulphocarbolate of zinc* is official.

Pheno'lum ioda'tum. Latinised term for *Iodised phenol*.

Phenom'ena. Plur. of *Phenomenon*.

Phenom'enal. Of the nature of a *Phenomenon*.

Phenom'enism. The doctrine of the *Phenomenists*.

Phenom'enist. (*Phenomenon*.) One who believes only in phenomena, rejecting the idea of a necessary relation between cause and effect.

Phenomenolog'ical. Belonging to *Phenomenology*.

Phenomeno'logy. (*Phenomenon*; Gr. *λόγος*, a dictum.) A scientific account of phenomena.

Phenomenon. (*Φαίνωμα*, to appear.) An appearance; also, an unusual appearance. A directly-observed fact, such, for example, as any change in any organ or organic function which can be appreciated by the senses; a sign or symptom of any disease.

Phenoxycaffeïn. A derivative of *Caffeïn*, first prepared by von Merck. It has been used subcutaneously to produce local anæsthesia.

Pheno'zygous. (*Φαίνω*, to show; *ζύγων*, used for the *zygoma*.) Epithet for a skull in which the two zygomatic arches are both visible at the same time from above.

Phen'yl. The monovalent radical (C_6H_5) of *Phenol*.

P. al'cohol. *Carbolic acid*.

P. hy'drate. *Carbolic acid.*
P., hydrated oxide of. A name for *Carbolic acid.*

P. hy'dride. A name for *Benzene.*

P. hydroxide. *Carbolic acid.*

P., hy'druret of. *P. hydride.*

Phenylacetamide. Antifebrin.

Phenylacetic acid. This acid occurs in white crystalline scales, having a strong aromatic taste, and an odour resembling that of horses' perspiration. The crystals are soluble in an equal quantity of spirit, or 1 part in 20 of oils. It is a disinfectant, and, as such, has been given internally in phthisis, as has also *Phenylpropionic acid.* Dose, 1 to 3 grains in spirit or oil.

Phenylacetic acid. $C_{10}H_{11}NO_3$. This acid, as well as *Phenacetic acid*, occurs in horses' urine, and in human urine when phenylacetic acid is taken internally. It can be prepared by the action of the anhydride or chloride of phenylacetic acid on glyccoll.

Phenylamine. *Aniline.*

Phenylbenzamide. *Benzanilide.*

Phenylbenzene. See *Diphenyl.*

Phenylia. Another name for *Aniline.*

Phenylboric acid. $C_6H_5Bo(H_2O)$. This acid is antiseptic and, taken internally, antipyretic; it is slightly soluble in cold water, readily in hot water and in ether and alcohol; it has an odour like that of marjoram.

Phenylcocain. This substance has been recommended by Vian as a local anæsthetic in Dentistry. It is prepared by mixing 1 part of carbolic acid with 2 of cocain, and gently heating the mixture for a short time.

Phenyl - dihy'dro - chinaz'olin. *Orexine.*

Phenyl - dimeth'yl - pyraz'olon. *Antipyrin.*

Phenyl-glycolyltro'pein. *Homatropin.*

Phenyl-hy'drazine hydrochlo'rate. This substance occurs in colourless crystalline scales, and is used as a test for sugar. A portion is warmed with twice its weight of sodium acetate dissolved in water, an equal volume of the solution to be tested is added, and the whole boiled for twenty minutes. If sugar be present, yellow crystals of phenyl-glucosazine are deposited on cooling.

Phenyl - hydra'zin - lævulin'ic acid. Antithermin.

Phenyl-meth'yl acetone. See *Hypnone.*

Phenyl - meth'yl - ke'tone. The same as *Phenyl-methyl-acetone.*

Phenyl-propion'ic acid. *Hydrocinnamic acid.*

Phenyl-sulphu'ric acid. *Sulphocarbolic acid.*

Phenyl-u'rethane. A white, crystalline powder soluble in alcohol but not in water, melting at $51^\circ C.$, and acting, when given internally, as an energetic and safe antipyretic. It has not been found to give rise to any unpleasant symptoms. A single dose of $1\frac{1}{2}$ grammes has been found to lower the temperature from about 2° to $6^\circ F.$, causing profuse sweating. It is best given dissolved in wine. (Villaret.)

Phenyl'ia. A synonym of *Aniline.*

Phenyl'ic. The same as *Phenic.*

P. acid. The same as *Phenic acid.*

Phenylin. A mixture of Lieven's, the

composition of which is not known. According to Casselman it is an aqueous solution of sulphate of iron and carbolic acid. (Geissler and Möller.)

Phœore'tin. See *Phæoretin.*

Phé'osine. (F.) A brown resinous substance found in the seeds of the *Laurel*, and extracted by means of sodium carbonate. (Grosourdy.)

Phé'rea. Nom. pl. n. (Φήρεα, τὰ, a swelling of the parotid glands, supposed to resemble the budding horns of Satyrs [Φῆρες], Foësius' *Oec. Hipp.*) Ancient term for swelling of the parotid salivary glands, or of the parotid lymphatic glands.

Phœgy'dron. (Φεύγυδρος, -ον [φεύγω; ὑδωρ], shunning water. G. *wasserscheu*.) Flying from or shunning water. A synonym for *Hydrophobia*.

Phial. See *Phiala*.

P., Bolo'gna. A small phial made of unannealed glass, which breaks if scratched by a hard body.

Phiala. (Φιάλη, a shallow drinking bowl. F. *phiole*; G. *Phiole*.) Term for an alembic or still; a *phial* or *vial*. By *phial* is usually understood a small glass bottle, such as those in which druggists send out liquid medicines.

Philac'ter. (Philo-; ἄγω, to guide.) A term employed to signify a talisman; also, a *philtre*.

Philadel'phia flea'bane. See *Eriogeron philadelphicum*.

Philadelphus. (Philo-; ἀδελφός, a brother.) Term applied to the *Galium aparine*, because of its rough leaves, which attach themselves to anything with which they are brought in contact.

Also, applied by Bory to an Order of *Polyps* among the *Protozoa*, including those in which there are many polyps in one colony and on a single stem.

P. coronar'ius. A shrub, the *Syringa*, Order *Philadelphææ*. The plants of this Order inhabit South Europe, Japan, and North India. The *Syringa* bears strongly-scented flowers, which were formerly used as a tonic.

Philadynam'ica. (Nom. plural n. From *Philadynamos*.) A term for *Debilitants*.

Philadynamos. (Φιλαδύναμος; from φιλέω, to love; ἀδύναμος = ἀδύνατος, without strength.) An old adjective, applied to that which soon weakens; used by Hippocrates, *de Rat. Vict. in Acut.*, iii, 40, as an epithet for water.

Philagria'non. (Philagrius, the name of its inventor.) Name for a *Malagma* described by Paulus Ægineta, vii, 18, *Adams' Transl.*, vol. iii, p. 577.

Philalustes. (Philo-; ἀλύω, to be distracted.) Term used by Hippocrates for one who is always in a state of anxiety and perplexity; especially applied to those mentally deranged.

Philanthropus. (Philo-; ἀνθρωπος, mankind. Cp. *Philadelphus*.) A name for the *Galium aparine*.

Also, an old term for a compound medicine used in diseases of the kidney.

Philant'ia. See *Antiphilia*.

Philetal'ron. (Philo-; ἑταῖρος, a companion.) A name applied by Hippocrates to the *Galium aparine*.

Philia'ter. (Philo-; λατῆρ, a surgeon;

later, a physician.) A lover of physicians or of their profession; also, an amateur student of medicine.

Philia'tric. Belonging to a *Philater*.

Philipp'i trochis'cus. Term for a troche against dysentery, described by Paulus Ægineta, vii, 12, *Adams' Transl.*, vol. iii, p. 581.

Philly'genin. See *Philygenin*.

Philly'rea. See *Philyrea*.

Philly'rine. See *Philyrine*.

Phil'o- (*Φιλέω*, to love.) Prefix, signifying love of, or a lover of.

Philobio'sis. (*Philo-*; *βίος*, life.) The love of life.

Philobol'tes. (*Philo-*; "bolus," a kind of fungus. *F. philobolite*; *G. Schwammfreund*.) A lover of fungi.

Philoch'e'micus. (*Philo-*; *χημεία*, chemistry. *F. philochémique*.) A lover of chemistry.

Philochirur'gicus. (*Philo-*; *ὁ χειρουργός*, an operating medical man, a surgeon. *F. philochirurgique*.) A lover of surgeons, or of the art of surgery.

Philochym'icus. See *Philochemicus*.

Philocotyl'e. Name for a plaster, according to Gorræus, described by Paulus Ægineta, vii, 17, where, however, it is written in the text, p. 130, line 18, *φιλοκοτύχη*. *Adams' Transl.*, vol. iii, p. 563, gives *phycotyche*.

Philocr'atis emplastrum. Name of a plaster described by Celsus, v, c. 19, p. 130, line 18, n. 14.

Philœ'nia. (*Philo-*; *οἶνος*, wine. *G. Weinliebe*.) The love of, or an addiction to, wine.

Philogen'iture. (*Philo-*; *L. genitura*, a begetting.) The love of begetting progeny.

Philogyn'ia. (*Philo-*; *γυνή*, a woman. *G. Weiberliebe*.) A love of womankind; also termed *gynophilia*.

Philomath'ia. (*Philo-*; *μάθησις*, acquiring knowledge. *G. Lerngebetde*.) The love of learning.

Philomath'ic. Belonging to *Philomathia*.

Philomime'sia. (*Philo-*; *μίμησις*, imitation. *G. Nachahmungssucht*.) F. B. Osseander's term for an affection of the mind characterised by a propensity for imitating.

Philomimetic. Belonging to *Philomimesia*.

Philon'is collyr'ium. (*Philo*, a Greek physician.) Term for a collyrium described by Celsus, vi, c. 6, n. 3.

Philon'ium. (*Philo*, a Greek physician, who invented it.) Old term for a narcotic antidote, described in the dispensaries of Bavaria, &c.; two others were described by Jac. le Mort, *Pharm. Med. Phys.*, c. 23, p. 174, one called *the warm*, the other, *the cold*.

P. londinens'se. (*L. Londinensis*, -e, of London.) Old term for *Confectio opii*.

Philopatridal'gia. (*Φιλόπατρις*, loving one's country; *ἄλγος*, any pain, whether of body or mind.) The same as *Nostalgia*.

Philopatridoman'ia. (*Φιλόπατρις*; *μανία*, madness.) The same as *Philopatridalgia*.

Philophys'icus. (*Philo-*; *φύσις*, nature. *G. Naturforscher*.) A lover of nature; an inquirer into the mysteries of nature.

Philopos'ia. (*Philo-*; *πόσις*, a drinking.) The same as *Philenia*.

Philopo'strophous. (*Philo-*; *ὑποστροφή*, a turning round.) Loving to return; also, recurring.

Philoprogen'itiveness. (*Philo-*; *L. progenies*, descent, family.) The instinctive love of young, common to man and all the higher animals.

In *Phrenology*, its organ is supposed to be situated immediately above the middle of the cerebellum, corresponding to the external occipital protuberance externally.

Philorist'ia. (*Φιλοριστία* [Galen]; from *φιλέω*, to love; *ὀρίζω*, to mark out boundaries. *G. Definirsucht*.) Too much study in bringing out definitions—(Galen, *de Diff. Puls.* l. i, c. i, 17, in *fin.*).

Philosaprot'ic. (*Philo-*; *σαπρότης*, rottenness, decay.) Loving, or disposed to, rottenness or decay. See *Saprophytic*.

Philosoph'e'ma. (*Φιλοσόφημα*.) A subject of scientific inquiry; a demonstration; a demonstrative argument or conclusion.

Philos'opher. (*Φιλόσοφος*, a lover of wisdom or knowledge.) A searcher after truth; hence, in a narrower sense, a metaphysician. Also, one who lives according to the rules of philosophy.

P.'s plas'ter. An ancient plaster used for wounds that were slow in healing; described by Aëtius.

P.'s stone, the. (*F. la pierre philosophale*; *G. der Stein der Weisen*.) An alchemical substance by which metals were to be transmuted, and all diseases cured. It was believed to be possessed of the greatest virtues; but was not of the nature of stone, this word having been applied by the alchemists to every fixed solid which did not evaporate. The modes of its preparation were, for the most part, altogether hyperbolic, and the recorded examples of seeming transmutation of metals effected by its power wear an aspect of imposture and absurdity too great for rational belief.

Philosoph'ia. See *Philosophy*.

P. corp'oris v'v'i. Philosophy of the living body. A term for *Physiology*.

P. hermet'ica. Term for *Alchemy*.

P. natura'lis. See *Natural philosophy*.

P. per ig'nem. Term for *Chemistry*.

Philosoph'ic. (*Philosophia*.) Belonging to, or in accordance with, *Philosophy*.

P. can'dle. Term for an incandescent jet of hydrogen.

P. wool. See *Lana philosophica*.

Philosoph'ical. The same as *Philosophic*; also, thinking like a philosopher.

P. ana'tomy. See under *Anatomy*.

Philos'ophy. (*Φιλοσοφία*, love of knowledge and wisdom.) The sum of scientific truth. Also, the general principles of any special science.

Phil'otæ emplastrum. An ancient plaster which was used especially for broken heads; described by Celsus, l. 5, c. 19.

Philozo'ia. (*Philo-*; *ζωή*, life. *G. Lebensliebe*.) The love of life.

Phil'ter. (*Φίλτρον*, a love charm.) A love potion. See *Philtrum*.

Phil'trum. (*Φίλτρον*. *F. philtre*; *G. Liebestrank*.) *Med.* Ancient term for a medicine given for the purpose of conciliating or of winning the love of another; such a medicine being at one time held in high esteem.

Anat. Old term for the groove or depression running from the *columna nasi* to the upper lip.

Philydrous. (*Philo-*; *ὑδωρ*, water. *F. philydre*.) Loving water; epithet applied to plants, *Philydræ plantæ*, and animals that grow in, inhabit, or frequent the water.

Philygenin. $C_{21}H_{24}O_6$. A crystallisable substance obtained, together with *glucose*, in the decomposition of the glucoside *Philyrine* by hydrochloric acid, with the aid of heat. It is soluble in ether; on the addition of strong sulphuric acid, it gives a permanent red colour.

Phily'ra. (The name of the mother of Chiron the Centaur.) See *Tilia*.

Phily'rea. (*Φιλλυρέα*, or *φιλυρέα*, a kind of *Ligustrum* or Privet.) A Genus of the Order *Oleineæ*. The bark and leaves of plants of this genus were formerly used medicinally as bitter astringents.

P. latifolia. (*L. latifolius*, broad-leaved.) A shrub growing in Spain and the South of France. The leaves are astringent and have been used in ulcerations of the mouth; a decoction of the leaves has been given as a diuretic.

Phily'rine. $C_{27}H_{34}O_{11}$. A glucoside discovered in 1836 by Carbonici in the bark of several species of *Philyrea*, and afterwards investigated by Bertagnini. It crystallises out from a strong aqueous solution in silvery scales. It has a feebly bitter taste, and is readily soluble in hot water, alcohol, and warm acetic acid.

Phimos. (*Φίμος*, a muzzle.) The same as *Capistrum*. Also, a syn. for *Phimosis*.

Phimosed. Having a *Phimosis*.

Phimosic. Relating to *Phimosis*.

Phimosientomy. (*Φίμωσις*, a muzzling; *ἐντομή*, an incision.) The operation of dividing the tight prepuce in *Phimosis*.

Phimosiotomy. (*Φίμωσις*; *τομή*, a cutting.) The same as *Phimosientomy*.

Phimo'sis. (*Φίμωσις*, a muzzling.) A condition of the *prepuce* in which this extends beyond the glans penis, and is so much contracted at its orifice as to prevent uncovering of the glans. It may be either *congenital* or *acquired*.

P., acquired. This is generally caused by solid œdema or false hypertrophy of the prepuce, resulting from repeated inflammatory attacks. It sometimes comes on in elderly men, from the irritation of fissures or shallow ulcerations round the orifice of the prepuce, and sometimes, in gouty patients, from repeated attacks of *herpes preputialis*.

P. adna'ta. (*L. adnascor* = *agnascor*, *agnatus*, to grow to.) The same as *P., congenital*.

P. circumligat'a. (*L. circumligo*, to fasten round.) Term for *Paraphimosis*.

P., congenital. The pressure of the narrow prepuce usually prevents a full development of the glans penis. The skin of the prepuce is lax and abundant, but the mucous lining is short and undeveloped; the constricting band is at the junction of mucous membrane and skin. As a rule the condition merely causes local inconvenience; but it may give rise to irritation and inflammation from retention and decomposition of the *smegma preputii*, difficulty in micturition, or irritability of the bladder. In some cases calculous concretions form under the prepuce. In children, incontinence of urine, intermittent flow, hæmaturia, priapism, or general spasmodic affections may occur as a result. The straining in micturition may give rise to hernia, and

hydrocele is often associated with *phimosis* in young children. Some surgeons consider congenital *phimosis* to be one predisposing cause of cancer of the penis in later life

P. œdematodes. (*Edema*; *εἶδος*, form.) See *Hydrophimosis*.

P., operations for. These are three: dilatation of the contracted and elongated prepuce; simple slitting up of the prepuce along the dorsal surface; and *circumcision*.

P. puerilis. *P., congenital*.

Phimotic. Belonging to *Phimosis*.

Phlas'ma. (*Φλάσμα*, Ion. for *θλάσμα*, a bruise.) Old term for a bruise or contusion.

Phlebangio'ma caverno'sum. (*Φλέψ*, *φλεβός*, a vein; *angioma*.) A venous vascular tumour; one of the varieties of *Angioma*, *cavernous*.

Phlebarteriecta'sia. (*Φλέψ*; *ἀρτηρία*; *ἐκτασις*, a stretching out.) Term for a *Varicose aneurysm*.

Phlebarteriodia'lysis. (*Φλέψ*, *ἀρτηρία*, an artery; *διάλυσις*, a separating.) Term for an *arterio-venous* or *varicose aneurysm*.

Phlebarteriodialytic. Belonging to *Phlebarteriodialysis*.

Phlebec'tasia. The same as *Phlebec-tasis*.

Phlebec'tasis. (*Φλέψ*; *ἐκτασις*, a stretching out. *G. Blutaderausdehnung*.) Dilatation of a vein or veins. Term for a *Varix* in which there is marked extension of the knotted veins.

P. hæmorrhoida'lis. Term for *Hæmorrhoids*.

Phlebec'tasy. *Phlebec'tasis*.

Phlebec'tatic. Belonging to *Phlebec-tasis*.

Phlebec'top'ia. (*Φλέψ*, a vein; *ἐκτοπος*, out of the way.) An abnormal situation of a vein, either from congenital abnormality, or from displacement caused by a tumour; or occurring as the result of violence.

Phlebec'top'ic. Belonging to *Phlebec-topia*.

Phlebemphrac'tic. Belonging to *Phlebemphraxis*.

Phlebemphrax'is. (*Φλέψ*; *ἔμφραξις*, a stoppage.) A stoppage or obstruction of a vein or veins.

Phlebepatit'is. (*Φλέψ*; *hepatitis*.) Term for venous hepatitis, or inflammation of the veins of the liver.

Phleb'es. Nom. pl. of *Phleps* or *Phlebs*.

P. aë'tioi. See *Aëtioi phlebes*.

Phleburys'ma. (*Φλέψ*; *εὐρύς*, wide. *G. Blutadernausdehnung*.) A widening or expansion of a vein; synonymous with *Varix*.

Phleburys'matic. Belonging to *Phleburysma*.

Phleb'icus. (*Φλεβικός*, belonging to the veins.) Belonging to *Phlebs*.

Phleb'ion. (Dim. of *φλέψ*.) Term for a small vein. See *Venula*.

Phlebis'mus. (*Φλέψ*.) Term used by Dr. Marshall Hall for the compression of the veins of the neck by contraction of the muscles, in the class of cases termed by him *Trachelismus*.

Phlebit'ic. Belonging to, or affected with, *Phlebitis*.

Phlebit'is. (*Φλέψ*, terminal, -itis. *F. phlebite*; *G. Blutaderentzündung*.) Inflammation of the walls of a vein. It may arise from

injury, from *periphlebitis*, or from the formation of an unhealthy thrombus within the vein. In some cases, spoken of as idiopathic, the cause cannot be made out. Traumatic phlebitis may be simple and localised, or septic and spreading. A clot forms as a result of the injury, within the vein, adherent to the injured spot. In the septic and spreading variety, the clot softens and decomposes and excites spreading inflammation in the vein-wall; this process may extend until it reaches a large vein, into which fragments of the clot may then get washed, giving rise to septic embolism and pyæmia. Spreading phlebitis may arise in veins leading from the seat of many infective inflammations, without any injury to the veins themselves.

The so-called *idiopathic* phlebitis almost always affects a large vein of the lower extremity, most commonly the internal saphenous, and usually a vein that has long been varicose. It is apparently most frequent when erysipelas is epidemic; but the relation between the two is not certain. The inflammation extends into the surrounding connective tissue; but it rarely goes on to suppuration. When suppuration occurs, the disintegrating thrombus is shut off on each side by adherent unsoftened thrombus, and therefore no extension usually occurs. The symptoms of phlebitis are, in the case of a superficial vein, hardness, swelling, and knob-like projections of the affected vein, with a reddish-purple colour of the skin over it, and some feeling of stiffness, and darting pains on movement. In the case of a deep vein, there are deep-seated pain and tenderness, with well-marked œdema of the parts from which the affected vein brings blood. There may be swelling without any subcutaneous œdema. The œdema usually continues long after inflammation has subsided; in fact, either until the channel of the vein has been restored, or the superficial veins have become large enough to completely restore the venous circulation of the part. The constitutional symptoms are not severe, unless suppuration takes place. Where the clot becomes organised and the vein remains imperforate, this is spoken of as *adhesive phlebitis*.

In the case of *spreading septic phlebitis* of the deep veins, there are localised pain and tenderness, considerable and rapidly-occurring œdema, and, later on, the symptoms of pyæmia.

P., cru'ral. Term for *Phlegmasia dolens*.

P., embol'ic. The same as *Spreading septic phlebitis*. See under chief heading.

P., gout'y. The phlebitis that occurs as a common symptom in *Irregular gout*.

P., intracra'nial. Usually secondary to middle-ear disease, and giving rise to thrombosis. Either the lateral or the petrosal sinus is most commonly affected. This thrombosis often causes optic neuritis.

P., umbilica'lis. Inflammation of the veins at the umbilicus in a new-born infant, due to septic infection at that spot.

P., u'terine. A term for *Puerperal fever*.

Phlebo'carcino'ma. (Φλέψ; καρκίνωμα = καρκίνος, a cancer.) Term for cancer growing into the walls of the veins.

Phlebo'cholosis. (Φλέψ; χόλωσις, lameness. F. *phlébocholose*; G. *die Lähmung der Venen*.) General term for a morbid condition of the veins.

Phlebo'cholot'ic. Belonging to *Phlebocholosis*.

Phlebo'des. (Φλέψ; εἶδος, form. F. *phlébeux*; G. *voll Adern*.) Full of, or having abundance of, veins.

Phlebodia'stasis. (Φλέψ; διάστας, a standing apart. F. *phlébodiastase*.) Term for the standing apart from one another of the ends of a divided vein.

Phlebodiastat'ic. Belonging to *Phlebodiastasis*.

Phlebodono'des. (Φλεβοδονώδης, apt to disturb the veins; φλέψ; δονέω, to shake to and fro; εἶδος, form. F. *phlébodonodeux*.) Full of agitated veins. Epithet used by Hippocrates, *Prædict.*, t. iii, 9, and *Coac.*, t. 20, and by Galen, *Comm. ad loc. prim.*, for blood-vessels agitated and distended on account of great heat and febrile effervescence of the blood; it is, however, considered by good authorities that φλεδονώδης is intended. See *Phledonodes*.

Phlebo'genous. (Φλέψ; γεννάω, to bring forth, produce.) Giving origin to veins. A term applied to large *angiomata* that are in communication with venous trunks.

Phleb'ogram. (Φλέψ; γράμμα, a drawing.) A *Sphygmogram* of the movements of a vein.

Phlebograph'ical. Belonging to *Phlebography*.

Phlebo'graphy. (Φλέψ; γράφω, to write.) A description or history of the veins.

Phleboi'dal. The same as *Phleboïdes*.

Phleboi'des. (Φλέψ; εἶδος, form. G. *aderähnlich*.) Resembling a vein.

Phleb'olite. (Φλέψ; λίθος, a stone. F. *phlébolithe*; G. *Aderstein*.) A *veinstone*, or calcareous concretion in the interior of a vein.

Phleb'olith. The same as *Phlebolite*.

Phlebolithi'asis. (Φλέψ; λιθίασις, the disease of the stone.) The tendency to the formation of *Phleboliths*.

Phlebolith'ic. Belonging to *Phlebolith*.

Phlebolit'ic. Belonging to *Phlebolite*.

Phlebolog'ical. Belonging to *Phlebology*.

Phlebo'logy. (Φλέψ; λόγος, a discourse. G. *Venenkunde*.) The anatomy of the veins.

Phlebomalacia. (Φλέψ; μαλακία, softness, weakness. F. *phlébomalacie*.) Lobstein's term, *Phlebomalacie*, for pathological softening of the veins.

Phlebometrit'is. See *Metrophlebitis*.

Phlebopal'ia. (Φλέψ; πάλλω, to leap, or quiver. G. *Aderschlag*.) Venous pulsation, or simply pulsation; the most ancient physicians not distinguishing between the veins and the arteries, and therefore using the term φλέψ for both.

Phlebophlogo'sis. (Φλέψ; φλόγωσις, inflammation.) The same as *Phlebitis*.

Phlebo'phorus. (Φλέψ; φορός, carrying. G. *venenträgend*.) Bot. Bearing veins.

Phlebophthalmo'tomy. See *Ophthalmophlebotomy*.

Phleboplero'sis ecphrac'tica. (Φλέψ; πλήρωσις, making full. Έκφρακτικός, -ης, -ον, fit for clearing obstructions.) A term for *Inflammation*.

Phlebopneumo'nia. (Φλέψ; pneumonia. F. *phlébopneumonie*; G. *die venose Pneumonie*.) Venous or *hypostatic pneumonia*.

Phleborrha'gia. (Φλέψ; ῥήγνυμι, to burst forth.) A sudden hæmorrhage from rupture of a vein.

Phleborrhag'ic. Belonging to *Phleborrhagia*.

Phleborrhec'tic. Belonging to *Phleborrhexis*.

Phleborrhex'is. (Φλέψ; ῥήξις, a breaking. G. *Aderriss*.) Rupture of a vein; also, venous hæmorrhage.

Phlebosceno'graphy. (Φλέψ; σκηνή, the scenes of a stage; γράφω, to write. G. *Venenbeschreibung*.) An illustrated description of the veins.

Phlebosclero'sis. (Φλέψ; σκληρώω, to harden, stiffen.) Thickening of a vein-wall, a process often followed by calcification, commonly accompanying arterio-sclerosis.

Phlebostem'ma. (Φλέψ; στέμμα, a chaplet.) A venous circle. See *Thelophlebostemma*.

Phlebosten'o'sis. (Φλέψ; στένωσις, a being straitened.) A narrowing or constriction of the veins.

Phlebostreps'is. (Φλέψ; στρέψις, a turning, twisting.) A tortuous condition of the veins.

Phlebosynize'sis. (Φλέψ; συνίησις, a falling in of the ground.) Collapse of the veins.

Phlebothrombo'sis. (Φλέψ; thrombosis.) Venous thrombosis.

P. puerpera'lis. A name for *Phlegmasia dolens*.

Phlebotoma'nia. See *Phlebotomania*.

Phleb'otome. (Φλέψ; τομή, a cutting.) Old name for an instrument used for incising a vein; a lancet.

Phlebotom'ia. *Phlebotomy*.

P. spoliati'va. (L. *spoliatio*, a robbing, spoiling.) Spoliative phlebotomy; blood-letting for the purpose of diminishing the whole mass of the blood in circulation.

Phlebotom'ic. Belonging to, or of the nature of, *Phlebotomy*.

Phlebotom'ical. The same as *Phlebotomic*.

Phlebo'tomist. One who practises or advocates *Phlebotomy*.

Phlebotomoma'nia. (*Phlebotomy*; *mania*. G. *Aderlasswuth*.) A mania for *Phlebotomy*.

Phlebo'tomy. (See *Phlebotome*.) Blood-letting from a vein. See *Blood-letting*.

It is usually the *median basilic vein* of the arm which is opened. A bandage is tied round the arm, above the vein, and the patient is directed to clasp some object in his hand, so as to compress the blood out of the deep into the superficial veins. A longitudinal incision rather less than half an inch long is then made in the vein with a lancet, care being taken not to wound the opposite wall of the vein. A graduated compress is bandaged over it when enough blood has flowed. The amount necessary is judged by the effect; in an adult it is usually from six to ten ounces.

Phlebs. (Φλέψ, φλεβός, a vein.) See *Phleps*.

Phlebypecta'sia. (Φλέψ; hypectasia.) Slight morbid dilatation of a vein.

Phlebyperecta'sia. The same as *Hyperphleboectasy*.

Phledoni'a. (Φλεδονεία, idle talk. F. *délire*; G. *Wahnsinn*.) Term for *Delirium*.

Phledono'des. (Φλεδών, an idle talker; εἶδος, resemblance.) The same as *Phledonous*.

Phled'onous. (*Phledonia*.) Talkative; delirious.

Phleg'hymen. See *Phlegmymen*.

Phlegm. (Φλέγμα, having two meanings, inflammation or heat, and also one of the four *Humours*, a cold slimy humour, supposed to be the cause of many diseases; from φλέγω, to burn. F. *phlegme*; G. *Phlegma*.) The thick, viscid mucus of the nose, bronchial tubes, and also, according to Charlton (*Ex. Physiol.*, vii, § 8), of the stomach and intestines. Also used for dullness or apathy. Formerly used also for inflammation or heat. In Chemistry, a name for water that is formed by distillation.

Phleg'ma. (Φλέγμα, see *Phlegm*.) *Phlegm*. Used among the Ancients to mean one of the four "humours" of the body, the other three being *blood*, *choler*, and *gall*.

P. nar'ium cras'sum. (L. *crassus*, thick.) Nasal mucus. See under *Phlegm*.

P. sal'sum. (L. *salsus*, briny.) A name applied in the middle ages to a general disease, especially attacking the skin, closely allied to *Leprosy* (Littre).

P. vit'riol. Term for a very dilute aqueous solution of sulphuric acid.

Phlegmago'gic. Of the nature of a *Phlegmagogue*.

Phlegm'agogue. (*Phlegma*; ἀγωγός, drawing forth.) That which removes, or assists in the expulsion of, phlegm. A term formerly applied to medicines that had such an action.

Phlegma'pyra. See *Phlegmatopyra*.

Phlegmas'ia. (Φλεγμασία = φλεγμονή, inflammation beneath the skin, a swelling. F. *phlegmasie*; I. *flemmasia*; G. *Entzündung*.) Term for inflammation accompanied by fever; feverishness.

P. adeno'sa. (ἄδην, a gland.) Term for *Adenitis*.

P. al'ba dol'ens. A plastic phlebitis occurring in the veins of the lower limb, apparently accompanied by lymphatic obstruction, spreading from some of the uterine veins, which occurs in women during the puerperal state, and is probably the result of a general blood-dyscrasia dependent on that state. It usually begins with severe pain in the limb, which is followed, within twenty-four hours or so, by swelling. There is general constitutional disturbance (possibly beginning with a rigor) with a raised temperature. The swelling usually begins in the groin and spreads downwards; the limb is hard, tense, brawny, not pitting on pressure, and of a shiny white appearance. Thrombi can often be felt in the femoral and popliteal veins, there may be some redness along their course, and they are very tender. The left leg is the one more often affected. The disease rarely begins before the second week after labour; the acute stage lasts from a week to a fortnight. Absorption takes six weeks, or longer. Suppuration rarely occurs. Pulmonary embolism may take place, causing sudden death.

P. cellular'is. *Cellulitis*.

P. dol'ens. The same as *P. alba dolens*.

P. glandulo'sa. The same as *P. adenosa*.

P. myo'ica. Term for *Myositis*.

P. of the peritone'um. Term for *Peritonitis*.

Phlegmas'ia. (Nom. plural of *Phlegmasia*.) Inflammations with fever. An Order of the Class *Pyrexia*, of Cullen's nosology.

P. membrano'sæ et parenchyma-

to'sæ. Membranous and parenchymatous inflammations; a term for internal inflammations. See *Empresma*.

Phlegmasit'ic. (*Phlegmasia*.) Belonging to *Phlegmasia*.

Phlegmathy'men. See *Phlegmymen*.

Phlegmatia dol'ens. See *Phlegmasia alba dolens*.

P. lac'tea. The same as *P. dolens*.

Phlegmatic. Belonging to, or abounding in, *Phlegma*, in its ancient meaning of one of the four "humours" of the body. It was believed to give rise to a dull, sluggish temperament. The same as *Lymphatic*.

P. tem'perament. See *Phlegmatic*.

Phleg'matoid. (Φλέγμα; εἶδος, form. *G. entzündungsähnlich*.) Resembling inflammation; resembling mucus.

Phlegmato'pyra. (*Phlegma*; πῦρ, fever heat. *G. Schleimfieber*.) The same as *Fever, mucous*.

Phlegmatorrhag'ia. (*Phlegma*; ῥήγνυμι, to burst forth.) The same as *Catarrh*.

Phlegmatorrhag'ic. Belonging to *Phlegmatorrhagia*.

Phlegmatorrhœ'a. (*Phlegma*; ῥέω, to flow. *F. phlegmatorrhée*; *G. Phlegmatorrhœe*.) Term for a milder degree of *Phlegmatorrhagia*.

Phlegmatorrho'ic. Belonging to *Phlegmatorrhœa*.

Phlegmatous. (*Phlegma*. *F. phlegmateux*; *G. entzündungsartig*.) Inflamed, or much inflamed.

Phleg'mon. (Φλεγμονή, inflammation beneath the skin, a swelling. *I. flemmone*; *G. Phlegmone*.) An acute localised inflammation, in which redness and swelling are well marked.

P., paramet'ric. An acute *Parametritis* in which the swelling is very well defined.

P., perinephrit'ic. See *Perinephritis*.

P., periu'terine. An acute *Perimetritis* in which the swelling is very well defined.

Phlegmonaposte'ma. (Φλεγμονή, inflammation beneath the skin, a swelling; *apostema*. *G. Blutabscess*.) A simple inflammatory abscess; an abscess containing blood mixed with the pus.

Phleg'monë. See *Phlegmon*.

P. col'i profun'da. The same as *Angina Ludovici*.

P. mam'mæ. See *Mastodynia apostematosa*.

P. mastodyn'ia. The same as *P. mammæ*.

P. musculo'rum. A term for *Myositis*.

P. parotide'a. *Parotitis*.

P. paru'lis. See *Parulis*.

P. pel'vica. *Parametritis*.

P. peritone'i. *Peritonitis*.

P. ventric'uli. A term for *Gastritis*.

Phleg'monoid. (*Gr. εἶδος, form*.) Resembling *Phlegmon*.

P. erysip'elas. *Phlegmonous erysipelas*.

Phlegmonosphæ'ria. (Φλεγμονή; σφαῖριον, a molecule. *F. phlegmonosphérie*; *G. Entzündungskügelchen*.) Term for a globular inflammatory swelling.

Phleg'monous. (Φλεγμονώδης, like an inflammation or swelling. *F. phlegmonode*; *G. entzündlich*.) Belonging to, or characterised by, the presence of *Phlegmon*.

P. ab'scess. See *Abscess, phlegmonous*.

P. erysip'elas. See *Erysipelas, phlegmonous*.

P. gastrit'is. See *Gastritis, phlegmonous*.

P. inflamma'tion. See *Inflammation, phlegmonous*.

P. rhini'tis. See *Rhinitis, phlegmonous*.

P. sore throat. See under *Sore throat*.

Phlegmo'pyra. See *Phlegmatopyra*.

Phlegmorrhag'ia. (*Phlegma*; ῥήγνυμι, to burst forth.) See *Phlegmatorrhagia*.

Phlegmorrhœ'a. See *Phlegmatorrhœa*.

Phlegmymen. (*Phlegma*; ὑμῖν, a membrane.) Term for *Mucous membrane*.

Phlegmymen'ic. Belonging to *Phlegmymen*.

Phlegmymenit'ic. Belonging to *Phlegmymenitis*.

Phlegmymenit'is. (*Phlegmymen*. *F. phlegmymenite*; *G. Schleimhautentzündung*.) Inflammation of a mucous membrane.

P. enter'ica. Term for *Enteritis*.

Phleme. The same as *Fleam*.

Phle'os. (Φλέως.) According to Sprengel, name for the *Arundo ampelodesmon*.

Also said to be the same as *Pimpinella spinosa*.

Phleps. (Φλέψ, φλεβός, a vein.) A vein.

Phlobaphenes. (Φλόος, rarer form of φλοιός, bark; βαφή, a dye, probably the saffron-dye. *F. phlobaphènes*; *I. floobafeni*; *G. die Phlobaphene*.) Certain not yet thoroughly-understood brown or red colouring matters, developed in dying or dead plant-tissues by the oxidation of the different varieties of tannic acid. They are readily soluble in alkalies, and slightly in alcohol; but insoluble in water. *Cinchona-red, Quercitrin, &c.*, belong to this group.

Phlo'em. (Φλοιός, bark.) *Bot.* The bast in a vascular bundle.

P. interfascic'ular. Parenchymatous tissue formed between the sieve-tubes of the phloëm, and consisting of long cells which contain various fluids.

P. sheath. The sheath of *Phloem* occasionally found surrounding the *xylem* in a vascular bundle.

Phlœorrhizi'na. (Φλοιός, bark; ῥίζα, a root. *F. phlœorrhizine*.) The same as *Phlorizin*.

Phlœosteosclero'sis. (Φλοιός; osteosclerosis.) The same as *Lemmosteosclerosis*.

Phlœ'um. (Φλοιός, bark.) *Bot.* The same as *Epiphlœum*.

Phlogæ'mia. (Φλόξ, a flame; αἷμα, blood.) See *Hæmitis*.

Phlogcephlog'ia. (Φλόξ, a flame; ἐκφλέγω, to set on fire, to inflame.) Term for the variety of small-pox, *Variola*, called *inflammatory*.

Phlogerysip'elas. (Φλόξ; erysipelas. *F. phlogerysipèle*.) See *Erysipelas inflammatory*.

Phlogerythro'pyra. (Φλόξ; erythro'pyra.) The so-called *inflammatory* variety of *Scarlatina*.

Phlog'ia. (Φλογιά, poet. for φλόξ, a flame.) A term for *Inflammation*.

Phlog'ic. Belonging to *Phlogia*.

Phlog'inos. (Φλόξ, a flame.) Burning. Formerly applied as an epithet to a certain collyrium described by Galen and Aëtius.

Phlogistereth'isis. (Φλογιστός, burnt, set on fire; ἐρεθίζω, to rouse or kindle.) Term applied (*Phlogisterethises*, nom. pl.) by C. H. Schultz to inflammations affecting the muscular or nervous systems.

Phlogis'tian. (*Phlogiston*.) One who believes in the existence of *Phlogiston*.

Phlogistic. (*Phlogiston*. F. *phlogistique*; G. *phlogistisch*.) Belonging to the supposed principle *Phlogiston*; also, *Inflammatory*.

P. theory. The theory of the existence of *Phlogiston* (q. v.).

Phlogisticated air. A term for *Nitrogen*.

P. alkali. Term for a fixed alkali; so named from former theories built up on the fact of its having been found combined with hydrocyanic acid, when ignited with animal substances and afterwards lixiviated; also termed, from the above fact, *Prussian alkali*.

P. gas. A term for *Nitrogen*.

Phlogistici. (Nom. pl. From *Phlogiston*.) The same as *Empresma*.

Phlogistocausus. See *Phlogmocaustus*.

Phlogistologia. (*Φλογιστός*, set on fire; *λόγος*, a discourse.) A treatise or history of combustible bodies; it was the title of a work published by J. Lippert.

Phlogiston. (*Φλογιστός*, burnt, set on fire. G. *Brennstoff*.) Old term for the supposed inflammable principle, which was thought to be pure fire, or the principle of fire resident in combustible bodies, as distinct from fire in action, or combustion.

Phlogmocaustus. (*Φλογμός*, burning heat; *causus*.) Term for acute inflammatory fever.

Phlogmus. (*Φλογμός*, burning heat, inflammation, Hipp. F. *ardeur*; G. *Hitze*.) Term for burning heat.

Phlogochroma. (*Φλόξ*, a flame; *χρώμα*, the colour of the skin.) The colour characteristic of inflammation.

Phlogochromatic. Belonging to *Phlogochroma*.

Phlogodes. (*Φλογώδης*, contr. for *φλογοειδής* [Hipp.] heated, inflamed. F. *phlogode*.) Resembling inflammation; used by Hippocrates (*Coac.* vii, p. 264) for an intensely red colour of the face.

Phlogogene. (*Φλόξ*; obsol. pres. *γένω* = *γεννάω*, to beget.) Flame producer; a name for *Hydrogen*.

Phlogogenetics. (*Φλόξ*; *γενέτης*, a begetter.) Substances that give rise to inflammation, i. e. *Irritants* (q. v.).

Phlogogenic. The same as *Phlogogenous*.

Phlogogenous. (*Phlogogene*.) Giving rise to inflammation.

Phlogogonorrhœa. (*Φλόξ*, a flame; *gonorrhœa*.) Term for very acute gonorrhœa.

Phlogoid. (*Φλόξ*; *είδος*, form. G. *flammähnlich*.) Having an inflamed appearance.

Phlogoporphyrtyphus. (*Φλόξ*; *porphyrotypus*.) Term for inflammatory *Porphyrotypus*.

Phlogopyra. (*Φλόξ*; *πύρ*, fever-heat. G. *Entzündungsfieber*.) Inflammatory fever.

Phlogosed. Acted upon by *Phlogosis*; inflamed.

Phlogosiætiologia. See *Phlogosietiology*.

Phlogosic. (*Phlogosis*.) Epithet applied by Brongniart to an Order of pyrogenous earths, comprehending the pseudo-volcanic, that is, those formed by inflammation without ejection or swelling.

Phlogosietiology. (*Φλόγωσις*, in-

flammation; *αιτιολογία*, a giving the cause. G. *Phlogosiætiologie*.) The doctrine of the causes of inflammation.

Phlogosin. (*Phlogosis*.) A product of cultures of the *Staphylococcus aureus* prepared by Leber, who found that it produced acute local inflammation going on to suppuration.

Phlogosigraphy. (*Phlogosis*; *γράφω*, to write.) A description of inflammation.

Phlogosiontology. (*Phlogosis*; *ontology*.) The doctrine of the nature of inflammation.

Phlogosiphysiology. (*Phlogosis*; *physiology*.) The doctrine of the nature and predisposing causes of inflammation.

Phlogosis. (*Φλόγωσις*, inflammation. F. *phlogose*.) Inflammation. The first Genus of the Order *Phlegmasiæ*, in Cullen's nosology.

Phlogotic. Belonging to *Phlogosis*; inflammatory.

Phlogotica. (*Phlogotic*.) The second Order of Class III, *Hæmatica*, of Good's nosology.

Phlogozelotism. (*Phlogosis*; *ζήλος*, any vehement passion.) Excessive zeal or ardent passion, especially of a morbid kind.

Phlogurethritis. (*Φλόξ*; *urethritis*.) The same as *Phlogogonorrhœa*.

Phlo'oplasty. (*Φλοιός*, the bark of trees; *πλάσσω*, to form.) See *Phloöplasty*.

Phloiorrhizinum. *Phlorizin*.

Phlo'os. (*Φλοιός*, the bark of trees.) The same as *Cortex*.

Phlo'mus. (*Φλόμος*, or *φλώμος*; L. *verbascum*, the *Mullein*, of which the ancients knew several kinds.) See *Verbascum thapsus*.

Phlo'obaphenes. See *Phlobaphenes*.

Phlo'oplasty. (*Φλόος*; *πλάσσω*, to form.) Term for the scraping away of the old or diseased bark of a woody plant, in order to effect a growth of healthy new bark (Littre).

Phlo'os. (*Φλόος* = *φλοιός*.) The same as *Phloios*.

Phlor'etate. A salt of *Phloretic acid*.

Phloretic acid. (C_9H_8O''). } O_2 . This

acid is formed, together with *phloroglucin*, when *phloretin* is boiled with potash-ley. It crystallises in long prisms, of an acid, astringent taste, soluble in alcohol, and, to a less extent, in water.

Phlor'etin. $C_{30}H_{14}O_{10}$. A white, crystalline substance, of a sweet taste, very soluble in alcohol and in strong acids, obtained by heating together *phlorizin* and dilute sulphuric acid to 90° C. Given internally, it causes temporary diabetes. It is not a glucoside, and therefore does not form sugar by decomposition. Part of the sugar, at least, seems to come from decomposition of the glycogen stored up in the liver; but phloretin also causes glycosuria in starving animals.

Phlorid'zin. See *Phlorizin*.

Phlori'zein. A red-coloured, bitter, resinous substance, soluble in boiling water, obtained by the action of ammonia on *phlorizin* in the air.

Phlori'zin. (*Φλόος*, cortex; *ρίζα*, a root.) $C_{42}H_{24}O_{10}$. A crystallisable, bitter glucoside, existing in the root of the apple, pear, plum, and cherry tree. Nitric acid transforms it into oxalic acid. When boiled with dilute sulphuric acid, it splits up into *phloretin* and

PHLOROGLUCIN—PHOBODIPSON

glucose. When given internally to animals, it has been found to cause glycosuria, even after extirpation of the liver, and to give rise to diabetes in animals that have a diet free from carbohydrates. The sugar thus formed must necessarily come from proteids (von Mering). Phlorizin has been given internally, in doses of 10 to 20 grains, either in pills or powder, as a substitute for quinine in intermittent fever.

Phloroglucin. $C_6H_6O_3$. Symmetrical trioxybenzol (Benedikt). This substance is found widely distributed in nature, mainly in combination as the complex body phloroglucide, but partly also in the free state. Phloroglucin can be obtained from phloroglucide by heating it with caustic potash. Perfectly pure phloroglucin is colourless; it is intensely sweet, and is soluble in water, alcohol, and ether. In solution together with vanillin (see *P.-vanillin*), it gives a deep red colour with hydrochloric acid, and is used as a test for the free acid in the contents of the stomach. As a 1 per cent. alcoholic or aqueous solution, phloroglucin is used as a test for the presence of *lignin* in vegetable cellular tissues; it changes the tissues containing lignin to a cherry-red colour.

P.-vanillin. Günzburg recommends an alcoholic solution of this body (2 grammes of *Phloroglucin*, and 1 gramme of vanillin in 30 grammes of absolute alcohol, forming a reddish-yellow liquid) as a test for free hydrochloric acid. Mineral acids, even when dilute, give with this solution a bright-red colour with a deposition of red crystals.

Phlo'rol. Another name for *Hydrophlorone*.

Phlorrhizin. See *Phlorizin*.

Phloous. (Φλοῦς, contrd. form of φλόος.) The same as *Phloös*.

Phlox. (Φλόξ, a flame.) A Genus of the *Polemoniaceæ*. Also, the *Verbascum thapsus*.

P. carolin'na. or **carolinia'na.** An American herbaceous plant, Order *Polemoniaceæ*. The root is said to be used in commerce as *Spigelia radix*, and to be similar in its therapeutic action to that root.

Phlox'ol. The name given by Trimble to a special variety of camphor that he found in the root of *Phlox carolina*.

Phlyctæ'na. (Φλύκταινα [φλύω, to bubble up], a rising on the skin, either a blister, pustule, or pimple.) An inflammatory vesicle; according to Good, a syn. for *Impetigo herpetica*.

P. pal'lida. See under *Infectious lymphoma*.

Phlyctænid'ion. (Dim. of *Phlyctenis*.) A minute vesicle, pustule or papule.

Phlyctænis. The same as *Phlyctæna*.

Phlyctæno'des. See *Phlyctenous*.

Phlyctænoïdes. (*Phlyctæna*; εἶδος, form.) Resembling a *Phlyctæna*.

Phlyctænoophthal'mia. (*Phlyctæna*; ophthalmia.) Phlyctenular ophthalmia. See *Conjunctivitis phlyctænulosa*.

Phlyctæno'ses. (Nom. pl. of *Phlyctænos*.) A Class of skin diseases of Hebra, under which he described pemphigus acutus, herpes and miliaria.

Phlyctæno'sis. (Φλυκταίνωσις, an eruption of pimples or pustules, Hipp.) The formation of *phlyctæna*; also, one of the *Phlyctænos*.

P. aggrega'ta. An eruption of minute

vesicles on a bright-red base, appearing in successive crops on different parts of the surface and accompanied by much itching (Billings).

P. labia'lis. A synonym of *Herpes labialis*.

P. spar'sa. A synonym of *Herpes*.

Phlyctæ'nula. (Dim. of *Phlyctæna*.) See *Phlyctenula*.

Phlycte'na. See *Phlyctæna*.

Phlycte'nic. Belonging to *Phlyctæna*.

Phlycte'noid. See *Phlyctænoïdes*. Epithet for one of the varieties of *Herpes*.

Phlycte'nous. Having *Phlyctæna*.

Phlycten'ula. A small inflammatory vesicle occurring on the conjunctiva in phlyctenular conjunctivitis. See *Conjunctivitis phlyctænulosa*.

Phlycten'ular. Having, or characterised by, the presence of one or more *phlyctenula*.

P. conjunctiv'itis. See *Conjunctivitis phlyctænulosa*.

P. cornel'itis. See *Keratitis, phlyctenular*.

P. kerati'tis. See *Keratitis, phlyctenular*.

P. ophthal'mia. See *Conjunctivitis phlyctænulosa*.

Phlyc'tides. Nom. pl. of *Phlyctis*.

Phlyctid'ium. (Dim. of *Phlyctis*.) A circumscribed spot of inflammation of the dermis proceeding to suppuration in the centre; e.g. the pustule of variola.

Phlyct'is. (Φλυκτίς, -ῖδος = φλύκταινα, a phlyctæna.) One of the four varieties into which Willan divided Pustules; he described it as a small pustule seated on a circular, slightly inflamed base, and containing either transparent, or curdy whitish, or pearly-coloured lymph.

Phlygeth'lon. See *Phygethlon*.

Phlys'is. (Φλύσις, a breaking out, eruption.) Old term for a cutaneous eruption. Also used for *Phlyctæna*. Also, the seventh Genus of the Order *Phlogotica* in Good's nosology; it contained the varieties of *Paronychia*.

P. ecthy'ma. See *Ecthyma*.

P. impeti'go. See *Impetigo*.

P. porri'go. See *Porrigo*.

P. sca'bies. See *Scabies*.

Phlyza'cia. (See *Phlyzacion*.) A name for *Ecthyma*.

Phlyza'cion. (Φλυζάκιον, dim. of φλύκταινα, a phlyctæna.) Term for a small pustule on a raised, circular, inflamed base, and terminating in the formation of a dark-coloured scab; also, term used for *Phlyctæna*. It was Willan's term for the largest of his four varieties of Pustules.

Phlyza'cious. Of the nature of, or belonging to, *Phlyzacion*.

Phlyza'cium. See *Phlyzacion*.

Phobi'ferous. (Φόβη, a lock of hair, the mane of a horse; L. *fero*, to bear.) Bearing a mane like that of the horse; applied to the *Æstrus phobifer*, the dorsal surface of whose thorax is beset with hairs.

Phobodips'ia. (Φοβόδιψος, hydrophobic, like one bitten by a mad dog.) A badly constructed term intended to mean, not fear of thirst, but the fear of allaying thirst attending certain diseases of the throat and stomach. It has been used also to mean *Hydrophobia*.

Phobodips'on. (Φοβόδιψος.) Term used, like *Phobodipsia*, for *Hydrophobia*.

Pho'ca. (Φώκη.) The common seal; Class *Carnivora*. Formerly used as food, and also in medicine, according to Aldrovandus, *de Cetis*, i, 10.

Phoca'ceæ. Péron's name for the *Phocidæ*.

Phocæ'na. (Φώκαινα, a porpoise.) A Genus of the *Cetacea* containing the *porpoises*, as distinguished from the dolphins.

P. commu'nis. The porpoise. Formerly used as food and in medicine, as described by Aldrovandus, *de Cetis*, i. Also called *Porcus marinus*.

Phocæn'ic ac'id. See *Phocenic acid*.

Phoce'rate. A salt of *Phocenic acid*.

Phocē'nic acid. A synonym of *Delphinic acid*.

Phocen'il. *Phocenin*.

Phoce'nin. (*Phocæna*. I. *focenina*.) The same as *Delphinin*.

Phocidæ. (*Phoca*.) The Seal Family; Order *Feræ*, Suborder *Pinnipedia*.

Phoci'ni. Vicq d'Azyr's name for the *Phocidæ*.

Phocomel'ia. (*Phocomelus*.) The special kind of deformity present in the *Phocomelus*.

Phoco'melus. (Φώκη, a seal; μῆλος, a limb.) A monster with limbs so much aborted that the hands and feet appear to spring from the trunk.

Phœnic'eum emplastrum. See *Emplastrum phœniceum*.

Phœnic'eus. (Φοινίξ.) Originally, *Phœnician*; hence, purple, the *Phœnician dye*.

P. mor'bus. A name for *Leprosy*. See *Morbus phœniceus*.

Phœnic'in. (Φοινίκεος, purple-red.) See *Phœnicin*. Also used for *Hæmatin* (Dunglison).

Phœnic'i'num emplastrum. The same as *Phœniceum emplastrum*.

Phœnicis'mus. (Φοινίξ, purple-red.) Plouquet's name for measles, *Rubeola*.

Phœnicis'tic. Belonging to *Phœnicis-mus*.

Phœnicisulphu'ric ac'id. The same as *Indigo-monosulphonic acid*.

Phœnicites lap'is. (Φοινίξ, the palm tree; from a supposed resemblance of this stone to the fruit of the palm. L. *lapis*, a stone.) The *Lapis judæicus*.

Phœnic'i'um emplastrum. The same as *Phœniceum emplastrum*.

Phœnic'ius. See *Phœniceus*.

P. mor'bus. See *Phœniceus morbus*.

Phœnig'mus. (Φοινιγμός, a making red, irritating the skin by blisters and the like.) Old term for a red skin-eruption without fever (Hooper); also, for *rubefaction*; also, for the agents (phœnigmi, nom. pl.) producing this, i. e. *rubefaciants*.

Phœ'nix. (Φοινίξ, originally, *Phœnician*; also, the palm tree; also, the fabulous Egyptian bird.) A Linn. Genus of plants, Class *Diœcia*, Order *Triandria*.

Also, the date-palm tree.

Also, the fabulous Egyptian bird.

P. dactyl'fera. (L. *dactylus* [δάκτυλος], a date; *fero*, to bear.) The date-palm; a dicocious tree, Order *Palmæ*. Of the three berries produced by the female flower, two are generally arrested. These berries have a vinous, sweet taste, and are used as food by the Arabs and

Negroes of the Date Country, which extends from Tunis to Morocco.

P. excel'sa. The same as *P. dactyl'fera*.

Phœnix'is. (Φοινίξις, a making red.) The same as *Phœnigmus*.

Phœno'des. (Φοινώδης [φοινός; είδος], of blood-red aspect.) Of a blood-red colour.

Phœnod'ina. (*Phœnodes*.) Term used by Hünefeld for the *crur sanguinis* or blood-clot; also, by others, for *hæmatin*.

Phœno'men. See *Phænomenon*.

Pho'ides. (Nom. pl. Φωίδες, nom. s. φωίς not used, blisters or weals on the skin.) Old term used by Hippocrates, *Coac. Prænot.* 318, in the same sense as *Phausinges*.

Phol'idote. (Φολιδωτός, clad with scales.) Scaly.

Phol'is. (Φολίς, -ίδος, a scale; strictly that of a reptile as opposed to *λεπίς*, the scale of a fish; but the two are often interchanged.) Old term for a *squama*, or scale.

Phonasce'tics. (Φωνασκητής = φωνασκός, a practising singing.) Systematic practising, either to strengthen or to bring back the voice.

Phonas'cia. (Φωνασκία, practice in singing. G. *Stimmbildung*.) The art of practising singing.

Phonas'cus. (Φωνασκός.) A singing-master.

Pho'rate. To utter sounds by means of the vibration of the vocal cords.

Phona'tion. (Φωνή, the voice.) The combination of phenomena in the production of the voice in man and animals (Chaussier).

P., cen'tre for. See *Speech, centre for*.

Pho'natory. Belonging to *Phonation*.

Phonaut'ogram. A diagram produced by means of the *Phonautograph*.

Phonaut'ograph. (Φωνή; *autograph*.) An instrument invented by Scott for producing a diagrammatic representation of articulate sounds. A trumpet, resembling an ear-trumpet, collects the sound-vibrations and conveys them to a stretched caoutchouc membrane, carrying a recording stylet in contact with a revolving drum.

Pho'në. (Φωνή, a sound, the voice.) Sound; also, the voice.

Phone'sis. (Φώνησις, a speaking, calling.) *Phonation*.

Phonetic. (Φωνητικός, belonging to sounding, or speaking.) Belonging, or according, to sound or the voice.

P. para'lysis. See *Paralysis, phonetic*.

Phonet'ics. The study, in languages, of articulate sounds.

Pho'nic. (Φωνή, a sound.) The same as *Phonetic*. Also applied to the place where the sound is produced; the position of the person speaking or the body emitting sound is termed the *phonic centre*.

P. cen'tre. See *Phonic*.

P. spasm. A spasm of the larynx occurring on attempting to speak. It occurs usually in neurotic people, or in those who are in the habit of over-exerting their voices; and also occasionally as a reflex neurosis in nasal disease. It is probably an analogous condition to that which Prosser James speaks of as stammering of the vocal cords.

Pho'nica. (Nom. pl. n. Φωνή.) In Good's Nosology, the first Order in the Class *Pneumatica*; it comprehends all diseases of the

throat or larynx in which the voice is affected. (Dunglison.)

Phonics. *Acoustics.* Also, the same as *Phonetics*.

Phonocamps'is. (Φωνέω, to produce sound; κάμψις, a bending.) Reflection of sound; an echo.

Phonocamp'tic. Belonging to *Phonocamps'is*.

P. cen'tre. The situation of the ear that is receiving reflected sounds.

Phonocamp'tics. (*Phonocamps'is*.) That branch of *Acoustics* which treats of the reflection of sound.

Phonochord'æ. (Φωνέω, to produce sound; χορδή, a string of gut, the string of a lyre, &c.) The *vocal cords*.

Phonognomonics. (Φωνέω, to sound, or speak clearly; γνωμονικός, experienced or skilled.) The study of the characters and the different modes of production of the voice.

Phonograph. (Φωνέω; γράφω, to write.) A variety of *Phonautograph* invented by Edison for reproducing the sounds of the voice. A delicate membrane is stretched over one end of a hollow cylinder, and the words are spoken in front of this membrane. A style fixed to the centre of the membrane stamps the movements on a sheet of soft tinfoil, which is fitted into a revolving apparatus. To reproduce the sound, the style is placed so as to impinge upon the tinfoil, and the apparatus holding the latter is made to revolve; in this way the membrane is made to vibrate, and thus to reproduce the sounds. Lichtwitz has suggested its use in ear disease for establishing a standard of measurement of the acuteness of hearing.

Phono'graphy. The art of writing according to the sound of the voice in pronouncing words. Also, a description of sound, or of the voice.

Phonoma'nia. (Φόνος, slaughter; mania.) A mania for killing.

Phono'metry. (Φωνέω; μέτρησις, a measuring, from μετρέω, to measure.) Term for a method of recognising a cavity beneath the surface by noting the intensity of the sound emitted by a vibrating tuning-fork resting firmly on that surface.

Phono'nosus. (Φωνέω, to produce sound, to speak clearly; νόσος, disease.) Disease of the organ of voice.

Phono'pathēs. The same as *Phonopath'ic*.

Phonopath'ia. (Φωνέω; πάθος, sickness.) An affection of the voice consequent upon disease.

Phonopath'ic. Belonging to *Phonopath'ia*.

Phono'phori. (Nom. pl. Φωνή, sound; φορός, bearing.) Collective term for the *ossicula auditus* in the Mammalia.

Phonorganon. (Φωνέω; ὄργανον, an instrument. F. *phonorgane*; G. *Sprachmaschine*.) An instrument devised to imitate vocal sounds or speech.

Phono'ris. *Phonation*.

Phonospasm. (Φωνέω; σπάσμα, a convulsion. G. *Stimmkrampf*.) Term used by B. Semmola, of Naples, for *Phonic spasm*.

Phonosynacter. (Φωνέω; συνακτήρ, a collector.) An ear-trumpet.

Phor'a. (Φορά.) Gestation.

Phoraden'dron flaves'cens.

(Φορά, in the sense of that which is borne or carried; δένδρον, a tree.) A name for the *Viscum flaves'cens*.

Phoran'thium. (Φορός, bearing, carrying; ἄνθος, a flower. F. *phoranthé*; G. *Blumenboden*.) Term originated by L. C. Richard for the widening of the peduncle in the *Synanthereæ*, which bears the flower, and is more generally named the receptacle, or *clinanthium*.

Phor'bē. (Φορβή, pasture, fodder.) Old term for *Pabulum*.

Phorbei'a. (Φορβεία, a halter.) The same as *Capistrum*.

Phorin'ē. (Φορίνη, the skin or hide of swine. Hipp.) Formerly used to mean *Corium* or leather; also applied to the hide of swine, according to Hippocrates, *de Rat. Vict. in Acut.*, iv, 2.

Phor'mia. See *Phormine*.

Phor'mine. A synonym of *Pseudomorphine*.

Phor'mium. A Genus of the Order *Liliaceæ*.

P. ten'ax, Forster. (L. *tenax*, -acis, that holds fast.) This plant furnishes the New Zealand flax. A decoction made from the root and the basal part of the leaves is used as a lotion for wounds. (Billings.)

Phoro'meter. (Φορός, bearing; μέτρον, a measure.) An apparatus designed to estimate deviations from the normal in the different visual axes, such as occur in affections of the various muscles that move the eyeball. (Stevens.)

Phoromet'ria. (Φορός, bearing, carrying; μετρέω, to measure. F. *phorométrie*.) A measuring of motion.

Phoronom'ia. (Φορός; νόμος, law.) The same as *Phoronomics*.

Phoronom'ics. The same as *Phoronomy*.

Phoro'nomy. (Φορός, bearing; νόμος, law. F. *phoronomie*.) *Kinematics*.

Phortæo'ra. (Φόρτος, a burden; αλώρα, a hammock. F. *phortéore*.) A portable hammock.

Phortocremath'ra. (Φόρτος; κρεμάθρα, a net or basket to hang things up in.) The same as *Phortæora*.

Phos'gene gas. (Φῶς, contr. of φάος, light; γένος, descent, offspring.) More correctly, *Photogene*. Name applied by J. Davy to *Carbonic chloride gas*, because it is formed by the action of the sun's rays on a mixture of equal parts of chlorine and carbonic oxide.

Phosphai'na. (Φῶς, contr. of φάος, light; φαίνομαι, to appear.) See *Phosphene*.

Phos'phas, -atis. A phosphate.

P. ammo'nico-so'dicus, Fr. Codex. See *Microcosmic salt*.

P. ammo'nicus. *Ammonia phosphas*.

P. bical'cicus, Fr. Codex. See *Calcium orthophosphate, monohydrogen*.

P. cal'cicus. See *Calcis phosphas*.

P. cal'cium stibia'tum. (L. *stibium*; antimony.) The *Pulvis antimonialis*.

P. ferro'so-fer'ricus. *Ferri phosphas*.

P. na'tricus. (L. *natrium*, sodium.) *Sodii phosphas*.

P. so'dicus, Fr. Codex. *Sodii phosphas*.

Phos'phate. A salt of *Phosphoric acid*.

P. of i'ron. See *Ferri phosphas*.

PHOSPHATED—PHOSPHORIC

P. of lime. See under *Calcium phosphate*; also, under *Calculus*.

P.s, sac'charated wheat. Ex. Ph. The organic phosphates and cereal in dissolved out of bran, and mixed with milk-sugar. Given in rickets, and generally to aid assimilation. Dose, $\frac{1}{2}$ teaspoonful with food, twice or three times daily.

P., stell'ar. A crystalline phosphate of lime ($\text{CaHPO}_4 + 2\text{H}_2\text{O}$) very occasionally occurring in the urine together with the amorphous phosphate ($\text{Ca}_3\text{P}_2\text{O}_8$). See also *Urine, phosphates in*.

P., trip'le. See under *Calculus*.

Phos'phated. Epithet applied in Mineralogy to a base that has become converted into a phosphate by combining with phosphoric acid.

Phosphat'ic. Belonging to, or entirely composed of, a phosphate or mixture of phosphates.

P. ac'id. Term for the oily liquid formed by slow oxidation of phosphorus in moist atmospheric air, and supposed by Dulong to be a distinct acid. Sir Humphrey Davy showed that it was merely a mixture of phosphorous and phosphoric acids.

P. cal'culus. See under *Calculus*.

P. depos'its. Urinary deposits of phosphatic calculi occur in the *Phosphatic diathesis*.

P. dia'thesis. See under *Diathesis*.

Phosphatur'ia. (*Phosphas*; $\phi\phi\tau\epsilon\omega$, to make water. F. *phosphaturie*.) The presence of an excess of phosphates in the urine. In connection with this condition, mental depression, hypochondriasis, and even melancholia have been known to occur; possibly the phosphaturia in this relation is an effect, not a cause.

According to Littré (*Dictionnaire de Médecine*), a condition often accompanying oxaluria, and depending on an abnormally large excretion of uric acid, in which the lime phosphates become decomposed by the uric acid in the urinary passages, phosphoric acid being set free, and the calcium uniting with uric acid to form urates.

Phos'phene. A subjective sensation of light or illuminated pressure-picture caused by pressure upon the eyeball. It was known to Aristotle. See also *Purkinje's figures*.

Phos'phide. A chemical compound composed of phosphorus in combination with one other element or compound radical.

Phos'phine. PH_3 . Gaseous hydrogen phosphide, or gaseous *phosphoretted hydrogen*.

Also, a phosphorescent yellow colouring-matter, red in alkaline solutions, occurring as nitrate of the two homologous *Chrysanielines*, $\text{C}_{19}\text{H}_{15}\text{N}_2$ and $\text{C}_{20}\text{H}_{17}\text{N}_3$, formed in the manufacture of *Fuchsin*. Given internally in doses of 0.5 gramme, Dujardin-Beaumetz has found it to act as an analgesic, but to cause gastric irritation.

Phos'phite. A salt of *Phosphorous acid*.

Phosphochal'cite. (*Phosphorus*; *chalcitis*.) Term for hydrated phosphate of copper.

Phosphogen'ic. See *Phosphorogenic*.

Phospholein. (F. *phospholéine*.) The flesh and bone of beef, finely powdered and mixed, and further prepared by the addition of alcohol and sugar. It has been proposed as a restorative food for invalids. (Littré.)

Phospholeu'leous. (*Phosphorus*, L. *oleuleus*, pertaining to oil. F. *phospholéulé*.) Composed of phosphorus and oil; applied by Béral to a mixture of phosphorus and an ethereal oil used for surgical dressings.

Phos'phorated. The same as *Phosphoretted*.

P. cod-liv'er oil. Ex. Ph. Prepared by adding 160 minims of *Ol. phosphoratum*, B. Ph., to 1 pint of *Ol. morrhue*. One drachm contains 1-100 grain of phosphorus; but it is unstable and very unpleasant to take. Dose, 1 to 4 drachms.

P. e'ther. See *Æther phosphoratus*.

P. oil. See *Oleum phosphoratum*.

P. su'et. Phosphorus 10 grains, carbon bisulphide 50 minims, prepared suet 90 grains. Used as a basis for several pills of phosphorus in the Ex. Ph.

Phosphorelæ'us. (*Phosphorus*; $\epsilon\lambda\alpha\iota\omega\nu$, oil.) The same as *Phospholeuleous*.

Phosphorénese, Fr. (I. *fosforenesi*.) Term applied by Baumès to the group of diseases, gout, rickets, osteomalacia, &c., characterised by a want or excess of calcium phosphate, or by its decomposition in the tissues.

Phosphoresce'. To exhibit *Phosphorescence*.

Phosphores'cence. (*Phosphorescent*.) The property possessed by certain bodies, under various conditions, of shining in the dark without giving forth sensible heat; as, for example, sugar when struck forcibly, air or water when compressed, and in several cases by chemical action, as by slaking quicklime with water, and in the decomposition of dead animal matter. Certain animals and plants are phosphorescent during life. See under *Light, emission of*.

Phosphorescence has been stated to have been occasionally observed in human beings, under two distinct conditions: when moribund at the end of some wasting disease, and after eating certain kinds of fish. See *Phosphoridrosis*.

Phosphores'cent. (*Phosphor* = *phosphorus*. G. *phosphoreszirend*.) Shining in the dark; exhibiting phosphorescence.

Phos'phoret. Old term for *Phosphide*.

Phos'phoretted. Occurring in combination as a *Phosphoret*.

Phosphoric acid. H_3PO_4 . Normal or orthophosphoric acid. Formed by burning phosphorus in the air, or by its oxidation with nitric acid, by oxidation of phosphorous or hypophosphorous acid, by decomposition of native phosphates (e. g. *apatite*), &c. There are two other varieties of phosphoric acid, *metaphosphoric acid* and *pyrophosphoric acid* (q. v.).

As used in Medicine (as the *Acid. phosph. con.* or the *Acid. phosph. dil.* of the B. Ph.), phosphoric acid has the general therapeutic action of acids; it also increases the amount of phosphates in the tissues, and possibly helps the growth of bones. Its value in disease is probably due to its action on the red blood-corpuscles, and to the bases (soda, lime, &c.) with which it is combined.

P. ac'id, anhy'drous. A name for *Phosphorus pentoxide*.

P. ac'id, con'centrated. The *Acidum phosphoricum concentratum* of the B. Ph. It is a strongly acid, colourless, syrupy liquid. Sp. gr. 1.5. Dose, 2 to 5 minims.

P. ac'id, dilu'ted. See under *Acidum*.

P. ac'id, gla'cial. Official, under the

PHOSPHORIDROSIS—PHOSPHORUS

name of *Acidum phosphoricum glaciale*, in the U.S. Ph. of 1873. The same as *P. acid, concentrated*, which has the chemical composition of *Metaphosphoric acid*.

P. ether. See *Ether, phosphoric*.

Phosphoridrosis. (*Phosphorus*; ὀδρωσις, a perspiring.) The secretion of sweat that is luminous in the dark, which is said to have been observed in some cases of phthisis and intermittent fever (see under *Phosphorescence*), and after eating some kinds of fish. (Billings.)

Phosphoris'mus. A term for chronic phosphorus poisoning.

Phosphorite. A synonym of *Apatite*.

Phosphorize. To cause to combine with phosphorus.

Phosphornecrosis. (*G. Phosphor-nekrose*.) Phosphorus necrosis.

Phosphorogenic. (*Phosphorescence*; γένεσις, origin, source. *F. phosphorogénique*.) Giving rise to phosphorescence. (Littré.)

Phosphroscope. (*Phosphorescence*; σκοπεῖν, to look at.) An apparatus invented by L. Becquerel in 1857 for relative estimation of the degree of phosphorescence of solids, liquids, and gases. For the gases, he used a *Geissler's tube*, in which the gas under examination was rarified, and through which an electric current was then passed. (Littré.)

Phosphorous acid. PH_3O_3 . This acid may be prepared by heating phosphorus trichloride with crystallised oxalic acid, or by passing a current of chlorine gas through melted phosphorus covered over by a layer of water. Its crystals melt at 74°F .; the acid is strongly deliquescent, and, on heating, splits up into phosphoretted hydrogen and orthophosphoric acid.

P. acid, Pelletier's. A synonym of *Phosphatic acid*.

Phosphoruria. (*Phosphorus*; οὔρον, urine.) 1. *Photuria*. 2. *Phosphaturia*.

Phosphorus. (Φῶς, contraction of φῶς, light; φωρός, bearing.) $P. = 30.96$. Vapour density = 61.92. It is uncertain who first discovered phosphorus; but it appears to have been first prepared in 1669 by Brand, an alchemist of Hamburg, from urine, by evaporating this to a syrup, and then heating it in a retort with white sand. He is believed to have sold the secret of his mode of preparing phosphorus to Krafft, from whom Kunkel learnt all that appeared in his pamphlet on the subject published in 1678. Krafft exhibited this element, which then commanded a very high price, in 1677, to Charles II of England among other European rulers. Even as late as 1730, phosphorus fetched 10 to 16 ducats an ounce. Boyle also prepared phosphorus from urine in 1680. Gahn, in 1769, discovered the existence of calcium phosphate in bone-ash; Scheele, in 1771, first obtained phosphorus from this source. The name *Phosphorus mirabilis* or *igneus* was at first given to true phosphorus (the word *phosphorus* being then used for any phosphorescent substance), to distinguish it from *Bolognian phosphorus* (q. v.). It was variously termed, in the eighteenth century, Brand's, Kunkel's, Boyle's, or English phosphorus. Lavoisier first showed, in 1772, that the phosphoric acid formed by burning phosphorus weighed more than the original phosphorus, the increase being due to combination with one of the constituent gases of the air. Before his time, phosphorus was believed to be a

compound of a special acid (*phosphoric acid*) with the hypothetical body *phlogiston*.

Phosphorus is widely distributed as a natural product, generally as calcium phosphate. It occurs in various minerals, as the main constituent of coprolites, in animals, plants, sea- and river-water, and most spring-water, and in all plant-bearing soils. The phosphorus of commerce is now prepared mainly from the calcium phosphate obtained from bone-ash; of that made in England, a considerable proportion is obtained from *sombrevite*, which is an impure form of calcium phosphate obtained from the West Indian island of Sombbrero. In 1874, 250 tons of phosphorus were prepared, of which the greater proportion was used for lucifer-matches, some for vermin poison, and some for use in chemical laboratories. Phosphorus occurs in three allotropic modifications: 1, common colourless, octohedral, or yellow phosphorus; 2, red, or amorphous phosphorus; and 3, rhombohedral, or metallic phosphorus.

1. *Common yellow phosphorus.* This is a waxy solid, translucent, and colourless or slightly yellow. At a low temperature it becomes brittle. It melts at $44\text{--}45^\circ \text{F}$. to a colourless, oily liquid, and it evaporates at temperatures below its boiling-point of 290°F . It is soluble in the essential oils, in ether and in turpentine, but hardly at all in water, and is very inflammable. In contact with moist air, it becomes luminous in the dark (phosphorescent), giving off garlic-smelling fumes; this phenomenon is due to its becoming oxidised into phosphorous acid. It is a very poisonous substance, and even the fumes are exceedingly deleterious. See *P., poisoning by*.

2. *Red or amorphous phosphorus.* Discovered by Schrötter in 1845. It can be prepared from ordinary phosphorus by the combined action of light and heat (temperature of 240° to 250°F .) in an atmosphere devoid of oxygen; above 260°F . it is reconverted into ordinary phosphorus. It is a lustrous, red-brown solid, is tasteless and inodorous, non-poisonous, and insoluble in any of the solvents of ordinary phosphorus. When quite free from ordinary phosphorus, this variety appears to be absolutely inert.

3. *Metallic or rhombohedral phosphorus.* Prepared by heating ordinary phosphorus in sealed tubes in contact with metallic lead for ten hours, at a temperature just below red heat. The lead when cooled is dissolved in nitric acid, leaving a lustrous dark mass of crystals, appearing red in thin layers, having a sp. gr. of 2.34. At 358°F . it is reconverted into ordinary phosphorus. It seems to be a better conductor of electricity than red phosphorus.

Phosphorus appears to be as essential to the living organism as are carbon and nitrogen. It is an important constituent of lecithin and other fats, and of nuclein, and is found associated with proteids. Its exact physiological uses are not known.

The *Phosphorus* of the B. Ph. (the ordinary yellow variety) is made from bone-ash, by treating it with sulphuric acid, filtering and evaporating the product, then heating with charcoal and afterwards distilling. Dose, 1-200 to 1-30 grain. Its two B. Ph. preparations are *Ol. phosphoratum* and *Pil. phosphori*. It is used also in the preparation of *Calcii hypophosphis* and *Sodii hypophosphis*.

Action. Both externally and internally, phosphorus is a local irritant and caustic (see

PHOSPHORUS

P., poisoning by. and hence it is always, when given medicinally, thoroughly mixed with an oil or solid fat. Phosphorus is only incompletely oxidised in the blood; its action upon the tissues is to increase metabolism, but to arrest oxidation; hence leading to an increased excretion of urea, but a storing up of fat. Small doses given for a long period tend to convert spongy into compact bone. The *Hypophosphites* of calcium and sodium are said to act internally in the same way as phosphorus, except that they are not irritant. They are apparently converted in the stomach into phosphates, and therefore probably have a stimulant effect on the stomach and intestines, and affect the nutrition of bones, lymphatic glands, and adenoid tissue. They are widely used in the treatment of lung diseases and nervous affections.

P., amorphous. See under main heading.

P., Baldwin's. Phosphorescent calcium nitrate; prepared as follows: recently fused calcium nitrate is broken up while still warm, placed in stoppered bottles and exposed for some time to the sun's rays; it phosphoresces in the dark.

P., black. A synonym of *Metallic phosphorus*. See under *Phosphorus*.

P., Bolognian. Also called Bolognian stone, or Kercher's phosphorus. Discovered quite accidentally by a shoemaker of Bologna in the seventeenth century. It is prepared from calcined sulphate of barium; this is powdered, made into a paste with mucilage, and rolled into sticks, which are dried and then ignited, and finally slowly cooled, and placed in stoppered bottles. After exposure to the sun's rays, it becomes phosphorescent.

P., Bononian. The same as *P., Bolognian*.

P., Canton's. Prepared as follows: a mixture of three parts of calcined oyster-shells with one of flowers of sulphur, arranged in alternate layers, is heated strongly in a crucible, after which it becomes phosphorescent.

P., detection and separation of, in food-residues. A method has been proposed by A. von Bastelaer, depending on the solubility of phosphorus in ether, and the fact of its not being acted on by strong ammonia. The suspected substance is mixed with water to form a thin paste, and is then shaken up two or three times with ether. The ether is allowed to evaporate in a shallow dish, and to the residue, warm water (at 50° to 60° C.) is then carefully added, when the phosphorus and part of the fat present collect together in a spherical form at the bottom of the vessel. The fat is separated from the phosphorus by dissolving it out in a strong aqueous solution of ammonia.

P., detection of, in the stomach or tissues. This may be effected by 1. Smell, luminosity, detection of pieces of phosphorus.

2. *Mitscherlich's method.* This is the only reliable method where the previous method gives no result. The tissue under examination is minced and placed in water in a flask, or, if a fluid, is simply put into the flask; enough sulphuric acid is added to neutralise the ammonia given off during distillation (phosphorus not being luminous in the presence of ammonia). The mixture is now distilled in a condenser, in absolute darkness, and if phosphorus be present, the tube of the condenser will become luminous. The acid distillate becomes luminous on shaking;

it can be tested for phosphoric acid. Free phosphorus may not be detected, owing to its oxidation in the tissues into phosphoric acid.

P. emulsion, E. Dieterich's. An emulsion is made with 5 grammes of the oil of phosphorus of the G. Ph. (containing .05 of phosphorus) and 3 of gum acacia in 5 of water, this is diluted with 77 of the aqua menthæ piperitæ, and sweetened with 10 grammes of simple syrup.

P., Homberg's. Chloride of calcium which has recently been ignited; this phosphoresces in the dark, like *P., Baldwin's*, *P., Bolognian*, &c.

P. oil. See *Oleum phosphoratum*.

P. necrosis. See *Jaw, necrosis of, phosphorus*.

P., poisoning by. 1. *Acute poisoning.* A very large number of cases have occurred since 1850, in France, Germany, and Austria; in England and the United States they have been rare, and usually accidental or suicidal. The commonest source has been matches; the next commonest, rat-paste; very rarely pure phosphorus or medicinal solutions.

Primary symptoms. Eructation of gas, tasting of phosphorus, and luminous in the dark, followed by sensations of heat in the throat, œsophagus, and stomach, with nausea and vomiting; symptoms usually not severe for five or six hours, perhaps not for twenty-four hours. Recovery may then occur, if the vomiting has been early and complete, otherwise symptoms last two or three days, the urine may be slightly diminished, and the feces may smell of phosphorus. Death may now occur by collapse; generally, however, apparent recovery takes place on the second or third day, secondary symptoms appearing on the third or fourth day.

Secondary symptoms. Three varieties. In all three the vomit may be luminous in the dark; the urine is diminished and is albuminous, it is dark coloured, may contain leucin and tyrosin, and contains also a large quantity of lactic acid.

a. *Irritant.* Jaundice and possibly urticaria, progressive enlargement of the liver, return of vomiting and abdominal pains, the vomit containing blood, feces scanty and pale, pulse first very frequent, then slow and feeble. The temperature is usually little or not at all raised.

b. *Hæmorrhagic.* Abundant hæmatemesis, melæna and bleeding from mouth, nose, and, in females, the uterus, subcutaneous and submucous ecchymoses.

c. *Nervous.* Headache, disturbance of special senses, affection of speech, numbness and tingling, fainting, delirium, coma. In some cases where the patient has recovered, there has been noted continued debility, with paresis.

One grain is usually considered a fatal dose for an adult. In recorded fatal cases, the time of death has varied between half an hour and seventeen days. Oil of turpentine is an antidote, and is given in doses of one drachm every four hours; sulphate of copper acts both as an emetic and an antidote. Vomiting should be at once brought about, or the stomach-pump be used. When the phosphorus has passed on into the intestines a purgative should be given; but fats and fixed oils, in all of which phosphorus is soluble, must be avoided.

2. *Chronic poisoning.* Caused by the constant breathing of phosphorus-vapour, and occurring in match manufactories. The symptoms are

PHOSPHOVINATE—PHOTOMICROGRAPHY

necrosis of the jaw (see under *Jaw*), anorexia, dyspepsia, gradual loss of flesh, and often nausea, sickness, and diarrhoea, and bronchial irritation going on to bronchitis. The disease can be prevented almost entirely by good ventilation of the workshops and exclusion of workmen with carious teeth; and entirely, by exclusive use of the inert red phosphorus.

Phosphovinate. A salt of *Phosphovinic acid*.

Phosphovinic acid. A synonym of *Ethylphosphoric acid*.

Phosphuret. *Phosphoret*.

Phosphuretted. *Phosphorette*.

Phosphuretum zincicum. Fr. Codex. The same as the *Zinc phosphide* of the U.S. Ph.

Phosphuria. See *Phosphoruria*.

Phosphypo'stasis. (*Phosphas*; *hypostasis*.) Any deposition of phosphates occurring in the living organism. (Dunglison.)

Photæsthesia. (*Φῶς*, *φωτός*, light; *αἴσθησις*, preception by the senses.) The same as *Visual purple*. (Villaret.)

Photalgia. (*Φῶς*, *φωτός*, light; *ἄλγος*, pain. F. *photalgie*; G. *Photalgie*, *Lichtschmerz*.) Pain in the eyeball arising from an excessive stimulation of the optic nerve by light.

Photia. (*Φῶς*.) Belonging to light, to its production and transmission.

Photics. (*Φῶς*. F. *photique*; G. *Photik*.) The study of the theory and laws of the production and transmission of light.

Photobiotic. (*Φῶς*; *βιωτικός* = *βίωσιμος*, belonging to life.) Bot. Living in the light; an epithet for certain vegetable cells.

Photocampsia. (*Φῶς*, *φωτός*, light; *κάμψις*, a bending.) Refraction of light.

Photo-chemical. Belonging to *Photochemistry*.

Photo-chemistry. (*Φῶς*; *chemistry*.) The study of the chemical actions produced by the ultra-violet rays of light. See under *Spectrum*.

P. of the retina. See *Visual purple*.

Photodermatic. (*Φῶς*; *δέρμα*, the skin.) Having a phosphorescent skin.

Photodynamic. (*Φῶς*; *dynamic*.) Belonging to the energy of light-rays.

Photodysphoria. (*Φῶς*; *dysphoria*.) Intolerance of light. See *Photophobia*.

Photodysphoric. Belonging to *Photodysphoria*.

Photo-epinasty. (*Φῶς*; *epinasty*.) Bot. *Epinasty* consequent upon exposure to bright light.

Photogen. (*Φῶς*, *φωτός*, light; *γενέσις*, origin, source.) Hermstädt's term for a chemical compound formed by the action of light.

Also, another name for *Kerosene*.

Photogene. A prolonged retinal impression.

P. gas. See *Phosgene gas*.

Photogenic. Belonging to *Photogeny*. Also, in *Biol.*, giving rise to light without any sensible heat.

Photogeny. (F. *photogénie*.) Another name for *Photography*.

Photohæmatachometer (Cybulski's). (*Φῶς*, *φωτός*, light; *hæmatachometer*.) An instrument for estimating and photographing the variations of level of the blood in two manometer-tubes which are put in connection with the cut ends of an artery, and which correspond

with the variations of blood-pressure due to the respiratory and cardiac movements.

Photohyponasty. Bot. *Hyponasty* consequent upon exposure to intense light following upon an arrest of growth.

Photolimos. (*Φῶς*, *φωτός*; *λιμός*, hunger. G. *Lichthunger*.) An intense desire for light.

Photological. Belonging to *Photology*.

Photology. (*Φῶς*; *λόγος*, a discourse.) The scientific study of light.

Photomagnetic. (*Φῶς*; *μαγνήτης*, for *λίθος μαγνήτης*, the lodestone. F. *photomagnétique*; I. *fotomagnetico*; G. *photomagnetisch*.) Epithet applied to the green, blue, and violet rays of the solar spectrum, which possess the property of magnetising a steel needle placed in their course.

Photomagnetism. The *Photomagnetic* action of certain rays of the solar spectrum.

Photomania. (*Φῶς*, *φωτός*, light; *mania*.) The increase of symptoms caused in some insane patients by an exposure to light.

Photometer. (*Φῶς*; *μέτρον*, a measure. F. *photomètre*; I. *fotometro*; G. *Lichtmesser*.) An apparatus for estimating the intensity of the light given out by the body under observation, as compared with a light of definite intensity. See *Bunsen's photometer* and *Rumford's photometer*.

P., Förster's. This consists of a rectangular box, blackened inside, about one foot long and rather less in height and width. At one end and to the side are two apertures with projecting tubes for the eyes to look through. Alongside, at the end, is the illuminating apparatus, which consists of a standard candle (kept always at a certain height by means of a spring) which is opposite a hole in the box covered with white paper, the size of the aperture or window being regulated by a moveable diaphragm. Inside the box, at the opposite end to all this, are the objects to be recognised or simply perceived, which are usually two small squares of white paper.

P., von Graef's. This is used for testing the acuteness of light-sense in cataract. It consists of a box, darkened on the inner surface, containing a lighted candle; this is looked at through a window of ground glass, the size of which can be regulated.

Photometric. Belonging to *Photometry*.

P. unit. See under *Photometry*.

Photometry. (*Φῶς*; *μέτρον*, to measure. I. *fotometria*; G. *Lichtmessung*.) The estimation of the relative intensities of two or more sources of light, one of the sources being a standard light of known intensity. The intensity varies inversely as the square of the distance of the source of light from the point of observation. The London standard, or unit, is a sperm candle of six to the pound, burning 120 grains in an hour. The absolute standard, or unit of intensity, which was adopted by the International Congress of Electricians, is "that given out by a square centimetre of melted platinum at the moment of its solidification."

Photomicrograph. (*Φῶς*; *micrograph*.) An enlarged photograph of a microscopic object.

Photomicrography. The process of photographing the enlarged image of a minute object produced by a microscope.

Photonos'us. (Φῶς; νόσος, disease. G. *Lichtkrankheit*.) Light-disease; applied to diseases, *Photonosi*, arising from exposure to a glare of light, as snow-blindness, sun-stroke.

Photopho'bia. (Φῶς; φόβος, fear.) Dread or intolerance of light, a symptom in various diseases of the eye.

Photophob'ic. Belonging to *Photophobia*.

Photophobophthal'mia. (*Photophobia*; *ophthalmia*.) Ophthalmia that is characterised by well-marked photophobia.

Photophone. (Φῶς; φωνή, a sound.) An instrument consisting of two mirrors, one of which receives the sound-vibrations of the person speaking, and, at the same time, a beam of light. The varying light is reflected on to a second (concave) mirror, and is focussed on a cell of selenium. Variations in the electrical resistance of the selenium are thus produced, and these reproduce the spoken words by means of a connected telephone.

Photophore. (Φῶς; φορός, carrying.) The name for an electric light for use in laryngoscopy, adapted to a forehead-band, so as to be reflected by the laryngoscopic mirror into the mouth and throat under examination.

Photophosphores'cent. (Φῶς; *phosphorescent*.) Becoming phosphorescent from the action of light.

Photophyga. (Nom. pl. n. Φῶς; *φυγάς*, a runaway.) Duméril's name for a family of the *Coleoptera* characterised by the habit of seeking their food at night.

Photophysical. (Φῶς; *physical*.) Belonging to the physical effects of light.

Photops'ia. (Φῶς; ὄψις, an appearance, vision.) A subjective sensation of light. See also *Phantoms*, *ocular*.

Photoptometer. (Φῶς; ὀπτέος, to be seen; μέτρον, a measure.) An instrument designed for the estimation of relative acuteness of vision for homogeneous light. (Billings.)

Photorexis. (Φῶς; ὄρεξις, a longing after. G. *Lichtbegierde*.) Desire for light. See also *Photolimos*.

Photorrh'esis. (Φῶς; ῥήξις, a breaking.) The same as *Photocampsis*.

Photosanton'ic acid. A crystallisable acid, obtained by exposing a solution of santonin in acetic acid to the action of sunlight.

Photosan'tonin. (Φῶς; *santonin*.) A crystalline substance obtained by prolonged exposure of an alcoholic solution of santonin to the action of sunlight. It is soluble in alcohol and ether.

Photoscope. (Φῶς; σκοπέω, to look at.) A small opaque tube, used for inspecting the nasal cavity, to compare the relative translucency of the wall of the antrum of Highmore on the two sides, as an aid in diagnosis of disease of either antrum. (McBride.)

Photo-shoo'tur. (Indian. Literally, "small-pox of camel.") Native Indian term for a malady to which the camel-milkers in the province of Lus are subject. It shows itself as a pustular rash affecting the hands and arms, and is derived from a similar affection on the udder of the camel, closely resembling cow-pox, *Vaccinia*. The disease appears never to be fatal, and it is remarked by the natives that those who have had it usually escape small-pox, which is occasionally endemic in that district.

Pho'tosphere. (Φῶς; σφαῖρα, a sphere. G. *Lichtsphäre*.) Bode's term for the luminous atmosphere of the sun.

Phototacho'meter. (Φῶς; *tachometer*.) An instrument for estimating the velocity of light-rays.

Phototax'is. (Φῶς; τάξις, arrangement.) *Bot.* The assuming of a certain relative position to incident light-rays.

Phototon'ic. Exhibiting the phenomenon of *Phototonus*.

Photo'tonus. (Φῶς; τόνος, a stretching.) The normal condition of motility or periodical spontaneous movement observed in certain plants, as in *Mimosa*, *Acacia*, *Oxalis*, &c., which is caused by the alternation of night and day. (Sachs.)

Photo'xyl'in. (Φῶς; ξύλον, wood. I. *fotossilina*.) A form of nitro-cellulose prepared by nitrating wood-wool. It was originally prepared in St. Petersburg. Dissolved in ether, either as a $\frac{1}{2}$ to 1 per cent. or a 5 per cent. solution, it was used first by Krysinski for embedding microscopical preparations. The solution has been used instead of collodion. Guranowski has employed it for the formation of an artificial drum in perforation of the tympanic membrane. After cleaning the external meatus with boric acid solution and carefully drying, he instils the solution several times, allowing each quantity to dry and form a layer before instilling the next; a very tough and serviceable artificial drum is thus formed. (Villaret.)

Photu'ria. (Φῶς; οὖρον, urine. G. *Lichtharn*.) The very rare symptom of the passing of urine that is luminous as it flows, from the presence of phosphorus. The urine has no other peculiarity that can be detected.

Phox'i. (Φοξός, tapering to a point.) Term applied by Hippocrates to those whose heads appear to taper to a point, and in whom the frontal and occipital eminences are either much depressed or much elevated; as, *e. g.*, the head of Thersites, according to Homer.

Phoxocheil'ous. (Φοξός, tapering to a point; χείλος, a lip. F. *phoxochilé*.) Having pointed lips.

Phrag'ma. (Φράγμα, a fence.) A partition. In *Zoöl.*, a partition. In *Entom.*, applied by Kirby to the partition separating the posterior orifice from the prothorax in the *Grylotalpa*. In *Bot.*, a false dissepiment formed by an enlargement of the placenta, or an irregular projection from the sides and back of the pericarp. Applied by Link to the transverse partitions of fruit.

Phrag'mata. Plur. of *Phragma*.

Phragmatic. (*Phragma*.) Inclosed, surrounded. Applied to cattle which suffer from colic, or obstruction of the bowels.

Phragmi'gerous. (*Phragma*; *L. gero*, to carry. F. *phragmigère*; G. *walltragend*.) In *Bot.*, applied to legumes which are divided into two or more cavities by transverse septa, as in *Cassia fistula*; also, to *pili* in the interior of which are transverse septa, as in certain species of *Carduus*.

Phragmites. (Φραγμίτης, growing in a hedge or fence.) Specific name of the *P. communis* or *Arundo phragmites*.

P. commu'nis. Order, *Gramineæ*. The common reed. The root was formerly given therapeutically, as a depurative and antisyphilitic.

PHRAGMOS—PHRENICULA

Phrag'mos. (Φραγμος, a fence.) Old term for the whole of the upper and lower rows of the teeth, which encircle the mouth as with a fence.

Phra'sis. (Φράσις, a speaking.) Term for articulate speaking.

Phra'sium vir'idē. Old term for *Æris flores*.

Phra'sum. See *Marrubium*.

Phren. (Φρήν; see *Phrenes*.) The diaphragm; also, the epigastrium.

Phrenalgia. (Φρήν, φρενός, in the sense of the seat of the mind; άλγος, pain.) A term for *Melancholia*. (Tuke.)

Phrenasthenia. (Φρήν, the seat of the mind; *asthenia*.) Finkler's term for a variety of *Neurasthenia*, characterised by torpor, and coming on after infectious fevers, or after great mental strain. He states that it differs from the ordinary form of *neurasthenia* in the absence of vaso-motor symptoms.

Phrenatrophia. (Φρήν, the seat of the mind; ἀτροφία, want of food.) Atrophy of the brain-substance.

Phrenauxē. (Φρήν; αὔξη, enlargement.) Hypertrophy of the brain-substance.

Phren'es. Nom. pl. of *Phren*. (Φρήν, φρενός.) Old term for the præcordia; also, for the diaphragm.

Phrene'siac. The same as *Phrenetic*.

Phrene'sis. (Φρήν, in the sense of the seat of the mental faculties.) The same as *Phrenitis*.

Phreneti'asis. (Φρενετίσις = φρενίτις.) The same as *Phrenitis*.

Phrenetic. See *Phrenitic*.

Phrenetis'mus. The same as *Phrenitis*.

Phreniat'ric. (Φρήν; ιατρικός, skilled in medicine.) The same as *Psychiatric*.

Phren'ic. (Φρήν, φρενός, the seat of the mind, also, the diaphragm.) Belonging to the diaphragm. Also, used in the sing. in the same two senses as *Phrenica*, in the plur.

P. ar'teries, infe'rior. Two small arteries which arise from the abdominal aorta, either separately or by a common trunk, at a level with the upper margin of the aortic opening in the diaphragm. In some cases they arise from the celiac axis or some other neighbouring branch of the aorta. They diverge, pass across the under surface of the corresponding crura of the diaphragm, the right division passing behind the vena cava, and the left behind the œsophagus. Each supplies the diaphragm and gives a superior suprarenal branch to the suprarenal body of its own side. They anastomose with the superior phrenic and musculo-phrenic branches of the internal mammary, and with the lower intercostal arteries.

P. ar'tery, supe'rior. Also called *comes nervi phrenici*. The artery of either side arises from the corresponding internal mammary, generally near the first rib, and descends to the diaphragm between the pericardium and pleura, in company with the phrenic nerve. Its terminal branches ramify on the upper surface of the diaphragm, supplying its anterior portion, and anastomose with the inferior phrenic and musculo-phrenic arteries. This artery also gives small branches to the pericardium.

P. cen'tre. See *Centre, phrenic*.

P. gan'glion. See under *Ganglion*.

P. glands. A mass of small lymphatic

glands encircling the upper end of the inferior vena cava.

P. her'nia. See under *Hernia*.

P. nerve. This nerve is a branch of the cervical plexus. It arises mainly from the fourth, but usually partly also from either the third or fifth cervical nerve. It descends in the neck over the scalenus anticus, passes into the thorax between the subclavian vein and artery, crosses over the internal mammary artery, and then passes in front of the root of the lung and by the side of the pericardium. It divides into branches which pass through the diaphragm to its under surface. The nerve of either side gives branches to the pericardium and pleura, and occasionally receives a branch formed by the union of the descendens noni and the cervical nerves. The right nerve descends first along the outer side of the right innominate vein and superior vena cava; the left crosses in front of the left vagus and the aortic arch. Branches are given off to the peritoneum, and on the right side to the right auricle of the heart and the inferior vena cava (Luschka). One or two branches of the right phrenic nerve unite with diaphragmatic branches from the solar plexus to form a small ganglion, *phrenic ganglion*, from which branches are given to the hepatic plexus, the suprarenal body, and the inferior vena cava. The left nerve has a similar communication, but no ganglion.

P. nerve, acces'sory. Name proposed by Valentin for the descending branch of the hypoglossal, *descendens noni*; as he considered that this branch supplied a great number of fibres to the phrenic nerve. Sappey thinks that Valentin probably mistook small blood-vessels for nerve twigs, and no other anatomist has ever found anything beyond a very slight connection existing between the phrenic nerve and the descendens noni.

P. plex'us. This is formed by nerves from the upper part of the semilunar ganglion; these nerves accompany the arteries on the under side of the diaphragm. Besides supplying the diaphragm, the plexus gives some branches to the suprarenal body, and others to join the spinal phrenic nerves. In the plexus of the right side is the *phrenic ganglion* (q. v.), making the junction of spinal and sympathetic nerves.

P. veins, infe'rior. These are two in number on each side. They run with the inferior phrenic arteries, and open, on the right side directly into the inferior vena cava, and on the left either into the cava or the left suprarenal vein.

Phren'ica. (Nom. pl. From φρήν, in the sense of the seat of the mind.) 1. Diseases affecting the mental faculties; the first Order in Good's Class *Neurotica*.

2. Also, term used for remedies that affect the mental faculties (Dunghison).

Phrenicocolic lig'ament. See *Phrenocolic ligament*.

Phrenicogas'tric. See *Phrenogastric*.

Phren'ics. The same as *Phrenica*, in its second meaning.

Also, metaphysics.

Phreni'cula. (Dim. formed from φρήν. *F. phrénicula*; *G. Hirnfieber*.) Term used by Rust for *Brain-fever*.

Also, *Acute hydrocephalus*.

P. hydrocephal'ica. The same as *Phrenicula*, in its second meaning.

Phrenis'mus. The same as *Phrenitis*.

Phrenit'ic. Belonging to *Phrenitis*.

Phrenitic'ula. The same as *Phrenicula*.

Phrenit'is. (L. *phrenitis*, -idis, an inflammation of the brain which causes madness; from *φρήν*, *φρενός*, the seat of the mental faculties.) A term improperly used for inflammation of the brain and its membranes. Phrensy; a Genus of the Order *Phlegmasiæ*, Class *Pyrexia*, of Cullen's Nosology.

P. calentura. (See *Calentura*.) A term for sunstroke.

P. la'trans. (L. *latrans*, a barker, i. e., a dog.) Hydrophobia.

P. potato'rum. (L. *potator*, -oris, a drinker.) Delirium tremens.

P. vermino'sa. (L. *vermis*, a worm. F. *vercoquin*.) A form of phrenitis formerly supposed to be due to the presence of a "worm" in the brain.

Phreno'blabēs. (Φρήν, φρενός, the seat of the mental faculties; βλάβη, hurt, damage.) Impaired as to the intellect.

Phrenoblab'ia. (*Phrenoblabes*.) Impairment of the intellect.

Phrenocolic lig'ament. The same as *Pleurocolic ligament*.

Phrenogast'ric. See *Gastrophrenic*.

Phrenoglot'tism. (*Phren*, the diaphragm; *glottis*.) The same as *Asthma*, *thymic*.

Phrenograph. (*Phren*, the diaphragm; γράφω, to sketch out.) Rosenthal's lever, which he introduced through an opening in the abdominal cavity, to record the movements of the diaphragm in respiration. He used it to demonstrate the stoppage of those movements produced by faradisation of the cut end of the vagus nerve.

Phrenography. (Φρήν, the seat of the mind; γραφή, a writing.) The observation and description of phenomena in *Comparative psychology*.

Phrenoleps'ia erotemat'ica. (Φρήν, the seat of the mind; λήψις, a seizing; ἐρωτηματικός, interrogative.) *Insanity*, *doubting* (q. v.).

Phrenolog'ical doctrine. (Of Gall and Spurzheim, 1828.) This is an assumption that the various mental faculties are situated in different parts of the brain, and make corresponding impressions on the inner surface of the skull, and that a considerable development of one particular "organ" can be detected by examination of the outside of the skull. See *Cranioscopy*.

Phreno'logy. (Φρήν, φρενός, the seat of the mental faculties; λόγος, a discourse.) 1. The *Phrenological doctrine*. 2. *Comparative psychology* (*Century Dict.*)

Phrenomag'netism. (Φρήν, the seat of the mind; *magnetism*.) The same as *Phrenomesmerism*.

Phrenomes'merism. (Φρήν; *mesmerism*.) See *Mesmero-phrenology*.

Phrenonarco'sis. (Φρήν; νάρκωσις, a benumbing. G. *Phrenonarkose*.) C. H. Schultz's term for a dulling of the intellect, or of the senses.

Phreno'nomy. (Φρήν; νόμος, law.) That part of comparative psychology which deals with deduction and prediction.

Phrenoparalysis. (Φρήν; *paralysis*.) The same as *Phrenoplegia*.

Phrenopath'ia. (Φρήν, φρενός, the seat of the mental faculties; πάθος, suffering, sickness. F. *phrénopathie*; G. *Gemüthskrankheit*.) Mental disease.

P. æthe'rea. Term for the cerebral symptoms produced by the inhalation of ether.

Phrenople'gia. (Φρήν; πληνή, a stroke. F. *phrénoplégie*; G. *Seelenlähmung*.) C. H. Schultz's term for a failing or loss of balance of the mental faculties.

Phrenortho'sis. The same as *Orthophrenia*.

Phrenorthot'ic. The same as *Orthophrenic*.

Phrenorthot'ica cu'ra. The cure of a mental disease, *Orthophrenia*.

Phren'osin. C₃₄H₆₇NO₈. One of the *Cerebrins*. First obtained, together with cerebrin and kersene, from brain-substance, by Thudicum.

Phreno'sis. (Φρήν.) The same as *Psychosis*.

Phrenosplen'ic. (Φρήν, the diaphragm; σπλήν, σπληνός, the spleen.) Belonging to the diaphragm and spleen.

P. lig'ament. (G. *Zwerchfelmilzband*.) A name for a fold of the peritoneum, continuous with the left extremity of the gastrosplenic omentum, which passes upwards from the spleen to the diaphragm.

Phren'sic. Affected with *Phrensy*.

Phrensy. (*Phrenesis*.) The same as *Frenzy*; also used in the same sense as *Phrenitis*.

Phren'zy. See *Phrensy*.

Phricas'mus. (Φρικασμός, a shuddering.) The same as *Phriciasis*.

Phri'cē. (Φρικη, a shivering, especially an aguish shiver or chill.) Old term for *Horror*, or a shivering or shuddering; also, *Torpor*.

Phrici'asis. (Φρικίασις, aguish shivering.) A shivering, as in ague.

Phrico'des. (Φρικώδης, [φριξ, εἶδος], that causes shuddering or horror.) Causing a shivering; in the act of shivering.

P. fe'bris. (L. *febris*, a fever. Gr. πυρετός φρικώδης.) A fever with shivering fits; a kind of ague. (Hipp.)

Phricogen'ium. (Φρίκος = φρίκη, a shivering or chill; γεννάω, to beget. F. *phricogène*; G. *Kältestoff*.) Term for the supposed principle or producer of cold.

Phricoides. The same as *Phricodes*; also, resembling the act of shivering.

Phric'ulē. (Φρίκη, a shivering or chill; ὕλη, the stuff of which a thing is made.) The same as *Phricogenium*.

Phrone'ma. (Φρόνημα, the spirit; afterwards used to mean thought.) Thought, cogitation.

Phronemopho'bia. (Φρόνημα, thought; φόβος, fear, dismay. G. *Denkscheu*.) A morbid dread or hatred of thinking.

Phrone'sis. (Φρόνησις, good sense.) Judgment, or common-sense.

Phron'tis. (Φροντίς, thought, attention.) Thought or reflection; also, anxiety.

Phrygi'us lap'is. (L. *lapis*, a stone.) A natural earthy substance obtained in Phrygia and in Cappadocia, formerly used as a local astringent. (Dunglison.)

Phryn'ia. (Φρύνος, a toad.) An extract made by Jornara from the parotid glands of the toad. It has an action similar to that of digitalis.

PHRYNOS—PHTHISIS

Phry'nos. (Φρύνος, a toad.) Old name for the *Rubeta*.

Phthalamide. An old term, not now in use. Phthalamide ($C_{10}H_8NO_2$) is a crystalline solid produced by the action of ammonia on anhydrous phthalic acid.

Phthar'ma cali'go. (Φθάρμα, that which is corrupted.) See *Caligo*.

P. catarac'ta. See *Cataract*.

P. glauco'ma. See *Glaucoma*.

Phthar'sis. (Φθαρτός, corruptible.) Corruption.

Phthar'tic. (Φθαρτικός, pernicious, deadly.) Deadly; deleterious. Formerly applied to poisons.

Phtheir. (Φθείρ.) A louse. See *Pediculus*.

Phtheiræ'mia. (Φθείρω, to destroy; αἷμα, blood.) Term for a deteriorated state of the blood.

Phtheiria'sis. (Φθειρίσις, the lousy disease; from φθείρ, a louse. *L. morbus pedicularis*.) The disease caused by the presence of the *Pediculus capitis*, *P. vestimenti*, or *P. pubis*. They cause great itching and irritation, and eczema, usually pustular.

Phthel'rium. (Φθείρ.) The same as *Phthirotectonum*.

Phthirotectonum. (Φθειροκτονέω, to kill lice.) A name for the *Delphinium staphisagria*.

Phthin'as. (Φθινάς, -άδος, wasting. Φθινάς νόσος = phthisis; νόσοι φθινάδες = wasting diseases in general.) A wasting. The same as *Phthisis*.

Phthin'o'des. (Φθίνω, to waste away; εἶδος, form.) Wasting. Term used, according to Foësius, n. 654, by Hippocrates, sometimes as a syn. for *Phthisis*, at other times for natural propensity or aptitude for wasting. See *Diss. div. i. s. iv*.

Phthin'oplasm. (Φθίνω; πλάσμα, anything moulded.) A term used by C. J. B. Williams for *Tubercle*.

Phthinopo'rinus. (Φθινοπωρινός, autumnal. *F. phthinoporine*.) Autumnal.

Phthino'sis. (Φθίνω.) Wasting; decay or disintegration.

Phthio'sis. (Φθίω, to waste away. *F. phthiose*.) The progress of *Phthisis*.

Phthiria'cus. (*Phthiriasis*.) Belonging to *Phthiriasis*.

Phthiria'sis. The same as *Phtheiri-asis*.

Phthirio'phagous. (Φθείρ, a louse; φαγείν, to devour.) Louse-eating.

Phthi'rium. (Φθείρ, a louse.) Term for *Acarus*.

Phthi'rius. (Φθείρ.) See *Pediculus*.

Phthis'es. (Nom. plural of *Phthisis*.) In Fuchs' classification, general term for diseases attended by *hectic*.

Phthis'ic. (Φθισικός, consumptive.) 1. Phthisical. 2. *Phthisis*. 3. A phthisical patient. (*Century Dict.*)

Phthis'ica spes. The phthisical hope. The hope of cure so characteristic of phthisical patients, often even to the end. (Tuke.)

Phthis'ical. (Φθισικός.) Belonging to, or the subject of, *Phthisis*.

P. as'tula. See *Phthisis, fistula in*.

P. insan'ity. See under *Insanity*.

Phthisicophthal'mia. See *Phthisiophthalmia*.

Phthisio'logy. (*Phthisis*; λόγος, a discourse.) The scientific study of *Phthisis*.

Phthisiopho'bia. (*Phthisis*; φόβος, fear, panic. *F. phthisiophobia*.) An ill-founded belief and panic possessing some patients that they have phthisis, when they really have not.

Phthisiophthal'mia. The same as *Ophthalmophthisis*, or *Phthisis bulbi*.

Phthisio'sus. Affected with phthisis.

Phthisipneumo'nia. See *Pneumono-phthisis*.

Phthis'is. (Φθίσις, consumption, decline; from φθίω, to waste away. *L. tabes*; *F. phthisis*; *I. tisi*; *G. Schwindsucht*.) In general, progressive emaciation; but used almost exclusively for *pulmonary phthisis*, and here considered in this sense.

Dr. Douglas Powell has defined phthisis as "progressive consolidation and decay of the lung with progressive wasting of the body."

Dr. Wilson Fox gives the following classification:—1. Acute pulmonary tuberculosis; 2. Acute pneumonic phthisis; 3. Chronic phthisis, which includes (a) latent phthisis, or other cases in which pulmonary symptoms are masked by those in other organs; (b) cases in which definite pulmonary symptoms exist from the first.

P., abdom'inal. This occurs under two varieties:—1. Intestinal tuberculosis, *Enterophthisis*, or consumption of the bowels; 2. Peritoneal tuberculosis.

1. *Intestinal tuberculosis.* This is rarely, if ever, a primary affection, and if so, more commonly in children than in adults; it occurs in more than one half of all cases of pulmonary phthisis, and is often associated with tubercle of the peritoneum and other abdominal organs. The lesions are found mainly in the ileum, cæcum, or colon, where the parts first affected are Peyer's patches and the solitary lymphatic glands. The tubercles undergo softening, and give rise to small, deep ulcers with overhanging edges. These ulcers tend to spread, and especially to spread transversely. Cicatrization, where it occurs, gives rise to marked contraction of the lumen of the gut. The symptoms are uncertain; but there is generally progressive diarrhœa, or perhaps at first irregularity of the bowels, with progressive emaciation and debility. The disease may prove fatal from perforation, or from peritonitis, or from both.

2. *Peritoneal tuberculosis.* In all cases of intestinal tubercular ulcers, there are found small grey tubercles scattered over the adjacent peritoneum, and these may be found also apart from any affection of the intestine. Peritoneal tuberculosis occurs almost invariably as a secondary affection to either acute or chronic tuberculosis of other organs. In children, infection seems to be most common from the intestines; in women, from the Fallopian tubes; while in men the testes and epididymis are commonly caseous. The disease occurs at all ages. The symptoms are much the same as those of chronic peritonitis; ascites is frequently present, but the effusion is not usually large. Both omentum and intestines tend to become matted together and thus form abdominal tumours; these may be (1) puckered and twisted-up omentum, (2) sacculated effusion, held in amongst the viscera, (3) retraction and thickening of the intestinal coils, and (4) enlarged mesenteric glands. In these cases the disease may be difficult to diagnose from cancer, ovarian tumour, &c.

PHTHISIS

P. abdomina'lis. Syn. for "consumption of the bowels," i. e., *Tabes mesenterica* (q. v.).

P. ab hæmo'ptoë. (Hippocrates.) P. from hæmoptysis. It is not yet absolutely decided whether phthisis is ever directly originated by bleeding from the bronchial tubes or lungs. Hippocrates believed that it was. Modern authorities follow Laennec, who believed that hæmoptysis was always presumptive evidence of the presence of tubercle. It is an observed fact that blood may enter the air-vesicles, coagulate, and cause broncho-pneumonia, which may be followed by phthisical changes.

P., acute'. See *P., pneumonic*, and *P., tubercular*.

P., albu'minous. A name formerly used by some writers for a variety of *P., tubercular*.

P. apostemato'sa. (Ἀπόστημα, an abscess.) The second variety in Good's classification of Phthisis; a form with severe and dry cough and localised pain in the chest, followed by sudden and copious discharge of purulent matter. (Good.)

P., bacill'ary. *P., tubercular*.

P., black. *Anthracosis pulmonum*.

P., bron'chial. Name for a form of phthisis, believed to be caused by the pressure on the adjoining portion of the lung, of tuberculous bronchial glands, which may communicate with pulmonary cavities (Dunglison).

P. bul'bi. (*L. bulbos*, a globular root or bulb; a term for the eyeball.) A shrinking and softening of the eyeball occurring in consequence of inflammations, such as iridocyclitis, panophthalmitis, or from the continued growth of granuloma of the iris; it is sometimes accompanied by pain.

P. bul'bi essential'is. (*Essential*, because occurring without previous inflammation of the eyeball.) A shrinking and softening of the eyeball accompanied by pain and leaving a painful stump, occurring in *sympathetic ophthalmia*.

P. calculo'sa. *Lithiasis pulmonum*.

P., can'cerous. Term for *Lung, cancer* of.

P., carbona'ceous. The same as *P., black*.

P., ca'seous. *P., pneumonic*, or caseous pneumonia. See under *Phthisis*.

P., catarrhal. Term for the early stage in some cases of *Phthisis, pneumonic*, where catarrhal signs in the lungs are very marked. By some it is looked upon as tubercular.

P., coal mi'ners'. See *Anthracosis pulmonum*.

P. consumma'ta. A name for *P., tubercular*.

P., cot'ton. A form of dust phthisis (see *P., dust*), occurring among those exposed to the mechanical irritation of the dust from cotton, especially in cotton-mills.

P., diabe'tic. Generally an acute form of phthisis, fatal in from two to five months. It is now most generally believed to be tubercular, the characters being closely similar, and tubercle-bacilli having been found in several cases, either in the sputum, or, p.m., in the lung-tissue. The reasons given for believing it to be non-tubercular are its resemblance to pneumonic phthisis, and the failure to find tubercles, either in the lungs, or in the larynx or intestine. See, further, classification of *Phthisis*.

P. dorsa'lis. *Tabes dorsalis*.

P., dust. A variety of *fibroid phthisis* set up by continued exposure to the irritation of dust in the air in certain industries (see *P., coal miners'*, *P., millstone grinders'*, &c.). In young people working under such conditions, who have a hereditary predisposition to phthisis, ordinary *catarrhal phthisis* may be set up.

P., dyspep'tic. Phthisis, generally tubercular, in which dyspepsia is a very marked symptom.

P. exulcera'ta. General term formerly used for phthisis in which pulmonary cavities were formed.

P. fab'rum molario'rum. (*L. faber*, a workman; *molarius*, belonging to a mill.) *Millstone grinders' phthisis*.

P. fe'brile. Pulmonary phthisis in which fever is a very marked symptom, and is accompanied by profuse sweating and rapid emaciation.

P., fi'broid. This is nearly always secondary to some inflammatory lung-affection; lobar, lobular, or tubercular pneumonia, irritation from the inhalation of dust-particles in certain trades (*pneumo-coniosis*). The disease is very chronic, and affects one lung only; there are usually no constitutional disturbance, rise of temperature, nor night-sweats; there is often little or no loss of flesh even at an advanced stage, and the health often remains good. The main symptoms are paroxysmal cough, purulent expectoration, dragging pains, and dyspnoea; hæmoptysis sometimes occurs. The physical signs are those of consolidation, which may be very extensive; it may affect the apex, middle, or base; there is also usually considerable falling in of the affected side, from fibroid contraction, and the heart's apex is often considerably displaced. If the other lung becomes affected, it is usually by grey tubercle; but the course is, as a rule, very chronic. Lardaceous disease sometimes supervenes. Douglas Powell notes great irritability of the heart in many left-sided cases, which he considers due to its uncovering, from retraction of the lung.

P., fis'tula in. Patients suffering from phthisis are peculiarly liable to *fistula in ano*, which presents the usual features of that complaint.

P., flax-dres'sers'. One form of *P., dust* (q. v.).

P. flo'rida. (*L. floridus*, flowery; metaph., lively, brisk.) *P., acute*.

P., gas'tric. The same as *P., dyspeptic*.

P., gran'ular. A syn. for *acute miliary tuberculosis*.

P., grind'ers'. See *P., knife-grinders'*.

P., hæmorrh'a'gic. Phthisis in which hæmoptysis occurs early and is a prominent symptom in the case.

P. hepat'ica. *Hepatophthisis*.

P. ischiad'ica. (Ἰσχιαδικός φθίσις, Hipp.) *Ischiophthisis*.

P., knife-grind'ers'. Formerly called *Asthma, knife-grinders'* (q. v.).

P., larynge'al. This usually occurs as a complication of pulmonary phthisis, rarely as a primary disease. It occurs in two forms:

1. *True laryngeal phthisis*. In this there is an infiltration of tubercle, followed by ulceration, affecting one or all of the following parts: the

PHTHISIS

ary-epiglottic folds, the inter-arytenoid fold, the epiglottis, the ventricular bands, and the vocal cords. Sometimes the disease begins by laryngeal catarrh, often unilateral. When the ulceration is extensive and deep, perichondritis may occur, with consequent stenosis of the larynx. Respiration, in some cases, becomes so much interfered with as to render tracheotomy imperative. In rare cases, pale, sessile tubercular laryngeal tumours have been found, varying from the size of a pea to that of a hazel nut.

2. *Non-tuberculous local changes in the larynx* associated with pulmonary phthisis. These are, anæmia of the larynx, sometimes with occasional flushing of the part, and abnormal local sensations.

Differential Diagnosis. Tubercular infiltrations of the larynx are generally pale and greyish, whereas tertiary syphilitic infiltrations (gummata) are very red. When ulceration has occurred, syphilitic ulcers are more often single and they extend more rapidly than tubercular ulcers, which are often numerous, small, have usually a yellowish margin, and are commonest on the false cords, the ary-epiglottic folds, the inter-arytenoid space, and the under surface of the epiglottis. Syphilitic ulcers are commonest on the upper surface and margins of the epiglottis. The history is generally distinctive. The finding of tubercle-bacilli in the sputum or in a portion of the growth may settle the diagnosis. There are several other diseases which occasionally produce infiltration and ulceration of the larynx; these are enteric fever, lupus and leprosy. The characteristic nodules of lupus are distinctive.

P., mam'mary. Wasting of the mammary gland, usually after a mammary abscess. (Dunglison.)

P. mesara'ica. (*Mesaraïc.*) *Tabes mesenterica.*

P., mesenter'ic. *Tabes mesenterica.*

P., mill'stone grind'ers'. Also sometimes termed *P., millstone makers'.* See *Millstone grinders' phthisis.*

P., mi'ners'. The same as *P., coal miners'.*

P. muco'sa. Bronchorrhœa in which the secretion is exceptionally profuse. (Dunglison.)

P. nodo'sa. (*L. nodosus*, full of knots or knobs.) A name for *P., tubercular.*

P. no'tias. (*Nῶτος*, the back.) *Tabes dorsalis.*

P. pituito'sa. The same as *P. mucosa.*

P., placen'tal. See *Placental phthisis.*

P., pneumon'ic. A variety of phthisis in which pneumonic processes predominate over tubercle. Generally classed as the most acute form of phthisis; but divided by Dr. Douglas Powell into—1. Acute, (a) Confluent, and (b) Disseminated (*F. phthisis gallopante*). 2. Chronic.

Chronic pneumonic phthisis often passes into fibroid phthisis.

P., pot'ters'. One form of *P., dust* (q. v.).

P. pulmona'lis. Pulmonary phthisis. See *Phthisis.*

P., pul'monary. The same as *P. pulmonalis.*

P. pupill'æ. *Synizesis pupillæ.*

P. pupillar'is. *Myosis* (Dunglison).

P. purulen'ta exulcer'ata. *Tubercular phthisis.*

P. rena'lis. Tubercular disease of the kidney.

P. re'num. The same as *P. renalis.*

P. scrophulo'sa. *P., tubercular.*

P., se'nile. It is extremely common for phthisis to occur in old people, "especially in institutions" (Osler). It is usually latent, and runs a very chronic course, and it may be difficult to diagnose, owing to co-existing bronchitis or emphysema. As a rule, the lymphatic glands, bones, and meninges are less often affected in old than in young people.

P. sic'ca. *Tabes dorsalis.*

P., stone-cut'ters'. A form of *P., dust* (q. v.).

P., syphilit'ic. It has been seriously doubted by many authorities whether this does exist as a definite disease, and, at any rate, granting its existence, it is extremely rare. The diagnosis must rest on the discovery of tubercle bacilli; though even here a source of doubt occurs, as tubercle may co-exist with syphilis.

P., tuber'cular. A specific inflammation of the lung, usually chronic, originated and kept up by the tubercle-bacillus. This variety comprises a large majority of all cases of phthisis.

Pathology.—Two varieties are distinguished, according to their origin; the one beginning by changes within, and the other by changes outside, the alveoli.

1. *Caseous pneumonia*, beginning by changes within the alveoli, may give rise to small isolated patches, *lobular*, or, much more rarely, may affect a large part or the whole of one lobe, *lobar*. Both subvarieties generally begin in the upper part of the lung, and both extend, partly from the original patch, and partly from secondary tubercular patches. By softening of a patch and its opening up into a bronchus, a cavity is formed. The consolidated patch originates in an exudation containing varying proportions of cells (leucocytes and epithelial cells) and fibrin. Caseation occurs early, and the signs of caseation enable the exudation to be distinguished from that of acute croupous pneumonia. In some places, the exudation within the alveoli becomes organised into fibrous tissue.

The alveolar walls in the consolidated patch gradually disappear in some parts, and, in others, become thickened, as does also the interstitial fibrous tissue. Here and there, this tissue becomes infiltrated with tubercle. The subsequent change in the interstitial tissue is either softening, or the formation of fibrous tissue.

2. *Tubercular peribronchitis.*—This begins often round the small bronchioles. The change is the same as that in the infiltrated interstitial tissue in caseous pneumonia. Some exudation within the alveoli also occurs; but the above is the more marked and characteristic process in this variety. Thus, the microscopical difference between 1 and 2 is merely one of degree.

Causation.—The position of the bacillus of tubercle is not (1893) completely established with respect to the part it plays in the causation of tubercular phthisis, although it appears to be invariably present throughout the disease; and therefore the disease cannot as yet be definitely classed as zymotic. What is at the present time certain is, that the pulmonary lesions are the result of various causes, and that they afford an eminently favourable soil for the

PHTHISIS

bacillus, which, at all events, is an important factor in the progress of the disease. As regards climate, it is known that tubercular phthisis is very prevalent where surface drainage is insufficient, and the soil damp.

Lancereaux states that it is invariably present in low and damp countries. Improvement of surface drainage has been followed by a diminution in the prevalence of the disease.

It cannot be doubted that hereditary influence plays a part in its causation. Three theories have been suggested as to the manner in which this influence is brought about:—(1) That it is due to contagion after birth, directly or through the milk; (2) to transmission of the poison as in congenital syphilis, showing itself in childhood as meningeal or peritoneal tubercle, or as "scrofula"; (3) to inheritance of a predisposition, or of qualities of tissue favourable, to the growth of the bacillus, if this once gains a foothold.

Thompson states that tubercular phthisis, in being transmissible from either parent, occurring either after or before the manifestation of the disease in the parent, in the fact of one attack predisposing to future attacks, and in the part played by atavism, differs markedly from syphilis and zymotic diseases, and bears a strong resemblance to insanity and trophic diseases.

History and course.—The disease is commonly divided into *acute* and *chronic*, according to its rate of progress; but there are those who also further divide into a *subacute* class. The diagnosis in early cases is often difficult and, sometimes, impossible. The family history may here afford great help. As regards the patient, there is usually some weeks' history of cough, worst in the night or early morning, with the expectoration of phlegm, probably at one time or another streaked with blood. There may be the record of a similar previous attack, after which the patient was apparently well again. Weakness and loss of flesh are almost constant. In some instances, one or several profuse hæmoptyses occur early in the case.

Signs in the first stage, or stage of tubercular deposit.—The early physical signs vary greatly. Inspection often reveals a long, narrow chest, with a small antero-posterior measurement. One or other side may show impaired expansile movement. Old "scrofulous scars" are of importance as regards the patient's previous history. Percussion commonly brings out an altered note at or near one apex, either in front or behind (rather more frequently behind); the resonance may be impaired, or the pitch raised and the quality of sound altered. There is frequently a feeling of increased resistance locally. Where consolidation has occurred, the apex of the lung is found not to rise so high on the affected as on the sound side. Auscultation may discover some local alteration of the respiratory murmur, this being weakened, jerky, or divided, with a prolonged expiratory murmur, or harsh. There may be abnormal auscultatory signs in an early case. The super-added sounds vary greatly: there may be fine crepitations, rhonchus, or creaking râles; these sounds are generally localised; they are usually heard at the apex; but often, only at the base. Pleuritic friction-sound is often heard at one part or another, and may be the only abnormal auscultatory sign. In early cases, the temperature not only varies greatly, but has much daily irregularity. The

finding of tubercle-bacilli in the sputum may settle the diagnosis where a doubt existed. As the case progresses, the symptoms become more marked. Cough is nearly always present throughout, and later on may seize the patient in exhausting paroxysms. The sputa become purulent, and often remain separate after expectoration, being circular and flattened, *nummular*; they usually contain elastic fibres and tubercle-bacilli, and frequently, streaks of blood. Hæmoptyses, variable in amount, are common. Dyspnoea often comes on early, and becomes very marked late in the disease. The temperature is either remittent or intermittent, and usually highest in the evening. Sweating is commonly profuse and occurs generally at night. Loss of flesh is fairly constant while the disease is progressive, and some anæmia is usually present. Loss of strength is very marked. The mental condition is often one of great hopefulness, and the so-called "phthisica spes" may remain up to the end; in some cases insanity may be the first noticed symptom of phthisis; at times taking the form of melancholia, with delusions of suspicion and refusing of food. Pleurisy is extremely common in the course of the disease, and empyema may occur. Dyspepsia, possibly associated with anorexia, is scarcely ever absent, and is a most troublesome symptom throughout the disease. The heart wastes in chronic cases. Small aneurysms occur in the branches of the pulmonary artery in the lung-cavities.

Signs in the second stage, or stage of consolidation.—They are very similar to those of the consolidation stage in lobar pneumonia; impaired mobility of the affected side, localised impairment of resonance, or a boxy note, bronchial breathing and bronchophony, and consonating râles. Later on, there is usually some falling in above and below the clavicle from contraction of scar-tissue, or, earlier, from destruction of tissue.

Signs in the third stage, or stage of excavation.—The chest develops the shape characteristic of expiration, and there is generally retraction of the upper part, on the affected side, with impaired movement. The note on percussion may vary greatly. Over a large cavity, the cracked-pot sound may often be elicited, cavernous or amphoric breathing, pectoriloquy, and a sort of whispering echo are commonly present. Bubbling râles are heard, and sometimes metallic tinkling. The heart's apex may be displaced, or the præcordial dulness increased.

Complications.—Laryngeal phthisis, pneumothorax, diarrhoea, lardaceous disease of the liver, kidneys, intestines and spleen, fatty liver, fistula in ano, acute nephritis, disseminated miliary tuberculosis. Tubercular disease of other parts—the joints and bones—may exist with phthisis. Dyspepsia, anorexia and pleurisy were mentioned above as common symptoms. The whole duration of the disease varies from three or four months to twelve or fifteen years; in chronic cases, with recurring periods of quiescence.

Death most commonly occurs from exhaustion; but may be due to hæmoptysis, meningitis, peritonitis from intestinal perforation, pneumothorax, or uræmia.

P. uterina. Metrophthisis.

P. ventriculi. (*Ventriculus*, the stomach.) A form of sclerotic chronic gastritis in which the coats of the stomach, and especially the mucous membrane, become greatly atro-

phied, but the size of the viscus is not lessened, and may even be increased (Osler).

P. verminalis. Also called *Hoose* or *Husk* (Billings). A parasitic disease of the lungs and bronchioles occurring in calves and lambs.

P. vesicalis. *Cystophthisis*.

P. weed. The *Ludwigia palustris*.

Phthisiuria. (F. *phthisurie*. I. *flisuria*.) See *Urophthisis*.

Phthisozoics. (Φθίω, in a trans. sense, to consume, destroy; ζωικός, belonging to animals.) The art of destroying those animals which are hurtful either to man or to any of the domestic animals. (*Century Dict.*)

Phthisuria. The same as *Phthisiuria*.

Phtho'e. (Φθόη = φθίσις.) *Phthisis*.

Phtho'icus. (Phtho'e.) Phthoical, i. e., *Phthisical*.

Phtho'is. (Φθόις, a kind of cake, also a bolus or pill, Foësius' *Oec. Hipp.*) Old name for a pastil, cake, or lozenge.

Phtho'is'cus. (Φθόισκος, a little cake, especially in plur., pills.) The same as *Phtho'is*.

Phthongodysphoria. (Φθογγός, the voice; δυσφορία, pain hard to be borne, excessive pain. Hipp.) Excessive sensibility for sound, or *Hyperacusia*.

Phthongometer. (Φθογγός, the voice; μέτρον, a measure.) An instrument for measuring the intensity of voice-sounds.

Phthor'a. (Φθορά, corruption, destruction.) 1. The same as *Apophthor'a*, or abortion (used by Hippocrates).

2. Old term for corruption (G. *Phthor*).

3. A name for *Fluorine*, because of the corrosive action of its hydrogen compound, hydrofluoric acid.

Phthor'e. The same as *Phthor'a*.

Phthorectonum. (Φθορά, destruction; κτείνω, to kill.) A redundant term for a means of killing, and causing expulsion of, the foetus.

Phthori'na. (Φθορά, destruction.) A name for *Fluorine*, because of its corrosive action.

Phthor'ius. (*Phthor'a*, in the sense of abortion. F. *phthorie*.) Having the power of destroying. Formerly applied to medicines for promoting abortion, *Ecbolics*.

Phthor'ctonus. (*Phthor'a*; κτείνω, to kill.) The same as *Phthor'ius*; *ecbolic*.

Phthor'on. See *Phthor'ina*.

Phthoropœ'os. (Φθορά, destruction; ποιέω, to make.) The same as *Phthartie*.

Phu. (Arab. *phua*.) The specific name of the *Valeriana phu*.

Phucagrostis minor. (Φύκος, sea-weed; άγρός, country.) See *Pila marina*.

Phus'ca. (Φούσκα, sour wine. Lat. *posca*.) The same as *Oxyerate*.

Phy'cæ. (Φύκος, sea-weed. Lat. *fucus*.) The aquatic section of the *Algæ*. (Acharius and Fries.)

Phycic acid. This acid, together with *phycite*, occurs in the *Protococcus vulgaris*, from which it can be extracted by means of alcohol. It is insoluble in water; but soluble in alcohol, ether, acetone, and oils.

Phycine. See *Phycite*.

Phycite. (Φύκος, sea-weed.) *Erythrite*.

Phycochrome'acæ. The *Cryptophyceæ*.

Phycochrome. (Φύκος, sea-weed; χρώμα, colour.) The blue-green colouring-

matter of some of the *Algæ*. It is a mixture of *phycocyan* and *chlorophyll*.

Phycochromophy'cæ. (*Phycochrome*; φύκος, sea-weed.) The same as *Phycochromeacæ*.

Phycocyan. (Φύκος; κύανος, a dark-blue substance, used in the Heroic age to adorn weapons and armour.) The blue colouring-matter occurring together with *chlorophyll* in some of the *Algæ*.

Phycocyanin. The same as *Phycocyan*.

Phycocysti'tis. A synonym of *Cap-sulitis*. (Billings.)

Phycoerythrin. (Φύκος; έρυθρός, red.) The red colouring-matter which occurs together with *chlorophyll* in some of the *Algæ*.

Phycohæ'matin. (Φύκος; hæmatin.) A red colouring-matter occurring in the alga *Rytiplæa tinctoria* (Kützinger), from which it can be extracted by maceration in cold water.

Phycology. (Φύκος; λόγος.) The part of Botany which deals with the *Algæ*.

Phycoma'ter. (Φύκος, sea-weed; μάτηρ, Dor. for μήτηρ, a mother.) Term for the gelatin which forms the nutritive medium in which the *sporules* of *Algæ* first live.

Phycomyce'teæ. The same as *Phycomycetes*.

Phycomyce'tes. (Φύκος, sea-weed; μύκης, -ητος, a mushroom. L. *fungus*.) Term applied by De Bary to a group of the *Thallophytes*, including the *Zygomycetes*, *Peronosporæ*, and *Saprolegniæ*. They have a much-branched mycelium, with hyphæ that possess, for the most part, no division-walls (Sachs).

Phycomyce'tous. Belonging to the *Phycomycetes*.

Phycophæ'in. (Φύκος; φαεινός, shining, bright-coloured. F. *phycophénie*; G. *Phycophäin*.) The brown colouring-matter that occurs, together with *chlorophyll*, in certain of the *Phæophyceæ*, a group of sea-weeds.

Phycostemon. (Φύκος, sea-weed; στήμων, in the sense of a stamen.) Turpin's name for the *Nectary* of plants; the *Nectarium* of Linnaeus.

Phyco'tychë. (Φυκοτύχη; φύκος, a kind of red paint, so called from its resemblance in colour to sea-weed; τύχη, good luck.) Old name of a plaster for every kind of ulcer, but especially for an ulcer about the anus, according to Aëtius (Gorræus).

Phycoxan'thin. (Φύκος; ξανθός, yellow.) The brownish yellow colouring-matter of some of the *Algæ*; the same as *Diatomin*.

Phyganthropia. (Φυγή, flight; άνθρωπος, mankind.) The same as *Misanthropy*.

Phygan'trus. (Φυγή; άντρον, a cave, in the sense of the frontal cells. L. *antrum*.) Retreating at the *antrum* or *torus frontalis*; epithet applied to skulls in which an imaginary vertical line from the most prominent point of the *torus frontalis* to the *radius fixus* lies as much as from 6 to 10 mm. behind a vertical line passing downwards from the *nasion* (Lissauer).

Phygeth'lon. (Φύγεθλον [probably more correctly φρύγεθλον, from φρύγω, to roast], an inflammation and swelling of the glands, especially in the groin.) Inflammation and swelling of a subcutaneous gland; the same as *Pannus*.

Phygæde'ma. (Φυγή, flight; œdema.) Flying, erratic, or neurotic œdema.

Phygogalactic. (Φεύγω (root ΦΥΓ-), to flee; γάλα, γάλακτος, milk.) *Antigalactagogue*.

Phygometopus. (Φεύγω; *metopon*.) Retreating at the *metopon*; epithet applied to skulls in which an imaginary straight line joining the *bregma* with the *nasion* makes an angle of 8° to 33·5° with the *radius fixus* (Lissauer).

Phygopisthius. (Φεύγω; *πισθιος*, hinder, belonging to the hinder part.) Retreating or falling back at the hinder part; epithet applied to skulls in which an imaginary straight line drawn from the *lambda* to the *inion* makes an angle of 106° to 127° with the *radius fixus* (Lissauer).

Phygoprosopus. (Φεύγω; *πρόσωπον*, the face.) Retreating or falling back at the face; epithet applied to skulls in which an imaginary straight line drawn between the *nasion* and the *alveolar point* makes an angle of 38° to 66·5° with the *radius fixus* (Lissauer).

Phygorrhinus. (Φεύγω; *ῥίς*, *ῥινός*, the nose.) Retreating or falling back at the nose; epithet applied to skulls in which an imaginary straight line drawn from the *nasion* to the *subnasal point* makes an angle of 36° to 66·5° with the *radius fixus* (Lissauer).

Phylacterion. (Φυλακτήριον, a preservative, amulet.) Old term for an *Amulet*.

Phylacterium. The same as *Phylacterion*.

Phylaxis. (Φύλαξις, a guarding.) A guarding or preserving.

Phyletic. Belonging to a tribe. In *Zoöl.*, belonging to a *phylum*.

Also, the same as *Phylogenetic* (*Century Dict.*).

Phyllanthæ. (*Phyllanthus*.) A Tribe of the *Euphorbiaceæ*, having the *Phyllanthus* for their type.

Phyllanthus. (Φύλλον, a leaf; *ἄνθος*, a flower. F. *phyllanthé*; G. *blattblumig*.) A Genus of the *Euphorbiaceæ*. In the plants of this genus, the peduncle of the flower is adherent to the principal nervure of the leaf.

P. emblica. The *Emblica officinalis*.

P. niruri. This species has the same habitat as *P. urinaria*, and its action and uses are similar.

P. urinaria. A plant growing in Ceylon, where it is used as a bitter and diuretic.

Phyllary. (Φύλλον.) A leaflet of the floral involucre in the *Compositæ*.

Phylleria latifolia. The same as *Philyrea latifolia*.

Phyllerin. The same as *Philyrine*.

Phyllerythrin. (Φύλλον, a leaf; *έρυθρός*, red.) The red colouring-matter of autumnal leaves.

Phyllic acid. (Φύλλον.) An acid obtained by C. Bougarel from the leaves of the cherry-laurel, quince, apple, peach, elder, mulberry and almond trees. It is purified from an alcoholic extract of the leaves, and is thus obtained in crystalline, colourless granules, insoluble in water, soluble in ether, alcohol, chloroform and carbon bisulphide. Both the acid and its salts are optically dextro-rotatory.

Phyllitis. (Φύλλον, a leaf; because the leaves only are visible. F. *phyllite*.) The *Scolopendrium vulgare*.

P. muraria. The *Asplenium ruta-muraria*.

P. rotundifolia. The *Asplenium trichomanes*.

Phyllobates. (Φύλλον, a leaf; *βάτης* [*βαίνω*], one that treads.) A Genus of the Order *Hylidæ* of the *Amphibia*. Several species yield the so-called "animal curare," which is used by certain races for poisoning their arrow-heads. (Geissler and Möller.)

Phyllobranchia. (Φύλλον; *branchia*.) The leaf-like gill of the *Crustacea*.

Also, nom. pl. n., a division of the *Crustacea*, including those that have *phyllobranchiæ*.

Phyllochloron. The same as *Chlorophyll*.

Phyllochromogen. (Φύλλον; *χρῶμα*, colour, complexion; *γένος*, stock, descent.) Liebermann's name for a constituent of *Chlorophyll*, which he believes to give rise, by its oxidation or reduction, to the various colouring-matters of flowers.

Phylloclade. The same as *Phyllocladium*.

Phyllocladium. (Φύλλον, a leaf; *κλάδος*, a young branch. F. *phylloclade*; G. *Blattast*.) A term proposed by Bischoff for the *Phylloodium* produced by a branch that is enlarged and flattened in the form of a leaf.

Phyllocyanin. (Φύλλον, a leaf; *κύανος*, a dark-blue substance, used in the Heroic Age to adorn weapons and armour.) A blue substance that forms one of the colouring-matters composing *Chlorophyll*. (Frémy.)

Phylloideous. (The same as *Phyllodes*. *Phylloides* would be a more correct form.) Term used first by G. Allman as a synonym of *Foliaceus*.

Phylloides. (See *Phyllodeous*.) The same as *Phylloides*.

Phyllo'dial. Epithet applied to an *Ascidium* when it is formed by the *Phyllodium*.

Phyllodineous. Belonging to a *Phyllodium*; term applied to plants that have *Phyllodia* instead of true leaves.

Phyllo'dium. (Φύλλον; *εἶδος*, form. F. *phylloide*; G. *Blattstielblatt*.) De Candolle's term for a *petiole* that is flattened out so much as to resemble a true leaf, the limb of its *foliole* being aborted. Also used by Herschel as synonymous with his term *Phylloma*.

Phyllody. (*Phyllodium*.) The metamorphosis of various parts of plants, calyx, corolla, bracts, &c., into true leaves.

Phyllogen. The same as *Phyllophore*.

Phyllogenous. (Φύλλον; *γένος*, descent, offspring. F. *phylogène*; G. *blattwachsend*.) Growing upon leaves.

Phyllogony. (Φύλλον; *γονή*, offspring, descent.) Schimper's term for the theory of the production of leaves.

Phylloid. (Φύλλον; *εἶδος*, form.) Leaf-like.

Phylloidæ. (See *Phylloid*.) Name given by Schultz to an Order of the *Lichenes*, comprehending those that form a leaf-like expansion.

Phyllolicheæ. (Φύλλον; *λείχη*, a lichen.) A term of Zenker's, synonymous with *Phylloides*.

Phyllo'ma. (Φύλλον.) Herschel's name (see also *Phyllodium*) for the germ contained in the bud of the future leaves of the plant. Also, the same as *Phyllome*.

Phyllomania. (Φύλλον; *μανία*, madness. F. *phyllomanie*; G. *Blättertollheit*.)

Term for an exaggerated development of the leafy parts of a plant.

Phyllome. Term for foliage.

Phyllo'morpho'sis. (Φύλλον; μόρφωσις, a shaping.) The same as *Phyllo'dy*.

Phyllo'morphy. (Μορφή, form.) The same as *Phyllo'morphosis*.

Phyllon. (Φύλλον.) A leaf. Used by Link for *Sepal*.

Phyllophæ'ina. (Φύλλον; φαίος, dusky.) See *Phyllophæin*.

Phyllo'phagous. (F. *phyllophage*.) Leaf-eating.

Phyllophe'in. (*Phyllophæina*.) The same as *Phæophyll*.

Phyllo'philous. (Φύλλον; φιλέω, to love.) Loving, or growing among, leaves.

Phyllophore. (Φυλλοφόρος, bearing leaves.) The terminal bud in Palms.

Phyllo'poda. (Φύλλον; ποός, ποδός, a foot.) A synonym for *Branchiopo'da*.

Phyllo'podobat'rachi. (Φύλλον, a leaf; ποός, ποδός, a foot; βάτραχος, a frog.) Name applied by J. A. Ritgen to the *Batrachia*.

Phyllopor'phyrin. (Φύλλον; πορφύρεος, purple. L. *purpureus*.) A product of the decomposition of *Chlorophyll*, obtained as a black substance with a violet metallic lustre. It is soluble in water, the solution having a purple colour. (Geissler and Möller.)

Phyllopto'sis. (Φύλλον, a leaf; πτώσις, a falling.) The falling of the leaf.

Phyllor'rhetin. (Φύλλον; ρέω, to flow.) A carbide of hydrogen which occurs, together with *tekor'rhetin*, between the bark and the wood, or within the spaces of the wood, in fossil pines. The substance is soluble in alcohol, and is crystallisable. (Littré.)

Phyllor'rhi'nus. (Φύλλον, a leaf; ρίς, later form of *ρίς*, the nose.) See *Rhinolophus*.

Phyllosoma. (Φύλλον; σῶμα, the body.) Name for a variety of the *Crustacea* which has a leaf-like body; also, formerly applied to the larva of the lobster, which was believed to be a separate species.

Phyllosoma'dæ. Nom. pl. f. Harworth's name for a Family of the *Decapodous Crustacea*, having the *Phyllosoma* as their type.

Phyllo'spora. (Φύλλον; σπορά, a seed.) Term used by K. H. Schultz for plants that have their seed in or under the leaf.

Phyllos'teophyte. (Φύλλον; osteophyte.) A lamellated *osteophyte*.

Phyllostic'ta. (Φύλλον; στικτός, marked, spotted.) A Genus of Fungi, Class *Sphæopsidæ*, Order *Sphærioidæ*, parasitic upon the leaves of various plants, and thought to be stages in the life-history of other fungi. (*Century Dict.*)

Phyllotac'tic. Belonging to *Phyllotaxis*.

Phyllotaxis. (Φύλλον; τάξις, an arranging.) The arrangement of the leaves upon the stem; also, the laws governing this arrangement.

Phylloxan'thin. (Φύλλον; ξανθός, yellow. G. *Blattgelb*.) The yellow colouring-matter of the leaves of plants, and one of the constituents of *Chlorophyll* (q. v.). Also termed *Xanthophyll*.

Phylloxera vasta'trix. (Φύλλον;

ξηραίνω, to parch up. L. *vastatrix*, she who wastes or destroys.) An insect belonging to the Genus *Phylloxera*, Family *Aphides*, which causes a peculiar disease in the vine plant. These insects attack the rootlets, which appear to be covered by a yellow powder, this being a mass of phylloxera with their eggs. Numbers of swellings form on the roots, these decay, and the plant dies. The insect attacks the vine during August and September.

Phyllule. (Dim. formed from φύλλον.) Term used by Zuccarini for the cicatrix left, after its fall, by each leaf, at its former place of insertion upon the bark.

Phylogenetic. Belonging to *Phylogeny*.

Phylo'geny. (Φύλον, a stock, race; γένος, descent. F. *phylogénie*; G. *Stammesgeschichte*.) The history of the evolution of the race, as distinguished from that of the individual, or *Ontogeny*.

Phylum. (Φύλον, a stock, race.) A division or sub-division of the animal or vegetable kingdom.

Also, a Zoölogical "family tree." (*Century Dict.*)

Phyma. (Nom. plural being *Phymata*. Φῦμα, an inflamed swelling on the body.) 1. Used by the Ancients in the general sense of an inflamed superficial swelling. 2. A Genus in Willan's arrangement of cutaneous diseases. 3. An Order of diseases, *Phymata*, in Sauvage's Nosology, including phlegmon, erysipelas, œdema, &c. 4. A Genus in Dr. Good's Nosology, including furunculus, sycosis, hordeolum, and anthrax.

It has been proposed to use the word as a synonym of "tubercle."

P. an'thrax. The same as *Anthrax*.

P. an'thrax termin'thus. See *Terminthus*.

P., fi'cus. (L. *figus*, a fig.) A name for *Sycosis*.

P. horde'olum. See *Hordeolum*.

P. per'nio. A term for *Frostbite*; see also *Pernio*.

P. syco'sis. See *Sycosis*.

Phymatic. Belonging to *Phyma*.

Phymatin. (*Phyma*. F. *phymatine*.) An organic substance which has been obtained from tubercle. It is soluble in alcohol, and can be precipitated from its solution by acetate of lead. (Littré.)

Phymat'ion. (Dim. of *Phyma*.) A small tumour or boil.

Phymato'des. (Φῦμα, -ατος, an inflamed swelling; εἶδος, form.) Having *phymata*, or resembling a *Phyma*.

Phymatoid. (See *Phymatodes*.) Resembling a *Phyma*.

Phymatorhu'sin. (*Phyma*; ῥυσός, drawn out, freed.) Term for a black pigmentary substance occurring in granules, which has been found in melanotic sarcoma. (Billings.)

Phymato'ses. (Nom. pl. of *Phymatosis*.) General term for diseases characterised by the formation of tubercles.

Phymato'sis. (*Phyma*.) One of the *Phymatoses*; also, a swelling or excrescence.

P. cere'bri. The same as *Encephalophymata*.

P. elephanti'asis. See *Elephantiasis*.

P. lu'pus. See *Lupus*.

P. pulmo'num. Pulmonary tuberculosis.

P. verrucosa. (L. *verrucosus*, warty.) The same as *Verruca*.

Phymocnidos. (*Phyma*; κνίδωσις, an itching, especially such as is caused by a nettle.) Term for *Urticaria*.

Phymolepra. (*Phyma*; *lepra*. F. *phymolèpre*.) Tuberculous leprosy.

Phynon. Old name of a collyrium, according to Celsus, vi, 6, 20.

Phypella. The same as *Panus* (Hartmannus, *Prac. Chymist. Op.* p. 89).

Physa. (Φύσα, wind, flatulence.) Old term for *Flatus*. Also, a term for *Bulla* and *Pustule*.

Physagogue. (*Physa*; ἀγωγός, drawing forth.) Carrying off, or expelling, flatus.

Physalecephlogiois. (Φυσάλις, a bladder, blister; *cephlogiois*.) Vesicular varioloids, or modified variola.

Physaliderysipelas. (Φυσάλις, -idos; *erysipelas*. F. *physaliderysipèle*; G. *Blatterrose*.) Bullous erysipelas.

Physalides. (Nom. pl. of *φυσάλις*, a bladder, vesicle.) The vesicles contained within *Physaliphores*. Virchow has called them *brood cavities*.

Physalidocnidos. (Φυσάλις, -idos; κνίδωσις, the itching caused by a nettle.) Vesicular urticaria.

Physalin. The active principle of *Physalis alkekengi*; it is a bitter, amorphous substance.

Physaliphore. (Φυσάλις; φορέα, a carrying.) One of the cells containing vesicles developed in the process of endogenous cell-formation, and giving origin, within its vesicle, to daughter-cells. See also *Physalides*.

Physalis. (Φυσάλις, a bladder, vesicle.) Bot. A Linn. Genus of plants; Class *Pentandria*, Order *Monogynia* (Juss. *Solaneæ*).

Also, the *P. alkekengi*. See also *Physalides*.

P. alkekengi. (F. *coqueret*; G. *Judenskirsche*.) The winter cherry. Order *Solaneæ*. A European plant. The fruit, which is enclosed in a red, accrescent calyx, has a diuretic action; six to twelve of the berries have been given as a dose. The plant has been stated to have an antiperiodic action similar to that of cinchona.

P. halicacabum. (See *Halicacabum*.) The *P. alkekengi*.

P. obscura. The *P. viscosa*.

P. pennsylvanica. The *P. viscosa*.

P. pubescens. The *P. viscosa*.

P. stramonium. A synonym of *Scopolia lurida*.

P. viscosa. The American ground cherry. The berries have been stated to possess a diuretic and sedative action.

Physalopædophylisis. (*Physalis*; *pædophylisis*.) Bullous *pædophylisis*.

Physas'thma. (Φύσα, wind; *asthma*.) Asthma emphysematicum, or *Pneumothorax*.

Physcœ. (Φύσκη, the stomach and large intestine.) The colon; also, the abdomen in general. (Dunglison.)

Physcia. A Genus of the *Parmeliaceæ*.

P. islandica. The *Cetraria islandica*.

P. nivalis. The *Peltigera canina*.

P. parietina. The *Parmelia parietina*.

Physconia. (Φύσκων, fat-paunch. F. *physconie*; G. *Physkonie*.) A Genus of the Order *Intumescentiæ*, Class *Cachexiæ*, of Cullen's Nosology (*Hyposarca* of Linnæus). Synonymous with Good's *Parabysma*.

Sauvages has comprised, under this term, all large tumours of the abdomen, except those that are either resonant or fluctuating.

P. adipo'sa. An accumulation of adipose tissue in the great omentum.

P. bilio'sa. Distension of the gall-bladder with bile.

P. emphysematica. Subcutaneous or subperitoneal emphysema of the abdomen.

P. hepatica. Any enlargement of the liver.

P. intestinalis. Physconia due to distension or to any morbid growth of the intestine.

P. lienis. (L. *lien*, *lienis*, the spleen.) Physconia due to enlargement of the spleen.

P. mesenterica. This term includes *Parabysma helminthicum*, *p. strumosum*, *p. scirrhusum*, *p. sarcomaticum*, *p. steatomatosum*, and *p. fungosum*.

P. omentalis. This term includes *P. adiposa*, and all other enlargements of the great omentum.

P. peritonei. Physconia due to any morbid growth (hydatids, new growths) of the peritoneum.

P. polysplanchna. (Πολύς, many; σπλάγχνον, the inward parts.) Syn. used by Cusson, Sauvages and Cullen for *Parabysma complicatum* (q. v.).

P. renalis. Any enlargement of the kidney sufficient to produce *Physconia*.

P. splenica. The *Ague cake*.

P. strumosa. Enlargement of the abdomen due to *Tubes mesenterica*.

P. uterina. Physconia due to any pathological enlargement of the uterus.

Physconic. Belonging to, or characterised by, *Physconia*.

Physconocolica. (*Physconia*; *colica*.) *Physconia* accompanied by colic.

Physechema. (Φύσα, wind; ήχημα, a sound.) See *Bruit de souffle*.

Physechos. (Φύσα, wind; ήχος, a sound.) The vesicular respiratory murmur. See under *Murmur*.

Physema. (Φύσημα, that which is blown up. F. *physème*; G. *Aufblähung*.) Pine resin (Galen, *Gorræus*).

Also, term applied by Wallroth to the caulis, frons, or folium of aquatic algæ.

Physematic. Belonging to *Physema*.

Physematous. The same as *Physematic*.

Physes. (Φύσις, a blowing.) The same as *Physema*.

Physeter. (Φυσήτήρ [φυσάω, to blow], a kind of whale. F. *physétère*; G. *Pottfisch*.) A Genus of the *Cetacea*; also, term used for the *P. macrocephalus*.

P. macrocephalus. (Μακροκέφαλος, long-headed.) The spermaceti whale. See *Cachalot*.

Physeteridæ. (*Physeter*.) A Family of the *Cetacea*, having the *Physeter* for their type.

Physetoleic acid. (*Physeter*; *oleic*. F. *acide physétolique*; G. *Physetölsäure*.) C₁₆H₃₀O₂. An unsaturated fatty acid, obtained by saponification of the fatty matter contained in the head of *Physeter macrocephalus*. The acid is isomeric (and, possibly, identical) with *hypogæic acid* (Littre); its triglyceride is fluid at the ordinary temperatures of the air.

Physianthropy. (Φύσις, the nature

PHYSIATREUSIOLOGY—PHYSIOLOGICAL

of a person or thing; *ἄνθρωπος*, man.) That science which deals with man's constitution and diseases, and with medical treatment. (*Century Dict.*)

Physiatreusio'logy. (Φύσις, nature; *iatreusiology*.) The same as *Physiatrics*, in its first meaning.

Physiat'rical. Belonging to *Physiatrics*, or to *Physiatricē*.

Physiat'ricē. (Φύσις; *ιατρικός*. L. *vis medicatrix naturæ*.) The healing power of nature, or the natural healing power inherent in healthy living tissues.

Physiat'rics. (Φύσις; *ιατρικός*, belonging to, or skilled in, medicine. G. *Physiatrik*.) The doctrine of the healing powers of nature.

Also, the application of the *Physical* forces, heat, light, &c., to therapeutics (*Billings*).

Physia'tros. (Φύσις; *ιατρός*, a surgeon or physician. F. *physiatre*; G. *Naturarzt*.) A physician who treats his patients in strict accordance with natural laws.

Physiautocrat'ia. (Φύσις; *autocrateia* or *autocratia*.) The absolute power of nature.

Physiautotherapi'a. (Φύσις; *αὐτός*, self; *θεραπεία*, a remedy, cure.) The same as *Physiatricē*.

Phys'ic. (Φυσικός, according to the laws of nature. F. *médecine*; G. *Arzneikunst*, *Arzneimittel*.) 1. The science of medicine. 2. A medicine used in the treatment of disease. 3. As a verb, "to physic," meaning to administer physic or medicine; also, to administer a purgative medicine.

P. balls. See *Veterinary medicines*.

P., In'dian. The *Gillenla trifoliata*.

P. nut. The seed of the *Jatropha curcas*.

P. nut, French. The seed of the *Jatropha multifida*.

P. root. The *Leptandra* of the U.S. Ph.

Phys'ical. (Φυσικός. F. *physique*; G. *physisch*.) Synonymous with natural; belonging to nature.

P. examina'tion. The examination, by means of the senses of sight, touch, and hearing, of the *physical signs* presented by a patient.

P. signs. Those signs of disease which can be elicited by physical examination (inspection, percussion, &c.) of the patient.

Phys'ician. (Old F. *physicien*. L. *physicus*.) This term is strictly applicable to one who studies the science of Physics, namely, a *Physicist* or *Natural Philosopher*; but it is used as distinctive of a Doctor of Medicine or *Physic*. Used to a great extent in the U.S. as synonymous with "general practitioner."

P. accoucheur'. The same as *Accoucheur*.

P. a'lienist. See *Alienist*.

P., fam'ily. The regular medical attendant of a family.

P., priest. See *Asclepiadai*.

Phys'iciancy. The post of physician.

Phys'icianship. The same as *Physiciancy*.

Physiat'rical. See *Physiatrical*.

Physicia'tros. See *Physiatros*.

Phys'icism. (Φυσικός.) A belief in the physical or material in contradistinction to belief in the spiritual.

Phys'icist. (*Physics*.) One who studies the science of *Physics*.

Phys'icky. Resembling physic.

Phys'ico-chem'ical. Belonging both to Physics and Chemistry; applied to certain molecular phenomena of matter.

Phys'ico-mental. (Φυσικός; *mental*.) Having to do with the mutual relationship between physical and mental phenomena.

Phys'ics. (Φυσικός, according to the laws of nature. F. *physique*; I. *fisica*; G. *Naturlehre*, *Physik*.) Natural philosophy; the science of the forms of energy at work in organic nature, and of the principles underlying them.

P., med'ical. The science of Physics as applied to that of Medicine.

Phys'inx. (Φῦσιγξ, the hollow stalk of garlic, Hipp.) Old term for *fistula*; also, a hollow canal or stem.

Physiocrat'ia. See *Physiautocratia*.

Physiogen'esis. See *Physiogeny*.

Physio'geny. (Φύσις, the nature or essence of anything; γένος, race, stock, descent. F. *physiogenie*; G. *Naturerzeugung*.) The evolution of function.

According to Rumpf, the formation of bodies from their original elements.

Physio'gnomist. (See *Physiognomy*.) One who judges of character from observation of the physiognomy.

Also, one who, from the same observation, tells fortunes (*Century Dict.*).

Physiognomon'ia. (Φύσις; γνώμων, one that knows or examines.) The same as *Physiognomy*.

Physiognomon'ical. Belonging to *Physiognomonics*.

Physiognomon'ics. (*Physiognomonía*.) The doctrine of the indication of the character given by the countenance.

Physio'gnomy. (Φύσις, nature; γνώμη, a means of knowing.) The general appearance of the features of an individual countenance; also, the art of judging of the moral and intellectual character by examining the features of the countenance.

Physiognos'ia. (Φύσις; γνώσις, inquiry, knowledge. F. *physiognosie*.) Natural science. (*Littre*.)

Physio'gnotype. (*Physiognomy*; *type*. F. *physionotype*.) An instrument devised to make a tracing on paper of the outline of the face. (*E. Huschke*.)

Physio'graphy. (Φύσις; γραφή, a delineation, description. G. *Naturbeschreibung*.) Term generally used as synonymous with *Physical geography*.

Physiolat'ry. (Φύσις; λατρεία, service, worship.) The worship of nature.

Physiolog'ia pathogenet'ica. Pathogenetic physiology. An old term for that part of *Pathology* which treats of the origin of disease, *Pathogenesis*.

Physiolog'ical. (*Physiology*.) Belonging to *Physiology*.

P. anat'omy. See *Anatomy*, *physiological*.

P. an'tidote. See *Antidote*, *physiological*.

P. doc'trine. See *Broussaism*.

P. psycho'logy. See *Psychology*, *physiological*.

P. salt solu'tion. The same as *Salt solution*, *normal*.

P. test. The testing of a drug that is believed to be poisonous, or of the contents of

the stomach or the substance obtained from the tissues in a fatal case in which there is a suspicion of poisoning, by observing its physiological action upon one of the lower animals.

P. time. See *Reaction time*.

P. unit. Corresponding to histological differentiation of tissues in the development of the organism, there is a physiological division of labour; and thus, each tissue may be considered as being made up of physiological units, alike in the same tissue, but differing from the physiological units of other tissues.

Physio'logism. The same as *Accidentalism*.

Physio'logist. (G. *Physiolog.*) One who makes a special study of Physiology.

Physiology. (Φυσιολογία [φύσις; λόγος], an enquiring into nature. F. *physiologie*; I. *fisiologia*; G. *Physiologie*.) That branch of Natural Science which treats of the functions of living organisms. Formerly used in the sense in which *Physics* is now.

P., animal. The study of the physiology of animals.

P., comparative. The comparative study of the physiology of the different members of the animal and vegetable kingdom.

P., general. Physiology which treats of function in general without reference to any species of living organism.

P., mental. *Physiological psychology*.

P., pathogenetic. See *Physiologia pathogenetica*.

P., special. The physiology of any *Species*, either animal or vegetable.

P., vegetable. The study of the physiology of plants.

Physio'lysis. (Φύσις; λύσις, a setting free, or loosing.) The natural decomposition of dead organic matter.

Physiomed'icalism. (Φύσις; *medicalism*.) The practice of using as remedies vegetable drugs only, and also discarding entirely those vegetable drugs which are poisonous.

Physiomed'icalist. One who follows the school of *Physiomedicalism*.

Physionom'ia. (Φύσις, nature; νόμος, a law. F. *physionomie*.) The doctrine of the laws of nature; natural philosophy.

Physiophilosoph'ia. (Φύσις; φιλοσοφία, the love or pursuit of knowledge.) Natural Philosophy.

Physiophyly. (Φύσις; φύλον, a stock, race.) That part of *Phylogeny* which treats exclusively of function.

Physioplast'ica. (Φύσις; πλαστικός, belonging to moulding.) The doctrine of natural formation, in Natural Philosophy.

Physio'sophy. (Φύσις; σοφία, knowledge, wisdom.) A doctrine of the secret operations of nature.

Physiotherapi'a. See *Physiauto-therapia*.

Physiothet'ica. (Φύσις, nature; θετικός, positive.) The special or positive interpretation of nature.

Physique'. (F. *physique*.) The physical organisation of an individual, or that which is characteristic of a race or of a class.

Phys'is. (Φύσις, the nature or essence of anything.) Old term of varied signification, but applied generally to the nature of every natural body, and especially of man.

Physiurg'ic. (Φύσις, nature; ἔργον, work.) Acted upon solely by the forces of nature.

Physobleph'aron. (Φῦσα, wind; βλέφαρον, the eyelid. F. *physoblepharon*.) Emphysematous swelling of the eyelid.

Physocarp'ous. (Φῦσα; καρπός, fruit. F. *physocarpe*; G. *blasenfrüchtig*.) Having an inflated fruit. Applied to those plants in which the fruit becomes blown up like a bladder.

Phys'ocèle. (Φῦσα; κήλη, a tumour.) Old term synonymous with *Pneumatocèle*.

Physoceph'alus. (Φῦσα; κεφαλή, the head.) Old term for emphysema of the scalp.

Physocœ'lia. (Φῦσα; κοιλία, the bowels.) Term for *Tympanites*.

Physocol'ica. (Φῦσα; colica. F. *physocolique*; G. *Blähungskolik*.) Colic with flatulence.

Physo'dēs. (Φυσώδης [φῦσα, εἶδος], full of wind. F. *physeux*.) Full of wind; flatulent.

Physodyspnoë'a. (Φῦσα; dyspnœa.) The same as *Emphysemodyspnœa*.

Physohæmatomē'tra. (Φῦσα; hæmatometra.) An accumulation, in the uterine cavity, of blood mixed with extraneous gases.

Physohydromē'tra. (Φῦσα; hydrometra.) A variety of *Hydrometra gravidarum*, or dropsy of the amnion, in which the gases of decomposition are mixed with the amniotic fluid.

Physoï'des. (Φῦσα; εἶδος.) Resembling a bladder in appearance.

Physo'logy. (Φῦσα, wind; λόγος, a discourse.) A discourse upon intestinal flatus.

Physomē'tra. (Φῦσα, wind; μήτρα, the womb. L. *tympanites uteri*. F. *physomètre*; I. *fisometria*; G. *Mutterwindsucht*.) The presence of air or the gases of decomposition in the cavity of the pregnant uterus, usually at or near full term. Air may pass into the uterus during obstetric operations, or, in smaller amount, may simply replace a portion of the liquor amnii as this escapes. Gas may be formed from decomposition of the fœtus. In either case, death may occur from entrance of the air or gas into the uterine veins. See *Aër hæmoctonia*.

Physon'cus. (Φῦσα; ὄγκος, a tumour. F. *physoncie*; G. *Windgeschwulst*.) A localised abdominal swelling due to a collection of flatus, constituting the commonest kind of *Phantom tumour*. Also, *Emphysema* (Billings).

Physopsoph'ia. (Φῦσα, wind; ψόφος, a noise.) The escape of gas (including air) from the body, with a hissing noise.

Physos'cheocèle. (Φῦσα; oscheocèle.) *Oscheocèle* containing flatus.

Physospasm. (Φῦσα; σπασμός, a convulsion. G. *Windkolik*.) Colic caused by flatus.

Physostig'ma. (Φῦσα; stigma.) A Genus of the Tribe *Phaseoleæ*, Order *Leguminosæ*, having a spiral keel, and a bearded style continued into an oblique hood.

P., poisoning by. See under *Physostigmatis semen*.

P. venenosum. (L. *venenosus*, poisonous. F. *fève du Calabar*; I. *fava del Calabar*; G. *Kalabarbohne*.) A West African twining plant. Its seed is the Calabar bean or *Physostigmatis semen*.

Physostig'matin. *Physostigmene*.

PHYSOSTIGMATIS—PHYTOCRENE

Physostig'matis fa'ba. (L. *faba*, a bean.) Former name for *P. semen*.

P. semen, B. Ph. (L. *semen*, -inis, seed.) The Calabar bean, or dried seed of *Physostigma venenosum*. It contains two alkaloids, *Physostigmine* or *Eserine*, and *Calabarine*. Dose of the powdered seed, 1 to 4 grains. From the seed are made *Ext. physostigmatis*, and *Physostigmina*.

Action.—Applied locally to the conjunctiva, the extract or preparations of physostigmine cause contraction of the pupil. Internally, Calabar bean causes vomiting and colicky pains, and, in larger doses, diarrhœa. Associated with these symptoms there are also faintness and shortness of breath, with contraction of the pupil, passing on, with a large dose, to increase of the above, with salivation, sweating, frontal headache, a slow, feeble pulse, paralysis, and, in fatal cases, asphyxia. The part mainly affected is the spinal cord, motor paralysis occurring after large doses, from affection of the anterior cornua. The respiratory centre is first briefly stimulated, then depressed, and finally paralysed. The cardiac centre is at first stimulated, causing a slow, powerful heart's action; but afterwards depressed. Contraction of the pupil and spasm of accommodation, together with a fall of intra-ocular tension, occur from stimulation of the fibres of the motor oculi nerve. Salivation is due to stimulation of the centre for the chorda tympani nerve. The above-described action is due to the alkaloid *Physostigmine*. The action of *Calabarine* is similar, except that it has a stimulant effect on the spinal cord.

Calabar bean has been given in the treatment of tetanus and other convulsive affections of the cord, and is occasionally used in the treatment of chronic constipation; the alkaloid *Physostigmine* is much used as a *Myotic*.

Physostig'mia. *Physostigmine*.

Physostigmi'na, B. Ph. *Physostigmine* or *Eserine*, $C_{15}H_{21}N_3O_2$. An alkaloid contained in *Physostigmatis semen*, and made from *Ext. physostigmatis* by adding sodium bicarbonate to an aqueous solution, shaking up with ether, and evaporating. It is obtained in faintly pink crystals, easily soluble in alcohol and dilute acids, only slightly in water. From it are prepared *Lamellæ physostigminae* (q. v.).

Action, see under *Physostigmatis semen*.

Physostigmi'næ hydrobromas. A soluble, hygroscopic, white amorphous powder. Dose, 1-60th to 1-20th grain. (Ex. Ph.)

P. salicylas. (*Physostigmine Salicylate*, U.S. Ph.; *Physostigminum Salicylicum*, P. G.) Crystalline; solubility 1 in 140 of cold water; solution at first colourless, but afterwards becoming red. Dose, 1-60th to 1-20th grain, or up to 1-12th grain. From this is prepared *Injectio p. salicylatis hypodermica*. (Ex. Ph.)

P. sulphas. A hygroscopic, white amorphous powder. Dose, 1-60th to 1-20th, or 1-12th grain. From this are prepared the *Guttæ p.* and *Injectio p. sulphatis hypodermica*. (Ex. Ph.)

Physostig'mine. See *Physostigmina*.

Physothorax. (Φῦσα; *thorax*.) *Pneumothorax*.

Phyt'albumose. (Φυτόν; *albumose*.) An *albumose* existing in the seeds of *Leguminosæ*, in papaw juice, and in flour.

Phytana'tomy. (Φυτόν, a plant; *anatomy*.) Vegetable anatomy.

Phytan'thrax. (Φυτόν, a plant; ἄν-θραξ, charcoal.) Tordi's name for vegetable charcoal.

Phytaux'ia. (Φυτόν, αὔξις = αὔησις, growth, increase.) Name used by Dupetit-Thouars for the growth of plants.

Phytel'ephas. (Φυτόν; *elephas*.) A Genus of the Order *Phytelphasia*, Class *Monocotyledons*. The plants of this genus develop an albumen, which is eatable while young, but, when ripe, becomes very hard, and forms the so-called "vegetable ivory" that is used as a substitute for elephants' tusks.

Phyter'ythrin. (Φυτόν, a plant; ἐρυθρός, red.) A synonym of *Phyllerythrin*.

Phyteuma. (Φύτευμα, a plant.) A Linn. Genus of plants; Class *Pentandria*, Order *Monogynia*.

P. orbicular'ë. The Horned Rampion. Supposed by some to be efficacious in the cure of syphilis.

Phyteumacoll'a. See *Phytocolla*.

Phyteumatocoll'a. See *Phytocolla*.

Phyteus'is. (Φύτευσις, a planting, and in general, producing.) A planting or producing.

Phyteute'riön. (Φυτευτήριον, a plant grown as a sucker, or in a nursery.) A nursery for trees, or nursery-garden.

Phythæ'ma. (Φυτόν, a plant; αἷμα, blood.) The sap of plants.

Phytiat'rics. (Φυτόν; ἰατρεία, a means of healing.) The doctrine of the healing of plant diseases.

Phytic'ë. (Φυτικός, coming from plants; τὸ φυτικόν, vegetable life.) Old term for vegetative life.

Phyticus. (Φυτικός.) Belonging to *Phyticë*; vegetative.

Phytiform. See *Phytoïd*.

Phyti'phagous. (Φυτόν; φαγεῖν, to devour.) See *Phytophagous*.

Phyti'vorous. (Φυτόν; L. *voro*, to devour.) A hybrid word for *Phytophagous*.

Phytoalope'cia. (Φυτόν; *alopecia*.) *Alopecia areata*; also, term used for *Tinea tonsurans*. (Littre.)

Phytobiology. (Φυτόν; *biology*.) Vegetable biology.

Phytobiotis'mus. (Φυτόν; βίος, life.) Vegetable life.

Phytocatalepsi's. (Φυτόν; *cataplexis*.) The maintenance by the leaves and other parts of plants of an acquired position, as, for example, the oblique position produced by the prevailing winds.

Phytocero'sium. (Φυτόν; κήρωσις, the formation of wax.) Vegetable wax.

Phytochem'i'a. (Φυτόν; *chemia*. F. *phytochimie*; I. *fitochimia*.) *Phytochemistry*.

Phytochem'istry. (Φυτόν; *chemis-try*.) The chemistry of plants.

Phytochlorai'non. (Φυτόν; χλωρός, pale green.) Term, introduced by Giese, synonymous with *Chlorophyll*.

Phytochlore. The same as *Phytochlorainon*.

Phytochrome. (Φυτόν; χρώμα, colour.) A name for *Chlorophyll*.

Phytochym'istry. (Φυτόν; *chymis-try*.) Botanical chemistry.

Phytocol'la. (Φυτόν; κόλλα, glue. G. *Phytokoll*.) General term for vegetable substances containing a large amount of nitrogen.

Phytocren'ë gigante'a. (Φυτόν;

PHYTODERMATA—PHYTOPARASITE

κήνη, a spring, or well.) A liane, the type of the Tribe *Phytocreneæ*, Nat. Order *Oleaceæ*. The stem is white and extremely porous; when cut, limpid, potable water flows from it.

Phytodermata. (Φυτόν; *derma*.) See *Dermatophyta*.

Phytodermic diseases. See *Dermatophyta*.

Phyto'dēs. (Φυτόν; εἶδος, form.) Full of, or pertaining to, plants.

Phytogæ'a. (Φυτόν; γαῖα, earth. F. *phytogé*; G. *Pflanzenerde*.) Vegetable earth.

Phytogamy. (Φυτόν; γάμος, marriage.) Name given by Dupetit-Thouars to "the marriage of the plants," i.e. the fertilisation of the flower.

Phytogē. (Φυτόν; γῆ = γαῖα, earth.) The same as *Phytogæa*.

Phytogen. (Φυτόν; γένος, race, descent.) Term for the supposed principle of the generation of plants.

Phytogenesis. (Φυτόν; γένεσις, creation, birth.) Term introduced by Dupetit-Thouars for *germination*.

Phytogenous. (*Phytogen*.) *Geol.* Epithet applied by Brongniart to the group of earths that are produced by the accumulation of plant debris.

Mineral. Applied by Jondi to a kind of coal which he named "Carbon phytogenium."

Under the head of "Phytogenous substances," Haüy has formed an appendix to the *Combustibilia*, comprehending those that have a vegetable origin.

Phyto'geny. The same as *Phytogenesis*.

Phytogeo'graphy. (Φυτόν; *geo-graphy*.) 1. According to Schouw, the description of the differences presented by plants over different parts of the globe.

2. According to De Candolle, the description of plants, including the naming and description of species.

Phyto'glyphy. (Φυτόν; γλυφή, carving.) Nature-printing; lit., plant-engraving, so named because first used for plants; also a syn. for *Phytography*. (*Century Dict.*)

Phytognomon'ia. (Φυτόν; γνώμων, a judge.) Old term for the naming and description of the external parts of plants.

Phytognomon'ics. (Same as *Phytognomonía*.) The characteristics of plants, their habitat, &c.

Phyto'graphy. (Φυτόν, a plant; γραφή, a writing, description.) The description of plants.

Phyto'id. (Φυτόν; εἶδος.) Resembling a plant.

Phytois'mus. (Φυτόν.) The process of vegetable life.

Phytolac'ca. (Φυτόν; lacca.) A Linn. Genus of plants; Class *Decandria*, Order *Decagynia*; Juss. *Phytolaccaceæ*.

P. ber'ry. See *Phytolaccæ baccæ*.

P. decan'dra. Systematic name of the Pork physic, or American nightshade, a plant growing in Virginia and other parts of America. The leaves are said to be anodyne, and the juice of the root, violently cathartic. The berries also are used (see *Phytolaccæ baccæ*). The plant has been used most generally in chronic rheumatism; it was formerly believed to be a cure for cancer.

P. dio'lea. Native to Mexico and Brazil. The fruit is edible, and is eaten by the people

living upon the coast of Algeria, where also the plant is grown.

P. dras'tica. A Chilian plant, growing among rocks. The root is chewed by the natives, for its purgative action.

Phytolac'cæ bac'cæ, U.S. Ph. (*L. bacca*, a berry. F. *raisin d'Amérique*; I. *bacche di fitolacca*; G. *amerikanische Kermbeere*.) The berries of the *Phytolacca decandra*, also called poke berries. They are alterative, and, in large doses, emetic and purgative.

P. ra'dix, U.S. Ph. Poke root; the root of the *Phytolacca decandra*.

Phytolac'cæ. 1. R. Brown's name for a Family of plants having the *Phytolacca* for their type. 2. The Family of the *Chenopodiaceæ* is sometimes designated by this name.

Phytolac'cic ac'id. An acid of problematical existence, stated by Bracannot to be present in the stem of *Phytolacca decandra*.

Phytolac'cin. 1. A crystalline substance obtained from the seeds of *Phytolacca decandra*. The crystals are soluble in alcohol, ether, and chloroform; but insoluble in water. 2. A powdered alcoholic extract of *Phytolaccæ radix*, used in America, also, in the Ex. Ph., dose, 1 to 5 grains, in a pill with glycerinum tragacanthæ. From it, *Tinctura phytolaccæ* (Ex. Ph.) is prepared. (For therapeutic action, see *Phytolacca decandra*.)

Phytolite. The same as *Phytolith*.

Phytolith. (Φυτόν, a plant; λίθος, a stone. F. *phytolithe*; G. *Pflanzenversteinierung*.) A petrified or fossil plant.

Phytolithology. (*Phytolith*; λόγος, a discourse.) A treatise on fossil plants.

Phyto'logy. (Φυτόν, a plant; λόγος, a discourse.) The same as *Botany*.

Phytomel'in. (Φυτόν; μέλας, black.) A synonym of *Rutin*.

Phytomentag'ra. (Φυτόν; mentagra.) A synonym of *Sycosis*.

Phytomephit'is. (Φυτόν; mephitis.) A *mephitis*, or mephitic miasm, of vegetable origin.

Phytomer. (Φυτόν; μέρος, a part.) One of the proximate principles in the structure of a specialised plant.

Phytomor'phic. Belonging to *Phytomorphism*.

Phytomorphism. (Φυτόν; μορφή, form.) The study of the forms of outline in plants.

Phy'ton. (Φυτόν.) A plant.

Phytonec'tar. (Φυτόν; νέκταρ, the drink of the gods.) Term used by Bracannot for the pure honey from flowers.

Phytonomatotech'nia. (Φυτόν; ὄνομα, -ατος, a name; τέχνη, an art.) Term introduced by Bergerot for the naming of plants.

Phyto'nomy. (Φυτόν; νόμος, a law.) The laws of vegetation in general.

Phytonose'ma. (Φυτόν; νόσημα, a disease.) Plant disease.

Phytonosology. (Φυτόν; nosology.) The classification of plant diseases.

Phytonym'phia. (Φυτόν; νυμφίος, wedded.) Term applied by Dupetit-Thouars to the inflorescence, or the first appearance of the flower.

Phytonymy. (Φυτόν; ὄνομα, Acol. for ὄνομα, a name. F. *phytonymie*; G. *Phytonymie*.) The nomenclature of plants.

Phytopar'asite. (Φυτόν; parasite.) The same as *Epiphyte*.

Phytopathology. (Φυτόν; *pathology*.) Vegetable pathology; also, the pathology of diseases caused by vegetable parasites. (Billings.)

Phytophagous. (Φυτόν; φαγῖν, to devour.) The same as *Herbivorous*.

Phytophilous. (Φυτόν; φιλίω, to love.) Plant-loving.

Phytophthora infestans, Bary. The *Peronospora infestans*.

Phytophylum. (Φυτόν; φυλάκιον = φυλάκειον, a watch tower.) A plant-house.

Phytophysiognomonics. (Φυτόν; *physiognomonics*.) The study of the individual characteristics of plants.

Phytophysiology. (Φυτόν; *physiology*.) Vegetable physiology.

Phytoplasm. (Φυτόν; *plasma*.) The protoplasm of plant-cells; also, according to Litré, the plasma of the latex of plants.

Phytopolite. (Φυτόν; πολίτης, a citizen. G. *blattbüngerlich*.) Epithet applied by Palisot-Beauvais to every vegetable organism growing upon another vegetable organism, whether living upon the latter's substance or not.

Phytoprotéine'ma. (Φυτόν; *protein*.) A vegetable combination of protein.

Phytop'tosis. (*Phytop'tus*.) The disease, consisting in overgrowth, caused in plants by members of the Genus *Phytop'tus*.

Phytop'tus ribis. (Φυτόν; όπτήρ, one who spies after a thing; L. *ribes*, red gooseberries.) The Currant Mite; Genus *Phytop'tus*, Order *Arachnida*. The mite is whitish in colour, and about 1-200th of an inch long; it feeds upon the buds and their sap. There are other distinct species of the Family *Phytop'tus* infesting the pear-tree, the lime, the birch, &c.

Phytor'ganies. (Φυτόν; όργανον, an organ of sense.) A vegetable parasitic growth. (Bouchut.)

Phytor'ganography. (Φυτόν; *organography*.) The describing of the internal organisation of plants.

Phyotosches'ia. (Φυτόν; σχίζα, a splinter of wood.) Term used, by Dupetit-Thouars, for the investigation of the further progress of cuttings and grafts taken from plants.

Phyotosco'ria. (Φυτόν; σκωρία, filthy refuse, especially the dross of metal.) The remains or refuse of decayed plants; coal.

Phytosepticus. (Φυτόν; *septic*.) Belonging to decaying or putrid vegetable matter.

Phyto'sis. (Φυτόν.) 1. A synonym of *Tinea*. 2. The progress, or life-history, of plants.

P. annula'ta. The same as *P. circinata*.

P. circina'ta. E. Wilson's term for *Tinea circinata*.

P. favo'sa. *Tinea favosa*.

P. ton'surans. *Tinea tonsurans*.

P. versi'color. *Tinea versicolor*.

Phytosper'mata. (Φυτόν; σπέρμα, a germ or seed.) The granules or *fovilæ* of the pollen cell (Mirbel, 1839); also, the *spermatozoïds* of cryptogamic plants.

Phyto'sterin. $C_{26}H_{44}O + H_2O$. "Vegetable cholesterin." A substance occurring in the seeds of many of the *Leguminosæ*, pea, maize, colchicum, Calabar bean, &c. It is obtained from peas by treating them with petroleum ether, evaporating, pressing between pieces of filter paper, and crystallising out from alcohol. The reactions of a chloroform solution of phyto-

sterin are the same as those of a similar solution of cholesterin. (Loebisch.)

Phy'totaxy. (Φυτόν; τάξις, an arranging.) Plant classification.

Phytotech'nia. (Φυτόν; τέχνη, an art.) Term used, by Desvaux, for the distinguishing, classifying and naming of plants; by H. Cassini, for the study of plants, and the teaching of that study.

Phytoterops'ia. (Φυτόν; τερέω, to bore through.) The same as *Phytopathology*.

Phytothe'ca. (Φυτόν; θήκη, a box.) A box of plants; also used as synonymous with *Phytophylacium*.

Phytotherapi'a. (Φυτόν; θεραπεία, care, nurture.) The cultivation of plants.

Phytother'ion. (Φυτόν, a plant; θήριον, a beast.) A term synonymous with *Zoö-phyte*; also, applied to the plant *Polypodium barometz*.

Phytotoc'ia. (Φυτόν; τόκος, a birth. G. *Pflanzengeburt*.) Plant-birth; applied by Dupetit-Thouars to the changes undergone by the fertilised *pistil*.

Phyto'tomist. (See *Phytotomy*.) A plant dissector. See *Anatomist*.

Phyto'tomy. (Φυτόν; τομή, a cutting.) Plant-dissection.

Phytotopo'logy. (Φυτόν; *topology*.) The study of the distribution of plants.

Phytotraumat'ia. (Φυτόν; τραῦμα, a wound, or hurt.) Term used, by Dupetit-Thouars, for the study of injuries to plants, especially those due to removal of some of their parts.

Phytotroph'ia. (Φυτόν; τροφή, nourishment.) Term used, by Dupetit-Thouars, for the study of plant-nutrition.

Phytotroph'on. (Φυτόν; τροφόν [τό], that which nourishes, namely food.) Plant-nutrition.

Phytotrop'ia. (Φυτόν; τροπή, a turning round.) Term, introduced by Link, for the art of producing artificial varieties of plants.

Phytovitel'lin. (Φυτόν; *vitellin*.) Plant vitellin; a substance very similar to animal vitellin, found in the seeds of the pumpkin and other plants.

Phytozo'a. (Pl. of *Phytozoön*.) Certain animals which resemble plants; *Zoöphytes*. Also, marine animalcules living in plant tissues.

Phytozo'an. Belonging to the *Phytozoa*. Also, the same as *Phytozoön*.

Phytozoa'ria. (Nom. pl. n.) The *Infusoria*.

Phytozo'ön. (Φυτόν; ζῶον, an animal. F. *phytozoaire*; G. *Pflanzenthier*.) The same as *Zoöphyte*.

Pia. A name for *Arrowroot*, *Tahiti*.

Pia'mater. L. (Kind mother; because it nourishes the brain, and was anciently supposed to be its origin. F. *pie mère*; I. *pia madre*; G. *weiche Haut*, *Gefässhaut*.) The vascular membrane immediately investing the brain and spinal cord. It consists of delicate connective and elastic tissue, covered in part with epithelial cells, and forming a framework for a minute plexus of blood-vessels. Besides investing the entire surface of the brain, it dips down between the convolutions and laminae, and sends processes into the interior. Such are the choroid plexuses of the fourth ventricle, and the velum interpositum, which passes through the transverse fissure. The membrane varies considerably in vascularity

and thickness in different parts of the brain; upon the *crura cerebri* and *pons Varolii* its structure is densely fibrous, and but little vascular.

P. ma'ter tes'tis. The *Tunica vasculosa testis*.

P. men'inx. The *P. mater*.

P'ial. Belonging to the *Pia mater*.

P. sheath. (G. *Pialscheide*.) A name for the *pia mater* sheath of the optic nerve. (Billings.)

P'ian. See *Frambæsia*.

P., moth'er of. See *Mama pian*.

Pia'noforte-player's cramp. (F. *crampe des pianistes*; G. *Klavierspielerkrampf*.) A variety of *Writer's cramp* or *Scrivener's palsy* occurring in pianists.

Piante'rium. (Πιαίνω, to fatten.) Old term for a fattening substance.

P'iar. (Πιαρ, fat.) Old medical term for fatness.

Piarhæ'mia. (Πιαρ, fat; αἷμα, blood. F. *piarrhémie*; G. *Fettblut*.) A morbid condition characterised by the occurrence of free fat in the blood.

Piarolytic. (Πιαρ; λύω, to loosen.) Fat-decomposing.

Piassa'ba, or Piassa'nö. The same as *Para piassaba*. See *Leopoldinia piassaba*.

Piatigorsk, min'eral wa'ters of. The Caucasus, Russia. There are seventeen saline, sulphur springs, varying in temperature from 28.5° to 45.5° C. In 1000 parts they contain from .0005 to .134 of sulphuretted hydrogen, and 1.46 to 1.93 of sodium chloride. There are, besides these, a bitter spring, at *Lysogorsk*, containing 10.19 parts of sodium chloride, 2.24 of potassium sulphate, 3.27 of sodium sulphate, and 3.06 of magnesium sulphate; and a lake, the *Tambucansee*, containing 16.96 of sodium chloride, 11.6 of sodium sulphate, and 16.79 of magnesium sulphate, in 1000 parts. (Geissler and Möller.)

Piat'tones. Old term, translated from It. idiom into Lat., for *Pediculi pubis*. See *Pediculus pubis*.

P'ica. (L. *pica*, a magpie.) In *Med.* (F. *pica*, *picacisme*; G. *Krankhafte Esslust*), depraved appetite, common in insanity, pregnancy, and hysteria; also occurring, but less commonly, in chlorosis; named after the magpie, on account of this bird's omnivorous habits.

Also, a Genus of the *Corvidæ* containing the common magpie, *P. melanoleuca*.

P. african'um. *Chthonophagia*.

P'ic'ac. The *Euphorbia corollata*.

Picacism'us. (L. *pix*.) Depilation by use of a pitch plaster. In *Med. Pathol.* = *Dro-pacismus*.

P'icæ. (L. *picus*, a woodpecker.) An Order of the Class *Aves* having a straight wedge-shaped bill, an extensible, barbed tongue, and apically stiffened tail-feathers; the first and fourth toes are turned backwards. It includes the woodpeckers and the wrynecks.

Pic'amar. (L. *pix*; *amarus*, bitter.) An oily substance found in the tarry matters obtained by the dry distillation of wood. (Reichenbach.)

Pica'o de Pra'la. (Span.) Name for the leaves and flowers of *Acanthospermum xanthioides*.

Pica'tio. An old term = *pica*. *Med. Pharm.* Also a name for a certain remedy, which was a species of *Dropax*.

Pice'a. (Πεύκη.) The pitch pine, *Pinus abies*.

P. excel'sa. Syn. for *Pinus abies*.

P'icelt. A name for the *Nicotiana tabacum*.

P'iceous. (F. *de poix-passé*; G. *gepicht*.) Belonging to pitch; pitch-black.

Picer'ion. (Πικέριον = βούτυρον.) Old term for butter.

P'ichi. Name (American Indian?) for the Chilean plant *Fabiana imbricata*. The plant contains an ethereal oil, a resin, an alkaloid, and a glucoside; which last closely resembles *Esculin*. It is used as a diuretic, antiseptic and sedative, in bladder diseases; it is used also in liver affections.

Pichu'rim bean. The fruit of the *Nectandra puchury* (*Laurus pichurim* of Richard); elliptical, flattened on one side, convex on the other, taste spicy, odour aromatic. Action, that of aromatics in general.

P. cor'tex. The highly aromatic bark of a species of *Laurus*, used in Lisbon in dysentery and to allay vomiting.

Pichurinstear'ic ac'id. A syn. of *Lauric acid*.

P'ici. See *Piceæ*.

P'icls. (L.) Gen. of *Pix*.

P. emplas'trum. See under *Emplas-trum*.

P. li'quidæ unguen'tum. See under *Unguentum*.

Pick'eridge. One of the varieties of *Warbles*; a swelling occurring on the backs of cattle.

Pick'le. (Mid. E. *pikil*. G. *Pökel* or *Bökel*.) Any solution for preserving animal or vegetable food; term originally used for brine in which herrings were preserved. For pickling vegetables, vinegar is generally used, flavoured with spices or aromatic herbs. For pickling animal food, ordinary brine is used, mixed with sugar, nitre, and spices. It is of great importance that no vessel of copper, zinc, lead, or brass should be used either in preparing or storing pickles. Pickles used sparingly aid digestion by stimulating the nerves of taste and the gastric nerves, and their acid acts as a solvent to many constituents of food. Used in excess they cause dyspepsia.

Picnohydro'meter. (*Picnometer*; *hydrometer*.) An apparatus which is a combined *picnometer* and *hydrometer*. (*Century Dict.*)

Picno'meter. See *Pycnometer*.

Picoden'dron Sloan'eii. See *Lignum quassiaæ spurium*.

Pic'oline. C₈H₇(CH₃)N. A methylpyridine, isomeric with aniline. It is a volatile body, found in the tarry matters obtained in the destructive distillation of organic substances; and is also present in tobacco-smoke, together with other pyridine compounds, all of which have an action similar to that of *nicotine*, but weaker.

Pico'ta. Old medical term for an affection characterised by small pustules of a red colour. The same as *Sarrampis*.

Picote'. (F.) A common name for *Variola*, in some of the French provinces. (Littré.)

P. des bêtes à laine. The *Rot* of sheep.

Picquotia'na. Name employed in France, where it is cultivated, for the *Psoralea esculenta*.

P'icra. See *Hiera picra*.

Picra'conine. A derivative of *Picraconitine*.

Picracon'itine. (Πικρός; *aconitine*.)

$C_{31}H_{43}NO_{10}$. An alkaloid derived from *Aconitum napellus*.

Picræ'na excel'sa. Order *Simarubaceæ*. Habitat, Jamaica. The tree yielding *Quassia lignum*, B. Ph.

P. quassioi'des. Habitat, China and the Himalayas. Used in the Pharm. Ind. under the name of *Brucea* (see *B. quassioides*) as a substitute for *Quassia*. The bark is febrifuge.

Picram'ic acid. See under *Picric acid tests*.

Picramin. (Πικρός, pungent, bitter.) Name employed by Berzelius for the alkaloid *Amarin*.

Picram'nia. The typical Genus of the Tribe *Picramniæ*, Order *Simarubaceæ*.

P. antides'ma. A Mexican and West Indian shrub. The bark is used in syphilis, and as a tonic and alterative, under the name of Honduras bark.

P. bark. See *P. antidesma*.

P. ellia'ta. A Brazilian plant. The bark is sometimes used instead of *Cascarilla* bark.

Picram'niæ. A Tribe of plants, Order *Simarubaceæ*, of which the Genus *Picramnia* is the type.

Picras'ma excel'sa. The *Picræna excelsa*.

Pic'rate. (Πικρός. L. *picras*; I. *picrato*.) A salt of picric acid. The best known salts are the *Ammonium picrate* and *Sodium picrate*.

P. of iron. This exists in two forms, as a ferrous and as a ferric salt. It is not of any importance.

Pic'ria. (Πικρία, sourness or bitterness.) Bitterness.

Picric ac'id. $C_6H_2(NO_2)_3OH$. (L. *acidum picricum*. F. *acide picrique*; G. *Picrinsäure*.) *Trinitrophenol*. A bright yellow, crystalline compound, poisonous, and explosive when heated rapidly. It dyes organic substances permanently yellow. It has a bitter taste, and strong acid properties; is soluble in 86 parts of water at $15^\circ C$., and readily soluble in alcohol and ether. It has been used for ague and albuminuria; for hardening tissues; and in certain tests.

P. acid tests. A saturated solution is used. 1. For albumen in urine. The solution poured upon the urine gives an opalescent precipitate of coagulated albumen where the liquids meet.

2. For sugar in urine. The urine is boiled with picric acid and potash solution. A deep red colour is formed when sugar is present, from formation of picramic acid, and, subsequently, pieramate of potassium.

Pic'ris. (Πικρός, bitter.) A name for the *Cichorium intybus*.

P. echoi'des. A name for the common ox-tongue, *Helminthia echinoides*. (Hooper.)

Pic'rium spica'tum. The *Coutoubea spicata*.

Picroacon'itine. See *Picraconitine*.

Picroadon'idin. (Πικρός; *Adonis*.) The active principle of the *Adonis vernalis*. It is an intensely bitter, amorphous glucoside, readily soluble in water. Taken internally it is a powerful cardiac poison.

Picroan'ilin. (Πικρός; *anilin*.) A mixture of saturated solutions of picric acid and anilin blue; used to colour microscopic objects. (Geissler and Möller.)

Picrocar'mine. A red staining-fluid, made by adding to picric acid an ammoniacal

solution of carmine. Also called *Picrocarminate of ammonia*.

Picro'chalous. (Πικρόχολος; from πικρός; *χολή*, bile.) Old medical term, signifying full of bitter bile; and hence, metaph., splenetic.

Picrocro'cin. (Πικρός; *Crocus*.) Saffron-bitter. A bitter, crystalline glucoside obtained from ethereal extract of *Saffron*. When boiled with dilute acids it splits up into oil of saffron and sugar.

Picrocyam'ic ac'id. *Isopurpuric acid*.

Picrogly'cion. (Πικρός, bitter; γλύκιος, sweet.) Name for a bitter-sweet substance isolated from *Solanum dulcamara*.

Picroliche'nin. (Πικρός; *lichenin*.) $C_{12}H_{10}O_6$. An intensely bitter crystalline body, soluble in boiling water, obtained from *Varolaria amara*. (Littre.)

Pic'romel. (Πικρός, bitter; μέλι, honey.) A bitter-sweet substance obtained from the bile, consisting of a mixture of the glycocholate and taurocholate of soda, with the addition of sugar; the *choleic acid* of Demarçay. (Littre.)

Picrope'gæ. Nom. pl. (Πικρός; *πηγή*, a spring.) Term for mineral waters, bitter from magnesium chloride in solution.

Picropodophyl'lic ac'id. A bitter crystalline acid obtained from *Podophyllotoxin*. See *Picropodophyllin*.

Picropodo'phyllin. (Πικρός; *podo*-*phyllin*.) A bitter, crystalline, neutral body obtained, together with picropodophyllic acid and podophyllic acid, by the splitting up of *Podophyllotoxin* by means of ammonia.

Picrorho'iza tee'ta. (Πικρός; *ρίζα*, a root.) Order *Scrophularinæ*, Tribe *Digitaleæ*. Hab., the Himalayas. This plant is intensely bitter, and is in high repute for ague.

Pic'ro-sacchari'meter. (Πικρός; σάκχαρον, sugar [L. *saccharum*; F. *saccharin*]; and μέτρον, a measure.) An apparatus invented by Dr. G. Johnson for the quantitative estimation of sugar in urine, by means of the *Picric acid test* (q. v.). The colour produced on boiling the urine with picric acid is compared with that of a standard solution.

Pic'rotin. A constituent principle of *Picrotoxin*.

Picrotox'in. $C_9H_{10}O_4$. (Πικρός, bitter; τόξον, an arrow.) U.S. Ph. The bitter, poisonous principle prepared from the seeds of *Cocculus indicus*. It is neutral, and does not form salts; it crystallises in white needles or laminæ; is sparingly soluble in water, freely soluble in glacial acetic acid, in alkaline solutions, alcohol, ether, and chloroform; gives an orange colour with hot sulphuric acid, and reddens Fehling's solution. Physiologically, it acts as a motor stimulant. It can be split up into the two bodies *Picrotoxinin* and *Picrotin*. It has been used to check night-sweats, and in chronic alcoholism.

Picrotox'inin. A constituent principle of *Picrotoxin*.

Picrotox'inum. *Picrotoxin*.

Picta'vi. The same as *Pictones*.

Pic'tones. A people of Gaul, south of the Loire, in the region now known as Poitou. Lead colic has been very prevalent in this country, hence the term *Colica pictorum*.

Pie plant. See *P. rhubarb*.

P. rhu'barb. The *Rheum rhaponticum*.

Pie'bald skin. See *Leukoderma*.

Pied'mont springs. A name for various mineral springs in the United States. 1. Sulphur springs near Oakland, in Alameda Co., California.

2. Chalybeate springs near Danbury, in Stokes Co., N. Carolina.

3. Sulphuretted and chalybeate springs in Burke Co., N. Carolina. (Billings.)

P. truff'le. The *Tuber cibarium*.

Pier'refonds. In France, departement Oise. A cold sulphur spring, and a chalybeate spring.

Pies'ma. (Πίεζμα; πιέζω, to press or squeeze.) *Bot.* Ancient term for either a thick juice expressed, or a pulpy mass left after expression of the juice.

Pies'meter. (Πίεζμα; μέτρον, a measure.) *Med.* An instrument devised for estimating the acuteness of the sense of pressure.

Pies'trum. (Πίστρον = πιεστήριον, a press; πιέζω, to compress.) An ancient obstetrical instrument, which was designed to crush the head of a dead fœtus, in order to facilitate extraction.

Pietrapo'la. A place in Corsica, where there is a mineral spring containing .02 parts of sodium chloride per 1000.

Piez'o'meter. (Πιέζω, to compress; μέτρον, a measure. F. *piézomètre*; G. *Druckmesser*.) An apparatus for estimating the tension of liquids.

Piffard's paste. Used as a test for sugar in urine. It is composed of one part of sulphate of copper, 5 parts of tartarated soda, and 2 of caustic soda.

Pig-nut. The nut of *Bunium bulbocastanum*, so called because of the fondness for it exhibited by pigs.

P. ty'phoid. Swine plague.

P.'s wrack. The *Chondrus crispus*.

Pige'on. (L. *pipire*, to chirp; *pipionem*, acc. of *pipio*, a chirper. F. *pigeon*.) General name for the Genus *Columba*.

P. berry. The fruit of the *Phytolacca decandra*.

P. breast. Deformity of thorax, so called from its resemblance to a pigeon's breast. The ribs are flattened laterally, and the sternum projects like a keel.

P. cher'ry. The *Prunus pennsylvanica*; also, its fruit.

P. diphthe'ria. 1. A disease arising naturally among pigeons. 2. Produced artificially (not identical with 1), characterised by the production of false membrane.

P. louse. *Dermanyssus avium*.

P. pea. The *Cajanus indicus*.

P. tree. The *Aralia spinosa*.

Pige'onfoot. A syn. of *Dove's foot*.

Pig'ment. (L. *pigmentum*, paint. F. *pigment*; I. *pigmento*; G. *Pigment*, *Farbstoff*.) Paint. In *Physiol.*, colouring matter occurring usually in granules in the tissues and secretions of plants and animals as a normal constituent. There are also morbid pigments. The excess or deficiency of a pigment may be a symptom of disease; as also its misplacement, as in jaundice.

P. bacte'ria. Certain bacteria which have the property of abstracting pigment from various bodies.

P., bil'lary. See *Bilirubin*; also, *Biliverdin*.

P. cells. Large, irregularly branched

connective tissue cells containing pigment, very common in many animals. In the human body they are found in the choroid tunic, iris, pia mater of the upper part of the cord, lymphatic glands, and sometimes the spleen. Migratory cells sometimes contain pigment, usually only in pathological conditions.

P. em'bolism. See *Embolism*, *pigmental*.

P. gran'ules. See chief heading.

P. indura'tion. The name for a chronic inflammatory process, chiefly applied to that process as occurring in the lungs, associated with deposit of pigment derived from the blood, probably of the nature of *hæmatoidin*.

P., liver. See *Liver*, *pigmentation of*.

P. of blood. *Hæmoglobin*, which splits up into a colourless proteid closely related to *globulin*, and a coloured compound *hæmatin*.

P. sarco'ma. *Sarcoma*, *melanotic*.

P. spot. 1. A term for *Nævus*.

2. *Zool.* The "eye-spot" of certain of the *Protozoa*. See under *Spot*.

3. *Bot.* A brownish spot seen in some vegetable spores.

P., u'rinary. There are several pigments occurring in the urine. 1. *Indican* (q. v.).

2. *Uroerythin*. Supposed to give to rheumatic urine its pink colour.

3. *Urobilin*. But little exists ready formed in urine.

4. *Urochrome*. The antecedent of *Urobilin*.

Pigmen'tal. Belonging to, or producing, pigment.

P. em'bolism. See under *Embolism*.

Pigmentari'us. A seller of paints or of ointments.

Pig'mentary. Containing, or belonging to, pigment.

P. degenera'tion. See under *Degeneration*.

P. lay'er. (L. *tapetum nigrum*.) The outer stratum of the retina, which has a pigmented epithelium.

P. næ'vus. See *Nævus*.

Pigmenta'tion. The process of deposition of pigment, whether physiological or pathological.

Pigmen'ted. Containing pigment.

Pigmen'tum. (L.) Pigment.

P. chlo'ral et cam'phoræ, Throat Hosp. Pharm. Rub together flowers of camphor and chloral hydrate, of each 1 oz., in a warm mortar, until liquid, and then filter. A permanent liquid at ordinary temperatures. Used as a local application in rheumatism and neuralgia.

P. chrysarobi'ni, Ex. Ph. Mix together pure chrysarobin 1 oz., liquor gutta-percha, B. Ph., 9 fl. oz. Used as a local application for psoriasis.

P. glas'ti. (L. *glastum*, the herb Woad, which furnished a blue pigment.) A syn. of *P. indicum*.

P. in'dicum. *Indigo*.

P. io'di et o'lei pi'cis. A name for *Coster's paste*.

P. ni'grum. The pigment of the *Choroid tunic* of the eye.

P. papa'in, Ex. Ph. Papain 12 gr., borax 5 gr., water 2 dr. It has been used to remove warts, and to dissolve diphtheritic false membrane.

P. picrotoxi'ni, Ex. Ph. Dissolve picrotoxin 8 gr. in glacial acetic acid 4 dr.; add castor oil 4 dr., and eucalyptus oil 16 min. It

PIGWEED—PILIDIUM

has been used for *Tinea tonsurans*, but with less success than Coster's paste.

P. plumbi. A syn. for *Glycerinum plumbi subacetatis*, B. Ph.

P. uruc. A syn. for *Annotto*.

Pig-weed. The *Chenopodium album*.

Piitis. (*Pia*, i.e. *Pia mater*.) Inflammation of the pia mater; synonymous with *Leptomeningitis*.

Pike. See *Esox lucius*.

Pikropegæ. See *Picropegæ*.

Pikry. The same as *Picra*.

Pil. Abbrev. for *Pilula*.

Pila. (L. *Pilus*, a hair [one meaning of *pila* being an effigy stuffed with straw]; or *πίλος*, a ball, globe, also hair matted into felt.) A ball or globe; also, a pill.

P. damarum. (L. *dama*, a fallow deer.) *Ægagropilus*.

P. hystricis. The Bezoar *hystricis*.

P. marina. A globular mass composed of the fibres of marine plants, chiefly the *Zostera marina*, abounding on the shores of the Mediterranean; formerly used as an anthelmintic and in scrofula.

P. rupicaprarum. (L. *rupicapra*, a wild goat.) *Ægagropilus*.

Pila. L. (*Piso* = *pinso*, to pound.) A mortar and pestle.

Pilacotia. (*Pilula*; *coccia*.) Syn. "pill cochia." A mixture of aloes and colocynth. Used as a purgative.

Pilar. (L. *pilaris*. F. *pilaire*; G. *haarig*.) Pertaining to hair.

P. muscles. *Arrectores pilorum*.

Pilar'e, malum. The hair evil. See *Malum pilare*.

Pilaris, morbus. The hair disease; a syn. of *Trichiasis*.

Pilary. The same as *Pilar*.

Pila'tio. (L. *pilus*, a hair.) The same as *Capillary fissure*.

Pile. (M. E. *pile*, a heap.) A heap of things laid one on another. A hæmorrhoid; see *Piles*. Also (L. *pilus*) a hair.

P.-clamp. An instrument, of which various forms have been devised, for crushing the base of the pile before cutting off, or for holding and compressing the pile while it is removed by the cautery.

P., dry, of Zamboni. This is made of paper discs, coated on one side with zinc-foil, and on the other, with binoxide of manganese, several thousand discs being piled one on another in a glass tube. These may be used for the same medical purposes as ordinary voltaic cells, but are not commonly employed.

Pilea pu'mila. (*Pilus*.) An American herb, Order *Urticaceæ*. It has been used locally as a wash for the skin-affection occurring in poisoning by different species of *Rhus*.

Pileiform. (L. *pilus*; *forma*, shape.) Hair-shaped.

Pileola. Bot. Mirbel's name for the funnel-shaped primordial leaf which covers the other leaves in the *gemmule* or stem-bud.

Pileolus. (L. *pileolus*, a little hat.) 1. A caul.

2. Bot. The same as *Pileola*.

Pileorhiza. (L. *pileus*, a cap; Gr. *ρίζα*, a root.) Bot. The root-sheath.

Pileous. (*Pilus*.) Hairy.

P. syst. Bichat's term for the arrangement of hair on the body.

Piles. Pl. of *Pile*. Common name for *Hæmorrhoids*.

P., bleed'ing. Piles which bleed; internal piles frequently bleed. See *Hæmorrhoids*, *internal*.

P., blind. Non-bleeding piles.

P., capillary. One of the two main varieties of *P.*, *internal* (q. v.). They consist of a superficial protruding mass of small vessels in the mucous membrane of the rectum.

P., cutaneous. A form of external piles consisting of masses of hypertrophied skin.

P., exter'nal. See *Hæmorrhoids*, *external*.

P., flesh'y. The same as *P., cutaneous*.

P., inter'nal. See *Hæmorrhoids*, *internal*.

They are generally described as of two kinds, *capillary* and *venous*. See *P., capillary* and *P., venous*.

P., oede'matous. Term for a swelling and inflammation of one or more of the mucocutaneous folds of the anus. Not, strictly speaking, piles. (Cripps.)

P., o'pen. Bleeding piles.

P., thrombotic. External piles composed of veins that have become inflamed and then ruptured, with subsequent clotting of the effused blood. (Cripps.)

P., ve'nous. One of the two varieties of *P.*, *internal* usually described. They consist of swellings composed of several large varicose veins covered by mucous membrane.

Pileum. (L. *pileum*, a cap.) *Ornithol*. The surface of the whole top of the head, and of the side of the head above the level of the eyes. It is divided into front, corona, and occiput. (*Century Dict.*)

Pileus. (L.) Originally a hat. Hence used with the following meanings: A nipple-shield. A caul. *Cucupha*. In *Ornithol.*, a syn. of *Pileum*.

P. Hippocrat'icus. The cap of Hippocrates. See *Bandage*, *capeline*.

Pile'wort. (*Pile*; *wort*.) The *Ranunculus ficaria*; so called because the crushed root has been used to make a poultice for piles.

Pili. (Pl. of *pilus*.) Hairs.

P. ana'les. The hairs round the anus.

P. cibo'til. The hairs of *Cibotium barometz*, used locally as a styptic.

P. compos'iti. In Bot., compound hairs; they may be either feathery, *plumosi*, branched, *ramosi*, or star-like, *stellati*.

P. congen'iti. Congenital hairs; the hair, i. e., of the head, the eyebrows, and eyelashes.

P. cu'tis. A term for *Lanugo*.

P. gossyp'ii. A name for the *Gossypium* of the B. Ph.

P. palpebrarum. (L. *palpebræ*, the eyelids.) The eyelashes.

P. postgen'iti. Postgenital hairs; the hair of the pubes, axillæ, &c., and, in men, of the face, all of which first develop about puberty.

P. pudendo'rum. The pubic hairs.

P. simplices. In Bot., simple hairs; they are usually in the form of flexible-jointed threads.

P. subaxillar'es. The axillary hairs.

Pilid'ium. 1. The hemispherical *apothecium* of certain lichens.

2. The name for a supposed Genus, which was

PILIFEROUS—PILL

made up in reality of merely a number of larvæ of different species of *Nemertini*.

3. A Genus of false limpets of the Family *Acmaeidae*.

4. A syn. of *Pileola*.

Piliferous. (L. *Pilus*; *fero*, to bear.) Bearing hair. *Zoöl.* Applied by Blainville to *Mammifera*, because their body is covered with hair.

Bot. Applied to parts of the plant which bear several hairs, or which terminate in a single hair.

Piliform. (L. *pilus*; *forma*, likeness.) Hair-shaped.

Piligan. (South American name.) The *Lycopodium saururus*, a South American species of *Lycopodium* (Billings). Used where it is native, as an emetic and purgative.

Piliganine. An alkaloid obtained from *Piligan*. In large doses, it causes vomiting, convulsions, and asphyxia by direct action on the medulla (Bardet); in small doses, it causes vomiting and purging.

Piligerous. (L. *gero*, to bear.) *Piliferous*.

Pilimictio. (L. *pili*, hairs; *mingo*, *mictum*, to make water.) A disease of the bladder or kidneys in which piliform, hair-like bodies are passed in the urine. It has also been termed *Trichiasis*.

Pill. See *Pilula*.

P., Ab'ernethy's. Pil. hydrarg. gr. 10, Pulv. jal. gr. 20, Syr. rhamni q. s. ut fiant pil. 6. Two at night, followed by Inf. sennæ the next morning.

P., analep'tic, James'. See *James' analeptic pills*.

P., An'derson's. *Pilula aloës et jalapæ*.

P., an'odyne. *Pilula opiata*.

P., antibil'ious. *Barclay's.* Ext. of colocynth 2 dr., jalap resin 1 dr., almond soap 1½ dr., guaiac 3 dr., tartar emetic 8 gr., oils of rosemary, juniper, and caraway, 4 min. each, syr. of buckthorn enough to make 64 pills. Dose, 2 or 3 pills. (Dunglison.)

Dixon's. Aloes, scammony, rhubarb, and tartar emetic.

P., Baly's. Pulv. digitalis, Pulv. scillæ, Pil. hydrarg., ana gr. 1.

P., Barbaros'sa's. See *Barbarossa's pills*.

P., Bar'thez's. Aloes, myrrh, camphor, musk, and balsam of Peru.

P., Becquerel's. Quin. sulph. 2 dr., Ext. digitalis 15 gr., Colchicum seeds powdered 2 scruples, made into 50 pills. Dose, 1 to 3 pills.

P., Bellos'te's. Fr. Codex, 1866. (F. *Pilules mercurielles purgatives*.) Mercury, white honey, Cape aloes, black pepper, rhubarb, scammony.

P., Blair's. A pill of colchicum for gout.

P., Blan'card's. Ferrous iodide, sugar, and liquorice powder.

P., Blaud's. 2½ grs. of sulphate of iron, and 2½ grs. of carbonate of potash.

P., blue. *Pilula hydrargyri*.

P., Bon'tius', Fr. Codex. Barbadoes aloes, gamboge, gum ammoniac, and white vinegar.

P., Bran'dreth's. The main constituents are aloes, gamboge, and scammony.

P., Cham'berlain's resto'rative. Cin-

nabar, sulphur, calcium sulphate, and some vegetable matter. (Dr. Paris.) Each pill weighs 3 grains.

P. coater. A machine for coating pills with sugar. The pills are put into a pan containing a solution of sugar, and the pan is kept constantly rotating, to prevent them from sticking together. (*Century Dict.*)

P. coch'y. *Pilula aloes et colocynthidis*.

P.s., concen'tric. Pills composed of several layers of different preparations, either to effect their successive digestion or their solution in different parts of the alimentary canal.

P., Debout's. Similar to *P., Becquerel's*.

P., din'ner. A pill taken shortly before dinner, to arouse the digestion.

P., din'ner, of May'o. Pulv. rhei 4 gr., Sodii carb. 1 gr.

P., Dupuytren's. Fr. Codex. Perchloride of mercury, Ext. of opium, Ext. of quinine.

P., everlas'ting. A pill formerly given, said to have been made of metallic antimony. Each pill swallowed was believed infallible in causing purgation.

P., fe'male. *Pilula de aloë et fœtidis*.

P., Foth'ergill's. Aloes, scammony, colocynth, and oxide of antimony.

P., Frank's. (F. *Graines de santé*.) Aloes, jalap, rhubarb, and syrup of wormwood.

P., Ful'ler's. The *Pilula de aloë et fœtidis*.

P., Grif'fith's. The *Pilula ferri co.*, U.S. Ph.

P., Grif'fitt's. Pulv. rhei drachmas 1½, Ferri sulph. dr. ½, Saponis scrupula 2, aquæ q.s. ut ft. massa in pil. 40 dividenda. Dose, 3 or 4 at bedtime.

P., Guy's. The same as *P., Baly's*.

P., Har'vey's. *Pilula aloës et colocynthidis*.

P., Helvetius'. (F. *pilule alunée d' Helvetius*.) Alum, sandragon, honey of roses. Fr. Codex, 1866.

P., Hooper's. See *Hooper's pills*.

P., hy'giene. *P., Morrison's*.

P., James' analep'tic. See *James' analeptic pills*.

P., Key'ser's. See *Keyser's pills*.

P., La'dy Crespig'ny's. See *Lady Crespigny's pills*.

P., La'dy Hes'keth's. See *Lady Hesketh's pills*.

P., La'dy Web'ster's. See *Lady Webster's dinner pills*. Also, one form was similar to *P., Lady Hesketh's*.

P., Lartigue's. See *Lartigue, pills of*.

P., Laville's. See *Laville's pills*.

P., Lee's New Lon'don. Scammony, gamboge, calomel, jalap, soap, and syrup of buckthorn. (Dunglison.)

P., Lee's Wind'ham. Gamboge, aloes, soap, potassium nitrate. (Dunglison.)

P. machine'. (F. *pilulier*.) An instrument used for rolling and cutting up a pill mass; also, an earthen pot in which pills are kept. (Dunglison.)

P., Mof'fat's. Similar to *P., Brand'reth's*.

P., Mor'rison's. Similar to *P., Mof-fat's*.

P., Nlemey'er's. Quinine 1 grain, digitalis ½ gr., opium ¼ gr. Dose, 1 pill every 4 or 6

PILLAR—PILULA

hours. Used in early cases of phthisis with much pyrexia.

P., Plum'mer's. *Pil. hydrarg. subchlor. co.*

P., red. *Pilula hydrarg. subchlor. co.*

P., red, Bo'erhaave's. The basis is red sulphide of mercury, *hydrargyri sulphuretum rubrum*.

P., Ric'ord's. Hydrarg. protiodidi, Lactucæ, Gallæ, ana ʒiiss., Ext. opii aquos. gr. ix, Ext. guaiaci aquos. ʒj. Div. in pilulas xxxvi. Used by Ricord in syphilis.

P., Ru'dius'. Similar to *P., Fothergill's*.

P., Ru'fus'. The *Pilula aloes et myrrhæ* of the U.S. Ph., 1873.

P., Scotch. *Pilula de aloë et foetidis.*

P., Sédill'ot's. Fr. Codex. (*F. pilule mercurielle savoneuse*.) Ointment of mercury, medicinal soap, and liquorice powder.

P. slab. A slab used for rolling pills upon.

P., Spen'der's. Each pill contains 1 to 3 grains of sulphate of iron, and about 1 or 1½ grains of either watery extract of aloes, compound extract of colocynth, or compound rhubarb pill. Sometimes ¼ grain of extract of nux vomica or belladonna is also added. Used in chronic constipation.

P., squatting. A name for the *Pilula opiata*.

P., Tanjo're. The *Pilula asiatica*.

P. tile. See *P. slab*.

P., Val'let's. The *Pilula ferri carbonatis* of the U.S. Ph., 1873.

Pillar. (*F. pilier*; *G. Säule*.) A term employed in Anatomy to indicate the relation certain structures stand in towards certain others, *i.e.*, as columns to a vault or arch.

P.s of Cor'ti. See under *Corti*.

P.s of di'aphragm. See *Diaphragm*, *pillars of*.

P.s of exter'nal abdom'inal ring. The free borders of the divided aponeurosis of the external oblique muscle, which bound the external abdominal ring externally and internally, being attached respectively to the spine and symphysis of the pubes.

P.s of fau'ces. Two arching folds of mucous membrane containing muscular fibres, which pass from the base of the uvula outwards and downwards, on either side; the *anterior pillar* to the side and base of the tongue; the *posterior pillar* to the sides of the pharynx.

P.s of for'nix. The extensions of the *Fornix* anteriorly and posteriorly towards the base of the brain. The *anterior pillars* pass down to the base of the brain, curve upon themselves, and spread out, each to form part of the corresponding *corpus albicans*. The *posterior pillars*, connected by their upper surface with the *corpus callosum*, pass downwards each into the descending horn of the corresponding lateral ventricle, where they become continuous with the *hippocampus major* on each side.

P.s of velum pen'dulum pala'ti. The *P.s of fauces*.

Pill'box. A small circular box for keeping pills in, usually made of cardboard, occasionally of metal or wood.

P. hydat'id. A sterile hydatid or *Acephalocyst*.

Pilli. A town in Tuscany, noted for a cold mineral spring, containing sodium chloride 9.39 parts, sodium sulphate 1.53, sodium bicarbonate 3.96, and carbonate of iron ($\text{FeH}_2(\text{CO}_3)_2$) .096, in 1000 parts. (Geissler and Möller.)

Pillocau'sia. A more modern name (deriv. not known) for *Hiera picra*, and vulgarly rendered *Pillicoshy*.

Pilocar'pidine. An alkaloid isolated from the leaves of *Pilocarpus pennatifolius* (q.v.).

Pilocarp'ina. *Pilocarpine*.

Pilocarp'inae hydrochlo'ras. Ex. Ph. White granular crystals, very soluble in water, slightly deliquescent. Dose, 1-20 to ½ grain by the mouth, 1-10 to 1-3 grain hypodermically.

P. ni'tras. B. Ph. It occurs in white crystals, either small and granular, or large and prismatic. Solubility 1 in 10 of cold water; freely soluble in hot, but only slightly in cold alcohol. Dose, the same as of *P. hydrochloras*.

Pilocar'pine. $\text{C}_{11}\text{H}_{15}\text{N}_2\text{O}_2$. An alkaloid obtained from *Jaborandi*, colourless and syrupy, forming crystallisable salts with acids. It is a powerful sudorific and sialogogue, contracts the pupil, and in large doses acts as an emetic. It has been used in diabetes mellitus and d. insipidus, in asthma, and as an antidote to belladonna poisoning. The alkaloid will act, when given hypodermically, in three to five minutes. The pure alkaloid is not used medicinally.

P., hydrochlo'rate of. See *Pilocarp'inae hydrochloras*.

Pilocar'pus pennatifol'ius.

(*Πίλος*, hair or wool wrought into felt; *L. pilus*; *καπρός*, fruit.) A Brazilian shrub, Order *Rutaceæ*. The leaflets contain a volatile oil, and the alkaloids, pilocarpine, jaborine, pilocarpidine, and jaboridine. When dried, the leaflets constitute the *Jaborandi* of the B. Ph.

Pilocyst'ic tu'mour. (*Πίλος*; *cyst*.) A dermoid cyst, so called because of its often containing hairs.

Piloni'dal si'nus. (*Pilus*; *nidus*, a nest.) A sinus occasionally found in the human subject as an abnormality, opening near the tip of the coccyx, and containing hair. (Billings.)

Pilosella alpi'na. The *Hieracium pilosella*.

Pilos'ity. (*Pilus*.) Hairiness.

Pilous. The same as *Pileous*.

Pilo'rus. (L.) Hair.

Pil'ula. Lat. (*F. pilule*; *I. pillola*; *G. Pille*.) A pill. A small mass of solid medicament made into a globular form for convenience in swallowing. A pill usually consists of one or more active ingredients and an excipient, such as mucilage, soap, syrup or spirit, or some soft, inert extract. The weight rarely exceeds 5 grains, unless the ingredients are exceptionally heavy. Pills are often rendered tasteless by silvering or gilding, or more commonly now by covering with a solution of gelatine or sandarach, or by sugar-coating, or pearl-coating with French chalk and gum. Also, see *Pills, concentric*. More than half the B. Ph. pills are purgative. For B. Ph. pills, see under *Pilula*.

P. ac'id'i carbol'ici. Ex. Ph. Absolute phenol 2 grains, glycerin ¼ minim, powdered althæa 3 grains, for one pill. Dose, 1 pill.

P. aconi'ti. Powdered aconite root 1-8 grain in each. Dose, 1 hourly (1 pill is equivalent to 1 minim of the tincture).

P. al'oës barbadensis. Barb. aloes 2, hard soap 1, oil of caraway 1-8, conf. of roses 1.

P. al'oës et colocyn'thidis. Former name (B. Ph., 1867) for the *P. colocynthidis composita*, B. Ph.

PILULÆ—PIMENTO

P. al'oës et jala'pæ. Barb. aloes 1 lb., black hellebore root, jalap, carbonate of potash, of each 1 oz., oil of anise 4 dr., simple syrup q. s. Dose, 10 to 30 gr.

P. al'oïn, strychni'næ et bella-don'næ. Aloin 1-5 gr., strychnine 1-60 gr., alcoholic ext. of belladonna 1-8 gr., in each. Dose, 1 or 2.

P. asiaticæ. Arsenious acid 55 gr., black pepper 9 dr., acacia enough to make 800 pills. Used in India for syphilis and elephantiasis. (Dunglison.)

P. Benedic'tæ Fulle'ri. The *P. de aloë et fatidis*.

P. butyl-chlor'al. Ex. Ph. Hydrate of butyl-chloral 4 gr., glycerine of tragacanth or mucilage of acacia, q. s. Dose, 1 every two hours.

P. calomel'anos compos'ita. The *P. hydrargyri subchloridi composita*, B. Ph.

P. de aloë et fœ'tidis. P. Ph. Socot. aloes, senna, asafœtida, galbanum, 2 dr. of each, myrrh 4 dr., crocus and mace 1 dr. of each, sulphate of iron $1\frac{1}{2}$ dr. To the above are added, oil of amber 8 min., and syrup of artemisia, q. s. Dose, 15 to 20 gr.

P. galbani compos'ita. A syn. of *P. asafœt. co.* B. Ph.

P. opia'ta. U.S. Ph., 1873. Pulv. opii 24 gr., soap 6 gr., for 24 pills (1 gr. of opium in each). Dose, 1 or 2 pills.

Pilulæ. Plur. of *Pilula*.

P. alephan'ginæ. (According to Lemery *alephanginæ* is an Arabic word signifying odorous.) Also called *P. aloephanginæ*. Pills composed of *aloes* combined with aromatic substances.

P. de caccion'dœ. Term for certain astringent pills containing *catechu*.

P. sublingua'les. See *Hypoglossides*.

Pil'ulæ of the B. Ph. Official. The dose is 5 to 10 grains, except where otherwise stated.

P. al'oës et asafœ'tidæ. Eq. parts of Socot. aloes, asafœt., hard soap, and conf. of roses.

P. al'oës et fer'ri. Sulphate of iron $1\frac{1}{2}$, Barb. aloes 2, comp. cinnamon powder 3, conf. of roses 4.

P. al'oës et myrr'hæ. Socot. aloes 2, myrrh 1, saffron $\frac{1}{2}$, treacle 1, glycerine q. s.

P. al'oës socotri'næ. Socot. aloes 2, hard soap 1, vol. oil of nutmeg 1-8, conf. of roses 1.

P. asafœ'tidæ compos'ita. Asafœt. 2, galbanum 2, myrrh 2, treacle 1.

P. cambog'ie compos'ita. Gamboge 1, Barb. aloes 1, comp. cinnamon powder 1, hard soap 2, syrup q. s.

P. colocyn'thidis compos'ita. Colocynth pulp 1, Barb. aloes 2, scammony resin 2, potassium sulphate $\frac{1}{2}$, oil of cloves $\frac{1}{2}$, water q. s. (about $\frac{1}{4}$).

P. colocyn'thidis et hyoscy'ami. *Pil. col. co.* 2, ext. of hyoscy. 1.

P. con'i' compos'ita. Ext. conii 1, ipecac. 1, treacle q. s.

P. fer'ri carbona'tis. Ferri carb. sacch. 4, conf. rose 1. Dose, 5 to 20 gr.

P. fer'ri iod'i'di. Mix aqueous solutions of iron and iodine with sugar and liquorice (1 in $3\frac{1}{2}$). Dose, 3 to 8 gr.

P. hydrarg'yi. (*Blue pill*.) Mercury 1, conf. of roses $1\frac{1}{2}$, liquorice $\frac{1}{4}$. Dose, 3 to 8 gr.

P. hydrarg'yi subchloridi compos'ita. Calomel 1, sulphurated antimony 1, guaiac resin 2, castor oil 1.

P. ipecacuan'hæ cum scil'lâ. Dover's powder 3, squill 1, ammoniacum 1, treacle q. s. (Opium, 1 in 23.)

P. phos'phori. Phosphorus 1, balsam of tolu 40, yellow wax 19, curd soap 30. Dose, 2 to 4 gr. (= 1-45 to 1-22.5 gr. of phos.).

P. plum'bi cum o'pio. Opium 1, acetate of lead 6, conf. of roses 1. (Opium, 1 in 8.) Dose, 4 to 8 gr.

P. rhe'i compos'ita. Rhubarb 6, Socot. aloes $4\frac{1}{2}$, myrrh 3, hard soap 3, peppermint oil 1-3, glycerine 2, treacle 6.

P. sapo'nis compos'ita. Opium 1, hard soap 4, water q. s. (Opium, 1 in 6, nearly.) Dose, 3 to 5 gr.

P. scammo'ni compos'ita. Scammony 1, jalap resin 1, curd soap 1, tinct. zingib. fort. 1, spirit. rect. 2. Dose, 5 to 15 gr. (*The only vegetable purgative pill of the B. Ph. not containing aloes.*)

P. scil'læ compos'ita. Squill $1\frac{1}{2}$, ginger 1, ammoniacum 1, hard soap 1, treacle 2.

Pil'ular. Pertaining to a pilula or pill.

Pil'ule. (F. *pilule*.) *Pilula*.

Pilum. (L. For *pissillum*; from *piso*=*pinso*, to pound. F. *pilon*.) A pestle.

Pil'us. (Nom. plural *pili*, q. v. Πῖλος, felted hair or wool.) A hair.

Pimar'ic acid. $C_{20}H_{30}O_2$. An acid, isomeric with *Sylvic acid*, obtained from the resin of *Pinus pinaster*, and apparently closely allied to pinic acid and oil of turpentine.

Pimel'aden. (Πιμελή, fat; ἀδὴν, a gland.) Term for a sebaceous gland.

Pim'elë. (Πιμελή. L. *adeps*.) Fat; also, fatness.

Pimelec'chysis. (Πιμελή; ἔκχυσις, a pouring out.) The same as *Pimelorrhœa*.

Pimel'ic acid. $C_5H_{10}(CO_2H)_2$. A dibasic acid, of the oxalic series, obtained by the action of nitric on oleic acid.

Pimel'icus. (Πιμελή.) Of, or belonging to, fat.

Pimell'tis. (Πιμελή.) Inflammation of the adipose tissue.

Pimelo'des. (Πιμελή; εἶδος, form.) Composed of fat; fatty.

Pimelo'ma. (Πιμελή.) A fatty swelling.

Pimeloptery'gium. (Πιμελή; pterygium.) The same as *Pterygium* or *Pinguicula*.

Pimelorrhœ'a. (Πιμελή; ῥέω, to flow.) Morbid discharge of fat.

Pimelorthopnœ'a. (Πιμελή; ὀρθοπνœα.) Orthopnœa from obesity.

Pimelo'sis. (Πιμελή.) Obesity.

P. hepaticæ. Fatty liver.

P. mim'ia. (L. *minimus*, excessive.) Excessive obesity.

Pimelotic. Belonging to, or characterised by, *Pimelosis*.

Pimelu'ria. (Πιμελή; οὖρον, urine.) Discharge of fat in the urine.

Pimenta. (*Pimenta*, the Spanish fir.) B. Ph. Allspice; the dried, unripe, full-grown berries of *Pimenta officinalis* (*Eugenia pimenta*), the West Indian allspice tree, containing an essential oil with stimulant and carminative properties. Its official preparations are *Aqua pimentæ* and *Oleum pimentæ*.

P. a'cris. The *Myrcia pimenta*.

P. officina'lis. See *Pimenta*.

Pimen'tæ bac'cæ. *Pimenta* berries.

Pimen'tic acid. *Eugenic acid*.

Pimen'to. (I.) *Pimenta*.

PIMIACULA—PINEOLI

P. oil. See *Oleum pimentæ*.
P. water. See *Aqua pimentæ*.
Pimiacula. (Πιμελή, fat.) Term for the *Labia majora*.
Pim'pernel. See *Pimpinella*.
P., Ital'ian. The *Sanguisorba officinalis*.
P., scar'let. The common name for the plant *Anagallis arvensis*.
P., wa'ter. The *Veronica beccabunga*.
Pim'pilin. A name for the *Piper longum*.
Pimpinella. A Genus of plants, Order Umbelliferae.
P. al'ba. A variety of *P. magna*; also, the *P. saxifraga*.
P. an'isum. The systematic name of the plant *Anise*, which contains an essential oil with carminative properties, and is a native of Egypt and the Levant.
P. ital'ica. The *Sanguisorba officinalis*.
P. mag'na. A European species, whose root has been used against erysipelatous ulcerations.
P. ni'gra. The same as *P. magna*.
P. officina'lis. The *P. italica*.
P. saxi'fraga. Systematic name of the *Burnet saxifrage*, whose root has diuretic, diaphoretic, and stomachic qualities.
Pimpinellin. A substance, readily soluble in alcohol and slightly in ether, discovered by Buchheim in an alcoholic extract of *Pimpinella*.
Pimple. (Anglo-Sax. *pipel*, prob. from *L. papula*.) A common name for a papule. See *Papula*.
P. mite. The *Demodex folliculorum*.
Pin. (L. *pinna* = *penna*, a feather; also, a pen. Old F. *penne*.) A peg of some sort.
P. and web. Old popular name for a corneal opacity.
P. bone. The *Ischium*.
P. cher'ry. Syn. for *Pigeon cherry*.
P.-eyed. Bot. Term applied to a flower in which the stigma is at the throat of the corolla and the stamens are inserted at a lower level.
P. foot'ed. Having lobate toes, such as those of birds.
P., hare-lip. A long steel pin used for closing wounds of any sort, but especially after the operation for hare-lip. It has also been used for arresting hæmorrhage by acupressure.
P.-head'ed. The same as *P.-eyed*.
P.-worm. The *Oxyuris vermicularis*.
Pina'cæ. (Lindley.) Syn. for *Coniferæ*.
Pinang'. Malayan name for the *Betel nut palm*; also, for its fruit, the *Betel nut*.
Pin'ash. See *Peenash*.
Pinastellum. (*Pinus*, the pine-tree; from the resemblance of their leaves.) The *Peucedanum silaia*.
Pinaster. (*Pinus*.) See *Pinus pinaster*.
Pince-nez. (F.) Name for that form of double eye-glass which is held on the nose by means of a spring.
Pinch. (Mid. E. *pinchen*; Old F. *pincer*, to pinch.) The amount of any substance in powder that can be taken up between the thumb and forefinger. The French Codex indicates the equivalent weight of a "pinch" of certain substances; e. g., a pinch of anise = 2 grammes; of fennel seeds, 2 grms.; of arnica, 1 grm., &c. (Littré.)
Pinched'. Metaph., Shrunken.
Pinckne'ya pu'bena. Hab., Carolina. This plant is a bitter febrifuge.

Pin'dars. A name for the *Arachis hypogæa*.
Pine. (L. *pinus*.) A pine-apple.
P.-apple. (F. *ananas*; G. *Fichtenapfel*.) The fruit of *Ananassa sativa*.
P.-apple, Apher'nous'll. The *Pinus cembra*.
P.-apple, oil of, artifi'cial. *Butyric ether*.
P. bath. A bath containing a liquor made from the leaves of the *Pinus sylvestris*, used in the treatment of rheumatism.
P. cure. The cure said to result from treatment by pine baths.
P., gin'ger. The *Chamæcyparis Lawsoniana*. Also known as the Oregon, Port Orford, or White, Cedar. Its resin is used as a diuretic, and also as an insecticide.
P., ground. *Lycopodium complanatum*.
P., ground, stink'ing. *Camphorosma monspeliaca*.
P., loblo'l'y. *Pinus tæda*.
P., moun'tain. *Pinus pumilio*.
P.-need'le. A name for the sharp-pointed leaf of the pine.
P. oil. 1. The essential oil obtained from the resinous exudation found on the bark of pines and firs. It is used for varnish. 2. The essential oil distilled from the leaves and twigs of *Pinus mughos* and *p. sylvestris*. It is used medicinally in Germany. 3. The fixed oil obtained in Sweden by distillation of the wood of firs and pines. It is used as lamp-oil. (*Century Diet.*)
P., Prin'ce's. *Chimaphila umbellata*.
P.-sap, Amer'ican. The *Hypopitys languinosa*.
P., stone. *Pinus pinea*.
P., su'gar. The *Zamia pumila*.
P.-this'tle. The *Atractylis gummifera*.
P., yellow. The *Pinus palustris*.
P.-weed. The *Hypericum sarothra*.
Pinea. (Fem. of *pineus*.) The specific name of the stone pine, *Pinus pinea*.
Pineal. (*Pineus*.) Relating to, or like, a pine cone.
P. bod'y. The *P. gland*.
P. eye. See *Parietal eye*.
P. gland. So named from its resemblance in shape to a pine cone. A small reddish body, about the size of a small cherry-stone, and containing sand-like particles, connected with the back of the third ventricle of the brain, and passing downwards and backwards between the two superior corpora quadrigemina. It is usually developed as a hollow outgrowth from that part of the brain of the embryo which afterwards becomes the third ventricle. It was thought by Descartes to be the seat of the soul. It is considered now by many comparative anatomists to be an abortive eye. See *Parietal eye*.
P. lam'ina. (*Lamina conarii*.) That part of the *Pineal gland* below the *Recessus pinealis*.
P. ped'un'cles. The peduncles of the *P. gland*.
P. sand. See *P. gland*.
P. ven'tricle. (*Ventriculus conarii*.) A hollow in the pineal gland, a foetal survival.
Pinea'tum. (Neut. of *pineatus* = *pineus*, belonging to the pine.) Old name for a certain medicine prepared from pine kernels.
Pineoli. (L. *Nuces pineæ*.) The seeds of *Pinus pinea*. They are rich in oil, and are used for the same purposes as almonds.

Píneus. (L.) Belonging to *Pinus*, a pine.

P. pur'gans. The *Jatropha curcas*.

Ping'hwah harjam'bi. The same as *Penjavar yambi*.

Pingo-pingo. Name for the root of *Ephedra andiva*, Order *Gnetaceæ*, imported from Chili, and used in bladder diseases.

Pinguecula. (L. *pinguis*, fat.) A small yellowish spot consisting of thickened tissue, but containing no fat, occurring as an abnormality in the conjunctiva, and situated close to the edge of the cornea.

Pingue'dinous. Resembling, or pertaining to, *Pinguedo*; fatty, greasy.

Pingue'do. (L.) Fat, fatness.

Pinguefy. (L. *pinguis*, fat, greasy; *facio*, to make.) To make fat.

Pinguicula. (L. *pinguis*.) 1. The same as *Pinguecula*.

2. Also, in *Bot.*, a Linn. Genus of plants, Class *Dianthia*, Order *Monogynia*.

P. vulgar'is. The butterwort, or Yorkshire sanicle, an unctuous plant, used as an application to chapped hands, and as a pomatum. The leaves are used, in broth, as an aperient by the country people of Wales.

Pinguid. (L. *pinguis*.) Fat (*adj.*) or fatty.

Pinguin. See *Bromelia pinguin*.

Pinguis. (L.) Fat (*adj.*) or greasy.

Pinguitu'do. (L.) Fatness, obesity.

Pinguoleum theobroma'tum. (L. *pinguis*; *oleum*.) Oil of theobroma.

Pinhole os. Term for a very small *Os uteri*.

Pinhole pu'pil. A syn. of *Pinpoint pupil*.

Pinho'nes in'dici. (F. *pignons d'Inde*.) The seeds of the *Jatropha curcas*.

Pini sylves'tris oleum. See under *Oleum*.

Pinic ac'id. (L. *pinus*, the fir-tree.) First discovered in French colophony or resin by Baup. It is soluble in alcohol, crystallises in triangular plates, and has an acid reaction.

Pinifolious. (*Pinus*; *folium*.) Having linear or coriaceous leaves, as the fir.

Pini'form. (*Pinus*; *forma*, likeness.) Like a fir-cone.

P. decussa'tion. Name for the decussation of the superior pyramids of the medulla oblongata. (Billings.)

Pinima. (*Pinus*.) Guibourt's term for pine resin.

Pinipic'rin. $C_{22}H_{36}O_{11}$. A brown, bitter, amorphous glucoside, insoluble in ether, soluble in water, obtained from the leaves and bark of *Pinus sylvestris*, and from the leaves of *Thuja occidentalis*.

Pinitan'nic ac'id. A variety of tannic acid which has been obtained from the leaves of *Pinus sylvestris*.

Pinite. $C_6H_7(OH)_5$. A crystallisable sugar found in the exudation from the trunk of *Pinus lambertiana* and *p. sabiniana*. It is dextrorotatory; it neither ferments with yeast, nor answers to Fehling's test; its therapeutic action is similar to that of Briançon manna.

Pini'tes. A name for certain fossil plants, or parts of them, supposed to belong to the Genus *Pinus*.

P. succin'ifer. (Göppert.) An extinct coniferous tree, the source of the fossil-resin *Amber* (q.v.).

Pink. (Mid. E. *pinken*, to pinch; from *pick*.) Flower so named because of cut or peaked edges of corolla; colour named from the flower.

1. *Bot.* The Common Pink or Carnation; also, generic term for the *Pinks*, synonymous with *Dianthus*.

2. The colour characteristic of the corolla of the common pink.

P., Caroli'na. *Spigelia marilandica*.

P., clove. See *Clove pink*.

P.-eye. A specific contagious fever, very similar to Influenza, occurring in the horse, and so named from the colour of the inflamed conjunctiva.

P.-fe'ver. The same as *P.-eye*.

P., ground. *Silene virginica*.

P., In'dian. The *P., Carolina*.

P., Mary'land. *P., Carolina*.

P., wild. The *P., ground*.

P. yeast. The *Saccharomyces glutinis*.

Pinkneya. See *Pinckneya*.

Pink'root. The *Spigelia marilandica*.

P., Demerara. The *Spigelia anthelmia*.

Pin'na. (Collateral form of *L. penna*, a wing, feather.) 1. The expanded part of the external ear, also called the *Auricle* (F. *lobe d'oreille*; G. *das äussere Ohr*). 2. The nostril or ala nasi.

3. In *Bot.*, the leaflet of a pinnate leaf.

P. mari'na. The *Byssus* of molluscs.

Pinna'culum. Late Latin. (*Pinna*, a peak, a pinnacle of a building, the top of an arch.) Term applied to the *Uvula* by Wedelius (*P. fornicis gutturalis*).

Pin'næ. Nom. pl. of *Pinna*.

P. dila'tor. The depressor *alæ nasi*.

P. he'patis. The lobes of the liver.

P. nar'is. The *Alæ nasi*.

P. na'si. The same as *P. naris*.

Pinnate. (L. *pinna*.) Feathered; having leaves proceeding laterally from one stalk.

Pinnatifid. (L. *pinna*; *fido*, to cleave.) Term applied to leaves cleft transversely into oblong, parallel segments.

Pinnatulate. (Low L. *pinnatulatus*, dim. of L. *pinnatus*.) *Bot.* Subdivided a second time.

Pinni'ferous. (L. *pinna*, in the sense of a fin; *fero*, to bear.) Fin-bearing.

Pinnigra'da. (L. *gradus*, a step.) Syn. for *Pinnipedia*.

Pinnigrade. Moving by means of fins; also, a member of the Group *Pinnigrada*.

Pinniner'vate. See *Penninervate*.

Pinnipe'dia. Nom. pl. (L. *pinna*, a fin; *pes*, *pedis*, a foot. F. *pinnipèdes*.) The *Aquatic carnivora*, a group of *Mammalia* in which all four limbs are modified, to a greater or less extent, to form fins. This group includes the *Phocidæ*, *Otariidæ*, and *Trichecidæ*.

Pinnisect'ed. (L. *sectus*, from *seco*, to cut.) The same as *Pinnatifid*.

Pin'nula. (Dim. of *pinna*.) A little feather; a leaflet. Term for a leaflet of a bipinnate or tripinnate leaf; also, a little fin.

Pin'nulate. (*Pinnula*.) Furnished with *Pinnulæ*. See *Pinnula*.

Pi'no'l. A name for *Oleum pini pumilionis*.

Piñoncil'lo tree. The *Castigleonia lobata*.

PINPOINT—PIPER

Pin'point pu'pil. See under *Pupil*.

Pint. (Sax. *pynt*. F. *pinte*, chopine; G. *Nössel*.) A liquid measure containing twenty fluid ounces, and forming one eighth part of a gallon.

Pin'ta. (F. *pinta du Mexique*; S. *Mal de los pintos*; root *pintar*, signifying to paint.) An endemic skin disease of Mexico, characterised by the presence of blotches, chiefly on the breast, extremities, and about the eyes, at first of a yellowish hue, but afterwards blue, and finally black. The diseased skin becomes rough and irritable, and ulcerates. The disease is thought to be due to a vegetable parasite.

Pinus. (F. *pin*. G. *Fichte*.) A Genus of the *Coniferae*, many of whose species yield resin. Also, the *Pineal gland*.

P. a'bies. The *Abies excelsa*.

P. austra'lis. Marsh-pine or pitch-pine. It is common in the Southern U. S., and is the chief source of American turpentine and resin. (Billings.)

P. balsam'ea. *Abies balsamea*, the Balm of Gilead fir, the source of *Canada balsam*.

P. Banksia'na. A North American species. Its cones are used in Canada as a sudorific.

P. canadensis. *Abies canadensis*.

P. can'dicans. The *P. picea*.

P. ce'drus. The wood of this species is very odorous (cedar wood; see *Libanus*); its other properties are similar to those of the fir.

P. cem'bra. The stone-pine. Hab., Central Europe and Siberia. This species yields *Carpathian balsam* and *Briançon turpentine*; the shoots afford, by distillation, *Riga balsam*.

P. damar'ra. The *Dammara orientalis*.

P. excel'sa. The *P. abies*.

P. gal'lica. The *P. picea*.

P. Lambertia'na. A native of Oregon and California. The source of *Pinit*.

P. larc'io. The Corsican pine. Hab., S. Europe. One of the sources of turpentine.

P. lar'ix. The larch, from which are obtained *Venice turpentine*, *Orenburgh gum*, and *Briançon manna*.

P. marit'ima. The *P. pinaster*.

P. massonia'na. A peculiar fungus, brown externally, white within, which grows upon the exposed roots of this species; and a decoction is used by the Chinese and Japanese for diseases of the bladder and lungs.

P. mu'ghos. The *P. pumilio*.

P. ni'gra. The black spruce fir. Hab., North Europe. The syrup, obtained by boiling the young branches and concentrating the liquor formed, is termed essence of spruce, and is used in making spruce beer.

P. palus'tris. The same as *P. australis*.

P. pectina'ta. The same as *Abies pectinata*.

P. pi'cea. The silver or common fir, from which *Strasburg turpentine* is obtained.

P. pinas'ter. The cluster-pine of South-western Europe; one of the sources of *Oil of turpentine*.

P. pinea. The stone-pine. The fresh young fruit is eaten where it grows, and is aperient and diuretic.

P. pumil'io. (L. *pumilio*, a dwarf.) The mountain or Mugho pine; the source of *Hungarian balsam*, and of *Oleum templinum*, or *Oleum pin. pumilionis*.

P. sabinia'na. The trunk of this species,

as well as that of *P. Lambertiana*, exudes *Pinites*.

P. sylves'tris. The Scotch fir. One of the sources of common turpentine, pitch, and resin.

P. tæ'da. The Loblolly pine of S. America. One source of *Thus americanum*.

P. taxifo'lia. The *P. picea*.

P. uber'rima. The *P. pinea*.

P. vulgar'is. The *P. picea*.

Pi'on. (Πίον, fat, rich milk.) Fat (*substantive*).

Pionorrhœ'a. (Πίων (adj.), fat; πῑω, to flow.) A morbid discharge of fat, *Pimelorrhœa*.

Piorthopnœ'a. (Πίων; orthopnœa.) *Pimelorthopnœa*.

Pi'oscope. (Πίον; σκοπέω, to look at.) A form of *Lactometer*.

Pioxæ'mia. The same as *Piarhæmia*. (Dunglison.)

Pip. (Mid. E. *pippe*, *pyppe*; Mod. L. *pipita*; L. *pituita*. F. *pepie*; I. *pipita*; G. *Pipps*.) A disease, occurring in birds, in which there is secreted an abundance of mucus in the mouth and throat, and the tongue often becomes coated with a scaly covering.

Pipe. (Anglo-Sax. *pipe*.) A musical instrument formed of a long tube; hence, a tube.

P. gamboge'. A name for cylindrical pieces of gamboge, some of which are hollow from loss of the juice. (Billings.)

P. plant, In'dian. See *Monotropa uniflora*.

P., tobac'co. (Span. *tabaco*, a word taken from the Haytian language.) Pipes were used for tobacco-smoking in America for an unknown period before Columbus' arrival there. Tobacco-smoking was unknown in Europe previously to the discovery of America; but it is thought that the Romans used pipes (of iron, clay, and bronze) for smoking hemp or aromatic herbs, or for the burning of incense. The *Smoker's plaque* appears to be due to irritation from the constant impinging of smoke from the pipe-stem on one part of the tongue. The constant smoking of a clay pipe with an unguarded stem appears to be often an exciting cause of cancer of the tongue. See *Tongue, cancer of*.

Pi'per. (L. From Gr. *πίπερι* = *πέπερι*, pepper, the pepper tree.) 1. Pepper. 2. *Piper nigrum*, B. Ph. 3. A Genus of plants, Nat. Order *Piperaceæ* (F. *poivre*; G. *Pfeffer*).

P. Afzel'ii. See *P. Clusii*.

P. al'bum. White pepper, obtained from the same tree (*P. nigrum*) as black pepper. It consists of the ripe fruit freed from its outer coat after maceration.

P. amal'go. An American species. Fruit used as a condiment.

P. angustifo'lium. A South American herb. See *Matico*.

P. anisa'tum. Hab., South America. The crushed seeds have a strong smell of anise, hence the name. The seeds are used like those of other peppers, and a decoction has also been used for washing ulcers.

P. aromat'icum. The *P. nigrum*.

P. be'tel or be'tle. This climbing shrub produces a kind of pepper. It is cultivated in India and other parts of Asia; the natives make a mixture with it called *Betel*, which they chew.

P. brazilia'num. The fruit of the Cayenne-pepper plant, *Capsicum annuum*.

PIPERACEÆ—PIPTOSTEGIA

P. callout'icum. Another name for *P. brazilianum*.

P. capen'së. Hab., S. Africa. Characters and actions similar to those of *Cubeba*.

P. carpo'piga. Leaves used in dyspepsia, and as an insecticide.

P. carpun'ya. Hab., Peru and Chili. A small tree, a preparation from whose leaves is used in dyspepsia.

P. caryophylla'tum. The *Phyllus pimenta*, or allspice tree.

P. cauda'tum. The *P. cubeba*.

P. churumay'a. Similar in Hab. and uses to *P. amalga*.

P. citrifol'ium. See *P. churumaya*.

P. Clu'sii. The same as *Cubeba Clusii*, or African black pepper.

P. croca'tum. See *P. churumaya*.

P. crystalli'num. See *P. churumaya*.

P. cube'ba. Hab., Java. The plant whose dried berries are termed *Cubeba*.

P. decortica'tum. *P. album*.

P. elonga'tum. A syn. of *P. angustifolium*.

P. favas'ci. A name for the *Myrcia acris*.

P. guineën'së. A syn. of *P. brazilianum*.

P. heterophyl'ium. Similar in Hab. and uses to *P. amalga*.

P. hispan'icum. A syn. of *P. brazilianum*.

P. in'dicum. A syn. of *P. brazilianum*.

P. jamaicen'së. The *Myrtus pimenta*.

P. lon'gum. A shrub grown in India and Ceylon, a source of *Piperine*. Also, the dried spikes or immature fruit of the same plant. Action, like Cayenne pepper, but weaker.

P. lusitan'icum. Cayenne pepper.

P. methys'ticum. A species growing in the Polynesian Islands. The root is called *Kava-kava*; it is used by the natives as a sialogogue, and they make from it a fermented drink. Its active principle, kavain, kavalin, or methysticin (see *Methysticin*) is allied to *Piperine*. *Kava-kava* also contains two resins, and an essential oil. It is a bitter tonic and diuretic; has been found to have a local anæsthetic action on the eye and tongue; and has been used with success in gout and in gonorrhœa.

P. mura'lë. The *Sedum acrë*, or wall pepper.

P. ni'grum. 1. The plant from which the *P. nigrum* of the B. Ph. is obtained, the pepper-vine of the East Indies.

2. The *P. nigrum* of the B. Ph. The small, wrinkled, dried, unripe berries of *P. nigrum*; carminative and stomachic; given in the form of confection (see *Confectio piperis*) for piles.

P. odora'tum jamaicen'së. See *P. jamaicensë*.

P. officinar'um. *P. longum*.

P. reticula'tum. The leaves of this species form one of the varieties of *Jaborandi*; they contain *Pilocarpine*.

P. sanc'tum. Hab., Mexico. Leaves used as a condiment.

P. siribo'a. The leaves are used for the same purpose as those of *P. betel*. (Billings.)

P. tabas'cum. *Myrtus pimenta*.

P. tur'icum. *Capsicum annuum*.

Piperaceæ. Order I in the Series *Hypogynæ* of the *Monochlamydeæ*.

Piperaz'idine. The same as *Piperazine*.

Pipera'zine. A compound closely allied to *Spermine*; its formula is given as $C_8H_{10}N_2$;

its chemical name being di-ethylenediamine, or ethylen-imine. It is said by several observers to be a powerful solvent of uric acid, and has been administered with apparently great success in gout, and renal colic, causing marked diminution in the amount of crystallised urates, and increasing diuresis. It has been given internally in doses of from 15 to 30 grains daily; it has also been used hypodermically in a 2 per cent. solution to dissolve deposits of urates, and a solution of the same strength has been injected into the bladder.

Pipercoorn. (Dutch.) The name for a form of *Typhus*, epidemic in Holland during part of the sixteenth century. (Dunglison.)

Piperic acid. One of the products formed on the treatment of *Piperine* with alcoholic potash.

Piper'idine. ($C_5H_{11}N$.) A substance formed, together with *Piperic acid*, from *Piperine* when this is treated with alcoholic potash; made also synthetically by treating *Pyridine* with nascent hydrogen; also derivable from *cadaverine*. It is a strongly alkaline liquid at ordinary temperatures.

Piperine. ($C_{17}H_{19}NO_3$.) A crystalline base obtained from the fruits of *Piper longum* and *Piper nigrum*. Colourless prisms, turning yellow on keeping, insoluble in water, soluble in alcohol, almost tasteless. Used in neuroses, and as an antipyretic. Dose, 1—10 grains.

Piperitis. (*Piper*; from the pungent taste of the leaves and root.) A name formerly applied to the herb *Dittany*; also, to a species of *Lepidium*, and to *peppermint*.

Piperitus. (*Piper*.) Of, or belonging to, pepper.

Piperoid. An ethereal extract of ginger root; it forms a syrupy mass, soluble in alcohol and the various oils. Also called *Zingiberin*.

P. of gin'ger. See *Oleoresina zingiberis*.

Piper'onal. $C_8H_6O_3$. A complex ethereal aldehyd formed by oxidation of *Piperine*, or by distillation of a mixture of a weak solution of potassium piperate with one of potassium permanganate. It is antipyretic and antiseptic.

Piperopas'tus. (*Πίπερι*, pepper; *παστός*, sprinkled.) Sprinkled with pepper.

Pipette. (*F. pipette*. I. *pipetta*.) A narrow, usually graduated, tube, wide-open at one end and, at the other, drawn to a fine, perforated extremity. Used for drawing up small quantities of liquid by suction applied at the wide-open end.

Pi-pi. The astringent legumes of the *Cesalpinia papai*.

Pipin'na. (*F. pipinne*.) A little penis.

Pipitzaho'ac. Mexican name for the rhizome and rootlets of *Perezia fruticosa*, which have a drastic purgative action.

Pipitzaho'ic acid. The active principle of *Pipitzahoac*; a yellow, crystalline, resinous body. It acts as a powerful purgative in doses of '3 to '6 grammes.

Pipitzahu'ac. The same as *Pipitzahoac*.

Pipmen thol. Commercial name for a variety of menthol prepared from American oil of peppermint.

Pipsis'sewa. A name for the *Chimaphila umbellata*.

Piptony'chia. (*Πίπτω*, to fall; *ὄνυξ*, a nail.) Falling off of the nails, *onychoptosis*.

Piptostegia opercula'ta. *Convolvulus operculatus*.

PIQUE—PISTACIA

P. piso'nis. *Convolvulus mechoacana.*
Pique. (F. *pique*, a point, pike.) 1. A name for *Argas nigra*, a blind tick which sometimes causes sores on men or animals.

2. A name for the *Jigger* or *Chigoe*.

Figure. (F.) A punctured wound, or puncture.

P. anatomique. Dissection wound.

P.s médecins. "Puncture doctors." A term applied at one time in Paris to those physicians who had a furor for acupuncture. (Dunglison.)

P'ria-Sta'deler's test for ty-ro-sin. The urinary sediment is warmed with strong sulphuric acid, by which a temporary red colour is produced. The solution is diluted with water, then boiled with barium carbonate and filtered; and dilute perchloride of iron solution is added, drop by drop. If tyrosin is present, a violet colour is obtained. (Geissler and Möller.)

Pir'ogoff, Nik'olai Iwan'o-witsch. A Russian surgeon, born 1810, died 1881.

P.'s amputa'tion. A modification of Syme's amputation of the foot, in which the posterior part of the os calcis is saved, and applied to the cut end of the tibia and fibula, to unite with them, and form a longer stump.

Pir'ola rotundifolia. Order *Eri-caceæ*. The leaves of this plant are astringent, and are applied to wounds.

P. ellip'tica. (Nuttall.) Used in America as an emetic.

Pi'sa. A town in Italy. Climate mild and damp, and considered especially suitable for many cases of consumption. There are two warm springs, at 39° C. and 51.2° C. respectively; and one at a temperature of 24° C.

Pisang. The banana.

Piscatology. (L. *piscator*, a fisherman; Gr. λόγος, narrative, history.) Syn. for *Ichthyology*.

Pis'ces. (Plural of L. *piscis*, a fish.) Fishes. Sub-kingdom, *Vertebrata*. A Class of aquatic animals which breathe, by means of gills, the oxygen dissolved in water. In Fishes, the skin bears scales and lateral sense-organs; the four limbs take the form of two pairs of fins. Electric fishes and eels have no scales.

Pisciarel'li, min'eral wa'ters of. At Monte Secco, in Italy. A hot spring, containing, in 1000 parts, ferrous sulphate 2.73, and aluminium sulphate 2.08.

Pisci'colous. (L. *piscis*, a fish; *colo*, to inhabit.) Parasitic upon fishes.

Pis'ciculture. (L. *piscis*, a fish; *culture*. F. *aquiculture*; G. *Fischzucht*.) The counteracting of the destructive effects of fishery by means of reparative and preventive measures; by "fishery," being understood the taking of all sea, lake, and river products, including the capture of whales, corals, sponges, pearls, &c. (*Encycl. Britann.*)

Pisc'ulus. (Dim. L. *piscis*, a fish.) A little fish. A name for the *Musculus coraco-radialis*.

Piscid'ia erythri'na. (L. *piscis*; *cedo*, to kill. Gr. ἐρυθρός, red.) The *Jamaica dogwood*, a small tree, Order *Leguminosa*, growing in the West Indies, and used to poison fish. It appears to be narcotic, and a tincture of the root-bark has been used for toothache. (Dunglison.) In America, a fluid extract has

been used in asthma, urinary diseases, mental diseases, &c. It is a mydriatic.

Pis'cidin. The neutral active principle of *Piscidia erythrina*.

Piscifaun'a. (L. *piscis*; *fauna*.) The fish-*Fauna* of a region.

Pisci'vorous. (L. *piscis*, a fish; *vor*, to devour.) The same as *Ichthyophagous*.

Pish'amin. The same as *Persimmon*.

Pi'siform. (L. *pisum*, a pea.) Pea-shaped.

P. bone. (F. *pisiforme*; G. *Erbsenbein*.) The fourth bone of the upper or proximal row of carpal bones, articulating with the palmar surface of the *cuneiform*. It gives attachment to the *flexor carpi ulnaris*, and the *abductor minimi digiti*, as well as to the *anterior annular ligament*. It is thought by some to be a *sesamoid* developed in the tendon of the *flexor carpi ulnaris*.

P. tu'bercles. The *Corpora albicantia*.

Pisiform'e, os. (L. *pisiformis*, *pisiform*.) *Pisiform bone*.

Pis'mire. Name for the *Formica rufa*.

Pi'so. (L. *pisere*, to pound in a mortar.) Old name for a mortar, *Mortarium*.

Pi'so-hama'tus. (See *Ligamentum piso-hamatum*.) The same as *Piso-uncinatus*.

Pi'so-uncina'tus. An occasional muscle, replacing the *ligamenta piso-uncinata*.

Pisonia. A Genus of plants, Order *Nyctagineæ*, whose species have properties similar to those of *Boerhaavia*.

Piss-a-bed. (From its repute as a diuretic.) The *Taraxacum officinale*.

Pi'ssa. (Πίσσα, pitch, also tar.) Pitch.

Pissakal'los. (Πίσσα; κάλλος, beauty.) The same as *Pissasphaltus*.

Pissasphal'tus. (Πίσσα; ἄσφαλτος, asphalt, bitumen.) Old term for the thicker kind of rock-oil.

Pisselæ'on. (Πίσσα; ἔλαιον, oil.) Old name for a compound medicine of pitch mixed with oil; also, for *Pix liquida*.

Pisselæ'um. The same as *Pisselæon*.

P. in'dicum. A name for *Petroleum*.

Pissemeti'na. See *Pittemetina*.

Pisse'res. (Πισσήρης, a pitch plaster.) See *Tetrapharmacum*.

Pisse'ros. (Πισσηρός = πισσῆεις, smelling or tasting of pitch.) The same as *Pisselæon*.

Pissi'tes. (Πισσίτης; οἶνος πισσίτης, wine flavoured with pitch, Diosc. F. *pisSITE*; G. *Pechwein*.) Term for wine flavoured with pitch.

Pissoce'ron. (Πισσόκηρος, beeswax.) Term for a mixture of pitch and wax.

Pissocopi'a. (Πισσοκοπία.) The removing of hair by pitch plasters. (Aretæus.) Also, see *Pitch cap*.

Pisso'phanum. (Πίσσα; φαίνομαι, to be clear.) Term introduced by Breithaupt for a resinous kind of rock-oil.

Pisso'sis. (Πίσσα.) The same as *Pisso-copia*.

Pista'chio nut. See *Pistacia nux*.

Pista'cia. (Πιστάκη; πιστάκια, fruit of the πιστάκη.) A Genus of plants, Order *Anacardiaceæ*.

P. atlan'tica. Hab., Mauritania. This plant yields a mastic which is used for the same purposes as the mastic of *P. lentiscus*.

P. chi'a. The *P. lentiscus*.

P. lentis'cus. A native of Scio. The shrub whose bark yields the resin *Mastiche* (q. v.).

PISTACITE—PITTACAL

P. narbonensis. The *P. terebinthinus*.
P. nux. The nut of the *P. vera*, resembling the sweet almond in taste; it can be made into an emulsion, and it affords an oil.

P. reticulata. The *P. terebinthinus*.

P. terebinthinus. A Mediterranean tree. Its trunk, when incised, exudes *Chian turpentine*.

P. vera. A tree, native of Western Asia, which yields the *Pistachio nut*.

Pistacite. The same as *Acanticonite* or *Epidote* (q. v.).

Pistation. See *Epistation*.

Pistia. A Genus of the Order *Aroideæ*. The herbage of species belonging to this Order, brought from Central Africa, was at one time used as an emollient and refrigerant.

Pistil. (L. *pistillum* and *pistillus*, a pounder, the pestle of a mortar.) The female organ of reproduction in a flower, generally situated in the centre of the flower. It is composed of *ovary*, *style*, and *stigma*.

Pistillate. Having a *Pistil*.

Pistillidium. (Dim. of *Pistillum*.)

Bot. The same as *Archegonium*.

Pistilliferous. (L. *pistillum*; *fero*, to bear.) The same as *Pistillate*.

Pistilline. Belonging to a *Pistil*.

Pistillody. (*Pistillum*; Gr. *eidōs*, form.)

Bot. The metamorphosis into pistils or carpels of various other floral organs.

Pistillum. (L. *pistillum*; from *pinso*, *pistum*, to pound.) A pestle; also, a *Pistil*.

Pistol-splint. See under *Splint*.

Pistolochia. (Πιστός, faithful; λοχία, child-birth.) A name for the *Aristolochia serpentaria*. So called because it was believed to promote parturition.

Pistoriensis, gladius. See under *Gladius*.

Pistyan. The same as *Pistyn*.

Pistyn. In Galicia. Noted for its hot spring, which contains .023 parts of sulphuretted hydrogen per 1000.

Pisum. L. (Πίσον = πίσος, a kind of pulse, or pea. F. *pois*; G. *Erbse*.) The Genus *Pea*, Order *Leguminosæ*.

P. sativum. The common pea.

Pit. (Sax. *Pitt*.) A depression. Applied medically to the permanent impression made by the finger in oedematous tissues, which are said to *pit* on pressure.

Also, a depressed scar left after the formation of a pustule, e.g. the pock-mark of smallpox.

P.s. See *Pit*. Also, in *Bot.*, round areas in the cell-wall of a plant, either single or grouped, which remain thinner than the rest of the cell-wall. (Sachs.)

P., arm-. The *Axilla*.

P.s, bordered. *Pit-canals* which open out of the interior of a cell, and suddenly widen as they reach the primary cell-wall. (Sachs.)

P.-canals. *Bot.* *Pits* which have become enclosed as canals from excessive increase in thickness of the surrounding parts of the cell-wall. (Sachs.)

P. of the stomach. Lat., *scrobiculus cordis*. The depression in the epigastric region between the cartilages of the false ribs, corresponding to the position of the greater part of the stomach.

P.s, olfactory. See *Olfactory pit*, *primitive*.

Pitaya bark. The same as *Pitayo bark*.

Pitayamin. An alkaloid discovered by Hesse in the bark of *Cinchona pitayensis*; it is quite distinct from the other cinchona alkaloids.

Pitayin. The same as *Quinidin*.

Pitay'o bark. The bark of *Cinchona pitayensis*.

Pitcaithley. A place in Scotland, four miles from Perth, and noted for its saline springs, which contain common salt and calcium chloride. (Dunglison.)

Pitch. (F. *poix*; I. *pece*; G. *Pech*.) See *Pix*.

Also, in music, the quality of a sound depending upon the rapidity of the vibrations; rapid vibrations producing a sound of high pitch.

P., birch. A name for the oil distilled from the bark of *Betula alba*.

P., black. Common pitch.

P., Burgundy, factitious. Made by melting together yellow resin, linseed oil, and palm oil, cooling and pulling with the hands. It is sold in "bladders."

P., Canada. See *Hemlock gum*.

P. cap. (F. *la calotte*.) This was, until about 1850 or 1860, the universal application for *Favus*, as it was supposed that the hairs were the source of irritation, and that they ought to be removed by depilation. The plaster was made of starch, verdigris, vinegar, black pitch, resin, Burgundy pitch, and an alloy of mercury and antimony. These ingredients, well mixed, were spread on a stout cloth, and the whole was applied to the scalp, from which the crusts had been previously removed, and the hair cut short. This plaster was removed after three or four days, tearing out a number of hairs; and then a fresh one was applied. This treatment was continued for two or three months, if necessary. The disuse of this barbarous treatment is due to the brothers Mahon.

P., hem'lock. The same as *P., Canada*.

P., Jew's. *Asphaltum* or *Bitumen Judaicum*.

P., min'eral. *Pissasphaltus*.

P. pine. The *Pinus australis*.

P. plaster. See *Emplastrum picis*.

P., stone. Common pitch.

P. tree. The *Pinus abies*.

P., white. *Pix burgundica*.

Pitcher. *Bot.* A tubular expansion of a leaf, for catching insects. A pepsin ferment is secreted by the tissues of the pitcher, which thus digests the insects caught. (Sachs.)

P. plant. The *Sarracenia purpurea*.

Pith. (Mid. E. *pith*, marrow.) 1. Substantive. In *Bot.*, the *medulla* of the stem of Dicotyledons, occupying the centre of the stem and composed of parenchymatous tissue.

In *Anat.*, the central portion of a hair; also an old term for the spinal cord.

2. Verb. (From *pith*, the noun.) To destroy the medulla oblongata or an adjoining part of the brain of an animal by introducing a sharp instrument into the cranium or the upper part of the spinal canal.

Pithecollobium avaremoremo. A Brazilian tree. See *Barbatimao bark*.

Pithe'cus. (Πίθηκος, an ape.) The same as *Simia*.

Pith'y. Abounding in pith.

Pit'ta. (Πίττα = πίσσα.) See *Pissa*.

Pit'tacal. (Πίττα; κάλλος, beauty.) Name for a solid substance of a fine blue colour obtained from oil of tar.

PITTACIUM—PIVOTING

Pitta'cium. (Πίττα.) Old term for a pitch plaster.

Pitted. Marked with pits or depressions, *e. g.*, a face after smallpox.

P. teeth. Teeth having defects in the enamel, causing slight depressions. Also called "honey-combed" teeth.

P. ves'sels. *Bot.* Also called dotted ves'sels; *wood vessels* with bordered pits.

Pittemet'ina. (Πίττα; *εμίω*, to vomit.) Term for the emetic principle of *Piz liquida*.

Pitting. The formation of a pit or pits. See *Pit*.

Pitto'sis. The same as *Pissosis*.

Pitto'ta. (Πιττωτά = πισσωτά, *nom. pl. n. of πισσωτός*, covered with pitch.) Old epithet for medicines prepared from pitch.

Pitts'burg. A town in Pennsylvania. About four miles distant from this town is a mineral spring, containing sodium chloride, oxide of iron, sulphate of lime, magnesium chloride, and carbonic acid. (*Dunghison*.)

Pitu'ita. (*L.*) Phlegm, viscid mucus.

Pitu'ital. The same as *Pituitary*.

Pituitar'ia. (*Pituita*.) The herb *Staves-acre*, which dries up rheum. (*Plin.*)

Pitu'itary. (*L. pituita. F. pituitaire; G. schleimig.*) Of, or belonging to, pituita or phlegm.

P. body. (*F. glande pituitaire; G. Hirnanhang.*) A small bilobed vascular mass attached to the *infundibulum* at the base of the cerebrum, and situated in the *Sella turcica*. The structure of the anterior lobe resembles that of a ductless gland.

P. divertic'ulum. An outgrowth taking place in the embryo from the mucous membrane of the back part of the pharynx, which assists in forming the *Pituitary body*.

P. fold. The two layers of dura mater which enclose the *Pituitary body*.

P. fos'sa. The excavation in the sphenoid bone, *Sella turcica*, in which the pituitary body rests.

P. gland. The *Pituitary body*.

P. mem'brane. (*F. membrane pituitaire; G. Nasen-schleimhaut.*) The mucous membrane which lines the nasal cavities, deriving its name from the character of its secretion; also called the *Schneiderian membrane*.

P. space. The space between the two *Trabeculae cranii* in which the pituitary body appears.

P. stem. The *Infundibulum*.

Pit'uite. The same as *Pituita*.

Pitu'itous. Containing, or resembling, *Pituita*.

P. fe'ver. See under *Fever*.

Pitu'ri. The leaves of *Duboisia Hopwoodii*. They contain *Piturine*.

Pitu'rine. A volatile liquid alkaloid prepared from the leaves and branches of the Australian plant *Pituri*, which is probably the *Anthocoris Hopwoodii* (*Duboisia Hopwoodii*), of the Order *Solanaceæ*. The alkaloid has been thought by some to be identical with *Nicotine*; but others have given its formula as C_6H_8N , or $C_{12}H_{16}N_2$. It is used as a mydriatic (*Brunton*), and also, by the natives, as a narcotic.

Pityox'ylon succini'ferum. (*Kraus.*) The *Pinites succinifer*.

Pityre'nus. (Πιτυρηνός; from *πιτυρον*.) Branny, scurfy. See *Pityron*.

Pityri'asis. (Πίτυρον, bran, a bran-like

eruption. *F. pityriase; I. pityriasi; G. Kleien-grind.*) A condition of skin characterised by the presence of branny epidermic scales, which repeatedly form and separate without inflammation. Also termed *P. simplex*.

P. al'ba. The same as *P. capitis*.

P. cap'itis. A scaly condition or "dandruff," depending on an affection of the sebaceous glands. The scales, which are white, thin, and dry, are thrown off and renewed abundantly. There is usually no redness of the skin.

P. folia'cea ru'bra. The same as *P. rubra*.

P. furfura'cea. A syn. for *Seborrhœa sicca*.

P. fus'ca. (*L. fuscus*, brown or dusky.) This variety occurs in tawny-red, irregularly-round patches, from about a half to one inch in diameter, mostly on the face and neck. The patches are slightly thickened, and are covered over with white, floury scales. There is usually no itching.

P. gravidar'um. The *Chloasma uterinum* of pregnancy.

P. lin'guæ. *Leukoplakia*.

P. macula'ta et circina'ta. The same as *P. rosea*.

P. neonato'rum. The *Seborrhœa capitis* of infants.

P. ni'gra. A form of *Melanoderma*, described by Willan as occurring in children born in India.

P. pilar'is. The same as *Keratosis pilaris*.

P. ros'ea. A slight skin disease, lasting from two weeks to about two months, characterised by the appearance of bright pink macules and papules, covered with delicate scales, on the neck, chest, and abdomen.

P. ru'bra. ("Eczema foliaceum," *Wilson*, 1867; *Universal exfoliative or desquamative dermatitis*.) A severe, obstinate skin disease, by some regarded as a form of eczema, characterised by one or more patches of erythema beginning, most commonly, on the chest or arms, and spreading over the whole body in from two days to two or three weeks. Thin, white, papery scales form, become early detached at the margins, and are abundantly shed; the patches of skin between the scales are bright red and dry. It often follows upon other skin diseases. Fever may accompany the disease, and emaciation and, occasionally, albuminuria may come on. Relapses may occur; but the disease often persists and leads to death from exhaustion, pneumonia, bronchitis, or diarrhœa.

P. sim'plex. See chief heading.

P. tabescen'tium. The same as *Seborrhœa tabescentium*.

P. versi'color. *Tinea versicolor*.

Pityris'ma. (Πιτύρισμα = *πιτυρίασις*.) *Pityriasis*.

Pityro'des. (Πιτυρον; *εἶδος*, form, likeness.) *Pityroid*.

Pity'roid. (*Pityrodes*.) Bran-like.

Pity'ron. (Πιτυρον, a bran-like skin eruption, especially scurf.) Detached branny scales of epidermis; scurf.

Piv'ot joint. A form of articulation in which the movement takes place within a ring, or in a ring round a fixed body; *e. g.* the superior radio-ulnar joint, and the atlo-axoid joint.

Piv'oting. The process of attaching an artificial crown to the root of a tooth.

Also, in *Bot.*, a main root which grows verti-

cally downwards is spoken of as "pivoting." (Littre.)

Pix. (L. *pix*, *picis*; from Gr. *πίσσα*. F. *poix*; G. *Pech*.) Pitch; a substance obtained from various pines, either as a product of exudation in the form of resin, or, as a thick, brown, viscid substance, and separated by destructive distillation.

P. abietina. Strasburg turpentine; see *Pinus picea*.

P. alba. *P. burgundica*.

P. arida. A name for pitch from various species of *Pinus*.

P. atra. *P. nigra*.

P. betulæ. Birch-tar. See *Tar*.

P. brutia. See *Brutia pix*.

P. burgundica. (F. *poise blanche*, *poise jaune*.) The resinous exudation from the stem of *Abies excelsa*, imported from Austria. Used in plasters as a rubefacient.

P. canadensis. The pitch, *Hemlock gum*, obtained from *Pinus canadensis*. Properties and uses identical with those of *P. burgundica*.

P. cedria. *P. liquida*.

P. græca. *Colophony*.

P. liquida. (F. *poise liquide*.) Tar; a brownish-black, thick, bituminous liquid obtained by the destructive distillation of the wood of *Pinus sylvestris* and other pines. It is a mixture of carbolic acid, creasote, toluol, xylol, turpentine, acetic acid, and resins. Tar is used as a stimulant and antiseptic externally, to the skin; internally, in the form of pill or tar-water, in cases of bronchial catarrh. Dose, 2 to 10 grains.

P. nigra. Black or common pitch, inspissated tar.

P. solida. *P. nigra*.

P. sutoria. (L. *sutorius*, belonging to a shoemaker.) Shoemaker's pitch, common pitch. See *Pix*.

Place'bo. (1st pers. sing., fut. indic. of L. *placeo*, to please; lit. "I will please.") Name for a medicine given by a doctor to a patient simply to please or satisfy the patient's mind; usually of a harmless nature, e. g. water coloured with cochineal.

Placenta. (Πλακοῦς, πλακούντος. L. *placenta*, a flat cake.) 1. (F. *placenta*, *arrière-jaix*; G. *Mutterkuchen*, *Nachgeburt*.) The flat, fleshy mass formed by the intimate union of the villous chorion and the hypertrophied mucous membrane of the uterus, the villi protruding into the uterine sinuses, whose thin walls they push before them. It serves as the medium by which the foetus is nourished in utero, and is expelled, shortly after the birth of the foetus, together with the membranes and funis, as the *after-birth*. 2. In *Botany* (G. *Samenträger*), that portion of the wall of the ovary which in *phanerogams* bears the ovules; also, sometimes applied to the *Receptaculum* of *vascular cryptogams*.

P., accessory. The same as *P., succenturiata*.

P., adherent. A placenta which fails to separate at the usual time, the failure being generally due to the results of previous endometritis, or placentitis, or to the growth of fibroids.

P., annular. See *P., zonary*.

P., apoplexy of. An extravasation of blood into the substance of the placenta. This is a rare condition, and, when it occurs, is generally secondary to a utero-placental extravasation, the

effused blood having passed from the decidua serotina into the placental substance.

P., atrophy of. A wasting of the placenta due either to blood having been extravasated between the villi and so causing their death by pressure, or to placentitis; or else to atrophy of the decidua. It is an occasional cause of the death of the foetus between the sixth and ninth months.

P., axiferous. Bot. Term for a placenta which arises from either the base or the summit of the ovary.

P., axile. Bot. Term for a placenta which is formed by the carpellary leaves of a compound pistil folding inwards so as to meet in the centre of the ovary.

P., basal. Bot. Term for a free central placenta; that is, one which springs free from the bottom of the ovary.

P., basilar. The same as *P., basal*.

P., bat-tledore. (F. *placenta en raquette*.) An irregular placenta, in which the cord is attached to the edge instead of the centre.

P., bell-shaped. Term for that variety of placenta in which chorionic villi disappear from one pole of the placenta and the part about it, but persist at the other pole and the surrounding region, this pole being generally the one at the fundus of the uterus. This condition is found in *Lemurs* and some other Mammalia.

P., bipartita. (See *Bipartite*.) A syn. of *P. dimidiata*.

P., central. See *P., axile* and *P., basal*.

P., circular sinus of. See *Placental sinus*.

P., cirsoïdes. (Κίρσοειδής, varicose.) Term for a placenta in which the arteries are arranged in a cirroid manner.

P., cordiform. Term for a placenta which, owing to an indentation of the margin, has somewhat the shape of a heart.

P., cotyledonous. See under *P., non-deciduate*.

P., cruoris. (L. *cruor*, blood.) Term for a blood-clot.

P., cysts of. These are always found on the foetal side, and their contents are either viscid or hæmorrhagic. If the former, they are probably remnants of the allantois; if the latter, they are the result of extravasations of blood.

P., deciduate. The form of placenta in which at birth both foetal and maternal portions are shed closely interlocked together. This form has three varieties, viz.:—

a. Discoidal.—Villi developed over circular area, as in Rodentia, Insectivora, &c.

b. Metadiscoidal.—Villi at first scattered, afterwards confined to definite area, as in Man and the Simiidae.

c. Zonary.—Villi forming a partial or complete belt round embryo, as in Elephants, the Carnivora, &c.

P., development of. The placenta is developed from the chorion of the foetus and the decidua serotina of the mother, which become closely interlocked by their respective processes. The position of the placenta, in the human subject, can be recognised as soon as the second month of pregnancy, and its characteristic structure is demonstrable by the end of the third month.

P., diffusa. (L. *diffundo*, *diffusum*, to pour out. F. *disséminé*.) See *P., diffused*.

P., diffused. See under *P., non-deciduate*.

PLACENTA

P. dimidia'ta. (See *Dimidiate*.) A syn. of *P. duplex*, in the second of the two meanings.

P. discoi'dal. See under *P., deciduate*.

P. discoi'dea. (L. *discoideus*; from *δίσκος*, a quoit; *είδος*, likeness.) The same as *P., discoidal*.

P., diseas'es of. These are (1) placental apoplexy, or extravasations of blood; (2) placentitis and subsequent sclerosis; (3) fatty degeneration; (4) syphilitic disease; (5) tumours (rare): fibrous, sarcomatous, fibro-myxomatous, cystic.

P., dissem'inated. The same as *P., diffuse*.

P., dome-like. The same as *P., bell-shaped*.

P., doub'le. Term for the large placenta made up of two united placentæ in a case of twin pregnancy.

P. du'plex. (L. *duplex*, double.) The same as *P., double*.

Also, term used by some writers for a placenta which is separated into two masses, the only connection between them being by the membranes and part of the cord. The cord may bifurcate, one branch going to each placenta, or it may be inserted entirely into one, vessels passing to the other with the membranes. When one mass is very much smaller than the other, the term *P. succenturiata* is applied to the condition.

P. evan'ida. (L. *evanidus*, perishing, effaced.) Term applied to a placenta found in a case of *fœtus papyraceus*; the surviving ovum having grown beyond the normal size had so compressed the placenta of the dead fœtus as to reduce it to a thin dark-brown layer, devoid of recognisable structure. (Hyrtl.)

P., expul'sion of. This has been shown by Matthews Duncan to occur normally in such a way that the placenta is folded or rolled up, the lower edge coming out first.

P., extra-u'terine. This has been found of all sizes, the chief difference between this and the normal uterine placenta being the loose and ill-developed connection between maternal and foetal structures.

P., fatty degenera'tion of. A morbid process affecting the placenta, and especially the chorionic villi, occurring in retention of the placenta and also after inflammation.

P. febr'ilis. A name for *Aque cake*.

P., fenestra'ta. (L. *fenestra*, a window.) Term for a placenta in which a placenta succenturiata, semilunar in shape, is attached by the two horns to the main placenta, leaving in between a thin island of chorion, free from villi, and thus forming a fenestra. (Spiegelberg.)

P., fœ'tal. The same as *P. fetalis*.

P. fœ'talis. The chorion and its villi, constituting the larger half of the placenta.

P. frondo'sa. (L. *frondosus*, leafy, shaggy.) Term used somewhat loosely as a syn. of *Chorion frondosum*.

P., fun'dal. Term for a placenta which is attached mainly to the *fundus uteri*.

P., hæmorrhage into. This occurs as a consequence of congestion of the placenta, the result of violence or some general morbid condition, whereby bleeding occurs into the maternal or foetal portion of the placenta; a common cause of miscarriage.

P., horse-shoe. (G. *hufeisenförmige Placenta*.) Term for the condition in which the

placentæ of twins are united by a strip of placental tissue.

P., hydat'id disease' of. An incorrect term for a cystic myxomatous degeneration of the chorionic villi. See *Mole, vesicular*. True hydatid disease of the placenta is unknown.

P., hydatid'iform degenera'tion of. The same as *P., hydatid disease of*.

P., hydatigenous. The same as *P., hydatid disease of*.

P., hyper'trophy of. This is occasionally seen in connection with a perfectly healthy fœtus, but it is generally found in cases of hydrops amnii or in conjunction with dead, and especially macerated, fœtuses. The explanation is probably that given by Morgagni, that the maternal portion continues to grow after the death of the fœtus.

P. in placen'ta. "A placenta in a placenta." Term applied by Hyrtl to a sarcomatous tumour embedded and encapsuled in an otherwise normal placenta, the tumour having its blood-supply from a branch of the umbilical artery, round which branch its vein was twisted so as to resemble an ordinary umbilical cord.

P., incar'cerated. *P., retained*.

P. inclu'sa. (L. *inclusus*, from *include*, to shut in.) A syn. of *P., retained*.

P., lat'eral. Term for a placenta attached mainly to the lateral wall of the uterus.

P., marg'inal. One of the varieties of *P. prævia*.

P., marg'inal si'nus of. The same as *P., circular sinus of*.

P. margina'ta. (L. *marginatus*, to furnish with a margin.) Term for the variety of placenta in which the chorion is mainly attached only to the central portion of the foetal surface of the placental mass, so that its margin is free. (Kölliker.)

P. mater'na. (L. *maternus*, belonging to a mother.) The maternal portion of the placenta, forming the framework, in amongst which lie the chorionic villi, and constituting the lesser half of the whole structure.

P., mater'nal. See *P. materna*.

P. membrana'cea. (L. *membranaceus*, like a membrane.) An unnaturally thin placenta, spread over an unusually large surface of the *decidua*. Also, the same as *P. diffusa*.

P., mem'branous. The same as *P. membranacea*.

P., metadiscoi'dal. See under *P., deciduate*.

P. multilo'ba. (See *Multilobate*.) Term applied by Hyrtl to the condition where the lobes or cotyledons are quite separate one from the other, but placed near together.

P., myx'oma fibro'sum of. See *Myxoma fibrosum*.

P., non-decid'uate. The form of placenta in which, at birth, the foetal and maternal portions separate more or less completely, the former portion alone being shed. There are two varieties of this form, viz.:—

a. *Diffuse*.—Villi scattered over the uterine surface, as in Ungulata (except Ruminantia) and in certain Primates (Sirenia, Cetacea, Lemniscata).

b. *Cotyledonary*.—Villi in patches, as in true Ruminantia.

P. obla'ta. (L. *oblatus*, proffered.) A term for *P. prævia*.

P. obsole'ta. (L. *obsoletus*, worn out.)

PLACENTA

Term used by Hyrtl for the rare condition in twin pregnancies in which the two placenta are entirely distinct the one from the other.

P. ob'via. (L. *obvius*, offering itself.) *P. prævia*.

P., œdema of. A condition occasionally found, in which there is considerable serous exudation into the placenta, causing it to be paler and more friable than normal, a yellowish serous fluid oozing out either spontaneously or on pressure. It is commonly found associated with hæmorrhages into the placenta, or with such conditions as hydrops amnii, anomalies of umbilical circulation, &c., and is probably due to morbid conditions of the fœtus.

P. panduræformis. (L. *pandura*, from Gr. *πανδοῦρα*, a musical instrument with three strings; *forma*, shape.) Term applied by Hyrtl to cases of *P. dimidiata* in which the two lobes, touching or nearly touching at their adjacent short margins, give the appearance of a fiddle.

P., pari'etal. *Bot.* A placenta which is attached to the wall of the ovary.

P., pigmentation of. This is found both in healthy and in morbid placenta, the pigment being derived from hæmatin which has been deposited either in extravasations or in stagnated blood in the vessels of the placenta.

P., polycotyle'donary. The same as *P., cotyledonous*.

P., polypi of. Masses, which may reach the size of an egg, whose basis is a fragment of undetached placenta, left behind after abortion. On this irregular surface blood coagulates, and fibrin is formed. Villi are sometimes traceable in these polypi.

P. prævia. (L. *prævius*, that goes before, leads the way.) A condition in which the placenta is attached low down in the body of the uterus, either overlapping or approximating to the internal os. It is very rare in primiparæ, and is believed to depend on morbid dilatation of the uterine cavity from subinvolution, endometritis, &c., the dilatation allowing of the ovum passing lower down into the uterus than is normally the case, before it becomes attached to the wall. Placenta prævia gives rise to dangerous bleeding in the first stage of labour, as the lower segment of the uterus becomes stretched, and it often causes serious hæmorrhage during the last two or three months of pregnancy. It was formerly described as divided into three varieties, complete, partial, and marginal, according to the degree to which it overlapped the internal os uteri. Another classification is into *central*, when the os is completely covered by placenta; *partial*, when both placenta and membranes can be felt; and *lateral*, when the placenta does not pass the edge of the os, but is attached in the zone of necessary detachment. The classification may vary in any given case as dilatation of the os takes place, so that a *central* placenta may become *partial*.

P., prolapse' of. Term for the complete separation and expulsion of the placenta before the fœtus. It occurs most commonly in cases of placenta prævia; but it has also been known in cases where the placental attachment was normal.

P., reniformis. (L. *renes*, the kidneys; *forma*, shape.) Term applied by Hyrtl to a lobe of a *P. dimidiata* which is kidney-shaped.

P., retained'. (F. *placenta châtonné*, *p. encysté*; G. *eingeklemmter Mutterkuchen*.) See *P., retention of*.

P., reten'tion of. The condition arising when the placenta is not expelled from the uterus at the normal time, the cause being found, either in uterine inertia (which may lead to "hour-glass" contraction), in irregular uterine contractions, or in morbid adhesions.

P. san'guinis. (L. *sanguis*, -inis, blood.) The same as *P. cruoris*.

P., sclero'sis of. A fibroid degeneration of the placenta, described by Neumann (1860), due probably to syphilis. If the degeneration spreads over a large area, the fœtus necessarily dies.

P., si'nus of, marg'inal. The same as *P., circular sinus of*.

P. sple'nica. (Σπληνικός, splenic.) The same as *P. febrilis*.

P. spu'ria. (L. *spurius*, bastard, counterfeit.) Term for well-defined patches of chorionic villi, either single or multiple, and situated near the placenta, but not connected with the decidua.

P. succentu'ria. The same as *P. succenturiata*.

P. succenturia'ta. (L. *succenturiatus*, kept in reserve.) Term given to an occasional abnormality in the shape of the placenta which consists in a massing together of the chorionic villi into two or more collections of unequal size, the smaller being termed *placenta succenturiata*. It is connected with the larger mass by a bridge of placental parenchyma, or more rarely by blood-vessels only.

P., superfi'cial. *Bot.* Term for the condition in which the ovules are found attached over the general inner surface of the carpels.

P., syph'ilis of. Both portions of the placenta may be affected by this disease, which may lead to a general slow inflammation or to definite gummatous formations. The placenta is larger than normal, denser and heavier, and of a paler tint. Fatty degeneration occurs in those villi which have been rendered functionless by obliteration of their blood-vessels.

P. triparti'ta. (See *Tripartite*.) Term for a placenta divided into three nearly equal parts; a very rare variety.

P., tri'ple. (G. *Drillingsplacenta*.) A placental mass made up of three placenta in a triple pregnancy.

P. trique'tra. (L. *triquetrus*, three-cornered.) Term applied by Hyrtl to a form of placenta in which a portion is so prominent as to look as if it were about to be detached as a separate lobe.

P., tu'mours of. These are usually situated beneath the amnion, on the fetal side of the placenta. They are either fibromata or sarcomata.

P., twin. (F. *placenta gémellaire*; G. *Zwillungsplacenta*.) A syn. of *P., double*.

P., umbili'cal. Term applied to a kind of placenta found in certain Elasmobranchs, which is formed by the raising of folds on the surface of the yolk-sac, these folds being received into depressions of the uterine surface.

P. uniloba'ta. (L. *unus*, one; late L. *lobus*, a lobe.) A syn. of *P. triquetra*.

P. u'teri. (L. *uterus*, the womb.) A syn. of *P. materna*.

P. u'teri succenturia'ta. A term for *Decidua*. (Dunghlison.)

P. uter'ina. (L. *uterinus*, pertaining to the uterus.) The same as *P. materna*.

PLACENTÆ—PLACOÏTIS

P. velamento'sa. (L. *velamentum*, a veil.) A variety in which the vessels of the cord divide before arriving at the placenta, and ramify in the membranes, which have a loose veil-like appearance.

P., vena coronar'ia of. The same as *Placental sinus*.

P., vil'ious. Term for a variety of placenta in which the cotyledons are somewhat scattered.

P. zonar'ia. (L. *zonarius*, pertaining to a zone or belt.) The same as *P., zonary*.

P., zo'nary. See under *P., deciduate*.

Placentæ sem'inis lini. G. Ph. (Nom. pl. of *placenta*; *semen*, -inis, seed; *linum*, flax.) Cakes of linseed. Term used for the flat cakes of crushed seed left after the expression of linseed oil.

Placental. (F. *placentaire*; G. *Placental*.) Belonging to, or having, a placenta.

P. adhesion. See *Placenta, adherent*.

P. area. The portion of uterine wall to which the placenta is attached.

P. artery. A name for the *Vein, umbilical*.

P. bru'it. The same as *P. murmur*.

P. dystoc'ia. Difficulty in the birth or shedding of the placenta.

P. folds. Term applied by Minot to two folds of uterine mucous membrane which appear one on each side of the mesial line at the attached side of the uterus in the rabbit, and into the substance of which the allantois grows so as to form the complete placenta.

P. lobes. The same as *P. folds*.

P. mur'mur. (F. *souffle placentaire*; G. *Placentargeräusch*.) A misnomer for *Souffle, uterine*, (q. v.).

P. period. The third stage of *Labour*. Also termed "period of the afterbirth."

P. phthis'is. A shrinking of the placenta following upon inflammation, or simply from degeneration.

P. polypus. See *Placenta, polypi of*.

P. sinus. The venous channel which encircles the circumference of the placenta. It belongs to the maternal portion of the placenta.

P. souf'fle. The same as *P. murmur*.

Placenta'lia. (Neut. pl. of *placentalis*, a modern word made from L. *placenta*.) A Class of the *Mammalia*, comprehending those animals of which the gravid females develop a placenta.

Placenta'lian. Pertaining to the *Placentalia*.

Also, a member of the *Placentalia*.

Placentar'ia. The same as *Placentalia*.

Placentar'ium. Bot. Term used by de Candolle as synonymous with *Placenta*. Mirbel reserves it for that part of the fruit which is formed by the union of the placentæ.

Placentary. Belonging, or referring, to the *Placenta*.

Placenta'ta. The same as *Placentalia*.

Placen'tate. Having a placenta; pertaining to a placenta.

Placenta'tion. The different forms which the relations between the maternal and fetal structures of the placenta display in different members of the *Placentalia*.

In *Botany*, the mode of attachment of the ovules to the placenta.

Placentiferous. (L. *placenta*; *fero*, to bear.) Comp. Anat., and Bot. Having a *Placenta*.

Placen'tiform. Placenta-shaped.

Also, in Bot., resembling a flat cake.

Placenti'gerous. (L. *placenta*; *gero*, to carry.) The same as *Placentiferous*.

Placenti'tis. (From adj. agreeing with *νόσος*, understood. F. *placentite*.) Inflammation of the placenta.

Placen'toid. (*Placenta*; *είδος*, likeness.) Of the form of a placenta.

Placent'ula. (Dim. of *placenta*.) A small cake-like mass or lozenge. A syn. of *Cop-tarium* (q. v.).

Also, a small *placenta*, i. e. a small mass having placental structure and supplied with blood by the branches of the umbilical artery.

Placentulæ succenturiatæ. (Nom. pl. of *placentula*; *succenturiatus*, kept in reserve.) Term used by Spiegelberg for small masses of placental tissue occasionally found attached to the membranes lying between a *placenta* and a *placenta succenturiata*.

By Hyrtl, the term is used for small masses of placental tissue which, he states, are to be frequently observed lying near the margin of a placenta, each mass having a small branch from the umbilical artery supplying it with blood.

P. succenturia'tæ obsole'tæ. (L. *obsoletus*, worn out.) Term used by Hyrtl for *placentulæ succenturiatæ* in which circulation has ceased; they shrink somewhat, and finally appear simply as brown stains or patches on the membranes; best seen against the light; traces of the blood-vessels are also to be seen.

Placia'num collyr'ium. (L. *placianus*, from Πλακίη, an ancient Pelasgian settlement in Mysia; *collyrium*.) Term for a collyrium used against any ophthalmic inflammation. It was strongly astringent, and contained opium. See *Ætius Tetrabib.* 2, serm. 4, c. 113.

Placi'tis. (Πλάξ, anything flat.) 1. Term used by ancient writers for a form of *Cadmia* (q. v.) left as a deposit on the lower parts of the walls of brass furnaces; the name *Botruitis* (βότρυς, a cluster of grapes) was given to the lighter, feathery deposit of *Cadmia* found on the upper parts of the walls.

2. Also, term for a kind of *Alum* or *Stypteria* (q. v.), found in scales.

Plac'oderm. (Πλάξ, a flat plate; *δέρμα*, skin.) Having the skin covered with flat plates. Belonging to the *Placodermi*.

Also, a member of the Order *Placodermi*.

Placoder'mal. The same as *Placoderm*.

Placoder'mata. The same as *Placodermi*.

Placoder'matous. The same as *Placoderm*.

Placoder'mi. An order of Palæozoic fishes having a long shield or covering for the head and front part of the body.

Plac'oid. (Πλακώδης; from πλάξ, anything flat and broad; *είδος*, form.) Plate-like.

Also, having plate-like or placoid scales.

Also, a member of the Group *Placoidæi*, Class *Pisces*.

P. exoskel'eton. The dermal teeth, plates, tubercles, spiny scales, &c., found in the integument of the *Elasmobranchii*.

Placoi'dei. An artificial Class of Fishes introduced by Agassiz, corresponding mainly to the modern Class of *Elasmobranchii*.

Placoi'tis. (Πλακοῦς.) The same as *Placentitis*.

Placorgano'meter. (Πλάξ, anything flat; ὄργανον, organ; μέτρον, measure.) An instrument used in *percussion*. It is wedge-shaped, having the narrow edge straight and the thick edge curved. After percussing on the plane surface, the instrument lying flat on the chest, the thick edge is raised while the thin edge is brought so as to rest on the surface of the body. Percussion is then made on the thick edge, and as there is only a small surface in contact with the body-wall, very slight changes of sound can be noticed as the instrument is gradually moved along.

Placountitis. The same as *Placentitis*.

Plac'ula. (Dim. formed from πλάξ, anything flat and broad.) A small plate. Applied to a disc-shaped stage of certain ova.

Plac'ular. Plate-like; having the shape of a placula.

Plac'ulate. Like a placula; being in the placula stage.

Placunte'chos. (Πλακοῦς, -οὔντος, the placenta; ἦχος, sound.) Term for the *Souffle*, uterine.

Placus. (Πλακοῦς, a flat cake.) A Genus of *Compositæ* founded by Loureiro on plants coming from Cochin-China.

P. chinensis. This species is used by the Chinese in applications to ulcers and cutaneous sores; the root is given for coughs.

Pladaroma. (Πλαδάριμα, dampness.) A soft, discoloured tumour of the inner part of the eyelid.

Pladaro'sis. (Πλαδαρός, damp.) The formation of *Pladaroma*.

Pladarotes. (Πλαδαρότης, dampness.) The same as *Pladaroma*.

Plad'era decussa'ta. (Πλαδαρός, flabby, flaccid; *decussate*.) A syn. of *Canscora decussata*.

Plad'os. (Πλάδος, abundance of fluids.) Old term for superfluous humours or abundance of moisture rendering the tissues lax and weak; used also for water-brash, *Pyrosis*.

Pla'ga. (Πληγή, a stroke.) Old term for disease in general; more strictly, that caused by violence.

Also, *Zoöl.*, a stripe of colour.

P. ignis. (L. *ignis*, fire.) Term for *Anthrax*.

Plagiobol'ia. (Πλάγιος, oblique; βολή [βάλλω], a throwing.) Imperfect emission of semen during coitus, or emission to one side of the vagina.

Plagiocephal'ic. *Plagiocephalous*.

P. id'io'cy. See *Idiocy*, *plagiocephalic*.

Plagioceph'alous. (Πλάγιος, oblique, awry; κεφαλή, the head.) Having the skull awry; the result of asymmetrical development, and the premature synostosis of the frontal with one of the parietal bones.

Plagioceph'aly. The condition of being *Plagiocephalous*.

Plagiochi'la asplenoi'des. (Πλάγιος, oblique; χιλός, green fodder; *asplenoides*, like the *asplenium*.) A Genus of the *Hepaticæ* (q. v.), belonging to the Order *Jungermanniaceæ*. Used like *Marchantia*, &c., in making poultices, the plant being boiled and mixed with linseed-meal; and also in decoction as a diuretic.

Plagiocit'rite. (*Plagios*; L. *citrus*, the citrus.) A hydrous sulphate of iron, aluminium, sodium, and potassium occurring naturally in

Bavaria, in the form of lemon-yellow crystals. (*Century Dict.*)

Plagioclase. (*Plagios*; κλάσις, a breaking.) Term applied to a group of triclinic felspars in which the two main cleavage directions are oblique to each other.

Plagioclas'tic. (*Plagios*; κλαστός, broken.) Breaking obliquely. Used of crystals.

Plagiodont. (*Plagios*; ὀδοῦς [ὀδοντ-], a tooth.) Having teeth set obliquely, as in serpents.

Plag'ionite. (Πλάγιος, oblique.) A native crystalline form of lead sulphide combined with antimony sulphide.

Plagiopodous. (Πλάγιος, oblique; πούς, a foot. F. *plagiopode*; G. *querfussig*.) Bot. Having the foot or *pedicel* oblique or crooked.

Plagiosper'meæ. (Πλάγιος, oblique; σπέρμα, seed.) A Family of the *Cucurbitaceæ*, containing *Citrullus*, *Lagenaria*, *Ecballium*, *Bryonia*, *Cucumis*, &c.

Plagiostoma. (*Plagios*; στόμα, a mouth.) The same as *Plagiosomi*.

Plagiostomatous. The same as *Plagiosomous*.

Plagiostome. The same as *Plagiosomous*. Also, any member of the *Plagiosomi*.

Plagiostomi. 1. In older classifications, an Order or Suborder of *Selachii* (Chondropterygian fishes), including Sharks and Rays.

2. In more recent systems, it is a synonym for *Elasmobranchii*, the first of the five main Orders of the Class *Pisces*.

Plagiostomous. Pertaining to the *Plagiosomi*.

Plagiotax'is chickras'sa. A syn. of *Chickrassia tabularis*.

Plagiotme'sis. (Πλάγιος, oblique; τμήσις, a cutting.) The same as *Plagiotome*.

Plagioto'më. (Πλάγιος, oblique; τομή, section.) An oblique section, or *Loxotomia*.

Plagiotre'mata. (*Plagios*; τρήμα, a hole.) Synonym for *Lepidosauria*.

Plagiotrop'ic. (Πλάγιος, oblique; τρόπος, a turn.) Bot. Exhibiting *Plagiotropism*.

Plagiotropism. (*Plagiotropic*.) Oblique *geotropism*, the result of which is that the organs of a plant come to have their long axes oblique, i. e. across the vertical line in which gravitation or the rays of light act. (Vines.)

Plague. (L. *plaga*, a wound, blow. Gr. *πληγή*, a stroke; L. anal., *pestis*; F. *peste*; G. *Pest*.) 1. In a general sense, the term denotes any disease accompanied by great mortality. 2. In a special sense, the term denotes a specific fever whose chief features are bubo of the inguinal and other glands, with extensive petechiæ and occasionally carbuncles which may lead to death in the course of a few hours. The disease is first certainly mentioned by Rufus (about 100 A.D.) as having been described by the contemporaries of Dionysius (about 280 B.C.); and he also quotes a description given by Dioscorides and Posidonius, both of Alexandria (about 50 A.D.).

It first appeared in Europe in the sixth century A.D., and continued to appear in epidemics, especially in the North and West of Europe, till the seventeenth century. Its last appearance in Europe was in 1878-9 in South-east Russia. It has not been known in Egypt since 1844; but was present in India and China at least till 1878-9.

The "black death" or *pestis nigra* has been regarded by some writers as a modified form of this disease, while others have considered it as a distinct disease. See under *P. Pali*.

P., black. See *Pestis nigra*.

P., bubonic. A syn. of *Plague*, as a specific disease, in which buboes are an important symptom.

P., cold. 1. A very severe variety of *Congestive fever* (see *Fever, congestive*) occurring in the Southern States of North America. 2. Bilious pneumonia unaccompanied by any febrile reaction.

P. cross. A mark which was affixed by the authorities to the door of all infected houses during the time of the great plague of London.

P., great, of London. This outbreak of the plague occurred in London in 1663-5, and spread over a great part of England. Since then there has been no further instance of the disease in this country.

P., hunger. Term for *Relapsing fever*.

P. in the guts. An English popular name, in the seventeenth century, for the *Plague*.

P., Indian. The same as *P. Pali*.

P., inguinal. The plague; so-called because buboes of the inguinal glands were regarded as pathognomonic signs.

P., Justinian. The plague; so-called because its first recorded great outbreak was that which devastated the Roman Empire in the reign of the Emperor Justinian; it commenced in A.D. 542, and lasted fifty or sixty years.

P., Levantine. The plague; so-called because it first entered Europe from the Levant, and also because its chief home during the Middle Ages was in the Levant and adjoining countries.

P., lung-. The *pleuro-pneumonia* of cattle.

P. mark. The same as *P. spot*, in the former of its two meanings.

P. of Antoninus. An acute febrile disease, very similar to the *P. of Athens*, which began in Asia and spread over the Roman empire during the reign of Antoninus.

P. of Athens. An acute febrile disease characterised by the presence of a skin-eruption giving rise to small ulcers, and by the occurrence of vomiting, purging, and respiratory trouble. It was epidemic during the Peloponnesian war, in the fifth century B.C., beginning in the East, passing over Persia and Egypt, and finally reaching Athens. It is described by Thucydides.

P., oriental. A name for the plague; so-called because it came to Europe from the East.

P., Pali. An epidemic disease which occurred in India, especially on the slopes of the Himalayas, during the early part of the nineteenth century. It received its name in 1836, the first outbreak in that year having occurred near Pali, in Rajpootana. A leading symptom in all these epidemics was severe hæmorrhage from the lungs; and for this reason it is considered by Hirsch and others that the Pali plague is identical with the Black Death of the Middle Ages, which they believe to have been merely a variety of the ordinary plague.

P. sore. An ulcer resulting from a bubo occurring in the *Plague*.

P. spot. A mark which was considered diagnostic of the *Plague*, and was described as being a small, hard, somewhat insensitive tubercle. It was probably an early stage of carbuncle in unfavourable cases.

Also, a locality in which any *Plague*, in the general sense, is rife.

P., Syrian. A syn. of the *Aleppo evil*.

P. to'ken. The same as *P. spot*, in the former of its two meanings.

Pla'gula. (Dim. of *L. plaga*, a stripe.) Old term for a plaster spread with some cerate. At one time used for fractures and dislocations to keep them in position, and to prevent inflammation.

Plain mus'cles. Unstriated muscles, as opposed to striated muscles.

Plaister. An obsolete or seldom-used form of the word *Plaster*.

P.-claver. An old name for *Melilotus officinalis*, which was so called from its use in plasters, some of which were in the Pharmacop. Lond.

Plait'ed. (*L. plicatus*.) Placed in folds or plaits.

P. hair. Term for *Plica polonica*.

Pla'na orbita'lia. (Pl. of *L. Planum*; *orbitalis*.) Orbital plates. See *Frontal bone*, *Palate bone*, &c.

Planæ'a. (*Planus*.) Term proposed by Haeckel for a theoretical organism, which should correspond to the fourth stage of the development of an ovum, and be a multicellular astomatous animal having as its larval form a ciliated planula.

Planæ'adæ. Haeckel's term for a supposed group of animals having the characteristics of a planæa.

Planan'thus fastigia'tus. (*L. planum*, flat; *Gr. άνθος*, a flower; *L. fastigo*, to bring to a point, to slope.) The *Lycopodium selago*.

P. sela'go. *Lycopodium selago*.

Planar'ia. (Low Lat. *planarius*, flat.) The Genus forming the type of *Planariidae*.

P. latius'cula. (Low Lat. *latiusculus*, dim. form from *latus*, wide, broad.) An incorrect term for *Distoma hepaticum*, which belongs to the *Trematoda*.

Also, syn. of *Distoma lanceolatum*.

Planar'ian. Like, or belonging to, the *Planarida*.

Also, a member of the Class *Planarida*.

Planar'ida. A synonym for *Turbellaria*, as the latter is understood in modern classification.

Planar'idan. Like a flat-worm.

Also, the same as *Planarian*.

Planari'form. Resembling a planarian in shape.

Planaril'dæ. A Family of dendrocœlous *Turbellarians*.

Planari'oid. The same as *Planariform*.

Planar'thagra. (*Πλάνος*, wandering; *άρθρον*, a joint; *ἄγρυ*, a catching. *G. die umherschweifende Gicht*.) *Arthritis vaga*, or wandering gout.

Plan'at's tinc'ture of coc'culus. An unofficial preparation; strength 1 of picrotoxin in 4. Dose, 1 to 5 minims.

Plana'tion. A term proposed by Dr. H. Allen for those movements of the hand which take place in the plane of the flexor surface of the forearm.

Plan'cus. (*L. planca*, a board, table.) A flat-footed person.

Plan'ë. (*Πλάνη*, a wandering.) A term for *Plexus*.

Plane. (*L. planus*, flat. *F. plan*; *G. Ebene*.) 1. As a *substant.* A flat surface.

PLANE

Anat. Any flat, smooth surface. Also, an imaginary surface of extension in any axis of the body. See *Planes of body*.

Bot. Any flat, smooth surface. Also, the Plane-tree.

2. As an *adj.* Belonging to, or having the characters of, a *Plane*.

P., alve'olo-condyle'an. See *Alveolo-condylean plane*.

P., auric'ulo-infraor'ital. The same as *P., Merkel's*.

P., Cam'per's. *Craniom.* The plane passing through the auricular points and the base of the inferior nasal spine. Also termed *Auriculo-spinal plane*.

P., coccyge'al. The fourth parallel plane of the pelvis.

P.s, craniomet'ric. Certain imaginary planes used as references in craniometry. See under separate headings: *Alveolo-condylean plane*, *Sagittal plane*, &c.

P.s, fo'cal. Term for the two planes in a dioptric system (*e.g.* the eye) which pass respectively through the anterior and posterior principal foci, and are perpendicular to the principal axis. They are termed respectively *anterior*, or *first*, and *posterior*, or *second focal planes*.

P., fo'cal, ante'rior. See under *P.s, focal*.

P., fo'cal, poste'rior. See under *P.s, focal*.

P., glabel'lo-lambdaide'an, of Ham'y. *Craniom.* The plane passing through the glabella and lambda, perpendicular to the median plane of the skull.

P., glabel'lo-occip'ital. *Craniom.* The plane in which lies the glabello-occipital diameter, perpendicular to the median plane of the skull.

P., inclin'ed. *Mechanics.* A plane inclined to the horizon or forming with any horizontal plane any angle except a right angle. It is one of the fundamental simple machines, the lever being the other.

Surgery. The inclined plane has been used in the treatment of scoliosis, fixation being effected either by the head or shoulder or both, the weight of the body serving to make extension. The drawback to this method is that extension is greatest at the neck instead of in the lumbar region where it is most needed. See also, *Double inclined plane*.

P., inclin'ed, dou'ble. See *Double inclined plane*.

P., inclin'ed, sin'gle. Term for an apparatus used in Surgery, consisting of a board or other flat object, on which a limb is placed, the distal end of the board being raised. It is used in the treatment of fractured patella and other injuries.

P., Meck'el's. *Craniom.* That plane in which lie the *auricular point* and *alveolar point*.

P., me'dian. See *Median plane*.

P., Mer'kel's. *Craniom.* That plane in which lie the *auricular points* of the two sides and the lowest points of the lower borders of the orbits.

P., me'sial. The same as *P., median*.

P., na'so-in'iac. See *Naso-iniac plane*.

P., na'so-opis'thiac. See *Naso-opisthiac plane*.

P., nu'chal. *Craniom.* Term for that flattened portion of the external surface of the *squama occipitis* which lies between the superior curved line and the foramen magnum.

P., occip'ital. *Craniom.* Term for that part of the external surface of the *squama occipitis* which lies above the superior curved line.

P. of A'eby. *Craniom.* The plane which contains both the *nasion* and the *basion*, and is perpendicular to the mesial plane.

P. of Ba'er. *Craniom.* That plane which is determined by the position and direction of the upper border of the zygomatic arches of the two sides.

P. of Blu'menbach. *Craniom.* The horizontal plane of the base of the skull.

P.s of bod'y. Certain imaginary plane surfaces used in Anatomy as standards of reference in describing the portions and relations of organs. There are five such planes drawn as tangents to the surfaces of the body, namely, an anterior, a posterior, an inferior, and two lateral planes. See also, *P., median*, and *P.s, craniometric*.

P. of Busk. *Craniom.* That plane in which lie the bregma and the auricular points of the two sides.

P. of chas'ma. (*F. plan du chasma*; *G. Chasmaebene*.) *Craniom.* Term applied by Lissauer to the plane in which lie both the posterior nasal point and the basion.

P. of cleav'age. *Crystallog.* A flat surface produced by the natural or artificial splitting of a crystal or mineral, generally parallel to one or other of its faces; the direction of cleavage being determined by the internal structure of the crystal, and being constant for any particular form.

P. of Dauben'ton. *Craniom.* That plane in which lie the *opisthion* and the lowest point of the inferior borders of the two orbits.

P.s of is'chium, inclin'ed. The lateral walls of the true bony pelvis are each divided by a raised line running downwards and backwards from near the ilio-pectineal eminence to the spine of the ischium. The surface in front of this line, looking mainly forwards, is termed the *anterior inclined plane* of the ischium; the surface behind this line, looking slightly backwards, is termed the *posterior inclined plane* of the ischium. These planes have probably but little effect on the progress of parturition.

P. of is'chium, inclin'ed, ante'rior. See under *P.s of ischium, inclined*.

P. of is'chium, inclin'ed, poste'rior. See under *P.s of ischium, inclined*.

P. of mastica'tion. *Craniom.* That plane which forms a tangent with the masticatory surface of the upper teeth. (Barclay.)

P. of Mor'ton. *Craniom.* The plane in which lie the most prominent points of the occipital and parietal eminences.

P.s of mo'tion. (*G. Bahnebenen*.) Those planes in which the line of sight moves during movements of the eye. Those that are *primary* pass through the line of sight in the primary position of the eye; those that are *secondary*, in secondary positions of the eye.

P.s of pel'vis, inclin'ed. The same as *P.s of ischium, inclined*.

P. of pel'vis, inclin'ed, ante'rior. See under *P.s of ischium, inclined*.

P. of pel'vis, inclin'ed, poste'rior. See under *P.s of ischium, inclined*.

P.s of pel'vis, par'allel. Term used for four planes which intersect the pelvic axis at right angles, and are therefore not really parallel to one another; they are (1) the plane of the in-

PLANE-TREE—PLANT

let, (2) the plane reaching from the centre of the sacrum to the lower edge of the subpubic ligament, (3) the plane at the level of the ischial spines, and (4) the plane of the outlet (see *Pelvis*, outlet of).

P. of regard'. (F. *plan de regard*; G. *Blickebene*.) That plane in which lie both lines of regard. See *Regard*, lines of.

P. of Rolle. *Craniom.* That plane in which lie the two auricular points and the two alveolar points.

P. of van Jhe'ring, horizon'tal. See *P., van Jhering's*.

P., orbital. See *Planum orbitalē*.

P., palatine, of Bar'clay. *Craniom.* That plane which forms a tangent with the palatine arch, drawn along the middle line.

P., poplite'al. See *Popliteal plane*.

P.s, prin'cipal. (G. *Hauptebenen*.) Those planes, in an optical system, which pass through the anterior and posterior principal points in a direction perpendicular to the principal axis. They are termed respectively *anterior*, or *first*, and *posterior*, or *second*, *principal planes*.

P., prin'cipal, ante'rior. See under *P.s, principal*.

P., prin'cipal, poste'rior. See under *P.s, principal*.

P., sagit'tal. See *Sagittal plane*.

P., tem'poral. See *Temporal plane*.

P., van Jhe'ring's. *Craniom.* Term for a plane in which lie the inferior orbital margin and the two auricular points.

Plane'tree. A Species of the Genus *Platanus*, generally *P. orientalis*.

Also, sometimes used for the *Acer pseud-platanus*, or sycamore.

Plan'era. (Named after Planer, J., German botanist.) A Genus of the Nat. Order *Ulmaceæ*.

P. abel'cea. (Mod. L. *abelicea*, resembling the *Abelia*, named after Dr. C. Abel, a traveller in China.) Hab., Crete. Used formerly as an aromatic, and exported as *false sandal-wood*.

Plane'sis. (Πλάνησις, wandering.) A wandering about.

Also, term for the restless tossings of patients in bed.

Plane'tes. (Πλανήτης = πλάνης, a wanderer.) Erratic, wandering. Epithet applied to diseases in which attacks recur at irregular intervals. It was especially applied to *Intermittent fever*. See *Febris planetes*.

Plane'tica arthri'tis. (Πλανητικός, roaming.) See under *Arthritis*.

Plan'etstruck. See *Sideratio*.

Planicaud'ate. (L. *planus*, flat; *cauda*, a tail.) Flat-tailed.

Planiceps. (L. *planus*, flat; *caput*, a head.) Having a flat head.

Planicipital. The same as *Planiceps*.

Plan'icis. (Πλάνος, wandering.) Erratic.

Plan'idens. (L. *planus*, flat; *dens*, a tooth.) Zoöl. Having flat teeth.

Planidor'sate. (L. *planus*, flat; *dorsum*, the back.) Flat-backed.

Planiflorus. (L. *planus*, flat; *flos*, *floris*, a flower.) Bot. Having flat flowers.

Pla'niform. (L. *planus*, flat; *forma*, form.) Anat. and Entomol. Plane-like; i.e. flat and smooth.

P. diarthro'sis. Another name for *P. joint*.

P. joint. The same as *Arthrodia*.

Planipen'nate. The same as *Plenipennis*.

Planipen'nis. (L. *planus*, flat; *penna*, a wing.) Entomol. Having flat wings.

Planipes. (L. *planus*, flat; *pes*, a foot.) Zoöl. Having flat feet.

Planipet'alous. (L. *planus*, flat; *petalum*, a petal.) Having flat petals.

Planiros'tral. (L. *planus*, flat; *rostrum*, a beak.) Having a flat beak.

Pla'nisphere. (L. *planus*, flat; *sphæra*, a sphere. F. *planisphère*; S. *planisferio*; I. *planisferio*.) A projection, on the flat, of a sphere. Also, an apparatus for showing a projection of the celestial sphere.

Planispher'ic. Pertaining to, or like, a planisphere.

Planispi'ral. (L. *planus*, flat; *spiral*.) Spiral, with the coils lying entirely in one plane, as the coils of a shell.

Planit'ies. (L.) A plane surface.

P. ligamento'sa la'ta rhomboida'lis. (The wide, rhomboidal, ligamentous flat surface.) A name for the posterior ligament of the wrist-joint.

P. ped'is. The sole of the foot.

Planiven'ter. (L. *planus*, flat; *venter*, the belly.) Having a flat abdomen.

Planobas'ilar line. (L. *planus*, flat; *basilar*.) The line drawn in the median plane, from the anterior border of the *planum sphenoidale* to the *basion*. (Billings.)

Plan'oblast. (Πλάνος, wandering; βλαστός, a bud.) Term applied by Allman to free-swimming zooids of the gonosome of *Hydroidea*; he distinguishes two forms, *blastocheme* and *gonocheme*. They are all, with one exception, of the form of gymnophthalmic medusæ.

Planoblas'tic. Like, or belonging to, a *Planoblast*.

Planobol'ia. (Πλάνος, a straying; βολή [βάλλω], a throwing.) The same as *Plagiobolia*.

Pla'no-con'cave lens. See under *Lens*.

Pla'no-con'ical. Plane on one side and conical on the other, as a lens.

Pla'no-con'vex lens. See under *Lens*.

Planod'ia. (Πλάνος, a straying; ὁδός, a way.) A false passage, such, for example, as may be present in a case of stricture of the urethra.

Plan'ogamete. (Πλάνος, wandering; gamete.) Bot. A Gamete capable of movement.

Planoma'nia. (Πλάνος; μανία, madness.) A mad desire to roam.

Pla'no-orbic'ular. (L. *planus*, flat; *orbicular*.) Having two surfaces, one flat and the other spherical.

Planorheumatis'mus. (Πλάνος; ρευματισμός.) Wandering rheumatism.

Pla'no-spi'nal line. (L. *planus*, flat; *spinal*.) An imaginary straight line drawn in the median plane of the body from the anterior border of the *planum sphenoidale* to the *spinal* or *subnasal point*. (Billings.)

Pla'no-spi'ral. The same as *Planispiral*.

Pla'no-sub'ulate. (*Planus*; *subula*, an awl.) Flat or smooth, and awl-shaped.

Plant. (L. *planta*, a plant. F. *plante*; S. *planta*; I. *pianta*; G. *Pflanze*.) A plant, slip,

PLANTA—PLANTAGO

sapling, small herb. The term connects a certain number of properties which serve to distinguish the vegetable from the animal kingdom, so far as the higher forms in each are concerned. With regard to the lower forms there is no absolute criterion, and the distinction is made with only a degree of probability.

Also, the sole of the foot.

P., aë'rial. An epiphyte or other plant which derives its nourishment from the air alone.

P.-an'imal. See *Phytozoon*.

P.s., antisyp'hilit'ic. Under this head are included various plants, or vegetable products, which are regarded popularly as being remedies useful in syphilis; such are guaiacum, sassafras, sarsaparilla, smilax, and many others, especially those which have sudorific powers.

P.s., carni'vorous. Under this head are included a number of species which are able to capture insects, &c., and then to digest and absorb them; such are *Drosera*, *Dionæa*, *Sarracenia*, &c.

P.-ca'sein. Term applied to what is now known to be *alkali-albumin*, formed from the native *plant-globulins* by the action of caustic potash. See also *Legumin*.

P.s., diges'tion in. Certain plants, e.g. *Drosera*, *Dionæa*, *Pinguicula*, are known to secrete from the protoplasm of the cells of their leaves a fluid containing a pepsin-like ferment and formic acid. This fluid has the power of digesting albumin.

P., dys'en'tery. The *Oldenlandia globosa*.

P.s., flow'ering. See *Phanerogamia*.

P.s., flow'erless. See *Cryptogamia*.

P., forc'ible. The *Bupleurum rotundifolium*.

P.-glob'ulin. This term includes *Plant-vitellin* and *Plant-myosin*, as the chief globulins occurring in plants.

P., hu'mus. Term for a *Saprophyte*.

P.s., indic'ative. Term for a species of plants which in their natural habitat are supposed to indicate the presence of certain minerals.

P.s., insecti'vorous. See *P.s., carni'vorous*.

P.s., lacti'ferous. Plants exuding a milky juice, e.g. *Papaveraceæ*, *Urticaceæ*, *Campanulaceæ*, &c.

P., lit'mus. The *Roccella tinctoria*, also the *Chrozophora tinctoria*, both of which yield *litmus*.

P.-louse. See *Aphis*.

P.s., medi'cinal. Term applied to any plants, &c., which are or have been used in medicine.

P.s., move'ments of. See under *Movements (allassotonic, anheliotropic, &c.)*.

P.-my'osin. A globulin found by Weyl in wheat, peas, oats, white mustard, and sweet almonds. It coagulates at 56°, and seems to correspond largely to the myosinogen of muscle tissue, being converted into the more insoluble gluten-fibrin by a ferment action.

P.-of-glut'ony. The *Cornus suecica*.

P.s., parasit'ic. Term for those plants which derive their nutriment directly from the juices of other living plants; see *Cuscuta*, *Mistletoe*, *Orobanche*, &c. It is now certain that the *Lichens* (q. v.) are *Ascomycetes*, which are parasitic on *Algæ*.

P.s., respira'tion of. See under *Respiration*.

P., sen'sitive. Term applied to various species of *Mimosa*, especially *M. pudica*.

P.s., sleep of. See under *Sleep*.

P.s., vas'cular. Term applied to such plants as *Phanerogams*, *Ferns*, &c., in which vessels are formed.

P.-vitell'in. See *Phyto-vitellin*.

Plan'ta. (*L. planta*, the sole of the foot; also, a plant. *F. plante*; *S. planta*; *G. Sohle*.) *Vertebr. Anat.* The sole of the foot.

Ornith. The posterior surface of the *tarso-metatarsus*.

Entom. The first joint of the *tarsus*, if large or clearly distinguished from the rest of the tarsal joints.

Bot. A plant.

P. leo'nis. (*L. leo, leonis*, a lion.) Old name for *Alchemilla vulgaris*.

P. mirab'ilis distillato'ria. (*L. mirabilis*, wonderful; *distillo*, to drop little by little.) Grimm's term for the Genus *Nepenthes*.

P. noc'tis. (*L. nox, noctis*, night.) A term for *Sudamina*.

P. ped'is. (*L. pes, pedis*, a foot.) The sole of the foot.

P. pri'ma ped'is. (*L. primus*, first; *pes, pedis*, a foot.) A term for the tarsus of *Vertebrates*.

Plan'tæ. (*L.*) Plants.

P. calyp'tra'tæ. (*Calyptra*.) Term for the *Musci*.

P. meridia'næ. (*Meridian*.) Term for plants whose flowers open about noon.

Plantagina'ceæ. The same as *Plantagineæ*.

Plantagin'eæ. (*Plantago*.) The Nat. Order comprising the *Plantains*.

Plantag'inis. (*L.*) Genitive of *Plantago*.

P. a'qua. (*L. aqua*, water.) A preparation of the *Fr. Codex* and *S. Ph.* made from the crushed flowering plant (*Fr. Codex*) or fresh leaves (*S. Ph.*) of various species of *Plantago* by distilling with water.

P. conser'va. (*Conserva*.) A preparation formerly in the *Wurzberg Ph.*, made by rubbing together plantain leaves and sugar.

P. fo'lia. (*L. folium*, a leaf.) The leaves of *Plantago major*, which are official in certain *Pharmacopœias*.

Planta'go. (*F. plantain*; *G. Wegerich*.) The chief Genus of the *Plantagineæ*, including all but two out of over 200 species belonging to the Order.

P. acu'ta. (*L. acutus*, sharp.) A syn. of *P. lanceolata*.

P. al'bicans. (*L. albicans*, part. pres. of *albico*, to be white.) Hab., Italy. Used as an application to wounds.

P. alpi'na. (*L. alpinus*, belonging to the Alps.) Hab., Alpine regions. Used in applications to wounds.

P. amplexicaul'is. (*L. amplexor*, to embrace; *caulis*, a stem.) Hab., India. Said to be astringent, and useful in ophthalmia and in intermittent diseases; also used as a remedy against snake-bite and certain lung diseases. (Native name *Spighuol, gajipali*.)

P. angustifo'lia. (*L. angustus*, narrow; *folium*, a leaf.) A syn. of *P. lanceolata*.

P. aquat'ica. (*L. aquaticus*, found in water.) The *Alisma plantago*.

P. arenar'ia. (*L. arenarius*, pertaining to sand.) *Fr. Cod.* The testa of the seed of this

PLANTAIN—PLANTAR

species contains much mucilage; hence the seeds are used as an emollient in ophthalmia.

P. asiatica. (*L. asiaticus*, relating to Asia.) A syn. of *P. major*.

P. attenuata. (*L. attenuatus*, thinned, weakened.) A syn. of *P. lanceolata*.

P. Bau'phula. A syn. of *P. amplexicaulis*.

P. Bellar'di. An Alpine species. Leaves and roots astringent, seeds emollient.

P. brachyphylla. (*Βραχύς*, short; *φύλλον*, a leaf.) Hab., W. Indies, Thibet, and Afghanistan. The bruised leaves are used as an application for wounds. (Native name *Parhar fangi*.)

P. cilia'ta. (*L. cilium*, an eyelash, a hair.) Hab., India. Frequently sold in the bazaars as a substitute for *P. ovata*.

P. corda'ta. (*L. cordatus*, heart shaped.) Hab., N. America. The heart-leaved plantain. Properties similar to those of *P. major*.

P. coronopifo'lia. (*Coronopus*; *folium*, a leaf.) A syn. of *P. coronopus*.

P. coron'opus. The buck's horn plantain. Used for the same purposes as the other species. Because of its toothed leaves, it was believed by the ancients to be of use in hydrophobia. See *Coronopodium*.

P. cy'nops. (*Κύνωψ*, from *κύων*, a dog; *ὤψ*, the eye.) The seeds have been used from an early period like those of *P. ispaghula*.

Also, term used as syn. for *P. psyllium*.

P. decum'bens. (See *Decumbent*.) The same as *P. ispaghula*.

P. ero'sa. (*L. erosus*, gnawed, notched.) A syn. of *P. major*.

P. ispagh'u'la. (Pers. *Ispaghul*, the name for this species.) Hab., India, Arabia, Persia. It has long been used in medicine, and is mentioned by the early Arabian and Persian writers (Avicenna and others). The seeds are sold in bazaars throughout India. Their chief value lies in their being very rich in mucilage, hence they are given in catarrh, gonorrhœa, kidney diseases, dysentery, diarrhœa, and fevers; a poultice of the crushed seeds is used for rheumatic and gouty swellings, for foul ulcers, old sinuses, &c. See also *Ispaghula semina*.

P. lagopoi'des. (*Λαγώπους*, rough footed, like a hare.) A syn. of *P. amplexicaulis*.

P. lagop'us. (*Λαγώς*, a hare; *πούς*, a foot.) Hab., Europe. Used as an application to wounds.

P. lana'ta. (*L. lanatus*, woolly.) A syn. of *P. ovata*.

P. lanceola'ta. (*L. lanceola*, a little spear.) Indigenous. Rib- or ripple-grass, a common weed. It is bitter and astringent, and has been found of some use as a hæmostatic, applied in the form of juice, powder, or paste. In India, the seeds are used as a drastic purgative.

P. latifo'lia. (*L. latus*, broad; *folium*, a leaf.) The *P. major*.

P. longisca'pa. (*L. longus*, long; *scapus*, a stem.) A syn. of *P. major*.

P. major. (*L. major*, greater.) The greater plantain, common plantain, &c. Universally distributed. Used from the earliest times in medicine. The seeds have much the same properties as those of *P. ispaghula*, and in India are often used in dysentery. The leaves and roots have astringent and bitter qualities, and have been given as a febrifuge. A water

prepared from the leaves is widely used throughout Europe as an eye-wash and styptic.

P. mari'tima. (*L. maritimus*, found by the sea.) The sea- or seaside-plantain. It was formerly considered the best of all species for its therapeutic properties. The leaves are still used as a sedative application to inflamed surfaces, and in North Europe are eaten as a vegetable, and as a medicine in cases of calculus in the bladder, &c.

P. med'ia. (*L. medius*, middle, common.) The hare's foot trefoil. Formerly used in medicine. The leaves are bitter and astringent.

P. mi'nor. (*L. minor*, less.) A syn. of *P. lanceolata*.

P. nit'ida. (*L. nitidus*, sleek, trim.) The *P. psyllium*.

P. ova'ta. (*L. ovatus*, egg-shaped.) The name by which *P. ispaghula* is known in modern Botanical nomenclature.

P. psyllium. (*Ψύλλα*, a flea.) The branching plantain or fleawort. A decoction of its flea-coloured seeds, which are rich in mucilage, was formerly used for sore-throats and hoarseness and other forms of inflammation, e. g. of the eye or of the intestines.

P. pulcar'ia. (*L. pulex*, a flea.) A syn. of *P. psyllium*.

P. quinquener'via. (*L. quinque*, five; *nervus*, a nerve.) A syn. of *P. lanceolata*.

P. remotifo'ra. (*L. remotus*, disconnected; *flos, floris*, a flower.) A syn. of *P. brachyphylla*.

P. sall'na. (*L. salinus*, of salt.) A syn. of *P. amplexicaulis*.

P. septiner'vica. (*L. septem*, seven; *nervus*, a nerve.) A syn. of *P. major*.

P. squarro'sa. (Low *L. squarrosus*, scaly.) Hab., Egypt. From the ashes of this plant, soda is obtained.

P. triner'via. (*L. tres*, three; *nervus*, a nerve.) A syn. of *P. major*.

P. virgin'ica. (*L. virginicus*, Virginian.) The white plantain or ribwort. Similar in properties to *P. major*.

P. vulgar'is. (*L. vulgaris*, common.) The *P. major*.

Plantain. The Genus *Plantago*.

P., bran'ching. The *Plantago psyllium*.

P., buck's horn. The *Plantago coronopus*.

P., com'mon. The *Plantago major*.

P., great. *P.*, common.

P., heart'leaved. The *Plantago cordata*.

P., hoar'y. The *Plantago media*.

P., In'dian. Term for any species of the Genus *Cacalia* (q. v.).

P.-leaved everlast'ing. The *Antennaria plantaginifolia*.

P., Man'il'a. The *Musa textilis*.

P. meal. The mealy substance of which the fruit of *Musa paradisiaca* is composed.

P., rat'tlesnake. The *Goodyera pubescens*.

P., rib'wort. The *Plantago lanceolata*.

P., Rob'in's. The *Erigeron bellidifolium*.

P., sea. The *Plantago maritima*.

P. tree. The *Musa paradisiaca*.

P., wa'ter. The *Alisma plantago*.

P., white. The *Plantago virginica*.

Plan'tar. (*L. plantaris*. *F. plantaire*; *G. plantar*.) Belonging to the *Planta* or sole of the foot.

P. aponeuro'sis. Another name for the *Plantar fascia*.

PLANTARIA—PLANTOSSEUS

P. arch. (F. *arcade plantaire* ; G. *Sohlenbogen*.) An arterial arch formed in the sole of the foot by the anastomosis of the *external plantar* artery with the communicating branch passing from the *dorsalis pedis* artery.

P. arteries. *External.* A branch of the posterior tibial, which forms the large artery of the sole. It passes from the fossa between the inner ankle and the heel obliquely across the sole to the base of the fifth metatarsal, where it turns, and passes obliquely inwards to the interval between the first and second metatarsals, there joining a branch from the *dorsalis pedis*. *Internal.* Another branch of the posterior tibial, which passes along the inner side of the foot.

P. cross. A term for the *P. arch*.

P. cutaneous nerve. The branch of the posterior tibial nerve which supplies the skin of the heel and inner side of the sole of the foot.

P. fascia. A mass of longitudinally-arranged, dense, glistening fibres confining the deeper structures of the sole, divided into a central and two lateral portions; the central is attached to the inner tubercle of the *os calcis*, and, after dividing and separately ensheathing the several flexor tendons of the toes, is inserted into the sides of the metatarsal bones. The lateral portions (external and internal), of far less size and thickness, cover the *Abductor minimi digiti* and *Abductor pollicis* respectively.

P. fibro-cartilaginous plates. A term for the fibro-cartilages of the digits of the *pes*. (Billings.)

P. interossei muscles. Three muscles which lie beneath the third, fourth, and fifth metatarsal bones.

P. interosseous arteries. Branches of the plantar arch.

P. ligaments. Small bundles of dense fibres which pass from each bone on the plantar surface of the foot to the neighbouring bones with which it articulates.

P. metatarsal arteries. Another name for the *Plantar interosseous arteries*.

P. muscle. See *Plantaris*.

P. nerve, external. This nerve takes origin, together with the *P. nerve, internal* from the division of the *Tibial nerve*, posterior between the internal malleolus and *os calcis*. It runs forwards and outwards across the foot, lying on the flexor accessorius, and divides into a *superficial* and *deep* branch between the flexor brevis digitorum and the adductor minimi digiti.

The *superficial* branch divides into two digital nerves supplying the fifth and the outer side of the fourth toe, and giving branches also to the flexor brevis minimi digiti, and sometimes one or both interossei of the fourth space. The outer of the two digital nerves communicates with a twig from the external plantar nerve.

The *deep* branch runs with the external plantar artery, and supplies the interossei, except occasionally those of the fourth space (see above, *superficial* branch), the two outer lumbricales, the adductor hallucis, and the transversus pedis.

P. nerve, internal. This is the larger of the two nerves into which the *Tibial nerve*, posterior divides, between the inner malleolus and *os calcis*. It runs with the internal plantar artery, and supplies both sides of the three inner toes and the inner side of the fourth, the last branch communicating with the external plantar nerve.

P. reflex. The reflex movements of the toes or of the toes and foot, produced by tickling the sole of the foot.

P. regions. The three regions, *external*, *middle*, and *internal* of the sole of the foot, corresponding with the three portions of the plantar fascia.

P. surfaces. The same as *P. regions*.

P. syphiloderm. See *Syphiloderm*, *plantar*.

P. tubercle. A rough prominence on the postero-inferior angle of the external surface of the base of the first metatarsal bone, to which the *peroneus longus* is attached.

P. veins. Veins which accompany the plantar arteries.

Plantaria. (L. *planta*, the sole of the foot. Cp. *Dandy*.) A name for *Dengue*, which is so called because the eruption commonly appears first on the palms of the hands.

Plantaris. (L. *plantaris*, belonging to the sole of the foot. F. *muscle plantaire*, *fémorocalcanien*, *plant-grêle* ; G. *Sohlenspanner*.) Belonging to the sole of the foot. The name for a small muscle, discovered by Galen, remarkable for its long, slender tendon. Lying between the gastrocnemius and soleus, it passes down, parallel to the inner border of the tendo Achillis, to be inserted with the latter into the back of the *os calcis*. A powerful flexor in many mammals, it is, in man, small and unimportant, and occasionally even wanting.

P. minor. (L. *minor*, lesser.) A duplication of the foregoing, arising from the posterior part of the capsule of the knee-joint, or from the popliteal surface of the femur. It is very rarely present.

P. superficies pedis. (L.) The plantar surface of the foot, *i.e.* the sole.

P. verus. (L. *verus*, true.) A name for the *Flexor accessorius*.

Plantarium. (L. *planta*, a plant.) A plant nursery. Also, term for the *pubes*. (Dun- glison.)

Planticle. A young or embryo plant. (Darwin.)

Plantigrada. (L. Neut. pl. of *plantigradus*, plantigrade.) In the older classifications this term was applied to a Subdivision of *Carnivora*, which included all those animals that are more or less plantigrade. It has been dropped from modern systems, as forming a purely artificial group.

Plantigrade. (L. *planta*, the sole of the foot; *gradus*, a step.) Stepping on the sole of the foot. Term applied to man and other mammals that walk on the sole of the foot.

Plan'ti-in'fra-phalangianus. (L. *Musculus* understood.) Term applied by Chaussier to the *lumbricales pedis*.

Plan'ti-sous-phalan'gien. (F. *Muscle* understood.) Term applied by Chaussier to the *lumbricales pedis*.

Plan'ti - ten'dino - phalan'gia - nus. (L. *Musculus* understood.) Term applied by Dumas to the *lumbricales pedis*.

Plan'ti-ten'dino-phalan'gien. (F. *Muscle* understood.) Term applied by Dumas to the *lumbricales pedis*.

Plantivorous. (L. *planta*, a plant; *voro*, to devour.) Herbivorous.

Plantlet. (Dim. of *Plant*.) A small or undeveloped plant.

Plantosseus. (L. *planta*, the sole of

PLANTULE—PLASMA

the foot; *osseus*, bony.) A plantar interosseous muscle. (Coues and Shute.)

Plantule. The same as *Plantlet*. Also, a plant embryo.

Plan'ula. (Dim. of *L. planus*, flat.) The free-swimming, flattened, ciliated embryo of *Cœlenterata*.

Plan'ulan. A *Planula*.

Pla'nular. Pertaining to a *Planula*.

Planuliform. Having the shape or morphological value of a *Planula*.

Planuloid. The same as *Planuliform*.

Pla'num. (*Planus*.) *Anat.* Flatness; as applied to the sole of the foot, the surface of the tongue, the central tendon of the diaphragm, &c.

P. aponeuroticum diaphragmatis. The aponeurotic expansion forming the central tendon of the diaphragm.

P. auriculârê. Term for the *Auricular surface of ilium*.

P. circula'rê elas'ticum. Term for the *Sphincter vesicæ*.

P. circula'rê os'til urethra'lis. (*L. ostium*, an entrance or opening.) Term for the internal sphincter of the bladder.

P. fibro'sum dorsa'lê transver'sum. Term for the posterior annular ligament of the wrist.

P. fronta'lê or'bitæ. Term for the roof of the orbit.

P. inclina'tum. See *Plane, inclined*.

P. infraorbita'lê. The part of the orbital surface of the *maxillary bone, superior*, which is external to the infraorbital canal.

P. is'chil. The smooth inner surface of the ischium.

P. mastoi'deum. The flat external surface of the upper and posterior portion of the mastoid portion of the temporal bone.

P. maxilla'rê or'bitæ. Term for the floor of the orbit.

P. nucha'lê. The *Plane, nuchal*.

P. occipita'lê. Term for the smooth surface of the squamous portion of the occipital bone which lies above the superior curved line.

P. orbita'lê. 1. Term for the portion of the superior maxillary bone which forms the floor of the orbit. 2. Henle's term for that portion of the floor of the orbit internal to the infra-orbital suture.

P., os. (*L. os, ossis*, a bone.) See under *Os*.

P. os'sis is'chil. (*L. os, ossis*, a bone.) The same as *P. ischii*.

P. ped'is. The sole of the foot.

P. poplite'um. Term for the popliteal surface of the femur.

P. semicircula'rê. Term for the temporal surface of the squamous portion of the temporal bone.

P. semiluna'rê. The same as *P. semilunatum*.

P. semiluna'tum. The semilunar or crescentic attached border of the *crista acustica* in the ampulla of the membranous labyrinth of the internal ear.

P. sphenoida'lê. The small, flattened part of the body of the sphenoid bone which lies in front of the groove for the optic commissure.

P. sterna'lê. The sternal portion of the anterior wall of the thorax.

P. supe'rius linguae. The upper or dorsal surface of the tongue.

P. tempora'lê. The more flattened, posterior part of the temporal fossa.

Planu'ria. (*Πλάνος*, straying; *οὔρον*, urine.) The passage of urine through a fistulous opening.

Plan'ury. The same as *Planuria*.

Pla'nus. (*L.*) Flat, smooth.

Plaque. A plate. A French word adopted of late by English medical writers meaning either a small disc-like object, as a blood-platelet, or a rounded patch.

P. à surface réticulée. (*F.*) *Lit.* "Patch with reticulated surface." Term applied to the condition of Peyer's patches at the eighth to tenth day of typhoid.

P. de Pey'er. (*F.*) Peyer's patch.

P.s des fu'meurs. (*F.*) Smoker's patches.

P. du'ra. (*L.*) *Lit.* "hard patch." Term applied by Louis and others to the hard condition of Peyer's patches in an early stage of typhoid.

P. jaune. (*F.*) *Lit.* "yellow patch." Patch of yellow softening in the grey matter of the cerebral convolutions, common in elderly persons.

P. lait'euse. (*F.*) *Lit.* "milky patch." A "milk spot" on the pericardium.

P. molle. (*F.*) *Lit.* "soft patch." Term applied by Louis and others to a Peyer's patch when swollen and soft in an early stage of typhoid.

P. mu'queuse. (*F.*) *Lit.* "mucous patch." The mucous patch or tubercle common in secondary syphilis.

P. o'paline. *Lit.* "opaline patch." Milk-white spots of rounded or indefinite shape, varying in size, with either flat or puckered surfaces, occurring on the fauces or hard palate, or on the inside of the cheeks or lips. They are found in early secondary syphilis, take a very slow course, and may occur also as a tertiary symptom.

P.s orti'ces. *Lit.* "patches like those produced by the stinging-nettle." See *Somphi*.

P.s pterygo'diennes. *Lit.* "pterygoid patches." Term given by Parrot to a form of ulcerative stomatitis in which aphthous ulcers are found on the hard palate, close to the velum and placed symmetrically, one on each side of the middle line. They occur in very cachectic newly-born children. At first they are shallow and oval, and may continue so, as they have little tendency to heal; but not uncommonly they become deeper and even involve the bone.

P., smo'ker's. See *Patch, smoker's*.

Plaquette'. (*F.* dim. of *plaque*.) The same as *Plaque*. Used especially of Bizzozero's blood-plates.

Plas'is. (*Πλάσις*, a moulding or making, from *πλάσσω*, to mould or make.) *Physiol.* A forming or making.

Plasm. (Low *L. plasma*. See *Plasma*.) A mould or matrix.

Also, the same as *Plasma*.

Plas'ma. (*Πλάσμα*, anything formed or moulded. *F. plasmé*; *G. Gebilde*.) The coagulable fluid medium in which the blood and lymph corpuscles float. The blood plasma is also termed *Liquor sanguinis*.

Also, a synonym for protoplasm, though less used now in this sense than formerly.

Also, a term for glycerite of starch.

Also, a green variety of translucent quartz.

P., bile-salt. Plasma obtained on mixing blood with a certain proportion of bile salts. It has been thought by foreign experimenters to show certain distinctive peculiarities.

PLASMASOMA—PLASMIDIUM

P. cells. (G. *Plasmazellen*.) Term applied by Waldeyer to certain fixed corpuscles found amongst connective tissue, having vacuolated protoplasm, the vacuoles containing fluid. As first used, the term included also certain large cells containing numerous coarse granules; but these are now considered to be a different form, and the term "*Mastzellen*" has been applied to them by Ehrlich.

P., cool'ed. Pure plasma obtained by allowing blood to flow into the middle compartment of a vessel, having the inner and outer compartments filled with ice.

P. cor'puscles. The same as *P. cells*.

P. cur'rent. The same as *Plasmatic current*.

P. fi'brin. Fibrin derived from plasma.

P., germ-. Term applied by Weismann to that portion of living substance which is transmitted from one generation to another, through the medium of the nuclei of the male and female reproductive cells.

P.-glob'ulin. One of the three globulins contained in *serum-globulin*, of which it constitutes the greater part. It is pre-existent in the blood.

P., histiogenet'ic. (ἱστίον, dim. of ἱστός, tissue; γένεσις, production, generation.) Term for protoplasm or plasma from which the body-tissue is regenerated.

P. lay'er. The same as *P. current*.

P., leech. Plasma obtained from blood whose clotting has been delayed by mixing it with extract of leeches.

P., lymph. See *Lymph-plasma*.

P., milk. Term applied to the fluid portion of milk in which float oil globules, &c.

P., mus'cle. See under *Muscle*.

P., pep'tone. Plasma obtained by means of a centrifuge from blood in which clotting has been delayed by the injection of peptone into the circulation before death. On passing carbonic acid gas through the plasma, or on adding lecithin, clotting will take place. If the original peptone plasma be cooled to 0° C., a proteid precipitate in rounded granules is obtained which is not obtainable from either pure or salted plasma.

P., salt'ed. Plasma obtained by mixing newly-shed blood with the necessary amount of strong saline solution, solid sodium sulphate, or magnesium sulphate.

P. san'guinis. The same as *P. blood*.

P., somat'ic. The same as *P., histiogenetic*.

P., sy'rupy. Plasma obtained by filtration from blood that has been mixed when shed with a 0.5 per cent. solution of cane sugar, so as to delay coagulation.

P. zone. The same as *P. current*.

Plasmaso'ma. (*Plasma*; σῶμα, the body.) A *Plasmasome*.

Plasmasoma'ta. Pl. of *Plasmasoma*.

Plas'masome. (*Plasmasoma*.) A separate particle of protoplasm, such as certain particles observed in cell-nuclei.

Also, term for those *Microsomata* of the cell-nucleus which stain with safranin. (Billings.) See *Plasmosoma*.

Plasmat'ic. Relating to, or containing, plasma. Also, having power to shape, plastic.

P. cur'rent. (G. *Plasmaströmung*.) The part of the blood-stream in the small arteries which lies between the column of red corpuscles

in mid-channel (*axial current*), and the wall of the vessel. Also termed *Inert layer*.

P. lay'er. The same as *P. current*.

P. stream. The same as *P. current*.

Plasmato'parous. (*Plasma*; L. *paro*, to bring forth.) Term used in Mycology for a special process of germination in which the whole protoplasm of a gonidium issues as a spherical mass, becomes invested with a membrane, and puts out a germ-tube (De Bary, quoted in *Century Dict.*).

Plas'ment. (*Plasma*.) A patented preparation of *Cetraria islandica*. Used as a lubricant and emollient.

Plasmerhidro'sis. (*Plasma*; ἰξ, out of; ἰδρωσις, a perspiring.) The exudation of blood plasma from the vessels.

Plas'mic. The same as *Plasmatic*.

Plas'mine. (*Plasma*.) Name given by its discoverer, Denis, to a substance present in blood plasma, precipitable by adding sodium chloride to the point of saturation. Its removal renders the plasma incapable of clotting. Plasmine is soluble in a very dilute saline solution; but after a time it forms a clot in the solution. It is a mixture of at least two bodies, *paraglobulin* and *fibrinogen*.

Plasmochy'ma. Term applied by Strasburger to the portions of the *Cytochylema* which are rich in proteids.

Plas'mochyme. (*Plasma*; χυμός, juice.) The fluid albuminous component of an organised cell.

Plasmocin'ese. (F.) (*Plasma*; κίνησις, movement.) The process of indirect division of protoplasm. (Carnoy.)

Plas'mode. The same as *Plasmodium*.

Plasmo'dia. Plur. of *Plasmodium*.

Plasmodia'resis. (*Plasma*; διαίρεσις, division.) Term recently applied to division of cell plasma as distinct from division of the nucleus. (*Quart. Journ. Micros. Sc.*, 1886.)

Plasmo'dial. Belonging to, or resembling, a *Plasmodium*.

Plasmo'diate. Giving rise to, or consisting of, a *Plasmodium*.

Plasmo'diblast. (*Plasmodium*; βλαστός, a bud.) See *Trophoblast*.

Plasmo'dic. The same as *Plasmodial*.

Plasmodio'phora. (*Plasmodium*; φέρος, carrying.) A Genus of Fungi, belonging probably to the Class *Myxomycetes* of the *Zygomycetes*.

P. bras'sicæ. (L. *brassica*, a cabbage.) This species is parasitic on the roots of *Cruciferae*, especially certain cabbages, and produces enlargement and swelling of the part. It is thought that this and other species, being taken with water or with the plant-host into the stomachs of animals, may have some connection with certain epidemic diseases; cp. *Plasmodium malaricæ* and malarial fever.

Plasmo'dium. (Πλάσμα; εἶδος, form.) A name given by Cienkowski to the large, motile, protoplasmic bodies formed as the result of the union of the swarm-cells in the *Myxomycetes*, which go through the vegetative stage in this form. Also, the protoplasm of certain Protozoa, found in masses or sheets, and formed by the organic fusion of individuals.

P. malar'icæ. Term proposed by Marchiafava and Celli for the parasitic *plasmodium* in the blood of patients with recent malaria, discovered by Laveran, and named by him *Oscillaria*

PLASMOGEN—PLASTER

malariae. It has also been termed *Hæmoplasmodium malariae*. These plasmodia are considerably smaller than the red blood corpuscles; they exhibit amœboid movements at one stage of their development; and, occasionally, they are found to contain pigment granules.

Plas'mogen. (*Plasma*; γένος, off-spring.) *Bioplasm*, or true protoplasm. That highest factor in the chemical elaboration of the molecule which exists in the protoplasm. (*Encyc. Brit.*, xxiv, 817.)

Plasmo'gony. (*Plasma*; γονή, off-spring.) The development of an organism from plasma. (Rossiter.)

Plasmo'logy. (*Plasma*; λόγος, a discourse.) *Histology*.

Plasmo'lysis. (*Plasma*; λύσις, a freeing.) *Bot.* Contraction of the protoplasm of living cells under the action of reagents. This contraction is generally effected by the withdrawal of water from the cell-contents by exosmosis, the reagent being a fluid (*e.g.* 10 per cent. salt solution) of greater density than the cell-fluid.

Plasmolytic. Showing or effecting plasmolysis.

Plas'molyze. To cause *Plasmolysis* in.

Plasmo'ma. (*Plasma*.) Term for *Fibroma*.

Plasmoso'ma. The same as *Plasmasoma*.

Plasmoso'mata. Pl. of *Plasmosoma*.

Plas'some. (Πλάσσω, to mould; σώμα, the body.) A term used by Brüche and Weisner for hypothetical minute vital particles, made up of a group of protoplasmic molecules, and constituting the smallest units which can exhibit the primary vital forces. They correspond to Weismann's "biophors," and to the "pangenes" of de Vries.

Plas'son. (Πλάσσω, to form.) Term used by Haeckel for *Protoplasm* in general; but also used, by van Beneden, for the protoplasm of non-nucleated cells or cytodes having no cell-wall.

Plastaux'ia. (Πλαστός, moulded; αὔξη, growth.) Increase of *Plasticity*. (Billings.)

Plas'ter. (Πλάσσω, to form, or mould. *L. emplastrum*; *F. emplâtre*; *I. empiastro*; *G. Pflaster*.) An adhesive application, either for mechanical support, or as a medium for the local application of some therapeutic agent. For plasters not given below, see under *Emplastrum*.

P., adhe'sive. The *Emplastrum resinæ*.

P., adhe'sive, Bayn'ton's. This is made by melting together 6 drachms of resin with 1 of *Empl. plumbi*. (Dunglison.)

P., adhe'sive, of pitch and resin. The *Emplastrum Andreae de cruce*.

P., André de la Croix's. The *Emplastrum resinarum glutinans*, *Sp. Ph.*; contains Burgundy pitch 92, elemi 29, olive oil and turpentine 12 each, white wax 6; of this plaster 115 parts are melted with yellow wax 7 and compound lead plaster 7, and spread thinly on linen. See also, *Emplastrum glutinans*, *Fr. Codex*.

P., antiseptic. *P., adhesive*, dipped in a hot aqueous solution of carbolic acid (1 in 60).

P., antiseptic lac. Shell-lac 3 parts, pure carbolic acid 1 part. One third of the acid is first mixed with the lac, and the mixture heated until the shell-lac is melted. Afterwards,

the remainder of the acid is added and the mixture stirred, strained, and then allowed to cool. To make the plaster, the preparation is spread evenly, and the surface is brushed over with gutta-percha dissolved in carbon bisulphide. (Lister.)

P., black. See *Emplastrum nigrum*; also *Emplastrum e minio*. An old form of this plaster was made by boiling one pound of cerussa alba with two pounds of linseed oil.

P., blis'ter. See under *Blister*.

P., blis'tering. Term for *Emplastrum lyttae*.

P., blis'tering, cam'phorated. In the Belg. Ph. it is made of a mixture of 96 parts of *Emplastrum cantharidis* with 4 of camphor.

In *Fr. Codex* (*Emplâtre vésicatoire camphré*) it is made by coating *Emplastrum cantharidis* with a thin layer of camphor.

P., blis'tering, first. A variety of *Emplastrum cantharidis*, formerly in the London Dispensatory (1745), containing 12 ounces of finely powdered cantharides, 1½ ounces of the seeds of *Ammi majus*, and half a pint of vinegar, all incorporated with the simple Melilot plaster.

P., blis'tering, sec'ond. A variety of *Emplastrum cantharidis*, formerly in the London Dispensatory (1745), and containing 12 ounces of Burgundy pitch, 4 ounces of Venice turpentine, and 6 ounces of powdered cantharides.

P., breast. See *Unguentum galbani compositum*.

P., brown. See *Emplastrum fuscum*.

P., Cæ'sar's. An old preparation of the London Dispensatory (1745), made by melting together white wax 96 parts, pine resin 80, and pitch 48; adding turpentine (washed in plantain-water) 32, oil of roses 24, hypocystis and acacia 2 each, all the four latter ingredients being dissolved in the juices of plantain, house-leek, and orpine, 8 each; adding lastly, 12 parts of red roses, 3 each of bistort root, cypress nuts, all the sanders, mint, and coriander seeds, 4 of mastich, 2 each of dragon's blood, sealed earth (*terra sigillata*), true bole, and red coral.

P., cal'cined. The same as *P. of Paris*.

P., car'bonate of lead. This was official in the U.S. Ph. up to 1840; omitted since. Used for excoriated surfaces, and especially for bed sores. It was made by boiling together 2 pints of olive oil and a pound of carbonate of lead, adding water and stirring; then adding 4 ounces of yellow wax, and a pound and a half of lead plaster and, when these had melted, 9 ounces of Florentine orris root in powder.

P., cephal'ic. See *Emplastrum opii*, and *Emplastrum picis*. An old preparation under this name in the London Dispensatory (1745) was made by dissolving 8 parts of labdanum with 3 of myrrh in a warm mortar, and adding 32 parts of transparent resin, 16 parts of black pitch, 8 parts each of turpentine, bean, flowers of bitter vetch, and pigeon's dung, 3 parts of mastic, and 4 of gum, juniper, and nutmegs. This is stated by Dr. James (*Med. Dict.*) to have been commonly used as an application to the feet as well as to the head.

P., chalybeate. The *Emplastrum ferri*.

P.-clo'ver. See *Plaster-claver*.

P., corn. A plaster for the protection of a corn from the rubbing of the boot, usually in the form of a thick, perforated disc with some adhesive substance spread over one surface. See *Sparadrapum viride*.

PLASTER—PLASTIC

P., court. The *Emplastrum adhesivum*, *E. adhesivum anglicum*, or *E. ichthyocolle*.

P., cum'min. The *Emplastrum cumini*.

P., defen'sive. See *Emplastrum defensivum*.

P., dia'chylon. The *Emplastrum diachyli*.

P., Eng'lish. The same as *P., court*.

P., fly. The *Emplastrum cantharidis*.

P., frank'incense. The *Emplastrum thuris*.

P., gum. The *Emplastrum gummosum*.

P., hem'lock. The *Emplastrum cicutæ*.

P., hem'lock pitch. The *Emplastrum picis canadensis*.

P., iron. See *Emplastrum ferri*.

P., is'inglass. The *Emplastrum adhesivum anglicum*.

P., is'inglass, Lis'ton's. Two or three coatings of a strong solution of isinglass in dilute alcohol are spread, either on prepared animal membrane or on oiled silk.

P., is'sue. The *Sparadrapum pro fonticulis*.

P. jack'et. The same as *P. of Paris jacket*.

P., lead. See *Emplastrum plumbi*.

P., Lo'gan's. An unofficial American preparation, made by mixing 12 ounces of Castile soap, $2\frac{1}{2}$ pints of olive oil, and 4 ounces of fresh butter, adding a pound each of litharge and lead carbonate; the mixture is boiled gently for about one and a half hours, then boiled more briskly, removed from the heat, and mixed with 2 drachms of mastic in powder. It has a wide popular use, and is occasionally employed professionally as protective and discutient.

P. machine'. (*F. sparadrapier*.) A machine for spreading plasters. This consists of a table with two raised moveable pieces furnished with metallic points, on which the wash-leather, &c., is stretched.

P., mercu'rial. See *Emplastrum hydragryri*.

P. mull. Term for a form of application for the skin first used by *Unna*, consisting of a thin sheet of gutta-percha, backed on one side with mull, *i. e.* undressed muslin, and spread on the other with an adhesive substance (aluminium oleinicum) with which one or more medicaments have been mixed. Plaster mulls have been used for the application to the skin of salicylic acid, creasote, mercury, pyrogallie acid, chrysarobin, carbolic acid, zinc oxide, &c.

P., mus'tard. A name for the *Cataplasma sinapis*.

P., Nur'em'berg. See *Emplastrum norimbergense*.

P. of blis'tering fly. The *Emplastrum cantharidis*.

P. of Can'ada pitch. See *Emplastrum picis canadensis*.

P. of gum res'in. The *Emplastrum cum gummi resini*.

P. of myrrh. An unofficial American preparation, made by rubbing together $1\frac{1}{2}$ ounces each of powdered myrrh, camphor, and balsam of Peru, adding this to 32 ounces of melted lead plaster and stirring well. It is made into rolls, and is used as a mild rubefacient where action has to be long continued.

P. of Par'is. *Gypsum ustum*; gypsum dried by means of heat. It is used to make splints, plastic apparatus, &c.

P. of Par'is jack'et. See *Sayre's jacket*.

P. of red oxide of iron. See *Emplastrum oxidi ferri rubri*.

P. of River'ius. A plaster formerly used in cases of aneurism, and made up with Armenian bole, terra sigillata, vinegar, and white of egg.

P. of Span'ish fly. *Emplastrum cantharidis*.

P. of Vi'go. The *Emplastrum de Vigo cum mercurio*.

P., pitch. See *Emplastrum picis*.

P., poor man's. (*F. papier goudronné. emplâtre du pauvre homme.*) A stimulating plaster, made up with common resin, tar, and yellow wax.

P., po'rous. A plaster having numerous small holes pierced through it so as to enable it to lie smoothly.

P., Ra'demacher's. The *Emplastrum miraculosum Rademacheri* (Swiss Ph.), prepared by boiling finely powdered litharge 50 parts with olive oil 100, stirring till the mixture is of a blackish brown colour, allowing to partially cool and then adding powdered amber 3 parts, triturated camphor 2 parts, and dried alum 1 part.

P., soap. *Emplastrum saponis*.

P., soap, brown. The *Emplastrum cerati saponis*.

P., spice. *Emplastrum aromaticum*.

P., stick'ing. See *Emplastrum adhesivum*, *E. adhesivum anglicum*, and *E. resinæ*.

P., stom'ach. The same as *P., spice*.

P., stom'ach, magister'ial. An old preparation formerly very popular, and held to strengthen the stomach; it was made by mixing 1 part each of mint, wormwood, bays, *Lavandula stoechas*, *L. spica*, flowers of lavender, *calamus aromaticus*, aloes-wood, nutmegs, cubebs, long pepper, mace, galangal; 2 parts each of mastic, 2 parts each of marjoram, red roses, and yellow sanders; 3 parts of mastic, $2\frac{1}{2}$ of cloves, 12 of oil of mint, 8 of spike-nard, 32 each of resin and wax, 24 of labdanum, and 4 of strained storax.

P., strength'ening. A name for the *Emplastrum ferri*; also, for *Emplastrum picis cum cantharide*.

P., thaps'ia. A plaster mainly used in France; prepared from the so-called resin of thapsia (really an extract from the root), which is spread on any convenient material. See *Thapsia*.

P., ve'sicating. The *Emplastrum cantharidis*.

P., warm. *Emplastrum calefaciens*.

P., wax. See *Emplastrum ceræ*.

Plas'tic. (Πλαστικός, belonging to forming or moulding. *F. plastique*; *I. plastico*; *G. plastisch*.) Formative or generative. Applied to the formative power in animal tissues, whereby growth and nutrition proceed, and repair takes place.

P. activ'ity. Term applied somewhat loosely either to the nutrition of tissue or to the power manifested in certain tissues of development and reproduction.

P. al'iments. Term applied by Dumas and Liebig to nitrogenous foods (*e. g.* casein, gluten, fibrin, &c.); as these are so readily absorbed and assimilated.

P. appa'rat'us. (*F. appareil plastique*.) Splints, &c., formed with material such as starch, which is applied in a liquid state, and subsequently stiffens.

P. arteri'tis. A form of inflammation of the coats of the arteries by which a diseased

PLASTICISMUS—PLATANUS

patch is protruded into the lumen of the artery, and adhesion may take place, leading to subsequent occlusion of the vessel.

P. bronchitis. See *Bronchitis, plastic.*

P. element. Term applied to any element of food or tissue which tends to the formation of a more highly organised form.

P. exudation. An exudation of *P. lymph.*

P. fluid. The same as *P. liquid.*

P. force. (Δύναμις πλαστική.) The power in living organisms by which growth and repair proceed.

P. gum. Term for *Gutta-percha.*

P. heterotopia. See *Heterotopia, plastic.*

P. irritation. Irritation which results in the formation of fresh tissue. See also *Irritation.*

P. liquid. A syn. of *Blastema* (q. v.).

P. lymph. *Plasma* which has exuded from a blood-vessel.

P. medium. Term for a medium or communication supposed to exist between mind and body, and partaking of the qualities of each. The idea has, however, now been dropped as without possible foundation.

P. operations. See *P. surgery.*

P. power. The same as *P. force.*

P. surgery. Reparative Surgery. Operations performed to remedy deficiencies of structure, the result of disease or of congenital or acquired malformation. An essential part of the reparative process after operation is union between raw edges by *first intention.* There are different methods of operating. New tissue may be transplanted from a distance or from the immediate neighbourhood, or diseased surfaces may be pared and brought together, as in the treatment of fissures. See, further, *Cheiloplasty, Meloplasty, and Rhinoplasty.*

P. tissue. Term applied by de Blainville (1833) to *Embryonic connective tissue.*

P. tumours. Tumours formed of *Embryonic connective tissue* (q. v.).

Plasticismus. (Πλαστικός, belonging to forming or moulding.) Syn. for *Plasticity.*

Plasticity. (F. *plasticité*; G. *Bildungsmögen.*) The property of being able either to mould or to be moulded.

Plasticule. (Dim. form from *plastic.*) The same as *Plastidule.*

Plastid. (*Plastidium.*) Term used by Haeckel for the simple cell, or cytode, the morphological unit.

Also, in *Bot.*, one of the various bodies, such as leucoplastids, chromoplastids, present in the protoplasm of living plant cells.

Also, as an adjective, resembling a plastid; plastic.

P., connective-tissue. The same as *Corpuscle, connective-tissue.*

Plastidium. (Πλαστός, moulded.) A *Plastid.*

Plastidozoa. (*Plastidium*; ζῶον, an animal.) Another term for *Protozoa.*

Plastidule. (Dim. of *Plastid.*) The smallest amount of protoplasm that can exist intact. The smallest portion of protoplasm or of protein which can have a separate molecular existence. (Haeckel.)

Plastilytic. (Πλάσσω, I form; λύω, I unbind.) Syn. for *Antiplastic.*

Plastilyticum hæmatolyticum. (*Plastilytic*; hæmatolytic.) Term for

the condition in which there is a lessening in the number of red corpuscles or of plastic matter in the blood.

Plas'tin. *Biol.* A chemical constituent of the cell nucleus. According to Schwartz, this substance, *plastin* or *cysto-plastin*, is extensible and viscous, and is not acted upon either by pepsin or trypsin.

Plas'tinx. (Πλάστιγξ, the scale of a balance.) Term used by Hippocrates for a splint or narthex. See also *Ferula.*

Plastocoly'sis. (Πλαστός; κώλυσις, interference.) Arrest of development.

Plastodyna'mia. (Πλαστός; δύναμις, power.) Ἡ δύναμις πλαστική, or the power of organisation resident in living tissues. The manifestation of nutritive activity in general, and especially that shown by the blood. (Lobstein.)

Plastodynam'ic. (*Plastodynamia.*) Pertaining to nutritive activity.

Plastoprole'psis. (Πλαστός; πρόληψις, anticipation.) A precociously rapid development.

Plas'tral. Belonging to the *Plastron.*

Plas'tron. (F. *plastron*, a breastplate.) Originally, a breastplate. *Anat.* The sternum together with the costal cartilages—the part removed in post mortem examinations.

Comp. Anat. 1. The ventral portion of the shell of the *Chelonia* and *Testudinea*. 2. The ventral shield of the fossil armadillos, *Glyptodons.*

Ornithol. A coloured region resembling a shield, present on the breast of some birds. (Coues.)

Pla'ta. (Πλάτη, the blade of an oar.) A synonym of *Omoplate.*

Platana'ceæ. The same as *Platanæ.*

Platan'eæ. (*Platanus.*) An Order of Dicotyledonous plants, native to North America and Mediterranean Asia, and cultivated throughout all temperate regions as ornamental trees.

Plat'anine. (*Platanus.*) A greenish crystalline substance which has been extracted from the bark of the plane-tree.

Platanther'a. (Πλατύς, wide; ἀνθηρός, blooming.) A group of plants formerly considered as a genus, now settled as a section of the Genus *Habenaria*, of the Order *Orchideæ.* They are native to the temperate and warmer regions of both hemispheres.

P. bifo'lia. See *Habenaria bifolia.*

P. orbicula'ta. (L. *orbiculatus*, circular.) The large, round-leaved orchis. Indigenous. Its leaves have been used as a dressing for blisters.

Plat'anus. (Πλάτανος, the Oriental plane. F. *platane*; G. *Platanenbaum.*) The only Genus of the *Platanææ.*

P. acerifo'lia. (L. *acer*, sharp; *folium*, a leaf.) Hab., Greece and the East generally. Grown occasionally as an ornamental tree in England and Western Europe.

Also, used as a syn. of *P. occidentalis.*

P. loba'tus. (Low. L. *loba*, a lobe.) A syn. of *P. occidentalis.*

P. occidenta'lis. (L. *occidentalis*, belonging to the West.) Hab., North America; but grown throughout England for the sake of the beauty of its foliage. Less common than *P. orientalis.*

P. orienta'lis. (L. *orientalis*, belonging to the East.) Hab., Greece and the East gene-

PLATE

rally. Described by Dioscorides under the name of Πλάτανος. Used in medicine up to the present time. The leaves and bark were considered useful against the poison of snakes and scorpions, against hæmorrhages, against inflammatory swellings, against diseases of the eye, and against toothache. It is now grown in Europe as an ornamental tree.

P. palma'ta. (L. *palmatus*, palm-like.) A syn. of *P. orientalis*.

P. trag'a. Another name for the *Acer pseudo-platanus*; also, for the *Musa paradisiaca*.

Plate. (Πλάτς, flat, broad. F. *plate*, *plat*; I. *piatta*; S. *plata*; G. *Platt*.) This word sometimes occurs in Anatomy, Physiology, and Embryology, in a technical sense; e.g., *Protovertebral plate*, *End-plate*, *motorial*, &c. (q. v.).

P.s., abdom'inal. See *Lateral plates of embryo*.

P., ambula'cral. See under *Ambulacral area*.

P., approxima'tion. See *Senn's plates*.

P., aud'itory. A thickened portion of epithelium formed, in some cases, in the *Cephalopoda*, by the terminations of the auditory nerves.

P., ax'ial. Term for *Streak*, *primitive* (q. v.).

P., basica'rnial. See *Basicranial plate*.

P., bas'ilar. See *Basilar plate*.

P.s., blood-, of Bizzoz'ero. Small colourless disc-shaped bodies, round, oval, or lenticular, from one quarter to one half the size of the red corpuscles, present in considerable numbers in the blood of all the *Mammalia*. They take some part in the formation of fibrin during coagulation. See also under *Hæmatoblast*.

P. bone. A popular name for the *Scapula*.

P.s., bone. See *Senn's plates*.

P., bran'chial. The same as *Branchial lamella*. See under *Lamella*.

P., car'diac. Term for the principal part of the chitinous lining of the stomach in the higher *Crustacea*, e.g. Crayfish. It is median, dorsal, and T-shaped, bears two "cardiac teeth," and is articulated with the remaining ossicles to form the so-called "gastric mill."

P., cell-. (F. *plaque cellulaire*, *p. équatorial*; G. *Zellplatte*, *Plattenzelle*.) Term for any cell which is flattish or plate-like, e.g. tendon cells, endothelial cells.

Also, the whole mass of chromatin fibrils found at the equator of a cell undergoing karyokinesis, thus including both *Plate*, *cytoplasmic* and *P., nuclear* (q. v.). (Strasburger.)

P., chief. See *P., principal*.

P., circumcæso'phage'al. Term applied to calcareous plates found in certain *Holothurians* which form a ring round the œsophagus and serve for the attachment of body muscles.

P., cli'noid. Term for that part of the body of the sphenoid bone which lies posterior to the pituitary fossa, and from the upper borders of which project the two posterior clinoid processes.

P.s., cos'tal. *Zoöl.* In *Chelonia*, dermal bony plates, to which the ribs are united, and which form the chief part of the carapace.

P., crib'riform. See *Cribriiform plate of ethmoid*.

P.-cultiva'tion. See *P. culture*.

P.-cul'ture. Term for the method of cultivating micro-organisms in nutrient media spread out on glass plates. The sterilised medium is

liquefied in a test tube, and inoculated with whatever bacteria it is desired to cultivate; this is done in such a way that the individual organisms are thoroughly distributed throughout the medium. The contents of the tube are poured out on to a sterilised glass plate, spread out evenly and allowed to set, being carefully protected from air, &c. By this means the micro-organisms are separated, and each individual that grows develops into a colony by itself.

The term is also used for the colonies thus grown.

P., cytoplas'mic. Term applied to that part of the *cell-plate* which is in the cell-body.

P.s., dor'sal. The same as *Medullary ridges*.

P.s., elec'trical. See *Electrical plates*.

P.s., enam'el. The same as *Enamel nodules*.

P., end. See *End plate*, *motorial*. Also see under *Reticulated*, *Secretory*, and *Sensory*.

P.s., en'dochrome. The portions of the cell contents of *Diatoms* which hold the colouring matter. See also *Endochrome*.

P., epiphys'ial. See *Disc*, *epiphysial*.

P., equato'rial. (F. *disque*, *couronne* or *plaque*, *équatoriale* or *nucléaire*; G. *Kernplatte*, *Äquatorialplatte*, *äquatoriale Verdichtungszone*.) Term applied to the mass of chromatin fibrils, having a plate-like appearance, collected during *Karyokinesis* at the equator of the nuclear spindle.

P.s., fa'cial. The same as *Preoral arches*.

P., flesh. (*Lamella carnea* of Haeckel; G. *Fleischplatte*.) Term employed by Haeckel for that portion of the parietal mesoblast from which are developed the muscles of the trunk, the endoskeleton, the parietal œlom-epithelium, and the testes.

P., foot-. Term for the flat base of the stapes, fitting into the *fenestra ovalis*.

P., fron'tal. Term employed by Spöndli for the cartilaginous foetal plate connecting the lateral parts of the ethmoid cartilages with the lesser wings and anterior portion of the sphenoid.

P., fron'to-na'sal. See *Fronto-nasal plate*.

P.s., gen'ital. Term applied to the perforated plates situated round the apical pole of *Echinodermata*; the ducts of the genital glands open through the perforations.

P.s., gill. See *Gill plates*.

P., grey. See *Lamina cinerea*.

P., ground. Term used by Klein for the hyaline ground substance of endothelial cells and connective tissue and other corpuscles, which contains the intracellular network embedded in it.

P.s., gu'lar. Term applied to bony laminae found between the mandibular rami in certain fishes (*Amia*, *Ceratodusa*, &c.).

P.s., hair. The same as *Hair fibres*.

P., horn. (*Lamella ceratina* of Haeckel; G. *Hornplatte*.) Haeckel's term for that portion of the parietal mesoblast from which are developed the epidermis and its appendages, including the lacteal glands.

P.s., hy'oid. Term for the second pair of visceral arches from which the cornicula of the hyoid (ceratohyals) are developed.

P., infraspinous. The same as *Post scapula*.

P.s., interambulac'ral. The non-per-

PLATEA—PLATINATE

forated rows of plates alternating with the ambulacral perforated plates in the shell of *Echino-dermata*. See also *Ambulacral area*.

P.s., intergen'ital. See *Intergenital plates*.

P., interna'sal. The same as *Fronto-nasal plate*.

P.s., interver'tebral. See *Intervertebral discs*.

P., ju'gular. The same as *P., gular*.

P., kid'ney, prim'itive. (*Lamella urogenitalis* of Haeckel; *G. Nierenkeimplatte*.) Haeckel's term for that portion of the blastoderm from which the kidneys and the primitive ducts are derived.

P., leath'er. (*Lamella coriaria* of Haeckel; *G. Lederplatte*.) Haeckel's term for that portion of the lateral mesoblast from which the corium is developed, and possibly also the cutaneous muscles.

P.s., ligamen'tous. Term for the embryonic *Intervertebral discs*.

P., madrepor'ic. See *Madreporic plate*.

P.s., mandib'ular. See *Mandibular plates*.

P.s., Mans'ford's. See under *Mansford*.

P., mar'row. (*Lamella medullaris* of Haeckel; *G. Markplatte*.) Haeckel's term for that portion of the lateral mesoblast from which are developed the cerebro-spinal axis and the special sense-organs.

P.s., maxil'lary. See *Maxillary plates*.

P.s., maxil'lary, infer'ior. See *P.s., mandibular*.

P.s., medul'lary. See *Medullary plate*. Also, used for *Ridge, medullary*.

P., mesenter'ic. (*Lamella mesenterica* of Haeckel; *G. Gekrösplatte*.) Haeckel's term for that portion of the visceral mesoblast from which are developed the mesentery and the fibro-muscular elements of the intestinal walls.

P., me'sial. A syn. of *P., protovertebral*.

P.s., mesoblas'tic, lat'er-al. The same as *Laminee ventrales*.

P., mo'tor. The same as *End-plate, motorial*.

P., mu'cous. (*Lamella mucosa* of Haeckel; *G. Schleimplatte*.) Haeckel's term for that portion of the hypoblast from which are developed the epithelium lining the intestinal canal and also the cells of the intestinal glands.

P., mu'scle. See *Muscle plate*.

P., na'sal. Term for any one of the dermal scales on the head of serpents, through or between which the nostrils open.

P., nu'clear. The same as *P., equatorial*.

P.s., oc'ular. See *Ocular plates*.

P. of eth'moid, or'bital. The *Os planum*.

P. of eth'moid, ver'tical. The *Mesethmoid bone* (q. v.).

P. of fron'tal bone, or'bital. See under *Frontal bone*.

P. of pal'ate bone, pal'ate or hori-zon'tal. See under *Palate bone*.

P. of pal'ate, na'sal bone, or ver'tical. See under *Palate bone*.

P. of pia mater, interfis'sural. Term used by Gegenbaur for the fold of pia mater lying in the anterior median fissure of the spinal cord.

P. of super'ior maxil'la, pal'ate. See under *Maxillary bone, superior*.

P., or'bital. See *Orbital plate*.

P.s., parachor'dal. The same as *P.s., mesoblastic, lateral*.

P.s., perisomat'ic. Term applied to anal, basal, oral, and other interrarial plates of Crinoidea to distinguish them from radial plates.

P.s., pharynge'al. The same as *Branchial arches*.

P., prescap'ular. See *Prescapula*.

P., prin'cipal. (*G. Hauptplatte*.) Waldeyer's term for the main plate of connective tissue cells which contains the nucleus and has secondary smaller plates extending from it.

P., protover'tebral. See under *Protovertebral*.

P., pter'ygo'id, exter'n'al. See under *Pterygoid plate*.

P. pter'ygo'id, inter'n'al. See under *Pterygoid plate*.

P., pterygosto'mial. See *Pterygostomial plate*.

P., ra'dial. See *Radial plate*.

P.s., regula'tion. Term for a plate so arranged in the mouth as to tend to alter the position of abnormally placed teeth. There are many varieties of this apparatus, in which wedges, springs, screws, &c., are used.

P., reten'tion. A plate fitted exactly to the teeth and palate, and employed after *P.s., regulation* have been used, to keep the teeth in their proper positions; generally worn about six months.

P., sec'ondary. Waldeyer's term for the smaller membranous plates projecting at various angles from the *P., principal* of connective tissue corpuscles.

P.s., Senn's. See *Senn's plates*.

P., spi'ral. The *Lamina spiralis*.

P.s., subcra'nial. See under *Branchial arches*.

P.-sul'phate of potas'sa. See *Potassium and sodium, double sulphate of*.

P.s., tar'sal. See *Tarsal plates*.

P., ter'minal. The same as *Nerve end-plate*.

P., tympan'ic. See *Tympanic plate*.

P., val'vular. Term for the *valve of the foramen ovalë*.

P., vas'cular. Term used by Wagner for the *endochorion*.

P.s., vis'ceral. See under *Visceral*.

Plate'a. (Πλατύς, -εῖα, -ύ, flat, broad.) A name for the *Bothriocephalus latus*.

Plateias'ma. The same as *Platiasmos*.

Plate'lets, blood-. (Dim. of *Plate*.) The same as *Plates, blood-, of Bizzozero*.

Platetrope. (Πλατύς, flat; τροπή, a turning round.) Wilder's term for a lateral homologue.

Platetropy. Bilateral symmetry.

Plathel'mins. See *Platyhelmins*.

Plathymor'phia. See *Platymorphia*.

Platias'mos. (Πλατειασμός, a broad, especially Doric, dialect.) Old term for indistinct speech from malformation or overgrowth of the upper lip. (Gorræus.)

Platias'mus. (*Platiasmos*.) The same as *Platiasmos*.

Plat'ina. The same as *Platinum*.

Plat'inæ. Gen. of *Platina*.

P. chlorure'tum. An old name (Dutch Ph.) for *Platinic chloride*.

P. mu'rias. A syn. of *Platinic chloride*.

P. oxy'dum. A syn. of *Platinic oxide*.

Plat'inate. A salt of some metal or

compound radical, in which platinic oxide plays the part of an acid.

Plat'ini. (Gen. of *Platinum*.) In compounds the prefix has the force of *Platinic*.

P. bichlor'idum. (L. gen. of *Platinum*.) A name for *Platinous chloride*; sometimes used erroneously for *Platinic chloride*.

P. et sodii chlo'ridum. See *Platinic sodium chloride*.

Plat'ini-bro'mide. Term for a salt of *bromo-platinic acid*.

Plat'ini-chlo'ride. Term for a salt of *Chloroplatinic acid*.

Plat'ini-iodide. Term for a double salt containing platinum tetraiodide with another iodide.

P. so'dio-chlo'ridum. The same as *Platini et sodii chloridum*.

Plat'ini-thiocyanate. Term for a double salt containing platinic thiocyanate with another thiocyanate.

P. tetrachlor'idum. The same as *Platinic chloride*.

Platin'ic. Belonging to *Platinum*. *Platinic salts* are those whose base is the quadrivalent Pt_4 .

P. chlo'ride. $PtCl_4$. (F. *perchlorure de platine*; G. *Platinchlorid*.) It occurs in large red crystals, readily soluble in water and alcohol. The official solution is prepared by dissolving bits of platinum foil in a mixture of nitric and hydrochloric acids, and diluting. It is used as a test for distinguishing between salts of potassium and sodium (precipitates salts of potassium), and also in testing for alkaloids. It has also been given in secondary syphilis (dose, gr. 1-16th to 1-4th in solution or in a pill with liquorice powder). It has been used in an ointment for stimulating indolent ulcers. In large doses it is as poisonous as arsenic, causing paralysis of the peripheral ends of the vaso-motor nerves.

P. hydroxide. $Pt(OH)_4$. Obtained as a bulky yellowish or brownish powder by boiling a solution of platinic chloride with caustic potash or soda, heating the precipitate with acetic acid and drying. It was formerly used in the Dutch Ph. as an emetic and purgative.

P. oxide. $Pt. O_2$. A black powder obtained on heating *Platinic hydroxide*, which latter is the form in which the salt was formerly used.

P. sodium chlo'ride. Na_2PtCl_6 . Also known as Chloride of Platinum and Sodium, Sodium Platini-chloride, Sodio-chloride of Platinum, Platino-bichloride of Sodium. It is obtained in light-red triclinic prisms or tables on evaporating chloroplatinic acid with common salt. It has been used for the same purposes as *Platinic chloride*. Dose, 1-12th to 1-4th gr.

Platin'ise. To coat with finely divided platinum, *e. g.*, the negative plate in Smee's battery.

Plat'ino-. (*Platinum*.) In compounds the prefix has the signification or force of *Platinous*.

Plat'ino-bro'mide. Term for a compound containing *Platinous bromide* ($PtBr_2$) with another bromide.

Plat'ino-chlo'ride. Term for a salt containing *Platinous chloride* with another chloride.

Also, used loosely as syn. of *Platini-chloride*.

Plat'ino-cyanide. Term for a double salt of *Cyanide of platinum* and another cyanide.

Plat'node. (*Platinum*; ὁδός, a way.) The negative plate or cathode of a voltaic battery, which, as in Grove's cell, may be a platinum plate.

Plat'nioid. (*Platinum*; ἴδος, form.) Resembling platinum. Term applied to the metals with which platinum is always found associated; they are palladium, rhodium, iridium, osmium, ruthenium.

Plat'inous. (F. *platineux*.) Term for those salts in which platinum appears as a bivalent radical (molecule = Pt_2).

P. chlo'ride. $PtCl_2$. Platinum dichloride. Obtained by heating chloroplatinic acid to 300° C., or by passing dry chlorine over spongy platinum heated to 240° C. It is a greenish-grey powder, insoluble in water.

Platinum. Symbol. Pt. (S. *platina*, platina, named from silvery appearance; from S. *plata*, silver, plate. F. *platine*; G. *Platina*.) A bright, heavy, malleable metal, characterised by its extreme infusibility and resistance to ordinary acids and the oxygen of the air. It is very readily heated. It dissolves in aqua regia, and is acted upon by caustic alkalies at high temperatures.

P. black. Finely divided metallic platinum, obtained by exposing an aqueous solution of $PtCl_4$ in an atmosphere of hydrogen to bright sunlight. A very active agent in determining combination of O and H. It is used in porcelain painting and in making mirrors.

P. foil. Platinum beaten out in very thin sheets, used extensively in the processes of chemical analysis.

P. need'le. A piece of platinum wire mounted on a glass rod, for inoculating nutrient media, &c., with bacteriological cultures.

P., spongy. A grey, loosely-coherent mass of finely divided platinum, obtained by heating ammonio-platinic chloride to low redness. Like *P. black*, it is an active agent in determining chemical change, *e. g.*, the union of hydrogen with oxygen.

Plat'maine. A *leucomaine* discovered by Würtz in fresh bullock's blood.

Plat'ode. The same as *Platoid*.

Plat'odes. In modern classification, the term for the third phylum of the animal kingdom, containing the three Classes of *Turbellaria*, *Trematoda*, and *Cestoda*. The phylum as thus constituted, takes these three classes out of the fourth phylum, *Vermes*; and corresponds only partially to the older Group of *Platyhelminthes*.

Plat'oid. (Πλατύς, flat, broad; ἴδος, form.) Flattened in shape, like many of the *Vermes*.

Plato'nia. (Πλάτων, the Greek philosopher.) A small Genus of trees of the Order *Clusiaceæ*. Hab., South America. See also *Moronobea*.

P. insign'is. (L. *insignis*, remarkable.) Hab., Brazil. The fruit of this tree is eaten as a great delicacy; the seeds tasting like almonds and being used as such.

Plattner. 1. Plattner, Ernest A., German physiologist, &c., who lived in early part of this century.

Also, 2. Plattner, K. F., 1800 to 1858, German chemist and mineralogist.

P.'s blow-pipe. (See *Plattnerite*.) A form of blow-pipe invented by the German chemist Plattner, having a square chamber or receptacle into which nozzle and mouth fit at right angles to one another.

PLATTNERITE—PLATYHIERIC

P.'s crys'tallised bile. Term given to needle-shaped crystals of the sodium salts of glycocholic and taurocholic acids, produced from ox-bile by evaporating to dryness with animal charcoal, and treating subsequently first with anhydrous alcohol, and then with anhydrous ether; the white amorphous precipitate first obtained is left to stand for some hours or days, and eventually shows the needles in tufts.

Plattnerite. (Named after K. F. Plattner.) A native form of plumbic peroxide, PbO_2 , occurring in black six-sided prisms.

Plat'ula. (Πλατύς, broad.) A synonym of *Pediculus pubis*.

Platun'gan. A hot saline spring in Java, situated near petroleum wells. It has a temperature of $44^{\circ} C.$ ($111^{\circ} F.$), and, according to Fresenius' analysis, its water contains sodium chloride 2.6 grms., potassium chloride .076, bicarbonate of soda .407, of magnesia .406, of calcium .483, ferrous carbonate .023 grms., with traces of iodide and bromide of sodium, bicarbonate of manganese, sulphate of potash, alum, and silica in 1 litre of water.

Platur'ous. (Πλατύς; οὐρά, a tail.) Broad-tailed.

Platur'us. See *Platyurus*.

Platy-. (Πλατύς, broad, flat.) A prefix meaning broad.

Platyba'sic. (Platy-; basic. F. *platybasique*.) *Craniom.* Having a wide base. (Broca.) Term applied to skulls in which the negative angle of Daubenton is more than 80° , the occipital bone round the foramen magnum being pressed upward.

Platybrachycephal'ic. (Platy-; *brachycephalic*.) *Platycephalic* and *brachycephalic*.

Platybreg'mate. (Platy-; *bregma*.) The same as *Platybregmatic*.

Platybregmat'ic. Having a wide *bregma*.

Platycap'nos spica'tus. (Platy-; *καπνός*, smoke; L. *spicatus*, pointed.) A species of the *Fumariaceæ*, common in South of Europe. Properties those of *Fumaria officinalis*.

Platycarp'ous. (Platy-; *καρπός*, fruit.) Having broad fruit.

Platycephal'ic. (Platy-; *κεφάλη*, the head.) Flat-headed; used of mushrooms, &c. *Craniom.* Term applied to skulls with a vertical index of less than 70° .

Platycephal'ous. The same as *Platycephalic*.

Platyceph'alus. *Anat.* Term for a broad, flattened skull, the characteristic shape of which is due to synostosis of the frontal and parietal bones.

Ichthyol. A Genus of the *Platycephalidæ*, or flat heads, a Family of the *Acanthopterygii*.

Platyceph'aly. The condition of being *Platycephalic*.

Platy'ceros. (Platy-; *κέρας*, a horn.) Pliny's name for *Cervus dama*.

Platyche'lous. *Zoöl.* 1. Having broad claws (*χηλή*, a claw). 2. Having broad lips (*χείλος*, a lip).

Platycne'mia. The condition of being *Platycnemio*.

Platycnem'ic. (Platy-; *cnemē*.) Flat, as to the tibia. Term applied to a tibia that is flattened at the side; also, to a person having such a tibia.

Platycne'mism. The state of being *Platycnemio*.

Platyco'don. (Platy-; *κῶδων*, a bell.) A Genus of the Nat. Order *Campanulaceæ*.

P. grandifo'rum. (L. *grandis*, large; *flos*, a flower.) Hab., Cochin China and adjacent districts. The root is extensively used by the natives as a tonic, astringent, carminative, and vermifuge. It has been given with success in dysentery, cholera, and various nervous and pulmonary diseases.

Platycœl'ous. (Platy-; *κοῖλος*, hollow.) The same as *Opisthocœlous*.

Platycor'ia. (Πλατυκορία, a disease of the eye from dilatation of the pupil; from *πλατύς*, and *κόρια*, the pupil of the eye.) *Mydriasis*.

Platycori'asis. (Πλατυκορίασις = *πλατυκορία*.) The same as *Platycoria*.

Platydac'tyl. (Platy-; *δάκτυλος*, a finger or toe.) Having flat, broad digits. Especially used of lizards and frogs which have toes much broadened at the ends.

Also, a member of the *Discodactylia*.

Platyda'ctylous. Having broad fingers or toes.

Platydolichocephal'ic. (Platy-; *dolichocephalic*.) *Platycephalic* and *Dolichocephalic*.

Platyel'mia. The same as *Platyhelminthes*.

Platyel'mins. See *Platyhelmins*.

Platygast'ric. (Platy-; *γαστήρ*, a stomach.) Having broad gastric cavities.

Platyglos'sal. (Platy-; *γλῶσσα*, a tongue.) Having a broad or wide tongue.

Platyglossa'tus. The same as *Platy-glossus*.

Platyglos'sus. (Platy-; *γλῶσσα*, a tongue.) Having a broad tongue.

Platygonid'ium. (Platy-; *gonidium*.) A form of gonidium, found in certain lichens, which is depressed and broad. See *Gonidium*.

Platyhel'mins. (Platy-; *ἔλμινς*, a worm, especially a tape-worm.) The same as *Platea*.

Platyhelmin'thes. (Plural of *Platyhelmins*.) The flat worms; a Group of the *Vermes*, containing the Nemertea, Cestoda, Trematoda, and Turbellaria.

P., devel'opment of. This varies considerably in the different Orders. *Turbellaria* mostly undergo a simple direct development; but some have special larval forms, characterised by the possession of ciliated lobes (Götte's, Müller's, or Moseley's larvæ). In *Nemertea* development takes place both with and without a metamorphosis; in those cases in which metamorphosis occurs, two main larval forms are known, viz. *Pilidium*, a ciliated, free-swimming, helmet-shaped form; and the type of *Desor*, a creeping ciliated form. In both these forms the sexually perfect worm is developed inside the larval skin. In *Trematoda*, development is either direct, or the embryos undergo metamorphosis, accompanied by an alternation of generations (see under *Cercaria*, *Distoma*, &c.). For the development of *Cestoda*, see *Cestoda*, *Bothriocephalus*, *Cysticercus*, and *Tænia*.

Platyhi'eric. (Platy-; *ἱερόν ὀστέον* = *os sacrum*.) With broad sacrum. Epithet applied to species or individuals in whom the sacral index ($\frac{\text{breadth} \times 100}{\text{height}}$) exceeds 100. Nearly all females

of whatever race are platyhieric, but amongst

males few black races come under this head. See *Dolichohieric*.

Platylabus (*Platy-*; λόβος, a lobe.) Having broad lobes or segments.

Platylomus. (*Platy-*; λῶμα, a fringe or border.) Having broadly-margined leaves.

Platymesaticephalic. (*Platy-*; mesaticephalic.) Both *Platycephalic* and *mesaticephalic*.

Platymesocephalic. The same as *Platymesaticephalic*.

Platymetaphrenicus. (*Platy-*; μετάρριον, the back.) Having a broad back.

Platymorphia. (*Platy-*; μορφή, shape.) A name for *Hypermetropia*.

Platyneurus. (*Platy-*; νεῦρον, a nerve.) Bot. Having broad nervures.

Platynosis. (*Platy-*; νόσος, disease.) Pathological enlargement or extension.

Platynote. The same as *Platynotus*.

Platynotus. (*Platy-*; νῶτον, the back.) Zool. Having a broad back.

Platyodont. (*Platy-*; ὀδούς, ὀδόντος, a tooth.) Broad-toothed.

Platyope. (*Platy-*; ὤψ, the face.) A person, animal, or skull with a broad face.

Platyophthalmon. (*Platy-*; ὀφθαλμός, the eye.) A name applied formerly to antimony, because of its use among Eastern women to make the eyes look large and sparkling.

Platyopic. (*Platyope*.) Having a broad face. In *Cranium*. Applied to skulls with a naso-malar index of less than 107.5°.

Platysteon. (*Platy-*; ὅστέον, a bone.) Old term for the *Sacrum*.

Platypellic. (*Platy-*; πέλλα, a basin.) Term applied by Turner to pelves having a brim-index under 85°. See *Dolichopellic*.

Platypes. (*Platy-*; L. *pes*, a foot.) Bot. Having the *stipes* dilated at the base.

Platypetalous. (*Platy-*; πέταλον, a petal.) Having broad petals.

Platyphylline. The same as *Platyphyllous*.

Platyphyllous. (*Platy-*; φύλλον, a leaf.) Having broad leaves.

Platypodia. (See *Platypodus*.) Flat-foot.

Platypodus. (*Platy-*; πούς, ποδός, a foot.) Bot. Having broad peduncles. Ornithol. Having broad feet.

Platypus. (Πλατύπους, broad-footed.) Pathol. Flat-foot.

Comp. Anat. 1. A Genus of the *Monotremata*, now termed *Ornithorhynchus*.

2. The duck-billed platypus, a Species of the Genus *Ornithorhynchus*.

Ornithol. A Genus of sea-ducks, also called *Fulex*.

Entom. A Genus of beetles, Family *Scolytidae*.

Platypygous. (*Platy-*; πνγή, the buttocks.) Broad across the buttocks.

Platyrhine. (*Platy-*; ῥίς, ῥίνος, the nose.) Flat-nosed. *Cranium*. Having a flat nose (nasal index of from 51.1° or 53° to 58°).

Zool. A member of the *Platyrhini*.

Platyrhini. (*Platyrhine*.) A division of the *Quadrumania*; the platyrhine monkeys.

Platyrhinus. (*Platyrhine*.) *Platyrhine*.

Platyrhynchine. (*Platy-*; ῥύγχος, a snout or beak.) Broad billed, broad nosed.

Platyros'tris. (*Platy-*; L. *rostrum*, a beak.) *Ichthyol.* Having a broad snout.

Ornithol. Having a broad beak. Applied by Blainville to a Family (*Platyrostris*) of the *Passeres*.

Platyrhine. The same as *Platyrhine*.

Platyrhinian. *Platyrhine*; also, in *Anthropol.*, having flattened, broad nasal bones. Also, used as a substant. in either of the two senses.

Platyrhiny. The condition of being *Platyrhinian*.

Platyscop'ic. (*Platy-*; σκοπέω, to look at.) *Optics*. Giving a wide field of vision.

Platysiliquus. (*Platy-*; siliqua, a pod.) Bot. Having flat, broad siliquæ.

Platysma. (Πλάτυσμα, anything spread out.) An expansion; anything spread out. Used for a spread plaster; also, for the *P. myoides*.

P. myoides. A syn. of *P. myoides*.

P. myoides. (Μῦς, a muscle; εἶδος, form. F. *large du cou*, *platysme myeux*; G. *breiter Halsmuskel*.) A broad sheet of muscular fibres covering the neck, and passing upwards and inwards from their points of origin, viz. the clavicle and muscles of the shoulder and upper part of the chest, to their insertion along the lower jaw. Many of them blend with the superficial facial muscles. It appears to represent the *Panniculus carnosus* of lower animals.

Platyster'nal. (*Platy-*; στήρνον, the chest.) *Anat.*, *Comp. Anat.* Having a broad sternum.

Platystomous. (*Platy-*; στόμα, a mouth.) Zool. Having a large mouth or opening.

Platyrus. (*Platy-*; οὐρά, a tail.) Zool. Having a broad, flat tail.

Plaue or **Plau**. A town in Schwarzburg-Sonderhausen, in Germany, where are several cold saline springs, the chief one being named *Riedquelle*, the source of the river Marais. The analysis given of this spring by Helft and Seegen is:—sodium chloride 3.236 grms., potassium chloride .002, magnesium chloride .062, calcium sulphate .401, sodium sulphate .188, magnesium sulphate .089, calcium carbonate .144, magnesium carbonate .004 grms. in one litre of water. The water is taken in doses of from four to six glasses each morning, and is frequently given in conjunction with treatment by baths at *Arnstadt* (q. v.), which lies near.

Plaut's method. This is a very useful method for demonstrating the "clubs" in *Actinomyces*. The sections are first warmed in magenta solution (magenta 2 parts, aniline oil 3 parts, alcohol of sp. gr. 0.830 20 parts, distilled water 20 parts), then rinsed in water, stained in a concentrated alcoholic solution of picric acid for five or ten minutes, rinsed again in water for five minutes, then passed through dilute and absolute alcohol and clove oil, and mounted in balsam. The clubs are stained red and the tissue yellow.

Plautus. (L.) One that is splay-footed. Also, old name for the Great Auk.

Plax. (Πλάξ, anything flat.) Name for a Genus of *Schizomycetes*.

P. scindens. (L. *scindo*, to divide.) Name given by Eeklund to a micro-organism found by him in the urine and blood of scarlet-fever patients, and also in the soil, water, &c. Eeklund believed it to be peculiar, and probably causal to the disease, but no proof beyond frequent presence has been given.

Plech'as. See *Plichas*.

Plecolepidous. (Πλέκω, to twist, twine; λεπίς [λεπιδ-], a scale.) *Bot.* Having coherent involucre bracts, as in *Compositæ*.

Plect'ana. (Πλεκτάνη, anything twined.) An old term for *Plexus*; applied also to a surgical knot; also, to the horns of the uterus (*Plectanæ uteri*, or simply *Plectanæ*).

Plect'anē. The same as *Plectana*.

Plectospon'dyl. (Πλέκω; σπόνδυλος, the backbone.) Having vertebrae ossified together, as in certain fishes.

Plectran'thus. (Πλήκτρον, a spur; ἄθος, a flower; so-called because the corolla is spurred in many species.) A Genus of the *Labiatae*, found widely distributed in the warmer parts of Africa, Asia, Australia, and the Pacific Islands. All the species possess a very strong aromatic odour, due to their essential oil.

P. amboin'icus. (Mod. L., belonging to *Amboina*.) Hab., Moluccas and Cochin-China. Every part of the plant has a strong pungent aromatic odour and flavour. It is used in chronic cough and asthmatic trouble, also in ague, epilepsy, and convulsions.

P. crassifolius. (L. *crassus*, thick; *folium*, a leaf.) Hab., Egypt and Arabia. The leaves are thick and fleshy, and have a strong aromatic odour. They are used to relieve cough and dyspnoea, and also as emmenagogue and diuretic.

P. du'blius. (L. *dubius*, doubtful.) Hab., East Indies. Used in sore throat, pains in the neck, and also against snake bites. It is possibly the same plant as *Anisochilus carnosum* (q. v.).

P. grav'eolens. (L. *graveolens*, strong-smelling.) A syn. of *Pogostemon patchouli*.

P. malabar'icus. (Mod. L. Belonging to *Malabar*.) Hab., East Indies. Same properties and uses as *P. scutellarioides*.

P. patchou'll. Hab., India. Supposed to be a source of the perfume *Patchouli*.

P. rugo'sus. (L. *rugosus*, wrinkled.) Hab., India. Used as insecticide against fleas, &c.

P. scutellarioid'es. (Hybrid of *scutellum*; *eidōs*. Having the form of a scutellum or little shield.) Hab., East Indies and Australia. Both roots and leaves have a strong aromatic odour. The former are used in colic and diarrhoea, the latter as general carminatives or aromatics.

P. suaveol'ens. (L. *suaveolens*, sweet-smelling.) Hab., Australia and Australasia. Used to keep off insects from clothing.

Plect'ron. See *Plectrum*.

Plect'rū. (Πλήκτρον, something to strike with, an instrument for striking the lyre.) *Anat.* (1) Term for the styloid process of the temporal bone; (2) the uvula; and (3) the tongue.

Ornithol. A spur on the wing or foot.

Entomol. A small bristle attached to the costal margin of the wing.

Pled'get. (Etyim. doubtful. F. *plumas-seau*; I. *plumaccinolo*; G. *Bäuschen*.) A small compress of lint, wool, &c.

Plegapho'nia. (Πληγή, a blow; φώνη, the voice.) The sound yielded by percussion over the larynx while the glottis is open. Used as a means of diagnosis.

Pleg'é. (Πληγή, a stroke or blow.) The same as *Ictus*.

Pleg'ma. (Πλέγμα, anything plaited.) The same as *Plectana*.

Plego'meter. (Πληγή; μέτρον, a measure.) Syn. for *Pleximeter*.

Plegorrh'iza adstrin'gens. Πλέκω, to twist; ρίζα, a root; L. *adstringens*, contracting.) A species of uncertain affinities. Hab., Chili. Root used by the natives for applications to wounds and abscesses.

Plehn's sol'u'tion. A solution used for staining and demonstrating *plasmodium malarie*. It contains methylene blue, eosin, and caustic potash, in distilled water.

Pleiomas'thus. (Πλείων, more; μαστός, Dor. form of *μαστός*, the breast.) See *Pleomasthus*.

Pleio'ma'zia. (Μαζός, the breast.) See *Pleomazia*.

Pleio'mery. (Πλείων; μέρος, a part.) *Bot.* Term applied to the formation of two members in a whorl of a flower in place of one, due either to the branching of one member at an early stage or to an original development of two members in place of one.

Pleiomor'phism. (Πλείων, more; μορφή, form.) The occurrence of more than one independent stage in the life-history of a species. See *Polymorphism*.

Pleio'morphy. The same as *Pleio-morphism*.

Also, the state of a flower which is usually irregular, but becomes regular by an increase in number of its irregular components.

Pleio'phyllous. (Πλείων, more; φύλλον, a leaf.) Exhibiting *Pleio'phyllly*. Also, having many leaves.

Pleio'phyllly. *Bot.* A condition of abnormal increase in the number of leaves growing from a certain point, or in the number of leaflets of a plant.

Pleiospo'rous. (Πλείων; σπορά, seed.) Having many spores.

Plei'otaxy. (Πλείων; τάξις, an arranging.) *Bot.* Increase in the number of whorls in a flower.

Pleis'tocene. (Πλείστος, most; καινός, new.) *Geol.* The lower portion of the *Post-tertiary* deposits in general.

Plemmy'ria. (Πλημμυρίς, redundancy of bodily fluids.) A syn. of *Plethora*.

Plena Mulier. See under *Mulier*.

Plenal'via. (L. *plenus*, full; *alvus*, the belly.) Impaction of the *rumen* in ruminants.

Plenck, Joseph Ja'cob, von. An Austrian physician and surgeon, 1738-1807.

P.'s depilatory. See under *Depilatory*.

P.'s lo'tion. Perchloride of mercury 2 parts, camphor 1 part, alcohol 16 parts. Applied as a local caustic to the cervix uteri.

P.'s sol'u'tion. Made by rubbing up mercury with gum arabic and adding water, the particles of mercury remaining suspended.

Ple'nicorn. (L. *plenus*, full; *cornu*, a horn.) Having solid horns, as ruminants.

Plenilu'nium. (L. *plenus*, full; *luna*, the moon.) Term for the time of the month when the moon is full. At this time it was formerly thought that people suffering from madness and epilepsy were liable to especially acute attacks, and that those who had worms were also worse.

Plenitu'do. (L.) Fulness. Formerly used for *Plethora*. *Lit.* fulness; applied especially to the sensation of oppression when the stomach is unduly distended by food.

Also, a syn. of *Plethora*.

P. u'teri. Pregnancy.

Plen'na. The same as *Blenna*.

Pleno ri'vo. (L.) "In a full stream;" applied to the free flow of blood following venesection.

Plenum. (L.) Fulness.

P. meth'od of ventila'tion. Term applied to methods of ventilation in which the "head" is produced by increasing the pressure at the inlet end of the system; thus the air entering the room must pass through the supplying machine, and the crevices of the system act as outlets. See *Vacuum method of ventilation*.

Pleocatan'tes. (Πλέων = πλείων, more; κατάντης, steep.) Lissauer's term for a skull in which the straight line joining the *hornion* and *staphylion* makes an angle of 45°—67° with the *radius fixus*.

Pleochro'ic. (Πλέων; χρώα, colour.) Showing *Pleochroism*, as certain minerals.

Pleochro'ism. *Crystallog.* The variation in colour of certain minerals when looked at from different points of view, due to the fact that the various rays in the spectrum are absorbed unequally in different planes of direction.

Pleochromatic. The same as *Pleochroic*.

Pleochro'matism. The same as *Pleochroism*.

Ple'odont. (Πλέως, full; ὀδούς, ὀδόντος, a tooth.) Solid-toothed.

Pleoe'pigna'thus. (Πλέων.) The same as *Epignathus*.

Pleomas'tia. (Πλέων; μαστός, a breast.) The condition in which the mammary gland has more than one nipple.

Pleomas'thus. Term for an individual with more than the normal number of mammary glands, *Pleomazia*.

Pleoma'zia. (Πλέων; μαζός = μαστος, a breast.) The condition in which there are more than the normal number of mammary glands.

Pleomor'phic. (Πλέων; μορφή, form.) The same as *Polymorphic*.

Pleomor'phous. *Pleomorphic*.

Pleomorphism. The same as *Polymorphism*; also, the same as *Pleiomorphism*.

Ple'omorphy. The same as *Pleiomorphy*; also, the same as *Polymorphism*.

Ple'on. (Πλέων.) *Bot.* Naegeli's term for groups of molecules which, if changed in size, suffer also a chemical change; as distinguished from *Micellæ* (q. v.), which undergo no chemical change when altered in size.

Also, *Zoöl.*, the abdomen of Crustacea; in the case of *Limulus* (the king crab) and others, the term is applied to its so-called *telson*, as this has been supposed to represent the abdomen of other Crustacea.

Pleonas'mus. (Πλεονασμός, abundance.) *Med.* A growth which is in excess of the normal, either in size or in the number of its parts.

Pleonec'tic. (See *Pleonectica*.) Belonging to, or possessing, *Pleonexia*; greedy of gain. Applied to a variety of *Athymia* (q. v.).

P. melancho'lia. A synonym of *Athymia pleonectica*.

Pleonec'tica, athym'ia. (Πλεονεκτικός, greedy.) See under *Athymia*.

Pleonex'ia. (Πλεονεξία, greediness.) Greediness or selfishness, considered as a morbid symptom.

Ple'opod. (Πλέων; πούς [ποδ-] a foot.) Term applied to an abdominal limb or *swimmeret* in Crustacea.

Pleo'podite. A *Pleopod*.

Ple'es archon'ticon. (Πλήρες, neut. of πλήρης, fully; ἀρχοντικόν, pertaining to an archon or leader.) The name of a medicine, a so-called antidote, considered to be of much value as a general tonic in all kinds of weakness and emaciation. It contained some thirty-one different constituents, mostly carminatives, balsams, and the like. For complete account see *Nic. Myrepsi Alexandrini*, De Compos. Medicament, sect. i, c. 149 and 150.

Plerocer'cus. (Πλήρης, full; κέρκος, a tail.) Term used for the cystic larval stage of tape-worms.

Plero'ma. (Πλήρωμα, fulness.) A filling up or completion. Also, the same as *Plerome*.

Ple'rome. (*Pleroma*.) *Bot.* The shaft of fibro-vascular elements in the growing-point of plants.

P.-sheath. A layer of cellular tissue enclosing fibro-vascular bundles.

Plerosis. (Πλήρωσις, a filling up.) Repletion, full-feeding. (Hippocrates.)

Also, restoration or replacement.

Plero'tic. (Πληρωτικός, filling up.) Restorative; as, *e. g.*, of the body when reduced by disease.

Plero'tica. (Πληρώω, to make full.) Term for medicines which help the growth of flesh to replace that destroyed by scars, sores, &c.

Pleroticus. (Πληρώω, to make full.) Tending to the restoration or filling up of flesh.

Plesiomor'phic. The same as *Plesiomorphous*.

Plesiomorphism. *Crystall.* Term expressing the relations between crystals which are nearly alike in form, but not identical.

Plesiomor'phous. (Πλησίος, near; μορφή, form.) Nearly of the same form.

Plesiops'ia. (Πλησίος, near; ὄψις, sight.) A form of *Myopia* due, according to E. von Jäger, to increased convexity of the crystalline lens, from cramp of accommodation. The exciting cause is over-use of the ciliary muscles in accommodation for near objects.

Plesiosau'ria. (Πλησίος; σαῦρος, a lizard.) A group of fossil marine reptiles, ranging from the Trias to the Chalk, of which *Plesiosaurus* is the type.

Plesiosau'rus. The typical Genus of *Plesiosauria*; it contained species of marine reptiles having naked skin, small skull, immensely long neck, and body and limbs fitted for swimming.

Plesmonë. (Πλησμονή, satiety.) Old term for repletion or gluttony.

Pless'er. See *Plessor*.

Plessigraph. (Πλήσσω, to strike; γράφω, to draw. F. *plessigraphie*.) A special form of *Pleximeter*, invented by Peter, a colleague of Trousseau, designed to reduce the percussed surface to a minimum so that the user may be able to map out more exactly the limits of any organ or dull area. It consists of a cylindrical stem terminating in a truncated cone at the end to be placed on the chest wall, and having at the end to be percussed a disc of greater diameter than the stem. The end placed on the skin has an area of less than 1-100th of a square inch, so that very small changes in sound are readily noticed. The stem is provided with a soft crayon

or piece of burnt cork, which can be easily pushed out so as to make a mark at any spot where there is a change in the nature of the sound. Other forms of plessigraph are described by Piorry (*Traité de plessimétrisme*, &c. Paris, 1866).

Plessimeter. (Πλήσσω; μέτρον, a measure.) The same as *Pleximeter*.

Plessimetry. See *Pleximetry*.

Ples'sor. (Πλήσσω, to strike.) The same as *Plexor*.

Plethomeria. (Πληθος, a great number; μέρος, a part.) A number of parts in excess of the normal.

Plethora. (Πληθώρα, fulness.) Fulness; i.e. of the blood-vessels. Term used either for a local over-distension of blood-vessels or for a generally full-blooded condition; also, for plumpness. It was the name given by Good to the first Genus of his fourth Order *Dysthetica* or *Cachexies*. He distinguished two varieties, viz. *P. entonica* or *sanguine plethora*, with strong pulse and general muscular vigour; and *P. atonica* or *serous plethora*, with feeble though full pulse, and bodily plumpness but general languor.

The following forms also have been generally recognised, viz.: 1. *P. ad molem* (also *ad vasa, ad venas*) which meant an actual surplus of blood.

2. *P. ad spatium* in which the diminished capacity of the vessels reduced the condition; which was only an apparent one, there being merely a surplus in reference to the space for containing blood.

3. *P. ad vires* which described the same condition as that meant by Good's *serous plethora*.

4. *P. ad volumen* which meant a form of *hyperplasia*, the blood being supposed to be rarefied by heat and so increased in volume.

P. abdominis. Abdominal plethora; engorgement of the abdominal viscera by some hindrance to the portal circulation, in or near the liver.

P. apocoptica. (Ἀποκόπτω, to cut off.) Term for the plethora that was supposed to occur after the amputation of a limb, due to the blood remaining about the same in quantity, while the circulatory area is diminished. It is a form of *P. ad spatium*. See main heading.

P. falsa. (L. falsus, false.) The same as *P. ad vires*. See main heading.

P., general. The same as *P. universalis*.

P., hydræmic. The same as *Hydræmia*.

P. hyperalbuminosa. Term applied to the condition of the blood when there is an absolute increase of albumins in the blood plasma, as e.g. after taking unusually large quantities of food. The condition can be also produced artificially by transfusion of serum between members of the same species.

P., local. Term for the engorgement with blood of a part or organ, due to some local cause.

P. polycythæmica. (*Polycythæmia*.) The same as *Hyperglobulia*.

P. serosa. (L. serosus, pertaining to serum or blood.) Term for an increase in the total quantity of blood.

P. spuria. (L. spurius, false, illegitimate.) The same as *P. ad vires*. See main heading.

P. universalls. (L. universalis, universal, general.) Term applied to the appearance presented by people with reddish face, broad chest, short neck, large muscles, and big abdomen; who are, probably erroneously, supposed to be more liable to cerebral hæmorrhage than others.

P. vera. (L. verus, true.) An increase in the whole quantity of blood in the body; also termed *Polyæmia*. The same as *P. ad molem*. See main heading.

Plethoretic. The same as *Plethoric*.

Plethoretical. *Plethoretic*.

Plethoric. Affected with, or belonging to, *Plethora*.

P. habit. The same as *Apoplectic constitution*.

P. hæmorrhage. Term for hæmorrhage occurring in cases of general *plethoric habit*; and especially in those persons who are the subjects of *Hæmophilia*.

Plethorical. *Plethoric*.

Plethorodyspnœa. (*Plethora; dyspnœa*.) Dyspnœa consequent upon plethora.

Plethororthopnœa. (*Plethora; orthopnœa*.) Orthopnœa consequent upon plethora.

Plethory. Obsolete form of the word *Plethora*.

Plethos. (Πληθος, fulness.) Term for satiety.

Plethysmograph. (Πληθυσμός, an enlargement; γράφω, to write.) An instrument for measuring and recording, by means of tracings, the changes in size of a part of the body, dependent on variations in the quantity of blood in the part. It consists essentially of a closed vessel or chamber filled with fluid, into which the part to be experimented on is introduced, the fluid meanwhile being prevented from escaping. Any increase or decrease of blood in the part causes an increase or decrease of pressure in the fluid contained in the vessel or chamber, and this is registered by means of levers, &c., in the usual way. It has been used principally for the arm, the kidney, and the brain.

Plethysmograph'ic. Pertaining to a *Plethysmograph*.

Plethysmo'graphy. The art of using a *Plethysmograph*.

Pleumo'des. (Πλεύμων, lung; εἶδος, likeness.) Having, or belonging to, a disease of the lungs.

Pleumon. See *Pneumon*.

Pleumon'ia. See *Pneumonia*.

Pleumono'des. (Πλεύμων, a lung; εἶδος, likeness.) Resembling lung. *Zoöl.* Term applied to the substance of sponges.

Pleumono'i'des. (See *Pleumono'ies*.) Resembling a lung.

Pleura. (Πλευρά, the side. F. *pleure* or *plèvre*; G. *Brustfell*.) The serous membrane which invests the surface of each lung as far as its root, and is then reflected upon the inner surface of the thoracic wall. Also, the plural of *pleuron*.

P., cavity of. The interspace between the *pleura costalis* and *pleura pulmonalis*.

P. costa'lis. (L. costa, a rib.) The layer of pleura which lines the inner surface of the chest-wall.

P., diaphragmatic. The same as *P. phrenica*.

P. fu'rens. (L. furo, to burn with rage.) A term for *Pleurisy*.

P., mediast'nal. The median portion of the visceral pleura of either side, which forms the lateral boundary of the anterior and middle mediastina.

P. parieta'lis. (L. paries, a wall.) The *P. costalis*.

P. pericard'aca. The portion of pleura in contact with the pericardium.

P. phren'ica. The phrenic or diaphragmatic pleura; i. e. that part of the parietal pleura which covers the upper surface of the diaphragm.

P. pulmona'lis. (L. *pulmo*, a lung.) The layer of pleura which invests the lungs.

P., pul'monary. The same as *P. pulmonalis*.

P., thick'ened. Term applied to the thickening of the pleura occurring after an exudative pleuritis or as a result of disease of the lung itself, the condition being due, partly to actual hyperplasia of the pleura, and partly to the deposition of lymph which eventually becomes organised. The condition has to be diagnosed chiefly from a pleural effusion, but may also simulate an enlarged heart.

P., vis'ceral. The same as *P. pulmonalis*.

Pleur'al. Relating to the *Pleura*.

Also, relating to a *pleuron* or rib; lateral, as opposed to *dorsal*, *ventral*, &c.

Also, *Zoöl.*, relating to a *pleurite*.

P. adhe'sion. See under *Pleurisy*.

P. ar'ter'ies. Branches from the intercostal arteries, which form a plexus underneath the pleura.

P. cav'ity. See under *Pleura*.

P. cough. Term given to a dry cough characteristic of pleurisy.

P. effu'sion. An effusion of fluid into the cavity of the pleura. The term is generally restricted to the effusion of serum or pus, an effusion of blood being spoken of as *Hæmothorax*. The effusion may be either (1) *active*, when it is due to *Pleurisy*; or (2) *passive*, as in *Hydrothorax*.

P. exuda'tion. The same as *Pleural effusion*.

P. fa'cet. See *Facet*, *pleural*.

P. fric'tion. See *Friction*, *pleural*.

P. gan'g'lion. The third pair of ganglia found in typical Mollusca which supplies the viscera and body walls, either directly or through the visceral loop and subordinate ganglia. The two ganglia are united to each other by commissures and also to the other two pairs of ganglia (cerebral and pedal); they are in some cases more or less completely fused with the other ganglia.

P. sac. The same as *P. cavity*.

P. si'nuses. Term applied to the spaces contained by folds of the parietal pleura formed through the pulmonary pleura not being coextensive with the parietal. There are three such sinuses (1) *Diaphragmato-costal*, (2) *Pericardio-sternal*, and (3) *Mediastino-diaphragmatic*.

P. sounds. These are only heard in cases of disease of the pleura; they may be divided into two classes, viz. (1) *Friction sounds*. See *Friction*, *pleural*. (2) *Sounds produced in large cavities*. See *Amphoric hum*, *Bell sound*, *Metallic tinkling*, *Succession splash*.

P. spine. See *Spine*, *pleural*.

Pleural'gia. (*Pleura*; *ἄλγος*, pain. F. *pleuralgie*; G. *Seitenschmerz*.) A synonym of *Pleurodynia*.

Pleurapophy'sial. Relating to, or of the nature of, a *pleurapophysis*; costal.

Pleurapo'physis. (*Pleura*, a rib; *ἀπόφυσις*, an offshoot.) Owen's name for the bony portion of a rib, considered as a process of the typical vertebra. The two *pleurapophyses* together with the two *hæmapophyses* made up the hæmal arch. Thus the term *pleurapophysis* applied not only to the ribs of the thoracic

region, but also to their morphological equivalents in the cervical and other regions. In more recent nomenclature (e.g. Claus) the term is applied to any transverse vertebral process, including diapophyses and parapophyses, the ribs being regarded as having a distinct origin of their own.

Also, simply a rib.

Pleuraposte'ma. (*Pleura*; *ἀπόστημα*, a large, deep-seated abscess.) A syn. of *Empyema*.

Pleurarthro'eacë. (*Πλευρά*, in the sense of "rib"; *ἄρθρον*, a joint; *κακός*, evil.) Disease, generally *Caries* of the rib, in connection with a rib-joint.

Pleurar'thron. (*Πλευρά*, a rib; *ἄρθρον*, a joint.) A joint between a rib and a vertebra.

Pleurecbolic. (*Pleura*; *ecbolic*.) *Biol.* Capable of being protruded by movement forwards of the side of the containing tube.

Pleurembolic. (*Pleura*; *embolic*.) *Biol.* Capable of being withdrawn by movement backwards of the side of the containing tube.

Pleuren'chyma. (*Pleura*; *ἔγχυμα*, that which is poured in.) *Bot.* Wood-tissue.

Pleure'sia. *Pleuritis*.

Pleure'sis. *Pleuritis*.

Pleure'ticum ba'lsamum. (F. *baume antipleurétique*; S. *balsamo pleuritico*.) Formerly in the Spanish and Sardinian Ph.; a mixture of equal parts of the pulp of *cucurbita lagenaria* and olive oil. Also known as *Oleum de cucurbita* or *Cucurbitæ pleureticum*.

Pleure'ticus. *Pleuriticus*.

Pleur'icus. Belonging to the pleura; pleural.

Pleur'isy. (F. *pleurésie*; L. *pleurisis*, also *pleuritis*.) Inflammation of the *Pleura*. It may arise from either local or general causes. The commonest cause in the previously healthy is chill. Pleurisy may be produced by local injury, inflammatory processes affecting the superficial parts of the lungs, or inflammation of other neighbouring structures. It is common in scarlatina and measles, in rheumatic fever with pericarditis, in phthisis, in Bright's disease, and in pyæmia. Pleurisy may be either with or without effusion—in the former case it is "dry" pleurisy; the effusion may be serous, purulent, ichorous, hæmorrhagic, &c. (See *Empyema*, *P.*, *ichorous*, *P.*, *hæmorrhagic*.) There is a dilatation of the pleural vessels, followed by exudation of lymph and formation of fibrin, and usually, after this, by effusion of a sero-fibrinous fluid. The fluid in the pleura, in proportion to its quantity, displaces more or less the lungs and heart. In most cases of serous pleurisy the effusion becomes eventually absorbed, with more or less adhesion of the two pleural surfaces.

The symptoms of *acute pleurisy* are usually:—chill or a distinct rigor, and severe "stitch" in the side with every breath, with fever, anorexia, furred tongue, and general feeling of illness. The breathing is quick and shallow.

Physical Signs. These are usually impairment of movement of the affected side, dullness on percussion, and absence or feebleness of the breath-sounds, absence of vocal resonance and vibrations, and displacement of the heart towards the sound side. In some cases the breath-sounds are bronchial in character, especially towards the upper surface of the effusion, and, in children, possibly over the whole side. In extreme cases the diaphragm, with the liver and

PLEURISY

spleen, becomes displaced downward. Usually, after about a week, absorption begins, the chest usually falling in to some extent on the affected side.

Chronic pleurisy occurs either as a sequela of acute pleurisy, or else is secondary to some other disease. See above.

P., acute'. See under chief heading.

P., are'olar. See *P., multilocular*.

P., bas'tard. See *Peripneumonia notha*.

P., bil'ious. Term for the variety of pleurisy which may form an early symptom in *Pneumonia, bilious*.

P., calcar'eous. Pleurisy which remains chronic, and in which there is calcareous infiltration in patches in the pleura.

P., catar'hal. A syn. of *P., moist*.

P., chron'ic. See under chief heading.

P., cos'to pul'monary. Pleurisy which involves both the costal and the pulmonary pleura.

P., diaphragmat'ic. Term for pleurisy which is mainly limited to that part of the parietal pleura which covers the upper surface of the diaphragm. The exudation is generally plastic, though in rare cases it is serous or purulent. Pain on movement is severe and causes the diaphragm to become fixed, so that respiration is thoracic and shallow. On pressure over the end of the tenth rib, where the diaphragm is attached, severe pain is caused. This form usually occurs in cases where there are old limiting adhesions, or is secondary to inflammation of the diaphragm itself or of neighbouring structures.

P., double. Pleurisy occurring on both sides.

P., dry. *Pleuritis sicca*. Also, formerly used to denote pleurisy not accompanied by expectoration.

P., dyscras'ic. Occasionally there is found evidence of previous pleurisy existing in still-born children, whose pleuræ contain a putrefying fluid; said to occur during epidemics of puerperal fever in lying-in hospitals.

P., encys'ted. Term for the condition in which an effusion, generally purulent, is confined in one or more loculi by the existence of adhesions, either recent or the remains of past inflammation.

P., epidem'ic. Term for pleurisy which has occasionally occurred in an epidemic form; it is probable that in most, if not all, of these cases the pleurisy was only secondary to some definite infectious disease, the symptoms of which had been masked.

P., false. Term for *Pleurodynia*.

P., hæmorrhag'ic. Term for pleurisy which is marked by a bloody effusion. This condition may occur in (1) pleurisy accompanying asthenic states, *e. g.* cancer, Bright's disease, cirrhosis of liver (rather frequent); (2) tuberculous pleurisy; (3) pleurisy in perfectly healthy persons, due probably to some accidental circumstance or individual peculiarity (*e. g.* hæmophilia); and (4) as a result of wounding the lung in aspiration.

In *hæmothorax*, blood may enter the pleura from the bursting of an aneurism, pressure on thoracic veins, &c.

P., hu'mid. Syn. for *P., moist*.

P., i'chorous. Pleurisy in which the effusion is of a serous nature, but is becoming decomposed, from communication, either with

a diverticulum of the œsophagus, or with some bronchial dilatation. The fluid is thin and watery, but contains débris of broken-down tissue, and is usually foul smelling.

Also, the same as *P., purulent*.

P., idiopath'ic. Ordinary acute pleurisy which is not secondary to some other disease, but arises from some primary cause, such as severe chill, &c.

P., interlo'bar. Term for pleurisy occurring on the interlobar serous surfaces. It is found to exist in most cases of acute pleurisy, and either the two surfaces become glued together, or an effusion is poured out which may become encysted.

P., interlob'ular. Incorrect term for *Interlobar pleurisy*, as there is no pleura separating adjacent lobules.

P., la'tent. Pleurisy in which symptoms are very slight, or absent. This variety is most commonly secondary to tubercle or to Bright's disease.

P., loc'ulated. The same as *P., encysted*.

P., malign'ant. The same as *P., epidemic*.

P., mediasti'nal. Old term for any inflammatory affection of the anterior mediastinum simulating pleurisy.

P., metapneumon'ic. Pleurisy occurring as a complication of pneumonia.

P., milk. Old term for pleurisy supposed to occur during lactation, owing to metastasis of milk.

P., moist. Term formerly used to designate pleurisy accompanied by expectoration, and generally meaning pleurisy occurring as a complication of bronchitis.

P., multiloc'ular. A variety of *P., encysted*.

P., pul'sating. Term given to a condition occasionally seen, in which, either with or without external swelling, the cardiac pulsations can be markedly felt over the dull area of an effusion. It has nearly always occurred on the left side, and mostly in cases of empyema.

P., pur'ulent. Syn. for *Empyema*.

P., pu'trid. Pleurisy with effusion, in which, owing to septic infection, the effusion not only becomes purulent, but also foul smelling. Infection almost invariably takes place from communication being established either with the interior of the lungs (*e. g.* phthisical cavity or dilated bronchus) or directly with the external air through a fistula, &c. It is possible, however, that in some cases the bacilli of putrefaction may be brought by the blood in septic emboli, and hence find their way into the pleural fluid.

P., rheumat'ic. Old term for *Pleurodynia*.

P., rheumatis'mal. The same as *P., rheumatic*.

P.-root. The *Asclepias tuberosa*.

P., sclero-calcar'eous. The same as *P., calcareous*.

P., sec'ondary. Pleurisy occurring as a result of an infectious inflammatory disease in some other part of the body.

P., sero-fib'rinous. (*F. pleurésie franche*.) Pleurisy with serous effusion and some formation of fibrin.

P., spur'ious. The same as *Pleurodynia*.

P., sup'purative. The same as *P., purulent*.

PLEURITE—PLEUROCENTRAL

P., true. Term formerly used to distinguish *Pleurisy* from *P., bastard*, *P., false*, &c.

P., tuber'culous. This may occur either (1) rarely as a primary tuberculosis of the pleura, with either a plastic or hæmorrhagic exudation, or (2) as secondary to pulmonary tuberculosis. The former is rare, but the latter is very common, and is to be found at some time during the course of almost all cases of tubercular disease of the lungs.

P., ty'phoid. *Pleurisy* with "typhoid" symptoms.

P. with effu'sion. *Pleurisy* accompanied by an appreciable effusion into the pleural sac.

Pleu'rite. *Zoöl.* The lateral portion of a somite (as in *Arthropoda*), lying between the tergite and the sternite.

Pleurit'ic. (Πλευριτικός.) Belonging to *Pleuritis*.

Also, *Zoöl.*, of, or pertaining to, a pleurite; pleural or lateral.

P. effu'sion. Effusion in *Pleuritis*.

P. fric'tion. See *Friction, pleural*.

P. fric'tion frem'itus. (*L. fremitus*, a sound.) The *P. friction sound*.

P. fric'tion rub. The rubbing together of the two adjacent inflamed surfaces of the costal and visceral pleura in *Pleuritis*.

P. fric'tion sound. See *Pleural sounds*.

P. pern'icious fever. Malarial intermittent fever in which *acute pleurisy* is the chief manifestation of the febrile attack.

P. rub. The same as *P. friction rub*.

Pleurit'ical. The same as *Pleuritic*.

Pleuriticencephaloty'phus. (Πλευριτικός; ἐγκέφαλος, the brain; τυφός, stupor.) *Pleuritis* accompanied by *typhoid* brain-symptoms; an old name for *Pleurisy, typhoid*.

Pleuri'tis. (Ἡ πλευρίτις νόσος, the pleuritic disease. Hipp. *F. pleurite*; G. *Seitenstich* or *Brustfell Entzündung*.) Inflammation of the *Pleura*. See *Pleurisy*.

P. bilio'sa. (*L. biliosus*, relating to bile.) See *Pleurisy, bilious*.

P. bronchia'lis. (*L. bronchialis*, bronchial.) *Bronchitis*.

P. carcino'mato'sa. (*Carcinoma*.) *Carcinoma* of the *pleura*.

P. costalis. (*L. costalis*, relating to a rib.) *Pleurisy*.

P. defor'mans. (*L. deformato*, to bring out of shape.) Term for the thickening of the *pleura* (which may be fibroid or even cartilaginous) occurring in *Pulmonary cirrhosis*.

P. diaphragmat'ica. (*L. diaphragmaticus*, of the diaphragm.) See *Pleurisy, diaphragmatic*.

P. duplica'ta. (*L. duplico*, to double.) *Pleurisy, double*.

P. exsudati'va. (*L. exsudativus*, characterized by exudation.) *Pleurisy with effusion*.

P. exquisi'ta. (*L. exquisitus*, choice.) A syn. of *P. vera*.

P. exsudato'ria sanguinolenta. (*L. exsuda*, to pour out, as by sweating; *sanguinolentus*, blood-stained.) A syn. of *P. scorbutica*.

P. humida. (*L. humidus*, moist.) See *Pleurisy, humid*.

P. idio'path'ica. (*Idiopathia*.) See *Pleurisy, idiopathic*.

P. incapsula'ta. (*L. in, in; capsula*, a small box.) A syn. of *Pleurisy, encysted*.

P. legit'ima. (*L. legitimus*, genuine, true.) A syn. of *P. vera*.

P. mediasti'na. See *Pleurisy, mediastinal*. "Pleuritis mediastini" in Sauvages' nomenclature.

P. muscular'is. *L. muscularis*, belonging to a muscle.) A syn. of *Pleurodynia*.

P. noth'a. (*L. nothus* from νόθος, illegitimate.) The same as *P. muscularis*.

P. pericar'dii. (*L. pericardii*, of the pericardium.) A contradictory term, formerly used to designate *Pericarditis*.

P. period'ica. (*L. periodicus*, recurring at fixed times.) Term used by Sauvages for tertian fever with *pleurodynia*.

P. pulmo'nis. (*L. pulmo, pulmonis*, a lung.) A syn. of *Pleuro-pneumonia*.

P. pulsans. (*L. pulso*, to beat.) *Pleurisy, pulsating*.

P. rheumat'ica. (*Rheumatic*.) See *Pleurisy, rheumatic*.

P. sanguine'a. (*L. sanguineus*, blood-stained.) *Pleurisy, hæmorrhagic*.

P. scorbu'tica. (See *Scorbutic*.) *Pleurisy* occurring as a complication or as a principal manifestation of *scurvy*; the exudation being largely composed of blood.

P. sic'ca. (*L. siccus*, dry.) *Pleuritis*, without any appreciable effusion into the pleural sac. Its occurrence generally signifies the presence of tubercle.

P. spur'ia. (*L. spurius*, false.) A syn. of *Pleurodynia*.

P. spur'ia simula'ta. (*L. spurius; simulatus*, having the appearance of.) The same as *P. spuria*.

P. typhoi'des. (*Typhoid*.) See *Pleurisy, typhoid*.

P. vento'sa. (*L. ventosus*, full of wind.) Term introduced by Sauvages for a pain over the lower ribs, supposed to be due to distension with flatus of the neighbouring intestines.

P. vera. (*L. verus*, true.) See *Pleurisy, true*.

Pleurito'genous. (*Pleuritis; γεννάω*, to produce.) Giving rise to *Pleuritis*.

Pleuro-. (Ἡ πλευρά, also, το πλευρόν, the rib, or the *pleura*; τα πλευρά, the side.) A prefix denoting reference to one or other of the etymological significations.

Pleurobranch. Shortened form of *Pleurobranchia*.

Pleurobran'chia. (*Pleuro-; βράγχια*, gills.) A gill attached to the epimeron of any thoracic somite in *Crustaceans*. In the *Crayfish*, for example, there are rudimentary *pleurobranchiæ* in the third and fourth epimeral regions, but on the fifth there is a fully formed appendage. See also *Arthrobranchia* and *Podobranchia*.

Pleurocar'pous. (*Pleuro-; καρπός*, fruit.) *Bot.* Term applied to mosses which bear the archegonia, and later, the capsules, on special lateral branches.

Pleurocele. (*Pleuro-; κήλη*, a tumour.) The same as *Pneumocèle*.

Also, term introduced by Sagar for a hernia of the *pleura* through the thoracic walls, containing lung (see *Lung, hernia of*), pus, or a tumour.

Pleurocentesis. (*Pleuro-; κεντέω*, to prick.) Puncture of the *pleura*. See *Paracentesis thoracis*.

Pleurocen'tral. Belonging to the *Pleurocentrum*.

Pleurocen'trum. (*Pleuro-*; κέντρον, *centrum*.) One of the lateral halves of the *centrum* of a vertebra.

Pleurocholocystitis. (*Pleuro-*; χολός, bile; κύστις, a bladder.) Inflammation of the *Pleura* and the gall-bladder.

Pleurococcus. (*Pleuro-*; κόκκος, a grain, seed.) A Genus of unicellular *Algæ*, belonging to the Class *Protococcoideæ*, of the Family *Confervaceæ*.

P. Beigel'ii. (*Beigel*, Hermann B., 1833-1879, German physician, who also practised in England; wrote on gynecology and skin diseases.) The so-called "chignon fungus," which is sometimes found on false hair.

P. vulgar'is. (*L. vulgaris*, common.) A common species, found as a green growth on trees, &c., and liable to be mistaken for green moulds which, being fungi, are of a higher organisation.

Pleurocœnadel'phia. (*Pleuro-*; κοινός, common; ἀδελφός, brother.) Name given by Gurlt to cœnadelphic monsters which have the two bodies united laterally.

Pleuro-colic. The same as *Costo-colic*.

P. fold. A somewhat broad fold of peritoneum lying below the spleen.

P. lig'ament. The same as *Costo-colic ligament*.

Pleurocolle'sis. (*Pleuro-*; κολλάω, to stick. *F. pleurocollèse*; *G. Seitenanhängend*.) Pleural adhesion.

Pleuro-cutaneous. (*Pleuro-*; cutaneous.) Epithet applied to a fistula which pierces both the skin and the pleura.

Pleurodiplosyrinx. (*Pleuro*; diplosyrinx.) A double syringe for washing out the pleura.

Pleurodont. (*Pleuro-*; ὀδός, ὀδόντος, a tooth.) Term for teeth that are ankylosed to the side of the socket; also, for an animal having such teeth.

Pleurodyn'ia. (*Pleuro-*; ὀδύνη, pain. *F. pleurodynie*; *G. Seitenschmerz*.) Pain in the side. Muscular rheumatism which affects the chest wall, and whose seat is the intercostal muscles, or sometimes the serratus magnus and the pectoral muscles.

P. vento'sa. (*Pringle*.) The same as *Pleuritis ventosa*.

Pleurodyn'ic. Of, or belonging to, *Pleurodynia*.

Pleurogen'ic. The same as *Pleurogenous*.

Pleuro'genous. (*Pleuro*; γένος, descent.) Originating in the pleura.

Pleurogyn'ë. (*Pleuro-*; γυνή, a woman.) A Genus of the *Gentianæ*, distributed throughout the colder parts of Europe and Asia.

P. rota'ta. (*L. rotatus*, turned round.) *Hab.*, Russia, Japan, &c. The leaves have valuable bitter and tonic properties, like those of *Chiretta*, but with no odour. They are also used as vulnerary and hæmostatic in Russia.

Pleuro'gynous. (*Pleuro-*; γυνή, a female.) Term applied to the stigma of a flower, when represented only by bands of papillæ on the surface of the ovary itself.

Pleurohepatitis. (*Pleuro-*; ἥπαρ, ἥπατος, the liver.) An inflammation involving the pleura and liver.

Pleuro'id. (*Pleuro-*; εἶδος, form.) A *Pleurapophysis* (*Century Dict.*)

Pleuro'ma. (Πλεύρον, a rib.) The

same as *Pleuron*; in the plural, *Pleuromata*, the sides.

Pleuromelo'phorus. (*Pleuro-*; μέλος, a limb; φέρω, bearing.) The same as *Pleuromelus*.

Pleuro'melus. (*Pleuro-*; μέλος, a limb.) A monster which has supernumerary limbs attached to the lateral ("pleural") portion of the body.

Pleu'ron. (Πλεύρον, a rib, older form of πλευρά, generally found only in plural, τὰ πλευρά, the ribs, the side.) A rib; in the plural, the ribs, the side; also, the same as the *Pleura* (nom. sing.).

Also, in Crustacea, the same as *Epimeron*.

Also, term applied to each of the lateral divisions of the body segments of *Trilobites*.

Also, in *Insecta*, the lateral part of each of the three thoracic segments.

Pleuronectes. (*Pleuro-*; νήκτης, a swimmer.) *Conchol.*, *Ichthyol.*, *Zoöl.* Lit. "swimming on the side." A Genus of the Family *Pleuronectidæ*, of the Class *Pisces*.

Also, a Genus of the *Pleuronectidæ*.

P. fle'sus. The same as *P. plessus*.

P. hippoglos'sus. The Halibut.

P. liman'da. The Dab.

P. max'imus. The Turbot.

P. plates'sa. The Plaice.

P. ples'sus. The Flounder.

P. ros'eus. The rose-coloured flounder, often found in the Thames, and the most highly esteemed of the flounders.

P. sole'a. The Sole.

P. ze'bra. An edible species larger than *P. solea*, found in the Indian seas.

Pleuronec'tidæ. A Family of *Pisces*, Order *Teleostei*, having the Genus *Pleuronectes* for their type. A Family of Suborder *Anacanthini* of Teleostean fishes.

Pleuro-œsophage'us. (*Pleuro-*; œsophagus, of the œsophagus.) Term for a wide fasciculus of unstriped muscular fibres sometimes present, passing from the left pleura to join the longitudinal fibres of the œsophagus. (*Hvrtl.*)

Pleuroparonych'ia. (*Pleuro-*; παρωνυχία.) A lateral *Paronychia*.

Pleuropath'ia. (*Pleuro-*; πάθος, disease.) See *Pleuropathy*.

Pleuro'pathy. (*Pleuro-*; πάθος, disease.) General term for any disease of the pleura.

Pleuro-pe'dal. (*Pleuro-*; pedal.) Belonging to the side and foot. Applied to the nerve cord connecting the pleural and pedal ganglia of each side, as in Mollusca.

Pleuro-pericardial friction sound. Term given to a sound heard near the apex of the heart in cases of pleurisy, and supposed to be caused either by the rubbing of the roughened pleura against the pericardium, or by the rubbing of the roughened pericardial pleura against the opposite pleural surface.

Pleuropericarditis. (*Pleuro-*; pericarditis.) Pleurisy complicated with pericarditis.

Pleuroperipneumo'nia. (*Pleuro-*; peripneumonia.) The same as *Pleuropneumonia*.

Pleuroperipneu'mony. *Pleuroperipneumonia*.

Pleuroperitone'al. (*Pleuro-*; peritoneum.) Belonging to the *Pleura* and *Peritoneum*.

P. cavity. The space between the two main horizontal divisions of the lateral plates of the *Mesoblast* in the embryo. Also, in *Comp. Anat.*, the cavity containing the pleura and peritoneum, or *pleuroperitoneum*.

Pleuroperitoneum. The serous membrane lining the pleuroperitoneal cavity.

Pleuro-peritonitis. (*Pleuro-*; *peritonitis*.) Inflammation of the pleura and of the peritoneum at the same time; said by Siredey to occur especially in puerperal septicæmia.

Pleurophorous. (*Pleuro-*; *φορός*, bearing.) Membrane-bearing.

Pleuroplegia. (*Pleuro-*; *πληγή*, a stroke.) Want of power to perform conjugate movements of the eyes to either side.

Pleuropneuma. (*Pleuro-*; *πνεῦμα*, air.) Air in the pleural cavity; a syn. of *Pneumothorax*.

Pleuropneumonia. (*Pleuro-*; *pneumonia*.) A term generally used as synonymous with *Pneumonia, lobar*, in which there is always some pleurisy. Dr. Hilton Fagge suggested that the term should be applied exclusively to cases of lobar pneumonia in which the pleurisy was severe enough to cause an appreciable pleuritic effusion. Also used for *P. contagiosa*.

P. contagiosa. (L. *contagiosus*, contagious.) A contagious variety of pleuropneumonia occurring among cattle.

P., epizootic. The same as *P. contagiosa*.

P., exudative. The same as *P. contagiosa*.

P., hypostatic. Term for hypostatic pneumonia complicated with pleurisy.

Pleuropneumonitis. The same as *Pleuropneumonia*.

Pleuropterus. (*Pleuro-*; *πτερον*, a wing.) Epithet applied to a Family of *Cheiroptera*, possessed of lateral membranes serving as a parachute.

Pleuropneumonia. (*Pleuro-*; *πύσησις*, a suppurating; especially pulmonary consumption.) Suppuration of or within the pleura, *Pyothorax*.

Pleurorhizal. (*Pleuro-*; *ρίζα*, a root.) Bot. Having the radicle lateral to the two cotyledons which are accumbent.

Pleurorhizæ. Term for those *Crucifere* which have a pleurorhizal seed.

Pleurorrhagia. (*Pleuro-*; *ρήγνυμι*, to break through.) The bursting of blood into the pleural cavity.

Pleurorrhoea. (*Pleuro-*; *ρέω*, to flow.) An exudation of fluid into the cavity of the pleura.

P. chylosa. (Mod. L. *chylosus*, chylous.) A syn. of *Chyllothorax*.

P. lymphatica. (L. *lymphaticus*, lymph like.) A syn. of *Hydrothorax*.

P. purulentæ. (L. *purulentus*, full of pus.) A syn. of *Empyema*.

P. sanguinea. (L. *sanguineus*, blood-stained.) A syn. of *Pleurisy, hæmorrhagic*.

P. serosa. (Mod. Lat. *serosus*, pertaining to serum.) The same as *P. lymphatica*.

Pleurorthopnoea. (*Pleuro-*; *orthopnoea*.) Orthopnoea due to pain in the side.

Pleurosigma. (*Pleuro-*; *σίγμα*, the letter Σ, σ.) A Genus of *Diatomaceæ*, which furnishes a good test for the power of the lenses of a microscope, since certain linear markings on the valves can be resolved into dots by a high power.

Pleurosomia. The same as *Pleurosomus*.

Pleurosomus. (*Pleuro-*; *σῶμα*, the body). Term for a congenital malformation, due to arrest of development, consisting in partial absence of one half of the upper part of the anterior abdominal wall and of the lower part of the chest wall, with ectopia of the viscera. The upper extremity on the side affected is usually ill-developed.

Pleurospasm. See *Pleurospasmus*.

Pleurospasmus. (*Pleuro-*; *σπασμός*, spasm. G. *Seitenkrampf*.) A cramp in the side.

Pleurostondylia. (*Pleuro-*; *σπόνδυλος*, a vertebra.) Synonym for *Chelonia*; so-called because the ribs and vertebræ are immovably fixed together by means of the dermal bones.

Pleurostemon. (*Pleuro-*; *δστέον*, a bone.) *Ornithol.* That part of the sternum with which the ribs articulate. In young birds this can be seen to be a separate bone, one being on each side of the lophostemon or median bone.

Pleurosthenos. See *Pleurothotonos*.

Pleurostosis. (*Pleuro-*; *ostosis*. F. *pleurostose*.) Formation of bone in or on the pleura.

Pleurotetanus. (*Pleuro-*; *τέτανος*, convulsive tension.) *Pleurothotonos*.

Pleurothotonos. (*Πλευρόθεν*, from the side; *τόνος*, a stretching. G. *Seitenstarrkrampf*.) One recognised variety of spasm occurring in *Tetanus*, in which the body is bent violently towards one side.

Pleurotomy. (*Pleuro*; *τομή*, a cutting.) Incision into the pleura.

Pleurotonus. (*Pleuro-*; *τόνος*, a stretching.) The same as *Pleurothotonos*.

Pleurotransversalis. (*Pleuro-*; *transversalis*.) Testut's name for a small muscular slip, described by Sibson as arising from the transverse process of the seventh cervical vertebra, becoming expanded into an aponeurosis covering the apex of the pleura, and inserted into the whole length of the inner edge of the first rib.

Pleurotribe. (*Pleuro-*; *τριβω*, to rub.) Bot. Term applied to certain zygomorphic flowers whose stamens and styles are so placed as to strike or rub a visiting insect on the side; hence cross-fertilisation is ensured. Examples, *Polygala*, *Phaseolus*.

Pleurovisceral. (*Pleuro*; *visceral*.) Belonging to the side and viscera.

P. loop. The loop connecting a pleural and a visceral nerve-ganglion in certain Invertebrata.

Pleurum. See *Pleuron*.

Plexal. Belonging to a *plexus*.

Plexiform. (L. *plexus*; *forma*, shape, resemblance.) In the manner of a *Plexus*.

P. angelioma. Synonym of *Angeioma*, simple. See also *Telangeiectasis*.

P. neurofibroma. Another name for *P. neuroma*. See also *Neurofibroma*.

P. neuroma. The same as *Neuroma*, plexiform, cylindrical.

P. sarcoma. See *Cylindroma*.

Pleximeter. (*Πληξίς*, percussion; *μέτρον*, a measure.) That which is struck; in Medical percussion this may be either a finger, generally the index or middle finger of the left hand, or an oval or circular plate made of various

PLEXIOMETRUM—PLEXUS

materials, ivory, wood, glass, &c. The plate is about an inch and a half in width and one sixth of an inch in thickness, and has either a raised rim or is provided with a pair of handles, so that it can be firmly held with one hand while it is struck by a *plexor*.

P., double, of Seitz. An instrument consisting of a flat plate for percussion, with a handle made of caoutchouc.

P., rod-, percus'sion. Term for a method of percussion, described by Heubner, in which two observers take part. While one auscultates, the other strikes with a rod, handle of plessor, pencil, &c., upon a pleximeter. Over a pneumothorax, or a large closed cavity with smooth wall and thin covering, the strokes are heard as clear ringing sounds. See *Bruit d'airain*.

Plexiomet'rum. (Mod. Lat.) A syn. of *Pleximeter*.

Plexometer. The same as *Pleximeter*.

Plex'or. (Πληξίς.) A striker; used specifically of that which strikes in Medical percussion. This may be either a hammer or the fingers of the physician, the latter being more commonly employed. Either one or more fingers are used, the percussing surface being the tips; the fingers are kept crooked, motion taking place only at the wrist. For hammer percussion various forms of instrument have been invented, the most useful being that with a wooden handle and a metal head.

Plex'us. (L. *plecto*, to twine: F. *plexus*; G. *Geflecht*.) A network or interlacing. The term has been applied to the blood-vessels, but is used chiefly of the nerves. In a plexus, different nerves blend and interchange their fibres, so that a branch leaving the plexus may be compounded of fibres from several different nerves. A plexus thus serves as a mechanism for rearranging and co-ordinating forces, as well as for blending sensory and motor fibres together in a single nerve. The individual nerve-fibres are not known to subdivide. Some sensory nerves, and the nerves of the involuntary muscles, end in plexuses.

For the various *Plexuses*, except those described below, see under their separate headings; e. g. *Carotid plexus*, *Celiac plexus*, &c.

P. alveolar'is. Term for the *Veins*, *alveolar*.

P. anseri'nus. See *Pes anserinus*.

P. anseri'nus ner'vi media'ni. The roots of origin of the median nerve given off by the eighth cervical nerve.

P. aor'ticus abdomina'lis. See *Aortic plexus*.

P. aor'ticus thorac'icus. The sympathetic nerve-plexus surrounding the thoracic aorta.

P. arte'riæ hepaticæ. Those branches of the *hepatic plexus* which are situated upon the hepatic artery.

P. articular'is. (L. *articularis*, pertaining to a joint.) The network formed by the temporo-maxillary vein round the temporo-maxillary joint.

P., Au'erbach's. See under *Auerbach*.

P. auricular'is poste'rior. The posterior auricular plexus; a plexus of sympathetic fibres, derived from the *plexus caroticus externus*, and supplying the posterior parts of the parotid gland.

P. axillar'is. (L. *axillaris*, belonging to the *axilla*.) A name for the *brachial plexus*.

P. basilar'is. (L. *basilaris*, about, or pertaining to, the base.) A name for the *Sinus transverse*.

P., bil'iary, interlob'ular. See *Interlobular plexus, biliary*.

P., blood, epider'mal. Term applied to a capillary plexus found amongst the epidermal cells of the *clitellum* and, to a less extent, of the body-wall in general, of *Lumbricus terrestris*.

P. brachia'lis. The *brachial plexus*.

P. brachia'lis supraclavicular'is. The supraclavicular portion of the *brachial plexus*.

P. bul'bo-caverno'sus. (Lenhossek.) Offsets from the *pudendal plexus* lying in the region of the bulb of the urethra.

P. cap'itis. (L. *caput, capitis*, the head.) A name for the plexus formed over the epicranium by the union of branches of the trigeminal nerve with branches of the upper cervical nerves.

P. cardi'acus ante'rior. The anterior or superficial *cardiac plexus*.

P. cardi'acus infe'rior. The same as *P. cardiacus anterior*.

P. cardi'acus poste'rior. The posterior or deep *cardiac plexus*.

P. cardi'acus supe'rior. The same as *P. cardiacus posterior*.

P. carot'icus commu'nis. A plexus of sympathetic fibres about the common carotid artery.

P. carot'icus inter'nus. The *carotid plexus*.

P., carot'id, exter'nal. The plexus of sympathetic fibres surrounding the external carotid artery; from it branches are given off to form similar plexuses on the various branches of the artery, and it is connected with the nerve supplying the stylo-hyoid muscle.

P., caud'al. (L. *cauda*, a tail.) The same as *P. coccygeus*.

P. caverno'sus. (L. *cavernosus*, full of hollows.) Syn. for *Bulb of vestibule*. Also, the *Cavernous plexus*.

P. caverno'sus clitor'idis. A name for the sympathetic nerves of the *clitoris*.

P. caverno'sus ner'vi carot'ici. See *Cavernous plexus*.

P. caverno'sus pe'nis. A name for the cavernous nerves of the *penis* which are continued forward from the prostatic plexus of the sympathetic.

P. cer'ebr'i. (L. *cerebrum*, the brain.) Syn. of the *P.s, choroid*.

P. cervica'lis. The *cervical plexus*.

P. cervi'co-brachia'lis. A name for the cervical and brachial plexuses together.

P. choro'i'des. The *choroid plexus*.

P. choro'i'des cerebel'li. The same as *P. choroideus ventriculi quarti*.

P. choro'i'des cer'ebr'i. The same as *P. choroideus ventriculi tertii*.

P. choro'i'deus. The *choroid plexus*.

P. choro'i'deus glan'dulae pinea'lis. The *choroid plexus*.

P. choro'i'deus im'par. (L. *impar*, uneven.) A syn. of *P. choroideus*.

P. choro'i'deus infe'rior. The *choroid plexus* of the fourth ventricle.

P. choro'i'deus interpos'itus. (L. *inter*, between; *pono*, to place.) Term used by Haller for a fold of *pia mater* interposed between

PLEXUS

the choroid plexuses of the lateral or superior ventricles; the *Velum interpositum*.

P. choroideus lateralis. The choroid plexus of the lateral ventricle.

P. choroideus medius. The choroid plexus of the third ventricle.

P. choroideus pampiniformis. The same as *P. choroideus*.

P. choroideus tertius. The same as *P. choroideus*.

P. choroideus ventriculi lateralis. The choroid plexus of either lateral ventricle.

P. choroideus ventriculi quartus. The choroid plexus of the fourth ventricle.

P. choroideus ventriculi tertius. The choroid plexus of the third ventricle.

P. ciliaris. Term for the *Ciliary ligament*; also, for the canal of Schlemm (see under *Schlemm*).

P. circularis foraminis magni. *Lit.* "circular plexus of the great foramen." That part of the *Occipital sinus* which passes round the edge of the foramen magnum to the jugular foramen. Also, sometimes termed the marginal sinus.

P. cirsoides. (*Κίρσος*, a varix; *εἶδος*, form.) A syn. of *P. pampiniformis*.

P., coccygeal. Term for the connection between the coccygeal nerve and the fourth and fifth sacral nerves upon the side of the coccyx.

P. coccygeus. The coccygeal plexus.

P. coeliacus. See *Celiac plexus*.

P., colic. Term for the divisions of the superior and inferior mesenteric plexuses which accompany each of the colic arteries. The superior mesenteric plexus supplies the ileo-colic, right colic, and middle colic branches; the inferior mesenteric supplies those to the left colic plexus.

P. coronarius anterior. The Coronary plexus, anterior.

P. coronarius dexter. (*L. dexter*, on the right.) A syn. of *Coronary plexus, anterior*.

P. coronarius posterior. The Coronary plexus, posterior.

P. coronarius sinister. (*L. sinister*, to the left.) A syn. of *Coronary plexus, posterior*.

P. coronarius ventriculi. (*L.*) The coronary plexus of the stomach. Term for the *Gastric plexus, anterior* and the *Gastric plexus, posterior* combined.

P. coronarius ventriculi inferior. The lower coronary plexus of the stomach. A name for the *gastro-epiploic plexus*.

P. coronarius ventriculi superior. The upper coronary plexus of the stomach. The sympathetic plexus which is situated along the lesser curvature of the stomach, giving branches to both anterior and posterior surfaces of the organ.

P. cranii externus. (*L. cranium*, the skull; *externus*, external.) Term for the venous network lying superficial to the epicranial aponeurosis.

P. cruralis. The lumbar plexus; also, name for a plexus round the femoral artery formed by branches of the anterior crural nerve. (*Krause*.)

P. curvaturæ minoris. The plexus of the lesser curvature, *i. e.*, of the stomach. A name for *P. coronarius ventriculi superior*.

P. cysticus. The cystic plexus.

P. deferentialis. (*L. deferentialis*, belonging to the [*vas*] *deferens*.) The extension of the vesical plexus which supplies, on either side, the *vas deferens*, *vesicula seminalis*, and half the prostate.

P., dental, inferior. The plexus formed, in the inferior dental canal, by communications between the dental branches of the inferior dental nerve. See *Dental nerve, inferior*.

P., dental, superior. The plexus formed, in their respective canals, by communications between the anterior and posterior dental nerves; or, as they are sometimes classed, *anterior, middle*, often joined with the *anterior*, and *posterior* dental nerves. See *Dental nerve, anterior* and *Dental nerve, posterior*.

P. diaphragmaticus. (*L. diaphragmaticus*, belonging to the diaphragm.) The phrenic plexus.

P. digitalis. The digital plexus. Term for venous plexuses situated on both anterior and posterior surfaces of the second and third phalanges of the fingers.

P. divisio[n]is aortæ abdominalis. The plexus of (or at) the division of the abdominal aorta. The aortic plexus.

P. dorsalis spinæ. The plexus of the dorsal spine. A name for the *Veins, dorsi-spinal*, and their intercommunications.

P., dorsispinal. The same as *P. dorsalis spinæ*.

P. ductus chole[do]chi. (*L. ductus*, a duct; *chole[do]chus*, containing bile.) Name for those branches of the hepatic plexus which ramify over the surface of the bile-ducts.

P. entericus. (*Εντερων*, a bowel.) Name for *Meissner's plexus*.

P. epigastricus. (*Epigastric*.) The epigastric or solar plexus.

P., excretory. Term applied to the plexus of very fine capillaries found on the surface of the nephridium in *Lumbricus terrestris*, and serving to connect the two main nephridial vessels.

P. femoralis. (*Femoral*.) Another name for the lumbar plexus.

P. femoralis inferior. (*L. inferior*, lower.) A syn. of the sacral plexus.

P. gangliiformis. (*Gangliiform*.) Term for the plexiform appearance of the union of the two heads of origin of the inferior maxillary nerve.

Also, the *Gangliiform plexus*.

P. gangliiformis nervi vagi. The gangliiform plexus of the vagus nerve. Term for *Ganglion of pneumogastric, lower*.

P. gangliiformis semilunaris. (*Gangliiform*; *L. semilunaris*, like a half moon.) Name for the celiac plexus.

P. gangliiformis Vieussenii. (*Gangliiform*; *Vieussenii*, = of Vieussens, q. v.) Name for the Gasserian ganglion.

P. gangliiformis. (*Gangliiform*.) The *Ganglion of pneumogastric, lower*.

P., ganglionic. Term for a nerve-plexus amongst whose fibres are scattered ganglion cells.

P. gangliosus. (*L. gangliosus*, full of ganglia.) Tiedemann. Collective term for the small ganglia formed at the points of union of the spinal nerves in the pelvic plexus.

P. gangliosus supramaxillaris. Term for *P., dental, superior*.

Also, the *P. gangliiformis*.

PLEXUS

P. gas'tricus. The *gastric* plexus.

P. gas'tricus ante'rior. See *Gastric plexus, anterior*.

P., gastroduode'nal. The division of the hepatic plexus which is continued along the gastroduodenal artery.

P.s, gas'tro-epiplo'ic. The secondary sympathetic plexuses from the hepatic and splenic plexus, on the right and left gastro-epiploic arteries, respectively.

P., gas'tro-epiplo'ic, left. See *Gastro-epiploic plexus, left*.

P., gas'tro-epiplo'ic, right. See *Gastro-epiploic plexus, right*.

P. glandular'is. (*Glandular*.) A syn. of *P. choroideus*.

P. glandullifor'mis. (*Glanduliform*.) A syn. of *P. choroideus*.

P. gulæ. (*L. gula*, the gullet.) The *æsoophageal* plexus.

P. gustator'io-sensor'ius. Term for a nerve plexus in the tongue, composed of branches from the glosso-pharyngeal and gustatory nerves.

P., gut'tural. The same as *P., pharyngeal*.

P. hæmorrhoida'lis. The *hæmorrhoidal* plexus.

P. hederaceus. (*L. hederaceus*, belonging to ivy.) A syn. of *P. pampiniform*.

P. hepatic'i nervo'so-arterio'si. Term for branches of the hepatic nervous plexus which ramify on the branches of the hepatic artery.

P. hepatic'i nervo'so-veno'si. Term for *P. venæ portæ*.

P. hepaticus. The *hepatic* plexus.

P. hypogas'tricus. The *hypogastric* plexus.

P. hypogas'tricus im'par. (*L. impar*, unequal.) The *hypogastric* plexus.

P. hypogas'tricus infe'rior. (*L. inferior*, lower.) The *pelvic* plexus.

P. hypogas'tricus latera'lis. (*L. lateralis*, belonging to the side.) The *pelvic* plexus.

P. hypogas'tricus me'dius. (*L. medius*, middle.) The *hypogastric* plexus.

P. hypogas'tricus pel'vicus. (*Mod. L. pelvicius*, belonging to the pelvis.) The *pelvic* plexus.

P. hypogas'tricus supe'rior. (*L. superior*, upper.) The same as *P. hypogastricus medius*.

P., ileocol'ic. That division of the *P., mesenteric, superior* which accompanies the ileocolic artery.

P. ili'acus exter'nus. Name for a plexus of lymphatic vessels surrounding the external iliac artery.

P. ili'o-hypogas'tricus. A name for the *hypogastric* plexus.

P. infra-maxillar'is. Term for *Dental plexus, inferior*.

P. infraorbita'lis. See *Infraorbital plexus*.

P., infrathyroid'eal. Name introduced by J. Cloquet for the plexus formed in front of the trachea by the anastomosis between the branches of the right and left inferior thyroid veins.

P., interepithe'lial. (*L. inter*, between; *epithelium*.) The network of nerves between the cells of the corneal epithelium.

P. interlaminar'is. See *Interlaminar plexus*.

P. intermesenter'icus lum'bo-aor'ticus. The same as *P. intermeseraicus*.

P. intermesera'icus. (*L. inter*, between; *meseraic*.) A name for the *aortic* plexus.

P., intermus'cular. Term for a gangliated nerve-plexus in the substance of any organ that has unstriated muscular fibres.

P. interpterygoid'eus. (*L. inter*, between; *pterygoid*.) Name for that part of the *pterygoid* plexus of veins which lies between the external and internal pterygoid muscles.

P. intestina'lis submuc'o'sus. A syn. of *P. of Meissner*.

P., intrasp'inal. The network of veins surrounding the spinal canal, and opening into the lumbar, vertebral, intercostal, and lateral sacral veins.

P. ischiad'icus. (*Ischiatic*.) The *P., ischiatic*.

P., ischiat'ic. See *Sciatic plexus*.

P. Jacobso'nii. Jacobson's plexus; generally termed the *Tympanic* plexus.

P., ju'gular, deep. A lymphatic plexus lying upon the internal jugular vein below the base of the skull.

P., ju'gular, superfi'cial. Term for the lymphatics which open into the vessel that accompanies the internal jugular vein, and which come from the ear, temple, and occiput.

P. latera'lis foram'inis cœ'ci. The lateral plexus of the *foramen cæcum*; a nerve plexus at the side of the foramen cæcum in the tongue.

P. latera'lis fren'uli. (*L. lateralis*, situated at one side of; *frenulum*, dim. of *frænum*, a fold.) Name for the plexus of lymphatic vessels situated on either side of the *frænum præputii*.

P. liena'lis. (*L. lienalis*, belonging to the spleen.) The *Splenic* plexus.

P. lingua'lis. (*L. lingualis*, belonging to the tongue.) Name for the sympathetic plexus on the lingual artery which is continued from that on the external carotid.

P. longitudina'lis colum'næ verte-bra'lis. The longitudinal plexus of the vertebral column. A name for the *Veins, posterior longitudinal spinal*.

P. lumba'lis. (*L. lumbus*, the loin.) The *lumbar* plexus.

P. lumbar'is. (*L. lumbus*, the loin.) The *lumbar* plexus.

P. lum'bo-sacra'lis. (*L. lumbo-sacralis*, belonging to the lumbar and sacral regions.) A name for the *lumbar, sacral, and coccygeal* plexuses together.

P. lymphat'icus axillar'is. The lymphatic plexus, both of vessels and glands, in the axilla. See *Axillary glands*.

P. lymphat'icus cervica'lis. The cervical lymphatic plexus. Term for the vessels and glands at the side of the neck.

P. lymphat'icus hypogas'tricus. The hypogastric lymphatic plexus. Term for the vessels and glands which surround the branches of the hypogastric artery and vein in the pelvis.

P. lymphat'icus inguina'lis. The inguinal lymphatic plexus. Term for the vessels and glands in the groin.

P. lymphat'icus intercosta'lis. An intercostal lymphatic plexus. Term for the vessels and glands in any intercostal space.

P. lymphaticus lumba'lis. The

PLEXUS

lumbar lymphatic plexus. Term for the lymphatic vessels and glands lying on the posterior abdominal wall beneath the peritoneum.

P. lymphaticus sacralis. The sacral lymphatic plexus. The network of vessels lying between the rectum and the sacrum.

P. magnus profundus. (L. *magnus*, great; *profundus*, deep.) Name given by Scarpa to the deep cardiac plexus.

P. mal'leal. A plexus of veins situated round the *Manubrium mallei*.

P. mammar'ius inter'nus. (L. *mammarius*, belonging to the mamma; *internus*, internal.) Name for the sympathetic plexus surrounding the internal mammary artery, formed by branches from the inferior cervical ganglion.

P., manu'brial. The same as *P., mal'leal*.

P. maxillar'is exter'nus. (L. *maxillaris*, belonging to the maxilla; *externus*, external.) Name for the sympathetic plexus on the facial artery, which is continued from that on the external carotid.

P. maxillar'is infer'ior. (L. *maxillaris*, belonging to the maxilla; *inferior*, lower.) The same as *P., dental, inferior*.

P. maxillar'is inter'nus. (L. *maxillaris*, belonging to the maxilla; *internus*, internal.) The *Pterygoid plexus of veins*; also, the sympathetic plexus on the internal maxillary artery, which is continued from the plexus on the external carotid.

P., me'dian. A term for the *cæliac* plexus.

P., medull'spi'nal. The plexus of veins round the spinal cord.

P. meninge'us. (L. *meningeus*, belonging to the meninges.) Name for the sympathetic plexus on the middle meningeal artery, which is a continuation of that on the external carotid.

P. meninge'us me'dius. (L. *medius*, middle.) The same as *P. meningeus*.

P. mesara'ico-aor'ticus. (*Mesaraic*; *aortic*.) The same as *P. aorticus abdominalis*.

P. mesara'icus infer'ior. (*Mesaraic*; *inferior*, lower.) The same as *P., mesenteric, inferior*.

P. mesara'icus super'ior. (*Mesaraic*; *superior*, upper.) The same as *P., mesenteric, superior*.

P., mesenter'ic, infer'ior. The sympathetic plexus on the inferior mesenteric artery.

P., mesenter'ic, super'ior. The sympathetic plexus on the superior mesenteric artery.

P. mesenter'ii pro'prius et max'i-mus. (The special and greatest plexus of the mesentery.) A term for the *cæliac* plexus.

P. mirab'ilis retifor'mis. (L. *mirabilis*, wonderful; *retiformis*, net-like.) A syn. of *P. choroideus*.

P., mus'culo-intest'inal. The same as *P. myentericus*.

P. myenter'icus. (Mod. L. *myentericus*, from *mūs*, a muscle; *ἐντερον*, a piece of the guts.) The same as *P. myentericus externus*.

P. myenter'icus exter'nus. (*Myentericus*; *externus*, external.) *Auerbach's* plexus.

P. myenter'icus inter'nus. (*Myentericus*; *internus*, internal.) *Meissner's* plexus.

P. na'so-palat'inus. (L. *naso-palatinus*, belonging to the nose and to the palate.) A name for *Cloquet's ganglion*.

P. ner'vi va'gi. The plexus of the vagus nerve. A name for the lateral portions of the choroid plexus of the fourth ventricle.

P. nervo'rum anseri'nus. The anserine plexus of nerves. A term for the *Pes anserinus*.

P. nervo'rum mol'lium. (L. *nervus*, a nerve; *molliis*, soft.) A name for the sympathetic plexus on the external carotid.

P. nervo'rum spina'lium. (L. *nervus*, a nerve; *spinalis*, belonging to the spine.) General term for any plexus composed of spinal nerves, as the cervical, brachial, &c.

P. nervo'so-ar'terio'sus. (L. *nervoso-ar'teriosus*, belonging to a nerve and to an artery.) A name for the *cavernous* plexus.

P. nervo'sus. (L. *nervosus*, composed of nerves.) General term for any nerve-plexus.

P. nervo'sus aor'ticus abdomina'lis. The abdominal aortic plexus of nerves. See *Aortic plexus*.

P. nervo'sus aor'ticus infer'ior. The inferior aortic plexus of nerves. See *Aortic plexus*.

P. nervo'sus aor'ticus super'ior. The superior aortic plexus of nerves; the sympathetic plexus about the thoracic aorta.

P. nervo'sus plen'us. (L. *nervosus*, composed of nerves; *plenus*, full.) Term for a nerve plexus, the meshes of which contain either nervous tissue (fibres or cells) or the special tissue of the organ in which the plexus is situated.

P. nervo'sus reple'tus. (L. *nervosus*, composed of nerves; *repletus*, filled up.) The same as *P. nervosus plenus*.

P. nervo'sus vac'uus. (L. *nervosus*, composed of nerves; *vacuus*, empty.) Term for a nerve plexus, the meshes of which are either empty, or contain simply connective tissue and its blood-vessels.

P. nodo'sus. (L. *nodosus*, knotty.) A name for *Ganglion of pneumogastric, lower*.

P. oar'icus infer'ior. The inferior ovarian plexus. See *P., ovarian, inferior*.

P. occipita'lis. (L. *occipitalis*, occipital.) Name for the sympathetic plexus on the occipital artery, which is a continuation of that on the external carotid.

P., œsophage'al. A plexus formed by communications between the right and left *pneumogastric nerves* as they lie in contact with the œsophagus, and by branches from the sympathetic ganglia.

P. œsophage'us. The *œsophageal plexus*.

P. of Au'erbach. See *Auerbach's plexus*.

P. of Gerlach. See *Gerlach's nerve-network*.

P. of Le'ber. (*Leber*, T. L. [b. 1840], German ophthalmic surgeon and anatomist.) Term applied to a small venous plexus situated between the canal of Schlemm and the spaces of Fontana.

P. of lymphat'ics, hypogas'tric. The *P. lymphaticus hypogastricus*.

P. of Meiss'ner. See *Meissner's plexus*.

P. of Santor'ini. See under *Santorini*.

P. omenta'lis. (L. *omentalis*, belonging to the omentum.) A name for the *Gastro-epiploic plexus, right* and *Gastro-epiploic plexus, left*.

P. ophthal'micus. (L. *ophthalmicus*, belonging to the eye.) The sympathetic plexus on the ophthalmic artery, which is a continuation of the *cavernous* plexus.

PLEXUS

P. ovar'ian, infe'rior. A plexus of nerves arising from the hypogastric plexus, and lying between the folds of the broad ligament, giving branches to the ovary and round ligament.

P. ovar'icus. (L. *ovaricus*, belonging to the ovary.) The *Ovarian* or *Pampiniform plexus*.

P. ovar'ii. (L. *ovarium*, the ovary.) The *Ovarian plexus, venous*.

P. pampinifor'mis. (L. *pampiniformis*, resembling the tendrils of a vein.) The pampiniform plexus; a name for the *spermatic plexus*, and also for the *Ovarian plexus, venous*.

P. pancreat'ico-duodena'lis. The *Pancreatico-duodenal plexus*.

P. parot'icus. (L. *paroticus*, parotid.) The same as *P. parotideus*.

P. parotide'us. (L. *parotideus*, parotid.) The *parotidean plexus*.

P. patel'læ. (L. *patella*, the knee-cap.) The *patellar plexus*.

P. pel'vicus. (L. *pelvicus*, belonging to the pelvis.) The *pelvic plexus*.

P., perine'al, ven'ous. This plexus, which is more distinct in females, consists of two parts, (1) *superficial*, and (2) *deep*.

1. *Superficial.* It is formed by the veins from the labia majora, and by some of the veins from the *præputium clitoridis*, and empties into the superficial epigastric, the pudic, and the external obturator veins.

2. *Deep.* Formed by the veins from the corpora cavernosa, clitoris, bulb, and branches from the dorsal vein of clitoris, and empties partly into the internal pudic vein and partly passes with the superficial perineal and inferior hæmorrhoidal veins into the internal iliac vein.

P. pharynge'us ascen'dens. (L. *pharyngeus*, belonging to the pharynx; *ascendo*, to climb up.) A syn. of *Pharyngeal plexus*.

P. pharyngo-basilar'is. (L. *pharyngo-basilaris*, belonging to the pharynx and the base of the skull.) The sympathetic plexus on the ascending pharyngeal artery, which is continued from that on the external carotid.

P. pharyngo-larynge'us. (L. *pharyngo-laryngeus*, belonging to the pharynx and larynx.) Term for a venous plexus situated posteriorly to the cricoid cartilage, and communicating with the pharyngeal venous plexus.

P. phren'icus. See *Phrenic plexus*.

P. plantar'is. (L. *plantaris*, belonging to the sole of the foot.) Name for the network of veins on the sole of the foot.

P. poplite'us. (L. *popliteus*, popliteal.) A continuation, on the surface of the popliteal artery, of the *Plexus cruralis* from the anterior crural nerve.

P.s, prever'tebral. See *Prevertebral plexuses*.

P. prostat'ico-vesica'lis. (L. *prostatico-vesicalis*, belonging to the prostate and bladder.) Another name for the *Pudendal plexus of veins*.

P. pterygold'eus exter'nus. (L. *pterygoideus*, pterygoid; *externus*, external.) The superficial portion of the *Pterygoid plexus of veins*, which receives the buccal and masseteric veins. (Zuckerkandl.)

P. pterygold'eus inter'nus. (L. *pterygoideus*, pterygoid; *internus*, internal.) Name for the posterior part of the *Pterygoid plexus of veins*.

P. pu'bicus im'par. (L. *pubicus*, pubic; *impar*, uneven.) The *Pudendal plexus of veins*.

P. pu'bicus par. (L. *pubicus*, pubic; *par*, equal, even.) (Lenhossek.) Name for certain veins passing on either side from the *Pudendal plexus of veins* to the *Plexus bulbo-cavernosus*.

P. pudenda'lis. See *Pudendal plexus*.

P. puden'do-hæmorrhoida'lis. Belonging to the pudendal and hæmorrhoidal regions. Another name for the *pudendal plexus of veins*.

P. puden'do-vesica'lis. (L. Belonging to the pudendal and vesical regions.) The same as *P. pudento-hæmorrhoidalis*.

P. puden'dus. See *Pudendal plexus*.

P. pulmona'lis. (L. *pulmonalis*, belonging to the lung.) See *Pulmonary plexus*.

P. pulmon'icus. (L. *pulmonicus*, belonging to the lung.) The *pulmonary plexus*.

P., pylo'ric. See *Pyloric plexus*.

P. ramifor'mis. (L. *ramus*, a branch; *forma*, shape.) Term for a plexus formed by a mutual interchange of fibres between two or more nerve-trunks. Also termed *Anastomosis nutua*.

P. rena'lis. The *renal plexus*.

P. reticular'is. (L. *reticularis*, net-like, from *rete*, a net.) A term for the *choroid plexus*; also, for the bulb of the vestibule.

P. retifor'mis. (L. *rete*, a net; *forma*, shape.) A term for the *Bulb of the vestibule*.

P. sacra'lis. The *sacral plexus of nerves*.

P. sacra'lis anti'cus. Anterior sacral plexus; the network formed by the sacral veins on the anterior surface of the sacrum.

P. sacra'lis poste'rior. The posterior sacral plexus. See *Sacral plexus, posterior*.

P. sa'cro-coccyge'us. (L. Belonging to the sacral and coccygeal regions.) The *coccygeal plexus*.

P. sac'ro-lumba'lis. The *sacro-lumbar plexus*.

P. semilunar'is. (L. *semilunaris*, like a half-moon in shape.) A name for the *cæliac plexus*.

P. semina'lis. (L. *seminalis*, seminal.) A name for the *rete testis*.

P. simplicis'simus. (L. *simplex*, simple.) Term for an anastomosis between two nerve-trunks, in which one trunk receives a bundle of fibres from the other and gives none in exchange.

P. solar'is. The *solar plexus*.

P. spermat'icus. (L. *spermaticus*, belonging to the spermatic region.) The *spermatic plexus*; also, the *pampiniform plexus*.

P. spermat'icus infe'rior. (L. *spermaticus*; *inferior*, lower.) Term for the lower portion of the *spermatic plexus*.

P. spermat'icus inter'nus. (L. *spermaticus*; *internus*, internal.) The same as *P. spermaticus*.

P. spermat'icus supe'rior. (L. *spermaticus*; *superior*, upper.) The same as *P. spermaticus*.

P. sphenoida'lis. (L. *sphenoidalis*, belonging to the sphenoidal region.) Term for the upper part of the *carotid plexus*.

P. spina'lis ante'rior. The anterior spinal plexus. See *Spinal plexus of veins, anterior*.

P. spina'lis poste'rior. The posterior

PLEXUS

spinal plexus. See *Spinal plexus of veins, posterior*.

P. spina'lis transvers'i. (L. *spinalis*, belonging to the spine; *transversus*, across.) Term for the transverse veins which unite the anterior and posterior longitudinal spinal veins.

P., spi'ral. See *Spiral plexus*.

P. splen'icus. The *splenic* plexus.

P. stomach'icus. (L. *stomachicus*, belonging to the stomach.) The *gastric* plexus.

P. subarachnoid'eus. (L. *sub*, beneath; *arachnoid*.) (Hinrichsen.) Small branches of spinal nerve-roots occasionally present, which unite with one another to form a plexus over the pia mater of the cord.

P. subcuta'neus abdom'inis. (L. *subcutaneus*, under the skin; *abdomen*.) A name for the venous ramifications on the anterior abdominal wall.

P., subepithe'lial. Term for the network formed by the terminal filaments of the ciliary nerves beneath the epithelium of the cornea.

P. sublingua'lis. (L. *sublingualis*, belonging to the sublingual region.) (Calori.) Term for the interlacement of those branches of the lingual nerve which supply the sublingual gland.

P. submuco'sus. (L. *submucosus*, under the mucous membrane.) A term for *Meissner's* plexus.

P., subsarto'rial. (L. *sub*, below; *sartorius*.) The nerve plexus formed about the middle third of the thigh, at the posterior border of the *sartorius* muscle, by the branches of the anterior division of the obturator, of the long saphenous, and of the internal cutaneous nerves.

P., subtrape'zial. (L. *sub*, below; *trapezius*.) A nerve plexus formed underneath the *trapezius* muscle by branches of the spinal accessory nerve and of the deep external branches of the cervical plexus. The trapezius receives its nerve supply mainly from this plexus.

P. supraclavicular'is. Term for the supraclavicular portion of the *brachial* plexus.

P. supramaxillar'is poste'rior. (L. *supramaxillaris*, belonging to the supramaxillary region; *posterior*, hinder.) Term for that part of the *Plexus, dental, superior* which lies above the second molar tooth when, as is occasionally the case, this forms a closer network than the rest of the plexus.

P. suprarena'lis. The *Suprarenal* plexus.

P. tempora'lis superficia'lis. The superficial temporal plexus. See *Temporal plexus, superficial*.

P. testicular'is. (L. *testicularis*, in the region of the testicle.) A name for the *spermatic* plexus.

P. thyroi'deus impar. (L. *thyroideus*, thyroid; *impar*, uneven.) The plexus formed in front of the trachea by the inferior thyroid veins.

P. thyroi'deus infe'rior. The inferior thyroid plexus. See *Thyroid plexus, inferior*.

P. thyroi'deus super'ior. The superior thyroid plexus. See *Thyroid plexus, superior*.

P. tonsillar'is. (L. *tonsillaris*, in the region of the tonsil.) The venous plexus formed round the tonsil which, together with factors from the soft palate, goes to form the inferior palatine vein. See also *Tonsillar plexus*.

P. triangular'is. (L. *triangularis*, three cornered.) Name for the plexus formed by the sensory root of the trigeminal nerve upon the proximal side of the Gasserian ganglion.

P. triangular'is ner'vi trigem'ini. See *P. triangularis*.

P. tympan'icus. The *tympanic* plexus.

P. uteri'nus ante'rior. The anterior uterine plexus. See *Uterine plexus of nerves, anterior*.

P. uteri'nus commu'nis. (L. *uterinus*, uterine; *communis*, common.) A name for the *hypogastric* plexus.

P. uteri'nus complic'itus. (L. *uterinus*, uterine; *complico*, *complicitum* et *complicatum*, to wrap together.) Term for the closely-meshed plexus formed by the uterine nerves (see *Uterus, nerves of*) on the posterior surface of the lower ends of the ureters.

P. uteri'nus infe'rior. (L. *uterinus*, uterine; *inferior*, lower.) A name for the *P. gangliosus*.

P. uteri'nus mag'nus. (L. *uterinus*, uterine; *magnus*, great. Tiedemann's name for the lower part of the *hypogastric* plexus.

P. uteri'nus poste'rior. The posterior uterine plexus. See *Uterine plexus of nerves, posterior*.

P. uteri'nus supe'rior. (L. *uterinus*, uterine; *superior*, upper.) A name for the *pelvic* plexus.

P. uteri'nus veno'sus. The venous uterine plexus. See *Uterine plexus of veins*.

P. u'tero-vagina'lis. (L. *utero-vaginalis*, belonging to the uterine and vaginal regions.) Term for the uterine and vaginal venous plexuses together.

P. vagina'lis. The *vaginal* plexus.

P. vasculo'sus coccyge'us. The vascular coccygeal plexus. A term for the *Coccygeal* gland.

P. vasculo'sus funic'uli spermat'ici pampiniform'is. The vascular pampiniform plexus of the spermatic bundle or cord. A term for the *P. pampiniformis*.

P. va'sis deferent'is. (L. gen. of *vas deferens*.) The *P. deferentialis*.

P. ve'næ por'tæ. (L. gen. of *vena porta*, the portal vein.) Name for the branches of the *hepatic* plexus which form a network on the portal vein.

P. veno'si medul'læ spina'les ante'rior et poste'rior. The anterior and posterior spinal venous plexuses. See *Spinal cord, veins of*.

P. veno'sus. (L. *venosus*, composed of veins.) General term for any plexus of veins.

P. veno'sus vagina'lis. (L. *venosus*, venous; *vaginal*.) The venous plexus situated in the walls of the vagina beneath the unstriped muscular coat.

P. veno'sus ve'næ dorsa'lis pro'prius. (L. *venosus*, venous; *vena dorsalis*, the dorsal vein [of the penis]; *proprius*, special.) Lenhossek's name for that part of the *puddendal* plexus of veins into which opens the dorsal vein of the penis.

P., ve'nous, interlob'ular. See *Interlobular plexus, venous*.

P., ver'tebral. The same as *P. vertebrobasilaris*.

P. vertebra'lis cervica'lis. (L. Belonging to the vertebral and cervical regions.) Name for the network of veins situated round the

PLEXUS—PLICA

transverse processes and on the anterior surface of the bodies of the cervical vertebræ, and opening into the vertebral vein.

P. ver'tebro-basilar'is. (L. Belonging to the vertebral region and to the region at the base [of the skull].) A name for the sympathetic plexus on the vertebral artery.

P. vesic'æ felleæ. (L. *vesica*, a bladder; *felleus*, containing gall.) A name for the *cystic* plexus.

P. vesicallis. The *vesical* plexus.

P. vesico-vagina'lis. The *vesico-vaginal* plexus.

P. vesiculæ semina'lis. (L. *vesicula*, a vesicle; *seminalis*.) The *P. deferentialis*.

P. Vidia'nus. (*Vidian*.) Term for that portion of the Vidian nerve which lies in the Vidian canal, partly surrounding, in a plexiform manner, the Vidian artery.

Plex'us. Nom. pl. of *Plexus*.

P. ganglioform'es. (*Gangliform*.) Term for nerve ganglia.

P. glandifor'mes. (*Glandiform*.) The same as *P. ganglioform'es*.

P. glandulosi Pey'eri. (L. *glandulosus*, like a gland; *Peyeri*, of Peyer.) A term for Peyer, glands of.

P. intestina'les. (*Intestinal*.) The same as *P. glandulosi Peyeri*.

P. spina'les exter'ni. (L. *spinalis*, belonging to the spine; *externus*, outer.) Term for the *Veins, dorsi-spinal*.

P. spina'les inter'ni. (L. *spinalis*, belonging to the spine; *internus*, inner.) Term for the *Veins, posterior longitudinal spinal*.

P. transver'si anterio'res. (L. *transversus*, lying across; *anterior*, in front of.) Term for a network formed by the union of small transverse veins lying in the vertebral canal, between the posterior common ligament and the posterior surface of the bodies of the vertebræ.

P. vertebra'les dorsa'les. (L. Belonging to the vertebral and dorsal regions.) A name for the *Dorsi-spinal veins*.

Plica. (L. *plica*, a fold; from *plico*, to fold. F. *pli*; G. *Falte*.) Anat. A fold; a convolution of the brain; a valve of a blood-vessel. (Kiolan.)

Med. The same as *Plica polonica*.

Zoöl. A genus of American lizards.

Entom. A ridge.

Bot. A pathological condition in plants and trees, in which short twigs are continually growing from buds that ought to give rise to leaves, branches, &c.; from these short twigs others grow, so that eventually a tangled mass of bare twigs is produced.

P. alar'is. (L. *alaris*, wing-like.) *Ornith.* Term for the fold of skin bearing feathers and forming the anterior border of the wing in birds. Also, the bend of the wing.

P. alifor'mis latera'lis. (L. *aliformis*, wing-shaped; *lateralis*, lateral.) Term for the outer of the two *Ligamenta alaria genu*.

P. alifor'mis media'lis. (L. *aliformis*, wing-shaped; *medialis*, middle.) Term for the inner of the two *Ligamenta alaria genu*.

P. antitrag'ica. (*Antitragicus*.) The projection of the folded border of the antihelix of the auricle or external ear, immediately above the antitragus.

P. arte'riæ umbilica'lis. The fold of the umbilical artery, or hypogastric fold. This

name is given to the peritoneal fold passing to the umbilicus from either side of the bladder.

P. ary-epiglott'ica. (*Ary-epiglotticus*.) The same as *P. arytaeno-epiglottidea*.

P. ary-epiglottide'a. The same as *P. ary-epiglottica*.

P. arytae'no-epiglottide'a. The *Arytaeno-epiglottidean fold*.

P. cachec'tica. (L. *cachecticus*, from *καχέκτης*, in a bad habit of body.) A syn. for *P. polonica*.

P. cap'ut Medu'sæ. (L. *caput*, a head; *Medusa*, the fabulous Gorgon.) A variety of *P. polonica*, in which the hair is so matted together in a stiff mass as to resemble a cap covering the head.

P. centra'lis retinæ. (L. *centralis*, central; *retinæ*, of the retina.) A small fold of the retina, observed post mortem, passing between the yellow spot and the optic papilla.

P. cespito'sa. (L. *cespitosus*, resembling the matted roots in a sod of turf.) Term for one of the chief varieties of *P. polonica*, in which the hairs are all matted together into one large mass. See *P. mitralis*.

P. cirro'sa. (L. *cirrus*, a tuft of hair.) A variety of *P. polonica* in which there are long hanging locks of hair.

P. col'l. (L. *colum*, the colon.) Term for the upper fold of the ileo-cæcal valve.

P. cu'biti. (L. *cubitus*, the elbow.) The *Fossa cubiti*.

P. Doug'las'i. *Douglas' fold*.

P. Douglas'sil. The same as *P. Douglassi*.

P. duode'no-mesocol'ica. The duodeno-jejunal fold. A fold of the peritoneum which passes from the point of union of the jejunum and ileum to the transverse mesocolon. On one side it contains the left colic artery, and on the other the superior mesenteric vein.

P. epigas'trica. (*Epigastric*.) A peritoneal fold occasionally found in which lie the epigastric artery and vein.

P. falcifor'mis. (L. *falx*, a sickle; *forma*, shape.) The *Falciform expansion of fascia lata*.

P. fimbria'ta. (L. *fimbriatus*, fringed.) Term for a thin ridge with a fringed edge found on the fetal tongue at its under surface on either side of the frænum. They wholly or almost wholly disappear in the adult, and are supposed to be homologues of the *sublingua* or *under-tongue* of the Lemurs.

P. gen'ito-enter'ica. The genito-enteric fold. A fold of peritoneum passing from the broad ligament of the uterus to the base of the mesentery of the sigmoid flexure of the colon.

P. glos'so-epiglott'ica latera'lis. The lateral *glosso-epiglottic fold* (q. v.), each one being at the outer side of the corresponding *vallecule*.

P. glos'so-epiglott'ica me'dia. The middle *glosso-epiglottic fold* (q. v.).

P. gubernat'rix. (L. *fem. of gubernator*, a pilot.) A columnar prominence formed by a partial folding in of the posterior wall of the *processus vaginalis testis*. Its concavity is filled up with soft subperitoneal tissue. It forms, together with the *gubernacular cord*, the *gubernaculum testis*.

P. hy'o-epiglott'ica. (*Hyo-epiglottic*.) The *hyo-epiglottic fold*. A fold of mucous membrane sometimes present, passing between the hyoid bone and the edge of the epiglottis.

P. il'ei. (Gen. of *L. Ileum*.) Term for the lower fold of the ileo-cæcal valve.

P. il'eo-cæca'lis ante'rior. The anterior ileo-cæcal fold. A fold of peritoneum which occasionally encloses the ileo-cæcal artery.

P. il'eo-cæca'lis infe'rior. The inferior ileo-cæcal fold. The fold of peritoneum forming the lower boundary of the *Fossa, ileo-cæcal*.

P. il'eo-cæca'lis supe'rior. The superior ileo-cæcal fold. The fold of peritoneum forming the upper boundary of the *Fossa, ileo-cæcal*.

P. il'eo-ingui'na'lis. The ileo-inguinal fold. A fold of peritoneum which extends from the inner margin of the right psoas muscle to the attachment of the mesentery.

P. ingui'no-col'ica. The inguino-colic fold. A fold of peritoneum which extends from the inner margin of the left psoas muscle to the attachment of the mesentery.

P. interarticular'is cox'æ. (*Inter-articular; coxa*, the hip.) A syn. for the *ligamentum teres* of the hip-joint.

P. interdigita'lis. (*Interdigital*.) Term for the palmar fold lying between each pair of fingers.

P. ligamen'ti triangular'is sinis'tri. Fold of the left triangular ligament. A somewhat triangular fold occasionally present, situated close to the left lateral ligament of the liver, and due to a slow atrophy of the glandular substance of that organ.

P. longicaud'a. (*L. longus*, long; *cauda*, a tail.) A variety of *P. polonica*, in which there is a long queue or tail of matted hair.

P. longicaud'a latera'lis. (*L. longus*, long; *cauda*, a tail; *lateralis*, to one side.) A variety of *P. longicauda*, in which the "queue" was placed at one side.

P. longitudina'lis duode'ni. The longitudinal fold of the duodenum. The same as *P. longitudinalis Vateri*.

P. longitudina'lis menin'gis. The longitudinal fold of the membrane [of the brain]. The same as *Falx cerebri*.

P. longitudina'lis Vate'ri. A syn. of *Diverticulum Vateri*.

P. luna'ta. (*L. lunatus*, moon-shaped.) The same as *P. semilunaris*.

P. mas. (*L. mas*, a male.) A syn. of *P. cirrosa*.

P. mesenter'ico-mesocol'ica. The mesenterico-mesocolic fold. See *Ligamentum mesenterico-mesocolicum*.

P. mitra'lis. (*L. mitra*, a head-dress.) A syn. of *P. caput Medusæ*.

P. multifo'r'mis. (*L. multus*, many; *forma*, shape.) Term for one of the main varieties of *P. polonica*, in which the hairs are matted together into a number of separate masses.

P. ner'vi larynge'i. (Hyrtl.) The fold of mucous membrane at either side of the larynx which contains the corresponding superior laryngeal nerve, and passes from the arytenoid cartilage to the greater cornu of the hyoid bone.

P. neuropath'ica. (*Νευρον*, a nerve; *πάθος*, disease.) A rare form of matting of the hair which has been twice or thrice reported as occurring in young women after the hair had been washed in warm water. The hair was drawn up into a closely-tangled hard mass which could not be unravelled.

P. petro-clinoi'dea anti'ca. The an-

terior petro-clinoid fold; being the continuation of the anterior or concave edge of the *tentorium cerebelli* over the end of the convex border to the anterior clinoid process.

P. petro-clinoi'dea latera'lis. A syn. of *P. petro-clinoi'dea antica*.

P. petro-clinoi'dea media'lis. A syn. of *P. petro-clinoi'dea postica*.

P. petro-clinoi'dea posti'ca. The posterior petro-clinoid fold, being the fold continued inwards from the posterior or convex and attached edge of the *tentorium cerebelli* to the posterior clinoid process.

P. pharyngo-epiglott'ica. (*Pharyngeal; epiglottic*.) (Luschka.) The fold which passes on each side from the upper portion of the free edge of the epiglottis to the lateral wall of the pharynx.

P. polon'ica. (Mod. *L. polonicus*, Polish. *F. plique*; *G. Weichselzopf*, *polonische Zopf*, *Juden-zopf*.) A matted condition of the hair induced by neglect, dirt, and pediculi, common in Poland, Lithuania, and Tartary. It has also been termed *Trichoma*, *Trichiasis*, *Helotis*, and *Kolto*, and was formerly thought to be a distinct disease.

P. polon'ica juda'ica. (*L. judaica*, Jewish.) The same as *P. polonica*.

P. primiti'va. (*L. primitivus*, earliest of a kind.) The *primitive fold* of the embryo.

P. pter'yo-mandibular'is. (*L. Belonging to the pterygoid and mandibular regions*.) Term for a fold of mucous membrane in the lateral wall of the mouth, passing from the hamular process of the sphenoid bone to the posterior extremity of the alveolar border of the lower jaw.

P. pter'yo-maxillar'is. The *Pterygo-maxillary fold*.

P. pu'bo-umbilica'lis. (*L. Belonging to the pubic and umbilical regions*.) The same as *P. arteriæ umbilicalis*.

P. rectovesica'lis. The recto-vesical or *Douglas' fold*.

P. salpin'go-palati'na. (Σάλπιγξ, a trumpet; *palatine*.) (Luschka.) The raised fold formed by the reflexion of the pharyngeal mucous membrane from the anterior portion of the ridge formed by the trumpet-shaped extremity of the cartilage of the Eustachian tube.

P. salpin'go-pharynge'a. (Σάλπιγξ, a trumpet; *pharyngeal*.) (Luschka.) The raised fold formed by the reflexion of the pharyngeal mucous membrane from the posterior portion of the ridge formed by the trumpet-shaped opening of the cartilage of the Eustachian tube.

P. saxon'ica. (*L. saxonicus*, Saxon.) A syn. for *P. polonica*.

P. seba'cea. (*L. sebaceus*, containing sebum.) A syn. of *Seborrhæa capitis*.

Also, a name for the *Fold of Douglas*.

P. semilunar'is. (*L. semilunaris*, shaped like a half-moon.) The vertical fold of conjunctiva which separates the eyelid from the eyeball at the inner canthus.

P. semilunaris fas'ciæ transver-sa'lis. The semilunar fold of the fascia transversalis. (Krause.) The internal and inferior border of the internal abdominal ring, formed by the fascia transversalis.

P. sublingua'lis. (*L. sub*, under; *lingua*, the tongue.) The reflexion of the mucous membrane from the under surface of the tongue to the floor of the mouth.

P. synovia'lis cox'æ. (*Synovial*; *coxa*, the hip.) A syn. for *Ligamentum teres* of the hip.

P. thy'ro-arytænoid'e'a inf'e'rior. The inferior thyro-arytenoid ligament, or true vocal cord.

P. thy'ro-arytænoid'e'a supe'rior. The superior thyro-arytenoid ligament, or false vocal cord.

P. transversa'lis duode'ni. The transverse fold of the duodenum. A syn. of *Diverticulum Vatri*.

P. transversa'lis ret'inæ. The same as *P. centralis retinae*.

P. umbilica'lis. (*Umbilical*.) The peritoneal fold in which the hypogastric artery often lies.

P. urachi. The *Urachal* fold.

P. ureter'ica. The *Ureteric* fold.

P. urogenita'lis. (*Umbilical*.) The peritoneal fold in which the lower end of the Wolffian duct.

P. Vate'ri. The *Diverticulum Vatri*.

P. vertica'lis duode'ni. The vertical fold of the duodenum. The same as *P. Vatri*.

P. vesica'lis me'dia. The middle vesical fold. See *Vesical fold, middle*.

P. vesico-umbilica'lis latera'lis. The lateral vesico-umbilical fold. The same as *P. arteriæ umbilicalis*.

P. vestib'uli nasa'lis. The fold of the nasal vestibule. See *Vestibule of nose, fold of*.

P. villo'sa. (*L. villosus*, shaggy, rough.) A syn. of *P. mitralis*.

Pli'cæ. Nom. pl. of *Plica*.

P. adipo'sæ. (*L. adiposus*, full of fat.) The *Ligamenta mucosa*.

P. adipo'sæ pericardi'acæ. (*L. adiposus*; *pericardiacus*, pericardial.) The projecting folds formed by pericardium and sub-jacent masses of adipose tissue, on the surface of the heart.

P. alifor'mes. (*L. ala*, a wing; *forma*, shape.) The *Ligamenta alaria genu*.

P. ciliar'es. (*Ciliary*.) A series of fine folds continuous with the *ciliary processes*, and reaching back almost to the *ora serrata*.

P. conniventes. (*L. conniveo*, to close the eyes.) A syn. of *Valvulae conniventes*.

P. Douglas'sii. See *Plica Douglassii*.

P. linguae perpendicular'es. The perpendicular folds of the tongue. Term for curved grooves on the dorsum of the tongue reaching from the middle line to the edges, with their concavities looking backwards.

P. membra'næ mucosæ tym'pani. The folds of the mucous membrane of the tympanum. Term for two folds of mucous membrane, an *anterior* and a *posterior*, on the outer wall of the tympanum, over the neck of the malleus and the chorda tympani nerve.

P. palma'tæ. (*L. palmatus*, shaped like the palm of the hand.) The same as *Palmæ uteri plicatæ*.

P. pu'bo-umbilica'les. (*Pubic*; *umbilical*.) Term for the peritoneal folds covering the lateral ligaments of the bladder.

P. rec'ti. (*L. Gen. of rectum*.) Term for certain transverse or slightly oblique folds, two to five in number, in the mucous membrane of the rectum, situated between its sacculations.

P. rec'to-uteri'næ. Recto-uterine folds. The *P. Douglassii*.

P. rec'to-vesica'les. Recto-vesical folds. The posterior false ligaments of the bladder in the male. See *Ligaments of bladder, false*.

P. semilunar'es. (*L. semilunaris*, shaped like a half-moon.) Term for the posterior false ligaments of the bladder. See *Ligaments of bladder, false*.

P. semilunar'es Douglas'sii. The same as *P. Douglassii*.

P. sero'sæ. (*L. serum*, serum.) Term for any folds of serous membrane.

P. sigmoid'eæ co'll. (*L. sigmoideus*, sinuous; *colum*, the colon.) The *Sigmoid folds* of the colon.

P. sigmoid'eæ rec'ti. (*L. sigmoideus*, sinuous; *rectum*.) See *P. recti*.

P. synovia'les. (*Synovial*.) Term for *Synovial fringes*.

P. synovia'les patellar'es. (*L. synoviales*; *patellar*.) The *Ligamenta alaria genu*.

P. thy'ro-arytænoid'eæ. (*Thyro-arytænoid*.) Term for *Ligaments, thyro-arytænoid*.

P. transversa'les rec'ti. (*L. transversalis*, transverse; *rectum*. The same as *P. recti*.

P. ureter'icæ. (*L. uretericus*, relating to the ureter.) The folds of vesical mucous membrane which pass forwards from each ureteric opening, and meet in the middle line at the base of the *uvula of Lieutaud*.

P. u'tero-recta'les. The utero-rectal folds. See *Folds, recto-uterine*.

P. vagi'næ. Term for the rugæ of the mucous membrane of the vagina.

P. vasculo'sæ. (*Low L. vasculosus*, from *L. vasculum*, a little vessel.) A syn. of *Synovial fringes*.

P. vesica'les latera'les. The lateral vesical folds. See *Plica arteriæ umbilicalis*.

P. vesico-uteri'næ. (*Vesical*; *uterine*.) The posterior false ligaments of the bladder in the female. See *Ligaments of bladder, false*.

P. villo'sæ. (*L. villosus*, rough, shaggy.) Term for certain small folds of mucous membrane of the stomach, situated between the rugæ, and most developed near the pylorus.

Also, term applied to certain pleural folds, fringed with villi, and containing masses of fat, situated along the edge of the pleural sinuses and near the phrenic nerves.

Plicar'ia. (*L. plico*, to fold.) Term applied to *Lycopodium clavatum*, the club moss, because its leaves are matted together.

Pli'cate. (*L. plicatus*.) Folded, or plaited.

Pli'catile. (*L. plicatilis*.) That may be folded up; pliable.

Plica'tio. A folding. Term for *Plica polonica*.

Plica'tion. Folding, bending; also, a fold.

Plicatu'ra. (*L. plicare*, to fold.) A doubling or fold; also, a ligament; also, a cerebral convolution; also, a name for *Plica polonica*.

Plicatu'ræ cere'brl. (Nom. pl. of *plicatura*; *cerebrum*.) The cerebral convolutions.

Pli'cature. (*L. plicatura*.) A doubling or fold.

Plich'as. (*Πλικάς*, or *πλῆξος* [Galen], the part of the thighs chafed in walking; connected with *πλίσσονται*, to cross the legs, and *πλέκω*, to fold.) Term used by Hippocrates for the upper part of the inner side of the thighs together with the perineum.

Plicidentine. (L. *plica*, a fold; *dens*, *dentis*, a tooth.) Term for that variety of tooth-formation in which the dentine on section presents wavy markings passing out from the central cavity of the tooth.

Pliciferus. (L. *plica*, a fold; *fero*, to bear.) Bearing folds.

Pliciformis. (L. *plica*, a fold; *forma*, resemblance.) Resembling folds.

Plicula. (Dim. of *Plica*.) A little fold.

Pliers. (From *ply*, to bend or shape.) A pair of short, stout forceps.

Plinia. (L. Pertaining to *C. Plinius* Secundus [A.D. 28-79], known as Pliny, or Pliny the elder—Roman author—wrote “*Historia Naturalis*.”) The name of a division or group of the Genus *Eugenia* (q. v.).

P. pedunculata. (Mod. L. *pedunculatus*, having a peduncle.) A syn. of *P. rubra*.

P. rubra. (L. *ruber*, red.) A syn. of *Eugenia uniflora*. Hab. Brazil and Antilles. Fruit of a very pleasant flavour, much used as an article of food; and also considered to be antibilious and refrigerant. Various drinks, a syrup, honey, &c., are prepared from it.

Plinii. (L.) Gen. of *Plinius* (see *Plinia*).

P. alyssum. (See *Alyssum*). The *Galium album* or *G. mollugo*, mentioned by Pliny.

P. culina sativa. (L. *culina*, food; *sativus*, planted, as in a garden.) The *Satureia hortensis*.

Plinthion. (Πλινθιον, a small brick, a pedestal.) Term for an ancient piece of apparatus something like a windlass, used for reducing dislocations. There were several forms of this machine, as altered by different surgeons. See Oribas., *de machinament.* c. viii.

P. Nilei. The commonest form of plinthion, invented by Nileus and described by Herodotus and Oribasius.

Plinthitis. (Πλινθιον, dim. of πλινθος, a brick.) Term for a kind of *Alum* or *Stypteria* (q. v.) used in medicine; so called because it occurred in shapes like bricks or tiles.

Plinthius laqueus. (*Plinthion*. L. *laqueus*, a snare.) Old term for a kind of four-fold bandage used in fractures of the jaw. See Oribas., *de laqueis*, c. xiii.

Pliocene. (Πλειων, more; καινός, new.) Geol. The latest division of the Tertiary period.

Plocaria. A syn. of *Gracillaria* (q. v.).

P. candida. (L. *candidus*, white.) Nees' name for Ceylon moss, *Gracillaria lichenoides* (q. v.). The preparations made from it were:—1. *Decoctum Plocariæ candidæ*. 2. *Gelatina Plocariæ candidæ*.

P. helminthocorton. The same as *Corsican moss*, *Alsidium helminthocorton*. It has been used for centuries in Corsica as an anthelmintic against *Ascaris lumbricoides*; but has also alterative, diuretic, and diaphoretic properties.

Plombières. A town in the Department of the Vosges, in the north-east of France. It lies in a valley at a height of 1500 feet above the sea-level. The climate is variable. There are thirty mineral springs in the neighbourhood, the temperatures of which vary from 52° to 158° F. These springs contain about three-sixteenths of mineral constituents in 1000 parts. The water is used externally for baths and douches for the following diseases: rheumatism, gout, dyspeptic troubles, chronic diarrhœa, and nervous diseases.

A variety of water found in some of these springs, and termed saponaceous (F. *savonneuse*), contains sulphate and subcarbonate of soda, common salt, chalk, silica, and a large proportion of mixed animal and vegetable matter termed *Plombiérine*, which is held in solution by the subcarbonate of soda and gives a greasy character to the water containing it.

Plombiérine. See under *Plombières*.

Plombiérîte. The same as *Plombiérine*. See also *Baregin* and *Glairin*.

Ploratio. (L. *plorare*, to weep, lament.) A weeping; synonymous with *Lacrimation*.

Ploratus. The same as *Ploratio*.

Plöss'lea. (Plössl, a Viennese optician.) Name given by Endlicher to the Genus usually known as *Boswellia*.

P. floribunda. A syn. of *Boswellia floribunda*.

P. papyracea. A syn. of *Boswellia floribunda*.

Ploteric. (Gr. πλωτήρ, drifting.) Biol. Term used by Haeckel for pelagic organisms which have not the power of voluntary motion, but drift with the currents.

Plotus. (L. *plotus* = *plantus*, he that is splay-footed.) Flat-footed.

Ploucquet, Wilhelm Gottfried. A physician of Tübingen. Born 1744, died 1814.

P.'s test. One kind of *Docimasia*, introduced by Ploucquet. It was also termed *Docimasia pulmonum statica*.

Ploughman's spike'nard. Old name used by Gerard for *Inula conyza*; also used for *Nardum maticum* and for a species of *Baccharis*.

Ploughshare bone. A name applied to the *Vomer*, from its shape.

Plover. (Low L. *pluvius* = L. *pluvialis*, of the rain. F. *pluvier*. So called because it appears in flocks as the rainy season begins.) A name for a bird of the Family *Charadriidæ*. The great plover, or thick-knee, *Edicnemus crepitans*, was used in medicine; its gall was said to be good for diseases of the eyes, and a jelly of its flesh was analeptic and restorative. Of the green plover, or lapwing, *Vanellus cristatus*, the ashes were said to be good for colic, and when mixed with wine were used in cataplasms to heal the bite of a mad dog. Its heart was said to be good for pains in the loins, and its skin, in cephalalgia.

Pluchea. (Named after N. A. Pluche, a French botanical writer of the eighteenth century.) A Genus of the *Compositæ*, distributed throughout the warmer parts of Asia, Africa, America, and Australia. The various species have generally a strong odour of camphor.

P. balsamifera. (L. *balsamum*, balsam; *fero*, to yield.) Hab. S. E. Asia. Indigenous, and cultivated. Used as aromatic, carminative, for increasing secretion of digestive tract, and as a diaphoretic.

P. bifrons. (L. *bifrons*, having two faces.) Hab. Southern United States. Used as stimulant and aromatic.

P. borealis. (L. *borealis*, belonging to the North.) Also known as arrow-wood. Hab. N. America. Aromatic and stimulant.

P. camphorata. (Mod. L. *camphoratus*, smelling of camphor.) The salt-marsh teabane, found on the American coasts. It has a strong odour of camphor.

PLUG—PLUMA

P. foliolosa. (L. *foliolum*, a small leaf.) A syn. of *P. indica*.

P. indica. (Mod. L. *indicus*, relating to India.) Hab. India, Malacca, China, and the Malay Archipelago. Roots and leaves used for their astringent properties; also, in fevers as sudorific.

P. lanceolata. (L. *lanceola*, a little spear.) Hab. W. India, Afghanistan, N. Africa. The leaves have aperient properties, and are used to adulterate senna, or as a substitute for the latter.

P. odora. (L. *odoratus*, fragrant.) Hab. W. Indies and S. America. Known as "riverside tobacco;" properties much the same as those of *P. balsamifera*.

Plug. (Dan. *plug*, a peg or bung.) Term applied, in Surgery, to pieces of wool, rag, sponge, &c., stuffed into a passage or cavity, generally to stop bleeding. Other varieties of *plug* are (1) *colotomy p.*, used to close the artificial anus left after colotomy; (2) *nasal p.*, used either to control epistaxis, or for the local application of various remedies; (3) *rectal p.*, used after operations about the rectum to prevent the closing of the gut by cicatrisation, &c.; (4) *tracheotomy p.*, used occasionally in the after-treatment of *tracheotomy*; (5) "*petticoated*" *p.*, see *Lithotomy tampon*.

P., cervical. See *P., mucous*.

P., cervical, Thomas'. A small glass cylindrical plug invented by Thomas, for keeping the lips of the cervix uteri apart after incision.

P.-closeset. The form of *water-closet* in which water is retained in the basin by means of a solid *plug* which works vertically in a side-chamber.

P.s., Dittrich's. The same as *P.s., fungoid*.

P.s., fungoid. Term for plug-like masses occurring in the sputum of putrid bronchitis; they have been found to contain leptothrices, hæmatoidin crystals, blood-corpuscles, fat-laden epithelial cells and fatty detritus.

P., mucous. Term for the mass of glairy mucus which accumulates in the canal of the cervix uteri during pregnancy.

Plug'ging. The operation of pushing in a *plug*.

Plug'ging-forceps. An instrument used by dentists for compressing the filling for cavities in teeth.

Plug'gè's phenol reaction. (After *Plugge*, the discoverer of this reaction.) A test for carbolic acid, *phenol*. When, to an aqueous solution of carbolic acid are added a few drops of nitric acid, and the mixture is then heated with a solution of oxynitrate of mercury, a brilliant red colouration is produced. (Geissler and Möller.)

Plug'ger. An instrument for filling cavities in teeth.

Plukenetia. (Named after *Plukenetius*, Leonhardus, M.D., an English botanist, 1642—1706.) A Genus of climbing shrubs of the Nat. Order *Euphorbiaceæ*, of general distribution in the Tropics.

P. corniculata. (L. *corniculum*, a little horn.) Hab. Moluccas. Cultivated in gardens; the leaves being used as a culinary vegetable, boiled with cocoa-nut milk.

Plum. (Anglo-Sax. *Plume*.) The fruit of any plant of the Genus *Prunus*, and more especially of the *Prunus domestica*. When dried and preserved, the fruit of this species is called *Prune*, or French plum.

P., Assyrian. A name for the fruit of *Cordia myxa*.

P., Australian. The *Diospyros australis*.

P., beach. The *Prunus maritima*.

P., black. The same as *P., Australian*.

P., Can'ada. The *Prunus americana*.

P., co'coa. The *Chrysobalanus icaco*.

P., dam'ask. The same as *P., damson*.

P., dam'son. See *Damson*.

P., dar'ling. The *Reynosia latifolia*.

P., date. See *Date*, and *Diospyros*.

P., down'ward. The *Bumelia cuneata*.

P., East In'dian. The *Flacourtia cataphracta*, and also *F. ramontchi*.

P., French. See *Prune*.

P., gin'gerbread. The fruit of *Parinarium macrophyllum* (q. v.).

P., green'gage. A variety of *Prunus domestica*, generally considered to be the best of all.

P., grey. The same as *P., Guinea*.

P., Guiana. The *Drypetes crocea*, a small euphorbiaceous tree. Hab. W. Indies and Florida.

P., Guinea. See *Guinea plum*.

P., horse. The fruit of either a variety of *Prunus domestica* or *P. americana*.

P., Jama'ca. The *Spondias lutea*.

P., Japan'. The *Prunus japonica*.

P., Madagas'car. The same as *P., East Indian* (*F. Ramontchi*).

P., maid'en. The *Comocladia dentata*, or *C. integrifolia*.

P., Malabar'. The *Jamrosia vulgaris*.

P., Mo'la. The *Parinarium Mobola*.

P., moun'tain. The same as *P., seaside*.

P., Natal'. The *Carissa grandiflora*.

P., ol'ive. A tree (or its fruit) belonging to the Genus *Elæodendron*.

P., pi'geon. Name for either *Chrysobalanus ellipticus* or *C. luteus*.

Also, the *Coccoloba floridana*.

P., rough-skinned. The same as *P., grey*.

P., saffron. The same as *P., downward*.

P., sapodilla. The *Achras sapota*.

P., sea'side. The *Ximenia americana*, or mountain plum.

P., Sebes'ten. The same as *P., Assyrian*.

P., seed'ed. A name for the *Persimmon*.

P., Span'ish. The *Spondias purpurea*; also, the *Mammea humilis*.

P., St. Julian. The variety of *Prunus domestica* which provides the chief part of the Pharmacopœial *Prunum*.

P., Tam'arind. The *Dialium indicum*.

P., wild. 1. The fruit or tree of various species of *Prunus*; e. g. *P. spinosa* (in Europe), *P. americana* (in eastern N. America), *P. subcordata* (in western N. America).

2. The fruit or tree of *Pappea capensis* (in S. Africa).

3. The fruit or tree of *Sideroxylon australis* (in New South Wales).

P., win'ter. The same as *P., seeded*.

P., yellow. The same as *P., seeded*.

Plu'ma. (L. *pluma*; see *Plume*.) A penna or contour feather as opposed to a filo-plume or down-feather.

Also, old Botanical term used to denote that part of the seed which in its growth becomes the trunk.

Also, *Anat. Lanugo*.

Also (Gr. *πλύμα*, water in which something has been boiled), term used by Hippocrates for a

lotion, or for water in which anything has been steeped, e. g. barley-water.

Pluma'ceolum. (Dim. of *L. plumacium*, a feather pillow.) An old term for a pad or compress, the ancients having used feathers placed between folds of linen for that purpose.

Pluma'ceous. (*L. pluma*, a feather.) Having the characters of a pluma.

Plumaria lancifolia. The same as *Plumeria lancifolia*.

Plumba'gin. The name given to a principle discovered by Dulong in the root of *Plumbago europæa*.

Plumbagina'ceæ. The same as *Plumbagineæ*.

Plumbagin'ææ. An Order of gamopetalous Dicotyledonous plants. Herbaceous or woody, and usually perennial plants, cosmopolitan in their distribution; most of the genera, however, being natives of the Mediterranean region. Calyx, tubular or funnel-shaped, 5-lobed; stamens, five, inserted opposite to the lobes of the corolla; styles, five; ovary, unilocular with single basal ovule. Flowers often small, dense inflorescences with numerous dry rigid bracts.

Plumba'go. (*L. plumbum*, lead.) 1. Graphite or black lead. 2. A Genus of plants, Order *Plumbagineæ*, Cohort *Primulales*, Series *Hypogynæ*, so named from their being covered with lead-coloured spots. 3. The *Polygonum persicaria*.

P. auricula'ta. (*L. auricula*, the external ear.) A syn. of *P. zeylanica*.

P. coccine'a. (*L. coccineus*, scarlet.) A syn. of *P. rosea*.

P. europæ'a. (Mod. *L. europæus*, found in Europe.) The toothwort, or leadwort, a plant of the Order *Plumbagineæ*. The root was formerly esteemed as a cure for dental neuralgia, and up to recent times has been used for scabies and dandruff. Its irritative properties have led to its being used in the treatment of indolent ulcers, and also as an emetic and purgative. It was also used for tumours of the breast and testicle, hence its name "cancer herb."

P. lapathifolia. (*L. lapathum*, sorrel; *folium*, a leaf.) Hab. S. E. Europe and the East generally. The root is used, like that of *P. europæa*, in dropsy.

P. Plin'ii. (See *Plinii*.) A name for *P. europæa*, used by Gerard.

P. rose'a. (*L. roseus*, reddish. Hab. India and East Indies. Used as a blistering agent, and applied topically in paralysis and rheumatism, in toothache, and in syphilis and leprosy. It is also used to procure abortion, the bruised root being inserted into the uterus, or an extract being taken by the mouth.

P. scandens. (*L. scando*, to climb.) Hab. the warmer parts of America, especially the Antilles. Is called "*herbe au diable*." Used as a prompt vesicant and emetic.

P. zeylan'ica. (Mod. *L.* From *zeylan*, the old name for Ceylon.) Hab. India and Ceylon. Known to the natives as *Chittramoolum*, or *chitra*. It has much the same properties as *P. rosea*, but to a less degree. It has been used as a caustic, vesicant, ebolic, sudorific, antiperiodic, tonic (in dyspepsia), sialagogue, and as a stimulant adjunct to other medicines, and with considerable success in each form.

Plumbaria ochra. (Fem. of *plumbarius*; *ochra*.) A name for *Massicot*. See *Plumbi oxidum*.

P. ochra facti'tia. (*L. factitius*, artificial.) The same as *P. ochra*.

Plumbar'ius. (*L.*) Pertaining to, or consisting of, *plumbum*, lead.

P. la'pis. (*L. lapis*, a stone.) Term for a preparation of lead resembling *Plumbi scoria*, and having the same properties.

Plumbate. Term applied generally to the compounds formed by the union of *Plumbic acid* (q. v.) with various bases.

Plumba'tum. (Mod. *L.*) Plumbate.

P. aceto'sum. (*L. acetum*, vinegar.) A syn. of *Plumbi acetas*.

P. aë'reum. (*L. aereus*, containing air.) A syn. of *Plumbi carbonas*.

P. linimen'tum. (*L. linimentum*, liniment.) A syn. of *Unguentum plumbi acetatis*.

P. muriat'icum. A syn. of *Plumbi murias*.

P. nitro'sum. (*L. nitrum*, nitre.) A syn. of *Plumbi nitras*.

P. vitrio'licum. (*Vitriolic*.) A syn. of *Plumbi sulphas*.

Plum'beous. See *Plumbeus*.

Plum'beus. (*Plumbum*.) The colour of lead; leaden; livid.

Plumbi ac'etas. (Gen. of *L. plumbum*. F. *acétate neutre de plomb*; G. *essigsaueres Blei*, *Bleiacetat*.) B. Ph. Acetate of lead, sugar of lead. $Pb(C_2H_3O_2)_2 \cdot 3H_2O$. A white, crystalline salt, obtained by dissolving lead oxide in a strong solution of acetic acid, and evaporating. It is astringent and sedative, and has a sweetish, astringent taste. Used externally and internally. Dose, 1 to 4 gr. in pill or solution (with excess of acetic acid). From this salt are prepared *Pilula plumbi cum opio*, *Suppositoria plumbi composita*, and *Unguentum plumbi acetatis*.

P. ac'etas solu'tus. (*L. solvo*, to dissolve.) Syn. of *Liquor plumbi subacetatis*.

P. ac'etas venal'is. (*L. venalis*, for sale.) Commercial lead acetate. See *Plumbum aceticum crudum*.

P. aceta'tis unguen'tum. See under *Unguentum*.

P. ac'etis. A syn. of *P. acetas*.

P. ac'etum. (*L. acetum*, vinegar.) Syn. of *Liquor plumbi subacetatis*.

P. acid'ulus sic'cus. (*L. acidulus*, made sour; *siccus*, dry.) A syn. of *P. acetas*.

P. a'qua. See *Aqua plumbi*.

P. arse'nias. Arseniate of lead. $Pb_3(AsO_4)_2$. (F. *arsénate de plomb*; G. *arsensaures Blei*.) A white insoluble powder, obtained as a precipitate on adding a solution of lead acetate to a solution of sodium arseniate. It has been proposed to use this salt as an external application in certain cases of cancerous ulceration.

P. azo'tas. A syn. of *P. nitras*.

P. bal'samum. (*L. balsamum*. Gr. *βάλσαμον*, in the sense of a healing application.) The same as *Liquor plumbi subacetatis*.

P. binox'idum. The same as *Lead dioxide*.

P. bro'midum. Lead bromide. $PbBr_2$. Obtained as a precipitate on mixing solutions of lead acetate and potassium bromide.

P. calx. (*L. calx*, chalk.) A syn. of *P. carbonas*.

P. calx aëra'ta. (*L. calx*, chalk; *aëratus*, containing air. G. *luftsaure Blei-Kalk*.) Name given by Bergmann (1744) to *Lead, white*.

P. calx dul'cis. (*L. calx*, chalk; *dulcis*,

PLUMBI

sweet.) Name given by Libavius ("Alchymia," 1595) to *Lead nitrate*.

P. calx fla'va. (L. *calx*, chalk; *flavus*, yellow.) A syn. of *P. oxidum citrinum*.

P. calx ru'bra. (L. *calx*, chalk; *ruber*, red.) A syn. of *P. oxidum rubrum*.

P. carbo'nas. B. Ph. Carbonate of lead, white lead. (F. *carbonate de plomb*, *céruse*; S. *albayaide*, *cerusa*; G. *basische Kohlensaures Bleioxyd*.) A mixture of carbonate and hydrate of lead. $2(PbCO_3), Pb_2H_2O$. Thus it is really basic lead carbonate, the normal carbonate being $PbCO_3$. A heavy, white powder, insoluble in water, soluble in weak acetic acid. It is made by exposing metallic lead, at the same time to acetic acid vapour and to air saturated with carbon dioxide from spent tan. From it is prepared *Unguentum plumbi carbonatis*.

P. carbo'nas venali's. (L. *venalis*, for sale.) A syn. of *P. carbonas*. (Belg. Ph.)

P. cera'tum aceti'ci tabula'tum. (L. *tabula*, a table.) Syn. of *Ceratum plumbi subacetatis*.

P. cera'tum anody'num. (Gr. *ἀνώδυ-νος*, allaying pain.) A preparation of the Sp. Ph. containing emplastrum sebi anodynum and olive oil.

P. cera'tum cum aceta'te. Syn. of *Ceratum plumbi subacetatis*, (q. v.).

P. cera'tum nig'rum. (L. *niger*, black.) A preparation of the Sp. Ph. containing sulphides of lead and antimony.

P. cera'tum rub'rum. (L. *ruber*, red.) A preparation of the Sp. Ph. containing litharge, with the carbonate and red oxide of lead.

P. cerus'sa. A syn. of *P. carbonas*.

P. chlo'ridum. See *Lead chloride*.

P. chlo'ris. Chlorite of lead. $Pb(ClO_2)_2$. Obtained as a precipitate on mixing solutions of lead nitrate and neutral calcium chlorite.

P. chro'mas. Chromate of lead; an occasional cause of lead-poisoning. See *Lead chromate*.

P. cin'is. (L. *cinis* [pl. *cineres*], ashes.) A syn. of *P. oxidum griseum*.

Also used in plural, *P. cineres*.

P. cre'ta. (L. *creta*, chalk.) A syn. of *P. carbonas*.

P. cro'cus. (L. *crocus*, from Gr. *κρόκος*, the crocus; crocus- or saffron-coloured.) A syn. of *P. oxydatum rubrum*.

P. crystal'li. (L. *crystallus*, a crystal.) A syn. of *P. nitras*.

P. cy'anas. See *Lead cyanate*.

P. deutox'idum. A syn. of *Lead dioxide*.

P. deutox'idum rub'rum. (L. *ruber*, red.) A syn. of *P. oxidum rubrum*.

P. diac'etas. A syn. of *P. subacetatis*, meaning by this the basic lead salt contained in Goulard's Extract.

P. diox'idum. See *Lead dioxide*.

P. extract'um. (L. *extractum*, an extract.) Syn. of *Liquor plumbi subacetatis*.

P. flave'do. (L. *flavido*, yellowness, citron-colour.) A syn. of *P. oxidum citrinum*.

P. flo'res. (L. pl. of *flos*, a flower.) Flowers of lead, or lead oxide as produced in the form of a powder by burning lead in the air.

P. hydri'odas. A syn. of *P. iodidum*.

P. iodhy'dras. The same as *P. hydriodas*.

P. iod'idum. B. Ph. Iodide of lead. PbI_2 . (F. *iodure de plomb*; G. *Iodblei*, *Blei-iodür*.) A yellow powder or scales, easily soluble in water. Made by mixing solutions of lead nitrate and

potassium iodide, and washing and drying the precipitate thus thrown down. Its official preparations are *Emplastrum plumbi iodidi*, and *Unguentum plumbi iodidi*.

P. iodure'tum. A syn. of *P. iodidum*. (Belg. Ph.)

P. magiste'rium. (See *Magisterium*.) A syn. of *P. carbonas*.

P. meph'itum. (*Mephitis*.) A syn. of *P. carbonas*.

P. monox'idum. *Lead monoxide*.

P. mu'rias. A name for *Lead chloride* of.

P. ni'tras. Nitrate of lead. $Pb(NO_3)_2$. (F. *azotate de plomb*, *nitre de Saturne*; G. *salpetersaures Blei*, *Bleisalpeter*, *salpetersaures Bleioxyd*, *Bleinitrat*.) Prepared by dissolving metallic lead in slightly diluted boiling nitric acid, and allowing it to crystallise out. It forms colourless crystals, with a sweet astringent taste, soluble in water and alcohol. From it is made *Plumbi iodidum*. In solution it yields an astringent lotion, and is given internally in hæmoptysis, epilepsy, and asthma. It is also used to destroy fætid odours due to the presence of sulphuretted hydrogen, with which it forms an insoluble sulphate.

P. ni'tris. *Lead nitrite*.

P. nitrosac'charas. Nitrosaccharate of lead. Prepared by pounding together 2 parts of strong nitric acid, 1 of sugar, and 10 of water, diluting, neutralising with chalk, filtering, and then adding lead acetate until no further precipitation occurs. The precipitate, which is composed of lead saccharate, is dried and washed. It is then dissolved in dilute nitric acid and evaporated to crystallisation. It forms transparent, amber-coloured prisms. This salt has been recommended as a solvent for phosphatic calculi.

P. oleas. (L. *oleas*, an oleate.) A non-official preparation, consisting of acetate of lead, 280 grains, dissolved in 40 ounces of distilled water; to this is slowly added 20 ounces of sodium oleate, and the resulting lead oleate is warmed, decanted, and dried.

P. olea'tum. See *Oleatum plumbi*.

P. ox'alas. Lead oxalate. C_2O_4Pb . Formed as a heavy precipitate, insoluble in water, soluble in nitric acid, solution of sal-ammoniac, and other ammoniacal solutions. When heated in the absence of air to $300^\circ C$., it yields *Plumbi suboxidum* (q. v.).

P. oxid'ulum fla'vum. (L. *flavus*, yellow.) A syn. of *P. oxidum citrinum*.

P. oxid'ulum griseum. (Low. L. *griseus*, grey.) A syn. of *P. oxidum griseum*.

P. oxid'ulum semifu'sum. (L. *semifusus*, half melted.) A syn. of *P. oxidum*.

P. oxid'ulum semivit'reum. (L. *semivitreus*, partially glassy.) A syn. of *P. oxidum*.

P. ox'idum. B. Ph. Massicot, Litharge. PbO . (F. *proto-oxyde de plomb fondus*, *oxyde de plomb*; G. *Bleioxyd*, *Bleigelb*, *Bleiglätte*.) Occurs native as *lead ochre*. Obtained by roasting lead in a current of air, or by heating the carbonate or nitrate. If the heating is carried on so as not to melt the metal, a yellow amorphous powder, *massicot*, is formed; if fusion takes place, *litharge* is formed as a reddish crystalline powder or scales. Lead oxide melts at red heat, is almost insoluble in water, but dissolves in warm alkaline solutions and in almost any acid. This salt is used in preparing both *Emplastrum*

PLUMBIC—PLUMBICUS

plumbi and *P. acetas*; it is also contained in several of the official *Emplastra*.

P. oxidum aceticum. A syn. of *P. acetas*.

P. oxidum album. (L. *albus*, white.) A syn. of *P. carbonas*.

P. oxidum carbonatum per acidum acetosum. A syn. of *P. carbonas*.

P. oxidum cinereum. (L. *cinereus*, ash-coloured.) A syn. of *P. oxidum griseum*.

P. oxidum citrinum. (Citrine.) A name for *Massicot*. See *P. oxidum*.

P. oxidum fusum. (L. *fusus*, melted.) A syn. of *P. oxidum*.

P. oxidum griseum. (Low L. *griseus*, grey.) An old name for *Lead suboxide*, as formed by heating *Lead oxalate* or, according to Berzelius, as found in a thin grey pellicle on the surface of lead which has been exposed to the air.

P. oxidum hydratum. Hydrated oxide of lead. $Pb(OH)_2$. A white solid, obtained by treating any soluble salt of lead with caustic potash.

P. oxidum luteum. (L. *luteus*, yellow.) A syn. of *P. oxidum citrinum*.

P. oxidum nitricum. A syn. of *P. nitras*.

P. oxidum rubrum. (L. *ruber*, red.) See *Lead oxide, red*.

P. oxidum semivitreum. (L. *semi*, half; *vitreus*, glassy, green like glass.) A syn. of *P. oxidum*.

P. oxidum semivitrificatum. (L. *semi*, half; *vitrum*, glass; *facio*, to make.) A syn. of *P. oxidum*.

P. oxidum vitreum. (L. *vitreus*, glassy.) A syn. of *P. vitrum*.

P. oxodes. (Oξωδης , like vinegar.) A syn. of *P. oxidum griseum*.

P. perchloridum. See *Lead perchloride*.

P. peroxidum. See *Lead dioxide*.

P. protocarbonas. A syn. of *P. carbonas*.

P. protoxidum fusum. (L. *fusus*, melted.) A syn. of *P. oxidum*.

P. pulvis. (L. *pulvis*, powder, dust.) Lead dust, prepared by melting lead, adding broken charcoal, and mixing, with violent agitation; this is continued till the metal solidifies, when it is powdered and the charcoal washed away. It is used by potters, and is a common source of lead-poisoning.

P. recementum. (L. *recerno*, to separate out.) The same as *P. scoria*.

P. saccharas. Saccharate of lead. (G. *zuckersaures Blei*.) Exists in two forms, as a salt of monobasic, and of dibasic saccharic acid, obtained in either case by precipitating an aqueous solution of saccharic acid with freshly prepared lead carbonate.

P. saccharum. Sugar of lead, *i. e.*, *P. acetas*.

P. sal. (L. *sal*, salt.) A syn. of *P. acetas*.

P. sal nitrosus. A syn. of *P. nitras*.

P. scor'ia. (L. *scoria*. Gr. $\sigma\kappa\omega\pi\iota\alpha$, dross, slag, refuse.) A syn. of *P. oxidum*.

P. sesquioxidum. *Lead sesquioxide*.

P. subacetas. Oxy-acetate of lead. $Pb_2O(C_2H_3O_2)_2$. The *Liquor plumbi subacetatis* of the B. Ph. is an aqueous solution of this salt. From the liquor are prepared *Glycerinum plumbi subacetatis*, *Liquor plumbi subacetatis dilutus*, and *Unguentum glycerini plumbi subacetatis*.

P. subacetas li'quidus. (L. *liquidus*, liquid.) A syn. of *Liquor plumbi subacetatis*. (Belg. Ph.)

P. subcarbo' nas. A syn. of *P. carbonas*.

P. subcarbo' nas squamo'sus. (L. *squamosus*, from *squama*, a scale, a plate.) A syn. of *P. carbonas*.

P. sulphas. See *Lead sulphate*.

P. sulphidum. *Lead sulphide*.

P. sulphis. See *Lead sulphite*.

P. sulphure'tum. A syn. of *Lead sulphide*.

P. superac'etas. A syn. of *P. acetas*.

P. supercarbo' nas. A syn. of *P. carbonas*.

P. tan' nas. See *Lead, tannate of*.

P. vitriolum. (Low L. *vitriolum*, vitriol.) A syn. of *P. sulphas*.

P. vitrum. (L. *vitrum*, glass.) Lead-glass. A term for perfectly fused oxide of lead (as distinguished from *P. oxidum semifusum*, &c.). It is used in the manufacture of different kinds of glass.

Plum' bic. (*Plumbicus*, from *Plumbum*.) Belonging to lead. Term for any compound of lead in which the lead exists saturated, as a diad radical.

P. acid. A term occasionally applied to *puce-coloured lead dioxide*, because of its combining with certain bases to form compounds which have been called *plumbates*.

Plum' bicum. (L.) A name for *Plumbi oxidum rubrum*.

P. ace'ticum. A syn. of *Plumbi acetas*.

P. iode'tum. A syn. of *Plumbum iodatum*. (Swed. Ph.)

P. iodure'tum. A syn. of *Plumbi iodidum*. (Fr. Cod.)

P. muriat'icum. A syn. of *Plumbi murias*.

P. nit'rum. A syn. of *Plumbi nitras*.

P. oxidum. A syn. of *Plumbi oxidum*. (Swed. Ph.)

P. oxy'dum. A syn. of *Plumbi oxidum*. (Dan. and Norw. Ph.)

P. præparatum. (L. *præ*, before; *paratus*, made ready.) A syn. of *Plumbi oxidum*. (Finn. Ph.)

P. rub'rum. (L. *ruber*, red.) A syn. of *Plumbi oxidum rubrum*.

P. salit'um. (L. *salitus*, saline.) A syn. of *Plumbi murias*.

P. semivit'reum. (L. *semivitreus*, partially glassy.) A syn. of *Plumbi oxidum*. (Netherl. Ph.)

P. subfu'sum. (L. *subfusus*, melted.) A syn. of *Plumbi oxidum fusum*.

Plum' bicus. (L.) Belonging to lead.

P. ac'etas. A syn. of *Plumbi acetas*. (Fr. Cod.)

P. ac'etas cum a'qua. A syn. of *Plumbi acetas*.

P. azo'tas. (L. *azotas*, azotate.) A syn. of *Plumbi nitras*.

P. carbo' nas. A syn. of *Plumbi carbonas*. (Dutch Ph.)

P. carbo' nas et hy'dras. A syn. of *Plumbi carbonas*. (Netherl. Ph.)

P. cru'dus. (L. *crudus*, raw.) A syn. of *Plumbi acetas venalis*. (Swed., Netherl., and Finn. Ph.s.)

P. hydra'to-carbo' nas. A syn. of *Plumbi carbonas*. (Dan., Norw., and Swed. Ph.s.)

PLUMBIS—PLUMBUM

P. venalis. (L. *venalis*, for sale.) A syn. of *P. crudus*. (Dan. Ph.)

Plumbis. (Mod. L.) Plumbite.

P. cal'cis. Plumbite of lime. Prepared by boiling oxide of lead with cream of lime. Used as a hair dye, a black lead sulphide being formed.

Plumbism. (L. *plumbum*.) Lead-poisoning.

Plumbite. (L. *Plumbis*.) Term applied generally to the compounds formed by the union of lead oxide with various bases.

Plumbocalcite. (*Plumbum*; *calcite*.) A variety of *calcite* which contains a small proportion of *Plumbi carbonas*.

Plumbogum'mite. (*Plumbum*; *gum'mis*, gum.) A phosphate of lead and alumina which is found in crusts of a yellowish or brown colour, bearing some resemblance to gum.

Plumbo'sum. (Low. L. *Plumbosus*, resembling *plumbum*, lead.) A name for *Plumbi oxidum griseum*.

P. citri'num. A syn. of *Plumbi oxidum citrinum*.

P. superoxy'dum. A syn. of *Plumbi oxidum rubrum*.

Plumbous. (*Plumbosus*.) Belonging to lead. Term for any compound of lead in which the lead exists unsaturated, as a monad radical.

P. ac'id. Term for *Plumbi oxidum* when it exists in combination with potassium and other bases.

Plum'bum. (L.) Lead. Also, term applied, by Pliny, to a disease of the eyes, from the resemblance in colour to lead of an eye affected with this disease.

P. aceta'tum. A syn. of *Plumbi acetat.*

P. ace'ticum. A name for *Plumbi acetat.*

P. ace'ticum ba'sicum solu'tum. (L. *solutus*, dissolved.) A syn. of *Liquor plumbi subacetatis*. (Austr., Hung., and Russ. Ph.s.)

P. ace'ticum cru'dum. (L. *crudus*, raw, unripe.) Commercial lead acetate (Ger., Gr., and Russ. Ph.s), which contains various impurities. Several continental Pharmacopeias forbid the presence of any trace of copper in this substance.

P. ace'ticum depura'tum. (Low L. *depuro*, to purify.) A syn. of *P. aceticum*. (Hung. and Russ. Ph.s.)

P. ace'ticum solu'tum. (L. *solutus*, dissolved.) A syn. of *Liquor plumbi acetatis*.

P. aceto'sum. A syn. of *P. aceticum*.

P. aëra'tum. (Low L. *aëratus*, containing air.) A syn. of *Plumbi carbonas*.

P. al'bum. (L. *albus*, white.) An old name for *Stannum*.

P. can'didum. (L. *candidus*, bright, shining.) The same as *P. al'bum*.

Also, a syn. of *Plumbi carbonas*.

P. carbon'icum. A name for *Plumbi carbonas*. (Austr., Russ., and Hung. Ph.s.)

P. carbon'icum creme'sium. (Mod. L. *cremesius*, white, like milk or cream; F. *crème*; O. F. *cremâ*; L. *chrisma*.) A syn. of *P. carbonicum*.

P. carbon'icum lamella'tum. (L. *lamella*, a little lamina or plate.) A name for *P. carbonicum*, as obtained in lamellæ by the action of air and vinegar on sheets of lead.

P. caus'ticum. (L. *causticus*, caustic.) Caustic lead. Name given by Gerhardt to a preparation containing 5 parts of lead oxide

in 7 parts of liquor potassæ. Used to remove warts.

P. chlora'tum. A syn. of *Plumbi murias*.

P. chro'micum. A syn. of *Plumbi chromas*.

P. ciner'eum. (L. *cinereus*, ash-coloured.)

An old name for *Bismuth*.

P. citri'num calcina'tum. (L. *calcinatus*, reduced to a calx.) A syn. of *P. oxydatum citrinum*.

P. cor'neum. (L. *corneus*, like horn.) A name for fused chloride of lead.

P. crema'tum. (L. *crematus*, past part. of *cremo*, to burn.) A syn. of *P. ustum*.

P. divi'sum. (L. *divido*, to divide, break up.) The same as *Plumbi pulvis*.

P. elo'tum. (L. *elotus*, past part. of *elavo*, to wash out.) A syn. of *P. lotum*.

P. fal'sum. (L. *falsus*, false.) An old name for *Graphite*.

P. ful'minans. (L. *fulmino*, to lighten.) A syn. of *P. nitricum*.

P. glacia'lë. (See *Glacial*.) An old name for *Bismuth*.

P. gris'eum calcina'tum. (Low L. *griseus*, grey; *calcinatus*, reduced to a calx.) A syn. of *P. oxydatum griseum*.

P. hyd'rico ace'ticum solu'tum. A syn. of *Liquor plumbi subacetatis*.

P. hydriod'icum. An old name for *Plumbi iodidum*.

P. hydrochlor'icum. A syn. of lead chloride.

P. hyperoxyda'tum ru'brum. (L. *ruber*, red.) A syn. of *Minium*. (Austr., Hung., and Russ. Ph.s.)

P. hyperoxydula'tum. A syn. of *Plumbi oxidum rubrum*.

P. ioda'tum. A syn. of *Plumbi iodidum*. (Ger., Russ., and Swiss Ph.s.)

P. ioda'tum cum hydrag'gyro ioda'to. A double salt, containing 2 parts of lead iodide and 1 part of mercuric iodide; obtained as red crystalline plates, soluble in alcohol, less soluble in water.

P. iodura'tum. A syn. of *P. iodatum*.

P. lo'tum. (L. *lotus*, past part. of *lavo*, to wash.) A preparation of lead formerly widely used, made by rubbing a leaden mortar with a leaden pestle, the mortar being partly filled with water. The water was poured off and strained, a fine powder being left behind. This was much used as an astringent, mild caustic, and refrigerant. (Dioscor. v, 95. Kühn ed.)

P. muriat'icum. A syn. of *P. chlora'tum*.

P. ni'grum. (L. *niger*, black.) Name for *Antimonium sulphuratum*. Also, Pliny's name for lead, to distinguish it from *P. candidum* = tin.

P. nitra'tum. A syn. of *P. nitricum*.

P. ni'tricum. An old name for *Plumbi nitras*.

P. oxal'icum. A syn. of *Lead oxalate*.

P. oxyda'tum. A syn. of *Plumbi oxidum*. (Russ., Aust., Swiss Ph.s., &c.)

P. oxyda'tum ace'ticum. A syn. of *Plumbi acetat.*

P. oxyda'tum carbon'icum. An old name for *Plumbi carbonas*.

P. oxyda'tum citri'num. A name for *Massicot*. See *Plumbi oxidum*.

P. oxyda'tum fus'cum. (L. *fuscus*, brown, dark.) A syn. of *Lead dioxide*.

PLUME—PLUMERIA

P. oxydatum luteum. (L. *luteus*, yellow.) A syn. of *P. oxydatum citrinum*.

P. oxydatum muriaticum. A syn. of *P. chloratum*.

P. oxydatum nitricum. A syn. of *P. nitricum*.

P. oxydatum rubrum. (L. *ruber*, red.) A syn. of *Minium*. (Gr. Ph.)

P. oxydatum semifusum. (L. *semifusus*, half-melted.) A syn. of *P. oxydatum*.

P. oxydatum semivitreum. (L. *semivitreus*, partially glassy.) A syn. of *P. oxydatum*.

P. oxydatum sulphuricum. A syn. of *P. sulphuricum*.

P. oxydatum vitreum. (L. *vitreus*, glassy.) A syn. of *Plumbi vitrum*.

P. oxydatum vitrificatum. (L. *vitrum*, glass; *facio*, *factus*, to make.) A syn. of *P. oxydatum vitreum*.

P. oxydatum fusum. (L. *fusus*, burnt, melted.) A syn. for lead monoxide. (Gr. Ph.)

P. oxydatum griseum. (Low L. *griseus*, grey.) A syn. of *Plumbi oxidum griseum*.

P. oxydum rubrum. (L. *ruber*, red.) A syn. of *Minium*.

P. philosophorum. (Gen. pl. of *philosophus*, a philosopher.) Old name for *Antimonium sulphuratum*.

P. phosphoricum. Lead phosphate. A preparation of the Hamburg Ph., made by precipitating liquor plumbi subacetatis by concentrated hydrochloric acid, dissolving the precipitate in boiling water, and then adding slowly a solution of sodium sulphate, and washing and drying the precipitate.

P. rubrum. (L. *rubeus*, ruddy.) The *Philosopher's stone*; also, native chromate of lead.

P. rubrum calcinatum. (L. *ruber*, red; *calcinatus*, reduced to a calx.) A syn. of *P. oxydatum rubrum*.

P. sacrum. (L. *sacer*, sacred.) Old name for *Antimonium sulphuratum*.

P. salinum. (L. *salitus*, saline.) A syn. of *P. chloratum*.

P. schistosum. (Low L. *schistosus*; Gr. *σχιστός*, cloven, split.) A syn. of *P. carbonicum*.

P. scriptorium. (L. *scriptorius*, belonging to a scribe or writer.) Old name for *Antimonium sulphuratum*, because used for colouring inks.

P. scriptorum. (L. Gen. pl. of *scriptor*, a writer.) Old name for *Antimonium sulphuratum*. See *P. scriptorium*.

P. scytodopsicum. (See *Scytodopsicum*.) An old preparation containing tannate of lead, prepared by adding liquor plumbi subacetatis to a decoction of oak bark till precipitation ceases, washing the precipitate, and adding alcohol. Used especially for bed-sores.

P. subacetatum liquidum. (L. *liquidus*, liquid.) A syn. for *Liquor plumbi subacetatis*. (G. Ph.)

P. subcarbonicum. A syn. of *Plumbi carbonas*. (Gr. Ph.)

P. sulphuratum. A syn. of *Lead sulphide*. (Sp. Ph.)

P. sulphuricum. A syn. of *Plumbi sulphas*.

P. superoxydatum. The same as *P. oxydatum*.

P. tannicum humidum. (L. *humidus*, moist.) A preparation of the Swiss, Belg., and Russ. Ph.s. Oak bark is boiled in water and precipitated by liquor plumbi subacetatis; alcohol or glycerin is then added.

P. tannicum multiforme. (L. *puls*, thick pap; *forma*, form.) A syn. of *P. tannicum humidum*. (G. Ph.)

P. tannicum purum. (L. *purus*, pure.) A syn. of *Plumbi tannas*. (Swiss Ph.)

P. tannicum siccum. (L. *siccus*, dry.) Dried lead tannate. Gr. Ph. A yellowish green powder, almost tasteless; made by stirring an aqueous infusion of nut-gall (1 in 2) into an aqueous solution of lead acetate (1 in 10), and washing and drying the precipitate. Same uses as for *Lead, tannate of*.

P. ustum. (L. *uro*, *ustum*, to burn.) A syn. of *P. oxydatum griseum*; also, of *Plumbi sulphuretum*.

P. vitriolatum. (Low L. *vitriolum*, vitriol.) A syn. of *P. sulphuricum*.

P. vitriolicum. (Low L. *vitriolicus*, like vitriol.) A syn. of *P. sulphuricum*.

Plume. (L. *pluma*, a small, soft feather, in *pl.*, down; from root *plu.* to float. F. *plume*; S. *pluma*; I. *piuma*; G. *Pflaum*.) A feather.

Bot. The same as *plumule*.

Entom. A hair having feathery branches.

Zoöl. The same as *pluma* or *penna*.

Also, any plumose part, or appendage, as the gills of Crustacea or Mollusca.

P., apical. The filamentous division of the stem of *Apodobranchia*.

Plume-alum. The same as *Plumose alum*.

Plume-nutmeg. The *Atherosperma moschata*.

Plume'let. (Dim. of *plume*.) A down-feather or plumule.

Also, anything like a plumule, as a tuft of leaves.

Also, *Bot.*, a little plumule.

Plumeria. (See *Plumiera*.) A Genus of the *Apocynaceæ*, whose species are mainly inhabitants of Tropical America, some few being found in the hotter parts of the Old World.

P. acuminata. (L. *acumen*, a sharp point.) A syn. of *P. acutifolia*.

P. acutifolia. (L. *acutus*, sharp; *folium*, a leaf.) Hab. Tropical America. Cultivated in India. The bark (termed *aachin*) is used for gonorrhœa and for intermittent fevers; also as a purgative and in cases of leprosy. The leaves are used in poultices. The juice is used as an active purgative, as a rubefacient in rheumatism, and as a cure for scabies. The core of the young wood is given to lying-in women for thirst, and to ease cough.

P. alba. (L. *albus*, white.) Hab. Brazil. The milky juice of this species is much used for its purgative action, and also as a caustic for removing warts, spots, &c. A decoction of the root is thought by the natives to be a specific against *Pian*. Of late years, a decoction of the bark has been recommended as a remedy in gonorrhœa, half a pint being taken three times a day, and all other liquids forbidden for a time.

P. rubra. (L. *ruber*, red.) Hab. Jamaica, Surinam, &c. The milky juice of this species is used as an active caustic for warts, &c., as a drastic purgative, as a remedy for dropsy, chronic skin diseases, syphilis, &c. From the flowers a

PLUM-FIR—PLURISETOSE

syrup is made, much used in diseases of the breast, and from the roots, aperient decoctions.

Plum-fir. A term for a species of *Podocarpus*.

Plum'era. (Named from *Plumier*, a French botanist, 1646—1706.) The name first given to the genus now generally known as *Plumeria*.

P. al'ba. Hab. Brazil. The milky juice of this species is used for its purgative action.

P. dras'tica. (Δραστικός, active.) Hab. Brazil. The fresh juice has a drastic purgative action.

P. lancifo'lia. (L. *lancia*, a lance; *fo-lium*, a leaf.) Hab. Brazil. The bark is febrifuge; it is termed *Agonia bark*.

P. phagedæ'nica. (Φαγέδαινα, a cancer, from φαγεῖν, to eat.) Hab. Brazil. The juice is used as an anthelmintic, and as a caustic for removing warts, &c.

Plum'iferous. (L. *pluma*; *fero*, to bear.) Carrying plumes or feathers.

Plum'iferus. (Mod. L.) *Plumiferous*.

Plu'miform. (L. *pluma*, a feather; *forma*, shape.) Resembling a feather.

Plum'igerous. (L. *pluma*, a feather; *gero*, to bear.) Feathered.

Plu'mipēs. (L. *pluma*, a feather; *pes*, a foot.) Having hairy or feathery feet.

Plum'mer, Andrew, M.D. A Scotch physician—pupil of Boerhaave, and afterwards Professor of Chemistry and Medicine in University of Edinburgh; died 1756.

P.'s pill. Was first described in "Med. Essays and Observations," vol. i, p. 42, Edinb., 1769. For composition, see *Pilula hydrargyri subchloridi composita*.

P.'s powder. A preparation formerly in a number of foreign Pharmacopœias. It contained equal parts of mercury and sulphurated antimony; in the Saxon Ph. a grain of each of these was mixed with two grains of guaiacum.

Plu'mose. (L. *plumosus*.) Feathery; feathered. In *Bot.*, used of bristles, &c., which have fine hairs arranged laterally so as to resemble a feather.

P. al'um. Term for silky crystals of the double sulphate of aluminium and iron, found occasionally in alum slate.

Plumos'ity. The condition of being *Plumose*.

Plumo'sus. (*Pluma*.) Covered with feathers; feathery.

Plu'mula. (Dim. of L. *pluma*, a feather.) *Anat.* Arnold's term for a set of microscopic transverse furrows situated on the roof of the aqueduct of Sylvius. Also, the same as *Plumule*.

Plumula'ceous. *Ornithol.* Downy; composed of *Plumules*.

Plum'ular. Pertaining to a *plumula*; plumulaceous.

Plu'mule. (*Plumula*. G. *Blattfederchen*.) 1. *Ornithol.* A down-feather. 2. *Entom.* A plume-like appendage. 3. *Bot.* The bud of the ascending axis of an embryo plant.

Plumul'iform. (L. *plumula*, a small feather; *forma*, shape.) Having the appearance of a small feather or *plumule*.

Plu'mulose. *Entom.* Having lateral branches, as on certain hairs of insects, which hairs thus resemble a down-feather.

Plunge bath. See under *Bath*.

Plunging siphon. See under *Siphon*.

Plun'ket's caustic. An empirical

application formerly in repute for cancer. It was made of sulphur, arsenious acid, and the powdered flowers of the crowfoot and dog's-fennel, made into a paste with white of egg, and applied to the surface of the cancer spread on a piece of pig's bladder.

P.'s ointment. Another name for *P.'s caustic*.

Plu'ral birth. See under *Birth*.

Plu'ri. (L. *plus*, *pluris*, more; in *pl.* many, several.) A prefix having the signification of many, several.

Pluricaps'ular. (*Pluri*-; *capsule*.) *Biol.* Having, or made up of, several capsules.

Pluricel'lular. (*Pluri*-; *cellula*.) Composed of several cells.

Plur'iceps. (*Pluri*-; *caput*, the head. G. *mehrköpfig*.) *Bot.* Epithet applied to plants having two or more stems springing from one root.

Pluricip'ital. (*Pluri*-; *caput*, *capitis*, the head.) The same as *Pluriceps*.

Pluricus'pid. (*Pluri*-; *cusps*.) Having several *cusps*.

Plurident'ate. (*Pluri*-; *dentate*.) Many-toothed, or having many tooth-like appendages.

Pluriflagel'late. (*Pluri*-; *flagellate*.) *Zool.* Having many *flagella*. See *Flagellum*.

Pluriflo'rous. (*Pluri*-; *flos*, *floris*.) Having many flowers.

Plurifœta'tion. (*Pluri*-; *fœtation*.) The conception of more than one fœtus from one coitus, as of twins, triplets, &c. (Percy.)

Plurifolio'late. (*Pluri*-; *foliate*.) Having many leaves.

Plurifol'iolate. (*Pluri*-; *foliolate*.) Made up of several *folioles*.

Pluriguttulate. (*Pluri*-; *guttulate*.) Containing many drops or drop-like bodies.

Pluriloc'ular. (*Pluri*-; *locular*.) The same as *Multilocular*.

Plurimam'mate. (*Pluri*; *mamma*, a breast.) Term applied to a person (or animal) having several breasts.

Plurinom'inal. (*Pluri*-; *nomen*, *nominis*, a name.) The same as *Polynominal*.

Plurinu'cleate. (*Pluri*; *nucleate*.) The same as *Multinucleate*.

Plurinu'cleated. (*Pluri*-; *nucleated*.) The same as *Plurinucleate*.

Pluri'para. (*Pluri*-; *pario*, to bring forth.) A syn. of *Multipara*.

Pluripar'ity. (*Pluripara*.) The state of being a *Pluripara*.

Pluripar'ous. (*Pluripara*.) The same as *Multiparous*.

Also, pertaining to a *Pluripara*.

Pluripar'tite. (*Pluri*-; *partio*, to divide.) Made up of several parts or divisions. *Zool.* and *Bot.* Divided by septa into several parts; made up of several parts, e.g. a calyx which presents numerous incisions extending nearly to the base.

Pluripet'alous. (*Pluri*-; *petal*.) The same as *Polypetalous*.

Plurisept'ate. (*Pluri*-; *septum*.) The same as *Pluripartite*.

Pluriser'ial. (*Pluri*-; *series*.) Made up of several series.

Pluriser'iate. (*Pluri*-; *series*.) *Bot.* Disposed in several rows or series.

Plurise'tose. (*Pluri*; *seta*, a bristle.) Having several bristles or setæ.

PLURISPIRAL—PNEUMATIC

Plurisp'iral. (*Pluri-*; *spiral*.) The same as *Multispiral*.

Plurisp'orous. (*Pluri-*; *spore*.) Having more than one *spore*.

Plu'risy. (*L. plus, pluris, more*.) A term for *Plethora*.

Plu'rivalve. (*Pluri-*; *valve*.) The same as *Multivalve*.

Plu'tea. (*L. pluteum, a breastwork, partition, &c.*) An old term used by Avicenna for a reduplication which makes a membrane thicker; as, for example, the *Falx cerebri* of the dura mater.

Plu'teiform. (*Pluteus*; *forma, form*.) Resembling a *pluteus* larva; more exactly, having the morphological value of a *Pluteus*.

Plu'teus. (*L. pluteus, a shed or mantlet*.) A bilateral larval form found in the development of certain Echinodermata (Ophiuroidea, Echinoidea). It develops long arms or processes on the ciliated area, the arms being supported by a provisional calcareous skeleton. See also *Bipinnaria*.

Plutoma'nia. (*Πλούτος, wealth; μανία, madness*.) An insane belief in the possession of imaginary wealth. It is a common early symptom in *Paralysis, general, of insane*.

Pluto'nian. (*Πλούτων, Pluto, the king of Hades*.) *Geol.* Term applied by Omasius to those earths that are formed by the action of fire.

Pluto'nic. (*Πλούτων, Pluto*.) *Geol.* Term applied to igneous rocks presenting a crystalline structure due to their formation at great depth and under pressure, and to their having cooled slowly; opposed to *Volcanic* (q. v.).

Also, the same as *Plutonian*.

P. the'ory. The theory that it is igneous action which has produced the present condition and aspect of the earth's crust; also known as *Metamorphic theory*.

Plu'tonism. (*Πλούτων, Pluto*.) The doctrines of the *Plutonic theory*.

Pluto'nium. (*Πλούτων, Pluto*.) Clarke's name for *Barium*.

Plu'vial. (*L. pluvialis, belonging to rain*.) Rainy. *Geol.* Formed by the action of rain.

Pluvial'is. (*L. pluvia, rain*.) Term in older nomenclature for the genus *Plover*, several species of which were used as medicine and food. See *Plover*.

Plu'viograph. (*L. pluvia, rain; Gr. γράφω, to inscribe*.) Term for a self-recording rain-gauge.

Plu'viometer. (*L. pluvia, rain; Gr. μέτρον, a measure*.) A rain-gauge.

Plu'viometry. The measurement of rain-fall.

Plu'vioscope. (*L. pluvia, rain; Gr. σκοπέω, to view*.) The same as *Pluviometer*.

Plyntriopso'ra. (*Πλύντρια, a washerwoman; ψώρα, the itch. F. plyntriopsoire; G. die Krätze Wäscherinnen*.) The form of psoriasis to which washerwomen are liable. (Bateman.)

P. M. An abbrev. for *Post mortem*.

Pm. An abbrev. for *Premolar*, used in writing Dental formulæ.

Pneobiogno'sis. (*Πνέω, to breathe; biognosis*.) The same as *Pneusiobiognosis*.

Pneobiomanti'a. (*Πνέω, to breathe; biomantia*.) The same as *Pneusiobiognosis*.

Pneobio-man'tic. Relating to *Pneobiomantia*.

Pneodynam'ics. (*Πνέω, to breathe;*

dynamics.) The science of the forces concerned in respiration.

Pneogas'ter. (*Πνέω, to breathe; γαστήρ, the belly*.) Term for the whole respiratory tract, considered as a specialised portion of the intestinal tract.

Pneogas'tric. Belonging to the *Pneogaster*.

Pne'ograph. (*Πνέω, to breathe; γράφω, to inscribe, draw*.) An instrument invented by Dr. Mortimer Granville for estimating the force and duration of the expiratory act in various conditions of the lungs. It consists of a small half-disc of talc, which is carefully suspended, and to which is attached a recording needle. Every movement of the air in expiration causes a corresponding movement of the half-disc.

Also, the same as *Pneometer*.

Pneo'meter. (*Πνέω, to breathe; μέτρον, a measure*.) A syn. of *Spirometer*.

Pneo'metry. (*Pneometer*.) The estimation of the amount of air inspired and expired in respiration.

Pne'oscope. (*Πνέω, to breathe; σκοπέω, to look at*.) An instrument for measuring the varying circumference of the thorax during inspiration and expiration.

Pneu'ma. (*Πνεῦμα, breath, from πνέω, to breathe*.) Air; breath; life; spirit. Hippocrates uses the word in various significations (breathing; difficult breathing; air, &c.) and in many phrases; see Foësius' *Æconom. Hippocr.* pp. 515—520 (Ed. 1583). See also *Pneumatici*.

Pneumapostema. See *Pneumonapostema*.

Pneumapyotho'rax. The same as *Pypneumothorax*.

Pneumarthro'sis. (*Πνεῦμα, air; ἄρθρωσις, a jointing*.) The presence of air in the synovial cavity of a joint.

Pneumatelec'tasis. (*Πνεῦμα, breath; ἀτελής, imperfect; ἔκτασις, a stretching out*.) A fuller expression for *Atelectasis*.

Pneumathæ'mia. (*Πνεῦμα, air; αἷμα, blood*.) The presence of air in a blood-vessel or blood-vessels.

Pneumatho'rax. See *Pneumothorax*.

Pneumatic. (*Πνευματικός, belonging to breath or wind. F. pneumatique; G. pneumatisch*.) Belonging to, or filled with, air or other gas. Occasionally applied as an epithet to physicians who treat diseases mainly by inhalation of gases; also, to the ancient school of the *Pneumatici*.

P. appa'rat'us. Term in general for any physical apparatus used for demonstrating or experimenting on the laws of Pneumatics.

Also, term specially applied to the various forms of apparatus invented for providing compressed or rarefied air for use in the *Pneumatic method*, either in conjunction with the pneumatic cabinet or as portable apparatus.

P. aspi'rat'or. See *Aspirator, pneumatic*.

P. cab'in'et. Name for the air-tight compartment in which a patient is placed for treatment by the inhalation of compressed air.

P. chem'istry. The chemistry of gases and vapours.

P. differ'entia'tion. Term for the treatment of certain lung diseases by inhalation of air either denser or less dense than that of the surrounding atmosphere.

P. duct. See *Ductus pneumaticus*.

P. mal'let. A mallet used for consolidat-

ing gold fillings in teeth, and worked by means of compressed air.

P. medicine. See *Atmiatry*.

P. method. The method of treatment by means of compressed or rarefied air. It has been used with more or less success in a great variety of diseases; but especially in chronic bronchial catarrh, emphysema, bronchial asthma, phthisis, anæmia, whooping-cough, and corpulence.

P. occipital bones. See *Occipital bones, pneumatic*.

P. physicians. See *Pneumatici*. See also main heading.

P. process. Term for air-cells occasionally found in the lateral parts of the occipital bone continuous with the mastoid cells. (Hyrtil.)

P. repositor. A globular rubber bag, connected with another compressible bag through which the former can be filled and dilated with air. The globular bag is placed in the vagina and then inflated, thus tending to replace a displaced uterus.

P. trough. Also termed *Hydropneumatic trough*. A trough fitted round the inner circumference with a perforated shelf, and used for collecting gas over water or mercury.

Pneumatica. (*Pneuma*.) Diseases of respiration, the second in Good's nosology.

Also, therapeutic agents that affect respiration.

Pneumatical. The same as *Pneumatic*.

Pneumatici. (Οἱ πνευματικοί, lit. "The spiritualists.") A school of Greek physicians, of whom the chief were Athenæus and Archigenes, forming a sect of the Dogmatics. The "πνεῦμα," according to their theory, was an invisible fluid or spirit permeating all the body, and forming the vital principle on which health and strength depended. This was really an expansion of a doctrine already taught by Plato, Aristotle, the Stoics, and others. They thought that the pulse was due to this "πνεῦμα," and that fevers also were mainly caused by changes in it; this led to careful investigations of both these sets of phenomena, and to elaborate classifications, which, though overlaid by excessive dialectic, yet contained much valuable pathology.

Pneumati'city. (*Pneumatic*.) The condition of being *pneumatic*, that is, of being hollow and containing air; applied especially to the respiratory apparatus of animals, to the hollow bones of birds, &c.

Pneumatics. (*Pneumatic*. F. *pneumatique*; G. *Pneumatik*.) That part of *Physics* which treats of the nature and properties of gases.

Pneumatism. The doctrine of the *Pneumatists*.

Pneu'matists. The *Pneumatici*.

Pneu'mato-. (Πνεῦμα, -ατός.) A prefix signifying relation to *Pneuma*.

Pneumatocar'dia. (*Pneumato*-; καρδία, the heart.) The pathological condition in which air or gas is found in the chambers of the heart.

Pneumatocatharte'rion. (*Pneumato*-; καθαρτήριο, purifying. G. *Athenverbesserungsmittel*.) A medicine for purifying the breath.

Pneu'matocele. (*Pneumato*-; κήλη, a tumour; G. *Windbruch*.) A tumour filled with gas. It may fluctuate, and it gives a resonant note on percussion.

Pneumatocelë vagina'llis. A *Pneumatocele* of the *Tunica vaginalis testis*.

Pneumatoceph'alus. (*Pneumato*-; κεφαλή, the head.) The same as *Physocephalus*.

Pneumatochemi'a. (*Pneumato*-; χημεία, chemistry.) The chemistry of gases.

Pneumatochem'ical. Belonging to *Pneumatochemistry*.

P. appara'tus, Priest'ley's. The *Pneumatic trough*.

Pneumatochymi'ferous. *Pneumatochymophorous*.

Pneumatochymo'phorous. (*Pneumato*-; χυμός, juice; φέρω, to bear.) *Bot.* Sap-bearing.

P. ves'sels. Name applied by Hedwig to the *tracheæ* of plants when arranged in pairs, one of the two containing air and the other sap or water.

Pneu'matocyst. (*Pneumato*; cyst.) *Comp. Anat.* An air-sac, as found in birds, hydrozoa, &c. See *Pneumatophore*.

Pneumato'des. (*Pneumato*-; εἶδος, resemblance.) Distended with air.

Term used by Hippocrates and others for those whose respiration is difficult and increased in frequency, whether the cause be thoracic (as by pleural effusion, narrow chest, &c.) or abdominal (tumour, excessive flatulent distension, &c.).

Pneumato'dic. The same as *Pneumatodes*.

Pneumatodyspnce'a. *Dyspncea* consequent upon *Emphysema*.

Pneumato'geny. (*Pneumato*-; γεννώ, to beget.) Artificial respiration. See under *Respiration*.

Pneu'matogram. (*Pneumato*-; γράμμα, a drawing.) The graphic representation of the respiratory movements by a curved tracing.

Pneu'matograph. (*Pneumato*-; γράφω, to write.) Name given to an instrument almost identical in construction and uses with the *Pneumograph*. The one most commonly in use is that invented by Fick.

Pneumatology. (*Pneumato*-; λόγος, a discourse.) Syn. for *Pneumatics*. Also, that branch of philosophy which deals with the nature and action of the mind.

Pneumato'meter. (*Pneumato*-; μέτρον, a measure.) The same as *Pneometer*.

P., Holden's. A form of spirometer invented by Dr. Holden for testing respiratory power. It consists of a tube about nine inches long containing a syren inside, one portion of which is moveable and attached to a spiral spring. The variations in the note produced serve to test the individual power, both in inspiration and in expiration. (See "Amer. Journ. of Med. Sci.," April, 1877.)

Pneumato'metry. (*Pneumatometer*.) The method of using a *Pneumatometer* to test the respiratory capacity.

Also, the system in which diseases affecting the respiratory organs are treated by pneumatic apparatus.

Pneumatom'phalocèle. (*Pneumato*-; ὀμφαλός, the navel; κήλη, a tumour. G. *Nabelwindbruch*.) An umbilical hernia containing gas.

Pneumatom'phalus. (*Pneumato*-; ὀμφαλός, the navel.) The same as *Pneumatophalocèle*.

Pneumato'pathy. (*Pneumato*-; πά-

PNEUMATOPERICARDIUM—PNEUMOCOCCUS

θός, a disease.) The curing of disease by influencing the mind; mind-cure.

Pneumatopericardium. See *Pneumopericardium*.

Pneu'matophore. (*Pneumato-*; φέρω, bearing, from φέρω, to bear, carry.) An air-cyst. The term is especially applied to the expanded proximal portion of the caenosarc of certain *Siphonophora*, an Order of the *Hydrozoa craspedota*; it acts as the swimming-bladder for the colony.

Pneumato'phorous. (*Pneumato-*; φέρω, bearing.) Air-carrying.

Ichthyol. Carrying a swimming-bladder.

P. ves'sels. *Bot.* Hedwig's term for the straight vessels containing air which pass to the centre of the spiral vessels of the *tracheæ*.

Pneumatorrhachis. (*Pneumato-*; ράχis, the spine.) Air in the vertebral canal.

Pneumatosis. (Πνεύματος, an inflation; used by Aristotle as meaning respiration. *F. pneumatose*; *G. Windsucht*.) Term denoting a morbid collection of gas in the cavities of the body, or in the tissues. Used by Sauvages to mean *Emphysema*. Thus, "pneumatose gastrique ou intestinale" is windy colic.

In Cullen's *Nosology*, *Pneumatosis* was classed as a genus in Class *Cachexiæ*, Ord. *Intumescentiæ*. He described four species: 1. *P. spontanea*, without assignable cause. 2. *P. traumatica*, from a wound. 3. *P. venenata*, from a poison. 4. *P. hysterica*, from hysteria.

P. abdom'inis. (Gen. of *abdomen*.) A term for *Tympanites*.

P. enter'ica. (Ἐντερικός, in the intestines.) A term for *Colica flatulenta*.

P. pericar'dii. (Gen. of *pericardium*.) A syn. of *Pneumopericardium*.

P. pulmo'num. (Gen. of *pulmones*, the lungs.) Pulmonary emphysema.

P. ventric'uli et enter'ica. (Gen. of *ventriculus*, the belly.) A term for general flatulence of the stomach and bowels. (Dunglison.)

Pneumatotherapeutics. See *Aërotherapeutics*.

Pneumatother'apy. (*Pneumato-*; *therapy* = *therapeutics*.) Treatment by inhalation either of compressed or rarified air.

Pneumatotherman'ter. (*Pneumato-*; θερμαντήρ, a warmer, i.e. a kettle.) A respirator.

Pneumatotho'rax. (*Pneumato-*; θώραξ, the chest.) See *Pneumothorax*.

Pneumatotomy. The same as *Pneumotomy*.

Pneumatu'ria. (*Pneumato-*; οὐρίω, to make water.) Passage of gas with the urine; generally due to a communication between the urethra or bladder and the intestine; but gas may be generated in the bladder by decomposition, &c.

Pneumec'tasis. See *Pneumonectasis*.

Pneumec'tomy. (For *pneumonectomy*, from Gr. πνεύμων, a lung; ἐκτομή, excision.) Term for excision of part of the lung, an operation which has occasionally been tried in some forms of *Phthisis*.

Pneumemphrax'is. See *Pneumonemphraxis*.

Pneumic. (Πνεύμων, the lung.) Belonging to the lung.

P. acid. An acid stated by Verdeil to exist in the pulmonary parenchyma of most

animals. It is said to be formed by the union of lactic acid and taurin.

Pneumo-. Where the prefix *pneumo-* is used as derived from Gr. πνεύμων, a lung, it is a shortened form of the more correct prefix *pneumono-* (q. v.).

Pneumoactinomyco'sis. (*Pneumo-*; *actinomycosis*.) Pulmonary actinomycosis.

Pneumoarct'ia. (*Pneumo-*; *L. arcto*, to crowd, strain.) Contraction of the lungs, *Pneumonostenosis*. (Piorry.)

Pneumobacil'lus. (*Pneumo-*; *bacillus*.) A synonym for Friedländer's *pneumococcus*.

Pneumoblennoze'mia. See *Pneumonoblennozemias*.

Pneumo'cacë. See *Pneumonocace*.

Pneumocarcino'ma. (*Pneumo-*; *carcinoma*.) A term for *Lung, cancer of*.

Pneumocatharte'rium. See *Pneumocathartherion*.

Pneumocele. See *Pneumonocele*.

Pneumocholo'sis. See *Pneumonochochosis*.

Pneumo'chysis. (*Pneumo-*; χύσις = χύμα, effusion.) Edema of the lungs.

Pneumococ'cus. (*Pneumo-*; κόκκος, a kernel.) 1. *Fränkel's*. A micro-organism discovered by Fränkel in the rusty sputum of pneumonia, having the appearance of an oval diplococcus, but being really a bacillus. It usually occurs in pairs, is non-motile, and is highly sensitive to temperature. Ordinary injections with fluid containing the bacillus do not produce lesions pathognomonic of pneumonia.

2. *Friedländer's*. A micro-organism discovered by Friedländer in the rusty sputum of pneumonia, in reality a short bacillus, but longer than Fränkel's; not found in all cases of the disease.

Term for the micro-organism supposed to be the specific agent causing pneumonia. In view of the occasional epidemic and apparently infective character of some cases of pneumonia, attempts have been made to discover a micro-organism specific to the disease. Friedländer, in 1883, described an encapsulated coccus which, he asserted, stained with aniline dyes when Gram's method was used, and from cultivations of which he claimed to be able to produce pneumonia by inoculation in mice. The coccus, however, has not been found in all cases of pneumonia, and, on the other hand, an apparently identical "capsule-coccus" may be found in the sputum, or buccal epithelium, and in other situations, in perfectly healthy individuals. Further, it is stated by other observers that the "capsule-coccus" is decolourised by the use of Gram's method, and that the organisms retaining the stain are identical with Fränkel's diplococcus. It is this latter organism which is now more generally believed to be the specific cause of many pneumonias. It is found in almost all cases of the disease, either in the sputum, lung tissue, pleural effusions, lymph, blood, or pus; and by inoculation after careful cultivation has almost invariably produced typical symptoms and morbid appearances in mice and rabbits, which are found to be much more susceptible than rats, guinea-pigs, or dogs. The cocci are generally encapsulated, occur in chains, and stain well by Gram's method. Though found so constantly in cases of pneumonia, the coccus is also found in the mouths of perfectly healthy

PNEUMOCONIOSIS—PNEUMOLITHIASIS

people, and Fränkel himself declares that in the absence of sufficient physical signs, a diagnosis of pneumonia cannot be made on the presence of this organism in the sputum. Some observers have considered the organism to be a bacillus, and it has been named *Bacillus septicus sputigenus* (q. v.). A third form, *B. pneumoniae*, has been described by Klein as occurring constantly in the lungs of persons who died during an epidemic in 1888. (See Appendix; under *Bacillus pneumoniae*.)

Pneumoconio'sis. (*Pneumo-*; κόνις, dust.) Inflammatory disease of the lungs produced by the inhalation of various kinds of dust. It includes several varieties. See *Phthisis, dust*.

P. anthracotica. ("Ανθραξ, coal.) The same as *Anthraxis pulmonum*.

P. siderotica. (Σίδηρος, iron.) The same as *Siderosis*.

Pneumocysto-ovar'ium. (Πνεῦμα, air; κύστις, a bladder; ovarium.) An ovarian cyst.

Pneumoder'ma. (Πνεῦμα, air; δέρμα, the skin.) Air beneath the skin; subcutaneous emphysema.

Pneumo'dēs. (*Pneumo-*; εἶδος, resemblance.) Pulmonary.

Pneumoectasia. See *Pneumonectasia*.

Pneumoēde'ma. See *Pneumonœdema*.

Pneumoënteritis. (*Pneumo-*; enteritis.) The same as *P. contagiosa*.

P. contagio'sa. Name introduced by Klein for *Swine fever*.

Pneumoga'stric. (*Pneumon*; γαστήρ, the belly.) Relating to the lung and abdomen.

P. gang'lion. See *Ganglion of pneumogastric, lower, and upper*.

P. lob'ule of cerebel'lum. The *Floc-culus*, so named because it is situated behind and in relation with the *pneumogastric nerve*.

P. nerve. (*P. pneumogastrique, vague*; G. *Lungenmagennerv.*) This nerve (the tenth cranial, or second trunk of the eighth pair of Willis) arises, by a deep origin from the floor of the fourth ventricle, and by a superficial origin from a tract behind the olivary body, whence it issues by many filaments.

Leaving the skull by the jugular foramen, it passes down the side of the neck, through the thorax and into the abdomen, where it terminates in branches to the stomach, spleen, and intestines.

In the thorax, the two pneumogastric nerves each form the *anterior* and *posterior pulmonary plexus* of the corresponding side, and the two nerves together form the *œsophageal plexus*. From this last plexus the two nerves form each a single trunk again, that of the left side passing through the diaphragm immediately in front of, and that of the right behind, the œsophagus. The left pneumogastric ends by dividing on the anterior, and the right on the posterior, surface of the stomach.

The pneumogastric nerves are the chief afferent nerves for the respiratory centre, and contain both accelerating and inhibitory fibres for this centre, the former being in greater number. Thus section of a nerve makes the respiratory movements deeper but less frequent, and stimulation of the central cut end leads to quickening of the movements, ending even in a tetanic condition. The superior laryngeal nerve contains the main part of the inhibitory fibres.

In this nerve are also the inhibitory cardiac

fibres, and possibly trophic fibres for the lungs and heart. It is the motor and sensory nerve for the pharynx, larynx, and œsophagus, the sensory nerve for the stomach, and to some extent the motor nerve for the stomach and intestines.

P. nerve, branches of. For description, see under their various headings. 1. Branches of the *upper ganglion*. It receives certain communications (see under *Ganglion*), and gives off the meningeal or *recurrent branch* and the *auricular branch*. 2. Branches of the *lower ganglion*. This ganglion also receives certain communications (see under *Ganglion*), and it gives off the *pharyngeal branch* and the *superior laryngeal*. 3. The *inferior laryngeal nerve*. 4. *Cardiac branches*. 5. *Pulmonary branches*. 6. *œsophageal branches*. 7. *Gastric branches*.

P. plex'uses. These are the *anterior* and *posterior pulmonary plexuses* and the *œsophageal plexus* (see under *Pneumogastric nerve*).

Pneu'mogram. (*Pneumo-*; γράμμα, a drawing.) A tracing taken by means of the *Pneumograph*.

Pneu'mograph. (*Pneumo-*; γράφω, to write.) Also termed *Stethograph*. An instrument for registering the movements of respiration. A usual form of it consists of two small drums, one applied to the chest wall, the other in relation with a recording apparatus, connected by an air-tube.

P., Mar'ey's. This consists of a hollow elastic cylinder, or a cylinder with elastic ends, which can be buckled round the chest like a belt. Its interior is connected with a tambour which works a lever, and thus, as the movements of the chest wall compress or allow to expand the air within the cylinder, the rise or fall of the lever is recorded on a revolving drum.

Pneumograph'ic. Pertaining to *Pneumography*.

Pneum'ography. (*Pneumo-*; γράφω, a picture.) A description of the lungs. Also, a recording of the respiratory movements.

Pneumohæ'mia. See *Pneumonæmia*.

Pneumohæmorrhag'ia. (*Pneumo-*; αιμορραγία, hæmorrhage.) Term proposed by Andral to denote pulmonary apoplexy as distinct from but preceding pulmonary hæmorrhage, the blood being effused into the substance of the lung, thereby causing laceration of the tissues.

Pneumohæmotho'rax. (Πνεῦμα, air; αἷμα, blood; θώραξ, the chest.) An accumulation of blood mixed with air in the pleural cavity.

Pneumohe'mia. See *Pneumohæmia*.

Pneumohydrome'tra. (Πνεῦμα; hydrometra.) The condition in which gas is formed by decomposition in *Hydrometra*.

Pneumohydropericar'dium. See *Pneumopericardium*.

Pneumohydrotho'rax. (Πνεῦμα, air; ὕδωρ, water; θώραξ, the chest.) An accumulation of serum mixed with air in the pleural cavity.

Pneumokonio'sis. See *Pneumoconiosis*.

Pneu'molith. (*Pneumo-*; λίθος, a stone. G. *Lungenstein*.) A lung-stone. See *Calculus, pulmonary*.

Pneumolithi'asis. (*Pneumo-*; λιθιάσις, the disease of stone. G. *Lungensteinbildung*.) The formation of one or more *Pneumoliths*.

Pneumology. (*Pneumo-*; λόγος, a discourse.) The scientific description of the organs of respiration and their functions.

Pneumomala'cia. (*Pneumo-*; μαλακία, softness.) Softening of the lung.

Pneumo'meter. See *Pneumatometer*.

Pneumo'metry. The same as *Pneumatometry*.

Pneumom'phalon. The same as *Pneumatomphalus*.

Pneumomyco'sis. (*Pneumo-*; mycosis.) General term for the presence of fungi in the lung.

P. aspergilli'na. (Mod. *L. aspergillus*, pertaining to *Aspergillus*.) Term applied to cases in which species of *Aspergillus* (chiefly *A. fumigatus*) have been found growing either in cavities in the lungs or on the mucous membrane of the trachea.

P. mucori'na. (*L. mucorinus*, pertaining to *Mucor*.) Term applied to cases in which species of *Mucor* (chiefly *M. corymbifer*) have been found growing either in cavities in the lungs or on the mucous membrane of the trachea.

Pneu'mon. (Πνεύμων, a lung.) The lung. The word used as a prefix is a shortened form of *Pneumono* (q. v.).

Pneumonæ'mia. (*Pneumon*; αἷμα, blood. *F. pneumonémie*; *G. Lungenschlagfluss*.) Congestion of blood in the lungs.

Pneumonal'gia. (*Pneumon*; ἄλγος, pain. *F. pneumonalgie*; *G. Lungenschmerz*.) Pain in the lungs. A term used by Alibert for *angina pectoris*, which was the fifth genus of pulmonary diseases (*pneumoses*) in his nosology.

Pneumonan'thē. (Πνεῦμα, air; ἄνθος, a flower.) Term formerly used as the generic name for certain species of *Gentianaceæ*, for which *Gentiana* is now substituted; e.g. *Pneumonanthē Kurroo* is now called *Gentiana Kurroo*.

Pneumonan'thos. (Πνεῦμα, air; ἄνθος, a flower. *F. pneumonanthe*; *G. Luftblumig*.) Epithet applied to flowers that resemble a bladder full of air, e.g. the *Gentiana pneumonanthē*.

Pneumonapoplex'ia. (*Pneumon*; ἀποπληξία, a striking down, disabling. *G. Lungenschlagfluss*.) A state of disability, or congestive paralysis, of the lungs.

Pneumonaposte'ma. (*Pneumon*; ἀπόστημα, a large, deep abscess. *G. Lungenabscess*.) Abscess of the lung.

Pneumonarteri'acus. (*Pneumon*; ἀρτηρία, an artery.) Relating to the arteries of the lungs.

Pneumonatelec'tasis. See *Pneumatelectasis*.

Pneumoneche'ma. (*Pneumon*; ἦχημα, a sound. *G. Lungenlaut*.) Literally, "a sound in the lungs." The normal vesicular murmur.

Pneumonecta'sia. The same as *Pneumonectasis*.

Pneumonec'tasis. (*Pneumon*; ἔκτασις, a stretching. *G. Lungenausdehnung*.) Dilatation of the air vesicles of the lung.

Pneumonec'tomy. See *Pneumectomy*.

Pneumone'mia. See *Pneumonæmia*.

Pneumonemphrax'is. (*Pneumon*; ἐμπράξις, a stoppage.) Obstruction in the passages of the lungs.

Pneumonemphyse'ma. (*Pneumon*; *emphysema*.) Emphysema of the lungs.

Pneumo'nia. (Πνευμονία, a disease of the lungs. *F. pneumonie*; *G. Lungenentzündung*.) Inflammation of the lungs. The disease has many varieties, but the most important division clinically is between *lobar* (croupous) pneumonia and *lobular* (catarrhal or broncho-) pneumonia. The one attacks the lung from the side of the vessels, invades large tracts of it, is commonest in adult and advanced life, and usually runs a definite course. The other invades from the air passages, is patchy in distribution, is common in children, rare in adults, and runs a less definite course.

P., abortive. Term for simple acute congestion of the lung, which does not pass into the stage of hepatisation.

P., acute. Acute pneumonia, whether *lobar* or *lobular*.

P., adynam'ic. The same as *P. asthenica*.

P. al'ba. (*L. albus*, white.) See *P., white*.

P., alcoholic. Term for *P., lobar* when occurring in drunkards, in whom it is often associated with violent delirium, and is very fatal.

P. angino'sa. (*L. anginosus*, accompanied by angina, i.e. by that which causes pain.) A syn. of *P. lobaris*.

P., ap'ex. The same as *P., apical*.

P., ap'ical. The form of the disease when it begins at the apex of a lung, instead of at the base as is usual. It has been said that this form is more often of the asthenic type, and associated with marked cerebral symptoms, but this is not generally accepted as correct.

P., aspira'tion. The form of *Bronchopneumonia* caused by the inspiration of foreign bodies (pieces of food, &c.) into the air passages. It is not uncommon in the insane or in cases of coma or uræmia, in which the sensibility of the respiratory mucous membrane is dulled.

P., asthen'ic. See *P. asthenica*.

P. asthen'ica. (Ἀσθενής, feeble.) An unfavourable form which *P., lobar* takes in persons broken down by disease or abuse (especially of alcohol), or in the aged. The usual symptoms are masked, and signs of prostration, or typhoid symptoms, set in early.

P., atax'ic. The same as *P. asthenica*.

P. bilio'sa. *P., bilious*.

P., bil'ious. (*G. biliöse Pneumonie*.) A form of *P., lobar* marked by *icterus*. It is usually of a very severe type, shown by grave nervous depression, and an early tendency to delirium, or by serious gastric symptoms, with swelling of the liver and spleen. It is mainly found in malarial regions, and the fever may be intermittent.

P., bron'cho-. (*F. bronchopneumonie*; *G. Bronchopneumonie*.) This form of pneumonia begins as an inflammation of the minute terminal bronchi and the communicating air-vesicles; it is thus practically identical with *Bronchitis, capillary* (q. v.), at any rate in the early stages. It occurs most commonly in children as a sequel to the specific fevers, e.g. measles, diphtheria, whooping-cough, scarlet fever, &c. It also occurs in a non-specific form, due to the inhalation or aspiration of irritating particles, as e.g. in coma, or after operations about the mouth, nose, or throat, or in cancer of the larynx or œsophagus. The commonest form of the disease, however, is that due to the

PNEUMONIA

tubercle bacillus, a majority of the cases of pulmonary tuberculosis beginning in this way. The physical signs are those of *Bronchitis, capillary*, and there may be in addition patchy dulness; but not uncommonly the diagnosis has to be made from the hearing of fine consonating râles, taken together with the general condition of the patient. The chief symptoms are fever, distressing cough, marked dyspnoea with rapid breathing; passing at a later stage into what has been termed *suffocative catarrh* (q. v.).

P., caseous. Term for those cases of *P., broncho-* in which caseation takes place in the different masses of solidified lung. Probably all, or almost all, of these cases are tuberculous.

P., caseous, lobular. A fuller term for *P., caseous*.

P., catarrhal. Another name for *P., broncho-*.

P. catarrhalis. (L. *catarrhalis*, catarrhal, from *κατάρρως*, a running down.) A syn. of *P. lobularis*.

P., central. Pneumonia affecting the central part of the lung, and often giving vague or uncertain symptoms. The ordinary physical signs of pneumonia are absent.

P., cerebral. Term applied to those cases in which delirium forms the chief symptom from the outset; in children convulsions are common, and in the adult all the symptoms may be those of simple acute mania. Very high fever is commonly found in these cases; but they may be of the asthenic type (senile or alcoholic) with a low temperature, and yet the brain symptoms may be the main feature.

P., cheesy. The same as *P., caseous*.

P., chronic. As opposed to *P., acute*. An obscure disease attended by chronic fibrous changes in the lung, appearing in some cases to be a sequela of *P., acute*.

P., chronic interstitial. Another name for *Cirrhosis of Lung*.

P., chronic, pleuro'genous. (*Pleura*; *γένος*, origin.) Pneumonia of a chronic type which apparently starts from a thickened pleura; it may or may not be tuberculous. Probably the pressure exercised by the thickened pleura helps in the formation of interstitial fibroid material, but in some cases it seems as if the formation was due to direct extension of a chronic process from the pleura into the substance of the lung.

P., cirrhotic. The same as *P., chronic interstitial*.

P., congestive. A syn. of *P. asthenica*.

P., contusion. Term used for pneumonia which is apparently due to the contusion produced by a blow on the chest wall; it is one form of *P., traumatic*.

P., cotton. A form of pneumonia due to mechanical irritation occurring among the workers in cotton mills.

P., creep'ing. The same as *P. migrans*.

P., cros'sed. Term for lobar pneumonia affecting the upper lobe of one lung and the lower lobe of the other.

P., croup'ous. (See *Croup*.) *P., lobar*; so called because associated with an exudation leading to the formation of fibrin.

P., deglutition. A syn. for *P., aspiration*.

P., desquamative. A form of pneumonia characterised by copious desquamation of the lining cells of the air-vesicles, proliferation of the connective-tissue cells of the interalveolar

septa, and the exudation of a scanty albuminous fluid. The inflammatory process is followed by caseous degeneration. Three varieties occur:— (1) The *lobular*; (2) the *confluent or lobar*; (3) the *bronchial*, or *caseous broncho-pneumonia*. (Gould.)

P., dissec'ting. A form of *P., pleuro-genous* in which the interlobular lymphatics become so distended with exudation that the lobules are separated by belts of infiltrated tissue; if these septa go on to suppuration, the lobules become isolated from one another.

P., dissem'inated. Broncho-pneumonia. See *P., broncho-*.

P., double. Term applied to the disease when found in both lungs at the same time; this form obviously increases the gravity of the disease.

P., drun'kard's. Syn. of *P., alcoholic*.

P., embol'ic. Pneumonia consequent upon embolism of the lung.

P., epidem'ic. This disease has not rarely been noticed to occur epidemically, either amongst the dwellers in one house, or in towns, prisons, or garrisons. It is in such cases as these that the presence and specific activity of micro-organisms have been most clearly traced.

P., epithel'ial. The same as *P., desqua-mative*.

P., epizoöt'ica. (Έπί, upon; ζῷον, an animal.) Pneumonia as found in animals.

P., erysipel'atous. A severe form of pneumonia, occurring as a complication of, or after exposure to, erysipelas, and influenced, as it appears, by the poison of the latter disease.

P., fibrinous. Another name for *P., croupous*.

P., fi'broid. A syn. for *P., interstitial*.

P., fi'brous. The same as *P., fibroid*.

P., food. A form of *P., aspiration*, due to the passage of food-particles through the larynx into the lungs.

P. gangræno'sa. Gangrenous pneumonia. Another term for *Lung, gangrene of*.

P., gout'y. Term for pneumonia when occurring in a gouty subject.

P., grip'pal. (F. *la grippe*, influenza.) Syn. for *P., influenzal*.

P., gum'matous. The form of *P., syphilitic* in which gummata are produced, and afterwards caseate.

P., hæmorrhag'ic. A form occurring usually in elderly people or in those in a low state of health, characterised by an excessive quantity of blood in the sputa.

P., herpet'ic. Term applied to those cases of pneumonia in which herpes appears abundantly, either about the lips, nose, or genitals. These cases number from 12 to 40 per cent. of all pneumonias; for it is in this disease that herpes occurs more frequently than in any other. Nothing is known as to the cause of this; but the occurrence of herpes has been looked upon as a favourable sign, though with doubtful reason.

P., hypostat'ic. (Υποστατικός, placing oneself under.) A non-inflammatory process, usually complicating other diseases or met with in the old and debilitated, invading the bases of the lungs, and consisting mainly of collapse, hyperæmia, and œdema.

P., idio'path'ic. Pneumonia constituting of itself the whole disease.

P., infec'tious. It is doubtful whether

PNEUMONIA

all cases of acute lobar pneumonia are infectious; but there seems to be no doubt that certain cases are distinctly infectious. Greissinger states also that pneumonia in malarious districts sometimes takes on an epidemic character. Aitken states that pneumonia (acute lobar) "sometimes appears as if it were epidemic." (Wynter Blyth.)

P., influen'zal. A peculiar condition which has been observed in certain cases of *Influenza*, apparently due to *Pneumoparesis*. In some cases either *croupous* or *catarrhal* inflammation is present. (Gould.)

P., in'sular. Syn. for *P., lobular*.

P., intercurrent. Pneumonia complicating other diseases.

P., intermit'tent. A form of *P., lobar* occurring in malarial districts, characterised by intermissions in the pyrexia. See also *P., bilious*.

P., intersti'tial, acute'. Acute inflammation of the interstitial connective-tissue of the lung, occasionally going on to suppuration.

P., intersti'tial, chron'ic. See *P., chronic interstitial*.

P., intersti'tial, pleuro'genous. The same as *P., chronic, pleurogenous*.

P., lar'val. Term applied to a form of the disease seen occasionally in the course of epidemics, distinguished by the mildness of the attack. The temperature is only slightly raised, there is a slight rigor and a few ill-marked physical signs. The disease then gradually dies away without running its full course. Hence the term "larval" is applied to this form, as if the disease were in an embryonic or larval stage.

P., lat'ent. A form in which physical signs are either ill-marked or absent.

P., lo'bar. (Λοβός, the lobe of the ear or liver.) An acute disease, commonest between the ages of twenty and thirty, characterised by sudden invasion, and high fever without remissions; the abatement in uncomplicated cases taking place between the fourth and tenth days. Intense dyspnoea and characteristic (rusty) sputum are its symptoms, and evidences of consolidation of the lung, its physical signs.

Macroscopic pathology. Three stages of affection of the lung are described: engorgement, red hepatisation, yellow hepatisation. Whether cases which recover ever reach the third stage has been disputed.

Microscopic pathology. The alveolar spaces are crowded with red blood-corpuscles, leucocytes, and epithelial cells; fibrin is demonstrable.

P., lobar'is. (L. *lobaris*, belonging to a lobe.) *P., lobar*.

P., lob'ular. (*Lobulus*, dim. of *L. lobus*.) The same as broncho-pneumonia. See *P., broncho-*.

P., lobular'is. (L. *lobularis*, belonging to a lobule.) *P., lobular*.

P., malar'ial. The same as *P., bilious*. See also *P., intermit'tent*.

P., malig'nant. A syn. of *P., bilious*.

P., malleo'sa. Pneumonia set up by the bacillus of *Glanders*. It is usually a broncho-pneumonia, but it may be lobar, or may give rise to multiple abscesses. (Gould.)

P., mas'sive. Term applied to the rare variety of the disease in which not only the alveoli and smaller bronchi are filled with exudation, but also the bronchi of the entire lobe, and it may be of the entire lung. In such a

case there are of course no breath sounds, vocal fremitus is absent, and on percussion there is complete dullness, so that the signs are very like those of pleurisy with effusion. If cough is severe, the patient may force up mounds of the bronchi.

P., mi'grans. (L. *migro*, to wander. G. *Wanderpneumonie*.) A form of *P., lobar* which spreads steadily from one lobe to another, day after day.

P., mi'gratory. The same as *P. migrans*.

P., necrot'ic. Goodhart's name for the non-tubercular variety of pulmonary disease occurring in diabetics. It is characterised by the formation of small rounded patches of solidification which break down in the periphery, leaving a central slough. These patches may occur either at the apex or base.

P., nerv'ous. A syn. of *P., bilious*. Applied to those cases in which nervous prostration is a marked symptom.

P., no'tha. The same as *Peripneumonia notha*.

P., oede'matous. A form associated with oedema, and involving the bases of the lungs, often complicating cases of *Apoplexy*.

P., period'ic. A syn. for *P., bilious*.

P., phren'o-. Pneumonia complicated by *diaphragmitis*.

P., plas'tic. Syn. for *P., croupous*.

P., pleurit'ic. Syn. for *Pleuropneumonia*.

P., pleurogen'ic. The same as *P., pleurogenous*.

P., pleuro'genous. Term for pneumonia in which inflammation extends to the lung tissue from the pleura, and chiefly by way of the interlobular lymphatic channels.

P. potato'rum. (Gen. pl. of *L. potato*, a toper; from *poto*, to drink.) Pneumonia, like other diseases, is much more serious for drunkards or for those who have been in the habit of drinking freely. In these cases delirium may come on at the very beginning of the disease, or may appear later; it is characterised by great excitement and hallucination. Profuse sweating occurs as a result of the muscular activity, the pulse rate rises rapidly, and there is marked cyanosis. In other cases the delirium is quiet, and the patient is incessantly muttering, moving his hands about, and picking at the bed-clothes. All cases of this form of pneumonia are liable to end fatally through cardiac failure, which may be sudden or gradual.

P., pur'ulent. There are three sub-varieties of this:—1. *Purulent catarrh*, affecting the surfaces of the air-vesicles and minute bronchi. 2. The formation of a localised pulmonary abscess. 3. Suppurative lymphangitis and perilymphangitis. The origin of all three sub-varieties of this form of pneumonia is the introduction of pyogenic micro-organisms, either by aspiration from the trachea (see *P., aspiration*), through the blood-vessels or lymphatics, or from a previous local source of infection, either originally in the lung, or extending from some neighbouring structure. (Gould.)

P., pu'trid. Syn. for *P., bilious*.

P., pythogen'ic. Term for a contagious pneumonia arising under miasmatic influences. (Gould.)

P., scroph'ulous. Old term for *P., cascons*.

P., sec'ondary. Pneumonia which develops as a complication in the course of some

PNEUMONIC—PNEUMONOLITHIASIS

other disease, such, for example, as enteric fever, erysipelas, diabetes, &c.

P., senile. The *P., lobular* of old people. Possibly partly due to inability to expel the mucus that collects in the bronchioles.

P., septic. Term for pneumonia when due to septic infection, either from wounds by the agency of septic emboli, or by inhalation, or any other method.

P., septic, embolic. Term for the pneumonia caused by the lodgment of septic emboli in the pulmonary vessels. In the case of a true embolus reaching the lung, an infarct is formed which leads to the production of a *metastatic abscess*, or in the case of putrefactive organisms, of a gangrenous patch.

P., septicus. Syn. for *P., sewer-gas*.

P., sewer-gas. A form of pneumonia arising from inhalation of sewer-gas.

P. serosa. (L. *serosus*, full of serum.) Term formerly applied (and revived in recent years) to *general pulmonary oedema*; it is incorrect, as this form of oedema is in no sense inflammatory; and there does exist, further, an inflammatory and circumscribed form of *pulmonary oedema*, as at the commencement of every case of *lobar pneumonia*.

P., sthenic. Term for pneumonia as found in persons of robust constitution, marked especially by a full, bounding pulse. Delirium, if it occurs, is of a maniacal character, and there is often great lividity.

P., stripe. (G. *Streifenpneumonie*.) Term for a variety of pneumonia in which the consolidated patch occurs as a band, usually lying parallel with the vertebral groove, on either side of the spinal column.

P., syphilitic. This is an interstitial pneumonia (see *P., interstitial*), is accompanied by the formation of gummata, and occurs almost exclusively in new-born infants; only very rarely in adults. There is also a form of broncho-pneumonia sometimes occurring in older children suffering from congenital syphilis, which does not differ from the ordinary broncho-pneumonia of children. (Cornil and Ranvier.) There is also another form found chiefly in still-born syphilitic children, termed *White pneumonia*. See *P., white*.

P., traumatic. Term for pneumonia which has its origin in a wound or injury, in which the pleura also is usually involved.

P., tuberculous. A pneumonia set up by the tubercle bacillus. It may be either *lobar* or *lobular*.

P., tubular. A syn. for *P., broncho*.

P., typhoid. Term used for cases of pneumonia of an adynamic type, the general condition of the patient being that known as "the typhoid state." Cases in which pneumonia occurs at the outset of typhoid fever are known as *pneumo-* or *pneumono-typhus* (q. v.).

Also, used as a syn. of *P., bilious*.

P., vagus. Pneumonia set up by section of both *vagi*.

P. vera. (L. *verus*, true.) A term for ordinary, uncomplicated lobar pneumonia.

P., vesicular. Another name for *Alveolar catarrh*, or *Broncho-pneumonia*. See *P., broncho*.

P., wandering. (G. *Wanderpneumonie*.) See *P. migrans*.

P., white. A catarrhal form of pneumonia

occurring almost exclusively in utero in syphilitic fœtuses, and resulting in death before birth. The lungs are found after birth to be white, dense, and enlarged, either in parts or all over, from fatty degeneration.

Pneumon'ic. (Πνευμονικός, relating to the lungs; especially, affected with lung-disease.) 1. Relating to the lungs. 2. Relating to, or affected with, *Pneumonia*. 3. A remedy suitable for diseases of the lungs.

P. phthis'is. See *Phthisis, pneumonic*.

P. spot. Term for the circumscribed flush on the cheek characteristic of a typical case of lobar pneumonia.

Pneumon'ica. (Nom. pl. From *Pneumon-*.) The second Order of Good's Class *Pneumonia*, comprehending diseases affecting the lungs.

Pneumon'ici, mor'bi. (Nom. pl. of *pneumonicus*; L. *morbus*, a disease.) Term in Dr. W. Farr's classification for diseases of the lung.

Pneumon'icula. (Dim. of *Pneumonia*.) Term for a slight *Pneumonia*.

Pneumon'icus. (Mod. L.) *Pneumonic*.

Pneumonit'ic. Relating, or belonging, to *Pneumonitis*.

Pneumonit'is. (*Pneumon*; Gr. fem. adjectival suffix *-itis*, agreeing with [νόσος].) Another name for *Pneumonia*.

Pneu'mono. (Πνεύμων, the lung.) A prefix signifying relating to the lung.

Pneumonoblennoze'mia. (*Pneumono-*; *blennozemia*.) Excessive secretion of mucus from the pulmonary air-passages.

Pneumono'cacé. (*Pneumono-*; κακός, evil.) A term for *Lung, gangrene of*.

Pneumonocarcino'ma. (*Pneumono-*; *carcinoma*.) Pulmonary carcinoma.

Pneumonocatar'rhus. (*Pneumono-*; *catarrhus*.) A catarrh of the lungs.

Pneu'monocèle. (Πνεύμων; κηλή, in the sense of a hernia. G. *Lungenbruch*.) Hernia of the lung.

Pneumonocelē diaphragmat'ica inter'na. (*Pneumonocele*; *diaphragmatic*; L. *internus*, inside.) Diaphragmatic hernia of the lung.

P. exter'na. (L. *externus*, outside.) Hernia of the lung through the thoracic wall.

P. thorac'ica. (L. *thoracicus*, belonging to the thorax.) A synonym of *P. externa*.

Pneumonocho'lis. (*Pneumono-*; χόλος, bile.) Eisenmann's term for *Pneumonia, bilious*.

Pneumono'chysis. See *Pneumochysis*.

Pneumonocirrho'sis. (*Pneumono-*; *cirrhosis*. G. *Lungenkirrhose*.) Fibroid thickening, or *cirrhosis*, of the lung.

Pneumonoconio'sis. The same as *Pneumoconiosis*.

Pneumonodyn'la. (*Pneumono-*; ὁδύνη, pain. G. *Lungenschmerz*.) Pain in the lungs.

Pneumonœde'ma. (*Pneumono-*; *œdema*.) Pulmonary oedema.

Pneumonogas'tric. The same as *Pneumogastric*.

Pneumonohæmorrhage. The same as *Pneumohæmorrhagia*.

Pneumonokonio'sis. See *Pneumoconiosis*.

Pneumon'olith. See *Pneumolith*.

Pneumonolithi'asis. See *Pneumolithiasis*.

PNEUMONOLOGY—PNEUMOPHTHISIS

Pneumonology. (*Pneumono-*; λόγος, a discourse.) A scientific discourse or treatise on the lung.

Pneumonomala'cia. See *Pneumomulacia*.

Pneumonomant'ia. (*Pneumono-*; μαντεία, prophesying, power of divination. *G. Lungenprobe*.) Diagnosis based upon a physical examination of the lungs.

Pneumonomelano'sis. (*Pneumono-*; melanos'is.) Melanosis of the lung. See under *Melanosis*.

Pneumono'meter. (*Pneumono-*; μέτρον, a measure.) The same as *Spirometer*.

Pneumonomyc'o'sis. The same as *Pneumomycosis*.

Pneumonopara'lysis. (*Pneumono-*; παράλυσις, palsy. *G. Lungenlähmung*.) Paralysis of the lungs.

Pneumonopath'ia. (*Pneumono-*; πάθος, affection. *G. Lungenleiden*.) An affection of the lungs.

Pneumonophlebit'is. (*Pneumono-*; phlebitis. *G. Lungenblutadernentzündung*.) Inflammation of the veins of the lungs.

Pneumonophthis'is. (*Pneumono-*; phthisis.) A term for *Phthisis pulmonalis*.

Pneumono'phthoë. (*Pneumono-*; φθόη=φθίσις.) The same as *Pneumono-phthisis*.

Pneumonophyse'ter. (*Pneumono-*; φυσητήρ, a pair of bellows.) An instrument for inflating the lungs.

Pneumonopleure'sis. (*Pneumono-*; pleuresis.) The same as *Pneumonopleuritis*.

Pneumonopleuritis. (*Pneumono-*; pleuritis.) Term for *Pneumonia, lobar*. See also *Pleuronpneumonia*.

Pneumono'ptysis. (*Pneumono-*; πτύσις, a spitting out; also, sputum.) Spitting out from the lung, expectoration. Term used for *hæmoptysis*; also, for *sputum cruentum*.

Pneumonorrhag'ia. (*Pneumono-*; ῥήγνυμι, to burst forth.) A term for *Hæmoptysis*.

Pneumonorrhoe'a. (*Pneumono-*; ῥοία, a flow.) The same as *Pneumonorrhagia*. Also, term for *Bronchorrhœa*.

Pneumonorrh'o'is. (*Pneumono-*; ῥέω, to flow.) Term for disease of the lungs in which hæmorrhage is a characteristic symptom.

Pneumonosapro'sis. (*Pneumono-*; σαπρῶν, to rot. *G. Lungenfaule*.) Putrescence or gangrene of the lungs.

Pneumonoscirrho'sis. (*Pneumono-*; σκίρρος, really σκίρος, a hardened swelling.) A hardening or fibrosis of the substance of the lung; the same as *Corrigan's cirrhosis*, described by Corrigan as a primary disease.

Pneumonoscirrhus. (*Pneumono-*; σκίρρος, a hardening.) Induration of the lung.

Pneumono'scope. (*Pneumono-*; σκοπέω, to look at, or examine.) The *Stethoscope*.

Pneumonoseps'is. (*Pneumono-*; σήψις, putrefaction.) Putrefaction of the lung.

Pneumono'sis. The same as *Pneumosis*.

Pneumonospas'mus. (*Pneumono-*; σπᾶσμος, a convulsion. *G. Lungenkrampf*.) Spasm of the lungs.

Pneumonosteno'sis. (*Pneumono-*; στένωσις, a narrowing. *G. Lungenverrengung*.) Contraction of the lungs.

Pneumonosy'rinx. (*Pneumono-*;

σῦριγξ, a tube.) An instrument for inflating the vessels of the lung. Also, a pulmonary fistula. Also, syn. for *Pneumonophyseter*.

Pneumonotelec'tasis. (*Pneumono-*; τέλος, completion, perfection; ἑκτασις, distension.) Complete distension of the lungs.

Pneumonotox'icus. See *Pneumotoxicus*.

Pneu'mono-ty'phus. Term used by foreign writers for *typhoid fever* which begins with *pneumonia*.

Pneu'mony. *Pneumonia*.

Pneumonyperpath'ia. (*Pneumono-*; ὑπέρ, over; πάθος, suffering, disease.) Any serious pulmonary disease.

Pneumonypo'stasis. (*Pneumono-*; hypostasis.) Subsidence of any fluid to the lower part of the lungs.

Also, term for *Pneumonia, hypostatic*.

Pneumoö'toka. The same as *Pneumotoca*.

Pneumoö'tokous. The same as *Pneumotocous*.

Pneumopara'lysis. See *Pneumono-paralysis*.

Pneumopar'esis. (*Pneumo-*; paresis.) An acute pulmonary disease, without pyrexia, preceded by nervous symptoms, and attended by progressive congestion of the lung. (B. W. Richardson.)

Pneumo'pathy. The same as *Pneumonopathia*.

Pneu'mo-pericar'dial friction sound. The same as *Pleuro-pericardial friction sound* (q. v.).

Pneumopericarditis. (*Pneumo-pericardium*.) *Pneumopericardium* accompanied by *pericarditis*.

Pneumopericar'dium. (Πνεῦμα, air; pericardium. *F. pneumopéricarde*.) Gas in the pericardium, arising from putrefying pericardial fluid, or from an entrance of gas from the alimentary canal, or passage of air from the lungs *ab externo*. In cases where air has entered through a perforation, acute pericarditis is excited at once, and the inflammatory exudation rapidly becomes purulent. The percussion-note over the præcordial area is tympanitic when the patient is lying down, but becomes dull on his sitting up. The heart sounds have an amphoric quality, and any friction sounds which may arise acquire a metallic character. When fluid is present as well as air, the succussion splash may be noticed, and a loud churning splashing is also heard, which may even completely mask the normal heart sounds, and be heard at some distance from the chest. The term *pneumohydropericardium* is given to those cases in which gas and fluid are present.

Pneumoperitonit'is. (*Pneumo-*; peritonitis.) Term for the condition in which air finds entry into the peritoneal cavity. It has been thought that fluid in the cavity might decompose and so produce gases, but this, if it ever happens, must be very rare. The usual cause is perforation of the intestines, or perforating wounds of the abdominal walls.

Pneumophlebit'is. (*Pneumo-*; phlebitis.) The same as *Pneumonophlebitis*.

Pneumophthal'mos. (Πνεῦμα, air; ὀφθαλμός, the eye.) The presence of air within the eyeball.

Pneumophthis'is. See *Pneumono-phthisis*.

Pneumo'phthoë. The same as *Pneumophthisis*.

Pneumophy'ma. (*Pneumo-*; φῦμα, a growth.) Old term for a growth (tubercular) on the lung.

Pneumophy'mata. (Φυμάτα, pl. of φῦμα.) Plur. of *Pneumophyma*.

Pneumophy'mia. (*Pneumophyma*.) The disease which consists in the growth of *Pneumophymata*.

Pneumopleure'sis. See *Pneumono-pleuresis*.

Pneumopleuri'tis. See *Pneumono-pleuritis*.

Pneumopro'teins. (*Pneumon*; *pro-*tein.) Term for proteins formed by the *Pneumococcus* during life.

Pneumoptysis. See *Pneumonoptysis*.

Pneumopyopericar'dium. See *Pyopneumopericardium*.

Pneumopyotho'rax. See *Pyopneumothorax*.

Pneumo'pyra. (*Pneumo-*; πῦρ, fire.) Fever of the lungs. Term applied by Eisenmann to *Bronchitis maligna*.

Pneum'or. (Πνεῦμα, air; L. *amor*, love.) A desire for air, or for breathing. (Gould.)

Pneumorrhag'ia. See *Pneumonorrhagia*.

P., diffuse. A syn. of *Pneumohæmorrhagia* (q. v.).

P. interna. (L. *internus*, inside.) A term for *Hæmothorax*.

Pneumorrhœ'a. See *Pneumonorrhœa*.

Pneumoscir'rhus. (*Pneumo-*; *scirrhus*.) A term for *Cirrhosis of the lung*.

Pneumoscope. (Πνεύμων, the lung; σκοπέω, to look at.) A syn. for *Pneumograph*.

Pneumoseps'is. (*Pneumo-*; *sepsis*.) A term for *Lung, gangrene of*.

Pneumoserotho'rax. (Πνεῦμα, air; L. *serum*; *thorax*.) Term signifying the presence of air or gas, together with serum, in the cavity of the pleura.

Pneumo'sis. (L. *pneumosis*, affecting the lung; from πνεύμων, the lung.) Name applied by Alibert to the fourth family of diseases in his *Nosology*, and comprehending all diseases of the lungs.

Pneumoskel'etal. (*Pneumoskeleton*.) Pertaining to the *Pneumoskeleton*.

Pneumoskel'eton. (*Pneumo-*; σκελετόν, a dry body.) Term for a hard exoskeletal structure developed in the integument, in connection with respiratory organs; e.g. the shell of a mollusc, developed from the *mantle*, which discharges respiratory functions. (H. Nicholson.)

Pneumo'stoma. (Πνεῦμα, air; στόμα, a mouth.) Term applied by Latreille to the *stigma* of an insect.

Pneumotherapeut'ic. (*Pneumo-*; *therapeutic*.) Belonging to *Pneumotherapy*.

Pneumotherapeut'ical. The same as *Pneumotherapeutic*.

Pneumotherapeut'ics. (*Pneumo-*; *therapeutics*.) Syn. for *Pneumotherapy*.

Pneumother'apy. (*Pneumo-*; θεραπεία, treatment of the sick.) The treatment of pulmonary diseases.

Also, syn. for *Pneumatotherapy*.

Pneumotho'rax. (Πνεῦμα, air; θώραξ, the chest. F. *pneumothorax*; G. *Luftbrust*.) Air or gas in the pleural cavity, serum or pus

being almost always present also, constituting *hydro-* or *pyo-pneumothorax*. Very rare as a primary condition; usually secondary to a wound of the chest, or to perforation of the lung occurring in purulent inflammation of the pleura, or in ulceration or gangrene of the lung. Thus, the two conditions in which it is most common are empyema and phthisis. Its onset is generally sudden, and marked by great pain in the side, severe dyspnœa, and general distress. These symptoms may, however, be absent, and the disease remain latent, and even unsuspected, during life. The typical physical signs are immobility of the affected side in respiration, tympanitic resonance, distant amphoric breathing, or complete absence of breath-sounds, metallic voice-sounds, a metallic quality in the râles and even in the heart-sounds, the "bell-sound," and "succussion splash." The heart and liver may be displaced.

Three main varieties of *Pneumothorax* are described: *open*, *closed*, and *valvular*. Other varieties are also spoken of. (See under sub-headings.)

In *open pneumothorax*, there is a free opening into the pleura, either externally from a wound, or internally from the lung.

In *closed pneumothorax*, there is a small opening into the pleura which very speedily becomes closed by lymph.

In *valvular pneumothorax*, a valve is formed by a tag of lymph or pleura over the opening in the pleura.

P. by occlu'sion. Syn. for *P., closed*.

P., closed. See under main heading.

P., loc'ulated. A rare form in which the air (and fluid, if present) is limited to a small space, by pleural adhesions. A permanent pulmonary fistula is often associated with this form.

P., o'pen. See under main heading.

P., pat'ent. Syn. for *P., open*.

P., pure. The form in which air alone is present in the pleural cavity. It is very rare, and generally of traumatic origin.

P., subphren'ic. A pneumothorax in which air has entered the pleural cavity through a perforation of the diaphragm.

P., val'vular. See under main heading.

Pneumo'toca. (Neut. plur. *Pneumo-*; ωστόκος, laying eggs.) Term applied by Owen to those Vertebrates which breathe air and lay eggs, e.g. birds and reptiles.

Pneumo'tocous. (*Pneumotoca*.) Air-breathing and oviparous; belonging to the *Pneumotoca*.

Pneumo'tomy. (*Pneumo-*; τομή, a cutting.) Incision of the lung, e.g. to drain a cavity. Also, the anatomical dissection of a lung.

Pneumotox'icus. (*Pneumo-*; τοξικόν=τὸ τοξικὸν φάρμακον, poison for smearing arrows. G. *lungengiftig*.) That which poisons the lung. Epithet applied by C. H. Schultz to disease arising from the inhalation of noxious vapours; also, to suffocation by drowning.

Pneumotoxin. (*Pneumo-*; τοξικόν=τὸ τοξικὸν φάρμακον, poison for smearing arrows.) Term applied by the brothers Klemperer to the poisonous products which they believe are produced by the pneumococcus, and which, introduced into the system, give rise to the various manifestations of pneumonia. Subsequently, *antipneumotoxin* is formed, which has the power of neutralising the poison, and when

PNEUMOTUBERCULUM—POCULUM

this is effected, the crisis occurs. They have injected the antitoxic body into patients suffering from pneumonia, with apparently good results.

Pneumotuberculum. (*Pneumo-*; *L. tuberculum*, a tubercle.) Tubercle of the lung.

Pneumo-typhoid. Syn. for *Pneumotyphus*.

Pneumotyphus. See *Pneumomotyphus*.

Pneumotypo'sis. (*Pneumo-*; *τύπος*, an impression, or type.) Another name for *Pneumonia*, intermittent.

Pneumus bol'dus. The *Boldoa fragrans*.

Pneubiomantia. See *Pneobiomantia*.

Pneusi'meter. (*Pneusis*; *μέτρον*, a measure.) An instrument used, like the *Spirometer*, to measure the vital capacity or "extreme differential capacity" of the chest in respiration, and made on the model of an anemometer. (Guillet.)

Pneusiobiogno'sis. (*Pneusis*; *biogno'sis*.) Another name for *Docimasia pulmonum*.

Pneusiobio'scopë. (*Pneusis*; *βίος*, life; *σκοπέω*, to look at, examine.) The same as *Pneusiobiognosis*.

Pneus'is. (*Πνεύσις*, a breathing.) Respiration.

P. pertus'sis. A term for *Pertussis*.

P. singul'tus. Another name for *Singultus*, or hiccough.

P. tus'sis. Another name for *Tussis*.

Pneusometer. See *Pneusimeter*.

Pnigalion. (*Πνιγάλιον*; from *πνίγω*, to stifle. *F. ephialte*; *G. Alp, Alpdrücken*.) Nightmare, so named from the sense of suffocation often attending it.

Pnigalium. The same as *Pnigalion*.

Pnig'itis. (*Πνιγίτις* [sc. *γή*], a kind of clay.) A white or greyish clay, from which soda was obtained. (Dioscor. 5, 177; *Plin.* 35, 56.)

Pnig'ma. (*Πνίγω*, to stifle.) The feeling of suffocation.

Pnigmos. The same as *Pnigma*.

Pnigocatar'rhus. (*Πνίγω*, to stifle; *κατάρρος*, catarrh. *G. Stickfluss*.) Suffocative catarrh.

Pnigopho'bia. (*Πνίγω*, to stifle; *φόβος*, fear.) Spasm of the lungs, with a feeling of impending suffocation.

Pnigos. The same as *Pnigma*.

Pnix. The same as *Pnigma*.

Pnix'is. The same as *Pnigma*.

Pnoë'. (*Πνοή*.) Breath.

Pnoë'a. (*Πνοή* = *πνοή*.) The same as *Pnoë*.

Pnoëcolyt'icus. (*Πνοή*, breath; *κωλυτικός*, hindering.) Asthmatic.

Pnoëcolyticus. (*Πνόος* = *πνοή*.) The same as *Pnoëcolyticus*.

Pnous. (*Πνούς*, Att. contr. of *πνόος*, breath.) The same as *Pnoë*.

Po di Ba'hia. The same as *Po-baia*.

Po'a. (*L.* From *πόα*, grass.) Spear-grass or meadow-grass. A Genus of the Order *Festuceæ*.

P. abyssin'ica. Abyssinian meadow-grass or "fef." The grain is used for bread-making.

P. flu'tans, Koel. The *Glyceria fluitans*.

Poad milk. The same as *Pourd milk*.

Poaya. Name used in Brazil for the

Cephaëlis ipecacuanha or its root, *ipecacuanha*. It is also used for other roots that have an emetic action.

P. bran'ca. Name used in Brazil for *Ipecacuanha*, white; also for *Ipecacuanha*, undulated.

Po-baia. Name for a powder used in Cochin China in the treatment of skin diseases. It is believed to be identical with *chrysarobin* (goa powder).

Pocger'ebæ cor'tex. (*L.*) *Pocgereba* bark. Name for an American remedy for bowel complaint.

Pock. (*Ang.-Sax. poc*, a pustule. *F. pustule*; *G. Pocke, Blatter*.) A common name for a pustule (*i. e.* a pouch filled with pus); applied especially to the pustules of *Variola*, *Varicella*, and *Vaccinia*.

P., black. See *Variola cruenta*.

P., bro'ken. Syn. for *Pock-marked*.

P., crys'talline. See *Variola verrucosa*.

P., diphtherit'ic. Term for a smallpox pustule in which the papillæ of the skin are so greatly infiltrated with leucocytes, that necrosis results, with the formation of a greyish white slough resembling a diphtheritic membrane.

P.-fret'ten. (*Fretten*, old form of *fretted*.) Old term for *P.-marked*.

P.-hole. A syn. of *P.-mark*.

P., horn. Syn. for *P., crystalline*.

P., kine. Cow-pox, or *Vaccinia*.

P.-mark. The scar left by a pock of smallpox.

P.-marked. Marked with the scars of former pustules of smallpox.

P., mas'ter. (*F. maître bouton*; *G. Meisterpocken*.) Van Swieten's term for a large pock sometimes seen in smallpox, very similar to that characteristic of inoculated smallpox.

P.-pitted. The same as *P.-marked*.

P., stone. An old term for a pustule of *Acne*.

P.-wood. Syn. for *lignum vitæ*, the *Guaiacum officinale*.

Pock'ed. Syn. for *Pock-marked*.

Pock'et. (*Mid. Eng. poket*; *Celt. poke*; *O. F. pochet* or *pochette*.) *Anat.* Any blind sac or diverticulum. *Zoöl.* Term used of the external cheek-pouch of certain rodents; also of the abdominal pouch of Marsupials; also of the abdominal cavity of certain fish, *e. g.* *holibut*; and, generally, of any sacculated cavity.

Pock'eting. *Med.* and *Surg.* Forming a pocket or pouch. Applied by Storer to a method of treating the pedicle in ovariectomy. The pedicle is brought between the lips of the abdominal incision, and left to heal in that position.

Pock-pit'ted. Marked with the pits left by variola, &c.

Pock'y. Belonging to, or the subject of, the "great pox" or pocks, *i. e.* *Syphilis*. Less frequently used than its synonym *Poxy*. Also used with regard to smallpox (*Dunglison*).

Pocular'is. (*L. poculum*.) Resembling a cup. See *Sinus pocularis*.

Po'culent. (*L. poculentus*, fit for drinking, from *poculum*.) Fit to be drunk, drinkable.

Po'culiform. (*Poculum*; *forma*, resemblance.) Cup-shaped.

Poculum. (Shortened from *Potaculum*, from *L. potare*, to drink.) Old term (*F. coupe*; *G. Schale*) for a drinking-cup. Also (*F. potion*; *G. Arzneitranck*), a draught or potion.

P. absinthia'tum. (*Absinthium*.) An ancient drink flavoured with *Absinthium*, or wormwood, which was supposed to cure drunkenness.

P. amato'rum. The lovers' cup. A love potion, or *Philtre*.

P. Diog'enis. Diogenes' cup. An old name for the palm of the hand.

P. emet'icum. The Emetic Goblet, or Antimonial Cup. See *Cup*, antimonial.

P. vomito'rium. A syn. for *P. emeticum*.

Pod. (Ang.-Sax. *pod*, a covering.) *Bot.* The same as *Siligua* (q. v.).

Podac'cacē. A shortened form of the word *Podarthrocacē*.

Podachæn'ium. A Genus of the *Compositæ*.

P. ala'tum. A shrub indigenous to Central America. The pith of the stem is used for imbedding microscopic specimens.

P. em'inens. Another name for the *P. alatum*.

Podag'ra. (Πούς, ποδός, the foot; ἄγρα, a seizure. *F. podagre*; *G. Fussgicht*.) Literally, pain in the foot. Term used originally to mean gout in the foot; in modern times generally used to mean *Gout* in general. *Podagra* or *gout* was a Genus of the Order *Phlegmasiæ*, Class *Pyrexia*, of Cullen's Nosology.

P. aber'rans. Aberrant, wandering, or flying, gout. See *Gout*, flying.

P. arthri'tis. Arthritic gout. A syn. for *Gout*.

P. aton'ica. Disguised or lurking gout. (Cullen.)

P. complica'ta. The same as *P. aberrans*.

P. larva'ta. The same as *P. atonica*.

P. regular'is. A regular fit of gout. (Cullen, Good, &c.)

P. retroce'dens. Retrocedent gout. See *Gout*, retrocedent.

P. retrogra'da. Retrograde gout. Another name for *P. retrocedens*.

Podag'ræ. The same as *Podagric*.

Podagraria'ta. (*Podagra*.) The specific name of the *Ægopodium podagraria*, or gout-weed.

P. ægopod'ium. The *Ægopodium podagraria*.

Podag'ric. (*Podagra*.) Belonging to, or the subject of, *Podagra*.

Podag'rical. The same as *Podagric*.

Podag'rial. The *Diathesis, gouty*.

Podag'rous. The same as *Podagric*.

Podalg'ia. (Πούς, a foot; ἄλγος, pain. *F. podalgie*; *G. Fuss Schmerz*.) Pain in the foot. Also, the same as *Podagra*.

Podal'ic. (Hybrid word, from πούς (pod-), a foot, and Eng. -al and -ic.) Pertaining to the feet.

P. ver'sion. See *Version*, podalic.

Podalir'ia australis. (Named after Podalirius [Ποδαλείριος], the son of Æsculapius.) The *Baptisia australis*.

P. tincto'ria. The *Sophoria tinctoria*.

Podalyr'ia. See *Podaliria*.

Podanenceph'al'ia. (Πούς; ἀνεγκέφαλος, without a brain. *G. Stielanencephalie*.) A fetal monstrosity, consisting in absence of brain, while what exists of a head is borne on a pedicle.

Podar'ium. (Ποδάριον, dim. of πούς.) Term applied by Illiger to the foot of the hind paws in the Mammifera.

Podarth'ral. Belonging to the *Podarthrum*.

Podarthrit'is. (Πούς; arthritis. *G. Fussgelenkentzündung*.) Inflammation of the joints of the foot.

Podarthro'cacē. (Πούς; ἄρθρον, a joint; κακή, evil.) Destructive disease of the joints of the foot.

Podarth'rum. (Πούς; ἄρθρον, a joint. *G. Fussgelenk*.) A foot-joint, esp. in *Ornithol*.

Podaxis. (Πούς, ποδός, a foot; axis.) A Genus of gasteromycetous *Fungi*.

P. carcinoma'lē. (Mod. L.) A species indigenous to the Cape of Good Hope. The brown-coloured powder formed of the spores is used to dress gangrenous ulcers and foul wounds generally.

Podax'on. (Πούς, ποδός, a foot; ἄξων, an axis.) The same as *Podaxis*.

Podede'ma. See *Podcedema*.

Podelco'ma. (Πούς; ἔλκωμα, an ulcer.) A name for *Madura* foot.

Podelko'ma. See *Podelcoma*.

Podenceph'al'ia. The condition of *Podencephalus*.

Podenceph'alus. (Πούς; ἐγκέφαλος, the brain. *F. podencéphale*; *G. fusskopfig*.) Term for a foetal monster whose brain, without a cranium, hangs by a pedicel. (Geoffroy Saint-Hilaire.)

Podex. (L.) The fundament, *anus*. Also, the *uropygium*.

Pod'ical. Pertaining to the *Podex*.

P. plates. *Entom.* Small pieces or plates surrounding the anal opening; they have been thought to be rudiments of an abdominal segment.

Pod'ion. (Dim. of πούς, ποδός.) *Comp. Anat.* The *manus* or *pes* in the *Mammalia*. *Ornithol.* Term applied by Illiger to the junction of the toes at the extremity of the *tarsus* in birds.

Podis'mus. (Ποδιζω, to tie the feet.) Spasm of the muscles of the foot or of the toes.

Podiso'ma. (Πούς; ποδός, a foot; σῶμα, the body.) A Genus of *Fungi*.

P. cro'pus. This species is believed to cause excrescences on the *Juniperus virginiana*. It is used popularly as an anthelmintic.

Podisoma'ta. Plur. of *Podisoma*.

Pod'ite. (Πούς, ποδός, a foot.) The leg or appendage of a crustacean, especially when developed for walking; more commonly used in compounds, *e. g.* *epipodite*, *coxopodite*, &c.

Podit'ic. Belonging to a *Podite*.

Pod'ium. The same as *Podion*.

Podobromhidro'sis. See *Podobromidrosis*.

Podobromidro'sis. (Πούς, ποδός, a foot; bromidrosis.) The same as *Bromidrosis*.

Podoc'cacē. The same as *Podarthrocacē*.

Podocar'pus. (Πούς; καρπός, fruit. *G. fussfruchtig*.) A Genus of trees, whose ovary is borne on a pedicel; they are conifers, of the tribe *Taxoideæ*.

P. dacrydioid'es. The white pine of New Zealand. Its gum is used as a masticatory.

P. zamlæfo'l'ius. *Hab.* and uses identical with those of *P. dacrydioides*.

Podoceph'alous. (Πούς; κεφαλή, the head.) Epithet for plants with flowers united into heads, borne upon peduncles.

Pododac'tylus. (Πούς; δάκτυλος, finger. *G. fussfinger*.) Epithet for animals that have distinct toes on each foot.

Podody'nia. (Πούς; δόδυνη, pain.) Pain in the foot.

Podœde'ma. (Πούς; οἰδημα, swelling.) Edema of the foot.

Pod'ogyn. Shortened form of the word *Podogynium*.

Podogynë. The same as *Podogyn*.

Podogyn'ium. (Πούς; γυνή, a woman; in *Bot.* used to mean the ovary. *F. podogyne*; *G. Fruchtnotenfuss*.) *Bot.* A solid projection continuous with and supporting the ovary, distinct from the peduncle and calyx; synonymous with *Basigynium*.

Podology. (Πούς; λόγος, a discourse.) A scientific description or account of the foot.

Pod'omancy. (Πούς; μαντεία, prophesying.) Divination founded upon an inspection of the feet.

Podometer. (Πούς; μέτρον, a measure. *F. podomètre*; *G. Fussmesser*.) The same as *Pedometer*.

Podometric. Belonging to a *Podometer*.

Podomet'rum. The same as *Podometer*.

Podonip'tron. (Ποδόνιπτρον = ποδάμιπτρον, water for washing the feet in.) Old term synonymous with *Pediluvium*.

Podophthal'mic. The same as *Podophthalmous*.

Podophthal'mite. (Πούς; ὀφθαλμός, the eye.) *Zoöl.* The distal of the two joints of the *ophthalmite* in Crustacea, as distinguished from the basal joint, or *basiophthalmite*.

Podophthal'mous. (Πούς; ὀφθαλμός, the eye.) Epithet applied to certain of the Crustacea, which have the eye at the extremity of a mobile peduncle.

Podoph'thora. (Πούς; φθορά, destruction. *F. podophthore*; *G. Fussverderbung*.) Destruction of the foot by disease.

Podoph'tora. See *Podophthora*.

Podophylla'ceæ. De Candolle's name for a Family of the *Ranunculaceæ*, having the Genus *Podophyllum* for their type.

Podophylli ra'dix. Former name for *P. rhizoma*.

P. resi'na, B.Ph. Resin of *Podophyllum*; also termed *Podophyllin*, and Resin of *Podophyllin*. Prepared by making a tincture of the rhizome, precipitating in water, and washing and drying the precipitate. It forms a yellow or orange powder. Dose, $\frac{1}{4}$ to 1 grain. From it is prepared *Tinctura podophylli*, B.Ph. *Action.* Given internally, podophyllin gives rise to gastric and intestinal irritation, with griping pains, and acts as a purgative and cholagogue. It acts in from ten to twelve hours. The purgative action is apparently due to stimulation both of the unstriped muscle and the glands of the intestine, together with an increased flow of bile.

P. rhizo'ma, B.Ph. *Podophyllum* zhizome. The dried rhizome and rootlets of *Podophyllum peltatum*, from N. America. The rhizome contains a resin. See *Podophylli resina*; also, *Podophyllotoxin*.

Podophyll'ic acid. Former name for *Picropodophyll'ic acid*.

Podophyll'in. See *Podophylli resina*.

Podophyllin'ic acid. The same as *Podophyll'ic acid*.

Podophylli'tis. Inflammation of the *Podophyllous tissue* of the hoof in quadrupeds.

Podophylloquer'citin. (*Podophyllum*; *quercitin*.) The colouring matter of the plant *Podophyllum peltatum*.

Podophyllotox'in. (*Podophyllum*; τὸ τοξικόν, poison for smearing arrows with.) A resinous substance obtained from *Podophylli resina*, and composed of *Picropodophyll'ic acid*, an inert substance, and *Picropodophyllin*, the active principle of the resin.

Podophyllous. (Πούς, ποδός, the foot; φύλλον, a leaf.) Belonging to the hoof and the lamellar tissue of the hoof in quadrupeds. Also, in *Biol.*, having the foot, or the organs of locomotion generally, flattened in the form of leaves.

P. t'is'sue. The lamellar tissue of the hoof in quadrupeds.

Podophyllum. (Πούς; φύλλον, a leaf. *F. podophylle*; *G. Fussblatt*.) Name given on account of the shape of the leaf; applied to—1. A Genus of N. American plants, Class *Polyandria*, Order *Monogynia*. 2. To the dried rhizome of *Podophyllum peltatum* (*Podophylli rhizoma*, B.Ph.).

P. monta'num. The mountain May-apple. It has the same properties as *P. peltatum*.

P. pelta'tum. (*L. peltatus*, armed with a *pelta* or crescentic shield. *F. podophylle*; *G. Fussblatt*.) The American May-apple plant, whose rhizome is cathartic. See *Podophylli rhizoma*.

Podoplegmati'tis. (Πούς; πλέγμα, anything plaited; -ίτις, fem. adj. termination agreeing with [νόσος=disease].) Vatel's term for general inflammation of the reticular tissue in the horse. (Littre.)

Podorrheum'a. (Πούς; ῥεῦμα, humour.) A term for rheumatism in the foot; also, for *Podagra*.

Podorrheum'atism. (Πούς; ῥεῦμα, humour.) Rheumatism in the foot.

Podoso'ma. The same as *Podisoma*.

Podoso'mata. Plur. of *Podosoma*.

Podosper'ma. (Πούς, the "sheet" of a sail; σπέρμα, seed. *F. podosperme*; *G. Samenfuss*.) *Bot.* The filament by which the ovule adheres to the placenta.

Podosymptomaticus. (Πούς; σύμπτωμα, a symptom.) Epithet applied to a variety of epilepsy, in which the "aura" is first perceived in the foot.

Podothe'ca. (Πούς; θήκη, a sheath.) *Human Anat.* A preparation of the scarf-skin of the foot and toes entire, with nails adhering, taken from the cadaver. Also, used in *Ornith.* and *Entom.* for the integument covering a leg.

Pod'otherm. (Πούς; θερμόν, heat. *F. podotherme*.) Petit's term for a thermometer specially designed for estimating the temperature of foot-baths.

Podotrochili'tis. (Πούς; τροχήλία, a pulley.) The same as *Navicular disease*.

Podozo'on. (Πούς; ζῶον, an animal.) That type of animal in which the presence of many feet is a leading character. (Eichwald.)

Pod'pepper. A common name for *Cap-sicum*.

Podwyssoz'ki's the'ory of in-flamma'tion. See *Theory of inflammation*, *Podwyssozki's*.

Podyperidro'sis. (Πούς; ὑπέρ, exceeding; ἰδρωσις from ἰδρώς, sweat.) Excessive sweating of the feet.

Pæcilia. (Ποικιλία, a marking with various colours.) Term for the piebald skin occasionally seen among negroes.

Pæcilocyte. See *Poikilocyte*.

Pæcilocyto'sis. See *Poikilocytosis*.

Pæcilomelas'ma. (Ποικίλος, many-coloured; μέλασμα, a black or livid spot.) An old term for senile gangrene, descriptive of the variety of hues presented by the affected area.

Pæcilonotus. (Ποικίλος; νώτος, the back.) *Ornithol.* Having a many-coloured back.

Pæcilonym. (Ποικίλος, many-coloured, various; ὄνυμα, a name.) *Biol.* One of several or many names for the same part.

Pæcilooperisso'ma. See *Pæcilooperittoma*.

Pæcilooperisso'sis. See *Pæcilooperittosis*.

Pæcilooperitto'ma. (Ποικίλος, varied; περίττωμα, Att. for περίσσωμα, a superfluity.) A mixed or varied hypertrophy.

Pæcilooperitto'sis. The process leading to *Pæcilooperittoma*.

Pæciloother'mal. See *Poikilothermal*.

Pæciloother'mic. See *Poikilothermic*.

Pælē-bark. Name for the bark of the *Alstonia spectabilis*.

Pæ'onin. A syn. for *Coralline*.

Pœ'phaga. (Πόν = πῶα, a plant; φάγειν, to devour.) The herbivorous Marsupials, kangaroos, &c. (Owen.)

Pœphagia. The eating of herbage; hence, *vegetarianism*.

Pœphagous. Eating grass or herbage; belonging to the *Pœphaga*.

Pœ'phagus. A Genus of *Bovidæ*, the Jaks. Also, a *vegetarian*.

Pœ't's cas'sia. Another name for *P.'s rosemary*.

P.'s gard'robe. Another name for *P.'s rosemary*.

P.'s rose'mary. A common name for the *Osyris alba*.

Pœ'tium. Brazilian name for the *Nicotiana tabacum*. (Dunglison.)

Pō'gon. (Πώγων.) The beard.

Pogon'asis. (*Pogon*.) Excessive growth of beard in man; or, a bearded condition in women.

Pogon'iate. (*Pogon*.) *Zoöl.* Bearded or barbate. *Ornith.* Webbed, as a feather.

Pogon'ic. (*Pogon*.) Relating to the beard.

Pogon'ium. (Πωγώνιον, dim. of πώγων.) A little beard. In *Ornith.*, the web of a feather.

Pogon'logy. (*Pogon*; λόγος, a discourse.) A treatise on the beard.

Pogon'opus. (*Pogon*; πούς, ποδός, the foot.) A Genus of the *Rubiaceæ*.

P. febrifu'gus. (L. *febris*, fever; *fugo*, to put to flight.) A South American tree, whose bark is tonic and contains an alkaloid named howardine, and a bitter principle.

Pogonotrophy. (*Pogon*; τροφή, nourishment.) The nutrition of the beard.

Pogoste'mon. (*Pogon*; στήμων, a thread.) A Genus of the *Labiata*, a native of E. Indies, Malay Archipelago, and Japan.

P. interme'dius. The *P. patchouli*.

P. patchou'li. The East Indian Patchouli or *Puchapat*. It is cultivated in the East for its aromatic volatile oil, used in making the scent called patchouli. The leaf is used to mix with the tobacco leaf for smoking.

P. sua'vis. The *P. patchouli*.

Po-ho-yo. (Chinese.) The Chinese oil of peppermint.

Pō'hon an'tiar. A syn. for *Upas*.

P. upas. A syn. for *Upas*.

Pohutuk'acoa. (Maori term, signifying brine-sprinkled.) The *Metrosideros tomentosa*, or Christmas tree, of New Zealand. Its bark furnishes a bronze dye, and its strong wood is useful in a variety of ways.

Pō'i. (Hawaiian.) An article of food, prepared from the root of the taro, *Colocasia antiquorum*, and used extensively in the Sandwich Islands. It is in the form of dough, and is allowed to ferment before being fit for use.

Pō'kiloblast. (Ποικίλος, varied; βλαστός, a shoot.) A syn. of *Poikilocyte*.

Pō'kilocyte. (Ποικίλος, varied; κύτος, a hollow.) A red blood-corpuscle of irregular shape, elongated, pyriform, &c. (Quinke.)

Poikilocythæ'mia. (Ποικίλος; κύτος, a hollow; αἷμα, blood.) The condition of blood characterised by the presence in it of *poikilocytes*.

Poikilocyto'sis. The condition of the blood when poikilocytes occur. In general this is accompanied by diminution in the number of leucocytes, and there is some anæmia.

Poikilomelas'ma. (Ποικίλος; μέλασμα.) A name for senile gangrene.

Poikiloother'mal. The same as *Poikiloothermic*.

Poikiloother'mic. (Ποικίλος; θέρμη, heat.) Term applied to those animals whose bodily heat varies with the temperature of the surrounding medium; i.e. the so-called cold-blooded animals.

Poincia'na. A Genus of the Sub-order *Cæsalpineæ*, Nat. Order *Leguminosæ*.

P. pulcher'rima. Linn. (L. *pulcher*, beautiful.) Hab. India, West Indies. Root acrid, poisonous; leaves and flowers purgative, emmenagogue and abortifacient; used also in fevers.

Point. (L. *punctum*. Gr. κέντρον.) 1. As a substantive. (F. *point*; G. *Punkt*.) The sharp, tapering end of any object. In *Mathematics*, that which has position, but no extension.

2. As a verb (intrans). (F. *aboutir*; G. *Zuspitzen, reifen*.) In *Surgery*, of an abscess, to come to the surface, and to be about to break, at a certain point.

P., alve'olar. See *Alveolar point*.

P., ante'rior fo'cal. See *P., focal, anterior*.

P., ante'rior no'dal. See *P.s, nodal*.

P., ante'rior prin'cipal. See *P.s, principal*.

P., apo'physary. The same as *P., apophysial*.

P., apophys'ial. (F. *point apophysaire*, Trousseau; G. *Apophysenpunkt*.) See under *Neuralgia*.

P., Archime'dean. The point in consciousness at which one's own existence is first recognised, this being the indubitable fact on which it was supposed the whole structure of philosophy could be raised. (*Century Dict.*)

P., auric'ular. See *Auricular point*.

P., blis'tering. Term employed by Dr. Rush to denote a certain point of time in the course of any continued fever, between the stages of excitement and collapse, at which he

considers the application of blisters to be beneficial. (Dunglison.)

P., boiling. The exact temperature at which a liquid boils, when subjected to a certain constant atmospheric pressure.

P., cardinal. *Optics.* One of the six points determining the direction taken by rays of light entering or leaving any set of refracting media.

P.s., car'dinal, of Cap'uron. Name applied by Capuron, for use in *Pelvmetry*, to four points of the inlet of the human *Pelvis*; namely, the two *ilio-pectineal eminences*, and the two *sacro-iliac synchondroses*.

P.s., correspond'ing ret'inal. See *P.s., retinal, corresponding*.

P.s., cover'ing. Another name for *P.s., retinal, identical*.

P.s., craniomet'ric. See *Craniometric points*.

P., critical. See *Critical points*.

P.s., deaf. Term for certain points near the ear at which, as has been pointed out by Urbantschitsch, the sound given out by a vibrating tuning-fork, held perpendicularly with the base touching the skin, cannot be heard by the person experimented on. There are two such points; one at the lower extremity of the *tragus*, and the other at the point where the *helix* meets a straight line drawn from the *zygoma* to the occiput.

P., dew. The exact temperature at which the aqueous vapour of the atmosphere begins to be deposited as dew.

P.s., dis'parate ret'inal. See *P.s., retinal, disparate*.

P.s., douleureux'. (F.) *P.s., painful* (q. v.).

P., Erb's. Term for the *P., supraclavicular*, from Erb, who first investigated it.

P., exter'nal or'ital. See *P., orbital, external*.

P., eye. Term for the circle of light seen at the point of crossing of the light-rays above the eye-piece of a microscope. Also, syn. for *Ocellus*.

P., far. *Optics.* The farthest point of distinct vision. In the *emmetropic* eye this is at infinity, but is considered, in practical ophthalmic work, to be at twenty feet from the eye. In the *hypermetropic* eye, the point is beyond infinity, or, in practical ophthalmic work, beyond a distance of twenty feet. In the *myopic* eye, the point is at some measurable distance, in practice less than twenty feet, in front of the eye.

P., first fo'cal. See *P., focal, first*.]

P., first no'dal. See *P.s., nodal*.

P., first prin'cipal. A syn. of *Anterior principal point*. See *P.s., principal*.

P., fixa'tion. *Optics.* That point on the *visual axis* at which vision is most distinct.

P., fo'cal. *Optics.* One of the two *principal foci* in a dioptric system.

P., fo'cal, ante'rior. That point at which emerging rays which are parallel in the vitreous substance of the eye meet in front of the eye.

P., fo'cal, first. A syn of *P., focal, anterior*.

P., fo'cal, poste'rior. That point at the back of the eyeball at which those entering rays meet, which are parallel when they enter the cornea.

P., fo'cal, sec'ond. A syn. for *P., focal, posterior*.

P., freez'ing. The exact temperature at which a liquid substance freezes, or becomes solid.

P., fus'ing. Syn. of *P., melting*.

P., fus'ion. The same as *P., fusing*.

P., grow'ing. The soft central portion of a bud, or of any terminal growing part of an organ of a plant. It is composed of primary meristem.

P.s., hys'tero-epilepto'genous. The same as *P.s., hystero'genic*.

P.s., hystero'genic. Syn. of *Zones, hystero'genic*.

P.s., hystero'genous. The same as *P.s., hystero'genic*.

P.s., identical ret'inal. See *P.s., retinal, identical*.

P., intersupercil'ary. *Craniom.* The middle point of a line passing between the most prominent points of the right and left superciliary ridges.

P., jug'al. See *Jugal point*.

P., ma'lar. See *Malar point*.

P., McBurney's. *Surg.* Term applied by McBurney to a point on a line between the anterior superior iliac spine and the umbilicus, situated two and a half inches from the former. This point is noted as marking the region of greatest tenderness in many cases of *Appendicitis*.

P., mel'ting. The exact temperature at which, under a certain atmospheric pressure, fusible solid bodies begin to melt or fuse.

P., men'tal. See *Mental point*.

P., meto'pic. See *Metopic point*.

P., mo'tor. See *Motor point*.

P., na'sal. See *Nasal point*.

P., near. The nearest point at which distinct vision can take place. It is divided into *P., near, absolute*, and *P., near, binocular*.

P., near, ab'solute. The nearest point of distinct vision with a single eye, by means of the maximum accommodation.

P., near, binocular. The nearest point at which distinct vision with both eyes can take place, by means of the maximum amount of accommodation and of convergence of the visual axes.

P.s., no'dal. *Optics.* These are two points,—the *anterior* or *first* nodal point, and the *posterior* or *second* nodal point,—situated on the optical axis of any dioptric system, and bearing such a relation to one another that every incident ray which passes through the *first* point is represented after refraction by a corresponding parallel emergent ray passing through the *second* point. The two nodal points of the schematic human eye are very nearly identical, the first lying 7 mm., and the second 7.33 mm. behind the cornea.

P., occip'ital. See *Occipital point*.

P., occip'ital, max'imum. *Craniom.* That point on the longest antero-posterior diameter of the skull most distant from the labella.

P. of disper'sion. *Optics.* The virtual focus. See *Dispersion, point of*.

P. of elec'tion. Term applied to the particular spot or place of the body where an operation can be most conveniently and safely performed, *e. g.* in the ligation of arteries.

P. of fu'sion of met'als. The degree of

POINTAL—POISON

temperature at which metals melt or liquefy. See also under *Fusion*, *laws of*.

P. of incidence. See *Incidence*, *point of*.

P. of least resistance. See *Locus resistentie minoris*.

P. of ossification. A syn. for centre of ossification. See *Ossification*, *centre of*.

P. of reflection. See *Reflection*, *point of*.

P. of refraction. See *Refraction*, *point of*.

P. of regard. The point at which the eye is directly looking in the centre of the field of vision.

P. of sight. The same as *P. of vision*.

P. of vision. The position of the eye during direct vision.

P., oph'ryon. See *Ophryon*.

P., orbital, external. *Cranium*. The most prominent point on the outer edge of the orbit.

P.s, pain'ful. (F. *points douloureux*.) Points along the course of a nerve and its branches, generally where the nerve emerges from a bony canal or passes through a layer of fascia, at which slight pressure causes great pain; they occur generally in some forms of neuralgia, and were first described by Valleix in 1841. This tenderness usually persists between the attacks. In trigeminal neuralgia, these painful points are situated at the supra-orbital and infra-orbital notches, and at the mental foramen.

P., physiolog'ical, mid'dle of ret'ina. Syn. for *Fovea centralis*.

P., poste'rior fo'cal. See *P., focal*, *posterior*.

P., poste'rior no'dal. See *P.s, nodal*.

P., poste'rior prin'cipal. See *P.s*, *principal*.

P., pres'sure. See *Pressure point*.

P.s, prin'cipal. *Optics*. Those two points on the optic axis of a lens which bear such a relation to one another that all lines drawn from them to corresponding points of the object and its image are parallel to one another. They are termed respectively the *anterior* and *posterior* principal point, or the *first* and *second* principal point.

P., prin'cipal, poste'rior. See under *P.s, principal*.

P.s, ret'inal, correspon'ding. Corresponding points on the retinae of the two eyes, the images falling upon which are projected to the same point in space.

P.s, ret'inal, dis'parate. Points on the retinae from which images are projected to different points in space.

P.s, ret'inal, iden'tical. The same as *P.s, ret'inal, corresponding*.

P., sec'ond fo'cal. See *P., focal*, *second*.

P., sec'ond no'dal. See *P.s, nodal*.

P., sec'ond prin'cipal. A syn. of *P., principal, posterior*.

P., spi'nal. See *Spinal point*.

P., subna'sal. See *Subnasal point*.

P., supra-auric'ular. See *Supra-auricular point*.

P., supraclavic'ular. See *Supraclavicular point*.

P., suprana'sal. The same as *Ophryon*.

P., supraor'bital. The same as *Ophryon*.

P.s, ten'der. The same as *P.s, painful*.

P., vaccine. See *Vaccine point*.

P.s, Val'leix's. The same as *P.s, painful* (q. v.).

P., vi'tal. See *Centrum vitale*.

Pointal. (*Point*.) *Bot*. Another name for *Pistil*. Also written, *pointel*.

Pointillage. (F.) *Dotting*. In Therapeutics, term for massage with the fingertips.

Point'ing. *Surg*. The process by which an abscess tends to approach a free surface, whether external or internal, and the attendant manifestations of the process, *e. g.* the tenseness, lividity, and oedema, which precede the final central sloughing.

Poiseuille, space of. The same as *P., still layer of*.

P., still lay'er of. The *Plasmatic layer*.

Pois'on. (F. *poison*. L. *potio*, a draught, especially a poisonous draught.) A generic name for all substances which, when taken into the animal economy, either by way of the digestive tract, by the lungs, or through the skin, produce a deleterious effect upon the whole or a part of the organism.

Poisons may be divided into animal, vegetable, mineral, and atmospheric or aerial.

A convenient classification of poisons is that into—1. Corrosive; 2. Irritant; 3. Narcotic; 4. Narcoto-irritant.

1. CORROSIVE POISONS.—These cause disintegration and erosion of the parts with which they come in contact. The important members of this group are:—

The mineral acids.

The fixed alkalis.

Certain salts of mercury, namely—

Corrosive sublimate,

Solution of acid nitrate of mercury.

2. IRRITANT POISONS.—These give rise to irritation of some tissue or tissues of the body, in most cases to local inflammation of the alimentary tract. This group includes:—

a. INORGANIC.

Sulphur.

Chlorine.

Iodine.

Bromine.

Iodide of potassium (from presence of free iodine).

Nitrate of potash.

Lime.

Ammonia and its salts.

Alkaline sulphides.

Salts of arsenic.

„ „ mercury (except the two classed under corrosives).

„ „ copper.

„ „ antimony.

„ „ tin.

„ „ silver.

„ „ gold.

„ „ zinc.

„ „ chromium.

„ „ lead.

„ „ barium.

Phosphorus and its compounds.

b. ORGANIC.

(i.) *Vegetable*.

Oxalic acid.

Euphorbia.

Castor oil seeds.

Physic nut.

Croton oil seed.

Colocynth.

Bryony.

Elaterium.

Clematis.

Strychnine.

Anemone.

Ranunculus.

POISON—POISONABLE

Mezereum. Savin.
 Arum. Squill.
 Jalap. Ipecacuanha.
 Gamboge. Croton oil.
 (ii.) *Animal*.
 Certain poisonous fish. Diseased or decompos-
 ing animal matter.
 Spanish fly (Cantharides).
 3. NARCOTIC POISONS.—These produce *narcosis* (q. v.). The important members of the group are:—

a. INORGANIC.

Oxygen. Sulphuretted hydrogen.
 Nitrous oxide. Carbon monoxide.
 Nitric oxide. Carbon dioxide.

b. ORGANIC.

Opium. Cyanogen.
 Hydrocyanic acid. Marsh gas.
 Hyoscyamus. Picric acid.
 Lactuca.

4. NARCOTO-IRRITANT POISONS.—These act locally as irritants, and also cause *narcosis*. This group includes:—

Belladonna. Camphor.
 Stramonium. Upas.
 Tobacco. Cocculus indicus.
 Aconite. Alcohol.
 Conium. Chloroform.
 Ergot. Ether.

Certain poisonous mosses and fungi.

For tests for these poisons, see under their various headings.

P., aë'rial. The same as *Miasma*.

P., ar'row. The juices of various plants and herbs used by the natives in Africa, South America, Java, &c., for smearing on the heads of their arrows, so as to render even slight wounds inflicted by them probably fatal; *e. g.* see *Curare*.

P.-ash. The same as *P. sumac*.

P.-bag. A syn. for *P.-gland*.

Also, the same as *P.-sac*.

P.-bay. The *Illicium floridanum*, whose leaves are said to be poisonous.

P.-ber'ry tree. Term applied to (a) any of the species of *Cestrum*; (b) *Bourreria succulenta*; (c) *Melia azedarach*, and others.

P., bish. See *Bish poison*.

P., blood. Any substance acting as a *poison* on the blood.

P.-bulb. The bulb of *Buphane toxicaria*, which is used by the Kafirs to prepare an arrow-poison.

P.-cup. The term for certain cups of glass, which were supposed to break if poison were poured into them.

P.-dog'wood. The same as *P. sumac*.

P.-el'der. The same as *P. sumac*.

P.s, escharot'ic. Poisons that cause inflammation of tissues, followed by the separation of an eschar. They may be either *corrosive* or *irritant*. See main heading.

P.-fang. The tooth (superior maxillary) which in certain species of reptiles serves by a groove to convey poison from the gland into a wound made by the tip of the tooth.

P., frog. The *Rhus venenata*. An animal poison obtained from certain species of frogs, used by the Indians of Colombia for smearing their arrow-heads.

P., gabo'on. A syn. for *P. of Pahonias*.

P.-gland. A gland whose secretion is poisonous.

P., hæmat'ic. ("Aqua, blood.) A syn. for *P. blood*.

P.-hem'lock. The same as *Hemlock*.

P., ir'ritant. See under main heading.

P., Ital'ian. A name for *Liquor arsenicalis*.

P.-l'vy. The same as *P.-oak*.

P.-laur'el. The *Prunus laurocerasus*.

P., morbid. (*L. morbus*, a disease.) A poison giving rise to specific disease, or a product of diseased tissue-change. See *Virus*.

P., mus'cle. Any substance acting as a *poison* on muscle; also, a poisonous albumin developed in muscle during contraction.

P., narcot'ic. See under main heading.

P., nerve. Any substance acting as a *poison* on nerve-tissue.

P.-nut. Term applied to (a) *Nux vomica*, (b) certain species of *Cerbera*.

P.-oak. (*G. Gift-baum*.) Term for *Rhus toxicodendron*; also, sometimes applied to *R. diversiloba*.

P. of Pahon'ias. A very deadly poison extracted from the seeds of *Strophanthus hispidus*, and used in the Gaboon country as an arrow-poison.

P. of Pho'nias. Syn. of *P. of Pahonias*.

P.s of the mind. Those substances which exert a morbid influence on the intellectual processes, either by disordering or by suspending them for a moment or longer. (Hack Tuke.)

P. orde'al. A trial of the guilt or innocence of accused persons customary with some savage races, by the administration of certain vegetable poisons, *e. g.* *Physostigma*; a fatal result being considered to establish the guilt of the accused.

P.-organ. Name given to any animal mechanism which is differentiated to enable it to inflict a poisoned wound.

P.-pea. Term for certain species of *Swainsona* (q. v.).

P.-plant. Term used in Australia for (a) certain species of *Gastrolobium*; (b) certain species of *Swainsona*; and (c) a species of *Lotus*, *L. australis*.

P., protoplas'mic. A substance acting as a *poison* on protoplasm.

P. pulmonat're. (F.) Pulmonary poison. According to Brown-Séquard, a volatile poison present in the human breath, and believed to be one of the *ptomaines*.

P.-root. The *Cicuta maculata*.

P.-sac. A sac or bag which either holds or secretes poison. See *P.-gland*.

P.-su'mac. The *Rhus venenata*.

P.-tooth. The same as *P.-fang*.

P.-tow'er. A building or chamber used in Saxony and Silesia, in the processes of producing arsenic and sulphur; also, for condensing fumes.

P.-tree. Term applied generally to any tree from which poison can be obtained, but especially to species of *Rhus* and to *Croton Verreauxii*.

P., saus'age. See *Allantotoximum*.

P., vas'cular. A poison which acts by altering (whether increasing or diminishing) the blood-pressure.

P., veg'etable. A name for *Upas*.

P.-vine. The *Rhus radicans*; also, the same as *P.-ivy*; also, the *Periploca græca* or milk-vine.

P.-wood. (1) The *Rhus metopium*; (2) The *Sebastiania lucida*.

Pois'onable. Capable of poisoning.

Pois'onberry tree. The *Melia azedarach*.

Pois'oner. Term applied to the person who administers, or the thing that yields, poison.

Pois'oning. Strictly speaking, the applying of a *poison* to any of the tissues of the body in a dose sufficient to cause serious symptoms; usually restricted to wilful and designed administration of a poison. Also, the condition produced as the effect of a poison.

P., blood. See *Blood poisoning*.

P., crowd. See *Ochlesis*.

P., se'cret. This was at one time practised as an art. It consisted in the secret administration (disguised in articles of diet, &c.) of slow poisons, continued for a length of time, until they proved fatal.

Pois'onus. Having the properties of a *Poison*.

Pois'onously. In a poisonous way or manner.

Pois'onusness. The property of being poisonous.

Pois'onsome. Poisonous.

Poi'zon. In Dep. Vienne, France. A place noted for its sulphurous and gaseous spring.

Pojan. A place in Transylvania, in the region of Haromszik, noted for its gaseous mineral springs.

Poke. (Probably Celtic.) The swimming-bladder of fishes. Also, the same as *Poke-weed*. Also, old name for *Scrofula*.

P.-ber'ries. Common name for the berries of the *Poke-weed*.

P., hydran'gea-leav'ed. The *Phytolacca icosandra*.

P., In'dian. The *Veratrum viride*.

P.-milk'weed. The *Asclepias phytolacoides*, which is not unlike *Poke-weed*.

P.-root. The root of the *Poke-weed*; also, of the *Indian poke*.

P.-weed. The *Phytolacca decandra*; the name is also applied to other species of *Phytolacca*.

Po'land man'na. The same as *Manna seeds* (q. v.).

Polanis'la. A Genus of the *Capparidææ*.

P. grav'colens. A North American species. It has an anthelmintic action.

Polar. (L. *polus*, a pole; F. *polaire*.) Relating to a pole, or the poles of a sphere. In *Anat.*, relating to poles which can in any way be made distinct, as of a nerve-cell or ovum-cell.

P.-biloc'ular. Bot. Having two cells or loculi, as in spores.

P. bod'ies. The same as *P. globules*.

P. cat'aract. See *Cataract, polar*.

P. cat'aract, ante'rior. See *Cataract, polar, anterior*.

P. cat'aract, poste'rior. See *Cataract, polar, posterior*.

P. cells. Term used to distinguish cortical cells of the head-end of the body in *Dicyemida*.

P. crown. Term for the discoidal mass of chromatin granules at each end of the nuclear spindle during *Karyokinesis*.

P. field. The clear space in which the nuclear spindle is formed in the process of *Karyokinesis*, and which is surrounded by the chromatin-loops which make up the "loose skein."

P. glob'ules. See *Globules, polar*.

P. meth'od. In *Electro-therapeutics*, that pole of the battery, the distinctive effect of which is wanted, is placed directly over the part to be treated, the other pole being placed over any other part.

P. mic'roscope. An instrument consisting of a combined *polariscope* and *microscope*.

P. nu'cleus. Bot. The fourth nucleus in each group at the two extremities of the embryo-sac, which nuclei move toward the middle of the sac and there coalesce to form the secondary nucleus of the sac. (Goebel.)

P. plant. A name for the *Silphium lanciniatum*, given from the fact of its leaves pointing due north and south.

P. reac'tion. Term for muscular contraction following upon the application of either pole of an electric battery to a nerve or muscle.

P. ve'sicles. The same as *P. globules*.

P. zone. Term suggested for the region or zone immediately surrounding the electrode of a battery when applied directly to some part of the body in *Electro-therapeutics*.

Polarimeter. (*Polar*; μέτρον, a measure. F. *polarimètre*.) A polariscope, devised especially for measuring either the amount of polarised light thrown on to the instrument, or the amount of angular rotation of the plane of polarisation. When used for solutions containing sugar, it is termed a *Saccharimeter* (q. v.).

Polarimetry. The process of measuring polarised light; the art of using a polarimeter.

Polarisa'tion. The process undergone in becoming or being formed into a *pole*.

P., angle of. In Optics, the angle which the incident ray must make with the normal to a plane, polished surface, in order that the polarisation may be complete. (Ganot.)

P., chromatic. Polarisation of light which is accompanied by a play of colours.

P., cir'cular. The turning to the right or left of the plane of polarisation of light.

P., cur'rent of. The currents produced in electrodes in the course of action in an opposite direction to the original current.

P., dielec'tric. The condition of a non-conductor of electricity when it is strained under the action of two adjacent charges, one of positive and the other of negative electricity.

P., electrolyt'ic. The collection of bubbles on the negative plate of a galvanic battery, which interferes with the generation of the electric current.

P., ellip'tic. See *P., elliptical*.

P., ellip'tical. In some cases the particles of ether composing a polarised ray of light, describe ellipses round their positions of rest. If the axes of these ellipses are equal and parallel, the ray is spoken of as elliptically polarised.

P., galvan'ic. The same as *P., electrolytic*.

P.-mic'roscope. An instrument in which a polariscope and a microscope are combined; used particularly in petrography.

P. of elec'trodes. The acquisition of certain properties by two electrodes in the process of passing a current in a given direction, whereby they become poles of a new current, produced in an opposite direction to the original current.

P. of light. The modification undergone by a ray of light after being reflected from or transmitted through certain media, the ray being split into two. This is done either by (1)

POLARISCOPE—POLE

reflection from a shining surface, as of glass, water, &c. (see *Polarisation, angle of*); (2) by passing the ray through parallel plates of glass placed at the proper angle to the ray; or (3) by passing the ray through certain crystals which have the power of double refraction, *e.g.* Iceland spar, tourmalin, &c. In the last case two crystals are generally used, called Nicol prisms, which being placed with their positions parallel, the ray passes through as ordinary light. If the prisms are crossed, *i.e.* have their shorter diagonals at right angles, the light passing through the first, the polarising prism, is arrested by the second, the analysing prism.

P. of light, plane of. The plane of reflection in which the light becomes polarised. (Ganot.)

P., rotatory. The rotation of the plane of polarisation of light through a certain angle. Quartz, tartaric acid and its salts, and some other crystals, possess the property of rotatory polarisation.

Polariscope. (*Polar*; σκοπίω, to view. *F. polariscope.*) An instrument for observing the polarisation of light as passed through various substances. The polarimeter is a special form of this instrument.

Polariscopic. Relating to a polariscope.

Polari'scopist. A person skilled in the use of the polariscope.

Polariscopy. That division of Optics dealing with polarised light and the use of the polariscope.

Polarise. To cause polarisation of,—as for a ray of light; to give polarity to. In *Elect.* to coat with a film of gas such as is on the negative plates in the cells of a battery, which after only brief use become coated with hydrogen.

Polarised. Affected by polarisation. Also, in *Elect.*, having a surface covered with a film of gas.

P. light, diamagnetic. Polarised light which possesses the property of *diamagnetism*.

P. light, rotation of. See *Polarisation, rotatory*.

Polariser. That part of a polarising instrument which is employed in polarising the light, as distinct from the other essential part, or analyser, which demonstrates the fact of the polarisation.

Polaristrobometer. (*Polar*; στρόβος, a whirling around; μετρον, a measure.) A form of *Saccharimeter*, giving a very delicate means for measuring the rotation produced by the sugar solution.

Polarite. (*Polar*.) Name for a filtering-medium used for the artificial filtration of sewage. It contains 50 per cent. of carbonate and magnetic oxide of iron.

Polarity. (*L. polus*, the pole.) The property whereby a magnet points to the poles.

Also, in applied senses; *e.g.* in *Veg. Physiol.*, applied to a property present in the root-end and shoot-end, whereby the forces of reaction are distributed in such a manner as to give, as a final result, the upright position of the tree.

In *Electro-therapeutics*, that state of a nerve in which the part near the negative electric pole is increased, and that near the positive diminished, in irritability.

Also, applied metaphorically, *e.g.* to the uterus, in reference to the fact that as the

fundus contracts the cervix tends to relax, and *vice versa*.

P., diamagnetic. The polarity of a *diamagnetic* body, which consists in the property of setting at right angle to the poles.

Polarization. See *Polarisation*.

Polarizer. See *Polariser*.

Pole. (*L. polus*, end of an axis. Πόλος, a pivot; *F. pôle*; *G. Pol*; *Sp. polo*; *It. polo*.) The extremity of the axis of a sphere, applied to those of the *earth*, the North and South Poles; also, to the two free ends of a magnet; also, to the *eye*.

P., antiger'minal. (*L. anti*, opposite; *germinal*.) The pole of the *ovum* at which the food-yolk lies, and which is opposite to the germinal pole. See *P., germinal*.

P., cephalic. The cephalic extremity of the embryo.

P.-chan'ger. A key designed for reversing the current of an electric battery.

P. corpuscles. A syn. for *Polar globules*.

P., ger'minal. That pole of the *ovum* at which the embryo begins to develop.

P., ger'minative. A syn. for *P., germinal*.

P., low'er, of an o'vum. A syn. for *P., antiger'minal*.

P., neg'ative. The electrode which is attached to the positive element in a voltaic battery.

P., north. Of a magnet, that extremity which points towards the magnetic north pole. See also, *P.s of a magnet*.

P., nu'clear. See *Nuclear pole*.

P., nu'tritive. A syn. for *P., anti-ger'minal*.

P., occip'ital. Term for the posterior pointed extremity of the *occipital lobe* of the cerebrum.

P.s of a bat'tery. The plates at the ends of a battery, or the wires uniting them, the one chemically active being the *negative* pole, the other, chemically passive, the *positive* pole, at which the current flows out from the battery.

P.s of a mag'net. The places near the ends of the magnetic bar at which the attraction and repulsion respectively are at their maximum intensity.

P.s of cho'ion. The upper and lower ends of the chorion, corresponding respectively to the fundus uteri and os uteri. Also, see *P., placental, of cho'ion*.

P.s of earth. (*Magnetic*.) The situations in which the dipping-needle occupies a position exactly vertical.

P.s of eye. The most elevated point of the cornea, and its opposite.

P., pel'vic. The pelvic extremity of the fœtus in utero.

P., placen'tal, of cho'ion. That pole (in the normal condition the upper—see *P.s of cho'ion*) at which the placenta develops.

P., pos'itive. The electrode which is attached to the negative element in a voltaic battery.

P., south. Of a magnet, that extremity which points towards the magnetic south pole. See also, *P.s of a magnet*.

P., up'per, of an o'vum. A syn. for *P., germinal*.

P., vitel'line. (*Vitellus* = yolk.) A syn. for *P., antiger'minal*.

Pole-star. *Biol.* A stellate figure produced in the course of karyokinesis, placed at either end of the spindle-shaped nucleus.

Pole'cat weed. A name for the *Dracontium foetidum* (*Symplocarpus foetidus*).

Polem'ici, mor'bi. (*Polemicus*, Latinized word from Gr. πολεμικός, belonging to war.) Diseases belonging to war. A term for gunshot wounds.

Polemocacopthal'mia. (Πόλεμος, war; κακός, evil; ὀφθαλμία, eye-disease.) The acute form of military ophthalmia, or *Conjunctivitis granulosa acuta*.

Polemonia'ceæ. (*Polemonium*.) A family of plants established by Jussieu, having the Genus *Polemonium* for their type.

Polemonia'les. A cohort of Gamopetalous plants, having corolla regular, with five lobes and five alternate stamens; distinguished from *Gentianales* by having alternate leaves. It includes the *Solanaceæ*, *Convolvulaceæ*, *Polemoniaceæ*, &c.

Polemoni' rad'ix. (*Polemonium*.) A name for the root of *Valeriana officinalis*.

Polemon'ium. (Πολεμώνιον, valerian (?), derived, according to Pliny, from πόλεμος, war, because the plant was said to have been the cause of war between two kings; others derived it from Polemon, a philosopher of Athens, or from Polemon, King of Pontus.) A Linn. Genus of plants, Class *Pentandria*, Order *Monogynia*.

P. coen'leum. Greek valerian, or Jacob's ladder, whose root is said to have astringent properties.

P. rep'tans. The abscess-root of the U. S. of N. America. It is expectorant and diaphoretic.

Polemonophthal'mia. (Πόλεμος, war; ὀφθαλμία.) Term for *Ophthalmia, military*.

Polen'ta. (L. *polenta*, peeled barley. Fr. *polente*, *polenta*; It. *polenta*; Sp. *polenta*.) A porridge made of barley-flour, or meal of roasted barley in France; of Indian meal (maize meal) in Italy.

Poleoprophylaxis. (Πόλις, a city; προφύλαξις, caution. F. *poleoprophylaxie*; G. *Staatssicherung*.) Municipal sanitary precaution.

Poley. See *Polium*. Obsolete form of *Poly* (q. v.).

Polian ves'icles. Cæcal diverticula from the circular vessel of the ambulacral system of *Echinodermata*.

Polian'thès. (Πολίος, white; ἄνθος, a flower. Sp. *poliantes*.) A Linn. Genus of the Order *Amaryllideæ*, tribe *Agaveæ*.

P. tubero'sa. The tuberose, a Peruvian plant. The Indians of Peru use the root, cut into strips, for snake-bites.

Poli'a'ter. (Πόλις, a city; ιατρός, a physician. F. *poliâtre*; G. *Stadtarzt*.) A town physician.

Police', med'ical. A set of rules and practical measures of *Hygiene* drawn up for the preservation of the public health and the prevention of disease. It includes the questions of quarantine, sanitary cordons, registration of births and deaths, and the systematic investigation of industries or establishments endangering the public health.

Also, the body of officials whose duty it is to carry out the above system.

P., san'itary. Syn. for *P., medical*.

Police'man's disease'. A name applied to *Tarsalgia*, on account of the relative frequency with which policemen suffer from this complaint.

Policlin'ic. The same as *Policlinic*.

Policlin'icē. (Πόλις, a city; κλινική [τέχνη], bed-side medicine. F. *policlinique*.) A clinic held in private houses in the town, as opposed to one held in a hospital. This word must be distinguished from *Polyclinic* (q. v.).

Pollencephali'tis. See *Polioencephalitis*.

Poll'mitus malar'iaē. (Πολίος, grey; μίτον.) A syn. (Laveran, and Danilewsky, 1886) for *Plasmodium malarie* (q. v.).

Polioencephali'tis. (Πολίος, grey; ἐγκεφαλίτις (νόσος), of the brain). Inflammation of the brain, and especially of the motor cortical regions.

P. acu'ta. Acute cortical inflammation of the brain in children, resulting in infantile cerebral palsy.

P., ante'rior supe'rior. An inflammatory affection of the grey matter of the third ventricle of the cerebrum, of the fourth ventricle, and of the grey matter connected with the aqueduct of Sylvius. It is usually acute. The typical symptoms are ophthalmoplegia, usually external, and somnolence. Sensation is unaffected. The disease is usually fatal.

P. cortica'lis. Inflammation of the cortical grey matter of the cerebrum.

P., poste'rior. Inflammation of the grey matter of the posterior part of the fourth ventricle.

Polioencephalo-myeli'tis. The same as *Polioencephalitis*.

Polioencephali'tis. (Πολίος; μυελός, marrow; encephalitis.) Term for *Polioencephalitis* combined with *Polioencephalitis*.

Polioencephali'tis. (Πολίος; μυελός; πάθος.) The same as *Polioencephalitis*.

Polioencephali'tis. (Πολίος; μυελίτις (νόσος), disease of the μυελός or marrow.) Inflammation of the grey matter of the spinal cord, i. e., of the large cells of the anterior cornua.

P., acute' ante'rior. See *Paralysis, spinal, adult* and *Paralysis, spinal, infantile*.

P., chron'ic ante'rior. See *Atrophy, progressive muscular*.

P., sub'acute ante'rior. See *Paralysis, spinal, general*.

Polioencephali'tis. (Πολίος; μυελός, marrow; πάθος, disease.) General term for disease of the grey matter of the spinal cord.

Polio'plasm. (*Polioplasma*.) Term for granular *protoplasm*, which has a greyish appearance.

Polio'plas'ma. (Πολίος; plasma.) *Polioplasm*.

Polio'sis. (Πολίωσις, a becoming grey. L. *canities*; F. *poliose*; G. *Grauwurden*.) A becoming grey, grey headedness; also, a becoming prematurely grey.

P. circumscrip'ta. A syn. of *Vitiligo*.

Polio'tes. (Πολίωτης.) Greyness, e. g., of the hair.

Polio'thrix. (Πολίος, grey; θρίξ, hair.) Grey hair.

Polio'trichos. (Πολιότριχος.) The same as *Poliothrix*.

Polish plait. See *Plica polonica*.

P. ring'worm. A syn. for *P. plait*.

POLISHING—POLLINIC

Pol'ishing red. A name for *Colcothar*.
Politi'a medica. (Πολιτεία, a state.)
 Medical polity. See *Polity, medical*.

Politobloth'erap'ia. (Πολίτης, a citizen; βίος, life; θεραπεία, medical treatment.) The medical care of citizens. (Mayer.)

Pol'ity, medical. A syn. for *Police, medical*.

Politz'er. A physician of Vienna of the present day (1895).

P.'s bag. A small india-rubber bag fitted with an ivory or bone nozzle, used in *P.'s treatment*.

P.'s ear-bag. The same as *P.'s bag*.

P.'s meth'od. See *P.'s treatment*.

P.'s treatment. The inflation of the middle ear by means of air introduced through the Eustachian tubes. The nozzle of a rubber bag is introduced into the nostril, which is drawn tight over it. The bag is compressed strongly, simultaneously with the act of swallowing. The air enters the open Eustachian tube.

Politzer'a'tion. The same as *Politzerization*.

Politzeriza'tion. The performance of *Politzer's treatment*.

Politz'erize. To perform *Politzer's treatment*.

Pol'ium. (Πολιός, white or grey.) *Bot.* Poley, a Genus of plants; the *Teucrium* of Linnaeus.

P. angustifo'lium. The *Teucrium creticum*.

P. capita'tum. The *Teucrium capitatum*.

P. cre'ticum. The *Teucrium creticum*.

P. erec'tum. The *Teucrium polium*.

P. monta'num. The *Teucrium montanum*.

P. monta'num anglo'rum. The *Teucrium capitatum*.

P. monta'num germen'o'rum. The *Teucrium montanum*.

Poll-e'vil. (Mid. E. and Provincial Mod. E. *poll*, the head. F. *mal de taupe*; G. *Genickbeule*.) A deeply-seated abscess occurring in the anterior part of the neck in horses and cattle, and usually resulting in the formation of sinuses.

Pollachi'genous. (Πολλάκις, many times; γεννάω, to produce.) A syn. of *Polycarpous*.

Pollack whi'ting. Common name for the *Gadus pollachius* (q. v.).

Pollakiur'ia. (Πολλάκις, often; ούρον, urine.) Excessive frequency of micturition, the quantity of urine secreted being normal, or at any rate not in proportion to the increased frequency.

Poll'ed. (*Poll*.) Old term for shorn (of the hair of the head). Also, in the present day, an epithet applied to hornless cattle.

Pollemphyteus'is. (Πολλάς, Ion. for πολός, many; ἐμφύτευσις, from ἐμφυτεύω, to graft in.) Term for revaccination performed in various regions of the body.

Pollen. (L. *pollen*; -inis, fine flour or flour dust. F. *pollen*; G. *Befruchtungstaub*, *Blüthenstaub*.) *Bot.* The fine, dust-like powder contained in the sacs of the anther, the constituent grains of which are the fertilising elements of the oösphere, and analogous to the spermatozoa of animals. Each grain is composed of an outer envelope, an inner lining membrane, and a contained substance. Their

forms are very various—spherical, ovoid, triangular, &c.

P.-bas'ket. See *Corbiculum*.

P.-catarrh'. A syn. for *Hay-asthma*.

P.-cell. The cell on an anther in which the pollen is formed.

P.-cham'ber. A cavity situated at the apex of the ovule in *Gymnospermous* plants, in which the pollen lies after the process of *pollination*.

P.-fe'ver. The same as *P.-catarrh*.

P.-grain. One of the unicellular, usually yellow, bodies forming the anther in *Angiospermous* plants.

P.-mass. A syn. for *Pollinium*.

P.-paste. Term for the pasty mass of pollen stored up by bees.

P.-plate. Syn. of *P.-basket*.

P.-sac. Syn. of *P.-chamber*.

P.-spore. Syn. of *P.-grain*.

P. the'ory. The theory, proposed by Gordon in 1829 and further confirmed by Blackley in 1873, that the exciting cause of *Hay-asthma* is irritation of the Schneiderian membrane of the nasal cavity produced by *pollen*.

P.-tube. The tube which is formed by a protrusion of the intine of the pollen-grain after the contact of the latter with the stigma of a plant, and through which the contents of the grain pass into the ovule.

Polleniferous. (*Pollen*; L. *fero*, to bear.) Most correctly *Polliniferous* (q. v.).

Pollenin. (*Pollen*.) Name incorrectly given to the combustible substance which forms the residue after treatment of *Lycopodium* powder with dilute alcoholic solution of potash. *Lycopodium* powder is formed of spores, and is not composed of pollen. (Littre.)

Pollenisa'tion. (*Pollen*.) The same as *Pollination*.

Pollex. (L. *pollex*; -icis, from *polleo*, to be powerful, on account of the superior strength of the *pollex*. F. *pouce*; G. *Daumendergrosse Zehen*.) 1. The thumb. 2. The term *Pollex pedis*, or *Pollex* alone is used as a synonym for *Hallux*.

Pol'lical. (*Pollex*.) The same as *Pollicar*.

Pollicar. Belonging to the *Pollex*.

P. ar'tery. A syn. for the *Arteria princeps pollicis*.

Pollicate. (*Pollex*; -icis.) Possessing *Pollices*.

Pollices. Plur. of *Pollex*.

Pollicis. Gen. sing. of *Pollex*.

Pollinar. (*Pollen*. F. *pollinaire*; G. *blumenstaubig*.) Epithet for a surface that is covered over with a fine, pollen-like dust.

Pollinar'is. (Mod. L.) *Pollinar*.

Pollinar'ium. (*Pollen*.) One of the organs of which several are present on the *hymenium* of certain Fungi, and which some observers consider to be male organs.

Pollina'tion. (*Pollen*.) The conveying of the pollen to the stigma in plant-fertilization.

Pollinc'ter. The same as *Pollinator*.

Pollinc'tor. (L.) An embalmer of the dead.

Pollinctu'ra. (L.) The embalming of the dead.

Pollin'ic. Belonging to, or made up of, *pollen*.

P. cham'ber. Syn. of *Pollen-chamber*.

P. mass. Syn. for *Pollen mass*, or *Pollinium*.

POLLINIFEROUS—POLYARCHION

Polliniferous. (*Pollen*; L. *fero*, to bear.) Pollen-bearing; also, containing or producing pollen.

Pollinigerous. (*Pollen*; L. *gero*, to bear.) Syn. of *Polliniferous*.

Pollinium. (*Pollen*.) Term for the mass of pollen-grains present in certain plants (e. g. the *Orchideæ*).

Pollinivorous. (L. *pollen*; *voro*, to devour.) Pollen-eating.

Pollinose. (*Pollen*.) Syn. of *Pollinar*.

Pollinosus. (Mod. L. *pollen*.) *Pollinose*.

Pollis. (L.) The same as *Pollen*.

Pollock. The *Gadus pollachius*, one source of cod-liver oil.

Pollo'dic. (Πολύς, plural πολλοί, many; ὁδός, a way.) Term proposed by Dr. Marshall Hall to express the fact of the passage of the so-called *Vis nervosa* from any one part to any other part of the spinal nervous system.

Also termed *Panodic*.

Pollom, little. A name for the *Polygala paucifolia*.

Pollution. (L. *pollutio*; *polluo*, to defile. F. *pollution*; G. *Befleckung*.) 1. Emission of semen without coitus; either a seminal flux in general (γονόρροια), or an emission during sleep (ὄνειρωγμός). 2. Contamination of food or water.

P., nocturnal. See *Pollution*.

P., self-. Masturbation.

P., vol'untary. The same as *P., self-.*

Polonychia. See *Polyonychia*.

Polt'foot. Another name for *Club-foot*.

Poluria. The same as *Polyuria*.

Polus. (L.) The pole or extremity; also, syn. for *patella*.

Poly-. (Πολύς, much, many.) A prefix denoting much or many.

Polyacanthocephalus. (*Poly-*; ἄκανθα, a thorn; κεφαλή, the head. G. *veildornkopfig*.) Zool. Having the head armed with many spines.

Polyacanthus. (*Poly-*; ἄκανθα.) Bot. Having many spines or thorns.

Polyacid. (*Poly-*; acid.) Chem. Epithet applied to a base or basic radical, one molecule of which saturates several molecules of the acid radical.

Polyacoustic. (*Poly-*; acoustic.) Intensifying sound; also, an apparatus for intensifying sound.

Polyactium tristē. The *Pelargonium triste*.

Polyad. (Πολύς, many.) Chem. Having a valency greater than two; also, an element or compound radical having a valency greater than two.

Polyadelph. (*Poly-*; ἀδελφός, a brother.) Term for a plant whose *stamens* are united by their filaments into several bundles.

Polyadelphia. The condition of being *Polyadelphous*.

Polyadelphous. (*Poly-*; ἀδελφός, a brother.) Having the characters of a *Polyadelph*, that is, having the *stamens* united by their filaments into several bundles.

Polyadenia. (*Poly-*; ἄδην, a gland.) Syn. for *Pseudo-leucæmia*.

Polyadenitis. (*Polyadenia*; fem. adj. termination *itis*.) Inflammation of many lymphatic glands simultaneously.

Polyadenoma. (*Poly-*; ἄδην, a gland.) A multiglandular adenoma.

Polyadenopathy. (*Poly-*; ἄδην, a gland; πάθος, suffering.) Term for simultaneous disease of several lymphatic glands.

Polyadenus. (*Poly-*; ἄδην, a gland. F. *polyadène*; G. *vieldrüsenig*.) Bot. Bearing many glands.

Polyæmatus. The subject of *Polyæmia*; plethoric.

Polyæmia. (*Poly-*; αἷμα, blood. F. *polyémie*; G. *Vollblütigkeit*.) Old term for *Plethora*.

P. apocop'tica. (Ἀποκόπτω, to cut off.) Term for the transient relative increase in the amount of blood in the circulation after major amputations in which there is only slight loss of blood.

P. aquo'sa. (L. *aquosus*, watery.) An excess of water in the blood. This occurs physiologically after large draughts of fluids.

P. hyperalbumino'sa. Term for excess of albumin in the blood-plasma.

P. polycythæ'mica. (*Polycythæmia*.) Term for an increase beyond normal in the quantity of red corpuscles in the blood.

P. sero'sa. That condition of the blood which is characterised by an increased proportion of serum.

Polyæmic. The same as *Polyæmatus*.

Polyæsthesia. (Πολύς, many; αἴσθησις, sensation.) A morbid condition in which sensation is multiplied, touch at a single point feeling like touch at several points simultaneously.

Polyæsthesis. The same as *Polyæsthesia*.

Polyæsthetic. Belonging to, or exhibiting, *Polyæsthesia*.

Polyal'thia. (Πολυαλθής, curing many diseases.) A Genus of the Order *Anoneæ*.

P. acutifolia. Properties similar to those of *P. sempervirens*.

P. corin'ti. An East Indian plant. The bark is febrifuge.

P. macrophy'la. A Javan plant. The bark is given as a febrifuge in the specific fevers.

P. sempervir'ens. A Malabar plant. The leaves are used in the treatment of rheumatism and intermittent fever.

P. subcorda'ta. A Javan plant. Its aromatic fruit is used in spasmodic colic.

Polyanæ'mia. (Πολύς, much; ἀναιμία, want of blood.) Excessive anæmia.

Polyan'dric. The same as *Polyandrous*.

Polyan'drous. Πολύς, many; ἀνήρ, a man; in Botany, signifying a *stamen*.) Bot. Having many *stamens*; term applied to a Linn. Class, characterised by the insertion of several *stamens* into the *receptaculum* of the flower.

Polyan'dry. (Πολύς, many; ἀνήρ, a husband.) Marriage of one woman to several men. In *Biol.*, the mating of one female with several males.

Polyanhæ'mia. (Πολύς; an hæmia = anæmia.) See *Polyanæmia*.

Polyanthe'rous. (*Poly-*; *anther*.) Having many *anthers*.

Polyan'thus. (Πολύς, many; ἄνθος, a flower.) Bot. Having many flowers.

Polyarchion. (Πολύαρχιον. From *Polyarchus*, its inventor.) Name for a *Malagma* described by Galen, *de cm. sec. Loc. viii*, 5; also, for a *cataplasma*, according to Aëtius, *ix*, 34. (Gortæus.)

Polyarthrit'is. (Πολύς, many; ἄρθρι-
τις [νόσος], joint disease.) Inflammation affect-
ing several joints simultaneously.

P., acute. A name for acute articular
rheumatism, or rheumatic fever.

P. deformans. Arthritis deformans, or
Osteo-arthritis.

P. rheumatica acu'ta. Acute rheu-
matic polyarthritis. The same as *P. acute*.

P. synovia'lis. Synovial rheumatism.
Another name for rheumatic fever.

P., vertebral. Term for a disease con-
sisting in inflammation of the intervertebral
fibro-cartilages, without subsequent caries of
the bones.

Polyar'throus. (Poly-; ἄρθρον, a
joint.) Having many joints, *multiarticular*.

Polyartic'ular. (Poly-; articular.)
Polyarthrous.

Polyatom'ic. (Πολύς, many; atom.)
A syn. for *Polyvalent* (q. v.).

Polyatomic'ity. The condition of
being *Polyatomic*.

Polyax'ial. (Poly-; axis.) Having
many axes.

Polyax'on. (Poly-; ἄξων, an axis.)
Biol. Having many axes of growth.

Polybaph'ia. (Poly-; βαφή, dye. *F.*
polybaphie; *G.* *Vielfarbenheit*.) Term for the
state of being many-coloured.

Polybas'ic. (Poly-; βάσις, a base.)
Chem. Epithet for a *polyatomic* acid-radical.

Polyblast. (Poly-; βλάστος, moulded.)
Biol. The mass of cells produced by the cleavage
of the ovum; also termed *morula*.

Polyblenn'ia. (Poly-; βλέννα, mucus.
F. *polyblennie*; *G.* *Verschleimung*.) Abundant
secretion of mucus.

Polybra'chia. (Poly-; βραχίων, an
arm.) A monstrosity consisting in the presence
of supernumerary arms.

Polybra'chus. (Poly-; βραχίων, an
arm.) A monster having supernumerary arms.

Polybreph'ia. (Poly-; βρέφος, a fœtus,
or new-born child.) The condition of having
many children or young.

Polycar'pa. (Πολύς, many; κάρπος, a
fruit.) More commonly used in pl., *polycarpæ*
(q. v.).

Polycar'pæ. (*Polycarpa*.) Term for a
division of cutaneous diseases, including psor-
iasis, lichen, herpes, and impetigo. (*Dunglison*.)

Polycarpæ'a. (Πολύς, many; κάρπος,
a fruit.) A Genus of the *Caryophyllaceæ*. The
members of this Genus are herbs.

P. corymbo'sa. Hab. East India and
Malabar. A plant used medicinally for the treat-
ment of hypochondriasis and snake bites.

P. spadice'a. Action and uses the same
as those of *P. corymbosa*.

Polycarpell'ary. (Poly-; carpel.)
Bot. Having many carpels.

Polycarp'ic. (Poly-; κάρπος, fruit.)
Bearing fruit repeatedly. Also, bearing many
fruits in each flower.

Polycar'pon. (*Polycarpus*.) A Genus
of the *Caryophyllaceæ*.

P. tetraphyllum. The all-seed. A
herb used in the treatment of paronychia and
indurated conditions of the skin. It grows in
Southern Europe and in South Carolina, and is
considered to be identical with the *παρωνυχία*
mentioned by Dioscorides.

Polycar'pous. (Poly-; κάρπος, fruit.)

Bot. Having a pistil composed of several car-
pels.

Polycel'lular. (Poly-; cellular.) *Mul-
ticellular*.

Polycen'tric. (Poly-; κέντρον, the
centre.) *Biol.* Having many nuclear points or
centres.

Polyceph'alocyst. (Poly-; κεφαλή,
the head; κύστος, a bladder.) Syn. for *Poly-
cephalus* as given in meaning 2 of that term.

Polyceph'alous. (Poly-; κεφαλή, the
head.) Having many heads.

Polyceph'alus. (Poly-; κεφαλή, the
head.) 1. As an adjective = *Polycephalous*.
2. As a substantive, term for a many-headed
hydatid.

P. cerebra'lis. Synonym of *Cænurus
cerebralis*.

P. cœnu'rus. Synonym of *Cænurus
cerebralis*.

P. echinococ'cus. Synonym of *Echino-
coccus hominis*.

P. granulo'sus. Synonym of *Echino-
coccus hominis*.

P. hom'inis. Synonym of *Echinococcus
hominis*.

P. humanus. Synonym of *Echinococcus
hominis*.

P. ovi'nus. A syn. of *Cænurus cerebralis*.

Polycerus. (Poly-; κέρας, a horn.) A
monster with horn-like protuberances on the
forehead.

Polychæt'ous. (Poly-; χαίτη, flowing
hair, a mane.) *Biol.* Having many *chætæ*.

Polyche'zia. (Poly-; χέζω, to ease
one's self.) Chronic looseness of the bowels.

Polychol'ia. (Poly-; χολή, bile.) Ex-
cessive secretion of bile.

Polycho'tomous. (Πολύχοος, abun-
dant; τέμνω, to cut.) Epithet for a body that
is divided into many articulations.

Polycho'tomy. (Πολύχοος, manifold;
τέμνω, to cut.) In Biological Taxonomy, the
division of a group into sub-groups.

Polychrest. A shortened form of the
word *Polychrestus*.

Polychres'tic. Resembling, or belong-
ing to, a *Polychrest* or *Polychrestus*.

Polychres'tus. (Πολύς, many; χρησ-
τός, useful.) Having manifold virtues. An old
term which was applied to medicines that were
useful for many diseases.

Polychr'o'ic. Exhibiting *Polychroism*.

Polychro'ism. (Πολύς, many; χροίζω,
to stain.) The manifestation of different colours
by crystalline bodies according to the direction
in which light penetrates them.

Polychro'ite. (Πολύς, many; χροιά,
colour.) The colouring matter of the *Crocus
sativus*, or saffron, so named because its colour
varies according to the dissolving medium em-
ployed. It is a glucoside, which on treatment
with dilute acids breaks up into sugar, a vola-
tile oil, and crocin. By some writers the name
Crocin is used as identical with *Polychroite*.

Polychr'oma. (Πολύς, many; χρώμα,
colour.) A syn. for *Bicolorin*.

Polychr'o'mate. (Poly-; chromate.)
A salt of *Chromic acid*, the molecule of which
contains several atoms of chromium.

Polychromat'ic. (Πολύς, many;
χρώμα, colour.) Many-coloured.

Polych'rome. (Πολύς, many; χρώμα,
colour.) A syn. for *Æsculin*. Also, a crystal-

POLYCHROMIA—POLYGALA

line principle found in quassia, which has a variegated colour in aqueous solution. (Gould.)

Polychromia. The same as *Pleiochromia*.

Polychromic. (Πολύς, many; χρώμα, colour.) The same as *Polychromatic*.

P. acid. A syn. for *Aloetic acid*.

Polychromous. The same as *Polychromic* and *Polychromatic*.

Polychronius. (Πολύς, many; χρόνος, time.) Chronic.

Polychylia. (Πολύς, much; χυλός, juice, chyle.) An excess of chyle.

Polychylic. Belonging to *Polychylia*.

Polychymia. (Πολύς, much; χυμός, juice, chyme.) An excess of chyme.

P. sanguinea. (*L. sanguineus*, bloody.) A syn. for *Plethora*.

Polyclinic. (Πολύς, many; κλινική [τέχνη], bedside medicine. F. *polyclinique*.) A general clinic devoted to the treatment of various diseases. This word must be distinguished from *Policlinic* (q. v.).

Polycoccos. (Πολύς, many; κόκκος, kernel.) Biol. Composed of several or many cocci or seeds.

Polycomus. (Πολύς, much; κόμη, hair.) Zool. Having much hair.

Polycopria. (Πολύς, much; κόπρος, dung.) The passing of an excessive quantity of fæces.

Polycoria. (Πολύς, many; κόρη, the pupil of the eye.) The existence of several pupillary apertures, owing to abnormality or lesion of the iris.

Polycotylar. (Πολύς, many; κοτύλη, a hollow. F. *polycotylaire*.) Epithet applied to animals that have many vents or openings to the body-cavity (e.g. the *Trematoda*). (Littre.)

Polycotyledonary. The same as *Polycotyledonous*.

Polycotyledonous. (Πολύς, many; κοτυληδών, a cotyledon.) Anat. Belonging to a *placenta* having several cotyledons. Bot. Having several cotyledons.

Polycotyledony. Biol. An abnormal increase in the number of *cotyledons*.

Polycrino'ses. (Πολύς, many; κρίνω, to separate.) A syn. for *Profluvium*.

Polycrome. See *Polychrome*.

Polycrotic. (Πολύς, many; κρότος, a striking.) Epithet for a pulse in which more waves can be recognised than the primary and secondary waves recognisable in the *dicrotic* pulse.

Polycrotism. The condition of being *Polycrotic*.

Polycruria. (Πολύς, many; L. *crus*, a leg.) A monstrosity consisting in the presence of supernumerary legs.

Polycyclic. (Πολύς, many; κύκλος, a circle.) Biol. Having many cycles or *whorls*.

Polycyesia. The same as *Polycesis*.

Polycesis. (Πολύς, many; κύησις, conception, or gestation.) The condition of multiple pregnancy; also, unusual frequency in the recurrence of pregnancy.

Polycystic. (Πολύς, many; κύστις, a bladder.) Having many cysts.

Polycythemia. (Πολύς, many; κύτος, a vessel; αίμα, blood.) Excess of red corpuscles in the blood.

Polydacria. (Πολύς, many; δάκρυ, a tear.) An abundant shedding of tears.

Polydactyl. (Πολύς, many; δάκτυλος,

a finger.) Biol. An animal that has supernumerary fingers or toes.

Polydactylia. (Πολύς, many; δάκτυλος, a finger.) An abnormality consisting in the presence of supernumerary fingers.

Polydactylism. The same as *Polydactylia*.

Polydactylus. (Πολύς, many; δάκτυλος, a finger.) An individual having a number of fingers or toes in excess of the normal.

Polydipsia. (Πολύς, much; δίψα, thirst.) Excessive thirst, a prominent symptom in diabetes. In Cullen's *Nosology*, a Genus of the Order *Dysorexia*, Class *Locales*.

P. ebrio'sa. (*L. ebriosus*, drunken, belonging to a drunkard.) A term for *Dipsomania*.

Polydynamia. (Πολύς, much; δύναμις, strength.) Great strength.

Polyei'dæ sphragis. (Πολυειδού σφραγίς, Galen.) A name for an ancient *trochiscus*, formerly used as a remedy for sluggish ulcers.

Polyembryonate. Belonging to *Polyembryony*; having several embryos.

Polyembryony. (*Poly-*, *embryo*.) The production of more than one embryo in the ovule, in Phanerogamous plants.

Polyemia. See *Polyæmia*.

Polygala. (Πολύς, much; γάλα, milk; from its abundant milky juice. F. *polygale*; G. *Kreuzblume*.) A Genus of the *Polygaleæ*.

P. amara. The milk-wort. A European plant. It is a powerful bitter tonic.

P. amarel'la. A syn. of *P. vulgaris*.

P. Boy'kini. An American species found in Florida and Georgia, to which *false senega* (see under *Senega*) has been wrongly referred as the source.

P. chamaebur'us. Box-leaved milk-wort. A European species sometimes substituted for *P. amara* and *P. senega*.

P. como'sa. Hab. Europe. Root and lower part of stem used in same way as root of *P. vulgaris*.

P. crotalaroid'es. Hab. the Himalayas. Root used in catarrh and as an antidote for snake-bites.

P. glandulo'sa. Hab. Mexico. Root emetic.

P. grandiflo'ra. A syn. of *P. senega*.

P. hungar'ica. A syn. of *P. major*.

P. latiflo'lia. A variety of *P. senega*, which furnishes some of the commercial *senega* root.

P. Linnæ'a. The *P. amara*.

P. ma'jor. Hab. Europe. Used for the same purposes as *P. vulgaris*.

P. mexica'na. In some doses tonic, in large doses emetic.

P. monticola. Hab. Venezuela. Root emetic.

P. Nuttall'lii. A syn. for the *P. sanguinea* (of Nuttall).

P. panicula'ta. Hab. South America and the West Indies. Root diluent, solvent, and diaphoretic.

P. pauciflo'ra. Dwarf milkwort. Hab. North America. Action similar to, but weaker than, that of *P. senega*.

P. poay'a. Hab. Brazil. Root emetic, used similarly to *ipecaacuanha* in bilious fevers. (Foster.)

P. polygana. An American plant. A bitter tonic.

POLYGALACTIA—POLYGONUM

P. rubella. An American species. Action, tonic, diaphoretic, and laxative.

P. sanguinea. Hab. North America. Action similar to, but milder than, that of *P. senega*.

P. senega. (*F. polygale de virginie*; *G. Klapperschlangenwurz.*) A North-American plant, whose root is the *Senega* of the B. Ph.

P. serpentaria. A shrub. Hab. Caffraria. The root is esteemed by the natives an antidote to the bite of venomous snakes.

P. telephoides. Hab. India. Used in catarrhs.

P. thesioides. The *Chinchin* of Chili. Root used as a diuretic.

P. tinctoria. Hab. Arabia. It yields a small amount of indigo. The seeds are tæni-fuge.

P. venenata. The Javan "Kata-tutum." It is a powerful poison; its odour alone is said to produce headache and sneezing.

P. venenosa. Syn. of *P. venenata*.

P. virginiana. A syn. of *P. senega*.

P. vulgaris. Common European milk-wort. Used as a pectoral. Root-bark aromatic, but not markedly bitter.

Polygalactia. (Πολύς, much; γάλα, milk. *F. polygalactie*; *G. Milchüberfluss.*) An excessive secretion of milk during lactation, enough to affect the health. To be distinguished from *galactorrhæa*. (Foster.)

Polygalic. Of, or belonging to, the Genus *Polygala*.

P. acid. $C_{32}H_{54}O_{18}$. A glucoside discovered in the *Polygala senega* by Peschier. It is apparently identical with *Saponin*.

Polygalin. Name for a bitter alkaline principle found in several species of *Polygala*.

Polygamarin. (*Polygala*. *L. amarus*, bitter.) A bitter crystallizable body which has been extracted from *Polygala amara*.

Polygamia. A Linn. Class of plants, comprehending those that have *polygamous* flowers.

Polygamous. (Πολύς, many; γάμος, marriage.) Mating with more than one individual of the opposite sex. In Vegetable Physiology, bearing perfect, bisexual flowers, and also pistillate or staminate flowers, on the same plant or in different individuals of the same species.

Polygamy. The condition of having more than one wife or husband.

Polyganglionic. (Πολύς, many; γάγγλιον, a knot.) Concerning many lymphatic glands.

Polygastrica. (Πολύς, much; γαστήρ, the stomach or belly.) Excessive secretion of gastric juice.

Polygastric. (Πολύς, many; γαστήρ, the stomach or belly.) Having many stomachs. Belonging to the *Polygastrica*, a group of the Infusoria.

Polygastrulation. (*Poly-*; *gastrulation*.) Multiple gastrulation.

Polygenesis. (Πολύς, many; γένεσις, origin.) *Biol.* The theory that organisms may arise from various kinds of cells.

Polygenetic. Belonging to *Polygenesis*.

Polygenism. (Πολύς, many; γεννάω, to beget.) The theory that the various races of man are derived from distinct species.

Polygeny. The same as *Polygenism*.

Polyglottus. (Πολύς, many; γλώττα,

tongue.) Many-tongued. Epithet for birds that have a varied song.

Polyglucoside. A substance consisting of the *glucoside* molecule ($C_{12}H_{10}O_{10}$) combined once or more times with itself to form a more complex molecule.

Polygnathism. The condition of being *Polygnathous*.

Polygnathous. (Πολύς, many; γνάθος, a jaw.) *Zoöl.* and *Entomol.* Having many jaws. Also, the condition of a *Polygnathus*.

Polygnathus. (Πολύς, many; γνάθος, a jaw.) A double monster, in which the parasite is attached to the jaws of the host. There are two varieties: *Epignathus*, in which the parasite is attached to the superior maxillary bone, and *Hypognathus*, to the inferior maxillary bone, of the host or autosite.

Polygon. (Πολύς, many; γωνία, angle. *F. polygone*; *G. Vieleck.*) A figure having more than four angles.

Polygona venosa calicem renis. (*L. Polygona*, nom. pl. of *Polygonum*, q. v.) "The venous polygons of the calices of the kidneys." A name for the polygonal anastomoses of the renal veins at the apices of the pyramids. (Foster.)

Polygonal. Having the characters of a *Polygon*.

Polygonate. (*Polygon.*) *Biol.* Many-jointed.

Polygonatum. (Πολυγόνατον; πολύς, many; γόνυ, the knee; also, a joint of a grass.) The plant called Solomon's seal, or *Convallaria polygonatum*.

P. anceps. The *Convallaria polygonatum*.

P. biflorum. A variety of *P. multiflorum*.

P. canaliculatum. The *Convallaria canaliculata*.

P. giganteum. A variety of *P. multiflorum*.

P. latifolium. The *Convallaria canaliculata*.

P. multiflorum. The *Convallaria multiflora*.

P. officinalis. A syn. of *P. uniflorum*.

P. pubescens. The *Convallaria pubescens*.

P. uniflorum. The *Convallaria polygonatum*.

P. vulgaris. The *Convallaria polygonatum*.

Polygonus. (*Polygonum.*) Relating to or resembling the Genus *Polygonum*.

Polygoneutic. (Πολύς, many; γόνος, offspring.) *Biol.* Having several broods or litters every year.

Polygoneutism. The state of being *Polygoneutic*.

Polygonia. (Πολυγονία, fecundity.) Excessive fertility, especially of the male.

Polygonia. (Πολυγώνιος.) Multangularity, or the condition of having many angles.

Polygonic acid. An acrid, insoluble substance found in the plants of the Genus *Polygonum*.

Polygonius. (Πολυγώνιος.) Multangular, or having many angles.

Polygonum. (Πολύς, many; γόνυ, a joint; from its numerous joints or knots. *F. renouée*; *G. Natterwurz.*) A Genus of the *Polygonaceæ*.

POLYGONUS—POLYMELIA

P. a'crē. Smart-weed. Astringent and febrifuge.

P. alp'num. Alpine knot-weed. Used in diarrhœa and dysentery.

P. amph'ibium. Amphibian knot-weed, willow-grass. The herb and root are mildly astringent, diuretic, and alterative.

P. antihæmorrhoida'lē. Hab. Brazil. Used externally in gout and in hæmorrhoids.

P. aquat'icūm. A syn. of *P. amphibium*.

P. avicular'ē. (L. *avicula*, a small bird.) Knot-grass, or goose-grass. The πολύγονον ἄρρεν of Dioscorides.) A mild astringent, used in asthma and whooping-cough. Formerly used as a febrifuge, vulnerary and styptic under the name *herba centummodiæ*.

P. barba'tum. Hab. China, Japan, India, &c. Used in India in colic, at the Cape in œdema of the feet. (Foster).

P. convol'vulus. Linn. (L. *convolvulus*, the bindweed; from *convolvere*, to roll up.) Black bindweed. Seeds esculent; used as buckwheat.

P. Bellar'di. Hab. S. Europe. Properties similar to those of *P. avicularē*.

P. bistor'ta. Snake-weed. Hab. Europe and N. Asia. Root, *Radix bistortæ*, astringent.

P. centino'dium. A syn. for *P. avicularē*.

P. coccin'eum. A syn. for *P. amphibium*.

P. divarica'tum. The Eastern buckwheat plant, whose roots are used as meal in Siberia.

P. erec'tum. A syn. for *P. avicularē*.

P. fagopy'rum. (Πυρός, wheat. F. *sarrasin*; G. *Buchwaizen*.) The buck-wheat plant, whose grain is made into bread in Germany, Switzerland, and Russia.

P. glab'rum. The leaves of this species are diuretic, and the root is purgative.

P. hydropi'per. ("Υδωρ, water; πίπερι or πίπερι, pepper.) Poor man's pepper. Water-pepper, or lake-weed; its leaves have an acrid, burning taste, and are antiseptic, aperient, and diuretic. They are reputed also to be emmenagogue and aphrodisiac.

P. hydropiperoï'des. Syn. for *P. punctatum*.

P. latifo'lium. A syn. for *P. avicularē*.

P. mas. A syn. for *P. avicularē*.

P. mi'nus. Another name for the *Herniaria glabra*, or rupture-wort.

P. orienta'lē. Hab. Asia, S. Africa, and Australia. Leaves, mucilaginous and weakly astringent.

P. persicar'ia. The arsmart of old writers; also called lady's thumb. An astringent.

P. puncta'tum. Properties similar to those of *P. hydropiper*.

P. selenoi'des. The parsley break-stone.

P. Siebol'dii. Hab. China and Japan. Root, tonic.

P. stypticum. Hab. Brazil. Herb and root, styptic.

P. tincto'rium. A plant grown in China; a source of indigo.

P. virginia'num. Wandspiked persicaria. A tonic, astringent, and diuretic.

Polygonus. (Πολύς, many; γόνος, a child.) Having many offspring.

Polygónus. (Πολύγωνος, having many angles.) The same as *Polygonius*.

Polygraph. (Πολύς, much or many; γράφω, to write.) A syn. for *Myographæ*.

Poly'gräus. Πολύς, many; γράω, to eat.) Voracious.

Poly'gria. (Πολύς, many; ὑγρός, moist. F. *polygrie*; G. *Saftsüberfluss*.) Excess of the "humours" or juices of the body.

Polygroma. (Πολύς, much; *hygroma*.) A large *Hygroma*.

Polyguria. (Πολύς, much; οὔρον, urine. F. *polygurie*.) A term used by Seidelius for *Diabetes*.

Polygynous. (Πολύς, many; γυνή, woman; the symbol of the female organ of flowers.) Biol. Having many pistils. Also, having more than one female mate, or wife.

Polygy'ral. (Πολύς, many; γύρος, a circle.) Biol. Having many whorls.

Polygy'ria. (Poly-; *gyrus*.) The condition of the brain which consists in the presence of an excessive number and complexity of *gyri*.

Polyhæmia. See *Polyæmia*.

Polyhed'ron. (Πολύς, many; ἔδρα, a base.) A solid figure with many bases or sides.

Polyhid'ria. See *Polyidria*.

Polyhidro'sis. (Πολύς, much; ἰδρωσίς, a sweating.) Excessive sweating.

Polyhydram'nios. (Πολύς, much; *hydramnios*.) A syn. for *Hydramnios*.

Polyhydrate. Poly-; *hydrate*.) Chem. A polyvalent *hydrate*; one, that is, containing more than one hydroxyl group.

Polyhy'dric. (Polyhydrate.) Having the properties of a *Polyhydrate*.

Polyhy'gria. See *Polygria*.

Polyhygroma. See *Polygroma*.

Polyhyperæmia. See *Polyperæmia*.

Polyid'ria. 1. (Πολύς, much; ἰδρώς, sweat.) An excess of perspiration.

Also, 2. (Πολύς, much; ἱδρίς, skilful.) Great skill.

Polyidro'sis. Πολύς, much; ἰδρώς, sweat. F. *polyidrose*; G. *Schweissucht*.) Excessive sweating (*Polyhidrosis*); also, term used by Ritgen for the *Sweating sickness*.

Polykor'ia. (Πολύς, many; κόρη, the pupil of the eye.) The condition of having several pupils to the eye.

Polyla'lia. (Πολύς, many; λαλέω, to speak. F. *polylalie*; G. *Polylalie*.) Mimicking.

Polylep'idus. (Πολύς, many; λεπτός, a scale.) Biol. Having many scales.

Polyleucocythæmia. (Πολύς, much or many; *leucocythæmia*.) Syn. for *Leucocythæmia*.

Polylymph'ia. (Πολύς, much; *lymphæ*.) Syn. for *Anasarca*.

Polyman'ia. (Πολύς, many; L. *manus*, the hand.) See *Polychiria*.

Polymas'thus. (Πολύς, many; μαστός, Doric form of *μαστός*, the breast.) Having more than the normal number of breasts.

Polymast'ia. (Πολύς, many; *μαστός*, the breast; also, the nipple.) The presence of supernumerary breasts or nipples.

Polymas'tigate. (Πολύς, many; μάστιξ, -ιγος, a whip.) Biol. Furnished with several *flagella*.

Polymas'tigious. The same as *Poly-mastigate*.

Polymaz'ia. (Πολύς, many; μαζός, the breast.) The same as *Polymastia*.

Polyme'lia. (Πολύς, many; μέλος, a limb.) 1. The presence of an abnormally great number of limbs. 2. *Nom. pl. n.* A class of monsters presenting this character.

Polyme'lian. (*Polymelia*.) Epithet applied to monsters exhibiting *Polymelia*.

Polymelianism. (*Polymelia*.) Presenting the condition of *Polymelia*.

Polyme'lius. The same as *Polymelian*.

Polymelus. (Πολύς, many; μέλος, a limb.) A monstrosity characterised by exhibiting *Polymelia*.

Polymely. The same as *Polymelus*.

Polyme'nia. (Πολύς, much; μήνες, months; the monthly courses.) Syn. for *Menorrhagia*.

Polymenorrhœa. (Πολύς, much; μήνες, the monthly courses; ῥέω, to flow; ροία, a flowing.) The same as *Polymenia*.

Polymer. (Πολύς, many; μέρος, a part.) One of a *polymeric* series of chemical compounds.

Polymeria. The same as *Polymerism*.

P. promiscua translativa. (L. *promiscuus*, mixed; *translativus*, carried across.) A term for transposition of viscera.

Polymeric. Exhibiting *Polymerism*.

Polymerid. A syn. for *Polymer*.

Polymeride. The same as *Polymerid*.

Polymerism. (Πολύς, many; μέρος, a part. F. *polymerie*.) 1. Chem. A form of *Isomerism*, in which substances have the same percentage composition, but differ in molecular weight—e. g., Acetylene, C₂H₂, and Benzene, C₆H₆, are *polymers*. 2. Biol. (F. *polymerisme*; G. *Vieltgliederigkeit*.) Monstrosity characterised by the presence of supernumerary organs.

Polymerization. (*Polymer*.) The apparent union of two or more molecules of a chemical compound to form a more complex molecule, which has a higher molecular weight than the original molecule, and exhibits different chemical and physical properties.

Polymerous. (Πολύς, many; μέρος, part.) Biol. The same as *Polymeric*.

Polymetamer'ic. (Πολύς, many; *metamere*.) Belonging to many *metameres*.

Polymicro'bic. (*Poly*-; *microbe*.) Containing many varieties of *microbes*.

Polymic'roscope. (*Poly*-; *microscope*.) A microscope fitted up on the principle of a revolving stereoscope.

Polymicrotome. (*Poly*-; *microtome*.) A special kind of microtome designed for rapid section-cutting.

Polymitus. (*Poly*-; μίτος, a thread.) Name for a rounded, filamented microbe which has been found in the blood in cases of intermittent fever. (Dunlison's Dict.)

Polymix'ic. (Πολυμυξία = πολυμυγία, a mixture of many ingredients.) Epithet applied to groups of organisms consisting of many species.

Polym'nia. (Πολύμνια, one of the nine Muses.) A Genus of the *Compositæ*.

P. uveda'lia. The bear's-foot, a North American plant. Root thought to be a tonic and secretory stimulant.

Polymorph. (Πολύς, many; μορφή, form.) One of a series the members of which are characterised by *Polymorphism*.

Polymorphic. Manifesting *Poly-morphism*.

P. cells of carcino'ma. Name for the irregularly-shaped cells present in the centre of the cell-nests of carcinoma. They are known now not to be absolutely diagnostic.

Polymor'phism. (Πολύς, many;

μορφή, form. F. *polymorphie*, *polymorphisme*; G. *Polymorphismus*, *Vieltgestaltigkeit*.) 1. *Crystall.* Term for the property possessed by some substances of crystallising in various forms, depending in great measure upon the temperature at which they crystallise.

2. *Biol.* Manifestation of a variety of forms at different stages of development, or under different conditions of growth, such as is exhibited by Fungi.

P., colo'nial. The polymorphism often exhibited among the members in a colony of organisms.

Polymor'pho-cellular. (*Poly-morphous*; *cellular*.) Composed of cells of various shapes.

Polymor'phous. The same as *Poly-morphic*.

Poly'morphy. Syn. for *Poly-morphism*.

Poly-moun'tain of Can'dy. Name for the *Teucrium creticum*.

P.-moun'tain of Montpel'lier. The *Teucrium capitatum*.

Polymyo'plasis. See *Myopolyplaxis*, *Myopolyplasmus*.

Polymyosi'tis. (Πολύς, many; μυο-σίτις [*νόσος*], disease of muscle.) Inflammation of a number of muscles.

P., acute' progres'sive. An acute and rapidly fatal form of *Polymyositis*. (Unverricht.)

P., parenchy'matous, puer'peral. A fuller term for *P., puerperal*.

P., puer'peral. Term for *Polymyositis* occurring in women during the puerperal period.

Polyneur'al. (Πολύς, many; νευρον, a nerve.) Epithet for muscles which are supplied by more than one nerve.

Polyneur'ic. (Πολύς; νευρον.) Biol. Epithet for a nerve-cell that has several processes going to form the axis-cylinder of a nerve-fibre.

Polyneur'i'tis. (Πολύς, many; νευρίτις [*νόσος*], disease of nerve.) Multiple neuritis.

P. potato'rum. Polyneuritis of drunkards. A syn. for *Neuritis, alcoholic*.

Polyneur'on. (Πολύς, many; νευρον, a nerve.) A name for *Plantago*.

Polyneur'us. (Πολύς, many; νευρον, a nerve.) Epithet applied to plants whose lateral nervures are very numerous.

Polyno'mial. (Πολύς, many; ὄνομα, a name.) Epithet applied to a nomenclature in which the names of individuals of a given Genus and Species are not confined to the two terms generic and specific.

Polynu'clear. (Πολύς; *nucleus*.) The same as *Polynucleate*.

Polynu'cleate. (Πολύς, many; *nucleus*.) *Multinucleate*.

Polynych'ia. See *Polyonychia*.

Polyodont. (Πολύς, many; ὀδούς, ὀδόντος, a tooth.) Zool. Having many teeth.

Polyodontia. (Πολύς, many; ὀδούς, a tooth.) Pathol. The presence of an abnormally large number of teeth.

Polyom'matous. (Πολύς; ὄμμα, the eye.) Having many eyes.

Polyony'chia. (Πολύς, many; ὄνυξ, a nail.) The presence of an excessive number of nails.

Polyonym. (Πολύς; ὄνυμα = ὄνομα. a

name.) *Biol.* Having a technical name made up of several distinct terms.

Polyonymic. Made up of more than two distinct terms.

Polyophthal'mia. (*Polyophthalmus*.) Term for the monstrosity which consists in the presence of more than two eyes.

Polyophthal'mus. (Πολύς, many; ὀφθαλμός, eye.) Epithet for argus butterflies, on account of the large number of spots or eyes on their wings.

Poly'opia. (Πολύς, many; ὄψ, ὀπός, the eye. F. *polyopie*, *polyopsie*; G. *Vielschen*, *Vielfachsehen*.) A morbid condition in which perceived objects are seen multiplied; termed *monocular* or *binocular*, according as it depends upon one eye or both.

P. monophthal'mica. Multiplied vision with a single eye. See main heading.

Poly'ops. (Πολύς, many; ὄψ, the eye.) Epithet for a monster which is formed of two individual bodies, and whose head bears two pairs of eyes. (Geoffroy Sainte-Hilaire.)

Polyops'is. (Πολύς, many; ὄψις, a seeing.) The same as *Polyopia*.

Polyor'chis. (Πολύς, many; ὄρχις, testicle.) Term for an individual with more than two testicles.

Polyorexia. (Πολύς, much; ὄρεξις, appetite. F. *polyorexie*; G. *Vielfresserei*.) Excessive appetite.

Polyorgan'ic. (*Poly*; *organic*.) *Biol.* Having, or made up of, many or several organs.

Polyorrhomen'itis. Another form of the word *Polyorrhymenitis*.

Polyorrhymen'itis. (Πολύς, many; ὕμην, -ιτις, fem. adj. termination, to agree with [νόσος].) Term for a progressive and malignant inflammation of serous membranes.

Polyos'teon. (Πολύς, many; ὀστέον, a bone.) Old term for the *tarsus* and *metatarsus* together.

Polyos'teum. See *Polyosteon*.

Polyot'ia. (Πολύς, many; οὖς, ὠτός, the ear.) The presence of one or more *auricles*, or external ears.

Polyp. (Πολύς, many; πούς, a foot.) Name originally applied by Réaumur to the fresh-water Hydra and allied species. It has since been used ambiguously, either to designate a *Polyp-colony*, or an individual organism of the colony.

P.-col'ony. A colony of polyps or individuals of the Order *Hydrozoa* living upon a common stem or *cænosarc*.

P.-stem. This term is used as synonymous with a *P.-stock*, not to designate the common stem or *cænosarc* to which the *P.-colony* is attached.

P.-stock. A *Polypidom*.

Polypæ'dia. (Πολύς; παῖς, παιδός, an infant. F. *polypédie*.) The presence of several fetuses at one gestation.

Polypanarthrit'is. (Πολύς, many; *panarthrit*.) Syn. for *Osteoarthritis*.

Polypapillo'ma. (Πολύς, many; *papilloma*.) A skin disease consisting in the presence of multiple papillomata.

P. trop'icum. Syn. for *Frambæsia tropica*.

Polypar'esis. (Πολύς, much; πάρεσις, weakness. F. *polyparésie*.) General paralysis of the insane.

Polypar'ium. The same as *Polyvary*.

Polyparous. See *Multiparous*.

Poly'parus ribis. Clerical error for *Polyporus ribis* (q. v.)

Poly'pary. (*Polypus*.) The solid protective structures of the body-wall of a polyp. (Allman.) The term has been used also as meaning the *cænosarc* of a *polypidom*.

Poly'path'ia. (Πολύς, many; πάθος, affection, disorder. F. *polypathie*.) The simultaneous presence of several diseases; also, the frequent recurrence of any one disease.

Poly'path'ic. (Πολύς; πάθος.) Belonging to *Polypathia*.

Polype. Older spelling of *Polyp*.

Polype'an. Belonging to a *Polyp*.

Polype'dia. 1. (Πολύς, many; παῖς, an infant.) See *Polyædia*.

2. (Πολύς, many; L. *pes*, a foot.) See *Poly-podia*.

Polyperæ'mia. (Πολύς, much; *hyperæmia*.) Excessive or general *hyperæmia*.

Polyper'ia. (Πολύς, many; πηρός, maimed.) Congenital malformation of various parts of the body.

Polyper'ythrin. (*Polyp*; *erythrin*.) A respiratory pigment discovered by Moseley in certain of the *Cœlenterata*; identical with MacMunn's *Hæmatoporphyrin*.

Polypet'alous. (Πολύς, many; πέταλον, a leaf.) Having many *petals*.

Polypha'gia. (Πολύς, many or much; φαγεῖν, to devour. F. *polyphagie*; G. *Gefräßigkeit*.) Voracious appetite; syn. for *Bulimia*.

Polypha'gic. Syn. for *Polyphagous*.

Polyphagous. (Πολύς, many; φαγεῖν, to devour.) *Omnivorous*.

Polyphagy. (Πολυφάγος, eating to excess.) The state of being *Polyphagous*.

Polyphar'macon. (Πολύς, many; φάρμακον, a drug.) A medicine of many ingredients; also, a *panacea*.

Polyphar'macus. (Πολύς, many; φάρμακον, a drug.) One who makes too free use of drugs.

Polyphar'macy. (Πολύς, many; φάρμακον, a drug.) Term for a single drug, which unites in itself the virtues of several drugs, *Polychrestus*.

Also, the use of numerous drugs in a single prescription. Also, too free use of drugs.

Polyphel'mins. (Πολύπους, a polypus; ἔλμινς, a worm.) A polypoid intestinal worm.

Polypho'bia. (Πολύς, many; φόβος, fear.) The state of mind characterised by morbid fears of many things.

Polyphorum. (Πολύς, many; φέρω, to bear.) The protuberance situate beneath the ovary, which, as for example in *Ranunculus*, is the common receptacle of many ovaries.

Polyphorus. (Πολύς, many; φέρω, to bear.) Fruitful.

Polyphras'ia. (Πολύς, much; φράσις, speech.) Excessive or insane volubility.

Polyphylet'ic. (Πολύς, many; φυλή, a tribe.) *Biol.* Having several lines of descent.

Polyphyl'line. The same as *Polyphyllous*.

Polyphyl'lous. (Πολύς, many; φύλλον, leaf. F. *polyphylle*; G. *vielblattrig*.) Having many leaves.

Poly'phyllly. (Πολύς; φύλλον.) *Veg. Physiol.* An increase above the normal in the number of organs in a *whorl*.

Polyphypodesmeus. (Πολύπους, a

POLYPHYODONT—POLYPORUS

polyp; ὑποδέω, to underbind.) Term for an instrument for destroying a polypus by tying its neck.

Polyphyodont. (Πολύς, many; φύω, to produce; δόους, δόντος, a tooth.) Epithet for an animal (e.g. the shark) in which tooth-germs continue to appear through life, and the old teeth continue to be replaced by new ones. See also *Diphyodont* and *Monophyodont*.

Polyphysia. (Πολύς, much; φύσα, wind.) Flatulence.

Polyphytus. (Πολύς, many; φύτον, plant.) Containing many plants; epithet for a Genus having many species.

Polypiarium. The same as *Polypary*.

Polypiarus. A syn. for *Polypoid*.

Polypide. (*Polyp*.) The zoöid developed within the zoëcium in the *Polyzoa*; the *polype* of the older writers, and *brgyzooid* of Reichart. (Gould.)

Polyp'idom. (*Polyp*; δόμος, a house.) The whole number of individuals in a colony of the *Hydrozoa*.

Polypier. (*Polyp*.) A *polypide*; also, a *polypidom*.

Polyp'ifer. (*Polypus*; fero, to bear.) Syn. for *Polypidom*.

Polypiferous. (*Polypus*; L. fero, to bear.) Bearing, or producing, polypi.

Polyp'iform. (*Polypus*; L. forma, likeness.) Having the appearance or shape of a *Polypus*.

Polyp'igerous. (L. *polypus*; gero, to bear.) Syn. for *Polypiferous*.

Polypionia. (Πολύς, much; πίων, fat. F. *polypionie*; G. *Fettüberfluss*.) Excess of fat.

P. infan'tum. Excessive fatness in children.

Polypio'sis. (Πολύς, much; πίων, fat.) The same as *Polypionia*.

Polypiotēs. (Πολύς; πióτης, fatness.) The same as *Polypionia*.

Polypiparus. (L. *polypus*; pario, to bring forth.) Syn. for *Polypiferous*.

Polyp'iria. (Πολύς; πείρα, a trial or attempt. F. *polypirie*; G. *Vielerfahrenheit*.) Med. Great experience; also, skill or wisdom founded upon great experience.

Polypite. (*Polyp*.) A zoöid of the *Hydrozoa* or the *Actinozoa*, whether a separate organism or a member of a *Polyp-colony*.

Polyp'itrite. See *Polypotrite*.

Polyp'last. (Πολύς, many; πλαστός, moulded.) Multicellular.

Polyplas'tic. (Πολύς, many; πλαστός, moulded.) Having the capacity to assume various forms; also (of cells), having a complex composition.

P. el'ement. Histology. An element that undergoes metamorphosis into various shapes.

P. mus'cles. (G. *polyplastische Muskeln*.) Those muscles whose fibres form small groups, each of which only extends part of the length of the muscle. (Krause.)

Polyplas'tides. (Πολύς; πλαστός.) Götte's term for *Metazoa*.

Polypleth'ora. (Πολύς, much; πληθώρα, fullness.) Excessive *plethora*.

Polypne'a. See *Polypnæa*.

Polypne'ic. See *Polypnæic*.

Polypnœ'a. (Πολύς; πνοία, breathing.) Very rapid respiration.

Polypnœ'ic. Belonging to, or causing, *polypnæa*.

P. cen'tre. Term for a portion of the brain, between the corpus striatum and optic thalamus, stimulation of which is said to quicken the respiratory movements.

Polypod. (Πολύς, many; πούς, ποδός, a foot.) Biol. Having many feet.

Polypodes'mē. (Πολύπους, a polypus; δεσμός, a band.) An instrument devised for ligaturing the pedicle of a polypus.

Polypod'ia. (Πολύς, many; πούς, a foot. F. *polypodie*; G. *Vielfussigkeit*.) A monstrosity characterised by the presence of supernumerary feet.

Polypodia'ceæ. A Tribe of *Filices* whose type is *Polypodium*.

Polypod'itēs. (Πολυποδίτης [οἶνος].) Old epithet for wine flavoured with *Polypodium*, described by Aëtius.

Polypod'ium. (Πολύς; πούς, ποδός, a foot; so named from its many roots. F. *polypode*; G. *Tüpfelfarn*.) A Genus of the *Filices*.

P. aculea'tum. The *Aspidium aculeatum*.

P. adiantifor'mē. See *Calagualæ radix*.

P. ammis'olium. See *Calagualæ radix*.

P. argen'teum. See *Calagualæ radix*.

P. bar'ometz. See *Cibotium barometz*.

P. calagua'ia. See *Calagualæ radix*.

P. cetaræ'cinum. A syn. for *P. incanum*.

P. coria'ceum. See *Calagualæ radix*.

P. denta'tum. The *Asplenium filix fœmina*.

P. dryo'pteris. (Δρύς, the oak; πτέρις, a kind of fern.) The same as *P. vulgarē*.

P. filix fœmina. The *Asplenium filix fœmina*.

P. filix mas. The *Aspidium filix mas*.

P. inca'num. This species is demulcent, aperient, and anthelmintic.

P. inci'sum. The *Asplenium filix fœmina*.

P. margina'lē. The *Asplenium marginalē*.

P. mol'lē. The *Asplenium filix fœmina*.

P. pennat'idum. Syn. for *P. vulgarē*.

P. politum. See *Calagualæ radix*.

P. querc'inum. (L. *quercus*, an oak.) Another name for *P. vulgarē*.

P. tri'idum. The *Asplenium filix fœmina*.

P. virginia'num. Syn. for *P. vulgarē*.

P. vulgar'ē. The oak-fern, whose root was formerly used in decoction as a purgative.

Polypodus. (Πολύς; πούς. F. *polypode*; G. *vielfussig*.) Having many feet.

Polypody. Common name for *Polypodium*.

P. com'mon. The *Polypodium vulgarē*.

P. male. The *Polypodium filix mas*.

Polypœ'cus. (*Polypus*; οἶκος, a house.) Term for *Coral*, the dwelling of Polypi.

Polypohel'mins. See *Polyphelmins*.

Polypoid. (*Polypus*; εἶδος, form.) Like a polypus.

Polyporous. (*Polyporus*.) Having many pores.

Polyporus. (Πολύς; πόρος, a passage or pore.) 1. Bot. A Genus of large, stalked Fungi, many of which grow upon the trunks of diseased trees; so called because their tubular hymenium opens on the surface by pores. 2. Zool. Latreille's name for a Family of the "Elminthaprocta hirudiformia," characterised by having two or more air-vents or suckers.

P. fomentarius. (*L. fomes*, touch-wood.) This species infests oaks and beeches. When dried and prepared, it forms surgeon's *agaric*.

P. ignarius. Also termed *Boletus ignarius*. Infests willows. Used as one of the sources of *agaric*.

P. officinalis. Also termed *Boletus laricis*. This fungus grows upon the trunks of larches. Stripped of its coat, it is bleached in the sun and pounded; and the prepared substance, which is colourless and bitter, is used as a drastic purgative, and also to check the night sweats of phthisis. It is also the source of *Agaric acid*.

P. ribis. A species infesting the currant-tree.

Polyposia. (Πολύς, much; πόσις, a drinking. *F. polyposie*; *G. Trinksucht*.) Syn. for *Polydipsia*.

Polyposis. (*Polypus*.) The condition of having polypi.

P. ventriculi. Term for a polypoid condition of the mucous membrane of the stomach.

Polypostem. A syn. for *Polyp-stem*.

Polypostyle. (*Polypus*; στυλος, a pillar.) A *Dactylozooid* or *Dactylozoid*.

Polypus. (*Polypus*.) Having polypi or a polypus.

Polypotome. (*Polypus*; τομή, a cutting.) An instrument for incising the pedicle of a polypus.

Polypotrite. (*Polypus*; τρίβω, to rub or bruise.) The same as *Polyprите*.

Polypous. See *Polyposus*.

Polypragmosynē. (Πολυπραγμοσύνη, meddlesomeness. *G. Vielbeschäftigtsein*.) *Med.* Old term for officiousness or meddlesomeness in practice.

Polypterus. (Πολύς; πτερόν, a feather, also a wing.) *Entomol.* Having many (including any number over two) wings. *Ornithol.* Having many feathers.

Polyptome. See *Polypotome*.

Polyprite. (*Polypus*; τρίβω, to crush.) An instrument for crushing polypi.

Polypus. (Πολύς, many; πούς, a foot. *F. polype*; *G. polyp*.) *Med.* and *Surg.* A purely descriptive term applied to certain tumours, from their supposed resemblance to the invertebrate animal called *Polypus*, especially in having numerous ramifications like legs or tentacles. As a fact, the tumours so called spring from mucous or serous surfaces, and are usually pedunculated. They may present every variety of pathological structure. *Zoöl.* A *Polyp*.

P., a'nal. Term for a *Polypus*, *rectal*, occurring near the anus. Usually in adults, and associated with an intractable ulcer where the free end of the polypus impinges on the bowel.

P., aur'al. (*L. auris*, an ear.) These polypi spring from the membrana tympani, or the interior of the tympanum.

P., blood. Syn. of *P., placental*.

P., bronchia'lis. Bronchial polypus. Term for the expectorated casts of the bronchial tubes in *Plastic bronchitis*.

P. carno'sus. Fleishy polypus. A term for *Sarcoma*.

P., cyst'ic. A *polypus* containing cysts.

P., fibrinous. The same as *P., placental*.

P., fibrous. Firm, often of slow growth. Composed largely of fibrous tissue.

P., flesh'y. Syn. of *P., fibrous*.

P., follic'ular. A polypus which contains a number of small mucous glands.

P. for'ceps. A special kind of long forceps for holding and removing polypi.

P., gelat'inous. Syn. of *P., mucous*. Also, term applied especially by Thomas to a polypus growing from the cervix uteri, and composed of enlarged mucous glands.

P., intesti'nal. Springs from the mucous membrane of the bowel, especially the rectum, and is composed of the tissue characteristic of the part from which it grows.

P., larda'ceous. A polypus that has undergone lardaceous degeneration.

P., larynge'al. Arises from the mucous membrane of the larynx.

P., lipo'matous. Term for a pedunculated *Lipoma*.

P., malig'nant. Composed of sarcomatous or carcinomatous elements.

P. mamil'læ. An old term for the nipple.

P., mu'cous. Soft, red; often more rapid in its growth than the fibrous polypus, and composed of mucous or myxomatous elements.

P., myo'matous. A polypus composed mainly of unstriped muscle.

P., myxo'matous. A form of *myxoma*.

P., na'sal. Mucous or fibrous in structure, covered with ciliated epithelium, springing from the nasal fossæ, especially from the upper portion of the external wall.

P., na'so-pharynge'al. Springs from the structures at the back of the pharynx, and the posterior portion of the nasal fossæ.

P. of ear. See *P., aur'al*.

P. of the heart. Old term for a fibrinous blood-clot found post-mortem attached to the interior of the heart, and formerly believed to be a polypus.

P., os'seous. Term for a polypus which contains bony tissue.

P., placen'tal. See under *P., uterine*.

P., rasp'berry cel'lular. Term for the commonest variety of aural polypus.

P., rec'tal. Commonest in children. They are fibrous, lobular, papillary, and sometimes contain cysts. They give rise to hæmorrhage, straining, and irritation, sometimes to prolapse of the bowel. In adults they are less common, and usually occur in the form of *P., anal* (q. v.).

P., soft. Term used as a syn. for *P., mucous*.

P., spong'y. A syn. for *P., mucous*.

P., ston'y. Term for a polypus which has undergone calcareous infiltration.

P., tooth. A polypus growing from the pulp of a carious tooth.

P., u'terine. The varieties usually described are:—1. *Cystic*, derived from *Nabothian follicles*. 2. *Mucous*, springing from the mucous membrane, especially that of the cervix uteri. 3. *Placental*, a fibrinous polypus, the result of a retained piece of placenta, with subsequent deposit upon it of fibrin. 4. *Submucous*, arising from the muscular wall of the uterus, and especially from its body.

P., vas'cular. Term for a polypoid *Angioma*. (Gould.)

P., ves'cal. (*L. vesica*, the bladder) Springing from the mucous membrane of the bladder.

Polyrhiz'al. The same as *Polyrhizous*.

Polyrhí'zon. (Πολύς; ῥίζα, a root.) A name for *Polypodium filix mas.*

Polyrhí'zous. (Πολύς; ῥίζα.) Having many roots.

Polyrhœ'a. (Πολύς, much; ῥέω, to flow.) An excessive discharge or flow.

Polyrrhœ'a. See *Polyrhœa.*

Polysac'charides. *Poly-*; *saccharide.*) One of the three groups into which the *Carbohydrates* are divided; the other two being glucoses and disaccharides. The polysaccharides are ethereal anhydrides of the glucoses.

Polysalicyl'ic acids. Anhydrides of the salicylic radical, formed by the action of phosphoric oxychloride on salicylate of sodium.

Polysar'cia. (Πολύς, much; σάρξ, flesh. *F. polysarcie*; *G. Polysarkie, Fettleibigkeit.*) Old term for bulkiness, corpulence. Two kinds of *polysarcia* were distinguished:—*a. Polysarcia carnosa*, or excessive fleshiness; *b. Polysarcia adiposa*, or excessive fatness.

P. cor'dis. Syn. for *Cor adiposum.*

Polysarco'sis. (Πολύς, much; σάρκωσις, growth of flesh.) The process which eventuates in *Polysarcia.*

Polysar'cous. (Πολύς, much; σάρξ, flesh.) Exhibiting *Polysarcia*; corpulent.

Polyscel'ia. (Πολύς, many; σκέλος, the leg and foot. *F. polyscelie*; *G. Vielschenkelkeit.*) A form of monstrosity characterised by the presence of supernumerary feet.

Polyscelus. A foetal monster exhibiting *Polyscelia.*

Polyschi'dia. (Πολυσχιδία, many parts.) A splitting into many parts.

Polyschis'tus. (Πολύς, much; σχίζω, to cleave.) Much split or divided.

Polyscope. (Πολύς, much or many; σκοπέω, to look at.) An apparatus invented by Trouvé, consisting of a combination of the instruments for visual examination of the eye, ear, larynx, urethra, &c., and fitted up with an electric light.

Polysep'alous. (Πολύς. *L. sepalum*, a sepal; *F. polysépale*; *G. vielkelchblattrig.*) Epithet applied to a *calyx* that is made up of sepals distinct from one another.

Polysial'ia. (Πολύς, much; σίαλον, spittle. *F. polysialie*; *G. Speichelüberfluss.*) Excessive flow of saliva. The same as *Ptyalism.*

Polyskel'ia. See *Polyscelia.*

Polyskelus. See *Polyscelus.*

Polysoma'tia. (Πολύς, much; σῶμα, the body.) A syn. for *Polysarcia.*

Polyso'mia. (Πολύς, many; σῶμα, the body. *F. polysomie*; *G. Polysomie.*) A form of monstrosity characterised by the attachment of several bodies to a single head.

Polysomit'ic. (*Poly-*; *somite.*) *Biol.* Composed of *somites.*

Polyspas'ton. (Πολύς; σπάω, to draw, pull.) *Surg.* Old term for a kind of windlass with many pulleys, used for reducing dislocations; said to have been invented by Archimedes.

Polysperm. (Πολύς, many; σπέρμα, a seed.) A plant that is *polyspermatous.*

Polysper'mal. The same as *Polyspermatous.*

Polyspermatous. (Πολύς; σπέρμα. *F. polysperme*; *G. vielsamig.*) Having many seeds.

Polysper'mic. (Πολύς; σπέρμα.) Epithet applied to an organism whose ovum requires

more than one spermatozoön for its impregnation.

Polysper'mism. (Πολύς; σπέρμα.) The secretion and discharge of an abnormally large amount of *semen.*

Polysper'mous. (Πολύς; σπέρμα.) The same as *Polyspermatous.*

Polyspermy. (Πολύς; σπέρμα.) Impregnation of an ovum by two or more spermatozoa; the state of being *polyspermic.*

Polyspire. (Πολύς, many; σπείρα, anything twisted round a stem.) *Biol.* Growing in a continuous spiral.

Polysporang'ium. (*Poly-*; *sporangium.*) A *Sporangium* that contains many spores.

Polyspore. (*Poly-*; *spore.*) A compound spore. (Gould's Dict.)

Polyspored. A syn. for *Polysporous.*

Polyspor'ic. The same as *Polysporous.*

Polyspor'ous. (Πολύς, many; σπόρος, seed.) Giving rise to many *spores.*

Polystemonous. (Πολύς, many; στήμων, a thread.) Having a large preponderance of *stamens.*

Polystethoscop'ium. (Πολύς; stethoscopia.) *F. polystéthoscope*; *G. Polystethoskop.*) Old term for a kind of stethoscope that could be put to several different uses.

Polysthen'ic. (Πολύς, much; σθένης, strength.) Having much or great strength.

Polystich'ia. (Πολύς; στίχος, a row.) The presence of several rows of eyelashes.

Polystichous. (Πολύς, many; στίχος, a row.) Arranged in a number of rows.

Polystichum. (Πολύς; στίχος, a row.) Term for the *Aspidium filix mas*, or male fern. (Roth.)

P. callip'teris. The same as *Polystichum.*

P. filix mas. The same as *Polystichum.*

Polystig'mous. Epithet for flowers that have many *stigmas.*

Polystoma. (Πολύς, many; στόμα, mouth.) A Genus of *Vermes*, order *Trematoda.* (Rudolphi.)

P. pingui'cola. (*L. pinguis*, fat; *colo*, to inhabit. Also termed *Hexathyridium pingui-cola.* A *Trematode* worm infesting the human ovary. See *Parasites, classification of.*

P. pingui'culum. The same as *P. pingui-cola.*

P. sangui'cola. (*L. sanguis*, blood; *colo*, to inhabit.) The same as *P. venarum.*

P. venar'um. Also termed *Hexathyridium venarum.* A *Trematode* worm infesting the veins in man. See *Parasites, classification of.*

Polystom'atous. (*Polystoma.*) Having many *stomata*, or mouths.

Polystyl'ous. (*Poly-*; *style.*) Epithet for a flower that has many *styles.*

Polysul'phide. (Πολύς, many; *sulphide.*) A sulphide containing more than two atoms of sulphur in combination. The polysulphides are now termed more exactly, according to the number of atoms of sulphur present in combination, tri-, tetra-, penta-sulphides, &c.

Polysul'phuret. (Πολύς, many; *sulphuret.* *F. polysulfure.*) Old term for *Polysulphide.*

Polysulphure'tum. (Mod. *L.*) A *Polysulphuret.*

Polysymmet'ria. (Πολύς, much; *συμμετρία*, symmetry.) Bilateral symmetry occurring at many points.

POLYTECHNIC—POMPHOLYX

Polytechnic. (Πολύς, many; τέχνη, art.) Relating to several arts.

Polythalamie. The same as *Polythalamous*.

Polythalamous. (Πολύς, many; θάλαμος, a chamber.) *Multilocular*.

Polythelia. (Πολύς; θηλή, a nipple.) The presence of supernumerary nipples.

Polythelism. Syn. for *Polythelia*.

Polythrix. (Πολύς, much; θρίξ, hair.) See *Polytrichus*.

Polytocia. (Πολύς, many; τόκος, offspring.) Fecundity.

Polytocous. (Πολύς, many; τόκος, offspring.) Exhibiting *Polytocia*; fertile.

Polytokis. (Πολύς, many; τόκος, a birth.) Epithet for a woman who bears three or more children in one pregnancy. (Billings.)

Polytomy. (Πολύς, many; τόμος, a cutting.) A division into many parts.

Polytrichia. (Πολύς, much; θρίξ, hair. *F. polytrichie*.) Unusual abundance of hair.

Polytrichosis. (Πολύς, much; θρίξ, hair.) Syn. for *Polytrichia*.

Polytrichum. (Πολύς; θρίξ.) An Order of *Musci*. Also, shortened name for the *P. vulgarë*.

P. communë. Syn. for *Asplenium trichomanoides*.

P. juniperinum. The haircap moss, or robin's rye. Hab. North America. Action, diuretic.

P. vulgarë. Syn. for *Adiantum aureum*.

Polytrichus. (Πολύς; θρίξ.) *Bot.*, *Zoöl.*, and *Entom.* Having an abundance of hairs.

Polytrophia. (Πολύς, much; τροφή, nourishment. *F. polytrophie*.) *Polytrophie*.

Polytrophie. (*Polytrophia*.) Excessive nutrition.

Polytypal. (Πολύς, many; τύπος, a type.) Exhibiting many types.

Polyuresia. See *Polyuresis*.

Polyuresis. (Πολύς, much; ὕρσις, a making water.) The same as *Polyuria*.

Polyuria. (Πολύς, much; ὕρον, urine. *F. polyurie*; *G. Vielharnen*.) Secretion of an excessive quantity of urine, a symptom both in diabetes mellitus and diabetes insipidus. It occurs also, either with or without glycosuria, with any lesion of a certain part of the floor of the fourth ventricle of the medulla oblongata, which has been termed the "Diabetic centre." It is a symptom also in chronic interstitial nephritis and in lardaceous disease of the kidneys; and occurs transiently in hysteria and nervous excitement, and at the crisis of fevers.

Polyuric. Belonging or relating to, or affected with, *Polyuria*. Also, an individual affected with *Polyuria*.

Polyuricus. Latinised form (*Polyuricus*, -a, -um) synonymous with *Polyuric*.

Polyvalent. (*Poly*; *valent*.) See *Multivalent*.

Polyzoa. (Πολύς, many; ζῶον, an animal). The sea mosses. A class of the *Molluscoidea*, forming colonies of zooids, each zooid being furnished with a ring of tentacles.

Poma. (L. Plur. of *Pomum*.) Apples. Also (*Gr. πῶμα*, a lid), *Comp. Anat.*, a name applied to the occipital operculum of the monkey's brain. (Gould.)

P. aurantiorum. A name for bitter oranges.

P. colocynthis. A name for the fruits of the colocynth.

Pomaceous. Belonging, or relating, to *Pomum*.

Pomaceum. (L. *pomum*, an apple.) A name for cider.

Pomade. *Fr.* (L. *pomatum*, from *pomum*, apple; because *pomade* is a cosmetic, whose ingredients originally were apples and fat. *G. Pomade*.) A pharmaceutical preparation, consisting of animal fat and some medicinal substance. It is applied externally, and only differs from an ointment in its softer consistency, and the absence of resin.

Pomambra. (L. *pomum*, apple; *ambra*, ambergris.) Name for a certain medicated ball, made of ambergris, civet, musk, and other aromatic substances. This ball used formerly to be carried about as a preventive against infection.

Poman'der. (L. *pomum*, an apple.) See *Pomambra*.

Pomatum. (L. *poma*; plur. of *pomum*, an apple.) The same as *Pomade*.

P. nervinum. The same as *Balsam, nervine*.

Pomalea ipecacuanha. This plant is one source of *Ipecacuanha*, white (q. v.).

Pome. (L. *pomum*, an apple.) *Bot.* Any fleshy, syncarpous fruit, like the apple, which is composed mainly of an adherent calyx.

Pomegranate. (L. *pomum*, an apple; *granatus*, having seeds. *F. pomme de sténade*; *G. Granatapfel*.) The fruit of the *Punica granatum*.

P., al'kaloid of. *Pelletierine* (q. v.).

P. flowers. See *Granati flores*.

P. fruit bark. See *Granati fructus cortex*.

P. rind. See *Granati fructus cortex*.

P. root bark. See *Granati radice cortex*.

Pomiferous. (*Pome*; L. *fero*, to bear.) Bearing *pomes*.

Pomiform. *Pome*-shaped.

Pommade. (*F.*) See *Pomade*.

P. de Gon'dret. An ointment of the French codex. It consists of tallow and prepared lard heated with solution of ammonia, agitated vigorously, and then cooled.

Pommelfoot. A syn. for *Clubfoot*.

P. joint. A syn. for *Condylloid joint*.

Pommelière. (*F.*) Bovine tuberculosis.

Pomphi. Plur. of *Pomphus*.

Pompholygeron. (Τὸ πομφολυγερὸν.) Old term for a vesicatory plaster; described by Paulus Ægineta, vii, 7 (*Adams' Transl.*, vol. iii, p. 563).

Pompholygmus. (*Pompholyx*.) An eruption of bullæ. (Gould's Dict.)

Pompholygodermatitis. (Πομφόλυξ, a water-bubble; *dermatitis*.) Bullous inflammation of the skin.

Pompholygodes. (Πομφόλυξ; εἶδος, likeness.) Having the appearance of *Pompholyx*; also, suffering from *Pompholyx*.

Pompholyx. (Πομφόλυξ, a water-bubble. *F. pompholyx*; *G. Pomphigus*, *Blasen-ausschlag*.) A vesicle containing fluid. Applied, in common with the term *Pemphigus*, to a disease characterised by the appearance of bullæ on the skin, at first containing clear, but subsequently turbid, fluid. See *Pemphigus*. Also, ancient name for the protoxide of zinc.

P. benignus. A variety of *Pompholyx*, characterised by the appearance of vesicles about

the size of peas, which burst in a few days and then heal up.

P. diu'tina. See *P. diutinus*.

P. diu'tinus. A form characterised by its chronicity, and the appearance of successive crops of bullæ, sometimes on parts of the body distant from one another. There is considerable constitutional disturbance.

P. tu'tia. An ancient name for zinc protoxide. See also main heading.

Pom'phos. (Πομφός.) A blister on the skin; also, a wheal.

Pom'phus. The same as *Pomphos*.

Pom'pion. A syn. for *Pumpkin*.

Po'mum. L. (F. *pomme*; G. *Apfel*.) An apple.

P. Ada'mi. (From the idea that the forbidden fruit stuck in Adam's throat. F. *pomme d'Adam*; G. *der Adam's Apfel*.) Adam's apple. The angular projection in front of the neck formed by the thyroid cartilage in men.

P. amo'ris. (F. *pomme d'amour*; G. *Liebesapfel*.) The apple of love. The fruit of the *Solanum lycopersicum*.

P. hierosolymita'num. (*Hierosolyma*.) A syn. for *Momordica balsamina*.

P. melon'gena. The *Solanum melongena*.

P. mirab'ilë. A syn. for *Momordica balsamina*.

P. querc'na. An oak-gall.

P. spino'sum. A syn. for *Datura stramonium*.

Ponce de Léon Spring. A chalybeate spring; Atlanta, Fulton County, Georgia.

Poncho Springs. Thermal waters, temp. 90° to 168° F.; Chaffee County, Colorado.

Pond-dog'wood. The *Cephalanthus occidentalis*.

Pond-lily. A syn. for *Water-lily*.

Pond-shovel. The *Unisema dentifolia*.

Pon'dera et mensuræ. (L. *pondus*, -eris, a weight; *mensura*, a measure.) Weights and measures.

Ponderability. (L. *ponderabilitas*.) The quality of possessing weight.

Pond'ing. An accumulation of liquid as in a pond. (Gould's Dict.)

P. of the li'quor am'nii. The retention of a large quantity of the liquor amnii above the head of the fœtus in labour, after rupture of the membranes. (Gould's Dict.)

Pon'dus. (L. *pondus*, -eris. F. *poids*; G. *Gewicht*.) Weight. Formerly applied to a definite weight—1 lb., or 12 ounces (= *Libra*).

P. pharmaceuticum. Pharmaceutical weight.

Pongam'ia. (E. Ind. *pongam*.) A Genus of trees of the Order Leguminosæ, native to the East Indies.

P. glab'ra. A tree of the Genus *Pongamia*, native to India, China, Australia, and Fiji. The seeds yield poonga or kurung oil, which is used by the natives in skin diseases. It has been employed for pityriasis versicolor, and rheumatism, lepra, and herpes.

Pon'os. (Πόνος, suffering.) An endemic disease occurring in the Greek islands Hydra and Spezzia, affecting children, and characterised by marasmus, enlargement of the spleen, and a peculiar odour to the urine. The disease is usually fatal, either from the marasmus, from hæmorrhage, or from general dropsy.

Pons. (L. Gen. *pontis*; plur. *pontes*. F. *pont*; G. *Brücke*.) A bridge; applied as a

descriptive term to several anatomical structures, and often used, for the sake of brevity, to mean *P. Varolii*.

P. basilar'is. A name for the basilar process of the occipital bone.

P. cerebel'li. A name for the *P. Varolii*.

P. he'patis. (L. *hepar*, -atis; from Gr. ἥπαρ, the liver.) A prolongation of hepatic tissue, sometimes present, bridging over the umbilical fissure.

P. Syl'vii. (*Sylvius*.) A name for the *Corpora quadrigemina*.

P. Tar'ni. Another name for *Space, perforated, posterior*.

P. Varo'lii. (L.) The bridge of Varolius.

The part of the cerebro-spinal system which lies above the *Medulla*, and below the *crura cerebri*. Its anterior or ventral portion consists of transverse fibres which connect the two lateral hemispheres of the cerebellum. The more superficial of these fibres gather at the sides to form the middle peduncles of the cerebellum. Its deeper portion consists mainly of longitudinal strands, which connect various parts of the medulla with portions of the cerebrum. Thus, one set of fibres pass from the anterior pyramid through the pons into the *crura cerebri*; another set pass from the *olivary body* through the pons to the *Corpora quadrigemina*, and other parts of the brain; while a third set pass from the lateral and posterior columns under the name of *fasciculi teretes*, up the floor of the fourth ventricle into the deeper parts of the *crus*. The reticular formation and grey matter of the medulla is continued through the pons; amid the former, nerve cells are freely distributed, and several important nuclei or collections of cells exist, probably those from which the seventh and parts of the fifth nerve rise. The median septum or raphe of the cord is represented in the dorsal portion of the pons, but is nearly obliterated in the ventral portion by the extensive development of commissural fibres.

P. Varo'lii, nu'clei of. See under main heading.

P. zygoma'ticus. The zygomatic arch, or zygoma.

Pont'al. The same as *Pontile*.

Pontede'ra. The same as *Pontederia*.

Pontede'ria corda'ta. A syn. for *Unisema deltifolia*.

Pontibrach'ium. (L. *pons* [the *Pons Varolii*]; *brachium*, an arm.) A name for the *Pons Varolii*.

Pontic'ulus. (Dim. of L. *pons*, *pontis*, a bridge.) Anat. A little bridge or connecting band of tissue. A term for the posterior part of the roof of the fourth ventricle of the brain; also, syn. of *Propons*.

P. auric'ulæ. The oblique ridge on the median surface of the *auricle* or external ear, along which is inserted the *retrahens auriculam*.

P. hepat'icus. (L. *hepar*, *hepatis*, the liver.) Syn. for *Lobulus caudatus*.

P. promonto'rii. (Gen. of *promontorium*.) The bony ridge on the internal wall of the tympanic cavity, below the foramen ovale, which runs from the promontory to the pyramid.

Ponticum absin'thium. The *Artemisia pontica*.

P. mel. A poisonous honey which was found in Heraclea, and was said to resemble aconite in its action when taken internally.

PONTILE—POPLITEUS

Pontile. The same as *Pontine*.

Pontinal. (L. *pons*, a bridge.) *Biol.* Bridging over.

Pontine. Belonging to the *Pons* (Varolii).

P. hemiple'gia. Hemiplegia consequent on a lesion of the *Pons*. When the lesion is low down—below the decussation of the fibres of the facial nerve—this is a *crossed hemiplegia*; but, when above this, an ordinary uncrossed hemiplegia.

P. nu'clei. See under *Pons Varolii*.

Pontivy. (F.) In Dep. Morbihan, France, noted for its ferruginous springs.

Pon'to-bul'bar. (*Pons*; *bulb.*) Belonging to the *Pons* (Varolii) and to the *Bulb* (*bulbus spinalis*).

P.-crur'al. (*Pons*; *crus.*) Belonging to the *Pons* (Varolii) and to the *Crus* or the *Crura* (*cerebri*).

Pool'root. Common name in America for the *Eupatorium ageratoides*.

Pool'wort. Common name in America for the *Eupatorium aromaticum*.

Poon'ga oil. The oil obtained from the seeds of *Pongamia glabra* (q. v.).

Poor man's band'age. Syn. for *Galen's bandage* (q. v.).

Poor man's pep'per. See *Polygonum hydropiper*.

Poor man's plas'ter. Name for a plaster the ingredients of which are tar, resin, and yellow wax.

Pop'lar. (L. *populus*. F. *peuplier*; G. *Pappel*.) Common name for the Genus *Populus*.

P., Amer'ican. The *Populus nigra*.

P., balm of Gil'ead. The *Populus canadensis*.

P., black. The *Populus nigra*.

P.-buds. (L. *gemmæ populi*.) Term used especially for the leaf-buds of *Populus nigra*, which contain a balsam, and are to some extent astringents when applied locally.

P., tu'lip-bearing. The same as *P., American*.

Pop'lès. L. (F. *jarret*; G. *Kniebeuge*, *Kniekehle*.) The ham, or *Popliteal space* (q. v.).

Pop'lesy. A term for *Apoplexy*. (Dun-glison.)

Poplitæ'us. See *Popliteus*.

P. accesso'rius. Syn. for *Plantaris*.

P. bi'ceps. Syn. for *Plantaris*.

P. ger'minus. Syn. for *Plantaris*.

P. mi'nor. Syn. for *Plantaris*.

P. supe'rior. Syn. for *Plantaris*.

Poplite'ad. A term introduced by Dr. Barclay to mean towards the *Popliteal aspect*.

Poplite'al. (*Poples*, ham.) Relating, or belonging to, the *Poples*, or to the *popliteus* muscle.

P. a'neurysm. An aneurysm which develops in the popliteal artery, one of the commoner sites of aneurysm. It may be either arterial or arterio-venous; it often leads to gangrene, in unfavourable cases, from obliteration of the popliteal vein.

P. ar'tery. That part of the main artery of the lower extremity which lies between the aperture in the adductor magnus muscle above, and the lower border of the popliteus below, at which latter spot it divides into the *anterior* and *posterior tibial* arteries. It lies deeply along the centre of the popliteal space, accompanied by its vein and the internal popliteal nerve;

Its branches are given off in two sets:—1. *Muscular*; *superior* and *inferior*. 2. *Articular*, to the knee-joint; *superior* and *inferior external* articular, *superior* and *inferior internal* articular, and a median branch, the *azygos* articular.

P. as'pect. The aspect or surface of the *Poplès*.

P. bur'sa. The bursa which intervenes between the thick tendon of origin of the popliteus and the articulation between the tibia and fibula. It usually communicates with the knee-joint.

P. fos'sa. Syn. for *P. space*.

P. glands. The group of lymphatic glands situated in the *P. space*, which receive the deep lymphatics from the leg and foot, and a few of the outer set of the superficial lymphatics from the same regions.

P. lig'ament. Another name for the posterior ligament of the knee-joint.

P. line. A rough linear marking crossing obliquely the posterior surface of the *tibia*, running in a direction downwards and inwards from the outer tuberosity, and giving origin to the soleus muscle.

P. mus'cle. See *Popliteus*.

P. nerve, exter'nal. Also termed the *Peroneal nerve*. The smaller branch into which the great sciatic nerve divides. Its origin is usually in the lower third of the thigh, but the bifurcation may take place higher; it lies at the external side of the popliteal space, close to the margin of the biceps. The nerve can be felt behind the head of the fibula; about an inch lower than this it pierces the peroneus longus, and divides into the *anterior tibial* and *musculo-cutaneous* nerves.

P. nerve, inter'nal. The larger of the two terminal branches of the great sciatic. It descends through the middle of the popliteal space to the lower border of the popliteus muscle, where it becomes the *posterior tibial*. It supplies the two heads of the *Gastrocnemius*, the *Plantaris*, *Soleus*, and *Popliteus*.

P. notch. Syn. for *Intercondylar notch*.

P. plex'us. Term for some small branches of the anterior crural nerve which form a sort of plexus round the popliteal artery.

P. re'gion. The *P. space*.

P. space. (F. *espace poplitée*.) The lozenge-shaped space in the ham, extending from the aperture in the *Adductor magnus* to the lower border of the *Popliteus*; formed above by the inner and outer ham-string muscles, and below by the two heads of the *gastrocnemius*. Its floor is formed principally by the back of the shaft of the femur and the fascia covering the popliteus muscle; its roof, by fascia lata. Its chief contents are the popliteal vessels, nerves, and glands.

P. sur'face. (L. *planum popliteum*.) The triangular space at the lower end of the posterior surface of the femur, between and below the two supracondylar lines.

P. ten'dons. The hamstring tendons which bound the popliteal space.

P. vein. Formed by the junction of the *venæ comites* of the anterior and posterior tibial arteries; its course corresponds to that of the *P. artery*.

Poplite'ën. Belonging to the popliteal space in itself. (Gould's Dict.)

Poplite'us. (L. *poples*, the ham. F.

poplitē; G. *Kniekehlemuskel*.) A triangular muscle which, arising from the external condyle of the femur and the posterior ligament of the knee-joint, is inserted into the triangular surface on the tibia above the soleal ridge. It is a flexor of the leg upon the thigh, and also an internal rotator, when the leg is flexed; its nerve-supply is from the internal popliteal.

P. accessorius. A syn. of *P. minor*.

P. bi'ceps. A syn. of *P. minor*.

P. gem'inus. A syn. of *P. minor*.

P. mi'nor. A distinct portion of the *popliteus*, occasionally present, arising in conjunction with the plantaris from the external condyle of the femur, or from the sesamoid bone in the outer head of the gastrocnemius, and inserted into the posterior surface of the capsule of the knee-joint, which it renders tense.

Also, a syn. for the *Plantaris*.

P. mus'cle. See *Popliteus*.

P. supe'rior. A syn. for *Plantaris minor*.

Poplit'ic. The same as *Popliteal*.

Pop'onax. The same as *Opoponax* (q. v.).

Poppy. (Sax. *Papig*. F. *pavot*; G. *Mohn*.) The common name of the Genus *Papaver*.

P. cap'sules. The dried ripe capsules of the white poppy grown in Britain. See *Papaveris capsula*, *Decoctum papaveris*.

P., cel'andine. Common name for the *Stylophorum diphylllum*.

P., corn, red. Common name for the *Papaver rhæas*.

P. fomenta'tions. The use of *Decoctum papaveris* hot, as a local anodyne application.

P. heads. Poppy capsules. See *Papaveris capsula*.

P., horn. The *Stylophorum diphylllum*.

P., pill. A name for *Opium*.

P., prick'ly. The *Argemonë mexicana*.

P., red corn. Common name for *Papaver rhæas*.

P., red, pet'als of. The scarlet petals of *Papaver rhæas*. See *Rhæados petala*, *Syrupus rhæados*.

P. seeds. The seeds of *Papaver somniferum*, which contain a bland, drying oil used for salads, soaps and paints, and to adulterate almond-oil and olive-oil.

P., spat'ling. Common name for the *Cucubalus behen*.

P.s, sy'rup of. See *Syrupus papaveris*.

P., thorn. The *Argemonë mexicana*.

P., white. The common name of *Papaver somniferum*.

P., wild. Common name for the plant called *Calocatanus*.

Popula'go. (L. *populus*, the poplar, from a similarity of the leaves.) A name for the *Caltha palustris*.

Populeum. (L. *populus*.) Old term for an ointment made from the buds of the white poplar; alluded to by Paracelsus.

Populin. (*Populus*.) Benzoyl-Salicin. $C_{20}H_{22}O_6$. A crystalline glucoside obtained from several species of *Populus*. A white substance, of a sweetish taste, sparingly soluble in water, soluble in alcohol. Acids decompose it, with formation of benzoic acid and glucose. It is believed to be febrifuge, and has been used in dysuria; it is also a tonic and vermifuge. Given in doses of 2 to 4 grains.

Pop'ulus. L. (F. *peuplier*; G. *Pappel*.) A Genus of the *Salicaceæ*.

P. balsam'ifera. Balsam poplar; a tree

whose bark contains *salicin*, and yields a resin termed *Tacamahac* (q. v.), and whose buds have a diuretic action.

P. can'dicans. Balm of Gilead; a variety of *P. balsamifera*.

P. nigra. (F. *le peuplier noir*; G. *die schwarze Pappel*.) Black poplar, whose buds have been recommended in chronic lung affections. The buds contain *populin* and *salicin*.

P. pe'nula. Syn. for *P. tremula*.

P. tacamahac'a. A name given to *P. balsamifera*, on account of its yielding the resin *Tacamahac*.

P. trem'ula. The European aspen. Its properties resemble those of *P. nigra*.

P. tremulo'id'es. The American aspen. Properties similar to those of *P. tremula* and *P. nigra*.

Por'cate. (L. *porca*, a ridge between two furrows.) Biol. Marked with deep furrows.

Porcel'lanæ. Nom. pl. (L. *porcellana*, a porcelain vessel.) A name for *Urticaria*.

Porcellan'eus. The same as *Porcellanus*.

Porcell'anous. (L. *porcellana*, a porcelain vessel.) Relating to, or resembling, porcelain. Applied to a certain condition of the skin in fever.

Porcellus. Lat. (A little hog.) A skin disease characterised by a thickening and scalliness of the epidermis.

Porci'nus. (*Porcus*.) Relating to the hog or to swine; porcine.

Por'culus. Lat. (A little hog.) The same as *Porcellus*.

Por'cupine disease'. See *Hystri-ciasis*.

P. men. Term for people suffering from a peculiar malformation (*P. disease*) of the epidermis, which is produced into pointed processes, moulded on the papillæ of the cutis vera, resembling the shorter quills of the hedgehog or the porcupine.

P. skin. The same as *P. disease*.

Por'cus. (L. *porcus*. F. *porceau*; G. *Schwein*.) A hog.

Also (*πόρκος*, a kind of fishing-net), an old term for the *Vulva*.

P. mari'nus. The sea-hog; a name for the porpoise.

Por'dë. (*Πορδή*.) *Crepitus ventris*.

Pore. (*Πόρος*, a passage. L. *porus*; F. *poré*; I. *poro*; G. *Pore*.) Anat. and Zool. A small opening. Applied to small openings in the skin of an animal body, connected with the functions of absorption and exhalation; these openings being in reality the openings of sebaceous or sweat-glands.

Bot. Term applied to certain openings present in vegetable organisms; e.g. the opening, *ostiolum*, in the wall of the *perithecia* of the *Pyrenomycetes*, which serves for the discharge of the spores.

P., abdom'inal. An external opening in the abdominal cavity of certain fishes through which the ova are discharged.

P.-canals'. Extremely minute channels supposed to exist, passing through certain animal cellular structures, e.g. the pores of the skin. (See main heading).

P.s of skin. See under main heading.

P.s, phys'ical. An expression used in *Physics* to denote interstices not large enough to prevent the attracting or repelling forces of the molecules from acting across them.

P.s, sens'ible. *Physios.* Interstices between the molecules of matter, of such a size that the molecular forces of attraction and repulsion cannot act across them.

P.s, sweat. The openings of the ducts of sweat-glands.

P., vas'cular. A transverse ventral opening in the round worms, *Ascarides*, which forms the common opening for the two lateral (presumably excretory) organs.

Pored milk. The same as *Poured milk*.

Porencephalia. *Porencephaly.*

Porencephalic. The same as *Porencephalous*.

Porenceph'alous. Belonging to, or the subject of, *Porencephaly*.

Porenceph'alus. *Porencephaly.*

Porenceph'aly. (Πόρος, a means of passing, hence, a pore; ὁ ἐγκέφαλος, the brain.) 1. A depression on the upper surface of the cerebral hemisphere, sometimes communicating with the lateral ventricle. It is usually congenital, but may be formed after birth secondarily to a local inflammation, hæmorrhage, or embolism. 2. Congenital absence of any part of the cerebrum.

Poret'ta. See *Porretta*.

Poreut'es. (Πορεύω, to convey.) The amœboid embryonic cells (cells of Kollmann) which give origin to the blood-corpuscles and liquor sanguinis, the endothelium of the vessel walls, and the amœboid wandering cells.

Por'i. Plur. of *Porus*.

P. biliari'il. (Mod. L. *biliarius*, biliary.) The bile-ducts of the liver.

P. cuta'nei. Cutaneous pores. The pores of the skin.

P. exhalan'tes. Exhaling pores. A syn. for *P. cutanei*.

P. resorben'tes. Absorbent pores. A syn. for *P. cutanei*.

Por'icus. (Πόρος.) Of, or belonging to, a pore.

Por'iferous. (Πόρος; L. *fero*, to bear.) Pore-bearing.

Por'iform. Resembling a pore.

Pork. (L. *porcus*. F. *porc*; G. *Schwein-fleisch*.) The flesh of the hog.

P., diseases of. Pork is sometimes infested with the two following parasites: *Cysticercus cellulosæ* and *Trichina spiralis*. *Swine-plague* is a fairly common infectious disease among swine.

P. phys'ic. Common name for the *Phytolacca decandra*, or poke-weed.

P., wild. The same as *P. phys'ic*.

Porlie'ra angustifolia. Gray's name for the *Guaiacum angustifolium*.

Por'nē. (Πόρνη.) A prostitute.

Porne'um. (Πορνείον.) A brothel.

Porni'a. (Πορνεία.) Fornication.

Pornograph'ia. *Pornography*.

Pornograph'y. (Πόρνη, a prostitute; γράφω, to write.) A treatise on prostitution, from the point of view of public hygiene.

Por'ocele. (Πώρος, a node, callus, of bones; κήλη, a tumour. F. *porocèle*; G. *Steinbruch*.) A hardening of the scrotum. Galen, *Poll.* iv, 203. Also, term applied to a scrotal hernia whose sac has become indurated.

Porodin'ic. (Πόρος; δίνος, a whirl or eddy; also, a round area.) *Biol.* That form of reproduction which is carried out with the aid of genital pores.

Porokerato'sis. (Πῶρος, callus; *keratosis*.) A form of *Keratosis* growing in irregular, raised or level areas, covered at the summit by a thin horny layer. It occurs usually on the extensor aspect of the limbs and neck, and on the face and head.

Por'o'ma. (Πῶρωμα.) A hardened part, callus. Hipp. *Fract.* 779.

Porom'phalocèle. Syn. for *Poromphalon*.

Porom'phalon. (Πωρόμφαλον, a hardening of the navel [Galen]. F. *poromphale*; G. *Nabelsteinbruch*.) A hardening of the navel; a hard tumour of the navel; also, an umbilical hernia with thickened and indurated sac.

Porom'phalus. The same as *Poromphalon*.

Poroplas'tic. (Πόρος; πλαστικός, -ή, -όν, belonging to moulding.) Both porous and plastic.

P. felt. A kind of porous felt which can be readily moulded when heated, becoming stiff again when cold. Used to make splints and other immovable surgical apparatus.

P. jack'et. A supporting jacket of poroplastic felt made to reach from the armpits to just below the hips. Used for keeping the spine immovable in *Pott's disease*.

Poropœ'ia. (Πόροποιΐα.) The opening of the pores of the skin.

Por'os. (Πόρος, a passage.) A canal, pore. See *Porus*.

Por'os. (Πῶρος, a callus [of bone].) A mass of callus, a callosity.

Por'ose. (Πόρος.) *Biol.* Porous, furnished with pores.

Por'o'sis. (Πώρωσις.) The process of formation of callus (*Poros*) on the ends of fractured bones. (Hipp. *Fract.*, 766, 792.)

P., os'teo-. See *Osteo-porosis*.

P. pal'pebræ. (L. *palpebra*, the eyelid.) Syn. for *Chalazion*.

Porosity. (Πόρος, pore. F. *porosité*; G. *Porosität*.) That condition of matter by virtue of which pores or interstices exist between the molecules. These may be *physical* or *sensible* pores. See *Pore*.

Por'o'sus. *Porous*.

Porotic. (Πῶρος, callus.) Aiding in the formation of callus.

Por'o'tomy. (Πόρος, a pore; τομή, a cutting.) The operation of enlarging, by means of incision, the meatus of the male urethra.

Por'ous. (Πόρος.) Having pores.

P. plas'ter. An adhesive plaster perforated with holes to make it easier to manipulate, and to avoid wrinkles.

Por'phyra. (Πορφύρα, purple.) A descriptive term for *Purpura*. Applied also to *Scorbutus* (*Scurvy*).

P. græco'rum. (*Græci*, the Greeks.) *P. of the Greeks*.

P. hæmorrhag'ica. Syn. for *Purpura hæmorrhagica*.

P. lancinia'ta. The same as *P. umbilicalis*.

P. naut'ica. Nautical porphyra. A syn. for *Scurvy*.

P. of the Greeks. An old name for *Purpura*.

P. umbilica'lis. The *Ulva umbilicalis*.

P. vulgar'is. Syn. of *P. lanciniata*.

Porphyra'tion. (*Porphyra*, purple.) Term given by Küss and Duval to the first stage in the gastric digestion of albuminoids.

Porphyreus. (Πορφύρα.) Zool. Epithet applied to animal objects which show purple spots upon a ground of another colour.

Porphyrine. A bitter alkaloid, soluble in water, alcohol, and ether, crystallising in white prisms, extracted from the *Dita* bark, obtained in Australia.

Porphyrisation. (From *Porphyry*, the substance often being pounded on a slab of porphyry. G. *Zerreiben*.) The process of pounding a substance.

Porphyrisma. (Πορφύρισμα, to be purplish.) A descriptive name for *Scarlatina*.

Porphyrismus. Another form of the word *Porphyrisma*.

Porphyrisation. See *Porphyrisation*.

Porphyrodermitis. (Πορφύρα, purple; *dermitis* [νόσος], the disease of the skin.) Term including several species of skin-disease characterised by the occurrence of cutaneous hæmorrhages.

Porphyroides. (Πορφύρα; εἶδος, likeness.) Having a purple appearance.

Porphyrotyphus. (Πορφύρα; τυφός, the stupor of fever. G. *Scharlachtyphus*.) A name for *Malignant scarlatina*.

Porphyroxin. Name for a neutral crystallisable substance, composed of a mixture of alkaloids (laudanin, meconidin, &c.), obtained from opium.

Porphyru'ria. (Πορφύρα; οὖρον, urine.) The secretion of urine that contains a purple colouring-matter.

Porphyry. (Πορφύρα, purple.) A species of compound rock, very hard, and capable of taking a considerable polish; employed, among other things, for making slabs and mortars for use in pharmacy.

Porphyuria. Another form of the word *Porphyru'ria*.

Por'poise. The common name for the *Phocæna*.

Porra'ceous. (L. *porrum*, the leek.) Relating to the leek. Applied formerly to matters having the colour of the leek, e.g. bilious vomit.

Porret. (F. *poireau*; G. *Lauch*.) The common name of the plant *Allium porrum*.

Porret's phenom'enon of muscle. First described by Porret, and stated as follows: When a galvanic electric current is passed through living muscular substance, the contents of the fibres exhibit a streaming movement in the direction of the negative pole, so that the fibre swells at the extremity contiguous to that pole.

Porretta, La. A place in Italy noted for its eight warm or hot sulphur springs, containing variously from .002 to .02 parts of sulphuretted hydrogen, 2.6 to 8.2 of sodium chloride, and sodium iodide and bromide together from .01 to .08 parts per 1000. (Geissler and Möller.)

Porriginous. Having, or relating to, *Porrigo*.

Porri'go. (L. *porrum*, the leek, which has many scaly coverings.) Scurf, dandruff of the head. A descriptive, not a scientific, term; formerly applied to a number of eruptions of the head and face, of an exudative or desquamative character.

P. amianta'cea. Old term for *Seborrhæa capitis*.

P. confer'ta. Syn. for *P. scutulata*.

P. contagio'sa. Syn. for *Impetigo contagiosa*.

P. decal'vans. (L. *decalvo*, to make quite bald.) Syn. for *Alopecia areata*.

P. favo'sa. See *Favus*.

P. fur'furans. (L. *furfur*, bran.) Name applied to *Seborrhæa capitis*, *Tinea tonsurans*, &c.

P. larva'lis. (L. *larva*, a mask.) Term for a scaly eruption, such as an untreated *eczema*, which covers the face like a mask.

P. lupino'sa. (L. *lupinus*, a lupin.) A descriptive term applied to *Favus*, from the resemblance of its flat round crusts to the disc of a lupin seed.

P. scutula'ta. (L. *scutula*, a lozenge-shaped figure.) A descriptive term applied to *Tinea tonsurans*, from its irregular patchy distribution on the head.

P. tonso'ria. Syn. for *Alopecia areata*.

Porri'gophyte. (*Porrigo*; Gr. *φυτόν*, a plant.) A name given to *Favus* by M. Gruby, of Vienna.

Porro's operation. An operation first executed by Porro, of Pavia, in 1876, for the removal of the main part of the uterus. The early steps in the operation resemble those in *Cæsarian section*. After removal of the fœtus, the uterus is drawn out through the abdominal wound, a loop of iron wire or "delta metal" passed round the lower part of the uterus, the free end of the loop drawn tight, and the uterus cut away about an inch above the loop, the stump being fastened to the abdominal wound. By this means the risk of a uterine wound communicating with the peritoneal cavity is avoided.

Porro-Müller operation. This consists in making the usual incision for laparotomy, drawing the uterus through the wound, ligaturing round the cervix, and then incising the uterus and delivering the fœtus.

Porro-Veit operation. A modification of Porro's operation, in which the stump of the uterus is allowed to fall back into the pelvis.

Porrum. L. (F. *poireau*; G. *Lauch*.) The leek, *Allium porrum*.

P. sativum. The *Allium porrum*.

Porrus. (*Porrum*.) A syn. for *Thymion*.

Port-wine. (F. *vin d'Oporto*; G. *Portwein*.) A dark-red, sweetish wine, with an astringent taste, made in Portugal, containing 16 or 17 per cent. of alcohol by weight.

P. mark. The same as *P. stain*.

P. stain. A common descriptive term for *Nævus*.

Porta. L. (F. *porte*; G. *Pforte*.) A gate. Term applied by anatomists to that fissure in the liver (the *transverse* or *portal* fissure) by which the vessels enter the gland; the gateway of the liver. Sometimes also extended to other organs.

P. he'patis. The transverse or portal fissure.

P. jec'oris. (L. *jecus*, -oris, the liver). Syn. for *P. hepatis*.

P. labyrin'thi. The gate of the labyrinth. A term for the *Fenestra rotunda*.

P. lie'nis. The hilum of the spleen.

P. omen'ti. The gate of the omentum. The same as *P. omentorum*.

P. omento'rum. The gate of the omenta. A name for the foramen of Winslow.

P. pulmo'nis. (L. *pulmo*, the lung.) Old term for the root of the lung.

P. re'num. The hilum of the kidney.

P. spa'til in'tra-aponeuroti'cæ su-pras'terna'lis. Term for an aponeurotic opening between the *Spatium intra-aponeuroti-cum supras'ternale* and the *Saccus cæcus retro-sterno-cleido-mastoideus* (Gruber).

Por'tæ ve'na. (L.) The portal vein.

Por'tal. (*Porta.*) Relating, or belonging, to a gate or entrance.

P. canals'. The system of tubular pas-sages within the liver, lined by connective tissue which is a continuation of Glisson's capsule. Each of them contains a principal branch of the portal vein, hepatic artery, and biliary duct.

P. circula'tion. The circulation of blood through the *Portal system* (q. v.).

P. fis'sure. The deep fissure (also termed *Transverse fissure*) which runs transversely across the under surface of the right lobe of the liver, meeting the longitudinal fissure at right angles. It contains the portal vein, the hepatic artery, the hepatic duct, nerves, and lymphatics.

P. fos'sa. Syn. for *P. fissure*.

P. sys'tem. Collective term for the veins which collect the venous blood from the stomach, intestine, pancreas, and spleen. They gather into four main veins—the superior and inferior mesenteric, splenic, and gastric—and by their union the *portal vein* is formed.

P. sys'tem of kid'ney. Term for the *efferent* vessels of the Malpighian glomerules, which are formed by the capillaries of the glome-rule, and themselves break up into a capillary plexus on the renal tubules; they are thus an intermediary passage, *porta*, between two capil-lary systems.

P. vein. (L. *vena portæ.*) The vein formed by the union of four large veins—the superior and inferior mesenteric, the splenic, and the gastric—which enters the liver at the portal or transverse fissure.

P. veins, acces'sory. Small veins col-lecting blood from structures in relation with the liver, and opening into the portal vein or some of its hepatic branches, after passing through the substance of the liver.

P. veins of kid'ney. Another name for *P. system of kidney*.

Porte-acide'. (F.) Acid-carrier. Term for a glass tube used for the local application of acid. A platinum wire with a tuft-like ex-tremity saturated in the acid is passed through the tube.

P.-aiguille'. F. (G. *Nadelhalter.*) Needle-holder. An instrument for holding surgical needles when it is impossible to manipulate them with the fingers.

P.-bougie'. (F.) A bougie-holder, *i. e.* a silver canula for introducing bougies into the urethra.

P.-caustique'. (F.) A cylindrical in-strument made of silver, whose point is covered with some caustic substance, such as nitrate of silver, for cauterising a limited area.

P.-cray'on. (F.) See *P.-pierre*.

P.-feuille'. (of Winslow.) See *Subscapu-laris*.

P.-fil. (F.) Syn. for *P.-ligature*.

P.-fil'et. (F.) An instrument for passing a fillet over the presenting part of the fœtus, to aid in extraction.

P.-lacs. (F.) An instrument for passing a fillet into the cavity of the uterus and round the fœtus.

P.-ligature'. (F.) A ligature-holder.

P.-loupe. (F.) A metal support for sup-porting a magnifying-glass during the examina-tion or dissection of an object.

P.-main. An instrument for steadying the hand in cases of trembling.

P.-mèche. (F.) A shaft of silver or steel, forked at the end, for pushing a plug of lint into a wound.

P.-mox'a. (F.) A small instrument de-vised to keep the *moxa* in contact with the part which is being cauterised.

P.-nitrate'. (F.) A caustic-holder.

P.-noeud. (F.) An instrument for passing a ligature round the pedicle of a polypus.

P.-objet'. (F.) The slide for a micro-scopical examination.

P.-pierre'. (F.) An instrument for hold-ing caustic.

P.-sonde. (F.) An instrument, resem-bling in appearance a porte-crayon, used to hold the probe, *sonde*, and to aid in inserting it into the nasal duct in the operation for the cure of lacrymal fistula.

P.-tam'pon. A tampon-carrier.

P.-topique'. (F. *topique*, topical.) An instrument devised for applying drugs to the internal surface of the uterus, and for intro-ducing vaginal tampons. It consists of a rubber tube split longitudinally and containing a piston.

P.-voix. F. (G. *Sprachrohr.*) A speak-ing-trumpet.

Porten'tum. (L.) A monstrous or strange thing; a monster.

Porter. This is a malt liquor made in the same way as beer and containing the same percentage of alcohol, but differing from it in being prepared from malt that has been browned by being roasted.

Porter's sign. See *Tracheal tugging*.

Porter springs. Chalybeate waters, Georgia.

Portio. (L.) Portion.

P. al'ba cer'e'br'i. The white substance of the brain.

P. aryvoca'lis. An intralaryngeal muscle, attached anteriorly to the vocal cord, and poste-riorly to the vocal process of the arytenoid car-tilage.

P. axillar'is. Axillary portion. Term for the second portion of the *Axillary artery*.

P. brachia'lis. Brachial portion. Term for the third portion of the *Axillary artery*.

P. cervica'lis. Cervical portion. Term for the third portion of the *Subclavian artery*.

P. cervic'is u'teri. The *Cervix uteri*.

P. cor'poris stria'ti exter'na. The external portion of the striate body. A name for the *Lenticular nucleus*.

P. cor'poris stria'ti inter'na. The internal portion of the striate body. A name for the *Caudate nucleus*.

P. dur'a. (L. *durus*, hard.) The facial nerve, or *P. dura* of the seventh pair of Willis.

P. infravagina'lis. Infravaginal por-tion. Term for the lower portion of the cervix uteri (also termed *P. vaginalis*), as distinguished from the upper portion or *P. supravaginalis*.

P. inter du'ram et mollem. A small fasciculus lying between the *P. dura* and *P. mollis*, arising from the lateral column of the cord.

P. interme'dia. The *P. inter duram et mollem*. Also, the middle part of the *cervix uteri*.

P. intermedia of Wrisberg. The *P. intermedia*, or *P. inter duram et mollem*.

P. major trigemini. The greater portion of the trigeminus. Term for the sensory root of the trigeminal nerve.

P. media inter portio nem du ram et portio nem mollem. The intermediate portion between the *portio dura* and *portio mollis*. A fuller term for the *P. inter duram et mollem*.

P. minor trigemini. The lesser portion of the trigeminus. Term for the motor root of the trigeminal nerve.

P. mollis. The auditory nerve, or *P. mollis* of the seventh pair of Willis; now classified as the eighth cranial nerve. It is soft in texture (whence the name) and without neurilemma.

P. muscularis. Muscular portion. A term for the second part of the subclavian artery.

P. pectinata. (*L. pecten*, -inis, a comb.) Pectinated portion. A portion of the *Lamina spiralis* (q. v.). Also termed *Zona pectinata* and *Habenula pectinata*.

P. pectoralis. Pectoral portion. A term for the first part of the subclavian artery.

P. pylorica ventriculi. The pyloric portion of the stomach.

P. recta ligamenti pisometacarpei. The straight portion of the pisometacarpal ligament, i. e. of the ligament joining the pisiform bone with the fifth metacarpal.

P. reflexa ligamenti pisometacarpei. The reflected portion of the pisometacarpal ligament, i. e. of the ligament joining the pisiform bone with the fifth metacarpal.

P. splenica ventriculi. The splenic (more usually termed the *cardiac*) portion of the stomach.

P. supravaginalis. Supravaginal portion. Term for the upper portion of the *Cervix uteri* (q. v.).

P. thoracica. Thoracic portion. Term for the first part of the axillary artery.

P. vaginalis. Vaginal portion. Term for the lower part of the *Cervix uteri* (q. v.). See also *P. supravaginalis*.

P. ventriculi lienalis. (*L. lien*, the spleen.) The splenic portion of the stomach. Syn. for *P. splenica ventriculi*.

P. Wrisbergii. Portion of Wrisberg. Term given to the *P. inter duram et mollem*, from Wrisberg who was the first to describe it.

Portiplexus. (*L. porta*, a gate; *plexus*.) The vascular plexus connecting the choroid plexuses of the two lateral ventricles of the cerebrum. It is named from its passing through the "porta" or foramen of Munro.

Portland arrowroot. Name for starch obtained from the tuberous rhizome of *Arum maculatum*.

P. powder. A remedy for gout, consisting of equal parts of serpentry root, gentian, germander tops and leaves, ground pine, and lesser centaury, dried, powdered and sifted.

Portlandia. A Genus of the *Rubiaceæ*.

P. grandiflora. The bark of this species and of *P. hexandra*, both native to the West Indies, is termed *Guiana bark* (q. v.).

P. hexandra. See *P. grandiflora*.

Portonarium. (*L. porta*, a door.) Old term for the *Pylorus*. Also applied to the *Duodenum*, the entrance to the intestines.

Portulaca. (*F. pourpier*. *G. Portulak*.) A Genus of the *Portulacaceæ*. The Purslane. Hab. South America and South Africa.

P. oleracea. The edible purslane, whose juice is acrid; said to be an aperient and diuretic.

Portulacaceæ. The Purslanes. An Order allied to the *Caryophyllaceæ*.

Porus. (*Πόρος*, callus.) A mass of callus, a callosity.

Porus. (*Πόρος*, a passage.) A passage, pore.

P. acusticus. The acoustic passage. Term for the *Auditory canal*, internal.

P. acusticus externus. The external acoustic opening. Term for the *Auricular foramen*.

P. acusticus internus. Internal acoustic opening. The opening at the inner extremity of the internal auditory meatus.

P. auditorius externus. Syn. for *P. acusticus externus*.

P. biliaris. The biliary passage or duct. Term for the common bile duct, *Ductus communis choledochus*.

P. caroticus externus. The external carotid pore or opening. Term for the *Carotid foramen*.

P. centralis. The central canal in the optic nerve through which runs the *arteria centralis retinae*.

P. cranio-nasalis. The cranio-nasal pore or opening. Term for the *Foramen cæcum*.

P. deferens. Syn. for *Vas deferens*.

P. Meckelii. Meckel's pore or opening. Term for the opening in the cranial dura mater through which the trigeminal nerve passes.

P. opticus. The optic pore or opening. Term for the *Lamina cribrosa* of the sclerotic coat of the eyeball.

P. pulmo-neus. An air-cell of the lung.

Posca. (*L.*) An acid drink of vinegar and water, given as a refrigerant.

Pose. 1. An old English term for ordinary catarrh or cold in the head.

2. In *Physiol.*, the "latent period," i. e. the interval between the application of the stimulus and the muscular contraction.

Posis. (*Πόσις*, a drinking.) A draught or potion.

Position. (*L. pono*, *positum*, to place.) Situation, attitude.

P. of a muscle. Syn. for period of rest or latent period of a muscle. See *Muscle*, latent period of.

P. of eyes, primary. That position of the eyes from which they can move from side to side, or up and down, without rotation of their vertical axis.

P. of eyes, secondary. Any position of the eyes in which they have become rotated on their vertical axis.

P. of foetus. *Obstet.* Term for the relation of the parts of the foetus in utero to the uterine and abdominal walls of the mother. Also, sometimes spoken of as the "lie" of the foetus. The term is to be distinguished from *Presentation of foetus* (q. v.).

P. of vocal cords, cadaveric. See *Vocal cords, cadaveric position of*.

P., Roser, of the head. See *Roser position of the head*.

P., shoe and stocking. Term introduced by Allis for the crossing of one leg over the other, with the one external malleolus resting on the opposite patella, as in putting on the shoe

and stocking. Inability to take this position with either foot is a symptom of hip-disease on the corresponding side.

P.-test. The testing of the power of co-ordination by the ability, or want of ability, to stand with the eyes shut and the feet together.

Pos'itive electric'ity. See under *Electricity*.

P. elec'trode. Syn. for *P. pole*.

P. el'ement. Term for the more oxidisable metal (usually zinc) in a galvanic battery.

P. eye-piece. Syn. for *Ramsden's eye-piece* (q. v.).

P. menis'cus. See *Meniscus*, *positive*.

P. oc'ular. See under *Ocular*.

P. plate. Term applied in electricity to that plate in an electric battery which is most attacked by the liquid. It generates the electricity and determines the direction of the current which proceeds from it.

P. pole. That pole of an electric battery which is connected with the negative plate or element. Also termed *Anode*.

Positiv'ity. The state of a body, or part of a body, that exhibits positive electricity.

Positor. (L. *pono*, *positum*, to place.) Term applied to an instrument used to replace a displaced uterus; now more usually termed *Repositor*.

Posolog'ical. Relating to *Posology*.

P. table. A tabulated list of drugs used in Medicine, with their respective doses.

Poso'logy. (Ποσόν, quantity; λόγος, an account. F. *posologie*; G. *Dosenlehre*.) That branch of *Materia Medica* which relates to the quantitative administration of drugs, according to the conditions, e. g. the age and sex, of the patient.

Posoque'ria dumeto'rum. Syn. of *Randia dumetorum*.

Possess'ed. (That is [of the devil, or of devils].) Old term for mad, lunatic.

Posses'sion. (See *Possessed*.) Condition of being *Possessed*.

Pos'set. (*Posca*.) Term for hot milk which has been curdled by means of wine or any acid.

Pos'setting. Term for the regurgitation of milk by infants.

Post sed. sing. liq. Abbreviation for *Post sedes singulas liquidus*.

Post sed'es sing'ulas li'quidas. (L.) *Med.* After each liquid stool.

Post-a'nal. Behind the *Anus*.

Post-apoplectic. Occurring after *Apoplexy*.

P. co'ma. The coma that often follows *Apoplexy*.

Post-aryte'noid. Behind the *Aryte'noid* cartilage or cartilages.

Post-aud'itory fos'sa. Term for a small crescent-shaped notch in the temporal bone, separating the temporal ridge and auditory plate. (Leidy.)

P. pro'cesses. *Biol.* Processes present in certain *Fishes*, lying behind the auditory chamber.

Post-ax'ial. (L. *post*, after; *axis*.) Situated on the posterior or caudal side of a line drawn through the axis of a limb at right angles to the axis of the body.

Post-brach'ial. See *Postbrachialis*.

Post-bran'chial. *Embryol.* Behind the *Branchiæ* or gill-arches.

Post-calcan'eal. *Biol.* Posterior to the *Calcaneum*.

Post-car'pal. Following upon, or distal to, the *Carpus*.

Post-cen'tral. Behind the centre.

P. convolu'tion. Another name for *Convolution*, *central*, *posterior*.

P. sul'cus. An ill-defined groove which separates the superior parietal from the ascending parietal convolution of the cerebrum.

Post-cephalic. *Biol.* Posterior to the head or cephalic segment.

Post-cerebellar ar'tery. Syn. for *Cerebellar artery*, *posterior*. (Wilder.)

Post-cere'bral ar'tery. Syn. for *Cerebral artery*, *posterior*. (Wilder.)

Post-cho'roid ar'tery. Syn. for *Choroid artery*, *posterior*. (Wilder.)

Post-ci'bal. (L. *post*, after; *cibum*, food.) After a meal.

Post-cister'na. (L. *post*; *cisterna*.) The *Cisterna magna*.

Post-clavicle. The posterior portion of the scapular arch in certain fishes.

Post-clavic'ular. Behind the clavicle; also, belonging to the *Post-clavicle*.

Post-commissu'ra. (L.) Syn. for *Commissure*, *cerebral*, *posterior*. (Wilder.)

Post-com'missure. See *Post-commis-sura*.

Post - communicant ar'tery. Syn. for *Artery*, *communicating*, *posterior*. (Wilder.)

Post-connu'bial. (L. *post*, after; *connubium*, marriage.) After marriage.

Post-convul'sive. After a convulsion or convulsions.

Post-cor'nu. Syn. for *Cornu of lateral ventricle*, *posterior*.

Post-cor'nual bulb. Syn. for *Bulbus cornu posterioris*.

Post-cost'al. (L. *post*; *costa*, a rib.) Behind a rib.

Post-cox'al. (L. *post*; *coxa*, the thigh bone.) Behind the *Coxa* or *Coxæ*.

Post-cru'ciate. Behind the *Cruciate fissure* of the cerebrum.

Post-cu'bital. Behind, or on the posterior aspect of, the *Cubitus*.

Post-diastol'ic. Following on the *diastole* in the cardiac cycle.

Post-dicrot'ic. Following the *dicrotic wave* of the pulse.

P. wave. A secondary recoil wave sometimes present, following on the *Dicrotic wave* of the pulse.

Post-dilata'tor. Name for the *Dilata-tor navis posterior*. (Coues.)

Post-dilu'vian. (L. *post*; *diluvium*, the Deluge.) *Geol.* Old epithet for the period immediately subsequent to that at which it was supposed that the Deluge took place; also, epithet applied to the earths of transport and the *alluvies* of that period.

Post-embryon'ic. Following on the *Embryonic* stage of life.

Post-epilep'tic. Following on an epileptic fit, or series of fits.

Post-fe'brile. After a fever or febrile paroxysm.

Post-fem'oral. Posterior to, or on the posterior surface of, the *femur*.

Post-fontanelle'. The *Fontanelle*, *posterior*.

Post-for'ceps. *Anat.* Term for the oblique nerve-fibres which pass from the posterior end of the corpus callosum to the occipital lobes.

Post-fo'vea. *Anat.* The posterior fovea in the floor of the fourth ventricle of the medulla oblongata.

Post-front'al. (*L. post, behind; frontal.*) Term applied by Owen to the *external orbital apophysis*, or external angular process of the frontal bone. In some animals this occurs as a separate bone.

P. pro'cess. See main heading.

Post-generation. Term applied by Roux to a process observed by him in the egg of the frog, and consisting in the re-animation of the segmentation-cell after it has lost its capability of further development.

Post-gen'iculum. The posterior and more mesial of the two eminences on the latero-ventral surface of the *Diencephalum*. See also *Pre-gen'iculum*.

Post-gen'ital. *Biol.* Belonging to those segments of the body which lie behind the genital pores.

Post-hemiple'gic. Following on an attack of *Hemiplegia*.

P. chore'a. Term for choreiform movements which sometimes occur (after hemiplegia) in paralysed limbs. These movements are, as a rule, best marked in the hand and arm, next in the face, and they rarely occur in the leg.

Post-hippocam'pal. Belonging to the posterior of the two hippocampi, or *hippocampus minor*.

Post-hu'meral. Posterior to the humerus.

Post-hy'oid. Posterior to the *Hyoid bone*.

Post-hypo'physis. Term for the posterior portion of the *Hypophysis cerebri*.

Post-in'sula. Term for the posterior (*caudal*) portion of the *Insula*, or Island of Reil.

Post-intermaxillar'ë. Syn. for *Mesognathion*.

Post-mas'toid. Posterior to the *mastoid* portion of the temporal bone.

P. ten'derness. This symptom is present in cases of septic thrombosis of the lateral sinus depending on otitis media. The point of greatest tenderness is usually a spot about one inch behind and one half inch above the external auditory meatus.

Post-me'dian. Posterior to the median line.

Post-mediastin'al. Belonging to the *Post-mediastinum*.

Post-mediastin'um. Term for the *Mediastinum, posterior*.

Post-min'imus. In *Anat.*, syn. for *Pisiform bone*. In *Biol.*, a supernumerary little (ulnar) finger or little (fibular) toe.

Post-mor'tem. (*L.*) After death. Term used both as an adjective, and also as a substantive signifying a *post-mortem examination* (q. v.).

P. examina'tion. The examination of a dead body, with the view of determining the cause of death, or of merely discovering or confirming the nature and extent of previous disease.

Post-mor'tuary. A syn. for *Post-mortem* (Gould's Dict.)

Post-na'sal. Posterior to the nose.

P. catarrh'. Catarrh of the *Nasopharynx*.

Post-na'tal. (*L. post, after; natus, born.*) After birth.

Post-na'tus. (*L. post, after; natus, born.*) Born after. Term formerly used in law as an epithet for the second son.

Post-oblonga'ta. The inferior (*caudal*) portion of the *Medulla oblongata*, which forms the floor of the posterior half of the fourth ventricle.

Post-ocular. (*L. post; ocular.*) Posterior to the eye.

Post-oesophage'al. Situated posterior to the *Œsophagus*.

Post-ol'ivary. Behind the *Olivary body*.

Post-operative. After an operation.

Post-oper'culum. The convolution (part of the supertemporal convolution) which forms the temporal portion of the *Operculum*, covering over part of the *Insula*.

Post-opticus. (*L. post; opticus.*) Wilder's term for either member of the posterior pair (*testes*) of the *Corpora quadrigemina*.

Post-or'al arch'es. (*L. post, behind; os, the mouth.*) The five subcranial plates which lie below (on the *caudal* side of) the mouth in the embryo, going to form the lower jaw and throat.

Post-or'ital. Posterior to the orbit.

Post-pal'atal. Posterior to the *Palate bones*.

Post-pal'atine bone. Also termed *Pterygoid bone*. A bone present in the skull of certain of the Reptilia.

Post-paralyt'ic. Following *Paralysis*.

P. chore'a. Syn. for *Post-hemiplegic chorea*.

Post-partum. (*L.*) After birth.

P. chill. Term for the slight shivering fit not uncommonly occurring in parturient women almost immediately after the birth of the child.

P. hæm'orrhage. See *Hæmorrhage, post-partum*.

P. shock. Term for the state of exhaustion not uncommon immediately after parturition.

Post-ped'uncle. See *Post-peduncular*.

Post-pedunc'ular. Belonging to the *Post-pedunculus*.

Post-pedun'culus. (*L. post, after, behind; pedunculus.*) A term for the *Cerebellum, peduncle of, inferior*. (Wilder.)

Post-perfora'tus. (*L. post, after; perforatus.*) Term for the *Perforated space, posterior*. (Wilder.)

Post-pharynge'al. (*L. post, after; pharyngeal.*) Behind the pharynx.

P. ab'scess. An abscess situated between the pharynx and the bodies of the upper cervical vertebrae. It most commonly arises from cervical caries. The main symptom is dysphagia.

Post-pitu'itary. (*L. post, after, behind; pituitary.*) Situated posterior to the *pituitary body*.

Post-pleurit'ic. Following *Pleuritis*.

Post-plex'us. (*L. post, after; plexus.*) That plexus which, in the Vertebrata generally, corresponds to the lumbo-sacral plexus in man.

Post-pon'tile. Posterior to the *Pons Varolii*.

POST-POSITIO—POSTERIOR

Post-posit'io. (L. *post*, after; *pono*, positum, to place.) Postponement. Delay in the return of the *paroxysm* in paroxysmal diseases. See *Anticipatio*.

Post-prostat'ic. Posterior (*dorsal*) to the *Prostate gland*.

P. pouch. The pouch formed by the visceral peritoneum where it leaves the posterior wall of the bladder at the base of the *trigone*.

Post-pyram'idal. (L. *post*, behind; *pyramid*.) *Anat.* Posterior to the *Pyramid*.

P. nu'cleus. Term for the nucleus of the *Funiculus gracilis*.

Post-ra'mus. (L. *post*, after; *ramus*, a branch.) Term for the horizontal branch of the stem of the *arbor* of the cerebellum. (Gould's Dict.)

Post-rhi'nal fissure. (L. *post*, after, behind; Gr. *ῥίς*, *ῥῖνός*, the nose.) Wilder's term for a fissure at the base of the *olfactory lobe* of the brain. It has also been termed the basirhinal fissure.

Post-roland'ic. Posterior to the *Fissure of Rolando*.

Post-sac'ral. Posterior to the *Sacrum*.

Post-scalene'. The *Postscalenus*; also, belonging to the *postscalenus*.

Post-ster'nium. The posterior part of the sternum in *Insects*.

Post-sylvian. Posterior to the *Sylvian fissure* of the cerebrum.

Post-systol'ic. Following on the *systole* in the cardiac cycle.

Post-tertiary. *Geol.* Epithet applied to the period following the *Tertiary period*.

Post-tib'ial. Posterior to, or on the posterior aspect of, the *tibia*.

Post-tympan'ic. Posterior to the *Tympanic bone*.

Post-umbo'nal. Posterior to the *Umbo*.

Post-u'terine. Posterior to the uterus.

Postabdom'en. (L. *post*, behind; *abdomen*, the belly.) Latreille's term for the five posterior segments of the abdomen of hexapodous insects.

Postabdom'inal. Belonging to the *Postabdomen*.

Postacetabular. Behind the *Acetabulum*.

Postbrachia'lë. (Neut. of *Postbrachialis*.) *Anat.* Old term for the *Metacarpus*.

Postbrachia'lis. (L. *post*; *brachium*.) *Anat.* Following upon, in the sense of distal to, the *brachium*.

Postbrach'ium. (L. *post*; *brachium*.) The posterior brachium of the *Corpus quadrigeminum*.

Postcar'pium. (L. *post*; *carpus*.) Term for the *Metacarpus*.

Postcar'pius. See *Post-carpal*.

Postca'va. (L. *post*, after; *cavus*, -a, -um, hollow.) The vena cava posterior (in Human *Anat.*, inferior).

Postca'val. Belonging to the *Postcava*. Also, used substantively for *postcaval vein*.

P. vein. The *Postcava*.

Postcervic'iplex. (L. *post*, after; *cervical*; *plexus*.) Term for the posterior cervical plexus. (Gould's Dict.)

Postcrib'rum. (L. *post*; *cribrum*, a sieve.) *Anat.* Term for the *Posterior perforated space*.

Postdigas'tricus. (L. *post*; *digas-*

tricus.) Name for the posterior belly of the *Digastricus*. (Cooes.)

Poste'rior. (L.) Behind. Applied, in *Anatomy*, to sundry structures that are situated behind, in relation to others. For anatomical structures designated *posterior*, and not to be found under the following sub-headings, see under their respective headings.

P. annular'is. The posterior annular (muscle). Name for the fourth dorsal interosseous muscle of the hand, which abducts the ring-finger.

P. aud'itory fos'sa. Term for a semilunar depression above the external auditory meatus in the temporal bone, dividing the auditory plate below from the temporal ridge above.

P. aur'is. The posterior (muscle) of the ear. Syn. for *Retrahens auriculum*.

P. cav'ity of peritone'um. The lesser cavity of the peritoneum. See under *Peritoneum*.

P. cen'tral convolu'tion. See *Convolu'tion*, *central*, *posterior*.

P. cen'tral sul'cus. See *Sulcus*, *central*, *posterior*.

P. cerebel'lar ar'tery. See *Cerebellar artery*, *posterior*.

P. cer'ebral ar'tery. See *Cerebral artery*, *posterior*.

P. cham'ber of eye. See *Chamber of eye*, *posterior*.

P. cho'roid ar'tery. See *Choroid artery*, *posterior*.

P. col'umns of spi'nal cord. See *Columns of spinal cord*.

P. com'missure of brain. See *Com'missura cerebri*, *posterior*.

P. com'missure of vul'va. See *Com'missura labiorum pudendi*.

P. commu'nicating ar'tery. See *Communicating artery*, *posterior*.

P. cor'nu. (L. *cornu*, a horn.) See *Lateral ventricle*, *posterior horn of*.

P. cor'nu'al bulb. The *Bulbus cornu posterioris*.

P. digas'tricus. Term for the posterior belly of the *digastricus*, or *digastric muscle*.

P. dilata'tor. The *Dilatator naris posterior*.

P. elas'tic lam'ina. See *Lamina*, *elastic*, *posterior*.

P. fontanelle'. See *Fontanelle*, *posterior*.

P. in'dicis ma'nus. The posterior (muscle) of the index (finger) of the hand. A name for the first palmar interosseous muscle, which adducts the index finger.

P. in'dicis ped'is. The posterior (muscle) of the index of the foot. A name for the first dorsal interosseous muscle of the foot, which abducts the second toe.

P. longitu'dinal bun'dle. See *Longitudinal bundle*, *posterior*.

P. me'dian column. See *Column*, *posterior median*.

P. med'ii dig'iti ma'nus. The posterior (muscle) of the middle digit of the hand. A name for the third dorsal interosseous muscle of the hand, which draws the middle finger towards the ulnar side of the hand.

P. med'ii dig'iti ped'is. The posterior (muscle) of the middle digit of the foot. A name for the third dorsal interosseous muscle of the foot, which draws the third toe towards the fibular side of the foot.

P.ter'ti'dig'iti. The posterior (muscle) of the third digit. A name for the fourth dorsal interosseous muscle of the foot, which abducts the fourth toe.

P.vesic'ular col'umn. See *Column*, vesicular, posterior.

Postero-. (L. *posterus*, that follows after.) Prefix, signifying behind.

P.-inferior. Posterior and inferior.

P.-lat'eral. Behind and to one side.

P.-lat'eral fis'sure. A groove in the spinal cord on each side of the posterior median fissure, corresponding to the line of exit of the posterior roots of the nerves.

P.-lat'eral groove. The same as *P.-lateral fissure*.

P.-parietal area. The posterior portion of the *Parietal area* of the skull.

P.-parietal gy'rus. A syn. for *Convolution*, postcentral of the cerebrum. (Huxley.)

P.-parietal lob'ule. A syn. for *Lobule*, parietal, superior of the cerebrum. (Huxley.)

P.-parietal sul'cus. Syn. for *Sulcus centralis*. (Huxley.)

P.-superior. Posterior and superior.

P.-tem'poral sul'cus. Syn. for *Sulcus*, temporal, middle.

P.-terminal. At the posterior extremity.

P.-ventral. Ventral and posterior.

Poster'ula. (L. *posterior*.) Term for that part of the naso-pharynx which lies in front of the salpingo-palatinal fold, and between it and the posterior nares. (Harrison Allen.)

Postgem'inum. (L. *post*; *geminus*, one of twins.) The two posterior corpora quadrigemina, considered as forming a single organ.

Postgenicula'tum. Term for the *Corpus geniculatum internum*. (Wilder.)

Postglenoid pro'cess. (L. *post*, behind; *glenoid*.) Term for a small tubercle separating the *glenoid fossa* of the temporal bone from the *auditory process*. It helps to prevent backward dislocation of the lower jaw during mastication and yawning.

Postgrad'uate. (L. *post*, after; *graduate*.) Belonging to studies pursued by one who is already a *graduate*.

Also, a *graduate*. (Gould's Dict.)

Posth'algia. (*Posthē*; ἄλγος, pain.) Pain in the penis or prepuce.

Posthē. (Πόσθη.) The penis; also, the prepuce.

Posthec'tomy. (*Posthē*; ἔκτομη, a cutting out.) The same as *Posthetomy*.

Posthetomist. One who performs *Posthetomy*.

Posthet'omy. (*Posthē*; τομή, a cutting.) Circumcision.

Posthia. (Ποσθία.) A styne on the eyelid. (Galen.)

Posthion. (Dim. of πόσθη. See *Posthē*.) A little penis; also, a little prepuce.

Posthioplastic. (*Posthē*; plastic.) The same as *Posthoplasty*.

Posthioplasty. The same as *Posthoplasty*.

Posthi'tis. (Ἡ ποσθίτις [νόσος], the disease of the *Posthē*.) Inflammation of the *Posthē*.

Posthium. Latinised form of the word *Posthion*.

Posthocalym'ma. (*Posthē*, κάλυμμα, a veil.) The same as *Posthocalyptron*.

Posthocalyp'tron. (*Posthē*, καλύπτρα.) Syn. of *Condom*.

Post'holith. (Πόσθη, the prepuce; λίθος, a stone.) A preputial calculus.

Post'hon. (Πόσθων, one that has a large *Posthē*.) One that has a large *posthē*; also, syn. for *Posthē*.

Posthon'cus. (*Posthē*; ὄγκος, a mass.) Tumour of the penis or prepuce.

Posthoplast'ic. (*Posthē*, in the sense of prepuce; πλάσσω, to mould.) Epithet applied to plastic operations on the prepuce.

Posthoplasty. (*Posthē*; πλάσσω, to mould.) Plastic surgery of the *posthē* or prepuce.

Post'humous. (L. *posthumus*, vel *postremus*, superl. of *posterus*; erroneously derived from *post*, and *humus*.) Latest. As applied to offspring, the last born; born after the father has died, or made his will.

Posthumus. (L.) *Posthumous*.

Posti'cus. (L.) Situate behind, hinder.

Postnares. Wilder's term for the *Nares*, posterior.

Postre'mus. (L.) Hindmost.

P. ped'is. Term for the *Extensor brevis digitorum pedis*.

Postscale'nus. (L. *post*; *scalenus*.) A name for the *Scalenus posticus* muscle. (Coues.)

Postscap'ula. (L. *post*; *scapula*.) A name for the infraspinous portion of the *scapula*. (Parker.)

Postscap'ular fos'sa. A name for the infraspinous fossa of the *scapula*.

Postscapular'is. (L. *post*; *scapula*.) A name for the *Infraspinatus* muscle. (Coues.)

Postsphenoid bone. (L. *post*; *sphenoid*.) Term for the posterior part of the body of the sphenoid bone in the region of the sella turcica, together with the great wings, which form a separate part of the human sphenoid in infancy.

Postumus. Another spelling of *Posthumus*.

Postural. (L. *pono*, *positum*, to place.) Belonging to posture or position.

P. meth'od. See *P. respiration*.

P. respira'tion. Term for the various forms of artificial respiration in which the patient is put in certain postures or positions. See *Respiration*, artificial.

P. treat'ment. Treatment by position, as, e. g., the raising of a congested or inflamed part, the special positions for various fractures, &c.

Postver'mis. Term for the *Vermiform process*, inferior, of the cerebellum.

Postzygapophys'ial. Belonging to the *Postzygapophysis*.

Postzygapo'physis. (L. *post*; *zygapophysis*.) Anat. Owen's term for the inferior articular processes of the vertebrae.

Pot. A vessel for holding anything; usually of pottery ware. Also, abbreviation for *Potio*; also, for *Potassa* and *Potassæ*.

Po'table. (L. *potabilis*.) Fit to drink.

P. gold. See *Aurum potabile*.

Potain's aspirator. A form of aspirator in common use, in which there is a syringe for emptying the bottle of air. See *Aspirator*.

P.'s solu'tion. A solution devised by Potain for diluting a specimen of blood drawn, in order to facilitate the counting of the red cor-

POTAMOPYRA—POTASSII

puscles under the microscope. It consists of equal parts of solutions of gum arabic, sodium chloride, and sodium sulphate, each of a sp. gr. of 1020.

Potamopyra. (Ποταμός, a river; πῦρ, fever.) Marsh-fever, malaria.

Potash. (F. *potasse*; G. *Kali*, *Pottasche*.) *Pot-ashes.* So named from the fact that commercial potash is obtained by reducing plants to ashes in pots or earthenware vessels. 1. Potashes; crude carbonate of potassium, the impure potash or pearl-ash of commerce. 2. Caustic potash. 3. The metal potassium, especially in naming the salts of this metal, *e.g.*, nitrate of potash, carbonate of potash.

P.alum. Common name for *Aluminium potassium sulphate*.

P., caustic. *Potassa caustica*.

P., prus'siate of, red. Syn. for *Potassium ferricyanide*.

P., prus'siate of, yellow. Syn. for *Potassium ferrocyanide*.

P. wa'ter. *Liquor potassæ effervescens* (q. v.).

Potass. Abbreviation for *Potassa*, also for *Potassæ*.

Potas'sa. (Latinized form of word *Potash*.) Potash, caustic potash.

P. caust'ica. B.P. (F. *potasse caustique*; G. *Aetzkali*.) Hydrate of potassium, KOH. Prepared by evaporating a solution of *potash* in a silver basin until it solidifies on cooling.

P. cum cal'ce. Potash with lime. Equal weights of caustic potash and quicklime powdered and mixed, and then made into a paste with rectified spirit or glycerine. It is used in obstetric practice made up into cylinders in the proportion of one part of potash to two of lime.

P. fu'sa. The same as *P. caustica*.

P. impu'ra. Impure potash. Term for pearl-ash, the impure potash of commerce.

P. li'quida. Liquid potash. A term for *Liquor potassæ*.

P. o'pe cal'cis para'ta et ig'ne fu'sa. (L.) Potash prepared by means of lime and fused by fire. A name for *Potassa cum calce*.

P. sulphura'ta. K_2S_3 , $K_2S_2O_3$. Sulphurated potash, or liver of sulphur. A dark green, hard substance, made by fusing together carbonate of potassium and sublimed sulphur. Action irritant, narcotic, and antiseptic. Used for scabies.

Preparation. *Unguentum potassæ sulphuratæ* (q. v.).

Non-official. *Balneum sulphuratum* (q. v.).

Potas'sæ. Gen. of *Potassa*. Less often used now of salts of potassium than the Gen. *Potassii* (q. v.).

P. acet'as. See *Potassii acet'as*.

P. az'otas. Azotate of potash. A syn. for *Potassii nitras*.

P. et alu'minæ sul'phas. Sulphate of potash and alumina. A name for alum. See *Alumen*.

P. et so'dæ tar'tras. Tartrate of soda and potash. Syn. for *Soda tartarata*.

P. hy'dras. Hydrate of potash, *i. e.* caustic potash.

P. li'quor. See *Liquor potassæ*.

P. perman'ganas. U.S. Ph. Permanganate of potassium. See *Potassii permanganas*.

P. prus'sias fla'va. Yellow prussiate of potash, *i. e.* *Potassium ferrocyanide*.

P. sulphura'tæ unguen'tum. See *Unguentum potassæ sulphuratæ*.

Potassii acet'as. B.P. (Gen. of *Potassium*. F. *acétate de potasse*; G. *Essigsaureskali*.) Acetate of potassium. CH_3COOK . A soluble, deliquescent salt, prepared by neutralising potassium carbonate with acetic acid. It is employed as a diuretic and mild aperient. *Dose*, 10 to 60 grains. It is sometimes given in the form of a pill.

P. ben'zoas. A crystalline powder, readily soluble in water. Used in cystitis with uric acid diathesis. *Dose*, 15 to 20 grains.

P. bicar'bonas. B.P. Bicarbonate of potassium. $KHCO_3$. Prepared by saturating a strong aqueous solution of the carbonate with carbonic acid gas, and recrystallising the salt formed. Soluble 1 in 3.2 of water. Antacid, diuretic, and alterative. *Dose*, 10 to 20 grains as an antacid, 1 dr. as a diuretic.

Preparation. *Liquor potassæ effervescens* (q. v.).

P. bichro'mas. B.P. K_2CrO_4 , CrO_3 . Bichromate of potassium. Soluble 5 in 6 of boiling water. Used officially to prepare *Acidum chromicum* and *Sodii valerianas*.

P. binox'alas. *Potassium binoxalate* (q. v.).

P. bitar'tras. U.S. P. Bitartrate or acid tartrate of potassium. The same as the *P. tartras acida* of the B.P.

P. bromi'dum. B.P. Bromide of potassium. KBr. Soluble 1 in 1 of boiling water. *Dose*, 5 to 30 grains. *Action.* That of the bromides in general. The action on the organs generally is one of depression. They lessen cerebral activity and nervous irritability, thus acting as indirect hypnotics. It is not known whether this action is on the nerve-cells directly, or on the cerebral blood-vessels. The spinal centres and spinal nerves are also depressed. Bromides often give rise to a form of acne of the skin when given for a length of time. The addition of arsenic often prevents or cures this eruption.

P. carbo'nas. B.P. K_2CO_3 . Carbonate of potassium. Soluble 4 in 3 of water. Antacid and diuretic. *Dose*, 10 to 30 grains. Contained in the following B. P. preparations:—*Decoctum aloes compositum*, *Enema aloes*, *Liquor arsenicalis*, *Mistura ferri composita*, *Pilula ferri*, and *Unguentum potassii iodidi*.

P. carbo'nas elixi'va ci'nerë. Potassium carbonate from lye-ash. A syn. for *P. subcarbonas impurus*.

P. carbo'nas impu'rus. Impure carbonate of potassium. A syn. for *P. subcarbonas impurus*.

P. carbo'nas pu'rus. A syn. for *P. subcarbonas*.

P. chlo'ras. B.P. $KClO_3$. Chlorate of potassium. Prepared by passing chlorine gas into a hot aqueous solution of slaked lime and potassium chloride, crystallizing out the less soluble chloride of calcium, and afterwards crystallizing out the chlorate of potassium. It is stimulant, diuretic, and disinfectant. Used especially as a mouth-wash and gargle. *Dose*, 10 to 30 grains.

Preparation. *Trochisci potassii chloratis* (q. v.).

P. chlo'ridum. KCl. Chloride of potassium. Found in sea-weed, in sea-water, and in several mineral springs. Taken internally, it is bitter and refrigerant.

POTASSII

P. chlorure'tum oxyda'tum. Oxydated chloruret (chloruret = chloride) of potassium. An old name for *Potassii chloras*.

P. chro'mas. K_2CrO_4 . A soluble yellow salt made by fusing any chromic compound with potassium bicarbonate.

P. citras. (F. *citrate de potasse*; G. *citronsaures Kali*.) $K_2C_6H_5O_7$. Citrate of potassium. A white granular salt, soluble in water, slightly, in alcohol. Made by neutralising citric acid with carbonate of potassium, and evaporating the solution to dryness. *Action*, laxative and diaphoretic. *Dose*, 20 to 60 grains in water.

P. citra'tis li'quor. See *Liquor potassii citratis*.

P. citra'tis mistu'ra. Syn. for *P. citratis liquor*.

P. cyan'idum. B.P. KCN. Cyanide of potassium. Obtained by heating the ferrocyanide at a red heat, until gas ceases to come off, and pouring the clear fluid off the sediment. Soluble 1 in $2\frac{1}{4}$ of water. It is a powerful poison. Used in the B.P. in the purification of *Bismuth*. Useful for removing black stains produced by silver nitrate.

P. cyanure'tum. An old term for *Potassii cyanidum*.

P. et fer'ri tar'tras. Tartrate of potassium and iron. *Ferrum tartaratum*.

P. et so'dii tar'tras. Tartrate of potassium and sodium. Tartarated soda or Rochelle salt. See *Soda tartarata*.

P. ferrocyan'idum. $K_4FeC_6N_6, 3H_2O$. Potassium ferrocyanide. Obtained by fusing animal refuse, such as cuttings of hide, hoofs and horns, with iron and potassium carbonate, in an iron pot, lixiviating with water, and purifying by crystallising out. Soluble 1 in 4 of water. Used therapeutically as a tonic to the stomach and bowels. *Dose*, 2 grains three times a day. It is used also in the preparation of *Acidum hydrocyanicum dilutum*, and *Potassii cyanidum*.

P. ferrocyanure'tum. An old name for *P. ferrocyanidum*.

P. hydrar'gyro-iod'idum. Mercurio-iodide of potassium. Made by combining red iodide of mercury with iodide of potassium. When given internally in minute doses it acts very similarly to the iodides of mercury.

P. hypophos'phis. U.S.P. KH_2PO_2 . Hypophosphite of potassium. Preparation and uses similar to those of *Sodii phosphis* (q.v.).

P. io'das. Iodate of potassium. Prepared by the action of iodine on potassium chlorate. It has been proposed as a therapeutic substitute for potassium chlorate.

P. iod'idum. B.P. (F. *iodure de potassium*; G. *Iodkalium*.) KI. A salt crystallising in cubes, with a saline and rather pungent taste, soluble in water (4 in 3) and alcohol. Made by adding iodine to caustic potash, evaporating to dryness, and fusing the residue with charcoal to convert the iodate into iodide. The product is then dissolved and recrystallised. The salt has a peculiar resolvent action on chronic inflammatory products, especially those of syphilis. *Dose*, 2 to 10 grains.

Preparations. *Linimentum potassii iodidi cum sapone*; *Unguentum potassii iodidi*. The iodide is also contained in *Linimentum iodi*, *Liquor iodi*, *Tinctura iodi*, and *Unguentum iodi*.

P. iodure tum. An old name for *P. iodidum*.

P. my'ronas. Myronate of potassium, *sinigrin*. A salt found in black mustard seed. When treated with *myrosin* it is converted into dextrose, allyl mustard oil, and potassium bisulphate.

P. ni'tras. B.P. (F. *azotate de potasse*; G. *Kalium-nitrat*.) KNO_3 . Potassium nitrate, nitre, saltpetre. Long prismatic fluted crystals, with a saline pungent taste; soluble in four times its weight of water. Prepared by mixing together animal matter with wood ashes and lime, and exposing them to the air, boiling with water, adding potassium carbonate to decompose the nitrate of calcium, and leaving the saltpetre to crystallise out. It also occurs as an efflorescence on the soil in tropical countries. *Action*. Diuretic, refrigerant, and diaphoretic. *Dose*, 5 to 10 grains as a diuretic and refrigerant. It has been given in doses of 20 to 30 grains as a vascular sedative in aneurism.

P. ni'tras fu'sus sulpha'tis pauci'llo mix'tus. (F. *sal prunelle*.) Potassium nitrate fused mixed with a little sulphate. Sore-throat salt, mineral crystal. Nitre mixed with a small quantity of sulphate of potash and run into moulds. *Action* and uses the same as those of *P. nitras*.

P. ox'alas. Oxalate of potassium, salt of sorrel. See *Potassium oxalate*.

P. oxy'geno-chlorure'tum. Oxychloride of potassium. An old name for *Potassii chloras*.

P. perman'ganas. B.P. (F. *perman-ganate de potasse*; G. *Kalium-permanganat*.) $KMnO_4$. Permanganate of potash. Dark purple slender prisms, with a sweetish astringent taste, a ready oxidiser, and readily decolourised by animal matter. It is prepared by fusing together caustic potash, manganese dioxide, and potassium chlorate, when a green mass containing manganate of potash is formed. On adding sulphuric acid, the green colour turns to purple. The permanganate formed can be obtained in a crystalline state on evaporation. *Action*. Antiseptic and deodorant, for which uses it is commonly applied. Rarely given internally. *Dose*, 1 to 5 grains, in a pill with *Massa paraffinum*. *Preparation.* *Liquor potassii permanganatis* (q.v.).

P. permangana'tis li'quor. See under *Liquor*.

P. phos'phas. Potassium phosphate. A deliquescent powder. Given as an alternative in phthisis and urinary affections. *Dose*, 1 to 10 grains.

P. pic'ras. *Potassium picrate* (q.v.).

P. protox'idi hydri'o'das. Hydriodate of the protoxide of potassium.

P. protox'idum. Protoxide of potassium. A syn. for *Potassa caustica*.

P. prus'sias fla'va. Yellow prussiate of potash. See *P. ferrocyanidum*.

P. sil'icas. K_2SiO_3 . Potassium silicate. A vitreous, deliquescent salt, made by fusing potassium carbonate with quartz or sand. It has been employed as an antiseptic; and also to make strong, immoveable casings for broken limbs.

P. subcarbo'nas. Potassium subcarbonate. A syn. for carbonate of potassium, *Potassii carbonas* (q.v.).

P. subcarbo'nas impu'ra. Impure subcarbonate of potassium. Another name for pearlash, which is impure carbonate of potassium.

POTASSIO.—POTASSIUM

P. suc'cinas. Succinate of potassium. Occurs as a deliquescent powder. It has been employed as a hæmostatic. *Dose*, 10 grains.

P. sul'phas. B.P. (F. *sulfate de potasse*; G. *Kaliumsulfat*.) K_2SO_4 . Potassium sulphate. Colourless six-sided prisms; occurring in the ashes of sea and land plants, and obtained in a variety of ways. A mild cathartic, often given with vegetable purgatives. *Dose*, 10 to 20 grains as an alterative; 1 drachm as a purgative.

P. sul'phas cum sul'phurë. Prepared by deflagrating nitre with sublimed sulphur. Action and uses the same as those of *P. sulphas*; given internally in doses of 15 to 30 grains.

P. sul'phis. U.S.P. (F. *sulfite de potasse*; G. *Kaliumsulfit*.) $K_2SO_3 \cdot 2H_2O$. Sulphite of potassium. A white, deliquescent salt, soluble in water, and slightly soluble in alcohol. Made by passing sulphurous acid gas through a solution of carbonate of potassium, and then evaporating. It is antiseptic.

P. sulphocyan'idum. Sulphocyanide of potassium.

P. sulphocyanur'um. Sulphocyanuret, *i. e.* sulphocyanide, of potassium.

P. sulphur'um. Sulphuret, *i. e.* sulphide, of potassium. Another name for *Potassa sulphurata* (q. v.).

P. superox'alas. Superoxalate of potassium. Another name for *P. oxalas*.

P. supersul'phas. $KHSO_4$. Supersulphate, or acid sulphate, of potassium. Obtained as a bye-product in the distillation of nitric acid. It is refrigerant and purgative.

P. supertar'tras. Supertartrate of potassium. Syn. for *P. tar'tras acida*.

P. supertar'tras impu'rus. Impure supertartrate, or acid tartrate, of potassium; commonly termed *Tartar* (q. v.).

P. tar'tras. B.P. (F. *tartrate de potasse*; G. *Kalium-tartrat*.) $K_2C_4H_4O_6$. Potassium tartrate. Small prismatic crystals, prepared from acid tartrate of potash by neutralising with potassium carbonate in solution, and evaporating. A mild purgative and diuretic. *Dose*, 60 grains to $\frac{1}{2}$ oz. in solution.

P. tar'tras acida. $KHC_4H_4O_6$. Acid tartrate of potassium. Obtained from the crude *tartar* deposited during fermentation of grape-juice, and from wine-lees. Soluble 1 in 100 of cold, 1 in 16 of boiling water. *Action*, diuretic, refrigerant, and purgative. *Dose*, 20 to 60 grains as a refrigerant and diuretic; as an aperient, 60 to 120 grains; as a hydragogue purgative, $\frac{1}{2}$ to 1 oz.

P. tar'tras stib'ialis. Antimonio-tartrate of potassium. A syn. for *Antimonium tartaratum*.

P. tar'tras stibio'sus. The same as *P. tar'tras stibialis*.

P. tar'tro-bo'ras. *Potassium borotartrate* (q. v.).

P. tersulphur'um. Tersulphuret, *i. e.* tersulphide, of potassium. A syn. for *Potassa sulphurata*.

Potas'sio-fer'ric tar'trate. *Potassium tartrate of iron*.

Potas'sio-mercu'ric iodide. $(HgI_2KI)2H_2O$. Occurs in yellow crystals. Prepared by saturating with mercuric iodide a warm aqueous solution of iodide of potassium, separating the excess of crystals of the former salt, and evaporating and crystallising the remaining

solution. Used as a test for alkaloids; it has also been used medicinally.

Potas'sio-tar'trate of iron. Tartrate of iron and potassium, or tartarated iron. See *Ferri et potassii tartras*.

Potas'sium. (L. *Kalium*.) Symbol, K. A metal discovered by Sir Humphrey Davy. Combining weight 39.045, sp. gr. 0.865, melting point 62.5° . A bright silvery white solid, which can be cut at ordinary temperatures; sublimes at a temperature below red-heat; combines with oxygen very readily; and is separated from its combinations with great difficulty.

P. ac'etate. See *Potassii acetat*.

P. al'coholate. Syn. for *P. ethylate*.

P. and so'dium tar'trate. Tartarated soda or Rochelle salt. See *Soda tartarata*.

P. antimo'niatè. See *Antimony, dia-phoretic*.

P. ar'senite. This is the potassium salt of arsenious acid, and forms the active principle of *Liquor arsenicalis*, B.P. It is an occasional cause of poisoning, and can be detected by the tests for *Arsenious acid* (q. v.).

P. aurocy'anide. (L. *aurum*, gold; *cyanide*.) $KAuCy_4$. Double cyanide of potassium and gold. It is obtained in white crystals. It is a powerful germicide; one part dissolved in 25,000 parts of blood-serum is found to destroy the anthrax bacillus.

P. bicar'bonate. See *Potassii bicarbonas*.

P. bichro'mate. See *Potassii bichromas*.

P. binox'alate. $HKC_2O_4 \cdot H_2O$. Occurs in rhomboidal acid crystals, slightly soluble in water. It is found in some plant-juices. It is poisonous in large doses. Used to remove ink-stains. The commercial salt is a mixture of binoxalate and quadroxalate.

P. bisul'phite. $KHSO_4$. Prepared by passing sulphurous acid gas into a strong solution of carbonate of potash, and adding strong alcohol. On exposure to the air it gives off sulphurous acid gas, and has hence been used as a deodorizer.

P. bitar'trate. See *Potassii bitartras*.

P. borotar'trate. This salt occurs as white transparent scales or a white powder; inodorous, acid, soluble in water. It is prepared by boiling the acid tartrate in an aqueous solution of boric acid, and evaporating. It is a purgative.

P. bro'mide. (F. *bromure de potassium*; G. *Brom-Kalium*.) See *Potassii bromidum*.

P. canthar'idate. (*Cantharides*.) The potassium salt of cantharidic acid. A solution of this salt is used as subcutaneous injection for the treatment of tuberculosis.

P. car'bonate. See *Potassii carbonas*.

P. chlo'rate. See *Potassii chloras*.

P. chlo'ride. (F. *chlorure de potassium*.) KCl. A salt occurring in natural saline deposits, *e. g.* at Stassfurt. It crystallises in cubes like those of common salt, and very readily soluble in water. It is used in the preparation of other salts of potassium.

P. cit'rate. See *Potassii citras*.

P. cy'anide. KCN. (F. *cyanure de potassium*; G. *Cyan-Kalium*.) A white salt, very soluble in water and alcohol; very fusible, and intensely poisonous. Used in photography, and in electrotyping in gold and silver, both of which metals it dissolves. Prepared by fusing *P. ferrocy'anide* with *P. carbonate*. See *Potassii cyanidum*.

POTASSIUM—POTATO

P. cyan'uret. An old name for *P. cyanide*.

P. dithiocar'bonate. Syn. for *P. sulphocarbonate*.

P. ethylate. $C_2H_5.OK$. A crystallisable salt, prepared by dissolving metallic potassium in absolute alcohol.

P. ferricy'anide. K_3FeCy_6 . Red Prussiate of Potash. A salt which crystallises in red prisms, gives a brown colouration with ferric salts, and a preparation of Prussian blue with ferrous salts.

P. ferrocyanide. K_4FeCy_6 . Yellow Prussiate of Potash. (F. *ferrocyanure de potassium*; G. *Ferrocyan-Kalium*.) Yellow crystals of considerable size, obtained by fusing nitrogenous matters with potassium carbonate and iron filings; then dissolving in water and evaporating. The crystals separate out and are purified. It has an aperient action, and is not poisonous. Gives with ferric salts a preparation of soluble Prussian blue. Is used in the preparation of dilute hydrocyanic acid, *Acid hydrocyanicum dilutum*.

P. ferrocyan'uret. An old name for *P. ferrocyanide*.

P. ferrotar'trate. A syn. for *Ferrum tartaratum*.

P. hydrar'gyro-iodide. See *Potassii hydrargyro-iodidum*.

P. hydrate. KOH . Caustic potash. See *Potassa caustica*.

P. hydroxide. A syn. for *P. hydrate*.

P. hypophosphite. KH_2PO_2 . Prepared by mixing solutions of calcium hypophosphite and potassium carbonate. A white, deliquescent solid, soluble in water and alcohol. Used theoretically in Medicine as a mode of introducing phosphorus into the system.

P. iodate. See *Potassii iodas*.

P. iodide. See *Potassii iodidum*.

P. iodo-hydrar'gyrate. The same as *P. hydrargyro-iodide*.

P. myronate. See *Sinigrin*. See also *Myronic acid*.

P. nitrate. See *Potassii nitras*.

P. osmate. See *Osmate, potassium*.

P. oxalate. Salt of sorrel. Prepared from the juice of the wood-sorrel, *Oxalis acetosella*. Two parts of salt of sorrel with one of cream of tartar forms salt of lemons. See *Lemons, salt of*.

P. perchlo'rate. $KClO_4$. Prepared by carefully heating potassium chlorate until it ceases giving off oxygen. Used to prepare *perchloric acid*.

P. perman'ganate. See *Potassii permanganas*.

P. pic'rate. $C_6H_2(NO_2)_3OK$. Occurs in bitter golden-yellow crystals, slightly soluble in water, explosive on heating. Prepared by reaction between magnesium picrate and potassium sulphate. Therapeutic action, antiperiodic.

P. protochlo'rate. A syn. for *P. chlorate*.

P. protonit'rate. A syn. for *P. nitrate*.

P. protox'ide. See *Potassii protoxidum*.

P. protox'ide, nitrate of. An old name for *P. nitrate*.

P. protox'ide, superox'ate of. An old name for *P. oxalate*.

P. protox'ide, supertar'trate of. An old name for cream of tartar; acid tartrate of potassium, *Potassii tartras acida*.

P. prus'siates. See *Potash, prussiate of, red*, and *Potash, prussiate of, yellow*.

P. silicate. K_2SiO_3 . A white, vitreous, deliquescent salt, prepared by fusing potassium carbonate with quartz or sand. Used in the form of a partial solution for impregnating bandages to form an immoveable support for fractured limbs.

P. sodium bo'ro-tar'trate. Prepared by digesting acid tartrate of potassium in a solution of sodium borate, and evaporating.

P. sodium tar'trate. A syn. for *Soda tartarata*.

P. sozoï'odol. See under *Sozoïodol*.

P. sulphate. See *Potassii sulphas*.

P. sulphate, ac'id. See *Potassii supersulphas*.

P. sulphides. Potassium combines in a number of different proportions, forming mono- to penta-sulphides. The tri-, tetra- and penta-sulphides enter into the composition of the *Potassa sulphurata* of the B.P.

P. sulphite. *Potassii sulphis*.

P. sulphocar'bonate. Has been used for eczema, psoriasis, &c.

P. sulphuret. See *Potassii sulphuretum*.

P. superprotosulphate. The same as *P. supersulphate*.

P. supersulphate. See *Potassii supersulphas*.

P. tar'trate. See *Potassii tartras*.

P. tellu'rate. Has been used for the night-sweating of phthisis.

P. thiocar'bonate. Syn. for *Potassium sulphocarbonate* (q. v.).

Pota'to. (Span. *Batata*. F. *pomme de terre*; G. *Kartoffel*.) The tuber of *Solanum tuberosum*. A common article of diet, and the source of potato-starch.

Also, the tuber of *Batatas edulis*.

P. bacil'lus. *Bacillus mesentericus vulgatus*. Name for the commonest of several micro-organisms that grow on potato. A highly resistant organism, consisting of short rods with rounded ends, often united in twos; it is vigorously motile, and it generally produces spores. This bacillus is also found in milk, in water, and in the human alimentary canal. It is non-pathogenic.

P.-blight. A syn. for *P.-disease*.

P. brand'y. A brandy prepared by distillation of a mixture of potato and barley-malt.

P., Caroli'na. The *Convolvulus batatas*.

P. cathar'tic. Bot. The root of *Batatas peregrina*.

P. cult'ure. A recognised mode of cultivating micro-organisms upon slices of potato.

P. cure. See under *Cure*.

P.-disease'. This is caused by the *Phytophthora infestans* (q. v.).

P. fly. Common name for the *Cantharis vittata*.

P. fun'gus. The *Phytophthora infestans*.

P., hog. Common name for the *Convolvulus panduratus*.

P.-mould. A syn. for *P.-disease*.

P. mur'rain. A syn. for *P.-disease*.

P. oil. A syn. for Fusel oil, or *Alcohol, amylic*.

P. paste. Term for a paste prepared from boiled potato. Used as a culture-medium for bacteria.

P. poult'ice. See *Cataplasma feculosum*.

P.-rot. A syn. for *P.-disease*.

POTENTIA—POTION

P., Span'ish. The *Convolvulus batatas* (q. v.).

P. spir'it oil. The same as *P. oil*.

P. starch. This is used to make *P. poultice* (q. v.).

P. sugar. The sugar obtained from the sweet potato.

P., sweet. The *Ipomœa batatas*.

P. treatment. See *P. cure*.

P. vine, wild. The *Convolvulus panduratus*.

P., wild. The same as *P. vine, wild*.

Poten'tia. (L.) Potency, power, faculty.

P. coëun'di. (L. *coeundus*; from *coeo*, to copulate.) Capability for copulation.

P. generan'di. (L. *generandus*, from *genero*, to procreate.) Capability for procreation.

P. irri'tans. (L. *irrito*, to provoke.) Irritating capability or power. General term for a stimulus.

Poten'tial. (L. *potentia*, power.) Capable of being manifested under given conditions, not as yet in process of manifestation. As applied in electricity, the *potential* at any point is the work required to be done against electrical force, in order to move the unit of positive electricity from an infinite distance to a given point in the neighbourhood of an electrified conductor. (Ganot.) It is estimated in *volts*.

P. caut'ery. (Kaiw, to burn. L. *ignis potentialis*; F. *cautère potentiel*.) Nitrate of silver (lunar caustic), or Potassa fusa, as distinct from the *Actual cautery*, or red-hot iron.

P., difference of. That portion of the electro-motive force of an electric current existing between any two points in the circuit.

P. en'ergy. The energy possessed by a mass in consequence of its having been raised against gravity, as distinct from energy of motion or *Kinetic energy*.

P. galvano'meter. The *Voltmeter*.

P., magnet'ic. The magnetic potential at any point is the work that must be spent upon a unit magnetic (north-seeking) pole in bringing it up to that point from an infinite distance. (Silvanus Thompson.)

P., ze'ro. The *potential* of a point that is situated at an infinite distance from all electrified bodies.

Potentill'a. (L. *potens*, powerful; the plant is so named from its effects. F. *potentille*; G. *Fingerkraut*.) A Genus of the *Rosaceæ*. Also, a name for the *P. anserina*.

P. anseri'na. (L. *anser*, a goose.) The silverweed. A native of Europe and N. America. A mild astringent.

P. argenti'na. (L. *argentum*, silver.) The *P. anserina*.

P. canaden'sis. Canadian potentilla. Action, diaphoretic and diuretic.

P. coma'ra. Marsh cinquefoil; a bitter tonic. Formerly used in diarrhœa, dysentery, and malaria.

P. fructico'sa. Similar in action to *P. anserina*.

P. impo'lita. The *P. anserina*.

P. neglec'ta. The *P. anserina*.

P. norve'gica. Norway cinquefoil. Properties similar to those of *P. anserina*.

P. palus'tris. The marsh cinquefoil. Hab. North America. Action, astringent.

P. rep'tans. (L. *repto*, to creep. F. *quinte-feuille*; G. *Fünffingerkraut*.) The com-

mon cinquefoil, or five-leaved grass, whose roots have astringent properties, and have been used in hæmorrhage and diarrhœa.

P. tormentill'a. (F. *tormentille*; G. *Rothwurz*.) The tormentilla, or septfoil. Its roots are highly astringent.

Poten'tiometer. (*Potential*; μέτρον, a measure.) Term applied to an instrument devised for measuring the difference of *potential* between any two points in an electric circuit.

Po'tentizing. The same as *Dynamization* (q. v.).

Pote'ril antihecticum. See *Antihecticum Poterii*.

Pote'rium. (Ποτήριον.) Bot. A plant, also called *phrynion*, (Plin. 25, 10, 76); perhaps *Tragacanth*. A Linn. Genus of plants, Class *Monœcia*, Order *Polyandria*. Pharm. Term for a certain *Malagma* for absorbing dropsical humours (Galen).

P. officina'lë. See *P. sanguisorba*.

P. sanguisor'ba. The herb burnet, whose leaves are astringent.

Potes'tas coëun'di. (L.) Power of copulation.

Po'tex. (L.) The anus, the same as *Podex*.

Pothomor'pha. A Genus of the *Piperaceæ*, native to Brazil.

P. pelta'ta. Action, diuretic.

P. umbella'ta. Given internally as an alternative.

Pothopatridal'gia. (Πόθος, yearning; πατρίς, one's country; ἄλγος, suffering.) *Nostalgia*, or home-sickness.

Poth'os fœtidus. (Πόθος, a kind of flower which was planted on graves, Theophr.) A syn. for the *Dracontium fœtidum*.

P. puto'ril. A syn. for the *Dracontium fœtidum*.

Potimos. (Πότιμος.) Drinkable.

Potio. (L.) (Πόσις, a drinking, or a drink. F. *potion*; G. *Trank*.) A medicinal preparation given by the mouth; a draught. It usually consists of an active principle, an excipient, and a corrective.

P. antispasmod'ica. An antispasmodic draught.

P. anti vomiti'va. (F. *potion anti vomitive* [de Rivière], *potion gazeuse*.) An effervescing draught, made of bicarbonate of potash and citric acid.

P. aromat'ica. (F. *potion aromatique*, *p. cordiale*.) A draught composed of syrup of pinks, tincture of cinnamon, &c.

P. cal'cis carbonat'is. A syn. for *Mistura cretæ*.

P. card'aca. (*Cardia*.) A cordial, or stimulating draught.

P. balsam'ica. (F. *potion de Chopart*.) A draught consisting of copaiba, syrup of tolu, &c.

P. efferves'cens antiemet'ica. Syn. for *Riverius, potion of*.

P. le'niens. A syn. for *Looch ex ovo*.

P. nigra. Black draught, *Haustus sennæ compositus*.

P. oleo'sa. (L. *oleosus*, oily, full of oil.) A syn. for *Looch ex ovo*.

P. pi'cea. A syn. for *Pix liquida*, which was formerly given by the mouth.

P. Rive'ril citra'ta. A syn. for *Riverius, potion of*.

Pot'ion. (*Potio*.) A medicinal draught.

Potio'nis deside'rium. (Gen. of *potio*. Lit., desire for a drink.) A term for thirst.

Potium'cula. (Dim. of *potio*.) A little potion or draught.

Potomania. (Ποτόν, drink; μανία, madness. F. *potomanie*; G. *Trinksucht*.) Drink-madness; *Dipsomania* (q. v.).

Potometer. (Ποτόν, drink; μέτρον, a measure.) An instrument devised for measuring the amount of water absorbed by any plant in a given time.

Potoparance'a. (Ποτόν, drink; παράνοια, derangement of mind.) The same as *Pototromoparanœa*.

Potos. (Ποτός, -ή, -όν, drunk.) Drinkable.

Pototromania. (Ποτόν, drink; τρόμος, trembling; μανία, madness.) *Delirium tremens*.

Pototromoparance'a. (Ποτόν, drink; τρόμος, trembling; παράνοια, derangement of mind. F. *pototromoparanée*.) A syn. for *Pototromania*.

Pototromoparanoi'a. The same as *Pototromoparanœa*.

Pototroparance'a. The same as *Pototromoparanœa*.

Potpour'ri. (F.) Term for a certain mixture of aromatics, used formerly to scent the air of rooms.

Pott, Percival. An English surgeon, born 1713, died 1788.

P.'s a'neurism. A name for *Aneurismal varix*. See under *Varix*.

P.'s boss. Another name for *P.'s curvature*.

P.'s cur'vature. (G. *Pottischer Buckel*.) Angular curvature of the spine, the result of *Pott's disease*.

P.'s disease'. (F. *maladie de Pott*; G. *Pottische Krankheit*.) Disintegration of the bodies of the vertebrae and intervertebral discs, the result of tubercular infiltration, leading to angular curvature. A disease of childhood and youth.

P.'s frac'ture. Fracture of the fibula two or three inches above the external malleolus, associated with rupture of the deltoid ligament, and dislocation of the foot outwards.

P.'s gan'grene. A name for *Gangrene, senile*.

P.'s para'lysis. The paralysis resulting from pressure on the spinal cord in *Pott's disease*.

P.'s paraple'gia. The same as *P.'s paralysis*.

P.'s puffy swell'ing. Syn. of *P.'s puffy tumour*.

P.'s puffy tu'mour. A localised œdematous swelling of the scalp, indicative of supuration immediately beneath the skull, and suggesting the necessity of trephining.

Potter's as'thma. A syn. for *P.'s phthisis*.

P.'s bronchi'tis. A syn. for *P.'s phthisis*.

P.'s consump'tion. See *P.'s phthisis*.

P.'s disease'. Syn. for *P.'s phthisis*.

P.'s phthis'is. See *Phthisis, Potter's*.

Pottingar. An old term for *Apothecary*.

Potus. (L.) Drink.

P. Hippocraticus. (L. *Hippocras*.) Syn. for *Hippocras*.

P. imperia'lis. (L.) Imperial drink.

Pouch gesta'tion. Gestation in a pouch or marsupium, as among the *Marsupialia*.

P., hair. The depression in the skin in which a hair grows.

P., il'eo-cæ'cal. A syn. for *Fold, ileo-cæcal*.

P., in'guinal, exter'nal. The external of the two pouches of parietal peritoneum formed by the urachus and obliterated hypogastric artery as they pass from the apex of the bladder to the back of the rectus abdominis.

P., in'guinal, inter'nal. The internal of the two pouches formed by the urachus and obliterated hypogastric artery. See *P. inguinal, external*.

P., larynge'al. See *Laryngeal pouch*.

P., marsu'pial. See *Marsupium*.

P. of Dou'glas. See *Douglas' pouch*.

P. of Fabric'ius. The *Bursa Fabricii*.

P. of larynx. See *Laryngeal pouch*.

P. of Rath'kë. See *Rathkë, pouch of*.

P. of See'sel. Term for a small diverticulum present in the embryo behind the upper end of the pituitary body, or *hypophysis cerebri*.

P. of tympan'ic mem'brane. This pouch is formed by a fold of mucous membrane surrounding the horizontal portion of the chorda tympani, where this nerve passes across the tympanic cavity.

P. of We'ber. Syn. for *Prostatic vesicle*.

P., pararec'tal. (Παρά, by the side of; *rectum*.) Term for the lateral portion of the *P. of Douglas*. (Gould's Diet.)

P., paravesi'cal. See *Paravesical pouch*.

P., rec'to-u'terine. The pouch formed by the visceral peritoneum where it is reflected off the anterior wall of the rectum on to the posterior wall of the uterus and the upper part of the posterior wall of the vagina.

P., rec'to-vagi'nal. The same as *P., recto-uterine*.

P., rec'to-vesi'cal. The pouch formed by the visceral peritoneum in the male where it is reflected off the anterior wall of the rectum on to the posterior wall of the bladder, just at the base of the trigone.

P., subcæ'cal. Term for the fold of peritoneum passing to the back wall of the abdomen from the postero-inferior surface of the cæcum.

P., u'tero-vesi'cal. The pouch of peritoneum formed between the bladder in front and the uterus behind.

P., vesico-u'terine. The same as *P., utero-vesical*.

Pouch'ed. Formed into, or combined in, a pouch; encysted.

Pouch'es, larynge'al. See *Laryngeal pouches*.

P. of peritone'um. See *Peritoneum, pouches of*.

Poul'tice. (Πόλτος, a porridge.) An application for conveying heat to some part of the surface of the body, consisting of certain substances mixed with boiling water to form a soft mass, which is then spread evenly on muslin, linen, tow, brown paper, &c. The substances most commonly in use to make poultices are linseed, bread, mustard, bran, and charcoal.

P., ferment'ing. A syn. for *P., yeast*.

P., galvan'ic. See *Galvanic poultice*.

P., vagi'nal. A poultice introduced into the vagina.

P., yeast. Made by mixing flour with half its weight of yeast and applying gentle heat until the mass begins to swell from fermentation.

Pounce. Common name for the powder of

POUND—POWDER

the concrete resin of the *Juniperus communis*, or of pumice stone.

Pound. (Anglo-Sax. *pund.*) A certain weight. In *Avoirdupois* weight, 16 ounces. In *Troy* weight, 12 ounces. Symbol lb.

P., foot. See *Foot-pound*.

Poundal. (*Pound.*) The unit of force; that force which, when applied for one second to a mass of one pound, generates in it a velocity of one foot a second.

P., foot. The same as *Poundal*.

Poupart. A French surgeon. Died 1708.

P.'s ligament. (*F. ligament de Poupart, arcade crurale.* G. *Schenkelbogen, das Poupart'sche Band.*) The crural arch; also called Fallopius' ligament. The lower border of the aponeurosis of the *Obliquus externus abdominis* muscle, extending from the anterior superior spine of the ilium to the spine of the pubes.

Pound milk. A name for *Colostrum*. (*Dunglison.*)

Powder. (*Mid. E. powder. F. poudre; I. polvere; G. Pulver.*) A mass of very fine, dust-like particles. See also *Pulvis*.

P., alum, compound. See *Pulvis sulphatis aluminis compositus*.

P., antimonial, Chen'evix's. The same as *Pulvis antimonialis*.

P., aromatic. The *Pulvis cinnamomi compositus*.

P., aromatic, of chalk. The *Pulvis cretæ aromaticus*.

P., arsenical, of Côme. Arsenious acid 10 grains, red sulphide of mercury 40 grains, animal charcoal in powder 10 grains. Made into a paste with mucilage, and used as a caustic. (*Dunglison.*)

P., arsenical, of Jus'tamond. Sulphide of antimony 16 parts and arsenious acid 1 part are melted together in a crucible. The mass is powdered when cold, and 5 parts of extract of opium are mixed with it. Used as a caustic. (*Dunglison.*)

P., bleach'ing. Common name for chlorinated lime. See *Calx chlorata*.

P.-blower. The same as *Insufflator*.

P., botanical, Chinese'. A mixture of a small quantity of tea-powder with more than 90 per cent. of catechu. See *Tea, adulterations of*.

P., Car'dinal del Lu'go's. A name for *Cinchona*.

P., Castil'lon's. See *Castillon's powder*.

P., caustic, of Dupuytren. Arsenious acid 1 part, calomel 200 parts.

P., chalk, compound. See *Pulvis cretæ compositus*.

P., Côme's. See *P., arsenical, of Côme's*.

P., countess'. A name for *Cinchona*.

P., Countess of Kent's. *Pulvis cantianus*.

P., Cy'prus. *Abelmoschus moschatus*.

P., disinfect'ing, Ridge'wood. Carbolic acid 5 to 8 per cent., sesquichloride of iron 2 to 5 per cent., charcoal or pulverised pumice 5 per cent., lime from magnesian limestone 5 per cent., Fuller's earth 70 to 80 per cent., and traces of sodium and potassium sulphate. (*Dunglison.*)

P., do'sia. A secret remedy in Japan, said to have been discovered 1000 years ago by Kobodaisi.

P., Do'ver's. See *Dover's powder*.

P., Dupuytren's. See *P., caustic, of Dupuytren*.

P., Earl of War'wick's. A name for *Pulvis cornachini*.

P., efferves'cing. Syn. for *P., soda*.

P., efferves'cing, com'pound. Syn. for *P., seidlitz*.

P., fe'ver, James'. The same as *P., James'*.

P., fe'ver, Schwan'berg's. A name for *Pulvis antimonialis*.

P. fold'er. Pharm. A mechanical contrivance for folding papers containing powders.

P., gamboge'. *Pulvis e gummi gutta*.

P., Go'a. See *Goa powder*.

P., gout, Duke of Port'land's. Equal parts of serpentary root, gentian, chamædrys, and centaurea minor. Dose, $\frac{1}{2}$ to 1 drachm. (*Dunglison.*)

P., grey. *Hydrargyrum cum creta*.

P., James'. A name for *Pulvis antimonialis*.

P., James', facti'tious. The same as *P., James'*.

P., jes'uits'. A name for *Cinchona* (q. v.).

P., Knox's. Common salt 8 parts, chlorinated lime 3 parts. Used as a disinfectant.

P., li'quorice, com'pound. See *Pulvis glycyrrhizæ compositus*.

P., mar'quis'. See *Marchionis pulvis*.

P., Mead's. *Pulvis antilyssus*.

P., mor'phine, com'pound. The same as *P., Tully's*.

P., myrrh, com'pound. See *Pulvis myrrhæ compositus*.

P., ni'trous. A mixture of powdered nitre, calomel, and tartar emetic.

P. of Æthio'pia, Guy's. This was composed of tin, mercury, and sulphur, powdered, and then triturated together. It was at one time in great esteem as an anthelmintic.

P. of Al'garoth. A name for oxychloride of antimony.

P. of al'oes, com'pound. See *Pulvis aloës compositus*.

P. of al'oes with canel'la. See *Pulvis aloës cum canella*.

P. of ar'um, com'pound. *Pulvis de aro compositus*.

P. of asarabac'ca, com'pound. *Pulvis asari compositus*.

P. of blad'der-wrack, yel'low. *Pulvis quercus marinæ*.

P. of burnt harts'horn with o'pium. See *Pulvis cornu usti cum opio*.

P. of cat'echu, com'pound. See *Pulvis catechu compositus*.

P. of chalk, aromat'ic. See *Pulvis cretæ aromaticus*.

P. of contrayer'va, com'pound. See *Pulvis contrayervæ compositus*.

P. of Æthio'pia. See *P. of Æthiopia, Guy's*.

P. of Fay'nard. Pharm. Old name for a styptic powder, said to be made of beechwood charcoal.

P. of ipecacuan'ha, com'pound. *Pulvis ipecacuanhæ compositus*.

P. of ipecacuan'ha and o'pium. The same as *P. of ipecacuanha, compound*.

P. of i'ron. A name for *Ferrum redactum*.

P. of jal'ap, com'pound. *Pulvis jalapæ compositus*.

P. of ki'no and o'pium. The same as *P. of kino, compound*.

P. of ki'no, com'pound. See *Pulvis kino compositus*.

P. of li'quorice, com'pound. See *Pulvis glycyrrhizæ compositus*.

P. of magne'sia, com'pound. See *Pulvis de magnesia compositus*.

P. of rhu'barb, com'pound. See *Pulvis rhei compositus*.

P. of scam'mony and al'o'es. See *Pulvis scammonii cum aloë*.

P. of sen'na, com'pound. See *Pulvis sennæ compositus*.

P. of the three san'ders. A name for *Diatrium santalorum*.

P., pearl. A name for *Bismuth sub-itate*.

P., Port'land. The same as *P., gout*, Duke of Portland's.

P., ring'worm. A name for *Goa powder*.

P., Rochelle'. Another name for *P., Seidlitz*.

P., saline', com'pound. See *Pulvis salinus compositus*.

P., scam'mony, com'pound. See *Pulvis scammonii compositus*.

P., Seid'litz. See under *Seidlitz*.

P., sneez'ing. See *Sneezing powders*.

P., so'da. Name for a powder composed of sodium bicarbonate 30 grains, with tartaric acid 25 grains. This forms an effervescent drink with water.

P., styptic. Name for a special styptic powder made up of alum, colophony, and gum acacia. Tragacanth and argil are sometimes also added.

P., sympathet'ic. See *Sympathetic powder*.

P., Tal'bor's. A name for *Cinchona*.

P., talc. See *Talc powder*.

P., Ten'nant's. A name for *Calx chlorinata*.

P., ton'quin. See *Pulvis Cobbii*.

P., trag'acanth, com'pound. See *Pulvis tragacanthæ compositus*.

P., Tully's. Camphor, prepared chalk, liquorice, of each 20 parts; sulphate of morphia 1 part. Used as a substitute for *P. Dover's*. (Gould's Diet.)

P., Vichy-wa'ter. A powder used to make artificial Vichy waters. Bicarbonate of soda 5 grammes, chloride of soda 1 centigramme, sulphate of soda 50 centigrammes, sulphate of magnesia 15 centigrammes, sulphate of iron 1 centigramme. Water 625 grammes is then added, and 3 grammes of citric acid to make it gaseous.

P., Vien'na. Equal parts of quicklime and caustic potash. Used for making *Paste, Vienna* (q. v.).

P., Vigo's. A name for *Hydrargyri oxidum rubrum*.

Power. (Mid. E. *poer*.) Strength; capability; energy.

P., absolute. *Physiol.* The absolute power of a muscle is measured by the least weight which, when attached to and hanging from the muscle, prevents the latter from contracting.

P., combin'g. *Chem.* The combining power of any element is measured by the number of hydrogen atoms with which it can combine.

P., inhe'rent. A term for *Irritability*.

P., senso'rial. See *Sensorial power*.

P., sex'ual. The capacity for performing the sexual act.

P., specif'ic refrac'tive. *Optics.* This is a constant quantity for every substance which refracts light. It is calculated by dividing the number expressing the index of refraction, minus one, by the number expressing the specific gravity. The quotient thus obtained multiplied by the number expressing the molecular weight gives the *refraction equivalent*.

P., specif'ic ro'tatory. *Optics.* The amount of rotation of a ray of polarised light, expressed in degrees of a circle of the plane of the polarised light, produced by 1 gramme of the substance dissolved in 1 cubic centimetre of liquid standing in a column 1 decimeter in length.

P., ton'ic. The same as *P., inherent*.

Pox. (*Pocks*, pl. of *pock*.) A name for *Syphilis*; also used for *P., small*.

P., ape. An exanthem observed among West Indian monkeys during smallpox epidemics.

P., bas'tard. A syn. for *P., chicken*.

P., black. A form of smallpox. See *Variola*.

P., chick'en. See *Varicella*.

P., cow. See *Vaccinia*.

P. doc'tor. A medical practitioner who makes a speciality of the treatment of the great pox, i. e. *Syphilis*.

P., false. A syn. for *P., chicken*.

P., French. A name for *Syphilis*.

P., gland. A syn. for *P., chicken*.

P., glans. A syn. for *P., chicken*.

P., grease. See *Grease pox*.

P., great. A syn. for *Syphilis*.

P., horn. See *Horn pox*.

P., horse. See *Variola equina*.

P., small. See *Variola*.

P., swine. See *Swine pox*.

P., wa'ter. See *Water pox*.

Pozzuoli. In Italy. Noted for its two warm mineral springs. 1. The "Acqua dell'Antro," at a temperature of 42.5° C., contains 2.05 parts of sodium chloride and 0.6 of sodium sulphate in 1000 parts. 2. The "Acqua di Serapide," at a temperature of 31.2° C., contains 1.04 of sodium chloride and 1.17 of sodium sulphate in 1000 parts.

Pp. *Chem.* Abbreviation for *Precipitate*.

p. p. Abbreviation for *Punctum proximum*.

Ppt. Abbreviation for *Præparatus* (-a, -um).

Pr. Abbreviation for *Presbyopia*.

p. r. Abbreviation for *Punctum remotum*.

Practical ana'tomy. See *Anatomy, practical*.

Practice. (Πρακτική. *F. pratique; I. pratica; G. Praxis*.) The repeated or long-continued performance of anything. In *Med.*, the performance of those duties which belong to a medical man; also, the extent of his business.

P., gen'eral. The practice of a Practitioner, general.

Practitioner. (Πρακτικός.) One who practises Medicine in all or any of its branches.

P., gen'eral. A medical man who practises the healing art in all its three branches, Medicine, Surgery, and Midwifery.

P., irreg'ular. Another name for a Quack.

P., reg'ular. One who practises Medicine according to the rules established by law and custom.

Præ. (L.) Prefix signifying before, whether concerning place or time.

Præabdomen. (L. *præ*, before; *abdomen*.) The first five segments of the abdomen of the *Crustacea*. (Latreille.)

Præbasilaris. (L. *præ*; *basilaris*, pertaining to a base.) One of the six pieces of the *cranium* of insects, placed before the *basilaris*. (Straus.)

Præbium. (L. *præbeo*, to administer to, allow.) A dose.

Præcartilage. (L. *præ*, before; *cartilage*.) See *Prochondrium*.

Præcaudalis. (L. *præ*; *cauda*, a tail.) Term for certain segments which exist at the extremity of the abdomen in *Chetopoda*. (Blainville.)

Præcautis. (L. *præ*; *caveo*, *cautum*, to beware of.) The same as *Prophylaxis*.

Præcava. See *Precava*.

Præcentral. (L. *præ*; *central*.) Anterior to the centre.

P. convolutio. Syn. for anterior central convolution, or anterior convolution of the *Insula*.

P. fissure. The ascending limb of the *fissure* of *Sylvius*; which runs upwards through the frontal lobe, dividing the superior, middle, and inferior convolutions on the one hand, from the ascending frontal on the other.

P. sulcus. The same as *P. fissure*.

Præcesio. See *Precession*.

Præchordal. (L. *præ*; *chorda*, a string.) Anterior to the anterior end of the chorda or *Notochord*.

Præcinctum. (L. *præcinctus*, girded.) Syn. for *Diaphragm*.

Præcipitans. (L. *precipitare*, to throw down.) Absorbent.

P. magnum. A name for *Sepia* (q. v.).

Præcipitatio. (L.) See *Precipitation*.

Præcipitatum. (L. *præcipito*, to throw down.) A *precipitate*.

P. album. *Precipitate*, white. Also, name for ammoniated mercury in the Belgian Pharmacopœia, and for precipitated calomel in the Portuguese Ph.

P. rubrum. *Precipitate*, red.

Præcisio præputii. (L. *præcido*, *præcisum*, to cut off.) Cutting off the prepuce, *circumcision*.

Præclavicularis. (Mod. L.) Anterior to the clavicle.

P. medius. The *Sterno-clavicularis*.

P. subcutaneus. (F. *cleido-aponévrotique ascendant*.) Human Anat. A muscular fasciculus, only rarely found, lying in a fold of the cervical fascia and attached to the two ends of the clavicle. (Gruber.)

Præcognitio. (L. *præcognosco*, *præcognitum*, to know beforehand.) Med. The same as *Prognosis*.

Præcommissura. The anterior cerebral commissure. (Wilder.) See *Commissura cerebri anterior*.

Præcordia. Neut. pl. (L. *præ*; *cor*, the heart.) 1. The muscle which separates the heart from the abdominal viscera, i. e. the diaphragm, *φρένες*. (Pliny.) 2. The thoracic viscera. 3. The forepart of the thoracic region, the breast. Now used exclusively in this last sense.

Præcordial. (L. *præ*, before; *cor*, the heart.) In front of the heart.

P. anxiety. (F. *angoisse précordiale*;

L. *angoscia præcordiale*; G. *Prækordialangst*.)

A feeling of anxiety and oppression, with a sensation of constriction of the chest over the præcordial region. The respiration is hurried and irregular; the pulse is small, regular, and increased in frequency. There is usually universal pallor, but occasionally some flushing of the cheeks. The attack is paroxysmal, and most commonly occurs at night, seldom lasting longer than fifteen minutes. The attack bears a considerable resemblance to *Angina pectoris*; but there is never the agonising pain which characterises that affection. It occurs often in neurotic subjects, especially in hypochondriacs and melancholics; but it is by no means unknown in healthy subjects. In the last it is usually the result of overloading of the stomach, either with solid food, or with alcohol; and often occurs as the result of a prolonged drinking bout. An emetic or, in some cases, a mere effervescing draught, often gives speedy relief.

P. dullness. See *Cardiac dullness*.

P. oppression. The same as *P. anxiety*.

P. region. The surface of the chest in front of the heart.

Præcordialgia. (L. *præcordia*; Gr. *ἄλγος*, pain.) Pain referred to the *Præcordia*.

Præcordium. The pit of the stomach, or *Scrobiculus cordis*. Also, syn. for *Præcordia*.

P. pedis. An old term for the *Metatarsus*.

Præcornu. (L. *præ*; *cornu*.) Wilder's term for the anterior horn of the lateral ventricle of the cerebrum.

Præcox. (L.) Early ripe, precocious.

Præcuneal. (L. *præ*, before; *cuneus*.) Anterior to the *Cuneus*; also, belonging to the *Præcuneus*.

Præcuneus. (L. *præ*; *cuneus*, a wedge.) The portion of the cerebrum lying in front of the *Cuneate* lobule, that is, the *Quadrante* lobule.

Præcustodia. (L. *præ*; *custodio*, to watch.) The same as *Prophylaxis*.

Prædiastolicus. See *Predialstolic*.

Prædictio. (L.) Prediction; another term for *Prognosis*.

Prædispositio. (L.) Predisposition.

Prædivinatio. (L.) Divination or foretelling.

Prædominium. (L. *predomo*, to subdue.) Predominance.

P. aquæ. Old term for predominance of watery or serous fluid.

P. sanguinis arterio'si. Old term signifying a predominance of arterial blood.

P. sanguinis veno'si. Old term signifying a predominance of venous blood.

Præfloratio. See *Præfloration*.

Præfocatio. (L. *præfoco*, to strangle.) Suffocation.

P. faucium. Another name for *Globus hystericus*.

P. matricis. (L. *matrix*, the womb.) The same as *P. faucium*.

P. uterina. The same as *P. faucium*.

Præforceps. See *Preforceps*.

Præformatio. (L.) Preformation.

Præfurnium. (L. *præ*, before; *furnus*, a furnace.) Term for the mouth or opening of a chemical furnace.

Prægeniculatum. (L. *præ*; *geniculatum* = *corpus geniculatum*.) Wilder's term for the *Corpus geniculatum externum*.

Præglobin. See *Preglobin*.

Prægnans. (L.) Pregnant.

Prægnas. The same as *Prægnans*.
Prægnatio. (L.) Impregnation.
Prægnatus. (L.) Pregnant.
Prægnax. (L.) Pregnant.
Prægustatio. (L.) A foretaste.
Præhallux. (*Præ*; *hallux*.) A bone present in certain quadrupeds on the tibial border of the foot, representing the vestige of a toe. It is said to be represented in the human embryo at the second month by a nodule of cartilage. (*Bardeleben*.)
Præhensio. (L.) Prehension.
Præintermaxillarë. (L. *præ*, before; *inter*, between; *maxilla*.) The middle or intermediate portion of the superior maxilla. Also termed *Endognathion*.
Prælabrum. (L. *præ*, before; *labrum*, the lip.) Syn. for *Glypeus*.
Prælingua. (L. *præ*; *lingua*.) The tip of the tongue.
Prælium. (L.) A battle or engagement. A term for coition.
Prælum. (L.) A wine-press; in general, a press.
P. arteria'le. A tourniquet.
Prælumbaris. (L.) Prelumbar.
Prælumbo-suprapubianus. A name for the *Psoas parvus*.
Præmaxilla. See *Premaxilla*.
Præmaxillary bone. The *Præmaxilla*.
Præmedulla. (L. *præ*, in front of; *medulla* = *medulla spinalis*.) A syn. for *Medulla oblongata*.
Præmonitorius. (L.) Premonitory.
Præmorphismus. (L.) Premorphism.
Præmor'sus. (L. *præmordeo*, *præmorsum*, to bite off.) Bitten off. Term used in Botany for certain appendages, as, for example, leaves and roots, which are jagged or terminate abruptly, having an appearance as though bitten off.
Prænar'is. (Mod. L.) In front of the nose. A term for the anterior nares (*Wilder*).
Prænomen. See *Prenomen*.
Prænomena. Plur. of *Prænomen*.
Prænotio. (L. *præ*; *nosco*, *notum*, to know.) A syn. for *Præcognitio*.
Prænuntiatio. (L. *præ*; *nuntio*, to announce.) The same as *Prænotio*.
Præoccipital. In front of the occiput.
P. fissure. A short fissure on the lower margin of the external surface of the cerebrum, which divides the occipital from the temporal lobes.
P. notch. The same as *P. fissure*.
Præocular. (L. *præ*; *oculus*, eye.) Of *antennæ*, when inserted before the eyes, as in the *Chrysis*.
Præesophage'al. See *Præesophageal*.
Præoperculum. See *Preoperculum*.
Præop'ticus. (L. *præ*; *op'ticus*, optic.) A term for the anterior pair, *nates*, of the *Corpora quadrigemina*.
Præoral. (L. *præ*; *os*, the mouth.) See *Preoral*.
Præparan'tes, arte'riæ. (L. *præparans*, preparing; so named from being formerly believed to prepare the semen.) Old term for the *Spermatic arteries*.
Præparantia, va'sa. (L.) Lit., Preparing vessels. The same as *Præparantes, arte'riæ*.
Præpara'ta, ve'na. (L. *præparatus*, prepared.) Old term for the *Facial vein*.

Præpara'tio. (L.) Preparation.
P. chy'li. Old term for *Chylification*.
Præparatum. (L.) A preparation. Also, neut. of *Præparatus*.
Præparatus. (L.) Prepared.
Præpedunculus. *Wilder's* term for the superior peduncle of the cerebellum. See under *Cerebellum*.
Præpelvister'num. See *Prepelvisternum*.
Præperforatus. *Wilder's* term for the *Perforated space, anterior*.
Præperitone'al. In front of the peritoneum.
P. cav'ity. Old term for the series of loose areolar spaces in the subperitoneal tissue of the anterior abdominal wall; formerly believed to be a continuous space into which the urinary bladder rose when distended.
Præpitu'itary. In front of the pituitary body.
Præpollex. (L. *præ*; *pollex*, the thumb.) A rudimentary extra finger, found in early embryonic life as a cartilage on the radial border of the hand. (*Albrecht*.)
Præpoten'tia. (*Præ*; *potens*, powerful.) Excessive power.
P. viri'lis. Excessive procreative power in the male.
Præpo'tio. (*Præ*; *potio*, a drink.) Syn. for *Propotismus*.
Præpu'bic. In front of the pubes.
P. an'gle. The bend formed in the penile urethra in front of the pubes when the penis is in the dependent position.
Præputiales. Pl. of *Præputialis*.
P. glan'dulæ. See under *Glandulæ*.
Præputialis. *Preputial*.
Præpu'tiate. (*Preputio*, to draw out the foreskin.) Having the foreskin uncircumcised.
Præpu'tii ductio. (L. *præputium*; *ductio*, a drawing.) Term for *Masturbation*.
P. fræ'num. See *Frænum of the prepuce*.
Præpu'tium. (L.) The *Prepuce*.
P. clitor'idis. The prepuce of the *clitoris*. Name for the covering of the *glans clitoridis*, formed by the upper folds of the *labia minora* where these converge in front.
Prærectalis. *Prærectal*. Also, *Henle's* term for the anterior part of the *Sustentator recti*.
Præsa'gium. (L. *præ*; *sagio*, to foresee.) Divination.
Præscap'ula. The portion of the *scapula* above, or, in quadrupeds, anterior to, the spine.
Præscapular fos'sa. The supra-spinous fossa of the scapula.
Præscapular'is. (Mod. L. From *præscapula*.) A syn. for *Supraspinatus*.
Præscien'tia. (L. *præ*; *scientia*, knowledge.) Another term for *Prognosis*.
Præscitio. (L. *scire*, to know.) The same as *Præscientia*.
Præscrip'tio. (L.) A prescription.
Præscutum. (L. *præ*, before; *scutum*, a shield.) The most anterior *sclerite* of the tergal portion of each thoracic segment in the *Arthropoda*.
Præsem'inal. See *Preseminial*.
Præse'pè. (L.) An inclosure. In *Anat.*, used in the same sense as *Alveolus*.
Præse'piolum. (Dim. of *Præsepium*.) Used in the same sense as *Præse'pè*.

Præsepium. The same as *Præsepē*.
Præservatio. (L. *præ*; *servo*, to save.) Another term for *Prophylaxis*.
Præservativum. (L.) An *Amulet*.
Præservatoria, indicatio. (L.) A prophylactic indication. See *Indications, prophylactic*.
Præservatorius. Syn. for *Prophylactic*.
Præspinalis. (L.) *Prespinal*.
Præsternum. See *Presternum*.
Præsylian convolution. A transverse cerebral convolution sometimes present, crossing the anterior end of the Sylvian fissure.
P. sulcus. A furrow on the orbital surface of the cerebrum, in front of, and running in the same direction as, the *Sylvian fissure*.
Præsystolic. See *Presystolic*.
Prætibia. (L.) *Pretibial*.
Prævia, placenta. (Fem. of *prævius*.) See under *Placenta*.
Prævius. (L.) That which goes before.
Pragmatagnosia. (Πᾱγμα, an object; ἀγνοσία.) Inability to recognise objects.
P., visual. Dr. John Wyllie's term for *object-blindness*.
Pragmatamnesia. (Πᾱγμα; ἀμνησία.) Inability to recollect the appearance of objects.
P., visual. Dr. John Wyllie's term for inability to recall visual images.
Prague method. *Obstet.* A method of delivering the aftercoming head in head-last cases. The ankles of the infant are grasped above the internal malleoli with the right hand; the index finger of the left hand is hooked over one clavicle and the remaining fingers over the other. Traction is made with both hands until the perineum is distended. The right hand is then passed up to grasp the legs. The feet are then brought forward with a circular motion towards the mother's abdomen, the left hand being used as a fulcrum.
Prairie burdock. The *Silphium terebinthinalum*.
P. bush, stinking. The *Ptelea trifoliata*.
P. dock. The *Parthenium integrifolium*.
P. hys'sop. The *Pycnanthemum lanceolatum*.
P. in'digo. The *Baptisia leucantha*.
P. itch. An inexact term used to designate several skin diseases prevalent on the prairies, characterised by itching and a papular or vesicular rash.
P. pine. The *Liatris scabiosa*. (Printed as *Liatris scariosa*, q. v.)
P. sen'na. The *Cassia chamæchrista*.
Pran'dium. L. (Gr. πρῶ, before; ἔνδειος, at noon.) Breakfast; also, an early dinner.
Prasinum viridē. (L. *prasinus*, leek-coloured; *viridis*, green.) Leek-green. An old name for subacetate of copper.
Prasinus. (Prason.) Leek-coloured. The same as *Porraceus*.
Prasites. (Πρασίτης.) Wine flavoured with horehound leaves. Also, leek-green.
Prasium. (Πράσιον.) A name for the *Marrubium vulgare*.
Prasoides. (Prason; εἶδος, form, resemblance.) The same as *Prasinus*.
Prason. (Πράσον.) The *Leek*.
Pra'sum. The same as *Prason*.

Pra'tal. (L. *pratium*, a meadow.) The same as *Praticolous*.
Praten'sis. (L. *pratium*, a meadow.) *Biol.* Belonging to meadows.
Prate'si's reagent. A mixture of bichromate of potassium with some alkaline silicate; used for the detection of sugar in urine.
Prati'colous. (L. *pratium*; *colo*, to inhabit.) *Biol.* That which lives in meadows.
Pravaz', Charles Gabriel. A physician of Lyons. Born 1791, died 1853.
P.'s syringe. A form of hypodermic syringe with a long trochar and cannula, used for injecting fluids into the circulation. Originally invented by Pravaz for the introduction of solutions of iron into aneurysms, to set up coagulation and consequent obliteration of the sac.
Prax'is. (Πρᾶξις.) Practice; also used in the special sense of *P. medica*.
P. medica. Medical practice.
Pray's test-letters. A test for *Astigmatism*. It consists of a row or rows of capital letters in black, marked with white strokes, which run in various directions, each individual letter having those strokes parallel to each other, whatever may be the angle of them.
Prayer beads. The seeds of *Abrus precatorius*. Also called *Jumble beads*.
Prazmowski's bacillus. (After *Prazmowski*, its discoverer.) The bacillus which sets up the butyric acid fermentation.
Pre-acetabular. In front of the *acetabulum*.
Pre-albuminur'ic. Before the onset of *albuminuria*.
Pre-a'nal. In front of the *anus*.
Preaortic. (L. *præ*; *aorta*.) In front of the *aorta*.
P. plex'uses. General term for those plexuses of the sympathetic which lie in front of and near to the *aorta*. Such are the pharyngeal, posterior pulmonary, and solar plexuses, &c.
Pre-ataxic. Before the onset of *ataxia*.
Pre-auditory. In front of the auditory canal; also, in front of the auditory nerve.
Preax'ial. (*Præ*; *axis*.) Term given originally by Huxley and Flower to those borders of the four rudimentary limbs in the early embryo which look towards the head, at that stage when the limbs lie with their axes approximately perpendicular to the transverse plane of the vertebral axis.
Prebas'al. *Biol.* In front of the base, or of the basal portion.
Prebasilar. In front of the *Basilar process*.
Preb'lau. In Austria. Noted for its cold spring, which contains 3·12 parts of sodium bicarbonate in 1000 parts.
Prebrach'ial. (L. *præ*, in front of; *brachium*.) In front of the *brachium*. Also, epithet applied to a vein on the wings of certain species of insects.
Prebrach'ium. (L. *præ*; *brachium*.) Syn. for *Brachium cerebri*; also, for *Propatagium*. Also, the wing-membrane above the *brachium* in bats.
Prebran'chial. (L. *præ*; *branchiæ*.) In front of the *branchiæ* or gills.
Prebron'chial. (L. *præ*; *bronchus*.) In front of a *bronchus* or of the two *bronchi*.
Prebuc'al. (L. *præ*; *bucca*, the cheek.) The same as *Preoral*.

PRECANCEROUS—PREDISPOSITION

Precan'cerous. (L. *præ*; *cancer*.) During the period immediately preceding the development of a primary cancer.

Precar'diac. (L. *præ*, before; Gr. *καρδία*, the heart.) On the *cephalic* side of, or superior (in Human Anat.) to, the heart.

Precartilag'inous. (L. *præ*, before; *cartilage*.) During the period, in embryonic life, immediately preceding the formation of cartilage.

Precaud'al. (L. *præ*; *cauda*.) In front of the *cauda*, or the *caudal vertebrae*.

Precava. (L. *præ*; *cava*.) Name for the *Vena cava superior*.

Precaval. Belonging to the *Præcava*. Also used as a substantive as a syn. for *Præcava*.

P. sinus. Term for the duct of Cuvier. See *Cuvier, duct of*.

Precentral. See *Præcentral*.

Precerebellar artery. Wilder's term for the *Cerebellar artery, superior*.

Precerebral artery. Wilder's term for the *Cerebral artery, anterior*.

Pré'chac. In the Département Landes, France. Noted for its hot mineral spring, temperature 53° C. to 57° 5° C. It appears to contain sulphuretted hydrogen.

Prechord'al. (L. *præ*; *chorda* [*dorsalis*].) In front of the *Chorda dorsalis* or *Notochord*.

Precho'roid arteries. Wilder's name for the *Choroid arteries, anterior*.

Precipitant. (L. *præcipito*, to cast down. F. *précipitant*; G. *niederschlagend*.) That which throws down. Applied to the chemical agent, the addition of which determines precipitation.

Precipitate. (L. *præ*; *caput*, the head. F. *précipité*; G. *Præcipitat-Niederschlag*.) 1. As a *subst.*, that which is thrown down. Term for the substance which is thrown out of solution, or separated as a solid, from a liquid compound, as the result of the addition of any chemical agent. 2. As an *adj.*, headlong.

P. labour. See *Labour, precipitate*.

P., red. Common name for *Hydrargyri oxidum rubrum*.

P., white. Common name for *Hydrargyrum ammoniatum*.

Precip'itated. Thrown down as a *Precipitate*.

P. calcium carbonate. See *Calci carbonas præcipitata*.

P. calcium phosphate. See *Calci phosphas præcipitata*.

P. carbonate of zinc. See *Zinci carbonas præcipitata*.

P. chalk. See *Calci carbonas præcipitata*.

P. fer'rous sulphate. See *Ferri sulphas præcipitata*.

P. sulphur. See *Sulphur præcipitatum*.

Precipita'tion. (L. *præcipito*, to cast down. F. *précipitation*; G. *Niederschlagung*.) The formation of a *Precipitate*.

P., frac'tional. The separation of a mixture of liquids of different volatility by the repeated addition of a solid *precipitant*, and separation of the precipitate formed, the least volatile liquid being that first precipitated. This process is used to separate mixtures of the fatty acids, the acetate of a heavy metal being employed as the precipitant.

P., par'tial. A method for the separation of two soluble salts in a mixture. A portion of

each is precipitated, and the precipitate is then decomposed, redissolved and reprecipitated.

Preclo'acal. (L. *præ*; *cloaca*.) Belonging to the anterior portion of the *cloaca*.

Precoc'ity. (L. *præcox*; *præ*; *coquo*, to ripen.) Unusually early development.

Precom'missure. (L. *præ*, before; *commissure*.) The anterior commissure of the brain.

Precor'acoid. (*Præ*; *coracoid*.) Anterior to the *coracoid* process of the scapula.

Also, as a *subst.*, term for the part of the pectoral arch anterior (ventral) to the *coracoid* in certain of the *Vertebrata*.

Precor'dia. See *Præcordia*.

Precor'dial. See *Præcordial*.

Precordial'gia. See *Præcordialgia*.

Precor'dium. See *Præcordium*.

Precor'neal. In front of the *Cornea*.

Precor'nu. (L. *præ*; *cornu*.) Term for the anterior cornu or horn of the lateral ventricle of the cerebrum.

Precrib'rum. (L. *præ*, before; *cribrum*, a sieve.) *Anat.* Syn. for *Perforated space, anterior*.

Precu'neal. See *Præcuneal*.

Precuneus. See *Præcuneus*.

Precur'sor. That which is *precursory*.

Precur'sory. (L. *præ*; *curro*, *cursum*, to run.) Preceding; also, foretelling.

P. symp'toms. The same as *Premonitory symptoms*.

Preda'cean. (L. *prædax*, preying upon others.) A syn. for *Carnivore*.

Predelinea'tion. (L. *præ*; *delineation*.) A syn. for *Preformation*.

Predia'stol'ic. (L. *præ*; Gr. *διαστολή*, dilatation.) Preceding the *Diastole*.

Predicrotic wave. (L. *præ*; Gr. *δίκροτος*, double-beating.) Preceding the *Di-crotic wave*. A term applied to a small and inconstant elevation in a sphygmographic pulse-tracing, which appears early in the descending portion of the main wave, and precedes the di-crotic wave.

Predigas'tric. Belonging to the *Pre-digastri-cus*.

Predigas'tricus. (*Præ*; *digastri-cus*.) Coues' term for the anterior belly of the *digastri-cus* muscle.

Prediges'ted. Digested, or partly digested, artificially, before being taken into the stomach.

P. foods. Foods artificially digested by means of preparations of the various digestive ferments.

Prediges'tion. (L. *præ*; *digestio*, digestion.) The processes which are precursory to digestion, namely, insalivation, mastication, and deglutition; also, artificial digestion by means of preparations of the various digestive ferments.

Predilata'tor. (L. *præ*; *dilatator* = *dilator*.) Coues' name for the *Dilator naris anterior*.

Predispo'nent. The same as *Predis-posing*.

Predispose'. (L. *præ*; *dispono*, *dispositum*, to order.) To render more liable.

Predispo'sing. (L. *præ*; *dispono*, *dispositum*, to order.) Epithet applied in Medicine to any particular condition, innate or acquired, which renders the organism more than usually susceptible to a given disease.

Predisposi'tion. (L. *præ*; *dispono*. F. *prédisposition*; G. *Prädisposition*, *Anlage*.)

PREDORMITION—PREGNANCY

Peculiar liability of the organism to a given disease, caused by any condition, structural peculiarity, or habit of body, innate or acquired.

Predormition. (L. *præ*, before; *dormio*, to sleep.) Term signifying the short stage of unconsciousness immediately preceding actual sleep.

Predorsal. (L. *præ*; *dorsal*.) Anterior to the *dorsum* or dorsal region.

Prefficients. (L. *præ*, before; *efficiens*, effecting.) Francis Galton's term for the sum of the predisposing causes of any given phenomenon.

Preëm'bryo. (L. *præ*; *embryo*.) Term for the inferior of the two cells opposite to the micropyle in the vegetable ovule which, by its growth and division, gives rise to the *embryo*.

Preëxistence. An existing beforehand.

P. of germs. The theory that the act of procreation merely develops an organised and formed being already existing. Observation has not confirmed this theory.

Prefloration. (L. *præ*floreo, to blossom before the time.) The same as *Æstivation*.

Prefolia'tion. (L. *præ*; *folium*, a leaf.) Term for the arrangement *inter se* of the leaves in the bud.

Prefontanelle'. (L. *præ*; *fontanelle*.) A term for the anterior fontanelle.

Prefor'ceps. (L. *præ*; *forceps*.) The curved anterior fibres of the *corpus callosum*, which pass into the frontal lobe of the cerebrum.

Preform. (L. *præ*; *form*.) To form beforehand.

Preforma'tion. A forming beforehand. Also, formerly used as a term synonymous with *Preëxistence of germs*. See also *Ovulists*, and *Animalculists*.

Preformative membrane. See *Membrana præformativa*.

Prefront'al. (L. *præ*; *frontale* [os], the frontal bone. "Frontal postérieur" of Cuvier.) The middle portion of the *ethmoid* bone. (Owen).

P.s. Term for the lateral masses of the *ethmoid* bone, which, in lizards, crocodiles, and osseous fishes, exist as separate and distinct bones.

P. lobe. That portion of the *frontal lobe* of the cerebrum which lies in front of the *ascending convolution*.

Pregeminal. (*Pregeminum*.) Belonging to the *Pregeminum*.

Pregem'inum. (L. *præ*, before; *geminus*, a twin.) Term for the anterior pair, *nates*, of the *Corpora quadrigemina*, considered as a single organ.

Pregenica'lum. (L. *præ*; [*corpus*] *geniculatum*.) A term for the *Geniculate body*, *external*.

Pregeniculum. (L. *præ*; *genu*, a knee.) The same as *Pregenica'lum*.

Pregenital. (L. *præ*; *genital*.) In front of the external genitals.

Pregle'noid. In front of the *Glenoid fossa* of the temporal bone.

Preglob'in. (L. *præ*; *globin*.) An albuminoid, obtained from cytoglobin by the action of dilute acids. Unlike other albuminoids, it does not dissolve in an excess of acetic acid.

Preglobulin. (L. *præ*; *globulin*.) An albuminous substance present in small amount in animal cells. It is soluble in a 10 per cent. solution of common salt and in dilute alkalies,

insoluble in water. It has a slight inhibitory action on the process of clotting of blood.

Preg'nancy. (L. *prægnans*, contr. from *præ-genans*, with young. F. *grossesse*; I. *gravidanza*; G. *Schwangerschaft*.) The condition of a female who is with young, *i. e.* who has within her a fecundated germ, at whatever stage of development.

Signs and symptoms.—The period of pregnancy may be conveniently divided, for the purpose of description, into three periods of three months each.

1. During the first three months. **Symptoms.** Amenorrhœa and morning sickness, the latter arising soon after the beginning of the second month. **Physical signs.** Some increase in the size of the breasts, and enlargement with increased pigmentation of the areola round the nipple. The walls of the vagina become of a purple colour and softer. The cervix uteri becomes softened and tilted back, and the uterus uniformly enlarged, the fundus being tilted forwards.

2. During the second three months. **Symptoms.** Those of first three months, except the sickness, which usually disappears about the middle of the fourth month, together with a history of "*quickening*" (q. v.) about the middle of the fifth month. **Physical signs.** Some colourless fluid can usually be squeezed out of the breast. This sign is of significance only in the case of a first pregnancy. The uterus can be made out per abdomen as well as bimanually to be enlarged, and foetal movements may be detected, and the parts of the foetus distinguished. The uterine souffle (see *Souffle, uterine*) can be detected, and also the sound caused by impaction of the foetus against the uterine wall. The foetal heart-sounds may sometimes be heard during the sixth month.

3. During the third three months. **Signs and symptoms** as in the second three months, but more marked, and foetal heart-sounds more certainly detected.

The duration of pregnancy averages from 271 to 276 days from the end of the last menstruation.

P., abdom'inal, pri'mary. The case in which the ovum escapes from the Fallopian tube and, after fertilisation, becomes engrafted upon the peritoneum.

P., abdom'inal, sec'ondary. The variety in which the fertilised ovum at first develops in a sac in the ovary or Fallopian tube, or in an abnormal uterus; but where, on rupture taking place, a new sac is formed by adhesions, and the ovum continues to develop.

P., abnor'mal. See *P., extra-uterine*.

P., bigem'inal. *P., twin*.

P., cervi'cal. 1. **Primary.** A variety of extra-uterine pregnancy in which the fertilised ovum is arrested and developed in the cervical canal.

2. **Secondary.** An early abortion in which the ovum becomes arrested in the cervical canal.

P., com'plex. Pregnancy complicated by the presence of hydramnios, a mole, &c., beside the developing ovum.

P., com'pound. Pregnancy in which two or more germs are simultaneously developed.

P., cor'nual. Pregnancy in one of the *cornua* of a *uterus bicornis*.

P., double. *P., twin*.

P., duration of. The average duration

PREGNANCY

has been variously estimated by different authorities from 271 to 276 days. No case of protraction beyond 300 days from a single coitus has been actually established.

P., extra-peritoneal. See *P., intra-ligamentous*.

P., extra-uterine. The development of the ovum in some site other than the cavity of the uterus. The symptoms before the occurrence of rupture (see *P., extra-uterine, rupture of*) are those of ordinary pregnancy, together with more or less continual pain at one side of the abdomen. Per vaginam, a solid, tender tumour can generally be felt in Douglas' pouch. The following varieties of their condition have been observed:—1. (By far the commonest.) In the Fallopian tube. 2. In the undeveloped horn of a two-horned uterus. 3. In the peritoneal cavity. 4. In the cellular tissue between the two layers of the broad ligament (so-called *P., intraligamentous*). 5. In an ovary—this has not been absolutely proved to have occurred. 6. Tubo-ovarian pregnancy.

In many cases no cause can be assigned; but the following are cited as possible causes:—blocking of the Fallopian tube by inflammation or twisting, or by a second ovum; fibro-myomatous tumours of the Fallopian tube; in the undeveloped horn of a two-horned uterus; cross-fertilisation, by spermatozoa, of the opposite ovary.

P., extra-uterine, rupture of. This nearly always occurs between the third week and the fourth month. The symptoms are sudden, sharp abdominal pain, followed by collapse, in which state the patient may die. Should she survive, either the ovum may cease to develop and form a hæmatocele which gradually becomes absorbed; or it may go on developing, and either rupture afresh after a few weeks, or continue intact up to full term. If the last occurs, the fœtus dies in about a month after term, and a false labour occurs.

After the death of the fœtus the vessels of the adventitious placenta contract, and either the sac suppurates, fatty degeneration, *mummification*, occurs, or else a *lithopædion* is formed. The first is the usual course of events, the last extremely rare.

P., extra-uterine, tubal. See *P., tubal*.

P., false. See *Pseudocyesis*.

P., fatty. A variety of *P., false*, consequent on an excess of fat in the abdominal walls and great omentum.

P., feign'ed. The same as *P., pretended* (q. v.).

P., fœtal. A term for true pregnancy.

P., gazohyster'ic. (F. *grossesse gazo-hystérique*.) A term for *Physometra*.

P., gemellary. (L. *gemelli*, twins.) A syn. for *P., twin*.

P., hæmatohyster'ic. (F. *grossesse hémato-hystérique*.) A term for *Hæmatometra*.

P., hydat'id. Pregnancy complicated by the formation of cystic myxoma of the chorion (the so-called *Mole, hydatiform*, q. v.).

P., hydrohyster'ic. (F. *grossesse hydro-hystérique*.) A term for *Hydrometra*.

P., hyster'ical. A form of *P., false*, occurring occasionally in hysterical females. The abdominal swelling is usually due to tympanites. Movements of the intestines may simulate fœtal movements. There is also amenor-

rhœa. The administration of an anæsthetic causes a disappearance of the abdominal signs.

P. in rudimen'tary horn of u'terus. This is similar in its symptoms and course to *P., tubal*; usually rupture and fatal hæmorrhage take place rather later, but before the beginning of the fifth month.

P. inher'itance. Term used to express inheritance through the mother during pregnancy, as opposed to "conception inheritance." (Billings.)

P., intersti'tial. See *P., tubo-uterine*.

P., in'tra-ligamen'tous. The development of the ovum between the layers of the broad ligament, following on rupture of the sac formed at some part of the tube.

P., intramu'ral. (L. *intra*, within; *murus*, a wall.) The same as *P., interstitial*.

P., mo'lar. See under *Mole*.

P., mul'tiple. The simultaneous development of two or more embryos.

P., mu'ral. (L. *murus*, a wall.) A syn. for *P., intramural*.

P., ner'vous. A syn. for *P., hysterical*.

P., ovar'ian. A rare form, due to rupture of the Graafian follicle without escape of the ovum.

P., ovar'ian tu'bal. See *P., tubo-ovarian*.

P., pari'etal. Syn. for *P., intramural*.

P., phan'tom. A syn. for *P., hysterical*.

P., plea of. A woman sentenced to capital punishment may set up such a plea, in arrest of execution of the sentence until after delivery. See also *Jury of matrons*.

P., plu'ral. The development of more than one fœtus at the same time.

P., preco'cious. Pregnancy occurring in a female at an unusually early age. It has even been known to occur before the establishment of menstruation.

P., pretend'ed. The criminal act of a female who, not having been recently delivered, presents a recently-born infant as her own.

P., protracted. It is most probable that in most cases of apparent protraction an error has arisen from conception having occurred during a period of amenorrhœa. There is reason to think that pregnancy may be protracted to the equivalent of the tenth menstrual period, i. e. 308 days.

P., sarcofoetal. (Gr. *σάρξ, σαρκός*, flesh; *foetal*. F. *grossesse sarcofoetale*.) A pregnancy in which there are present one or more living fœtuses, and one or more moles.

P., sarcohyster'ic. (Gr. *σάρξ, σαρκός*, flesh; *hyster'ic*. F. *grossesse-sarco-hystérique*.) Term including molar (carneous or hydatidiform) and extra-uterine pregnancies.

P., signs and symp'toms of. See main heading.

Also, special signs:—1. *Hegar's sign*. Softening of the lower segment of the uterus.

2. *Braxton Hicks's sign*. Intermittent uterine contractions. These are first apparent about the end of the third month.

3. *Jorissen's sign*. Non-acceleration of the pulse on the patient changing from the horizontal to the erect position.

P., sim'ple. The same as *P., single*.

P., sin'gle. A pregnancy associated with the development of a single fœtus.

P., sol'itary. Pregnancy in which there is only one fœtus.

PREGNANT—PREMNA

P., spu'rious. See *Pseudocystis*.

P., trigem'inal. (L. *trigemini*, three at a birth.) The simultaneous development of three fœtuses from one ovum.

P., tu'bal. Development of the ovum in a sac formed by the hypertrophied wall of the Fallopian tube; the commonest variety of extra-uterine pregnancy. Rupture of the sac usually takes place before the end of the second month.

P., tu'bo-abdom'inal. This is practically the same as *P., tubo-ovarian*. The adventitious sac is attached by one surface to the fimbriated end of the Fallopian tube, and lies in the abdominal cavity, developing adhesions to neighbouring structures.

P., tu'bo-ovar'ian. The development of the ovum in a sac formed between the Fallopian tube and the ovary.

P., tu'bo-u'terine. Development of the ovum in that portion of the Fallopian tube which passes through the uterine wall. The so-called spontaneous rupture of the uterus is almost invariably due to rupture of the sac of a tubo-uterine pregnancy.

P., twin. The simultaneous development of two fœtuses from one ovum.

P., uncon'scious. Pregnancy of which the woman herself has not become aware.

P., u'terine. The normal kind of pregnancy, in which the fœtus develops in utero.

P., u'tero-abdom'inal. Pregnancy in which two fœtuses develop, one in the uterus and the other in the abdominal (peritoneal) cavity.

P., u'tero-ovar'ian. Pregnancy in which two fœtuses develop, one in the uterus and the other in the ovary.

P., u'tero-tu'bal. Pregnancy in which two fœtuses develop, one in the uterus and the other in the Fallopian tube.

Pregnant. (L. *pregnans*, with child. F. *enceinte*; I. *gravida*; G. *schwanger*.) In the condition of *Pregnancy*; with child.

Prehall'lux. See *Præhallux*.

Prehemiple'gic. (L. *præ*; *hemiplegia*.) Before an attack of *Hemiplegia*.

P. chore'a. Choreiform movements preceding paralysis of a limb.

P. pain. Pain coming on in a limb just before the occurrence of paralysis.

Prehens'ile. (L. *prehendo*, to seize.) Capable of prehension.

Prehens'io. (L. *prehendere*, *prehensum*, to lay hold of.) A laying hold of. Also, epilepsy. Also, catalepsy.

Prehens'ion. (*Prehensio*. F. *prehension*.) The act of laying hold of a thing.

Prehens'ipes. (L. *prehendo*, to seize; *pes*, a foot. F. *préhensipède*.) Ornithol. Able to catch a foothold, and so climb.

Prehens'ory. The same as *Prehensile*.

Prehypoph'ysis. The anterior portion of the hypophysis cerebri or *Pituitary body* (q. v.).

Prein'sula. (L. *præ*; *insula*.) The anterior portion of the *Insula* or Island of Reil.

Prelach'rymal. (L. *præ*; *lachrymal*.) Situated in front of the lachrymal gland, or of the lachrymal sac.

Préludes. (F.) *Prodromata*.

Prelum abdominal'ë. (L. *prelum*, a press-beam for pressing grapes.) "The abdominal press-beam." An expression applied

to the expulsive mechanism of the abdominal muscles.

P. arteria'lë. (L.) "The arterial press-beam." Term for a *Tourniquet*.

Prelum'bar. (L. *præ*; *lumbus*, the loin. F. *prelombaire*; G. *präthumbar*.) Situated in front of the loin.

P. sur'face. Term for the anterior or ventral surface of the lumbar vertebrae.

Premani'acal. (L. *præ*; *maniacal*.) Previous to an attack of *Mania*.

Pre'mature. (L. *præ*, and *mature*.) Mature or ripe before the time.

P. expul'sion of o'vum. See *Ovum*, *premature expulsion of*.

P. la'bour. (F. *Accouchement prématuré*; I. *parto prematuro*; G. *die zu frühe Geburt*.) Labour taking place before the completion of the natural term, but at a time when the fœtus is viable, i. e. between the twenty-eighth and thirty-eighth weeks.

P. la'bour, induc'tion of. As a conservative operation for both mother and child, this was first performed in England, where it has since been advocated more than on the Continent. When performed at too early a stage of pregnancy for the delivery of a viable child, i. e. before the end of the twenty-eighth week, it is termed induction of artificial abortion.

Indications for operation. Extreme pelvic contraction, diseases dangerous to the life of the mother—such as placenta prævia, severe morbus cordis or lung-disease, severe Bright's disease, eclampsia; habitual death of the fœtus within the last two months of pregnancy.

Methods of operation. 1. Puncture of membranes; this was the earliest method introduced.

2. Passage of a flexible catheter or bougie between the uterine wall and the membranes.

3. Dilatation of the cervix, first with tents, and afterwards with either hydrostatic dilators or the more modern and convenient metal dilators.

4. Vaginal douching with hot water (100° to 110° F.), introduced by Kiwisch of Wurzburg in 1836.

5. Intra-uterine injections with warm water by means of a rubber tube passed into the uterus.

6. By means of oxytocics, usually ergot. This method was sometimes used formerly; but it is uncertain and unsafe.

7. The Faradic current by means of an electric battery.

8. The use of a vaginal dilator of india rubber (*colpeurynter*), introduced by C. Braun of Vienna.

P. respira'tion. Respiration of the fœtus during birth, before the birth of the head. This sometimes occurs, in breech cases.

Premaxilla. The *Premaxillary bone*.

Premaxill'ary. The *Premaxillary bone*.

P. an'gle. The *basifacial angle*.

P. bone. (L. *præ*; *maxilla*. F. *prémaxillaire*.) The intermaxillary bone; represented in man by the *pars incisiva* of the superior maxillary, which is in some cases separated from the rest of the bone by a deep fissure.

P. sec'tor. (L. *seco*, *sectum*, to cut.) That area in the median plane of the skull which lies between lines drawn from the *hormion* to the alveolar and subnasal points. (Lissauer.)

Premen'strual. (L. *præ*; *menstrual*.) Immediately preceding *Menstruation*.

Premna taiten'sis. A Fijian shrub,

Order *Verbenaceæ*. Its bark is used to prepare *Tonga* (q. v.).

Prem'non. (Πρέμνον, the root or bottom of anything.) *Anat.* Term for the extremity of the visible part of the sclerotic or white of the eye, according to Goræus, in *Def.*

Premo'lar. (L. *præ*; molar. F. *prémolaire*.) Situate in front of the molar teeth; another name for a bicuspid tooth, replacing a milk tooth.

P. tooth. See main heading.

Premon'itory. (L. *præ*; *moneo*, to warn.) Giving warning beforehand; applied to symptoms.

Premorph'ism. (L. *præ*, before; Gr. *μορφή*, form.) The sum of the laws governing the development of a new formation from a primary cell.

Prémorse. See *Præmorsus*.

Prenan'thes. (Πρηνής, bent forward; ἄνθος, a flower.) Another name for the Genus *Nabalus*.

P. al'ba. The *Nabalus albus*.

P. Fra'seri. The "lion's foot." A North American perennial herb, which has a milky juice and a bitter root. The juice is believed to act as an antidote to snake-bites. The root is tonic.

P. serpentar'ia. The same as *P. alba*.

Prenar'es. (L. *præ*; *nares*.) The *Nares*, anterior.

Prenar'ial. Belonging to the *Prenares*.

Prena'sal. (L. *præ*; *nasal*.) In front of the nose.

Prenat'al. (L. *præ*; *natal*.) Before birth.

Preno'men. (L. *præ*; *nomen*, a name. Plur. *prenomina*.) *Biol.* The first or generic portion of a compound name.

Preoccip'ital. (L. *præ*; *occipital*.) Anterior to the *occiput*.

P. fis'sure. A fissure situated on the latero-ventral surface of either cerebral hemisphere, running between the sphenotemporal and occipital lobes.

Preocular. (L. *præ*, before; *oculus*, an eye.) In front of the eye.

Preœsophage'al. (L. *præ*; *œsophageal*.) Anterior to the œsophagus; also, anterior to the œsophageal ring in the Invertebrata.

Preomostern'al. Belonging to the *Preomosternum*.

Preomoster'num. (L. *præ*; *omosternum*.) An anterior *Omosternum*. (Gould's Dict.)

Pre-oper'cular. (*Pre-opercule*.) *Comp. Anat.* Term applied by Owen in his Homologies to the proximal segment of the radiated appendage of the *tympano-mandibular arch*.

Pre-oper'cule. (*Preoperculum*.) *Ichthyol.* The bony framework upon which plays the *operculum* of the gills.

Preöper'culum. (L. *præ*; *operculum*, a lid.) The *Pre-opercule*.

Preopt'ic. (*Preopticus*.) Another term for *Pregeminal*.

Preopt'icus. (L. *præ*; Gr. *ὀπτικός*, belonging to sight.) Another term for *Pregeminal*.

Preo'ral. (L. *præ*, before; *os*, *oris*, the mouth.) In front of the mouth.

P. vis'ceral arch'es. The facial plates of the cephalic extremity of the fœtus, situated in front of the mouth, and consisting of the median fronto-nasal plate, and the two lateral

pairs of external nasal and maxillary plates, respectively. The maxillary plates form the basis of the upper jaw.

Preos'seous. (L. *præ*; *os*, *ossis*, a bone.) Immediately antecedent to bone-formation.

Preovar'ian. Situated in front of the ovary.

Prepal'atal. Syn. for *Prepalatine*.

Prepal'atine. (L. *præ*; *palatum*, the palate.) Anterior to the palate. Also, as a substantive, syn. for *Maxillary process* of palate bone.

Prepara'tion. (L. *præparo*, to get ready beforehand.) 1. A preparing. (F. *préparation*; I. *preparazione*; G. *Präpariren*.)

2. Something prepared. (F. *préparation*; G. *Präparat*.) Term applied to an anatomical or pathological specimen; also, to a prepared drug.

Prepared'. (L. *præparo*, to get ready beforehand. F. *préparé*; I. *preparato*; G. *präparirt*.) Got ready in a special way for use.

P. bar'ley flour. Barley flour which has been steamed for twenty-four hours.

P. cal'amine. See *Calamina præparata*.

P. chalk. See *Creta præparata*.

P. flour. See *P. barley flour*.

P. oys'ter-shell. (L. *testa præparata*.) The white inner layer of the shell of *Ostrea edulis*, powdered and washed. It is almost pure calcium carbonate. (For uses, see *Calcium carbonate*.)

P. sto'rax. See *Styrax præparatus*.

P. su'et. See *Sevum præparatum*.

Pre-paroccip'ital. (L. *præ*; *paroccipital*.) Anterior to the *Paroccipital convolution* of the cerebrum.

Prepatell'ar. (L. *præ*; *patella*. F. *prérotulien*; I. *prerotuliano*.) Situated in front of the patella.

Prepeduncle. (L. *præ*; *peduncle*.) The anterior peduncle of the cerebellum. See *Peduncle of cerebellum*, anterior.

Prepedun'cular. Belonging to the *Prepeduncle*.

Prepedun'culate. The same as *Prepeduncular*.

Prepedun'culus. (L. *præ*; *pedunculus*.) *Prepeduncle*.

Prepelvister'nal. Belonging to the *Prepelvisternum*.

Prepelvister'num. (L. *præ*; *pelvisternum*.) An anterior *Pelvisternum*. (Gould's Dict.)

Preperfora'tus. (L. *præ*; *perforatus*.) A term for the *Perforated space*, anterior.

Prepitu'itary. (L. *præ*; *pituitary*.) Anterior to the *Pituitary body*.

Preplacental. (L. *præ*; *placenta*.) Before the development of the *placenta* in gestation.

Prepol'lex. (L. *præ*; *pollex*.) Term for the radial sesamoid bone (or, in some cases, two bones) in those of the *Mammalia* that have five complete digits.

Prepont'ile. (L. *præ*; *pons*, *pontis* = the *Pons Varolii*.) Anterior to the *Pons Varolii*.

Prepo'tency. (L. *præ*; *potency*.) *Biol.* The power of one parent, whether animal or plant, to impress his or her special characteristics on the offspring, those of the other parent being less markedly transmitted.

P., individ'ual. The *prepotency* possessed

PREPUBES—PRESENTATION

by certain individuals, both among animals and plants.

P., racial. A marked *prepotency* shown by any special race in contra-distinction to other races.

Prepu'bes. (L. *præ*; *pubes*.) The *pubes* of birds; also, the preacetabular portion of the Mammalian pubes.

Prepu'bic. In front of the pubes.

Prepu'ce. (*Præputium*. Originally from L. *præ*, before; and Gr. *πόσθιον*, the penis. F. *prépuce*; I. *prepuzio*; G. *Vorhaut*.) The foreskin; a loose fold of integument continued from the skin of the body of the *Penis*, and reflected over the *glans*. The integument of the inner surface of the prepuce resembles a mucous membrane.

P., glands of. See *Preputial glands*.

P., herpes of. See *Herpes præputialis*.

P., hood'ed. A term for *Phimosis*.

P., hyper'trophy of. This is not uncommon as a result of chronic irritation or disease. The hypertrophy consists of a solid œdema of the areolar tissue.

P., inflamma'tion of. This may occur either as inflammation of the prepuce alone (*Balanitis*, q. v.), or may affect the mucous membrane of the glans as well (*Posthitis*, q. v.).

P. of clit'oris. The superior folds of the labia minora which encircle the *Glans clitoridis*.

Prepu'tial. Belonging to the *Prepuce*.

P. cal'culus. See *Calculus, preputial*.

P. glands. Also termed *Glandulæ odoriferæ*, and *Glands of Tyson*. See *Tyson, glands of*.

P. her'pes. See *Herpes præputialis*.

Prepu'tium. See *Præputium*.

Prepylor'ic. (L. *præ*; *pylorus*.) Anterior to the *Pylorus*.

Prepyr'amid. (*Præ*; *pyramid*.) Term for the *Anterior pyramid* of the medulla oblongata.

Pre-ra'mus. (L. *præ*; *ramus*, a branch.) Term for the vertical branch of the stem of the arbor in the cerebellum.

Prerect'al. (L. *præ*; *rectal*.) Situated immediately in front of the rectum.

P. litho'tomy. See *Lithotomy, prerectal*.

Preren'al. (L. *præ*; *renes*, the kidneys.) In front of one or both kidneys.

Preret'ina. (L. *præ*; *retina*.) The thin lamina representing the retina in that part of the posterior or vitreous chamber of the eye immediately anterior to the *ora serrata*.

Preret'inal. Belonging to the *Preretina*.

Presac'ral. (L. *præ*; *sacrum*.) In front of the *Sacrum*.

Presbyacous'tic. (Πρόσβυς, an old man; ἀκουσις, hearing.) Belonging to *Presbycousis*.

Presbycous'is. Another spelling of *Presbykousis*.

Presbycus'is. The same as *Presbycousis*.

Presbykous'is. (Πρόσβυς, an old man; ἀκουσις, hearing.) The diminished hearing-power of old age.

Presbyodoch'ium. (Πρόσβυς, an old man; δέχομαι, to receive.) An asylum for the aged.

Presbyo'nosi. Nom. pl. of *Presbyonosus*.

Presbyo'nosus. (Πρόσβυς, an old man; νόσος, disease.) Disease peculiar to old age.

Presbyope. A person suffering from *Presbyopia*.

Presbyophre'nia. (Πρόσβυς, an old man; φρήν, the mind.) Senile dementia.

Presbyo'pia. (Πρόσβυς; ὤψ, the eye. F. *presbyopie*; G. *Fernsichtigkeit*.) Failure of accommodation for near vision, occurring in elderly people, dependent upon changes in the lens which lessen its elasticity, or in failure of the ciliary muscle or its motor nerves.

Presbyo'pic. Suffering from *Presbyopia*.

Presbyopy. *Presbyopia*.

Presbyosphac'elus. (Πρόσβυς; σφάκελος, gangrene. F. *presbysphacèle*.) Senile gangrene.

Presbyt'ia. (Πρεσβυτής, age.) Old term for farsightedness, including *Hypermetropia* and *Presbyopia*.

Presbyt'ic. Suffering from *Presbytia*.

Presbytodoch'ium. See *Presbyodochium*.

Prescap'ula. (L. *præ*; *scapula*.) Term for that part of the scapula above (or, in the horizontal position, anterior to) its *spine*.

Prescap'ular. (L. *præ*; *scapula*.) Anterior to the scapula; anterior, i. e. in the prone position, which is the natural posture in quadrupeds.

P. fos'sa. The *Supraspinous fossa*.

Prescapular'is. Coues' term for the *Supraspinatus* muscle.

Prescription. (L. *prescribo*, to direct. F. *prescription*; I. *prescrizione*; G. *Vorschrift*.) A formula for medicines to be exhibited, with directions as to the taking of them. A prescription may be either *simple*, consisting of one ingredient only, or *compound*, consisting of two or more ingredients. The classical compound prescription consists of four parts: 1, the *basis*, or principal ingredient; 2, the *adjuvant*, which helps the action of No. 1.; 3, the *corrective*, which corrects the action or obviates any unpleasant symptoms; 4, the *excipient* or *vehicle*, which gives the medicine, if solid, consistence, or, if liquid, forms a convenient fluid medium.

Prescu'tum. See *Præscutum*.

Presem'inal. (L. *præ*; *semen, seminis*, seed.) Previous to *insemination*.

Presentation. (L. *præsentatio*. F. *présentation*; I. *presentazione*; G. *Ueberreichung, Vorstellung*.) 1. In *Obstetrics*, the part of the fœtus which occupies the lower segment of the uterus, and lies over the internal os uteri at the beginning of labour, *P., primary*. Also, the part of the fœtus which comes to occupy that position during the progress of labour, *P., secondary*.

2. In *General Surgery*, a lying forward or prominently.

P., abdom'inal. Presentation of the abdomen of the fœtus.

P., arm. This occurs with considerable frequency as a prolapse of the arm in cases where the fœtus lies more or less transversely at the beginning of labour.

P., breast. Presentation of the anterior surface of the chest of the fœtus.

P., breech. See *Breech presentation*.

P., brow. See *Brow presentation*.

P., cephal'ic. Syn. for *P., head*.

P., cheek. Presentation of either cheek of the fœtus. An occasional variety of *P., face*.

P., chin. Presentation of the chin of the fœtus. An occasional variety of *P., face*.

P., coccyge'al. A syn. for *P., breech*.

P., complete' foot. See *P., foot, complete*.

P., com'pound. The presentation in labour of more than one part of the fœtus, as, *e. g.*, of the hand or arm with the head.

P., face. In this variety, instead of being flexed, the head of the fœtus is extended, and the face and forehead form the presenting part. Face presentations always begin as *Brow presentations* (q. v.).

P., foot. Really a variety of *P., breech*, in which one or both thighs become extended, and thus the presenting part consists of one or both feet. This is most likely to take place when the liquor amnii is abundant, and the breech does not fill up the lower part of the uterus; hence it occurs most commonly with twins or premature children.

P., foot, complete'. Term for presentation of both feet. See *P., foot*.

P., foot, incomplete'. Term for presentation of one foot. See *P., foot*.

P., foot'ling. Syn. for *P., foot*.

P., fron'tal. A syn. for *P., face*.

P., fun'is. Presentation of the funis or umbilical cord. This is spoken of as occurring when the cord is felt in front of or close to any other presenting part before rupture of the membranes. In this case, when the membranes rupture, the cord usually descends into the vagina, and is then spoken of as prolapsed.

P., head. Presentation of any part of the head of the fœtus. Most commonly used as synonymous with *P., vertex*.

P., incomplete' foot. See *P., foot, incomplete*.

P., knee. This is a variety of *P., breech*, in which one or both thighs become extended upon the trunk, the leg or legs remaining flexed. It occurs under similar conditions to those under which *P., foot* (q. v.) occurs.

P., longitu'dinal. Presentation of either extremity (cephalic or pelvic) of the fœtal ellipse, *i. e.* of the fœtus in its natural position of flexion.

P., mouth. Presentation of the mouth of the fœtus.

P., neck. Presentation of the neck of the fœtus.

P., oblique'. The same as *P., transverse*, as the latter term is generally used. See *P., transverse*.

P., occip'ital. Presentation of the occiput of the fœtus.

P., occip'ito-ante'rior. A variety of *P., vertex* in which the occiput is anterior.

P., occip'ito-lat'eral. A variety of *P., vertex* in which the head lies transversely with the occiput pointing towards either sacro-iliac synchondrosis of the mother.

P., occip'ito-poste'rior. A variety of *P., vertex* in which the occiput lies backwards towards the mother's sacrum.

P., occip'ito-sac'ral. The same as *P., occipito-posterior*.

P. of cord. See *P., funis*.

P. of foot and knee. This is developed from a primary *P., breech* in the same way as are *P., foot* and *P., knee*, and under the same conditions.

P., pel'vic. This heading comprises *P., breech* with its sub-varieties of *P., foot*, *P., knee*, and *P. of foot and knee*.

P., placen'tal. Another name for *Placenta prævia*.

P., po'lar. The same as *P., longitudinal*.

P., preternat'ural. Any rare or unusual presentation. Sometimes applied exclusively to *P., transverse*.

P., pri'mary. See main heading.

P., sec'ondary. See main heading.

P., shoul'der. The presentation of a shoulder at the beginning of labour, the fœtus lying somewhat obliquely in the uterus with the head lower than the breech. This, in common with other abnormal presentations, is relatively common before the last month or so of pregnancy, and tends to become righted by the adaptation of uterus and fœtus. The causes of shoulder presentation are prematurity of labour, death of the fœtus, maceration following death, contraction of the pelvic brim, and causes which interfere with the usual adaptation of fœtus and uterus; namely, weakness of the uterine muscle, excess of liquor amnii, spinal deformity of the mother, and the presence of twins.

P., side. Presentation of the lateral aspect of the trunk of the fœtus. The same as *P., transverse*, in the strict sense of this term.

P., trans'verse. The only condition under which an exactly transverse presentation occurs is that in which the mother's abdomen is so contracted from above downwards, on account of deformity of the spine, that there is most room for the fœtus in this position. What is often spoken of as a transverse presentation or cross-birth is one in which the fœtus lies somewhat obliquely, with the head lower than the breech. This usually develops into a shoulder presentation.

P., ver'tex. Presentation of the vertex or vault of the cranium in labour. There are four possible positions of the vertex when it presents—

First, or left occipito-anterior. The long diameter of the head lies approximately in the right oblique diameter of the pelvis (see under *Pelvis*), with the occiput anterior.

Second, or right occipito-anterior. Similar to *first*, but in the left oblique diameter.

Third, or right occipito-posterior. In the right oblique diameter, with the occiput posterior.

Fourth, or left occipito-posterior. In the left oblique diameter, with the occiput posterior.

Preservative. (*L. præ; servo, to save.*) *Med.* Used in the same sense as *Prophylactic*.

P. fluids. Fluids for preserving animal or vegetable structures, whether microscopic or otherwise.

Pre'sis. (*Πρήσω, to swell.*) Swelling, inflammation.

Pres'ma. The same as *Presis*.

Presmu'chum. Alchemical term for *Cerussa*, or white lead.

Presmu'kis. The same as *Presmuchum*.

Presphe'noid. (*Præ; sphenoid.*) Term applied by Owen in his *Homologies* to that part, *basisphenoid*, of the body of the sphenoid bone which lies anteriorly to the anterior clinoid processes.

P. bone. See *Presphenoid*.

Presphyg'mic. (*L. præ; σφνγμός, the pulse.*) Epithet applied to the interval between the beginning of the systole of the heart and the commencement of the propagation of the pulse wave.

Prespi'nal. (*L. præ; spinal.*) Situated in front of the spine.

Press of Hero'philus. See *Torcular Hierophyli*.

Presse artère. (F.) Arterial clamp. Another name for *Serre-nœud* of Deschamps.

Presse urèthre. (F.) Urethral clamp. Term for *Jugum penis*.

Pressio. (L. *premo, pressum*, to weigh down.) Pressure.

Pressions. (From *press*.) In massage, methods of pressing or compressing the muscles, by means of the whole hand, the tips of the fingers, or the *roulet*.

Pressor. (To *press*.) Exciting, stimulating.

P. n'bres. Syn. for *P. nerves*.

P. nerves. Nerves which, when stimulated, cause the vaso-motor (vaso-constrictor) centres to react, with consequent increase of arterial tension.

Pressure. (L. *premo, pressum*, to press.) The sensible effect of weight.

In *Massage*, a movement between percussion and kneading, by means of firm pressure with the finger-tips or knuckles.

P., after. The sensation of pressure remaining for a short time after the removal of the object giving rise to the pressure.

P., arte'rial. The tension exercised by the blood upon the arterial walls.

P., atmospher'ic. The pressure exerted by the atmosphere; this amounts, on an average, to fifteen pounds per square inch, at the sea-level, where it is at its maximum.

P.-a'trophy. Atrophy of tissues consequent on pressure. It may either occur from without, as by the pressure of an innocent tumour; or interstitially, as from the growth of a malignant tumour into the tissues.

P., blood-. See *Blood-pressure*.

P. effects'. Symptoms, due to pressure upon various organs, which arise in the course of sundry morbid conditions, *e. g.* aneurysm and new-growths; such as the œdema that develops from the compression of veins, or spasmodic cough from pressure on the vagus nerve. See also *P.-atrophy*.

P., endocar'dial. The blood-pressure in the cavities of the heart.

P., inspiratory. The pressure of air in the respiratory passages during inspiration.

P., in'tra-abdom'inal. The pressure exerted upon the walls of the abdomen by its contained viscera.

P., in'tra-cra'nial. The pressure exerted upon the walls of the cranium by its contents.

P., in'tra-oc'ular. The same as *Tension, intra-ocular*.

P., in'tra-thorac'ic. The pressure exerted upon the walls of the thorax by its contained viscera.

P., neg'ative. A minus pressure, such as is produced by suction. Also, absence of positive pressure.

P.-phos'phenes. See under *Phosphenes*.

P.-points. Points on the surface of the body marked by special sensibility to pressure.

P. sensa'tion. The feeling of pressure or compression which arises when a weight is placed on any part of the cutaneous surface.

P.-sense. The capability of perceiving pressure, *i. e.* of receiving a *pressure sensation*.

P. signs. The same as *P.-effects*.

P.-sore. A syn. for *Bed-sore*.

P. symp'toms. Nervous symptoms consequent on pressure on the brain or spinal cord.

Also, used as synonymous with *P.-effects*.

P.-tests. Tests applied to ascertain the acuteness of the *pressure-sense*.

P. the'ory. The theory that hernia arises from an overcoming of the resistance of the abdominal walls at a weak spot by the intra-abdominal pressure.

P., ve'nous. The tension of blood in the veins. This is a positive, though low, pressure, except in the thoracic veins during inspiration, when it becomes a minus pressure.

Prester. (Προστήρ, a meteor, also a swollen stream, and *metaph.* a flood of tears. In the plur., προστήρες, it signifies the veins of the neck when swollen by anger.) Ancient term for the white of the eye when inflamed; also, in the pl., for the veins of the neck, when swollen under the influence of excitement.

Presternal. Belonging to the *Presternum*; also, in front of the *Sternum*.

Presterna'lis. (L. *præ; sternum*.) Name for a muscle sometimes present passing over the sternum, on one or both sides, from the manubrium as far down as the fourth or fifth rib. (Gould's Dict.)

Presternum. (L. *præ; sternum*.) The *Manubrium sterni*.

Presto'mial. (L. *præ; Gr. στόμα*, the mouth.) More correctly, *Prostomial* (q. v.).

Presto'mium. (L. *præ; Gr. στόμα*, the mouth.) More correctly, *Prostomium* (q. v.).

Preston salts. Term for a form of smelling salts, composed of coarsely powdered carbonate of ammonia, strong solution of ammonia, and some volatile vegetable oil.

Presyl'vian. (L. *præ; sylvian*.) Anterior to the *aqueduct of Sylvius*.

Presymphys'al. (L. *præ; symphysis*.) In front of the *symphysis*, usually meaning the *symphysis menti*.

Presystolë. (L. *præ; systole*.) Term for the latter part of the *diastole*, corresponding to the time occupied by the dilatation of the ventricles.

Presystol'ic. (L. *præ; Gr. συστολή*, contraction. F. *présystolique*.) Preceding the *Systole*, belonging to the *Presystole*.

P. murmur. An endocardial murmur, generally rough and trilling in character, beginning in the latter part of the diastole and running on into the first sound of the heart. It is usually plainly heard only over the heart's apex, and is indicative of *Mitral obstruction*. It has also been termed an *auriculo-systolic murmur*.

P. thrill. A thrill felt in the region of the apex-beat of the heart, immediately preceding the systole, and generated by the same friction at the mitral orifice, in obstruction at that orifice, which gives rise to the *presystolic murmur*. It is not invariably to be felt in cases where the murmur can be heard.

Preternatural combustion. Old term, synonymous with *Combustion, spontaneous* (q. v.), in the second of its two meanings.

Pretib'ial. (L. *præ; tibia*.) In front of the tibia.

Pretuber'culous. (L. *præ; tuberculous*.) Immediately preceding the development of tuberculosis.

Pretympan'ic. (L. *præ; tympanic*.) In front of the tympanum, or of the tympanic region.

Prevalence of contours. The persistence of the image of the contour with some part of its background when a portion of the visual field of one eye offers a well-marked contour, while the corresponding part of that of the other eye has merely an evenly-coloured surface. (Billings.)

Preventive medicine. (L. *præ-venio, præventum*, to come before.) That branch of Medicine which deals with the use of preventive measures against disease.

P. treatment. The practical application of *P. medicine*.

Prevermis. (L. *præ; vermis*.) Term for the superior vermiform process of the cerebellum.

Prevertebral. (L. *præ; vertebral*.) In front of the vertebral column.

P. aponeurosis. Another name for *P. fascia*.

P. artery. A twig from the meningeal branch of the ascending pharyngeal artery, or, occasionally, from the artery itself, which is distributed in the prevertebral region in the neck.

P. fascia. A layer of fascia which lies over the prevertebral muscles, separating them from the pharynx and œsophagus, forming laterally the back of the carotid sheath, and becoming continued downwards over the scaleni, the brachial plexus and the subclavian vessels, thus forming the axillary sheath.

P. muscles. The muscles situated in relation with the anterior surface of the vertebral column.

P. plexuses. These are respectively the *Cardiac*, the *Solar*, and the *Hypogastric* plexus.

P. region. The region of, and in immediate relation with, the anterior surface of the vertebral column.

Prevesical. (L. *præ; vesica*, the urinary bladder.) In front of the urinary bladder.

Prezygapophysial. Belonging to the *Prezygapophysis*.

Prezygapophysis. (L. *præ; zygapophysis*.) Owen's term for the superior or anterior articular process situated one on either side of the body in the dorsal (thoracic) vertebrae. See also *Postzygapophysis*.

Priapeia. (Πρίαπος, the god of gardens.) A name for the *Nicotiana rustica*.

Priapismus. (Dim. formed from πρίαπος, in the sense of the penis. F. *priapisque*.) *Surg.* Term for a tent in the shape of a penis. Also, syn. for *Bougie*.

Priapism. (Πριαπισμός. F. *priapisme*; G. *Priapismus, Ruthenkrampf*.) Continual erection of the penis, accompanied or not with sexual desire. It is occasionally a result of stone in the bladder, especially in children. Also, erection of the clitoris in the female, consequent on sexual excitement.

P., persistent. Such a condition lasting for a number of days sometimes occurs as a result of excessive sexual connections, and especially of connection during intoxication.

Priapitis. (*Priapus*; adjectival termin. -itis.) Another name for *Phallitis*.

Priapus. (Πρίαπος.) The penis.

P. cervi. (L. *cervus*, a stag.) Stag's pizzle. The dried penis of the stag, which was formerly considered to act as an aphrodisiac, and was given internally in the form of powder.

P. ceti. (L. *cetus*, a whale.) Also termed

Leviathan penis. The penis of the whale, which was at one time administered in the form of powder for dysentery and also for leucorrhœa.

Prickle. (Anglo-Sax. *Prica*, a sharp point.) *Biol.* A hardened, pointed, ridged outgrowth of the epidermis.

P. cells. (F. *épithéliums dentelés*; G. *Stachelzellen*.) A descriptive term applied to cells which are found in the deeper layers of stratified epithelium, and which present minute spines upon their surface.

P. layer. The deeper layer of epidermis, in which *prickle cells* occur.

Prickly ash. A name for the *Aralia spinosa*; also, general term for the members of the Genus *Xanthoxylum*.

P. elder. A name for the *Aralia spinosa*.

P. heat. A common name for *Lichen tropicus*, a disease of hot climates, characterised by the eruption of minute pimples, accompanied by a sensation of intense burning and pricking.

P. lettuce. The *Lactuca virosa*.

P. pear. The *Opuntia vulgaris*.

P. poppy. The *Argemone mexicana*.

Pride of China. A name for the *Melia azedarach*.

P. of India. The *Melia azedarach*.

P. tree. The same as *P. of China*.

Pride weed. The *Erigeron canadense*.

Priest's crown. A name for the dandelion, *Taraxacum dens-leonis*.

P.-physicians. The *Asclepiadæ*.

Prima cella coli. (L.) The first compartment of the colon. A name for the *Cæcum*.

Primæviæ. (L.) *Anat.* The principal passages, i. e. the alimentary canal.

Primalia. (L. *primus*, first.) Term introduced by Wilson and Cassin for the least specialised group of plants and animals which propagate by means of cell-development. It includes Lichens, Algæ, Sponges, Fungi, and Infusorians.

Primaries. *Ornithol.* The usual term for *Primary feathers*.

Primary. (L. *primarius*, of the first rank.) A term used in a variety of senses in Medicine; e. g. to denote the original site of a disease (primary seat of a new-growth), or its earliest manifestations (primary syphilis); often used in opposition to secondary, in cases in which the morbid condition so indicated is viewed as the main disease, and not as a secondary effect, e. g. primary lateral sclerosis = idiopathic lateral sclerosis.

P. adhesion. Union of tissues by *first intention*.

P. age. *Geol.* That age in which the primary deposits occurred, i. e. the oldest deposits which, by their organic remains, afford any information of climate or the former positions of land and sea.

P. amputation. Amputation performed within the first twenty-four hours after an accident, before inflammation has had time to supervene.

P. body-cavity. See *Cælome*.

P. bubo. (F. *bubon d'emblée*.) A bubo originating from the absorption of chancrous matter without the persistence of a chancre; a condition not universally believed to exist.

P. cancer. See *Cancer, primary*.

P. confusional insanity. See under *Insanity*.

P. cell. Term for an embryonic cell.

PRIMATES—PRIMUM

P. chan'cre. See *P. sore*.

P. demen'tia. See under *Dementia*.

P. feath'ers. See *Feathers, primary*.

P. growth. *Pathol.* The original growth which gives rise to secondary growths.

P. lat'eral sclero'sis. See under *Sclerosis*.

P. le'sion. The original lesion which is the starting-point of secondary lesions.

P. mus'cular a'trophy. See *Myopathic atrophy*.

P. neural canal'. The neural canal formed in the embryo by the meeting of the medullary plates.

P. sarco'ma. See *Sarcoma, primary*.

P. sore. A syphilitic sore, or hard chancre. See under *Syphilis*, also under *Chancre*.

P. spas'tic para'lysis. See *Paralysis, spastic*.

P. sympt'oms. Those symptoms which appear at the onset of a disease.

P. syph'ilis. The local infection and irritation of neighbouring lymphatics with the syphilitic virus.

P. tu'mour. The same as *P. growth*.

Prima'tes. (L. *primus*, first.) The highest Order of the *Mammalia*, including man, apes, monkeys, and lemurs.

Primigenial. (L. *primus*; *gignere*, to beget.) Epithet applied to organisms that are primitive types of their special genus.

Primigenious. (L. *primus*; *gignere*, to beget.) Original.

Primigenous. The same as *Primigenious*.

Primigrav'ida. (L. *prima*, first; *gravida*, big with young.) Term for a woman in her first pregnancy.

Primine. (L. *primus*, first.) The external coat of the ovule in plants, which develops into the testa of the seed.

Primipara. (L. *primus*; -a, -um, first; *pario*, to bring forth. F. *primipare*; G. *Erstgebärende*.) A woman who has brought forth her first child.

Primipar'ity. The condition of a *Primipara*.

Primiparous. (L. *primus*; *pario*, to bring forth. F. *primipare*.) Belonging to a first birth; also applied as an epithet for a *Primipara*.

Primipartu'riens. (L. *primus*, first; *parturiens*, bringing forth.) The same as *Primipara*.

Primisterna'lē. (L. *primus*; *sternum*, the breast-bone.) Term applied to the *Manubrium*, or first piece of the sternum.

Primit'ia. (L. *primus*.) First-fruits. *Obstet.* Term applied to the *amniotic fluid*, whose discharge precedes the expulsion of the foetus.

Primitive. (L. *primitivus*, earliest of its kind.) 1. Original. 2. Imperfectly developed.

P. ax'is. The *Axis-cylinder* of a nerve-fibre.

P. band. The same as *P. axis*.

P. carot'id artery. A name for the common carotid artery.

P. cho'rion. See *Chorion, primitive*.

P. convolu'tions. (F. *circonvolutions primitives*; G. *Urwindungen*.) A series of cerebral convolutions, well-marked in the *Carnivora*, arranged concentrically round the fissure

of Sylvius. Traces of this arrangement are discernible in the frontal, temporal, and callosal convolutions of the human brain. (Billings.)

P. earths. *Geol.* Term introduced by Werner for earths which contain no trace of organic bodies. 2. The inferior strata, which constitute continents.

P. fibril'læ. (Of Max Schultze.) The elementary fibrillæ of which the axis-cylinder of a nerve consists; the essential conducting portions of the nerve, which are continued to the nerve-ending.

P. groove. (F. *gouttière primitive*.) The furrow which first appears in the upper surface of the *P. streak*. This furrow is bounded by two plates, *laminæ dorsales*; while, beneath it, the chorda dorsalis, or *notochord*, is developed.

P. il'iac ar'tery. A term for the common iliac artery.

P. joint. See *Amphiarthrosis*.

P. o'va. The same as *Primordial ova*.

P. sheath. (Sheath of Schwann.) The delicate membrane which invests the white nerve-fibres, containing nuclei at regular intervals, in definite relation to the nodes of Ranvier, at which points the membrane turns in, and closely invests the axis-cylinder.

P. streak. (F. *ligne primitive*; G. *Primivstreif*.) A faint streak, which appears in the *area germinativa* of the yolk in the fertilised ovum, and is the earliest trace of the future embryo.

P. sul'ci. Those *sulci* which appear earliest in the brain of the embryo.

P. trace. The *P. streak*.

P. ver'tebræ. See *Protovertebræ, Primordial vertebræ*.

Primor'dial. (L. *primordialis*.) Original.

P. cell. See under *Cell*.

P. cran'ium. Term for the membranous embryonic skull.

P. kid'ney. The *Wolffian body*.

P. o'va. Cells in the germ-epithelium of the ovary, which become *ova*; they enlarge, and become enclosed in Graafian follicles.

P. u'tricle. See under *Utricle*.

P. ver'tebræ. The *Protovertebræ*.

Primor'dium. (L.) The beginning. Old term for the germ contained in the egg.

Primor'es. (L. gen., without nom. sing., *primoris*, pl. *primores*.) The first, foremost (pl.).

P. dentes. The fore-teeth, or *incisors*. (Pliny.)

Prim'rose. (Prime, or first, rose. So named from its early flowering.) Common name of *Primula vulgaris*.

P., eve'ning. The *Oenothera biennis*.

P. tree. Another name for the *P., evening*.

Prim'ula. (L. *primulus*, the first.) A Genus of the *Primulaceæ*.

P. officina'lis. The *P. veris*.

P. ve'ris. The cowslip, whose flowers, sometimes used in infusions, are believed to have an antispasmodic action.

P. vulgar'is. (F. *primivère*; G. *Schlüsselblume*.) The primrose. The flowers are believed to possess antispasmodic properties, similar to those of the *P. veris*.

Primulace'æ. A Nat. Order of Dicotyledonous herbs, whose typical Genus is *Primula*.

Prim'ulin. (*Primula*.) Syn. for *Cyclamin*.

Primum mo'vens. (L. Lit. "the first [thing] moving.") *Pathol.* The first point of change, i. e. the site of the original lesion.

P. vi'v'ens. (L.) The first living. Old term for the heart of the embryo, from an erroneous idea that this was the first part formed. See *Punctum saliens*.

Primus quadrigem'inus. (L. *primus*, first; *quadrigeminus*.) Term for the *Pyramidalis* muscle.

Prince's method of resuscitation. Used especially in failure of respiration in ether or chloroform narcosis. The patient is suspended by the bent knees over the operator's shoulder, and is carried quickly up and down the room in this position. Artificial respiration may be carried on at the same time.

P. feath'er. Common name for the *Amaranthus hypochondriacus*.

P. pine. The *Chimaphila umbellata*.

Princeps. (L.) First, chief.

P. alexipharmac'um. (L.) The chief of antidotes. Old term for the *Angelica*.

P. cervi'cis. See *Arteria princeps cervicis*.

P. pol'licis. See *Arteria princeps pollicis*.

Principal. (L. *princeps*.) Chief.

P. axis. *Optics*. The straight line passing through the centres of curvature in spherical lenses.

P. cur'rent. The electric current which traverses the whole of a given circuit, when any two points in the circuit have been joined by a second wire.

P. fo'cal dist'ance. *Optics*. The distance of a principal focus in a refracting system from the optical centre of the refracting surface.

P. fo'ci. (Pl. of *focus*.) *Optics*. In every refracting system there are two principal foci. 1. The point through which all rays that are parallel to the principal axis of the system before incidence, pass after refraction.

2. The point at which incident rays cross in order that the emergent rays may be parallel to the principal axis of the system.

P. fo'cus. (L. *focus*, a fire-hearth.) See *P. foci*.

P. planes of space. These are the chief horizontal plane, the median plane, and the frontal plane. See under *Plane*.

P. points. There are two such in an optical system, and they are such that, when an incident ray, prolonged if necessary, passes through the first principal point, its corresponding emergent ray, or the prolongation of the latter, passes through the second, but the two rays are not parallel.

Princip'ium. (L.) A beginning. An element, a principle.

P. acid'ificans. The acidifying principle. A name for oxygen.

P. adstrin'gens. (L. *adstringo* = *astringo*, to bind.) The binding principle. A name for Tannic acid.

P. byrsodeps'icum. (L. *byrsa*, a hide; *deps*, to tan.) The same as *P. adstringens*.

P. coria'ceum. (L. *coriaceus*, of leather.) The same as *P. adstringens*.

P. hydrogenet'icum. A term for hydrogen.

P. hydrot'icum. The same as *P. hydro-geneticum*.

P. oxy'genans. A name for *Oxygen*.

P. saliva'l'e. Salivary principle. An old term for *Ptyalin*.

P. scytodeps'icum. (Σκῦτος, a hide; δεψέω, to make supple.) An old term for *Tannin*.

P. urino'sum. (Mod. L. *urinosus*, belonging to urine.) An old term for *Urea*.

Prin'ciple. (L. *principium*.) 1. An element. 2. A fundamental notion.

P., col'ouring, of blood. See *Blood*, colouring matter of.

P., diges'tive. A term for *Pepsin*.

P.s, imme'diate. The same as *P.s, proximate*.

P.s, me'diate. The same as *P.s, proximate*.

P. of Archime'des. The doctrine that a body immersed in liquid loses a weight equal to that of the liquid displaced.

P.s, prox'imate. (L. *proximus*, nearest.) Nearest principles. A term used in Organic Chemistry to designate substances that may be regarded as biologically, though not chemically, elementary; because they exist as such in the organism (e.g. albumen, gelatin, &c.).

P.s, ul'timate. Term for the elementary chemical bodies into which the *proximate principles* of a body can be finally split up.

P., vital. See *Vital principle*.

Prinos. (Πρίνος = L. *ilex*, the ever-green oak.) A Genus of the *Aquifoliaceæ*.

P. gla'ber. (L. *glaber*, smooth, without hair.) The inkberry. Habitat and uses the same as those of *P. verticillatus*.

P. læviga'tus. (L. *lævigo*, to make smooth.) The smooth winterberry. Habitat and uses the same as those of *P. verticillatus*.

P. padifolius. Syn. for *P. verticillatus*.

P. verticilla'tus. (L. *verticillatus*, jointed together.) The black alder, a common North American shrub. Its bitter bark has been used as a tonic, and as a substitute for cinchona in intermittent fever.

Prionoder'ma. (Πρίων, a saw; δέρμα, skin.) Syn. for *Linguatula*.

Prionodes. The same as *Prionoïdes*.

Prionoï'des. (Πρίων, a saw; εἶδος, resemblance. F. *prionoïde*; G. *Sägenähnlich*.) Saw-like. Term applied in old writings to the sutures of bones.

Priono'labis. The same as *Lapidoprion* (q. v.).

Pri'or. (L.) The former; also, that which lies more to the front.

P. annular'is. The *Interosseus tertius* of Winslow.

P. in'dicis. (L. *index*, *indicis*, the forefinger.) The *Extensor tertii internodii indicis*.

P. in'dicis pe'dis. The abductor indicis pedis, or first dorsal interosseous of the foot.

P. me'dii. See *P. medii digiti*.

P. me'dii dig'iti. (L. *medius*, middle; *digitus*, a digit.) The *Interosseus secundus*.

P. me'dii dig'iti pe'dis. The first plantar interosseous muscle.

P. min'im'i dig'iti. The third plantar interosseous muscle.

P. ter'tii dig'iti pe'dis. The second plantar interosseous muscle.

Pris'is. (Πρίσις.) Sawing. Term applied medically by Hippocrates to grinding of the teeth, *stridor dentium*, and also to trephining. Also, the same as *Prism*.

Prism. (Πρίζω, to saw. F. *prisme*; G. *Prisma*.) Geom. A solid figure, whose sides are parallelograms, and bases two polygons. *Optics*. A transparent medium comprised by two planes at a certain inclination to each other. This inclination is the refracting angle; the line opposite to it is the base of the prism. The function

of a prism is to refract mixed or white light, and decompose it into its constituent primary colours.

P., Am'ice. *P., Amici's.*

P., Am'ic's. See *Amici's prism.*

P.-diop'ter. The standard of refracting power of prisms. It consists of a prism deflecting light one centimetre on a tangent plane placed at the distance of one metre.

P.-diop'try. The same as *P.-diopter.*

P.s, enam'el. See *Enamel prisms.*

P., Nic'ol's. A prism invented by Nicol, constructed out of a rhombohedron of Iceland spar. Used for polarising light.

Pris'ma. (*Πρίσμα*, firstly, anything sawn; secondly, a prism.) A syn. of *Scobs* (q. v.).

Prismatic. (*F. prismatique*; *G. prismatisch.*) Relating to, or having the form of, a prism.

P. ana'lysis. Another name for *Spectral analysis.*

P. col'ours. The primary colours of the solar spectrum, into which white light is split up by the action of a prism.

P. spec'tacles. Two prisms, with bases towards the nose which, by refracting near rays towards their bases, give them a direction as though they came from a distance, and lessen the need for convergence of the optic axis.

P. spec'trum. The band of colours produced by the decomposition of white light by means of a prism.

Pris'matoid. (*Πρίσμα*, a prism; *εἶδος*, form.) Resembling a prism.

Pris'men'chyma. (*Πρίσμα*, a prism; *ἐγχύμα*, that which is poured in.) Term for a variety of vegetable tissue composed of prismatic cells. (Littré.)

Prismoid. (*Πρίσμα*, a prism; *εἶδος*, form, resemblance.) Prism-like.

P., li'quid. J. Thompson's name for the refracting watery liquid found in the corneal reflexion of the conjunctiva of the eye.

P., wat'ery. Syn. for *P., liquid.*

Prismoid'al. (*Prismoid.*) Resembling a prism. Epithet applied in Biology to structures shaped like an elongated prism.

Prismo'meter. (*Prism*; *μέτρον*, a measure.) An instrument designed for measuring the refractive power of prisms.

Prismus. The same as *Prisis.*

Prisopto'meter. (*Πρίζω* = *πρίω*, to saw; *ὄψ* = *ὄψις*, the eye; *μέτρον*, a measure.) An instrument designed for the estimation of varying degrees of *ametropia* of the eye, by means of two prisms fixed together at their bases.

Private parts. (*L. privus*, one's own.) The external genital organs.

P.s. The same as *Private parts.*

Privet. See *Ligustrum vulgarè.*

Privities. (*L. privus.*) The genital organs.

Priv'y. (*L. privus.*) *Adj.* Private. *Subst.* An outside closet. Also, syn. for *Privet.*

P. mem'bers. The external genital organs.

P. parts. The same as *P. members.*

P. r. n. Abbreviation for *pro re nata.*

Pro re nata. (*Medical L.*) A term commonly used in prescriptions, signifying for the occasion, or as occasion may require.

Proagoreu'sis. (*Προαγόρευσις.*) Foretelling. Term for *Prognosis.*

Pro'al. (*Πρό*, forth.) Having a forward direction.

Proam'nion. (*Πρό*, before; *amnion.*) That part of the area encircling the anterior extremity of the early embryo in which the epiblast and hypoblast are in contact, not being yet separated by the extension of the mesoblast.

Proamniot'ic. Belonging to the *Proamnion.*

Proan'giosperm. (*Πρό*, before [in point of time]; *angiosperm.*) A primordial *Angiosperm.*

Proangiosper'mic. Belonging to a *Proangiosperm.*

Proat'las. (*L. pro*; *atlas.*) A primitive *atlas vertebra.*

Prob'able dura'tion of life. See *Life, duration of, probable.*

Pro'bang. (*L. proba*, to try. *F. sonde œsophagienne*; *G. Schlundsonde.*) A long, slender, flexible rod, usually of whalebone, terminating in a small piece of sponge or ivory, or having a skein of horse hair near the extremity, designed for introduction into the œsophagus or larynx, to move foreign bodies lodged therein, or to apply local remedies.

P., ball. A probang fitted at one end with an ivory ball.

P., mon'ey. Also termed coin catcher. A form of probang designed for catching coins lodged in the œsophagus or larynx; fitted at the extremity with a flat, moveable piece of metal, arranged so as to lie flat against the stem of the instrument during insertion, but to turn on its hinge at right angles as the instrument is withdrawn.

P., sponge. A probang fitted at one end with a small piece of sponge.

Probar'bium. (*L. pro*, for; *barba*, a beard. *G. Vorbart.*) The downy hair which precedes the beard.

Probascan'ium. (*Προβασκάνιον.*) Old term for an *Amulet.*

Probascan'tium. The same as *Probascanium.*

Pro'basis. (*Πρόβασις*, an advancing.) A projection of a part, as in *hernia* or prolapse.

Probe. (*L. proba*, to try. *F. sonde*; *G. Sonde.*) 1. *Substantive.* An instrument, commonly of silver, with a blunt end, for exploring the direction and depth of wounds and sinuses. 2. *Verb.* To explore with a probe.

P., An'el's. A fine silver or gold probe used for dilating the lachrymal canals.

P.s, Bow'man's. A graduated series of flexible probes for dilating the nasal duct.

P., bullet. See *Nélaton's probe.*

P., chem'ical. A probe with lint or cotton-wool wound round one end for the local application of liquid drugs.

P., drain'age. A probe designed to assist in the drainage of a cavity.

P., drum. A probe fitted at one end with a drum in order to detect contact of the other end with foreign bodies, by means of the sound produced.

P., ear. A probe used for exploring the external auditory meatus.

P., elec'tric. A probe fitted with two insulated wires for detecting bullets in wounds, contact with the bullet completing the galvanic circuit.

P., eyed. A probe perforated at one extremity with an eye shaped like that of a darning-needle.

P., joint'ed. A probe jointed throughout its length; used for exploring tortuous sinuses.

P., lac'hrymal. The same as *P., Anel's*.

P., meerschaum. A variety of *P., bullet* tipped with meerschaum.

P., Nélaton's. See under *Nélaton*.

P.-nippers. Name for a kind of probe-forceps used for exploring wounds for foreign bodies.

P., por'celain. Another name for *P., Nélaton's*.

P., Sayre's ver'tebrated. See under *Sayre*.

P., stethoscop'ic. A probe fitted at one end with the tube of a stethoscope.

P., uterine. The same as *Sound, uterine*.

Probing. See *Probe* (verb).

Problematic bodies. The same as *P. organs*.

P. or'gans. Müller's term for the tubes of the water-vascular system of *Invertebrata*.

Probolé. (Προβολή.) A projection, prominence; a bump on the skull (Hippocrates).

Probosc'itate. (Proboscis.) Having a proboscis.

Proboscid'eus. (Προβοσκίς.) Having the appearance of a trunk.

Proboscid'ian. (Proboscis.) Having a proboscis. Applied (*Proboscidiana*, neut. pl.) to a Family of the *Pachydermata*.

Proboscid'il. (Nom. pl. of *Proboscidiūs proboscideus*.) The same as *Proboscidiana*. See *Proboscidian*.

Probosc'is. (Πρό, before; βόσκω, to feed. *F. trompe*; *G. Rüssel*.) An elephant's trunk. (Aristotle.) Applied also to the feelers of a cuttle-fish. (Aristotle.) In general, a trunk, or prolonged snout.

Procalym'ma. (Προκάλυμμα, a veil, curtain.) *Anat.* Term for any structure which hangs, like a curtain, in front of some other structure; applied, especially, to the labia majora.

Procamb'ial. Belonging to the *Procambium*.

Procamb'ium. (L. *pro*, before; *cam-bium*.) The primitive fibro-vascular tissue of plants.

Procar'dium. (Πρό, before; καρδία, the heart, also, the stomach.) The pit of the stomach.

Pro'carp. Shortened form of the word *Procarpium*.

Procar'pium. (Πρό, before; καρπός, fruit.) Term for the unfertilised female organ of certain of the Floridæ among the Algæ.

Procatar'ctic. (Προκαταρκτικός, previous; τὰ προκαταρκτικά = the immediate cause of things. Hippocrates.) *Med.* Predisposing.

Procatar'xis. (Procatarctic.) *Med.* Predisposition.

Procellar'ia obscu'ra palag'ica. The mutton bird of New Zealand. An oil obtained from this bird has been used as a liniment in rheumatism.

Proceph'ali. (Πρό, before; κεφαλή, the head.) A syn. for *Macrocephali*.

Procephalic. (Πρό, before; κεφαλή, the head.) Belonging to the anterior part of the head.

Proceph'alon. (Πρό; κεφαλή, the head.) The anterior portion of the head in *Arthropoda*.

Procer'eb'ral. Belonging to the *Procer'eb'rum*.

Procer'eb'rum. (Πρό, before; L. *cerebrum*.) The same as *Prosencephalon*.

Proce'rus nasi. (L. *procerus*, long; *nasus*, a nose.) Syn. for the *Pyramidalis nasi* muscle.

P. Santori'ni. (After *Santorini*.) The same as *P. nasi*.

Pro'cess. (Processus.) A well-defined projecting structure. Also, a method. For subheadings not given below, see under *Processus*, or under separate headings (e.g. for *P., clinoid*, see *Clinoid process*, &c.).

P., A, B, C. See under *Sewage, disposal of*.

P., acces'sory, of lum'bar ver'tebræ. See under *Accessory*.

P., acro'mion, of scap'ula. See *Acromion*.

P., a'lar. (L. *ala*, a wing.) One of the small, wing-like processes forming that part of the *crista galli* of the ethmoid bone which surrounds the foramen cæcum.

P., alve'olar. See *Alveolar process*.

P., an'gular, exter'nal. A thick, protruding portion of the frontal bone at the outer side of the orbit, articulating with the malar bone.

P., an'gular, inter'nal. That process of the frontal bone, at the inner side of the orbit, which articulates with the lachrymal bone.

P., an'kyroid. (Ἀγκυροειδής, like an anchor.) A syn. for *P., coracoid*.

P.s, artic'ular. See *Articular processes*.

P., aud'itory. The curved plate of bone which surrounds the opening of the *meatus auditorius externus*.

P., bas'ilar. See *Processus basilaris*.

P., cli'noid, ante'rior. See under *Clinoid*.

P., cli'noid, mid'dle. See under *Clinoid*.

P., cli'noid, poste'rior. See under *Clinoid*.

P., cochlear'i'form. See *Processus cochleariformis*.

P., cu'neiform. (L. *cuneus*, a wedge; *forma*, shape.) A term for the *Basilar process*.

P., ensi'form. See *Ensiiform process of sphenoid*, *Ensiiform process of sternum*.

P., fal'ciform. See *Falciform process*.

P., ham'ate, of eth'moid. See *Hamate*.

P., ham'ular. See under *Hamular*.

P., inci'sor. See *Incisor process*.

P., intraju'gular. See *Processus intra-jugularis*.

P., ju'gular. (L. *jugulum*, the collar-bone.) See *Jugular process*.

P., lach'rymal. The process of the *Inferior turbinated bone* which articulates with the anterior inferior angle of the lachrymal bone.

P., maxil'lary. See *Maxillary process*.

P., men'tal. (L. *mentum*, chin.) The prominent termination below of the internal border of the *inferior maxillary bone*.

P., mod'elling. See *Modelling process*.

P., na'sal. See *Nasal process*.

P., odon'toid. See *Odontoid process*.

P.s of calca'neum. See *P.s of os calcis*.

P. of he'l'ix. The small conical projection of cartilage opposite the first turn of the helix of the external ear (auricle).

P.s of in'cus. 1. Long process. 2. Short process. See under *Incus*.

P.s of Ingras'sias. See under *Ingras'sias*.

PROCESSUS

P. of Len'hossek. Term for the *Spinal cord, reticular process of.*

P.s of os cal'cis. 1. *Greater process, the head of the os calcis.* 2. *Lesser process, the sustentaculum tali.*

P. of Rau. See *Rau, process of.*

P., olec'ranon. The *Olecranon.*

P., ol'ivary. See *Olivary process.*

P., or'bital. See *Orbital process of malar bone, and Orbital process of palate bone.*

P., pal'atine, of supe'rior maxil'lary bone. See *Maxillary bone, superior.*

P.s, protoplas'mic, of Del'ters. The branched ganglion-cells of the grey matter of the central nervous system.

P., pter'ygoïd, of pal'ate bone. See *Pterygoid process of palate bone.*

P.s, pter'ygoïd, of sphe'noid bone. Two processes of the *Sphenoid* which descend, one on each side, from the point of junction of the body and great wing.

P., pyram'idal. See *Processus pyramidalis.*

P., ram'ifying. Another term for *P.s, protoplasmic, of Del'ters.*

P., sphe'noid, of pal'ate bone. The same as *P., sphenoidal, of palate bone.*

P., sphenoid'al, of pal'ate bone. See *Palate bone.*

P., spi'nous, of il'ium. *Anterior.* Term for the anterior superior spine. *Inferior.* The anterior inferior spine. *Posterior.* The posterior superior spine.

P., spi'nous, of sphe'noid. The pointed termination of the greater wing of the sphenoid posteriorly.

P., spi'nous, of tib'ia. The process situate between the two articular surfaces of the head of the tibia.

P., sty'loid. (Στύλος, a pillar.) 1. The irregularly triangular prominence at the termination of the external border of the lower end of the *radius.*

2. A long sharp process of bone in one or several pieces projecting downwards from the inferior surface of the *petrous* portion of the *temporal* bone, continuous with the *vaginal* process.

3. A rounded projection descending from the back of the lower end of the *ulna.*

P., supracon'dylar, of hu'merus. A small hooked process, with the hook pointing towards the condyle, occasionally present, situated immediately in front of the internal supracondylar ridge in the human subject. A fibrous band passing between it and the internal condyle gives origin to the pronator radii teres muscle, and beneath this passes the median nerve, and often the brachial artery. This arrangement corresponds to the foramen in this situation in *Carnivora.*

P.s, supracon'dyl'oid, of fe'mur. See *Processus supracondyloideus femoris lateralis, and P. supracondyloideus femoris medius.*

P., supracon'dyl'oid, of hu'merus. The same as *P., supracondylar, of humerus.*

P., un'cif'orm. (L. *uncus*, a hook; *forma*, shape.) 1. The curved process at the lower and inner border of the anterior surface of the *unciform* bone.

2. A projection from the lateral portion of the *ethmoid* bone, which closes in the upper part of the opening to the *antrum.*

P., un'cinate. (L. *uncinatus*, hooked.) A syn. for *P., unciform.*

P., vagi'nal, of sphe'noid bone. See *Sphenoid bone.*

P., ver'miform. See *Processus vermiformis.*

P., ver'tical, supe'rior longitu'dinal. Term for the *Falx cerebri.*

P., xiph'oid. See *Xiphoid process.*

P., zygomat'ic. See *Zygomatic process.*

Proces'sus. (L. *procedo*, *processum*, to go forward. F. *procès*; G. *Fortsatz*.) 1. A projection or protuberance, whether of bone or the soft parts.

2. An operation.

P. a cerebel'lo ad medul'lam. The same as *P. a cerebello ad medullam spinalem.*

P. a cerebel'lo ad medul'lam spina'lem. Process from the cerebellum to the medulla spinalis. Another name for *Cerebellum, peduncle of, inferior.*

P. a cerebel'lo ad pon'tem. Process from the cerebellum to the pons. Another name for *Cerebellum, peduncle of, middle.*

P. a cerebel'lo ad testes. Process from the cerebellum to the testes. Another name for *Cerebellum, peduncle of, superior.*

P. accesso'rius. The *Process, accessory, of a lumbar vertebra.*

P. accesso'rius spu'rius. Term for the rudimentary transverse process of the sacrum.

P. acromia'lis. The acromial process or *Acromion.*

P. acu'tus hel'icis. The sharp process of the helix. See *Process of helix.*

P. ad vo'merem. Process to the vomer. Term for the *vaginal process of the sphenoid bone.*

P. alveolar'is. The *Alveolar process.*

P. ancone'us. An old term for the olecranon.

P. ancora'lis. (L. *ancora*, an anchor.) A syn. for *Coracoid process.*

P. angulus margina'lis infe'rior. The inferior marginal angular process. Term for a ridge running along the posterior border of the frontal process of the malar bone. It is present only occasionally and in certain races of men.

P. annular'is. The annular process. A term for the *Pons Varolii.*

P. anon'ymous. A name for the *Jugular process.*

P. ante'rior mal'lei. The *processus gracilis* of the malleus.

P. ascen'dens. The ascending process. Term for the *nasal process of the maxillary bone, superior.*

P. basilar'is. The *basilar process* of the occipital bone. Also, term for a slender process of the posterior part of the body of the sphenoid bone, forming part of the lateral wall of the inferior petrosal sinus.

P. belenoï'des. Belenoid process. (See *Belenoid*.) A term for the *Styloid process.*

P. Blumenbach'ii. (After *Blumenbach*.) A term for the *Unciform process.*

P. brev'is incu'dis. The short process of the *Incus.*

P. brev'is mal'lei. Short process of the malleus. A low eminence at the root of the *manubrium* of the malleus, projecting towards the *Membrana tympani.*

P. bul'bi olfacto'rii. The process of the olfactory bulb. Another name for the *Fila olfactoria* (q. v.).

P. cæ'ci vermiform'is. The vermiform appendix of the cæcum.

P. calcar'ius. (L. *calcar*, a spur.) The

PROCESSUS

spur-like downward continuation of the bony septum of the nose.

P. cartilagin'us he'licis. The *Process of helix*.

P. cauda'tus. (L. *cauda*, a tail.) Caudate process. A name for the *Lobe of liver*, *caudate*; also, for the inferior extremity of one of the divisions of the *anti-helix* of the auricle, or external ear.

P. cerebel'li ad medul'lam. The same as *P. a cerebello ad medullam*.

P. cerebel'li ad pon'tem. The same as *P. a cerebello ad pontem*.

P. cerebel'li ad tes'tes. The same as *P. a cerebello ad testes*.

P. cerebri latera'lis. "The lateral process of the cerebrum." A name for the *Hippocampus major*.

P. cerebri major. "The greater process of the cerebrum." A name for the *Falx cerebri*.

P. clava'tus. (L. *clava*, a club.) Another name for the *Clava* of the medulla oblongata.

P. clinoid'eus. *Clinoid process*.

P. cochleari'formis. (L. *cochlea*, a snail-shell; *forma*, shape.) A thin plate of bone, which separates two canals situated at the junction of the squamous and petrous portions of the temporal bone, the one for the *Tensor tympani*, the other being the bony portion of the *Eustachian tube*.

P. cochlear'is. The same as *P. cochleari-formis*.

P. con'icus. The conical process. A name for the *Odontoid process*.

P. cricoid'eus. The small process on the lower border of either half of the thyroid cartilage which articulates with the cricoid cartilage.

P. crucia'tus. Term for the cruciate arrangement of the *falx cerebri* and the *falx* and *tentorium cerebelli*, where they meet opposite the internal occipital protuberance.

P. cubita'lis. (L. *cubitus*, the forearm.) Term for the lower end of the humerus, including the two lower articular surfaces.

P. cuneifor'mis. (L. *cuneus*, a wedge; *forma*, shape.) Term for the *Uncinate process* of the ethmoid bone.

P. cuneifor'mis os'sis occip'itis. The wedge-shaped process of the occipital bone. A term for the *Processus basilaris*.

P. denta'lis. Dental process. A name for the *Alveolar process*.

P. denta'tus. Dentate process. Another name for the odontoid process of the *axis* vertebra.

P. descen'dens fas'ciæ pel'vis med'ius. The median descending process of the pelvic fascia. Lesshaft's term for that process of the recto-vesical fascia which passes from the rectum to the bladder.

P. ensifor'mis. The *Process, ensiform*.

P. ethmolda'lis. (Ἡθμός, a sieve.) A thin plate in the *inferior turbinated* bone, which projects upwards to join the *unciform process* of the *ethmoid*.

P. falcifor'mis cerebel'li. (L. *falx*, a sickle; *forma*, shape.) Another name for the *Falx cerebelli*.

P. falcifor'mis du'ræ ma'tris. The falciform process of the *dura mater*. A name for the *Falx cerebri*.

P. falcifor'mis ma'jor. The greater falciform process. A name for the *Falx cerebri*.

P. falcifor'mis mi'nor. The lesser falciform process. A name for the *Falx cerebelli*.

P. folia'ceus. (L. *foliaceus*, of, or like, leaves.) Term for the delicate process of the ethmoid bone which projects into the frontal cells.

P. folia'nus. A name for the *P. gracilis* of the malleus.

P. fol'li. The same as *P. folianus*.

P. fronta'lis. The thick, rough portion of the *malar* bone, which articulates with the *external angular process* of the *frontal* bone.

Also, another name for the *nasal process* of the superior maxillary bone. See *Maxillary bone, superior*.

P. fron'to-sphenoida'lis. Another name for the frontal process of the *malar* bone. See *P. frontalis*.

P. glot'tidis. Process of the glottis. A name for the *P. vocalis*.

P. grac'ilis. A delicate process of bone, arising from an eminence below the neck of the *Malleus*, and passing to the *Glaserian fissure*. It affords attachment to the *Lazator tympani* muscle.

P. hama'tus. (L. *hamatus*, hooked.) The *Unciform process* of the unciform bone. Also, the *Uncinate process* of the ethmoid bone.

P. hamular'is. (L. *hamulus*, a little hook.) 1. A hook-like process on the *lachrymal* bone, articulating with the *lachrymal process* of the *superior maxillary*.

2. The hook-like termination of the *internal pterygoid plate* of the sphenoid.

3. The termination of the *lamina spiralis ossea* of the *cochlea*.

P. he'licis. The *Process of helix*.

P. he'licis cauda'tus. (L. *cauda*, a tail.) The same as *P. helicis*.

P. horizonta'lis incu'dis. The horizontal or short process of the *Incus*.

P. infe'rior. Term for the small, wedge-shaped process of bone that passes from the *tegmen tympani* to the inner end of the fissure of Glaser.

P. infe'rior incu'dis. The inferior or long process of the *Incus*.

P. inframalleolar'is. (L. *infra*, beneath; *malleolus*.) A name for the *Peroneal spine*.

P. innomina'tus. Innominate process. A name for the *Jugular process*.

P. inter'nus calca'nei. The internal process of the calcaneum. A name for the *Sustentaculum tali*.

P. intrajugular'is. Intrajugular process. Term for a small spinous process of the petrous portion of the temporal bone which crosses the jugular foramen.

P. juga'lis. (L. *jugum*, a yoke.) Term for the *process, malar*, of the superior maxillary bone; also, for the *Process, angular, external* of the frontal bone; and also, for the *zygoma*.

P. jugular'is accesso'rius. The accessory jugular process. Weber's term for a prominence often present on the occipital bone, bounding the jugular notch anteriorly.

P. jugular'is ante'rior. Syn. for *P. jugularis accessorius*.

P. jugular'is med'ius. The *P. intra-jugularis*.

P. lachryma'lis. The *nasal process* of the superior maxillary bone.

P. lachryma'lis ante'rior. The anterior lachrymal process. A name for the lachrymal crest of the superior maxillary bone. See *Lacrimal crest*.

P. lachryma'lis con'chæ infe'rior'is.

PROCESSUS

(*L. concha*, a shell; a name for the inferior turbinated bone.) The *lachrymal process* of the inferior turbinated bone.

P. lateralis. Lateral process. A term for that part of the transverse process of a lumbar vertebra which is considered to be serially homologous with a rib.

P. lateralis calcanei. The lateral process of the calcaneum. A syn. for *P. internus calcanei*.

P. lateralis spurius. Spurious lateral process. Another name for the *P. supracondyloideus femoris lateralis*.

P. lenticularis. (*L. lenticula*, a lentil.) The rounded extremity of the *P. longus* of the *Incus*, which articulates with the head of the *Stapes*. It is also termed *Os orbiculare*.

P. lenticularis incudis. (Gen. of *incus*.) Full name for *P. lenticularis*.

P. longus incudis. The slender or long process of the *Incus*, on which is set the *P. lenticularis*.

P. longus mallei. A syn. for the *Processus gracilis* of the malleus.

P. malaris. Malar process. A name for the *Processus angular, external* of the frontal bone; also, for the *zygoma*.

P. mammillaris ossis temporis. The mammillary process of the temporal bone. Another name for the *mastoid process*.

P. mammillaris vertebrarum. The mammillary process of the vertebrae.

P. marginalis. The same as *P. angulus marginalis inferior*.

P. mastoidæus. The *mastoid process*

P. maxillaris conchæ inferioris. The *maxillary process* of the inferior turbinated bone, or *concha*.

P. maxillaris ossis malaris. The maxillary process of the malar bone.

P. maxillaris ossis zygomatici. The *maxillary process* of the zygomatic or malar bone.

P. medullæ cerebri. "The process of the medulla of the cerebrum." A term for the *Crus cerebri*.

P. medullaris transversus. The transverse medullary process. A term for the *Pons Varolii*.

P. membraniformis. The membraniform process. A term for the choroid plexus of the fourth ventricle.

P. nasalis. The *nasal process* of the superior maxillary bone; also, the *lachrymal process* of the inferior turbinate; also, the *maxillary process* of the palate bone.

P. nasi. (*L. nasus*, a nose.) Syn. for *Pyramidalis nasi*.

P. nucleiformis. The nucleiform process. A syn. for *Odontoid process*.

P. obliquus. Oblique process. Syn. for *Articular process*.

P. obtusus. The same as *P. brevis* (of malleus).

P. occipitalis. Syn. for *P. basilaris*.

P. occultus. (*L.*) The hidden process. Term for the toothed edge of the *orbital plate* of the superior maxilla at the anterior extremity of the infra-orbital canal.

P. odontoidæus. The *Odontoid process* of the axis vertebra.

P. olivaris. The *Olivary process*.

P. orbicularis. The orbicular process. A syn. for *P. lenticularis*.

P. orbicularis cerebri. The orbicular process of the cerebrum. A term for the *Infundibulum*.

P. paracondyloidæus. The *Paracondyloid process* (q. v.).

P. paramastoidæus. (*Παρά*, alongside of; *mastoid*.) Syn. for *P. paracondyloideus*.

P. petrosus ossis sphenoidæi medius. The middle petrous process of the sphenoid bone. A name for the *P. basilaris* of the body of the sphenoid.

P. petrosus posterior et superior ossis sphenoidæi. The posterior and superior petrous process of the sphenoid bone. A name for the *posterior clinoid process*.

P. pinealis. The pineal process, or pineal gland.

P. pneumaticus. Pneumatic process. A name for the jugular process of the occipital bone, on account of its air-cells which communicate indirectly with the mastoid cells.

P. primus. First process. A name for the handle of the *malleus*.

P. pyramidalis. The pyramidal process. Term for the occasional *middle lobe* of the *Thyroid gland*; also, for the *pyramidal process* of the palate bone.

P. rachidianus. Rachidian process. A name for the spinal cord.

P. Ravii. The process of Ravius or Rau. A name for the *processus gracilis* of the malleus.

P. restiformis. The restiform process, or *restiform body*.

P. reticularis. (*L. reticulum*, a little net.) A projection of grey matter into the white matter of the *lateral columns* of the spinal cord, best marked in the cervical region.

P. rostriformis. (*L. rostrum*, a beak; *forma*, shape.) A name for the *Coracoid process*.

P. Sæmmeringii. (After *Sæmmering*.) A name for *P. marginalis*.

P. spelæus. (*L. spelæus*, a cave.) Term for a process of the ethmoid bone which projects into the sphenoidal sinus.

P. sphenoidalis. The sphenoidal process of the palate bone. See *Palate bone*.

P. sphenomaxillaris. The sphenomaxillary process. Term for an occasional prolongation downwards of the greater wing of the sphenoid bone.

P. spinosus mallei. Spinous process of the malleus. A name for the long process. See *Malleus*.

P. spinosus sphenoidalis. The spinous process, or spine, of the sphenoid.

P. sterni xiphoidæus. The *xiphoid process* of the sternum.

P. styloidæus cranii. The styloid process of the cranium.

P. styloidæus fibulæ. The styloid process of the fibula.

P. styloidæus radii. The styloid process of the radius.

P. styloidæus ulnæ. The styloid process of the ulna.

P. sulcatus. (*Sulcus*.) A process of the palate bone, occasionally present, joining the orbital with the sphenoidal process.

P. superior incudis. Superior process of the *incus*. A name for the short process. See *Incus*.

P. supracondyloidæus femoris lateralis. Lateral supracondyloid process of

PROCESSUS

the femur. Term for an occasional projection above the external condyle of the femur.

P. supracondyloid'eus fem'oris media'lis. Median supracondyloid process of the femur. Term for the projection above the internal condyle of the femur to which the inner head of the gastrocnemius is attached.

P. supracondyloid'eus hu'meri. The supracondyloid process of the humerus. See *Process, supracondyloid, of humerus.*

P. tali exter'nus. (*Talus = astragalus.*) Term for that projecting part of the external surface of the astragalus, the inferior surface of which articulates with the sustentaculum tali of the os calcis.

P. tali inter'nus. (*Talus = astragalus.*) Term for the projection of the posterior extremity of the astragalus which is grooved on its inner surface for the reception of the flexor longus hallucis tendon.

P. tegmen'ti tym'pani. (*Tegmentum = tegmen.*) Term for part of the tegmen which forms the roof to the internal and middle ear.

P. tempora'lis. Temporal process. Term for a process of the frontal bone, but rarely observed, which passes back to articulate with the squamous portion of the temporal.

P. te'res. Syn. for *Fasciculus teres.*

P. transversus accesso'rius. Accessory transverse process. Syn. for *P. accessorius.*

P. transversus du'ræ ma'tris. The transverse process of the dura mater. A name for the *Tentorium cerebelli.*

P. transversus occipita'lis. The occipital transverse process. A term for the *Jugular process.*

P. trochleari'formis. (*Trochlea; L. forma, shape.*) Syn. for *P. cochleari'formis.*

P. trochlear'is. Trochlear process. Hyrtl's term for a groove in a bone which is for the reception of a tendon, and effects a change in the direction of the tendon.

P. trochlear'is calca'nei. Trochlear process of the calcaneum. Syn. for *Peroneal spine.*

P. tubar'ius. (*Tuba, the Eustachian tube.*) Rebsamen's term for the projection of the internal pterygoid plate of the sphenoid, which forms a support for the cartilage of the Eustachian tube.

P. tuberosita'tis navicular'is. Process of the navicular tuberosity (*i.e.* the tuberosity of the navicular or scaphoid bone). A process, sometimes present, attached to the tuberosity of the scaphoid bone of the foot.

P. tym'pani. Syn. for *Tegmen tympani.*

P. unci'formis. (*L. uncus, a hook; forma, shape.*) A name for the *Coracoid process.*

P. uncina'tus. The uncinate process. A term for the olecranon; also, for the coracoid process.

P. uncina'tus mi'nor. A flat plate of the ethmoid bone, occasionally present, which covers in either the maxillary or lachrymal cells.

P. uv'ifer. (*L. uva, a grape; fero, to carry.*) A term for the uvula.

P. vagina'lis. (*L. vagina, sheath.*) Vaginal process. 1. A plate of bone running inwards from the base of the *pterygoid process*, articulating with the *Vomer*. 2. A broad plate of bone on the inferior surface of the *temporal process*. Also, 3. The *P. vaginalis peritonei.*

P. vagina'lis fas'ciæ transver'sæ. Vaginal process of the transverse, *i.e.* transversalis, fascia. Nuhn's name for the *Infundibuliform fascia.*

P. vagina'lis peritone'i. The pouch of peritoneum extending down into the *scrotum*, into which the testicle projects.

P. ventricu'li. (*L. ventriculus, the paunch.*) A term for the duodenum.

P. vermicular'is. Vermicular process. Syn. for *P. vermiformis.*

P. vermifor'mis. (*L. vermis, a worm; forma, shape.*) Syn. for *Appendix vermiformis.*

P. vermifor'mis infe'rior. The *Vermiform process, inferior.*

P. vermifor'mis, supe'rior. The *Vermiform process, superior.*

P. ver'mis infe'rior. The *Vermiform process, inferior.*

P. ver'mis supe'rior. The *Vermiform process, superior.*

P. voca'lis. See *Vocal cords.*

P. voca'lis ante'rior. Term for the small tuberosity on the posterior surface of the thyroid cartilage, to which the true vocal cords are attached anteriorly.

P. vo'mero-sphenoida'lis. (*L. vomer; sphenoidalis, sphenoidal.*) Syn. for *P. sphenoidalis.*

P. xiphoi'des. The xiphoid cartilage.

P. xiphoi'deus. The same as *P. xiphoi'des.*

P. xiphosterna'lis. (*Xiphoides; sternalis.*) The same as *P. xiphoi'des.*

P. zygoma'tico-orbita'lis. Zygomatico-orbital process. A name for the *Process, malar.*

P. zygoma'ticus. The zygomatic process.

Processus. (*L.*) Pl. of *Processus.*

P. a cerebello ad cere'brum. The *superior peduncles* of the cerebellum. See *Cerebellum, peduncles of.*

P. a cerebello ad medulla'm. The same as *P. ad medulla'm.*

P. ad cere'brum. The same as *P. a cerebello ad cere'brum.*

P. ad medulla'm. The *inferior peduncles* of the cerebellum. See *Cerebellum, peduncles of.*

P. ad pon'tem. The *middle peduncles* of the cerebellum. See *Cerebellum, peduncles of.*

P. ad tes'tes. The same as *P. cerebelli ad testes.*

P. alaefor'mes. The *Ligaments, alar.*

P. ala'ti. The winged processes. A syn. for *Alisphenoids*, or greater wings of sphenoid bones.

P. alifor'mes. Term for the *Pterygoid processes* of the sphenoid bone.

P. arcifor'mes. The *Arciform fibres.*

P. articula'res spor'ti. Name for the small prominences situated on the inner side of the posterior foramina of the *sacrum*. These are rudimentary articular processes.

P. ascenden'tes. (*L. ascendens, mounting up.*) Term for the superior articular processes of the *vertebræ*. See *Articular process.*

P. cartilagin'e'i tu'bæ Eustachia'næ. Term for nodules of cartilage, presumably sesamoid, present in the cartilaginous part of the wall of the Eustachian tube.

P. cerebel'li ad cere'brum. The *superior peduncles* of the cerebellum. See *Cerebellum, peduncles of.*

P. cerebel'li ad medulla'm oblonga'tam. The *inferior peduncles* of the cerebellum. See *Cerebellum, peduncles of.*

P. cerebel'li ad pon'tem. The same as *P. ad pontem*.

P. cerebel'li ad tes'tes. The superior peduncles of the cerebellum. See *Cerebellum*, *peduncles of*.

P. cerebel'li inferio'res. The inferior peduncles of the cerebellum. See under *Cerebellum*.

P. cerebel'li med'li. The middle peduncles of the cerebellum. See under *Cerebellum*.

P. cerebel'li superio'res. The superior peduncles of the cerebellum. See under *Cerebellum*.

P. cerebel'li transver'si. The transverse processes of the cerebellum. The same as *P. cerebelli medii*.

P. ciliar'es. The *Ciliary processes*.

P. cor'poris quadrigem'ini ad cerebellum. The processes of the quadrigeminal body to the cerebellum. Syn. for *Cerebellum*, *peduncles of, superior*.

P. costar'il. (L. *costa*, a rib.) Term applied to the transverse processes of the lumbar vertebræ, on account of their being believed to be the serial homologues of the ribs.

P. du'ræ ma'tris. The processes of the dura mater. Term for the falx cerebri and tentorium cerebelli.

P. e cerebel'lo ad pon'tem. The same as *P. cerebelli ad pontem*.

P. e cerebel'lo ad tes'tes. The same as *P. cerebelli ad testes*.

P. ensiform'es. Ensiform processes. Term for the lesser wings of the *Sphenoid bone*.

P. enteroid'e'i cer'ebr'i. (Mod. Lat. *enteroideus*; from Gr. *έντερον*, an intestine; *αἶδος*, form.) Term for the cerebral convolutions, from their resemblance in appearance to the coils of the bowels.

P. excep'ti. (L. *exceptus*, received, entertained.) Term for the inferior articular processes of the lumbar vertebræ, which are embraced by the superior articular processes.

P. excipien'tes. (L. *excipiens*, receiving, taking up.) Term for the superior articular processes of the lumbar vertebræ, which embrace the inferior articular processes, *P. excepti*.

P. incisuræ trigem'ini. (L. *incisura*, a notch; *trigeminus* = *nervus trigeminus*.) Certain small projections, only rarely present, at the apex of the petrous portion of the temporal bone, on either side of the hollow for the Gasserian ganglion. They are believed to represent the ring of bone encircling the Gasserian ganglion in certain of the Mammalia.

P. latera'les u'teri. The lateral processes of the uterus. A name for the *Fallopian tubes*.

P. latera'les vertebrar'um. The lateral, i. e. the transverse, processes of the vertebræ.

P. mammillar'es cer'ebr'i. The *mammillary tubercles* (q. v.).

P. muscular'es vertebrar'um. Muscular processes of the vertebræ. Term for the prominences on the vertebræ for muscular attachment.

P. obli'quo-mammillar'es. Oblique mammillary processes. Term for the rudimentary articular process of the sacrum.

P. papillar'es. Papillary processes. A term for the *olfactory nerves*.

P. papillar'um. The same as *P. papillares*.

P. spino'si spu'rii. The spurious spinous processes. A term for the bony eminences, representing spinous processes, along the midline of the posterior surface of the sacrum.

P. tere'tes. Pl. of *Processus teres* (q. v.).

Procheila. Pl. of *Procheilium*.

Prochellid'ion. (Προχειλίδιον.) The *prolabium*, or projecting part of the lip.

Procheil'on. (Πρό, before; χείλος, lip.) The same as *Procheilidion*.

Procheu'ma. (Πρόχευμα, that which is poured out.) *General Anat.* Syn. for *Parenchyma*.

Prochi'lon. See *Procheilon*.

Proch'ilous. (Πρό, before; χείλος, a lip.) Having protruding lips.

Prochon'dral. (Πρό, before; χόνδρος, gristle.) Before the formation of cartilage.

Prochon'drium. (Πρό, before; χόνδρος, cartilage.) Freshly-formed cartilage. The *Præcartilage* of Minot.

Prochor'dal. (Πρό, before; χορδή, a cord.) In front of the *Chorda dorsalis*.

Procho'rion. (Πρό, before; chorion.) Hensen's name for that part of the mammalian ovum comprised by the zona pellucida and albuminous coverings of the ovum. Also, the *Primitive chorion*.

Prochorion'ic. Belonging to the *Prochorion*.

Pro'chyma. The same as *Procheuma*.

Procident. (L. *procidens*, falling forward.) Slipping out of place.

Procidentia. (L. *procido*, to fall forward. F. *providence*; G. *Vorfall*.) The slipping of any organ or structure from its place.

P. ani. Another name for *Prolapsus ani*.

P. intest'ini rect'i. A term for *Prolapsus recti*.

P. iridis. The same as *Prolapsus iridis*.

P. ocul'i. (L. *oculus*, the eye.) A term for *Exophthalmos*.

P. sed'is. (L. *sedes*, the fundament.) A term for *Prolapsus ani*.

P. testiculi tubulo'rum. (L. *testiculus*, the testicle; *tubuli*, tubes.) A term for *Hernia testis*.

P. u'teri. A falling of the womb, *prolapsus uteri*; generally used in the present day to mean a complete prolapse, in which the whole vagina becomes inverted, and protruded, together with the uterus, outside the vulva. The inverted vagina becomes hypertrophied and of ivory-like appearance; it often becomes inflamed.

P. vulvar'um. (L. *vulva*, -æ, the womb.) Ancient term used by Pliny for *P. uteri*.

Procli'vus. (L.) Sloping. In *Anat.* epithet applied to teeth inclined nearly in the line of the axis of the jaw.

Proclivity. (L. *proclivitas*.) Tendency, *Predisposition*.

Procne'mium. (Προκνήμιον.) The *tibia*.

Proccælia. (Neut. pl. προκοίλια, see *Proccælius*.) Lateral ventricles. (Wilder.)

Proccæ'lius. (Προκοίλιος, with a paunch.) Having a prominent abdomen.

Proccæ'lous. (Προκοίλιος, with a paunch.) Convex in front, concave behind.

Procon'dylus. (Πρό, before; κόνδυλος, a knuckle.) The first or proximal joint of the fingers.

Procreant. (L. *procreans*; *procreo*, to beget.) Begetting.

PROCREATE—PROCTOTOCIA

Procreate. (L. *procreo*.) To beget.
Procreatio. (L.) Procreation.
P. sanguinis. See *Hæmatorsis*.
Procreation. Begetting.
Procrisis. See *Proëccrisis*.
Procryptic. (Πρό, for; κρυπτικός, fit for, or good at, concealing.) Epithet applied to the protective mimicry of colour by certain animals; e.g. the green colour of the tree-frog and leaf-insect.
Proctagra. (Πρωκτός, the anus; ἄγρα, a seizure.) Sudden pain about the anus.
Proctalgia. (Πρωκτός; ἄλγος, pain. F. *proctalgie*; G. *Afterschmerz*.) Neuralgia of the anal region; also, any pain in that region.
P. hæmorrhoidalis. Proctalgia due to *Hæmorrhoids*.
P. inflammatoria. Proctalgia due to inflammation of the rectum.
P. intertrigiosa. (*Intertrigo*.) Proctalgia caused by chafing of the skin.
P. rheumatica. Proctalgia due to *Proctorrheuma*.
Proctatre'sia. (Α, not; τρώω [τεραίω], to bore. F. *proctatrésie*.) Imperforate anus. See under *Anus*.
Proctauxë. (Αἰξή, growth.) Enlargement of the hind parts; also, dilatation of the anus.
Proctectasia. (Ἐκτασις, a stretching out.) Dilatation of the anus.
Proctectomy. (Ἐκτομή, a cutting out.) Excision of the rectum.
Proctenclisis. (Ἐγκλείω, to close in.) A closing up or constriction of the anus or rectum.
Procteuryn'ter. (Εὐρύω, to widen. F. *procteuryn'tère*; G. *Afterausdehner*.) An instrument for dilating the anus.
Prothæmorrhagia. (Αἱμορραγία, hæmorrhage. F. *proctohémorrhagie*; G. *Afterblutung*.) Hæmorrhage from the anus.
Procthypodesmus. (ὑποδεσμός, an under-bandage.) An anal support.
Proctica. (*Proctus*.) Pain in the anal region, not associated with inflammation. A Genus of the Order *Enterica*, Class *Celiaca*, in Good's Nosology.
P. exania. (L. *exanio*, to squeeze out.) Term for *Protocele*.
P. marisca. (L. *marisca*, the piles.) A term for *Hæmorrhoids*.
P. simplex. Syn. for *Proctalgia*.
P. tenesmus. Syn. for *Tenesmus*.
Proctisis. (*Proctus*.) *Proctitis*.
Proctitis. (Ἡ πρωκτίτις [νόσος], the disease of the anus. F. *proctite*; G. *Afterentzündung*.) Inflammation of the rectum, or immediately round the anus.
P. foetida. *Proctitis* with which there is a foetid discharge.
P. gangræno'sa. (Mod. L. *gangrænosus*, from L. *gangræna*, gangrene.) The same as *Proctocacé*.
Proctoblennoze'mia. (Πρωκτός; βλίννα, mucus; ὀζω, to smell.) Offensive mucous discharge from the anus.
Proctocacé. (Πρωκτός; κακή, mischief. F. *proctocacé*; G. *Mastdarmfaule*.) Ancient term for disease of the rectum characterised by sloughing, and by putridity of the discharge.
Proctocèle. (Πρωκτός; κήλη, a tumour. F. *proctocèle*; G. *Aftervorfall*.) Term for *Prolapsus ani*.

P., vagi'nal. A hernia of the rectum through the posterior vaginal wall.
Proctocystotome. An instrument specially designed for the performance of *Proctocystotomy*.
Proctocystotomy. (Πρωκτός; cystotomy.) A *Cystotomy* performed through the anterior wall of the rectum.
Proctodæ'al. Belonging to the *Proctodæum*.
Proctodæ'um. (Πρωκτός, the anus.) *Embryol.* The anal invagination of the *epiblast*, as distinguished from the primitive hypoblastic part of the bowel.
Proctode'al. Belonging to the *Proctodeum*.
Proctodeum. See *Proctodæum*.
Proctodynia. (Πρωκτός; δόδυνη, pain.) Spasmodic pain in the immediate region of the anus.
Proctoleucorrhœ'a. (Πρωκτός; leucorrhœa.) A discharge of mucus from the bowel.
Proctome'nia. (Πρωκτός; μήν, a month.) Old name for a supposed vicarious menstruation *per anum*.
Proctonus. (Πρωκτός; ὄγκος, a swelling.) A swelling or tumour in the immediate neighbourhood of the anus.
Proctoparalysis. The same as *Proctoplegia*.
Proctoplas'tic. Belonging to *Proctoplasty*.
Proctoplasty. (Πρωκτός; πλάσσω, to mould.) Plastic surgery of the anal region.
Proctople'gia. (Πρωκτός; πλῆγη, a stroke.) Paralysis of the *sphincter ani*.
Proctopolypus. (Πρωκτός; πολύπους, a polypus. F. *proctopolype*; G. *Afterpolyp*.) Term for *Anal polypus*.
Proctoptoma. (Πρωκτός; πτώμα, a fall.) Fall, or *prolapse*, of the anus.
Proctoptosis. (Πρωκτός; πτώσις, a falling.) The process eventuating in *Proctoptoma*.
Proctorrha'gia. (Πρωκτός; ῥήγνυμι, to break forth.) Another term for *Proctohæmorrhagia*.
Proctor'rhapsy. (Πρωκτός; ράφή, suture.) Suture of the rectum, or, more strictly of that part at or close to the anus.
Proctorrheuma. (Πρωκτός; ῥεῦμα, a flux or rheum.) Painful catarrh of the anal portion of the rectum.
Proctorrhœ'a. (Πρωκτός; ῥέω, to flow. F. *proctorrhée*.) A flow or discharge from the anus.
Proctor'rhois. (Πρωκτός; ῥέω, to flow.) The disease of *Hæmorrhoids*.
Proctos. (Πρωκτός, the anus.) The anus.
Proctoscir'rhus. (Πρωκτός; σκίρρος [σκίρος], a hardened swelling.) Scirrhus of the rectum, or of its anal portion.
Proctospas'mus. (Πρωκτός; σπασμός, a convulsion. F. *proctospasme*; G. *Mastdarmkrampf*.) A term for *Tenesmus*.
Proctosteno'sis. (Πρωκτός; στένωσις, a narrowing. F. *proctosténose*; G. *Mastdarmverengerung*.) Contraction or stricture of the anus or rectum.
P. organ'ica. Organic *Proctostenosis*.
Proctotoc'ia. (Πρωκτός; τόκος, a birth.) Delivery *per anum* of the fœtus in Labour.

Proc'totome. An instrument for performing *Proctotomy*.

Procto'tomy. (Πρωκτός; τέμνω, to cut. F. *proctotomie*; G. *Mastdarmschnitt*.) 1. Incision of the rectum, or incision at the anus; usually for the relief of stricture. 2. Also used to mean incision with partial excision of the rectum for the removal of a malignant growth. The latter operation was first performed by Faget in 1739 (Velpeau); and was revived by Lisfranc in 1826. The whole circumference, or a considerable part to a point well above the disease, is removed, all the tissues being first divided backwards to the coccyx, and, if necessary, the coccyx itself being taken away.

P., exter'nal. Division of the rectum and posterior border of the anus, and the tissues backwards to the coccyx; usually for stricture.

P., inter'nal. Division of parts as in *P., external*, but without division of the sphincters.

P., lin'ear. Through a subcutaneous opening in front of the coccyx, division is made of the posterior wall of the rectum, including the stricture for relief of which the operation is performed, and the tissues between the lower part of the rectum and the coccyx.

P., Maisonneuve's. (F. *procédé de la ligature extemporanée*.) Operation introduced by Maisonneuve for excision of the rectum. A circular incision is made deeply round the rectum, and the part separated is removed by means of a double loop with a cord attached to the écraseur.

P., Nélaton's. A variety of *P., external*, introduced by Nélaton. The left index finger is passed into the rectum as a guide, and with a blunt-pointed bistoury the rectum below the stricture is divided in the posterior median line. The lips of the wound are then separated, and the stricture is divided by a second incision.

P., Panas'. A name for *P., linear*, the introduction of which has been erroneously ascribed to Panas.

P., Rouse's. The sphincter is avoided by making a deep incision at the side of the anus, and pressing out through this the part of the rectum to be excised.

P., Verneuil's. In this modification of the operation, the rectum is divided into lateral halves by means of the écraseur, and the part to be removed is then dissected up with the knife of the galvanocautery.

Proctotoreu'sis. (Τορεύω, to bore through.) Perforation of an *imperforate anus*.

Proctu'cous. (Πρωκτός, the anus; ἔχειν, to have.) Having an *anus*.

Proct'us. The same as *Proctos*.

Procub'itus. (L. *procumbo, procubitum*, to lie down flat.) Syn. for *Procidencia*.

Procumbens. (L. *procumbo*, to lie down flat.) Procumbent.

Procumb'ent. (*Procumbens*.) Epithet applied to plants that trail on the ground.

Procuratio abortūs. A procuring of abortion.

Prodiagno'sis. (Πρό, before; *diagnosis*.) The predicting of the onset of a future disease.

Prodiagoreus'is. See *Proagoreusis*.

Prodigio'sus. (L.) Prodigious. Epithet applied to a pigment-forming, non-pathogenic *bacterium*, whose free growth on potato is attended by an odour of trimethylamine.

Prodro'ma. (Πρόδρομος.) The same as *Prodrome*. Oftener used in the plur., *Prodromata*.

Prodro'mal. (Πρόδρομος, running before, or in advance. F. *prodromique*; G. *vorhergehend*.) Precursory, premonitory. An epithet applied to *Symptoms*.

Prodrom'ata. (Plur. of *Prodroma*.) Precursory or premonitory symptoms.

Pro'drome. (Πρόδρομος.) A precursory or premonitory symptom. Generally used in the plural, *Prodromata*.

Prodro'mic. The same as *Prodromal*.

Prodrom'ous. The same as *Prodromal*.

Pro'dromus. (Πρόδρομος.) A *Prodrome*.

Produce'. (L. *producere*.) To bring forth.

Product'io. (L. *produco*, to prolong.) A prolongation. In *Anat.*, used as synonymous with *Apophysis* and *Processus*.

In *Medicine*, synonymous with *Prolapsus*.

P. u'vulæ a pitu'ita. (L. *Uvula*; *pituuta*, phlegm.) Term for swelling of the uvula.

Product'ive. (L. *producere*.) Generating, bringing forth.

P. arteri'tis, acute'. Term for a form of *Arteritis*, *acute* which is especially characterised by a proliferation of round cells with subsequent development of connective-tissue and fresh blood-vessels; in some cases the lumen of the artery affected becomes occluded. See *Arteritis obliterativa*.

Productiv'itas. (Mod. L.) Fertility.

Proëc'crisis. (Πρό, before; *eccrisis*.) An early *crisis* to a disease.

Proëgu'minæ caus'æ. (*Proëgminus*; L. *causa*, a cause.) Predisposing causes.

Proëgu'minus. (Προηγούμενος [*προηγέομαι*], leading the way. F. *proëgumène*; G. *vorausgehend*.) Preceding; also, predisposing.

Proëlum. (L.) A press; also, a tourniquet.

Proëm'bryo. (Πρό, before; *embryo*.) Syn. for *Prothallium*.

Proëmbryon'ic. Belonging to a *Proëmbryo*.

Proëm'inent. (L. *pro*, forth; *eminens*.) Standing out beyond, projecting.

P. ver'tebra, the. *Human Anat.* The seventh cervical vertebra, so called on account of the length of its spinous process.

Proëncepha'lia. (*Proëncephalus*.) Protrusion of the brain through the unclosed vault of the skull.

Proënceph'alocèle. (*Proëncephalon*, κήλη, a tumour.) An *encephalocèle* situated in the anterior part of the cranium.

Proënceph'alón. (Πρό, before; *encephalon*.) Syn. for *Proencephalon*. Also, a syn. for *Proëncephalocèle*.

Proënceph'alus. (Πρό, before; *encephalon*.) A monster in which the brain protrudes through the unclosed vault of the skull.

Proëo'tia. (Πρωιότης, earliness.) Sexual precocity.

Proëpime'ral. Belonging to the *Proëpimeron*.

Proëpime'ron. (Πρό, before; ἐπί, upon; μηρός, the thigh.) Syn. for *Prothorax*.

Proëpister'nal. Belonging to the *Proëpisternum*.

Proëpister'num. (Πρό, before; ἐπί,

upon; *στίρνων*, the breast-bone.) The *episternum*, belonging to the *prothorax*.

Pro-ferment. (L. *pro*, in the sense of before, in front of; *ferment*.) A term for *Zymogen*.

Profes'sional. Belonging to a profession. Also, in a narrower sense, belonging to the Medical profession; also, in keeping with the ethics of the Medical profession.

P. cramp. A syn. for *Writers' cramp*.

P. et'iquette. The unwritten code of practical ethics generally recognised by the Medical profession as governing the conduct of its members, both among themselves, and also with the laity.

P. neuro'ses. A syn. for *Occupation neuroses* (q. v.).

Profile line. 1. A syn. for *Facial line*. 2. Also, several profile lines, differing slightly as to the points from which they are taken, have been introduced:

a. Camper's profile line. See under *Camper*; also, *Facial line*.

b. Topinard's profile line. See under *Topinard*.

c. The Frankfort profile line. This is drawn from the point midway between the two superciliary ridges (intersuperciliary point) to the alveolar point.

Proflu'via. (Pl. of *profluvium*.) Term for *fluxes* of any kind in fever; an Order of the Class *Pyrexia* in Cullen's Nosology.

Proflu'vil cor'tex. (Gen. of *profluvium*.) The bark of the *Nerium antidysentericum*; also, termed *Codaga pala* bark.

Proflu'vium. (L.) A flow or discharge.

P. al'vi. (L. *alvus*, the belly.) Diarrhœa. (Celsus.)

P. genita'lë mulieb'rë. (L. *genitalis*, belonging to the sexual organs; *muliebris*, belonging to woman.) A term for menstruation.

P. genita'lë mu'llierum. (L. *mulier*, a woman.) A term for menstruation. (Pliny.)

P. mucosum ure'thræ. (L. *mucosus*, abounding in mucus; *urethra*.) Term for gonorrhœa.

P. mulieb'rë. (L. *muliebris*, pertaining to a woman.) The same as *P. genita'lë muliebre*.

P. san'guinis. (L. *sanguis*, blood.) Hæmorrhage.

P. san'guinis e re'nibus. (L. *renes*, the kidneys.) Hæmorrhage from the kidneys.

P. san'guinis ex a'no. Hæmorrhage from the anus.

P. san'guinis ex o're. (L. *os, oris*, the mouth.) Hæmorrhage from the mouth.

P. san'guinis ex u'tero. Hæmorrhage from the uterus, *Metrorrhagia*.

P. sem'inis. Seminal flow. (Pliny.)

P. ven'tris. (L. *venter*, the belly.) A term for diarrhœa.

Profun'da. (L.) Fem. of *Profundus*.

P. artery of arm, infe'rior. A small branch of the *Brachial artery*, arising about the middle of the arm, or occasionally given off in common with the superior profunda, *profunda artery of arm, superior*, descending in company with the ulnar nerve on the inner head of the triceps muscle, giving branches to that muscle, and ending by anastomosing with the *anastomotic branch* of the brachial artery, and the *posterior recurrent branch* of the ulnar. This artery is occasionally absent.

P. artery of arm, super'ior. The

largest branch of the *Brachial artery*. It arises just below the *teres major* muscle, and passes back to the interval between the long and inner heads of the triceps, and then traverses the musculo-spiral groove with the musculo-spiral nerve. It ends at the outer side of the humerus by dividing into two branches, the smaller passing on with the musculo-spiral nerve and anastomosing with the radial recurrent artery, and the larger anastomosing behind the external condyle with the posterior interosseous recurrent artery. It gives branches to the three heads of the triceps muscle, and small cutaneous twigs to the outer side of the arm. This artery sometimes arises from the axillary artery, and it occasionally gives origin to the posterior circumflex.

P. ar'tery of cliti'oris. A branch of the *pubic artery*, which enters the corpus cavernosum of the clitoris. Also termed the artery of the corpus cavernosum clitoridis.

P. ar'tery of pe'nis. The same as *Corpus cavernosum, artery of*.

P. ar'tery of thigh. The *Femoral artery, deep*.

P. cervi'cis, ar'teria. The *Cervical artery, deep*.

P. fem'oris, ar'teria. The *P. femoris artery*.

P. fem'oris ar'tery. The *Femoral artery, deep*.

P. pe'nis ar'tery. See *Profunda artery of penis*.

P. ra'dial ar'tery. A name for the terminal twig of the *P. artery of arm, superior*.

P. vein. The vein accompanying the *P. femoris artery*.

Profundipal'mar. (*Profundus*; *palmar*.) Belonging to the deep-seated structures of the palm of the hand.

Profundiplan'tar. (*Profundus*; *plantar*.) Belonging to the deep-seated structures of the sole of the foot.

Profun'dus. (L.) Deep. In Anatomy, applied to certain structures in the body which lie deeply in relation to other structures.

Profus'io. (L. *profundo*, to pour out.) Profusion. A flowing, a flow of blood. A Genus of the Order *Apoceneses*, Class *Locales*, in Cullen's Nosology.

P. a'quæ. (L. *aqua*, water.) The discharge of liquor amnii on rupture of the membranes, during parturition.

P. san'guinis. (L. *sanguis*, blood.) Hæmorrhage.

P. sem'inis. Ejaculation of semen.

P. se'ri. (L. *serum*.) An effusion of serum.

P. se'ri in cer'e'bro. An effusion of serum in the brain. Term for *Apoplexy, serous*.

P. subcuta'nea. (L. *subcutaneus*.) A term for *Purpura simplex*.

Progas'ter. (Πρό, before; γαστήρ, the belly.) A syn. for *Archenteron*.

Progas'tor. (Πρό, before; γαστήρ, the belly.) One who has a pendulous abdomen.

Progeneration. (L. *pro*; *generation*.) The same as *Propagation*.

Progen'ies. (L. *pro*, forth; *gigno*, *genitum*, to bring to the birth.) Progeny.

Progen'itor. (L. *pro*; *gigno*, *genitum*, to bring to the birth.) Ancestor; also, father.

Progeny. (*Progenies*.) Offspring.

Proglos'sis. (Προγλωσσίς.) The tip of the tongue.

Proglottid. The same as *Proglottis*.
Proglottides. Pl. of *Proglottis*.
Proglottis. (Πρό, before; γλώττα, the tongue.) A term applied by van Beneden to denote the sexually perfect phase of *Trematoda* and *Cestoda*. In the *Cestoda*, the *Proglottis* is the single segment, and is analogous to an entire *Trematode*, as far as its sexual completeness goes, though differing from the latter in not possessing an independent nervous system.
Prognathic. The same as *Prognathous*.
Prognathism. The condition of being *Prognathous*.
Prognathous. (Πρό, before; γνάθος, the jaw.) Having a projecting lower jaw. This condition is seen typically in the negro races.
Prognosis. (Πρό; γνώσις, knowledge. F. *prognose*; G. *Prognose*, *Prognostik-Vorhersagung*.) The knowledge of the course a given disease is most likely to run.
P. an'ceps. A doubtful prognosis.
P. ex lin'gua. (L. *lingua*, the tongue.) Another name for *Glossomantia* (q. v.).
P. faus'ta. A favourable prognosis.
P. gen'eral. The prognosis of any specific disease in general.
P. infaus'ta. An unfavourable prognosis.
P., partic'ular. The prognosis of a particular case of any specific disease.
Prognostic. (Προγινώσκω, to know beforehand. F. *pronostique*; G. *prognostisch*.) Epithet applied to the symptoms upon which a prognosis is based. Also (F. *pronostic*; G. *Prognose*), as a subst., syn. for *Prognosis*.
Prognosticate. To make a *prognostication*; also, to give a *prognosis*.
Prognostication. (Προγινώσκω.) A foretelling.
Prognos'ticë. (Προγνωστική [τέχνη], the prognostic [art].) *Prognosis*.
Progres'sio. (L. *pro*, forth; *gradior*, *gressus*, to step.) *Med.* Augmentation.
Progressive bul'bar para'lysis. See *Paralysis, bulbar, progressive*.
P. fat'ty muscular para'lysis. A name for *Pseudo-hypertrophic paralysis*.
P. locomotor atax'y. A term applied to *Ataxy, locomotor* (q. v.), on account of the progressive character of the disease.
P. mus'cular atrophy. See *Atrophy, progressive muscular*.
P. oss'ifying myosi'tis. A form of chronic *myositis* characterised by the formation of bony deposits in the muscles, and usually accompanied also by the formation of exostoses.
Progres'sus. The same as *Progressio*.
Progym'nosperm. (Πρό, before; gymnosperm.) A primordial *Gymnosperm*.
Progymnosper'mic. Belonging to a *Progymnosperm*.
Pro'totes. (Πρωϊότης, earliness.) Sexual precocity.
Projec'tile. (L. *projicere*, to throw forward.) Anything thrown suddenly and violently forward.
P., vom'iting. Term for a variety of *Vomiting, cerebral*, characterised by the violent projection of the vomit, often to a considerable distance.
P.s, wounds from. See *Wounds, gunshot*.
Projection. (L. *projicere*, to throw forward.) The act of throwing violently forward. Also, something which appears to have been

thrown forward beyond surrounding parts; a prominence.

P. meas'urement. Term for the distance between lines that are tangent to the two opposite sides of the body, measured vertically to a given plane. (Billings.)

P., monoc'ular. The projection into space of the impression of an object produced by rays of light passing from the object into one eye only.

P., oc'ular. See under *Ocular*.

P. of vis'ual impres'sions. The projection into their correct position in space of impressions of objects produced by rays of light entering the eyes from those objects.

P. system of Meynert. See *Meynert's projection system*.

P., uniloc'ular. (L. *unus*, one; *oculus*, eye.) A syn. for *P., monoc'ular*.

Projector ure'thræ. The *Levator prostatae*.

Projectu'ra. (L.) The jutting out in a building. In *Anatomy*, a process.

Prola'bial. Belonging to the *Prolabium*.

Prola'bium. (L.) The most prominent part of the lip; synonymous with *Procheilum*.

Prolapse'. See *Prolapsus*. For any condition of *Prolapse* not given under this heading, see under *Prolapsus*.

P., artifi'cial. The drawing down, out of position, of a part or organ of the body for the purposes of examination or treatment.

P. of a'nus. See *Prolapsus ani*.

P. of cord. (F. *prolapse ou procidence du cordon*.) The descent through the external os uteri of a part of the umbilical cord, during *Labour*, in front or at the side of the presenting part of the foetus. See *Presentation, funis*.

P. of fu'nis. The same as *P. of cord*.

P. of i'ris. The protrusion of the iris through an ulcer or wound of the cornea.

P. of o'vary. See under *Ovary*.

P. of placen'ta. A condition present in *Placenta prævia* (q. v.).

P. of tongue. See *Prolapsus lingue*.

P. of u'terus. (F. *prolapse de matrice*; G. *Muttervorfall*.) This is really part of a more general condition, a prolapse of the pelvic floor, involving uterus, bladder, urethra, and anterior and posterior vaginal walls. It has been termed a sacro-pubic hernia.

For convenience of clinical description, it has been divided into three degrees.

First degree.—The uterus has descended in the axis of the pelvic brim on to the anterior or upper surface of the coccyx.

Second degree.—The cervix, after descent of the uterus, has turned forward, and the posterior surface of the uterus rests on the floor of the pelvis.

Third degree.—The changes of the first and second degrees have taken place, and the uterus has finally been protruded outside the vulva, constituting *Procidentia*. See *Procidentia uteri*.

P. of vag'ina. Prolapse of the vaginal wall through the vulva.

Prolapsed. Fallen forward; in a state of *Prolapse*.

Prolaps'us. (L. *prolabor*, *prolapsus sum*, to slip forward. G. *Vorfall*.) The slipping of an organ from its normal position.

P. ani. (G. *Aftervorfall*.) Prolapse of the anus. A protrusion of the mucous membrane of the rectum through the anus. Only

the mucous membrane, together with thickened subjacent areolar tissue, is protruded. Where the muscular coat also is protruded, the condition is strictly not prolapsus ani, but *prolapsus recti*.

Prolapsus ani usually occurs in weakly adults, and generally in cases where there is habitual constipation, and especially where there is straining at micturition, as with stricture, or vesical calculus. It is very commonly associated with the presence of piles.

One form of the disease arises from atony of the levator and sphincter ani muscles.

P. bul'bi oc'uli. (L.) Prolapse of the bulb of the eye. See *Exophthalmos*.

P. cer'e'br'i. (*Cerebrum*.) A syn. for *Encephalocoele*.

P. cor'neæ. Prolapse of the cornea. See under *Staphyloma*.

P. i'ridis. Prolapse of the iris. See under *Staphyloma*.

P. lin'guæ. Prolapse of the tongue. See *Glossocoele*, and *Paraglossa*.

P. oc'uli. (*Oculus*.) A syn. for *Exophthalmos*.

P. œso'phagi. Prolapse of the œsophagus, *Pharyngocoele*.

P. pal'pebræ. (L. *palpebra*, the eyelid.) Prolapse of the upper eyelid, *Pto'sis*.

P. pharyng'is. Prolapse of the pharynx, *Pharyngocoele*.

P. placen'tæ. Prolapse of the placenta.

P. rec'ti. Prolapse of the rectum. This is almost always a disease of childhood. The prolapse includes all the coats of the bowel, and usually projects considerably outside the anus. It very rarely becomes strangulated. The common causes are irritation from worms, dysenteric diarrhœa, polypus of the rectum, and stone in the bladder.

P. sclerot'ici. Term for *Staphyloma* of the sclerotic coat of the eye.

P. umbil'ci. Prolapse of the umbilicus. Term for *Exomphalus*.

P. u'teri. See Prolapse of uterus.

P. u'teri comple'tus. Complete prolapse of the uterus, i. e. *Procidentia uteri*.

P. u'vulæ. Prolapse of the uvula. Term for œdematous swelling of the uvula.

P. vagi'næ. See Prolapse of vagina.

P. vesic'æ. Prolapse of the urinary bladder, i. e. of its mucous membrane into the urethra.

Prolecta'tio. (L. *prolecto*, to allure.) The process of separation of the finer from the coarser particles of a body.

Prolep'sis. (*Πρόληψις*, an anticipating.) Anticipation; presumption; prediction. In a special sense, return of a paroxysm before the usual time.

Prolep'tic. Belonging to *Prolepsis*.

Prolep'tical. The same as *Proleptic*.

Prolep'tics. (*Prolepsis*.) *Med.* Term proposed by Lacoek for the science and art of prediction or *prognosis*.

Prolès. (L. *pro*, forth; *olesco*, to grow.) Offspring.

Prolicide. (L. *proles*; *cædo*, to kill.) Killing of offspring; a term including *infanticide* and *feticide*.

Prolifer. *Proliferous*.

Prolif'erate. To bud; of living cells, to divide.

Prolifera'tion. (L. *proles*, offspring;

fero, to bear. F. *prolifération*; G. *Sprossenbildung*.) The appearance on an organism of an organ which it has not been accustomed to bear. A budding, or sprouting; applied to cell-division.

P., atroph'ic. Term for proliferation of the nuclei of cells, with degeneration of the cell-protoplasm, such as occurs in inflammation.

P., me'dian. The same as *P., atroph'ic*.

Prolif'erative. The same as *Proliferous*.

Prolif'erous. (L. *proles*; *fero*. F. *prolifère*; G. *sprossend*.) Epithet for an organ which gives origin to another organ that it is not accustomed to bear. Sprouting.

P. cyst. A cyst whose lining membrane proliferates, giving rise to intra-cystic growths.

Prolif'ic. (L. *proles*, offspring; *facio*, to make, produce. F. *prolifique*; G. *fruchtbar*.) Producing numerous offspring.

Prolifica'tion. (*Prolific*.) *Biol.* The condition of a part which is over-prolific, so that there is a multiplication of parts; as, for example, a flower within a flower.

P. is'lands. Term for proliferous patches occurring on the villi of the *chorion*; also, for thickened patches of the nucleated protoplasm of the *ectoderm*.

Prolig'erous. (L. *proles*, offspring; *gero*, to bear. F. *proligère*; G. *sprossentragend*.) Bearing, or carrying, germs.

P. disc. (*Discus proligerus*.) A term which has received various applications; it has been applied to the mass of small embryonic cells resulting from the segmentation of the *vitellus* in fishes; to various parts of the unfertilised ovum in birds; to the mass of epithelial cells of the *membrana granulosa*, which forms a granular layer round the ovum in *Mammalia*; to the *area germinativa* of the *blastoderm* in the fertilised ovum.

P. lay'er. The same as *P. disc*.

Prolonga'tion. (F. *prolongement*; G. *Verlängerung*.) A lengthening.

Promalact'erium. (*Πρό*, before; *μαλακτήρ*, one that softens.) The room in the gymnasium of the Greeks in which the body of the gymnast was rubbed and anointed. Also, the operation of rubbing and anointing the body.

Proma'nus. (L. *pro*, for; *manus*, the hand.) Old term for *pollex*.

Promes'oblast. (*Πρό*, before; *mesoblast*.) The mass of embryonic cells which develops into the *Mesoblast*.

Prometo'pia. (*Πρό*, before, in front of; *μέτωπον*, the forehead. F. *prométopie*; G. *Sternhaut*.) Old term for the skin of the forehead.

Prometopid'ia. Plur. of *Prometopidium*.

Prometop'id'ium. (*Προμετωπίδιος*, being before the forehead.) Old term synonymous with *Prometopia*. Also, a bandage for the forehead.

Prometo'pis. (*Προμετωπίς*, a star in the forehead [of horses].) Old term synonymous with *Prometopia*.

Prom'inence. (L. *prominco*, to stand out.) A projection. Also, the condition of being prominent. Also, a standing out in a metaphorical sense; distinction.

P., double. The same as *P., false*.

P., Doyère's. See *Doyère's prominence*.

P., false. Syn. for *Promontory of sacrum*, *false*.

PROMINENTIA—PRONATOR

P., gen'ital. A mass of cells that are situated on the ventral aspect of the cloaca in the embryo, and that afterwards develop into the external genital organs.

P., men'tal. (L. *mentum*, the chin.) The triangular projection on the lower part of the symphysis of the lower jaw, which forms the bony prominence of the chin.

P., sac'ro-ver'tebral. The Promontory of the sacrum.

Prominen'tia. (L. *promineo*, to stand out. F. *projecture*; G. *Hervorragung*.) An object that stands out; a prominence, or protuberance.

P. albicans. Syn. for *Corpus albicans*.

P. annular'is cer'ebr'i. Annular prominence of the cerebrum. A term for the *Pons Varolii*.

P. cana'lis facia'lis. Prominence of the facial canal. The prominence on the inner wall of the tympanum above the fenestra ovalis, corresponding to the position of the aqueduct of Fallopius.

P. cor'neæ. Term for *Staphyloma corneæ*.

P. enceph'alli. The prominence of the brain. A name for the *Corpora quadrigemina*.

P. larynge'a. The same as *P. laryngis*.

P. laryng'is. (*Larynx*, -ngis.) Term for the *Pomum Adami*.

P. lentifor'mis. (L. *lens*; *forma*, shape.) Syn. for *Lenticular nucleus* of corpus striatum.

P. nati'for'mis. (L. *nates*; *forma*, shape.) Syn. for *Nates* of corpora quadrigemina.

P. oculi toti'us. Prominence of the whole eye. A syn. for *Exophthalmos*.

P. os'sis contin'ua. A continuous prominence of bone. A syn. for *Apophysis*.

P. semiova'lis. Semioval prominence. A syn. for *Ovary body*.

P. sphaer'ica. Spherical prominence. A term for a *convolution* of the cerebrum.

P. spira'lis. Spiral prominence. An eminence of bone on the outer wall of the *cochlea*, forming the lower boundary of the *stria vascularis*.

P. tubar'ia pharyng'is. Tubal prominence of the pharynx. The prominence on which lies the pharyngeal opening of the Eustachian tube.

Prominen'tiæ. Pl. of *Prominentia*.

P. albican'tes. (L. *albicans*, growing white.) The *Corpora albicantia*.

P. orbicular'es major'es. The greater orbicular prominences. A term for the *Nates* of the corpora quadrigemina.

P. orbicular'es mino'res. The lesser orbicular prominences. A term for the *Testes* of the corpora quadrigemina.

P. semiova'les medullæ oblonga'tæ. The semioval prominences of the medulla oblongata. Term for the *Ovary bodies*.

P. testifor'mes. (L. *testis*; *forma*, shape.) A term for the *Testis* of the corpora quadrigemina.

Promonto'rium. (L.) A promontory.

P. facie'i. The promontory of the face. A term for the nose.

P. os'sis sa'cri. The promontory of the sacrum.

Promontory. (L. *promontorium* [*pro*; *mons*], a headland. F. *promontoire*; G. *Vorberg*, *Vorgebirge*.) A part of a mountain projecting into the sea; applied, anatomically, to various parts of the body.

P., false, curve of. See *Curve of false promontory*.

P. of sac'rum. See *Sacrum, promontory of*.

P. of sac'rum, false. See *Sacrum, promontory of, false*.

P. of tym'panum. See *Tympanum, promontory of*.

Promorph. (Πρό, before; μορφή, form.) Biol. A primitive type or form.

Promorph'ism. (Πρό, before; μορφή, form.) The condition given rise to by *Promorphosis*.

Promorphologist. One who studies, or is learned in, *Promorphology*.

Promorphology. (Πρό; *morphology*.) Biol. Morphology, as relating to a few fundamental types.

Promorpho'sis. (Πρό; μόρφωσις, a shaping.) The development of an organism or an organ or tissue into a condition of higher specialisation than is usual.

Promus'cidate. *Promusci*-shaped.

Promus'cis. A corrupt form for *Proboscis*.

Pronæ'us. (Πρόναος, or πρόναος, the hall or first room of a temple.) Term applied to the *Vagina*; also to the *Vestibule*, or entrance of the vagina proper.

Pronate. (L. *pronus*, bent forward.) To place in the position of *pronation*.

Prona'ting. Placing in the position of *pronation*.

Prona'tion. (L. *prono*, to bend forward. F. *pronation*; G. *Neigung*, *Vorwärtsbeugung*.) The act of turning the palm downwards, by a rotation of the radius upon the ulna; also, the position assumed as the result of the act. In general, the act of *pronating*; also, the state of being prone.

Prona'to-flex'or mass. The mass of pronator and flexor muscles of the forearm, which have a common origin from the inner condyle of the humerus and become distinct below. (Humphry.)

Prona'tor. (L. *prono*, to bend forward. F. *pronateur*; I. *pronatore*; G. *Einwärtswender*, *Vorbeuger*.) A name given to certain muscles which effect *pronation*.

P. eu'bito-radia'lis. The *P. quadratus*.

P. epitroch'leo-radia'lis. The *P. radii teres*.

P. inf'e'rior. The *P. quadratus*.

P. mi'nor. The *P. quadratus*.

P. obli'quus. The *P. radii teres*.

P. ped'is. Syn. for *Musculus accessorius ad musculus accessorium*.

P. quadra'tus. (L. *quadro*, to square. F. *petit pronateur*, *pronateur carré*; G. *viereckiger Vorwärtswender*.) A flat, square muscle passing horizontally across from the lower fourth of the anterior surface of the ulna to the corresponding surface of the radius, and effecting *pronation* when the forearm is flexed upon the arm. Its nerve comes from the anterior interosseous branch of the median.

P. ra'dii brev'is. Syn. for *P. radii quadratus*.

P. ra'dii quadra'tus. Fuller name for *P. quadratus*.

P. ra'dii te'res. (F. *grand ou rond pronateur*; G. *runder Vorwärtswender*.) The most external muscle of the *prona'to-flex'or mass*, arising by the common tendon from the inner

condyle of the humerus. It arises by two heads, the more superficial, from the upper part of the inner condyle, the common tendon, and the fascia and intermuscular septum; the deeper, a thin fasciculus, from the inner margin of the coronoid process. The muscle ends in a flat tendon, which is inserted into the middle of the outer surface of the radius. The median nerve passes between the two heads of origin, and gives a branch to the muscle.

P. rotundus. (L. *rotundus*, round.) The *P. radii teres*.

P. teres. The *P. radii teres*.

P. tibiae. (F. *pronateur transverse de la jambe*.) A supernumerary muscle of the leg, which passes between the tibia and fibula below the popliteus. (Gruber.)

P. transversus. The *P. quadratus*.

Prona'us. (Πρόναος, the hall or first room of a temple.) The *Vestibule* of the vagina.

Prone. (L. *pronus*.) Having the face downward.

Pronephric. Belonging to the *Pronephros*.

P. duct. The duct of the *Pronephros*.

Pronephridium. (Πρό, before; νεφρός, a kidney.) One of the canals which, in certain of the Invertebrata, act as excretory organs.

Proneph'ron. The same as *Pronephros*.

Proneph'ros. (Πρό, before [in point of time]; νεφρός, the kidneys.) The name given by Ray Lankester to the anterior division of the *segmental apparatus* extending on each side of the body of a Vertebrate embryo.

Pronervatio. (L. *pro*, before; *nervus*, a tendon.) An old term for *Aponeurosis*; also, for *Tendon*.

Pronœ'a. (Πρόνοια, a knowing beforehand.) *Prognosis*.

Pronuclei. Plur. of *Pronucleus*.

Pronucleus. (L. *pro*, in the sense of before; *nucleus*. Pl. *pronuclei*.) *Biol.* Name given originally by E. van Beneden to either of the two nuclear elements of the recently fertilised ovum whose fusion gives rise to the first embryonic nucleus.

The female pronucleus appears first after the formation of the polar bodies in the ovum.

As regards the male pronucleus, Hertwig believes it to be developed directly from the head of the fertilising spermatozoid; but Salensky believes that the head of the spermatozoid first becomes dissolved, and gives rise secondarily to the male pronucleus.

P., fe'male. See main heading.

P., male. See main heading.

P., segmenta'tion. A syn. for *Nucleus*, *segmentation* (q. v.).

P., sperm. A syn. for *Pronucleus*, *male*. See main heading.

Proödon'tus. (Πρό, before; ὀδούς, ὀδόντος.) *Craniom.* Epithet applied by Lissauer to skulls in which a straight line from the *subnasal* to the *alveolar point* encloses, with the *radius fixus*, an angle not less than 23° nor greater than 60°.

Proof-spirit. *Spiritus Tenuior*. A colourless liquid containing 60·8 parts by weight of alcohol, to 49·2 of water. Specific gravity 0·92 at 15·5° C. Any spirit containing a higher percentage of alcohol than the above is said to be "above proof;" any containing a lower percentage, "below proof."

Proös'teon. (Πρό, before; ὀστέον, a bone.) A bony prominence.

Proö'tic. (Πρό, before; οὖς, ὠτός, the ear.) A term applied by Huxley to one of the three centres of ossification existing in the cartilaginous rudiment of the temporal bone; viz. that enclosing the superior semicircular canal. The other two centres he named *epiotic* and *opisthotic*.

Proövar'ium. (L. *pro*; *ovarium*.) The *Parovarium*.

Prop cells, Hen'sen's. A term for the cylindrical epithelial cells which, together with the outer hair-cells, constitute the outer layer of the Organ of Corti.

Prop'agate. (L. *propago*.) To perpetuate the species. Also, to disseminate.

Propagation. (L. *propago*, to generate.) A term applied to the various ways by which vegetables and animals perpetuate themselves. Also, dissemination.

P., arc of. Term for the spreading, opaque, curved edge of the *Corneal creeping ulcer* of *Saemisch*.

Propagato'ria. Plur. of *Propagatorium*.

Propagatorium. (L. *propago*, to generate.) *Biol.* The whole mechanism of reproduction. (Gould's Dict.)

Propa'go. (L.) A slip or shoot; applied, in Anatomy, to the smaller branches of vessels or nerves.

Propag'ule. (*Propagulum*.) Any structure used in asexual propagation in plants.

Propag'ulum. (L. *propago*, to generate.) A *Propagule*.

Propane. C₃H₈. The third member in the homologous series of *Paraffins*, of which Methane is the first. It is a gas at ordinary temperatures.

Proparatere'sis. (Πρό, before; παρατήρησις, observation.) Previous observation. (Galen.) *Prophylaxis*.

Propath'ia. (Προπάθεια; πρό, before; πάθος, suffering. F. *propathie*.) The earliest symptoms or *Prodromata* of a disease.

Prop'athy. See *Propathia*.

Propenden'tia. (L. *pro*-pendeo, to hang down.) Old term for *Procidencia*.

P. uvulæ. A hanging down of the uvula. Term applied to a relaxed and swollen condition of the uvula.

Propenyl. The trivalent radical C₃H₅, of which glycerine is the hydrate.

P. hy'drate. C₃H₅(OH)₃. A name for glycerine.

P. trini'trate. Nitroglycerine.

Propeps'in. (Πρό, before; πέπω, to digest.) The zymogen giving rise to *pepsin*, found in the peptic cells of the gastric glands.

Propep'tone. (Πρό, before; πέπω, to digest.) Also termed *Hemialbumose*. One of the intermediate products formed during the conversion of albumins into peptones in gastric digestion.

Propeptonu'ria. (*Propeptone*; οὖρον, urine.) The passing of *propeptone* in the urine. Also termed *Hemialbumosuria* (q. v.).

Proper light of ret'ina. See *Retina*, *proper light of*.

Properisto'ma. (Πρό, before; περί, around; στόμα, any mouth-like opening.) *Biol.* The thickened edge of the *Gastrula*.

Properisto'mal. Belonging to the *Properistoma*.

Proper'istome. The same as *Properi-stoma*.

Periton'one'al. In front of the *Peritoneum*.

P. her'nia. A hernia whose sac extends between the layers of the abdominal wall.

P. hernia, cruro-. Kroenlein's term for a femoral hernia with an additional sac in the pelvic connective-tissue, between the peritoneum and the anterior abdominal wall.

P. her'nia, inguino-. (F. *hernie en bissac*.) Kroenlein's name for an inguinal hernia which passes outwards along the fold of the groin, in front of the peritoneum and between the layers of the anterior abdominal wall.

Property. (L. *proprius*, peculiar, proper.) In Natural Science, any quality peculiar to, and characteristic of, a body.

Pro'phasis. (Πρόφασις, something alleged as a cause.) The occasion which renders active or efficient a previous disposition to disease. (Hippocrates.)

Prophthal'mos. (Πρό, forward; ὀφθαλμός, the eye. F. *prophthalme*.) Syn. for *Exophthalmos*.

Prophylactic. (Πρό, beforehand; φυλάσσω, to guard. F. *prophylactique*; G. *prophylaktisch*.) Belonging to preventive medicine, or *Prophylaxis*.

P. medicine. The same as *Prophylaxis*.

P. treatment. The same as *Prophylaxis*.

Prophylax'is. (Προφύλαξις, caution. F. *prophylaxie*; I. *profilassi*; G. *Prophylaxie*.) The method of preventing disease; preventive medicine.

Prophylaxy. The same as *Prophylaxis*.

Prophyllum. (Πρό, before; φύλλον, a leaf.) A primitive leaf.

Pro'physis. (Πρόφυσις, a germ, bud.) Syn. for *Symblepharon*.

Prop'ionate. The generic name given to salts formed by the union of *Propionic acid* with bases.

Propion'ic acid. C_2H_5COOH . (F. *acide propionique*; G. *Propionsäure*.) The third in the homologous series of fatty acids, of which *Formic acid* is the first. A colourless liquid with penetrating odour, like that of acetic acid; boils at 140° . Formed by distillation of wood, or from *Ethyl cyanide*.

Propioni'trile. C_2H_5Cn . The *Nitrile* of propionic acid. Another name for *Ethyl cyanide*.

Proplasm. (Πρό, before; πλάσσω, to mould.) *Biol.* A matrix.

Proplexus. (L. *pro*, before; *plexus*.) The analogue in the Vertebrata generally of the *brachial plexus* in man. Also, Wilder's term for the choroid plexus of the lateral ventricles of the cerebrum.

Pro'polis. (Πρό, before; πόλις, a city. G. *Vorwachs*.) A soft, resinous substance, reddish, and having a faint, balsam-like odour, which bees use as a cement and varnish for their hives. It has been used medicinally in diarrhoea and dysentery, and the fumes of the substance when burnt have been used for asthma.

Propo'ma. (Πρό; πῶμα, a drink.) A potion of wine and honey taken before meat; term also applied to other drinks and medicated wines taken before food.

Pro'pons. (L. *pro*, before; *Pons*. F. *avant-pont*; G. *Vorbrückchen*.) Term for the *arciform fibres*, where they cover the anterior

pyramid of the medulla immediately below the pons Varolii.

Propotis'mos. (Πρό; ποτίζω, to give to drink.) Old term properly signifying a preparing medicine given before purgation, but generally used as synonymous with *Propoma*.

Propres'sio. (L. *pro*, before; *presso*, to press hard, or squeeze.) Old term used by Stahlus to designate the movement of blood in the veins.

Propri'etary. (L. *proprietas*, property.) Belonging to an owner or proprietor.

P. medicine. A medicine made up from a private formula, and sold under a copyrighted name.

Propri'etas. (L.) Property. In *Physics*, a *property* of a body.

Pro'prius. (L. Neut. of *proprior*.) Nearer.

P. aur'is exter'næ. (L. *auris*, the ear; *externus*, external.) Term for the *Retrahens auris*.

Propto'ma. (Πρόπτωμα, a falling forwards.) The same as *Prolapsus*.

P. auricular'um. (L. *auricula*, the external ear.) The same as *Paræsthesia auditus flacca* (q. v.).

P. mammar'um. A pendulous state of the breasts.

P. palpebrar'um. (L. *palpebræ*, the eyelids.) A syn. for *Ptoxis*.

P. scro'ti. A relaxed, pendulous condition of the scrotum.

Propto'sis. (Πρόπτωσις, a falling forwards. F. *proptose*; G. *Vorfall*.) Formerly used as synonymous with *Prolapsus*, now generally in the sense of *Exophthalmos*.

P., entero-. See *Entero-proptosis*.

P., gas'tro-. See *Gastroptosis*.

P. oc'uli. *Exophthalmos*.

P. pal'pebræ. (L. *palpebra*, the eyelid.) *Ptoxis*.

P. u'vulæ. Edematous swelling of the uvula.

Propt'ysis. (Προπτύω, to spit out. F. *proptysie*.) Expectoration.

Propul'sion. (L. *pro*, forward; *pello*, *pulsum*, to drive.) A driving onward.

Propul'sive. (*Propulsion*.) Exercising propulsion.

Propu'pa. (L. *pro*, in the sense of before; *pupa*.) That stage in insect development immediately preceding the *pupa*.

Propye'ma. (F. *propyème*.) A premature collection of pus.

Propyl. The monovalent radical group C_3H_7 .

P. alcohol. (C_3H_7OH .) The third in the series of Alcohols in which Methyl Alcohol stands first. It is a colourless liquid with a fragrant odour, boiling at $97.4^\circ F$; formed in the process of sugar fermentation.

Propyl'amine. $NH_2(C_3H_7)$. One of the substituted ammonias in which a hydrogen atom is replaced by the group Propyl (C_3H_7). It is a *ptomaine*, and is isomeric with trimethylamine. A strongly basic liquid with ammoniacal odour, forming crystalline salts with acids; it fumes on contact with hydrochloric acid. Obtained by distilling herring-brine with lime. The *hydrochlorate* is used in acute rheumatism. Dose, 2 grs.

Pro'pylene. C_3H_6 . The second member of the *Ethylene* series of Hydrocarbons.

Pro'ra. (L.) A prow. In *Anat.*, the occiput.

Pro'ræ, os. (Gen. of L. *prora*.) Name for the *Os basilare*.

P. sutu'ra. The suture of the occiput. A name for the *lambdoid* suture.

Prorrhe'sis. (Πρόρρησις.) Prediction, prognosis. (Hippocrates.)

Prorsad. (L. *prorsum*, forward.) Toward the anterior aspect.

Prorsal. (L. *prorsum*, forward.) Anterior.

Prorup'tio. (L. *prorumpo*, to break forth. F. *prorruption*; G. *Hervorbrechen*.) A bursting forth, as, for example, of blood.

P. san'guinis. (L. *sanguis*, blood.) Hæmorrhage.

Pros' appara'tus. An apparatus, invented by Pros, for making continuous traction on the foetal head with the obstetric forceps, counter-pressure being made against the bed. (Gould's Dict.)

Prosago'gē. (Προσάγω, to lead to.) *Anat.* An old term for *Adduction*.

Prosar'ma. (Πρόσαρμα.) Food. (Hippocrates.)

Prosarthro'sis. (Προσάρθρωσις, connection with by joints.) Old term synonymous with *Diarthrosis*.

Prosbolē. (Προσβολή, a putting to or upon.) An impression.

Procephalæ'um. (Προσκεφάλαιον.) A pillow; also, a cushion for sitting upon. Used by Hippocrates, *de Fract.* ii, 53, to mean a pillow to support either the head or a broken limb.

Prosch'ysis. (Πρόσχυσις, a pouring upon.) Affusion.

Proscly'sma. (Πρόσκλυσμα, water for washing out.) *Med.* Old term for *Aspersio*. (Gorræus.)

Proscol'ecine. Belonging to a *Proscolex*.

Proscolex. (Πρό, before; *scolex*.) Term for the embryo of *Trematoda* and *Cestoda*, at the moment when it leaves the ovum. Finding its way into the organism of the host, it develops there and becomes an embryo *scolex*. See *Cestoda*; also, *Scolex*.

Proscolla. (Πρός, before; κόλλα, glue.) See *Retinaculum*.

Proscolle'sis. (Προσκόλλησις, a glueing to.) Adhesion.

Prosechēs. (Προσεχής, close to, next.) *Med.* Accompanying; old epithet applied to the *proximate* cause of a disease.

Prosect'io. (L. *proseco*, to cut off.) *Anat.* The same as *Dissectio*.

Prosect'ion. See *Prosectio*.

Prosector. (L. *proseco*. F. *prosecteur*.) A dissector. One who prepares subjects for a lecturer in Anatomy.

Prosectorship. The office of a *Prosector*.

Prosem'bryo. (Πρός, near; *embryo*.) *Bot.* The same as *Perembryo*.

Prosencephal'ic. Belonging to the *Prosencephalon*.

P. arch. Term for the so-called neural arch of the frontal vertebra, the base of the skull being considered as composed originally of the bodies of cranial vertebrae.

Prosencephalon. (Πρός, towards; ἐγκέφαλος [μυελός], the brain. G. *Vorderhirn*.) The part of the brain which is developed from

the fore part of the anterior cerebral vesicle, and which develops later into the cerebral hemispheres with the lateral ventricles, the corpora striata, and the olfactory lobes.

Prosen'chyma. (Πρός; ἔγχυμα, an infusion. F. *prosenchyme*; G. *Zwischenzellengevebe*.) Vegetable fibrous tissue; the elongated cells and vessels distributed between the parenchymatous tissue in the stems of *Dicotyledons*.

Prosenchymatous. Belonging to the *Prosenchyma*.

Proselep'sis. (Πρόσληψις, a taking in addition.) Prehension.

Pros'lysis. (Πρός; λύσις, dissolution.) Syn. for *Catalysis*.

Prosobreg'mus. (Πρός; bregma.) *Craniom.* Lissauer's term for skulls in which a straight line between the bregma and hormonion makes an angle not less than 82° nor more than 95° with the radius fixus.

Pros'ocle. (Πρόσω, forwards; κοίλος, a hollow.) Term for the cavity of the *prosencephalon*.

Prosodi'encephal. (Πρόσω, forwards; διά, through; ἐγκέφαλος, the brain.) The primitive fore-brain of the embryo.

Prosodi'encephal'ic. Belonging to the *Prosodi'encephal*.

Pros'odos. (Πρόσοδος.) Sexual intercourse. (Hippocrates.)

Pros'odus. The same as *Prosodos*.

Prosogas'ter. (Πρόσω, forwards; γαστήρ, the belly.) Syn. for *Foregut*.

Prosgnathous. (Πρόσω, forwards; γνάθος, a jaw.) Syn. for *Prognathous*.

Proso'ma. (Πρό, before; σώμα, the body.) The anterior or cephalic segment of the body of an animal.

Proso'mal. The same as *Prosomatic*.

Prosomatic. Belonging to the *Proso'ma*.

Pro'some. The same as *Proso'ma*.

Prosopal'gia. (Πρόσωπον, the face; ἄλγος, pain. F. *prosopalgie*; G. *Gesichtschmerz*.) Pain in the face, facial neuralgia.

Prosopal'gic. Belonging to, or affected with, *Prosopalgia*.

Prosopan'tra. Pl. of *Prosopantrum*.

Prosopan'tritis. (Πρόσωπον; άντρον, a cave. Adj. fem. termination -itis.) Inflammation of the frontal sinuses.

Prosopan'trum. (Πρόσωπον; άντρον, a cave. G. *Stirnhöhle*.) Term for the frontal sinus.

Prosopecta'sia. (Πρόσωπον; ἑκτασις, a spreading out.) A morbid swelling of the face.

Prosoperysip'elas. (Πρόσωπον; erysipelas.) Facial erysipelas.

Prosop'is. A Genus of the *Leguminosæ*. Several species of this genus, namely *P. algaroba*, *P. dulcis*, *P. glandulosa*, *P. juliflora*, and *P. microphylla*, yield Mesquite gum (q. v.).

P. algaro'ba. See main heading.

Prosoplex'us. (Πρόσω, forwards; plexus.) Term for the choroid plexuses of the ventricles contained within the *Prosencephalon*.

Prosopocarcino'ma. (Πρόσωπον; carcinoma.) Carcinoma of the face.

Prosopodid'ymus. (Πρόσωπον; διδύμος, double.) Syn. for *Diprosopus*.

Prosopodiple'gia. (Πρόσωπον; diplegia.) Bilateral facial palsy.

Prosopodyn'ia. (Πρόσωπον; ὀδύνη, pain.) Pain in the face.

Prosopodysmor'phia. (Πρόσωπον;

PROSOPOGRAPHY—PROSTATE

δυσ-, prefix signifying bad, unlucky; *μορφή*, form.) Malformation of the face. A syn. for *Facial atrophy, progressive*.

Prosopography. (Πρόσωπον; γράφω, to write.) A description of the personal appearance.

Prosopology. (Πρόσωπον; λόγος, a discourse.) A dissertation on the face; *physiognomy*.

Prosopomantia. (Πρόσωπον; μαντεία, a prophesying.) A prognosis, from study of the countenance.

Prosopon. (Πρόσωπον.) The face.

Prosoponeuralgia. (Πρόσωπον; neuralgia.) Facial neuralgia.

Prosopoparalysis. (Πρόσωπον; παράλυσις, palsy.) Facial palsy.

Prosopoplegia. (Πρόσωπον; πληγή, stroke.) A syn. for *Prosopoparalysis*.

Prosoporrheuma. (Πρόσωπον; ῥεύμα, a flux.) Rheumatism of the face.

Prosoposalgia. See *Prosopalgia*.

Prosoposchisis. (Πρόσωπον; σχίσις, a clearing.) An oblique fissure occasionally present in foetal monsters, passing from the edge of one orbit to the mouth, and usually associated with some malformation of the brain.

Prosoposis. (Πρόσωπον.) Physiognomy.

Prosopospasmos. (Πρόσωπον; σπασμός, spasm.) Facial spasm. Usually restricted to *Risus sardonius*.

Prosoposternodymia. (Πρόσωπον; στήρνον, the chest; δύω, to enter.) The variety of the monstrosity *Cephalosomatodymia* in which the two foetuses are united face to face and sternum to sternum.

Prosopothoracopagus. (Πρόσωπον, the face; θώραξ, the chest; πάγος, anything that has become stiff.) A double foetal monster in which the twins are united by the face, chest, and upper part of the abdomen.

Prosopotocia. (Πρόσωπον; τόκος, bringing forth. F. *prosopotocie*; G. *Gesichtsgeburt*.) Face-presentation in *Labour*.

Prosopotopologia. (Πρόσωπον; τόπος, position; λόγος, a discourse.) A dissertation on the lineaments of the face.

Prosopotypus. (Πρόσωπον; τύπος, an impression.) Emaciation of the face.

Prosoprospus. (Πρός, towards; πρόσωπον, the face.) *Cranium*. Epithet applied by Lissauer to skulls in which a straight line between the nasion and the alveolar point makes an angle not less than 66°5' nor more than 78° with the radius fixus.

Prosorhinus. (Πρόσω, towards; ρίς, ρινός, the nose.) *Cranium*. Epithet applied by Lissauer to skulls in which a straight line between the nasion and the subnasal point makes an angle not less than 66°5' nor more than 77° with the radius fixus.

Prosorrhinus. See *Prosorhinus*.

Prostoma. (Πρόσω, forwards; τέρμα, a limit.) Term for the lamina that unites the two halves of the *Fornix* of the brain.

Prosothoracopagus. (Πρόσω, forwards; θώραξ, the chest; πάγος, anything that has become stiff.) A double monster in which the two thoraces are joined.

Prospagma. (Πρόσπηγμα.) Old term for a *Concretion* (Hippocrates).

Prosperitas valetudinis. (L.) Favourableness of health, a good state of health.

Prospheromenon. The same as *Prosporema*.

Prosphora. (Προσφορά.) See *Prosporema*.

Prosporema. (Προσφόρημα = προσφορά. F. *prosporeme*.) *Med., Surg.* Old term for any substance or appliance used for the sick, including food, surgical appliances, &c. (Hippocrates, *de Medico*, iii, 9).

Prosphysis. (Πρόσφυσις, a growing to. F. *prospyse*; G. *Verwachsung*.) 1. The attachment of bodies normally joined to one another (Hippocrates).

2. Morbid attachment, adhesion.

P. palpebrarum. (L. *palpebrae*, the eyelids.) A syn. for *Ankyloblepharon*.

Prostasis. (Πρόστασις, a standing before.) Predominance, as, for example, of humours (Hippocrates). Also, difficulty of breathing, *dyspnœa*.

Prostata. (Προστάτης, one who stands before; from the position of the prostate with regard to the bladder.) The *Prostate gland*.

P. inferior. A term for *Cowper's gland*.

P. mulierum. (L. *mulier*, a woman.) Term applied by De Graaf to the muscular fibres and interspersed connective tissue encircling the female urethra.

P. superior. The *Prostate gland*.

Prostatæ levator. See *Levator prostatae*.

Prostatalgia. (Prostata; Gr. ἄλγος, pain. F. *prostatalgie*.) Pain in the *Prostate*.

Prostatauxë. (Prostata; Gr. αὐξη, increase.) Enlargement of the *Prostate*.

Prostate. (Προστάτης, one who stands before. F. *prostate*; G. *Vorsteher*.) That which stands before, i.e. before the urinary bladder. Used substantively for the *Prostate gland*. A gland present in the male, consisting of three lobes, and resembling a horse-chestnut in shape and size, about one and a half inches across, surrounding the neck of the bladder and the first part of the urethra, having above it the anterior true ligaments of the bladder, and resting upon the rectum. It is maintained in its place by the pelvic fascia. Microscopically, it consists of muscular tissue and glandular follicles, which latter open into long canals that join to form a dozen or more excretory ducts.

P., abscess of. This is usually secondary to inflammation, or the result of wounding in *lithotripsy*. It is characterised by rigors, strangury and, often, retention of urine. If left to itself the abscess bursts usually into the urethra or neck of the bladder, less commonly into the perineum, or into the rectum.

P., adenomyoma. See *P., hypertrophy of*.

P., amyloid bodies of. See *Amyloid bodies*.

P., anterior. A name for *Cowper's gland*.

P., atrophy of. This sometimes occurs as the result of pressure or of senile decay.

P., calculus of. This is formed in the ducts of the gland, and is peculiar as being nearly always composed of phosphate of lime (about 85 per cent.) and animal matter (about 15 per cent.) It is said to be occasionally composed of carbonate of lime. The calculus is rarely larger than a cherry-stone; it is grey-coloured, very hard, and is usually faceted. The symptoms it gives rise to are those of enlargement and irritation of the prostate; pain

PROSTATECTOMY—PROSTATOLITH

and a feeling of weight in the perineum, occasionally retention of urine, and a discharge of mucus in the urine.

P., cancer of. This is very rare. The growth is primary; usually scirrhus; but Stanley Boyd has recorded one case of colloid cancer. Erichsen cites a case in which there were secondary growths in the lymphatic glands and liver. The symptoms are pain and irritability in the region of the neck of the bladder, with occasional hæmaturia and, later on, obstruction to the passage of urine. The symptoms increase rapidly. Per rectum, a hard, ill-defined nodular mass can be felt in the region of the prostate.

P., cavities in. The same as *P., cysts of*.

P., congestion of. An event common in hypertrophy of the prostate, and thus usually occurring in old men. It is attended with fever, hæmaturia, and retention of urine.

P., cysts of. Follicular dilations, abscesses, or cavities containing concretions or calculi. (Erichsen.)

P., ducts of. Twelve or more minute orifices opening on to the floor of the *Prostatic sinus*.

P., enlargement of. See *P., hypertrophy of*.

P. gland. See *Prostate*.

P. gland, hypertrophy of. See *Prostate, hypertrophy of*.

P., hæmorrhage from. This occurs as the result of congestion or ulceration, which latter may be either simple or due to a new growth. It may also occur from injury to the middle lobe in catheterisation. The blood usually passes back into the bladder, and may thus appear either uniformly mixed with the urine, or at the end of micturition.

P., hypertrophy of. A condition occurring in about one-third of all men over fifty-five years of age. (Sir H. Thompson.) When it involves the middle lobe it gives rise to symptoms, viz. pain, frequent and inadequate micturition, the frequency being greatest at night, a dribbling stream of urine, and, frequently, retention. The condition is not a true hypertrophy; but is really due to the growth of an *Adenomyoma* of the prostate.

P., inflammation of. *Acute.* Occurring as the result of gonorrhœa, irritation from calculi, cystitis, or cold, and attended by spasmodic pain and dysuria. It may run on to abscess. *Chronic.* Occurring in gonorrhœa, the symptoms being similar to those of the acute disease, but less intense.

P., lobes of. The middle and two lateral lobes of which the prostate is formed.

P., myoma of. More correctly *P., adenomyoma of* (q. v.).

P., phleboliths of. Earthy concretions in the *P. plexus of veins*.

P., secretion of. See *Prostatic fluid*.

P., tubercle of. Usually a part of tuberculosis of the genito-urinary tract. The vesiculæ seminales are generally implicated, and often also the floor of the bladder. The symptoms are not marked, and are usually complicated by those due to the presence of tubercle in neighbouring parts.

P., tumours of. These comprise the so-called hypertrophy, cystic disease, melanosis, and carcinoma, which last is usually encephaloid, but sometimes scirrhus.

Prostatectomy. (*Prostata*; Gr. ἐκτομή, a cutting out.) Excision of the *Prostate*.

Prostathelcosis. (*Prostata*; Gr. ἕλκος, ulceration. *F. prostathelcose*.) Ulceration of the *Prostate*.

Prostatic. (*F. prostatique*.) Belonging to the *Prostate*.

P. acini. Syn. for *P. ducts*.

P. bisector. A cutting instrument introduced by Dr. Stevens of New York, for use in lateral lithotomy. The blade is olive-shaped, with a beaked extremity.

P. calculus. See under *Calculus*.

P. catheter. A catheter with a long curve about a third of the circumference of a circle, for use in enlarged prostate; designed to meet the difficulty occasioned by the enlargement of the middle lobe and the lengthening of the urethra.

P. ducts. Twelve or more minute orifices opening on to the floor of the *P. sinus*.

P. fluid. A milky, acid fluid secreted by the prostate gland, containing granular matter and epithelial cells. Some of the granules are composed of lecithin.

P. liquor. Another name for *Prostatic fluid*.

P. plexus of nerves. This plexus is derived from the *pelvic plexus* of the sympathetic. Its nerves are of large size, and pass between the prostate and the levator ani, giving offsets to the prostate and vesicula seminalis, and then passing on to form the *cavernous nerves*, which supply the erectile tissue of the penis. See *Corpus cavernosum, nerves of*.

P. plexus of veins. This plexus surrounds the base of the *prostate*, and is formed by the further breaking up of the divisions of the dorsal vein of the penis, and also by smaller branches from the prostate itself and the muscles around. Below, it communicates with the factors of the pudic vein, and above, it is continued into the vesical plexus of veins. This plexus usually becomes enlarged in old age.

P. portion of urethra. See *Urethra, prostatic portion of*.

P. sinus. A fossa on either side of the *Veru montanum*, the floor of which is perforated by the *Prostatic ducts*.

P. urethra. The prostatic portion of the urethra. See under *Urethra*.

P. vesicle. (*Vesicula prostatica*, or *Sinus pocularis*.) A depression in the fore part of the *Veru montanum*, in the middle line, the margins of which contain the openings of the *Ejaculatory ducts*.

Prostaticus. (Mod. L.) Prostatic.

P. superior. Another name for the *Compressor prostatae*.

Prostatitic. Belonging to, or affected with, *Prostatitis*.

Prostatitis. (*Prostata*; Gr. adj. termination -itis. *F. prostatite*; G. *Vorsteherdrüsenentzündung*.) Inflammation of the prostate. See *Prostate, inflammation of*.

P., gouty. Prostatitis occurring as a symptom in gout.

Prostatocoele. (*Prostata*; Gr. κύλη, a tumour. *F. prostatocèle*.) Tumour of the prostate.

Prostatocystitis. (*Prostata*; Gr. κύστις, the bladder.) Inflammation of the prostate and bladder.

Prostatolith. (*Prostata*; Gr. λίθος, a stone. *F. prostatolithæ*.) Prostatic calculus. See under *Calculus*.

Prostatome. (*Prostata*; τέμνω, to cut.) A cutting instrument used especially in operations on the prostate.

Prostatomelē. (*Prostata*; Gr. μήλη, a probe. F. *prostatomèle*.) A probe for exploring the prostate.

Prostatometer. (*Prostata*; μέτρον, a measure.) An instrument for measuring the prostate.

Prostaton'cus. (*Prostata*; ὄγκος, a tumour.) Tumour of the prostate.

Prostatoparec'tasis. (*Prostata*; παρέκτασις, extension.) Enlargement of the prostate.

Prostatorrhœ'a. (*Prostata*; πῑω, to flow. F. *prostatorrhée*.) The discharge of a glairy mucus from the prostate, usually at the end of micturition, in consequence of irritation of that organ. It is of importance on account of its liability to be mistaken by the patient for *spermatorrhœa*; the distinction is readily made by means of the microscope.

Prostatoscirrhus. Scirrhus of the prostate.

Prostatotomy. (*Prostata*; Gr. τομή, cutting.) Incision of the prostate.

P., ther'mo-electric. Tunnelling the prostate by means of the galvanic cautery, in order to establish a channel through the gland.

Prosternid'ius. (Πρό, before; στήρ-νον, the breast-bone.) That which is applied to the sternum. Old epithet for a plaster used for application over the sternum.

Proster'num. (Πρό, before; στήρνον, the breast-bone.) The *Manubrium sterni*.

Prostethid'ius. (Πρό, before; στήθος, the breast.) Another term for *Prosternid'ius*.

Proste'this. (Πρό, before; στήθος, the breast.) Ancient term for the ball of the foot, or the corresponding fleshy eminence in the palm of the hand.

Prosthesis. (Προστίθημι, to apply or add.) 1. Application (as of a cupping glass. Arist. Rhet.).

2. An addition, appendix.

3. In *Surgery*, the application of artificial members, legs, eyes, teeth, &c.

P., den'tal. The replacement of natural by artificial teeth.

P. oculi. The application of an artificial eye.

Prosthetic. Belonging to *Prosthesis*.

P. appar'atus. An apparatus acting as a substitute for a lost part or member.

P. den'tistry. The same as *Prosthesis, dental*.

Prosthetics. That branch of Surgery which has to do with *prosthesis*.

Prosthetos. (Προστίθημι.) Ancient epithet for all kinds of topical medicines; also, and more especially, applied to medicaments either applied to or introduced within the uterus.

Prosthion. (Πρόσθιος, -a, -on, foremost.) Term for the *Alveolar point*. Also, the penis.

Prostitute. A female who practises *prostitution*.

P.'s col'ic. See *Colica scortorum*.

Prostitution. (L. *prostitutio*, to expose publicly. F. *prostitution*; I. *prostituzione*; G. *Hurerei*.) The yielding of the person to indiscriminate sexual intercourse for hire; used of females only.

Prosto'ma. (Πρό, before; στόμα, the mouth.) Syn. for *Blastopore*.

Prosto'mia. Plur. of *Prostomium*. Also, old term for the commissure of the lips.

Prosto'mial. Belonging to the *Prostomium*.

Prosto'miate. Having a *Prostomium*.

Prosto'mium. (Πρό, before; στόμα, any mouth-like opening.) The region in front of the mouth in embryos, and also, in the Invertebrata.

Prostrate. (L. *prosterno, prostratum*, to lay flat.) Lying at full length. Also, in a state of *Prostration*.

Prostrated. Rendered *Prostrate*.

Prostration. (*Prostrate*. F. *prostration*; G. *Entkräftung*.) The state of being prostrate. Extreme muscular or nervous exhaustion.

P., nerv'ous. Extreme nervous prostration brought on by excessive nervous strain of any kind.

Pro'tagon. (Πρῶτος, first; ἄγω, to lead.) $C_{160}H_{308}N_5PO_{35}$. A crystalline body, containing nitrogen and phosphorus, obtained from the brain by Liebreich; crystallising from warm alcohol, insoluble in water, melting at 200° C. It appears to be nothing but impure *Lecithin*.

Protalbumose. See *Protoalbumose*.

Protamine. (Πρῶτος, first; amine.) $C_{16}H_{32}N_9O_2$. A basic organic substance occurring, combined with *nuclein*, in the outer covering of spermatozoa, and in salmon-spawn.

Protamœ'ba. (Πρῶτος, first; ἀμβά.) This is probably the simplest form of living organism, Class *Protozoa*. It is of microscopical size, and consists of an undifferentiated mass of jelly-like protoplasm moving onwards by change of shape.

Pro'tasis. (Προτείνω, to stretch out.) Lengthening out; applied to laborious breathing. (Hippocrates.)

Protan'dric. The same as *Protandrous*.

Protan'drous. Shortened form for *Protandrous*.

Protan'dry. Shortened form for *Protandry*.

Pro'tea. A Genus of the *Proteaceæ*.

P. lepidocar'pon. (Λεπίς, -ίδος, rind, husk; καρπός, fruit.) The juice of this plant is used in the same way as that of *P. mellifera*.

P. mellif'era. (L. *mel*, honey; *fero*, to bear.) A South African plant. The involucre and flowers contain a sweet watery liquid, from which, by drying, is formed a syrup used in pulmonary diseases.

Prote'an. (*Proteus*. F. *proteiforme*.) Assuming many different shapes.

Protective. That which protects. As a substantive, a generic name applied to a number of therapeutical agents which protect parts, and especially wounds (e. g. oiled silk), or relax the tissues (e. g. poultices, oils, &c.).

P., green. Green oiled silk, used as a *protective*.

Prote'ic. The same as *Proteïnous*.

P. sub'stances. Term for *Proteids*.

Pro'teid. One of the *Proteids*.

Pro'teids. A generic name given to a group of bodies occurring in vegetable and animal organisms. They are amorphous, not crystalline; under ordinary circumstances, contain C, O, H, N, and S, in proportions that vary within narrow

limits; are insoluble in alcohol and ether, and decomposable by strong acids and alkalies. They are precipitated by certain salts, and answer certain common tests (*xanthoproteic*, &c.). Their solutions are laevorotatory.

Landois makes seven subdivisions of proteids:—1, Native albumins; 2, derived albumins or albuminates; 3, globulins; 4, fibrins; 5, coagulated proteids; 6, albumoses and peptones; 7, lardacein or amyloid.

P.s, defensive. (*Alexins* of Buchner.) Certain proteids, either normally present in the tissues or introduced by means of inoculation or vaccination, which have the power of destroying bacteria.

Hankin divides them as follows:—

1. *Sozins*, normally present.

a. Mycosozins, which destroy microbes.

b. Toxosoins, which destroy the products of the microbes.

2. *Phylaxins*, introduced artificially.

a. Mycophylaxins, which destroy microbes.

b. Toxophylaxins, which destroy the products of the microbes.

P.s, derived. Another name for *Albumins*, derived (q. v.).

P.s, vegetable. The proteids of plants, which are closely similar to animal proteids. They are named in the same way as animal proteids (see *Proteids*), but with the prefix *Vegetable* in each case.

Proteiform. (*Proteus*; *forma*, shape. *F. protéiform*.) Changing its form often, or from time to time; term applied especially to diseases.

Proteil. (*Πρώτος*, first; *ὑλη*, the substance of which anything is made.) Lankester's term for the definite chemical compound of high complexity probably present in all protoplasm, and forming the hypothetical basis of all living matter.

Protein. (*Πρωτεύω*, to be first.) Term originally introduced by Malder, in 1838, to mean the hypothetical chemical compound of the albuminoids; now used to designate the albuminoids themselves.

Also, the sulphur-free residue of a *proteid*, obtained by treatment of the proteid with caustic potash. On the further addition of acetic acid, the protein is precipitated as a translucent, gelatinous substance.

P., anthrax. Term for a sulphur-free proteid obtained from cultures of the anthrax bacillus.

P. bod'ies. A syn. for *Proteids*.

P. gran'ules. A name for small particles of vegetable proteid found in seeds. Also termed *aleurone*.

P., mic'ro-. Term introduced by Nencki to designate any of the albuminous substances found within bacteria.

Proteina'ceous. The same as *Proteinous*.

Protein-chrome. The reddish-violet product which *Protein-chromogen* gives with chlorine or bromine.

Protein-chro'mogen. One of the products of the action of *Trypsin* upon *hemi-peptone*.

Proteinous. (*Protein*.) Belonging to, or composed of, *protein*; albuminous.

Protembryo. (*Πρώτος*, first; *embryo*.) Term for that stage of segmentation of the ovum of *Metazoa* in which it closely resembles the colony formed by certain of the *Protozoa*.

Protembryon'ic. Belonging to the *Protembryo*.

Protenceph'alon. (*Πρώτος*, first; *encephalon*.) Syn. for *Prosencephalon*.

Proten'chyma. (*Πρώτος*, first; *ἐγχύμα*, something poured in, an infusion.) Term introduced by Naegeli to include all the tissues of a plant not belonging to the fibro-vascular system or "epenchyma."

Protensio'nes glandular'es. (*L. protendo*, *protensum*, to stretch out.) Glandular prominences. Term synonymous with *Mamillary eminences*.

Proteolysis. (*Proteid*; *λύσις*, a setting free.) Term for the separation of the proteids from a proteid-containing mixture; also, for the splitting up of proteids by ferments.

P., digestive. The splitting up of proteids during digestion.

Proteoly'tic. Having the power to perform *proteolysis*.

Prote'oses. (*Πρώτος*, first.) Those bodies formed in gastric digestion which are intermediate between the proteids of the food and the peptones formed by digestion; such, for example, as *hemi-peptone*.

Proteran'drous. Exhibiting *Proterandry*.

Pro'terandry. (*Πρότερος*, before; *ἀνὴρ*, a male; the sign of the stamen.) The condition, in a *Phanerogam*, in which the stamens of the flower mature before the pistil.

Proteran'thous. (*Πρότερος*, before; *ἄνθος*, a flower.) Developing flowers before leaves.

Protero'gynous. Exhibiting *Proterogyny*.

Protero'gyny. (*Πρότερος*, before; *γυνή*, a female; the sign of the pistil.) The maturation of the pistil of a flower before the stamens.

Pro'teus. (*Πρωτεύς*, a sea-god of Greek Mythology, who could change his form at will.)

1. Old name for a certain *collyrium* mentioned by Paul. *Æg.*, vii, 16, *Adams' Trans.*, vol. iii, p. 554. 2. A name applied to a Genus of *Schizomycetes* whose general characteristics are as follows: they are, under ordinary conditions, non-pathogenic organisms which inhabit the digestive canal, only occasionally becoming pathogenic by entrance into the blood. Several species have been described.

P. capsula'tus sept'icus. This species has been found in human blood and fluids after septic poisoning. It forms rods and cocci, of various sizes and non-motile.

P. hom'inis capsula'tus. Believed to produce a disease resembling anthracæmia. It forms rods resembling *Bacillus anthracis*, but thicker. These are found in the lymphatics and intercellular spaces.

P. mirab'ilis. Similar in habitat to *P. vulgaris*; but more frequently exhibiting spherical forms, and liquefying the gelatin in a cultivation more slowly.

P. vulgar'is. The typical species of the genus. A micro-organism occurring in putrefying animal matter. It forms twisted threads, or longer or shorter rods. Small doses to animals are not pathogenic. Liquid cultivations set up putrefaction, with its characteristic odour.

P. Zen'keri. Similar to *P. vulgaris*, except that it does not liquefy gelatin, and its odour is less strong. It occurs in the form of rods.

PROTHALLIUM—PROTOGYNOUS

Prothallium. (Πρό, before; θάλλος, a young shoot.) The sexual generation of the *Filices*, formed by germination of a spore, and giving rise by means of its male and female reproductive organs (*antheridia* and *archegonia*) to the frondose asexual generation.

P., female. A variety of prothallium, developed from the *macrospore* of certain vascular cryptogams, which bears *archegonia* only.

P., male. A variety of prothallium, developed from the *microspore* of certain vascular cryptogams, which bears *antheridia* only.

Prothallus. The same as *Prothallium*.

Protherorubin. One of the bodies, according to Schmidt, which aid in the breaking up of cystin, and favour the clotting of the blood.

Pro'thesis. (Πρό, in place of; τίθημι, I place.) See *Prosthesis*.

P. ocular'is. The same as *P. oculi*.

P. oculi. See *Prosthesis oculi*.

Prothetic. See *Prosthetic*.

Prothyalosoma. (Πρώτος, first; ὕαλος, any kind of clear, transparent stone; σῶμα, the body.) Van Beneden's name (1883) for the envelope of the *nucleolus* of an ovum.

Prothyalosomal. Belonging to the *Prothyalosoma*.

Prothyalosomata. Plur. of *Prothyalosoma*.

Prothy'lē. (Πρώτος, the first; ὕλη, material. F. *prothyle*; G. *Grundmaterie*.) Term for primary or original matter.

Protiologi'a. (*Protiasis*; λόγος, a discourse.) The ancient doctrine of healing.

Protia'sis. (Πρώτος, the first; ἰασις, healing. F. *protiase*; G. *Urheilung*.) The most ancient method of healing or curing.

Protia'ter. (Πρώτος, the first; ἰατήρ = ἰατρός, a surgeon; later, a physician.) Syn. for *Archiatr*.

Protia'trus. (Πρώτος; ἰατρός, a surgeon; later, a physician.) The same as *Protiater*.

Proti'odide. (Πρώτος, the first; iodide.) That iodide of a polyvalent element or basic radical which contains the smallest proportion of iodine in combination.

P. of mercury. See *Mercury protiodide*.

Protist. The same as *Protista*.

Protista. More often used in the plur., *Protistæ* (q. v.).

Protistæ. (Πρώτος; ἵστημι, to place.) Haeckel's term (1868) for the simplest forms of living organisms.

Protme'sis. (Πρό, before; τμήσις, a cutting.) Old term for the umbilicus (from the cutting of the umbilical cord in infants close to the umbilicus).

Pro'to. (Πρώτος.) Prefix signifying the first. In *Chem.*, prefixed to the name of a salt to signify its being composed of one atom of the acid element, or one molecule of the acid radical, with one atom or molecule of the basic element or basic radical.

Protoalbumose. (*Proto*-; *albumose*.) One of the intermediate products in the hydration of *Proteids*. It is a substance soluble in cold and hot water and saline solutions; precipitated from its solution on saturation with sodium chloride or magnesium sulphate.

Protoblast. (*Proto*-; βλαστός, a shoot.) A cell which has no cell-wall. Also, the nucleus of the ovum.

Protoblas'tic. (*Protoblast*.) Syn. for *Holoblastic* (q. v.).

Protocac'ē. Clerical error for *Proctocacē* (q. v.).

Protoca'seose. (*Proto*-; *caseose*.) A primary product of the digestion of *casein*. It is soluble in cold water, gives a precipitate with cold nitric acid which is dissolved upon heating; and it is precipitable by common salt. (Chittenden.)

Protocatechu'ic acid. (*Proto*-; *catechuic acid*.) Its chemical composition is that of dioxy-benzoic acid. It is occasionally present in the urine.

Protocer'eb'ral. Belonging to the *Protocerebrum*.

Protocer'eb'rum. (*Proto*-; *cerebrum*.) The embryonic vesicle which develops into the *cerebrum*.

Protochlo'ride. (*Proto*-; *chloride*.) That chloride of a polyvalent element or basic radical which contains the smallest proportion of chlorine in combination.

P. of mercury. See *Mercury protochloride*.

Protococ'cus. (*Proto*-; κόκκος, a kernel.) A Genus of unicellular organisms belonging to the Order *Protococcaceae* of the *Algae*.

P. dental'is. A species found associated with dental caries.

Protocone. (*Proto*-; *cone*.) The anterior and internal cusp of an upper molar tooth.

Protoco'nid. (*Proto*-; *cone*.) The anterior and internal cusp of a lower molar tooth.

Protocole. (*Proto*-; *cone*.) The anterior and intermediate cusp of an upper molar tooth.

Protodont. (*Proto*-; ὀδούς, ὀδόντος, a tooth.) Term for a simple molar tooth with ill-defined cusps.

Proto-elastose. A name given by Chittenden and Hart to a primary product of the digestion of *Elastin*. This substance is precipitated by saturation with sodium chloride and ammonium sulphate; it gives the *biuret* and *xanthoproteic* reactions.

Protogæ'a. (*Proto*-; γαῖα, the earth.) Leibnitz's term for the first or original form of the earth.

Protogal'a. (*Proto*-; γάλα, milk.) Old term for *Colostrum*.

Protogaster. (*Proto*-; γαστήρ, the belly.) The primitive intestinal canal of a *Gastrolula*.

Protogas'tric. Belonging to the *Protogaster*.

Proto'genal. (*Proto*-; γενής, offspring.) Primitive; first-born.

Protogen'esis. (*Proto*-; *genesis*.) A syn. for *Abiogenesis*.

Protogenetic. Belonging to *Protogenesis*.

Protogen'ic. (*Proto*-; γενής, offspring.) Epithet applied to the intercellular spaces formed at the commencement of differentiation of the tissues in embryonic life.

Protoglobulose. (*Proto*-; *globulose*.) Name given by Chittenden and Kühne to a primary product of the digestion of *globulin* by gastric juice (either natural or artificial). It is soluble in water, and precipitable by saturation of the solution with a neutral salt.

Protogynous. Belonging to *Protogyny*.

Proto'gyny. (*Proto-*; γυνή, a female.) Shortened form for *Proterogyny*.

Protohæm'oblast. (*Proto-*; αἷμα, blood; βλαστός, a shoot.) Term for a hæmoglobin cell.

Protoia'tros. (*Proto-*; λατρός, a surgeon.) A syn. for *Archiater*.

Protoiodide. See *Protiodide*.

Prototeu'cyte. (*Proto-*; λευκός, white; κύτος, a cell.) Salensky's term for the formative part of the ovum, as distinguished from the "deutoleucyte," or nutritive part, in which vitelline granules abound.

Prototeuc'ocyte. (*Proto-*; λευκός, white; κύτος, a cell.) Term for the minute lymphoid corpuscles of the spleen and the red marrow of bone.

Protomē. (Πρό, before; τομή, a cutting.) Old term for the face of the lower animals.

Protomed'icus. (*Proto-*; medicus.) A syn. for *Archiater*.

Protomer'istem. (*Proto-*; meristem.) A syn. for *Primary meristem*.

Protome'us. (Πρό; τομή, a cutting.) Syn. for *Prosector*.

Protomorph'ic. (*Proto*; μορφή, form.) Having a primitive structure.

Protomus. The same as *Protomeus*.

Protomyosinose. Term given by Chittenden and Kühne to a soluble substance formed by the digestion of *myosin* by gastric juice (natural or artificial). It is precipitable by common salt, acetic acid, copper sulphate, alcohol, and by ferrocyanide of potassium. It is not coagulable by heat. Further acted upon by pepsin, it is changed into *deuteromyosinose*.

Proton. (Πρώτος, first. G. equiv. *Analage*.) Wilder's term for the undifferentiated rudiment of a part of a living organism.

Protoneph'ric. Belonging to the *Protonephron*.

Protoneph'rion. (*Proto-*; νεφρός, the kidney.) The same as *Protonephron*.

Protoneph'rium. The same as *Protonephrion*.

Protoneph'ron. (*Proto-*; νεφρός, the kidney.) The primitive kidney, or *Wolffian body*.

Protoni'trate. (*Proto-*; nitrate.) That nitrate of a polyvalent element or basic radical which contains the smallest proportion of the nitric acid radical in combination.

P. of mercury. Another name for *Mercurous nitrate* (q. v.).

Protonu'cleate. (*Proto-*; nucleus.) Showing the first signs of formation of a nucleus.

Protoōr'ganism. (*Proto-*; organism.) One of the simplest of organised beings, capable of being referred either to the animal or vegetable kingdom.

Protopath'ia. (*Proto-*; πάθος, affection. F. *protopathie*; G. *Urleiden*.) The primary or original disease.

Protopath'ic. Relating to *Protopathia*.

Protopath'y. The same as *Protopathia*.

Protopes'ia. (*Proto-*; πέπω, to digest.) Primary digestion; i. e. the processes which are carried on in the alimentary canal.

Pro'tophyll. (*Proto-*; φύλλον, a leaf.) Syn. for *Prothallium*.

Pro'tophyte. (*Proto-*; φυτόν, a plant. F. *protophyte*.) A vegetable organism of elementary structure. The term has been applied to *Algæ*, and also to the *Mucorini* and *Lichenes*.

Protophy'tic. Belonging to a *Proto-phyte*.

Proto'pia. (*Proto-*; opium.) C₂₀H₁₉NO₅. An alkaloid obtained from opium, and similar in properties to *Cryptopia*.

Pro'topine. The same as *Protopia*.

Protopla'sis. (*Proto-*; πλάσις, a moulding.) Primary tissue-formation.

Protoplasm. (*Proto-*; plasma.) A substance occurring in all vegetable and animal organisms, whether free or contained in cells. It is the basis of organic existence, and endowed with sundry properties termed vital; namely, irritability, contractility, the power of assimilation and metabolism, and the power of reproduction. When occurring in cells, it forms the main cell-substance, as distinct from the nucleus. Chemically it is proteid in nature, containing a definite basic substance, *proteid*, and it has a remarkable affinity for certain staining reagents, e. g. hæmatoxylin and carmine; it is viscid, contains in its substance a considerable quantity of water, and consists of two portions, a clear homogeneous matter, containing a granular material embedded in it.

P., circulation of. The movement from place to place of the granules within the network of the protoplasm of living cells. Also, the peripheral rotation, within the cell-wall, of the fluid protoplasm in certain vegetable cells.

P., mother-. A syn. for *Germ-plasm*.

P., movements of. See *P., circulation of*; also, *Ambæoid movements*.

Protoplas'mal. The same as *Protoplasmic*.

Protoplasmat'ic. The etymologically correct form of *Protoplasmic*.

Protoplas'mic. Belonging to *Protoplasm*.

P. pro'cesses of Deiters. See *Deiters' process*.

P. u'tricle. Term for a thin layer enclosing the sap-cavity of the vegetable cell.

Protoplast. (*Proto-*; πλαστός, moulded.) An embryonic cell.

Protoplast'ic. Syn. for *Protoplasmic*.

P. li'quid, Schmidt's. A solution especially prepared for investigating the influence exerted by the blood-plaques or platelets on coagulation. It is prepared as follows:—One part of blood is allowed to flow into three parts of a 28 per cent. aqueous solution of sulphate of magnesium at 0° C. It is stirred and allowed to stand, and the supernatant liquid then drawn off is afterwards filtered.

Proto-salt. Chem. A salt having the composition of a proto-compound. See *Proto-*.

Protoso'ma. (*Proto-*; σῶμα, the body.) Embryol. Syn. for *Primitive streak*.

Protoso'mite. (*Proto-*; somite.) Syn. for *Myotome* (in the former of its two meanings.)

Protosomit'ic. Belonging to a *Protosomite*.

Pro'tospasm. (*Proto-*; spasm.) A spasm which begins in one limb only.

Protospermatoblast. (*Proto-*; spermatoblast.) One of the parent cells forming the layer next to the tunica propria in the seminiferous tubules of the testis, from which are developed the *spermatoblasts*.

Protospore. (*Protosporos*.) A primary spore from which a *prothallus* or similar vegetable organism is developed.

PROTOSPOROS—PROTUBERANCE

Proto'sporos. (*Proto-*; σπόρος, seed.) Term for the *Os uteri externum*.

Proto'stoma. (*Proto-*; stoma. Pl. *Protostomata*.) *Embryol.* The primitive opening of the sac of a *gastrula*, formed by a process of invagination.

Protosul'phate. That sulphate of a series which contains the smallest proportion of the sulphuric acid radical.

Protosy'chē. (*Proto-*; ψυχή, the soul.) Haeckel's term for the *Prosencephalon*.

Protothal'lus. (*Proto-*; thallus.) Syn. for *Prothallus*; also, for *Hypothallus*.

Prototherap'ia. (*Proto-*; θεραπεία, service done to the sick.) The same as *Proti-asia*.

Prototyp'al. Belonging to a *Prototype*.

Pro'totype. (*Proto-*; type.) A model on which something is moulded or formed.

Prototypem'bryo. (*Prototype*; embryo.) A late embryonic stage, showing the essential characteristics of the group or family to which it belongs.

Protover'atrine. (*Proto-*; veratrin.) $C_{32}H_{51}O_{11}$. A poisonous alkaloid obtained from *veratrine*.

Protover'tebra. (*Proto-*; vertebra. F. *provertebre*.) *Embryol.* A term formerly applied to the cubical bodies formed from the *mesoblast*, which are laid down on either side of the *notochord*.

Protover'tebræ. Pl. of *Protovertebra*.

Protover'tebral. Belonging to a *Protovertebra*, or to *Protovertebræ*.

P. columns. The thick columns into which the *mesoblast* divides longitudinally, and out of which the *somites* or *Protovertebræ* are formed.

P. plates. The same as *P. columns*.

P. so'mites. Syn. for *P. plates*.

Protovit'ellose. (*Proto-*; vitellose.) A soluble substance obtained by the action of gastric juice (natural or artificial) on *phytovitel-lin*. It is partially precipitable from its solution by common salt. Gastric juice is capable of further converting *protovitellose* into *deutero-vitellose*. (Neumeister.)

Proto'va. Pl. of *Protovum*.

Proto'vum. (*Proto-*; ovum.) The first stage of an ovum.

Protox'ide. That oxide of a polyvalent element or basic radical which contains the smallest number of atoms of oxygen.

Protoxylem. (*Proto-*; xylem.) The primitive or first-formed *xylem* of a fibro-vascular bundle.

Protozo'a. (Pl. of *Protozoön*. F. *protozoaires*; G. *Urthiere*.) The lowest class of the Animal Kingdom, consisting of unicellular organisms, or colonies of simple cells.

Protozo'al. The same as *Protozoan*, in its first meaning.

Protozo'an. Belonging to the *Protozoa*. Also, the same as *Protozoön*.

Protozoids. (F. *protozoïde*.) A name given to *Spermatozoa*.

Protozo'ön. (*Proto-*; ζῶον, an animal.) A member of the Class *Protozoa*.

Protracted la'bour. See *Labour*, *protracted*.

Protract'ile. (L. *pro*, before; *trahere*, to draw.) Capable of protrusion; syn. of *protrusile*.

Protract'ion. (L. *pro*, before; *trahere*,

to draw.) Extraction; as of a foreign body from a wound.

Protractor. (L. *pro*, before; *trahere*, to draw.) An instrument for extracting foreign bodies from wounds. Also, a muscle that acts by drawing a part forward.

Protractores anguli oris. (L. *protractor*, one that draws out.) Term for occasional accessory fasciculi of the *Orbicularis oris* at the angles of the mouth.

Protrahens auriculæ. (L. *pro*, forth; *traho*, to draw.) That which draws forward the auricle. Syn. for *Attrahens auriculam*.

P. len'tis. That which draws forward the crystalline lens. A name given to the *Ciliary muscle*.

Protrude'. (L. *protrudo*, to thrust forward.) To thrust forward.

Protrus'ile. (L. *protrudo*, to thrust forward.) Capable of protrusion.

Protru'sio. (L. *protrudo*, to thrust forward.) The same as *Protrusion*.

P. enorbita'lis. A term for protrusion of the orbit with the eyeball.

P. exorbita'lis. A term for protrusion of the eyeball, or *Exophthalmos*.

P. oc'uli. The same as *P. exorbitalis*.

Protru'sion. (L. *protrudo*, to thrust forward.) Thrusting forward, or being thrust forward.

Protru'sor. (L. *protrudo*, *protrusum*, to thrust forward. F. *protruseur*; G. *Hervor-trieher*.) *Anat.* That which thrusts forward. Also, term used for the *Detrusor urinæ*.

P. lin'guæ. Syn. for *Genio-glossus*.

Protuberance. (L. *pro*, before; *tuber*, a swelling. F. *protuberance*; G. *Vorsprung*.) A swelling. *Anat.* A process, apophysis.

P., an'nular. Term for the *Pons Varolii*.

P., cer'ebral. Term for the *Medulla oblongata*; also, for the *Pons Varolii*; also, for the upper (anterior) of the cerebral flexures in the embryo.

P., fron'tal. The prominence of the forehead, formed by the tabular portion of the frontal bone.

Also, the prominence formed by the lower (posterior) of the cephalic flexures in the embryo.

P., fron'tal, lat'eral. A prominence in the embryo situated on each side of the frontal prominence.

P., maxil'lary, infe'rior. A prominence formed on each side by the second pharyngeal arch, and representing the rudiment of the lower jaw in the embryo.

P., maxil'lary, supe'rior. A prominence formed on each side by the first pharyngeal arch in the embryo, representing the rudiment of the upper jaw.

P., men'tal. The prominence of the *mentum* or chin.

P., na'tiform. (L. *nates*; *forma*, shape.) Term for the *nates* of the *Corpora quadrigemina*.

P., occip'ital, exter'nal. A prominence on the external surface of the occipital bone, midway between the summit of the bone and the posterior margin of the foramen magnum, to which the ligamentum nuchæ is attached.

P., occip'ital, inter'nal. The meeting point of the four divisions of the *Crucial riage* on the internal surface of the occipital bone.

P., pari'etal. The *Parietal eminence*.

PROTUBERANTIA—PRUNUS

Protuberantia. A *Protuberance*.
P. annularis Willisii. Term for the *Pons Varolii*.

P. basilaris. The same as *P. annularis Willisii*.

P. cerebrellis. The same as *P. basilaris*.

P. cylindrica. Term for the *Cornu ammonis*.

P. laryngea. The *Thyroid eminence*.

P. sclerallia. Term for a small prominence of the sclerotic coat of the eye immediately below the *porus opticus*.

P. striata. Term for the *Optic thalamus*.

Protuberate. (*L. protubero*, to bud.) To swell.

Protureter. (*Proto-*; *ureter*.) The excretory duct of the *Protonephron*.

Protyl. (*Πρώτος*, first.) Syn. for *Methyl*.

Protylē. (*Proto-*; *ἴλη*, the stuff of which anything is made.) The hypothetical substance from which all living matter is supposed to have sprung.

Protylic. Belonging to *Protyl*.

Proud flesh. A popular term applied to superabundant granulations on the surface or margins of a healing wound.

Provence rose. The *Rosa centifolia*.

Proventric'ular. (Belonging to the *Proventriculus*.)

Proventric'ulus. (*L. pro*, before; *ventriculus*, the stomach.) The true glandular stomach of Birds, lying between the crop and the gizzard. Also, the first stomach of Insects.

Prover'sio. (*L. pro*, forward; *versus*, a turning.) Anteversion.

Provins. Department of Seine-et-Marne, France. Noted for its chalybeate springs, which contain also carbonic acid.

Provis'ional callus. See *Callus*, *provisional*.

Provocato'rii, dies. (*L.*) Provoking or provocative days. An old term for *Intercalary days*.

Proximad. Adverbial term used by Dr. Barclay as corresponding to the adjective *Proximal*.

Proximal. (*L. proximus*, nearest.) *Anat.* Nearest to the attached end of an appendage, as opposed to *Distal*.

P. clot. See *Clot*, *proximal*.

Proximate. (*L. proximus*, next or nearest.) Nearest.

P. cause. In disease, the circumstance or condition immediately determining the disease, as distinct from *predisposing causes*.

P. principles. See *Principles*, *proximate*.

Proximen. (*L. proximus*, nearest.) Belonging to the proximal aspect.

Prozo'ic. (*Πρό*, before; *ζωή*, life.) *Geol.* Term applied to rocks existent previous to the beginning of animal life.

Pru'na. (*L.*) Hoar frost. Term applied to the powdery substance on ripe fruit; also, to *tartar*.

Pru'na. (*L.*) A live coal. An old term for *Carbuncle*. Also, plur. of *Prunum*.

P. gal'lica. Plur. of *Prunum gallicum*.

Prune. (*L. prunum*, a plum.) A dried plum, usually the fruit of the *Prunus domestica*. A mild laxative.

P., French. The *Prunum gallicum*.

P.-juice expectora'tion. The same as *P.-juice sputum*.

P.-juice spu'tum. See *Sputum*, *prune-juice*.

P.s, med'icated. Name for a confection made by evaporating and adding sugar to a mixture of prunes and a concentrated infusion of senna.

P. pulp. See *Pruni pulpa*.

Prunella. (*Dim. of L. prunum*.) 1. Term for *Angina pectoris*; also, for *Cynanche*; also, for thrush, *Aphthous stomatitis*; also, for the pupil of the eye. 2. (*F. sanicle*; *G. Prunelle*.) A Genus of the *Labiatae*.

P. vulgar'is. The Self-heal or Bugle. It has been used for its astringent properties.

Prunel'lae sal. (*L. Gen. of Prunella*; *sal*, salt.) Name for fused nitrate of potash mixed with a small quantity of sulphate of potash.

Prunel'loe. A popular name for the *Prunum brignolensæ*.

Pru'neola sylvest'ris. Syn. for *Prunus spinosa*.

Pruni pul'pa. Prune pulp. The prunes are steamed, the stones removed, and the remainder is beaten up in a mortar, and then pressed through a sieve.

P. virginia'næ cortex. U.S.P. The bark of *Prunus serotina*. It contains tannin, amygdaline, and emulsin. The sedative effects of preparations of this bark appear to be due to the hydrocyanic acid formed from the amygdaline and emulsin by treatment with water.

Pru'niform. Having the appearance of a prune.

Pru'nin. The same as *Cerasin*.

Pru'num. (*L.*) A plum or prune. The dried fruit of *Prunus domestica*. All the following varieties are emollient and mildly laxative.

P. brignolen'sæ. The Brignole plum, or Prunelloe, from Brignole, a town in Provence.

P. damasce'num. The Damascene plum or damson.

P. gal'licum. The French plum.

P. stella'tum. The *Averrhoa carambola*.

P. sylvest're. (*F. prunelle*; *G. Schlehe*.) The wild plum, or sloe; the fruit of *Prunus spinosa*.

Pru'nus. (*F. prunier*; *G. Pflaumenbaum*.) A Genus of the *Rosaceæ*.

P. aca'cia. The *P. padus*.

P. ac'ida. A variety of *P. cerasus*.

P. amygd'alis. The *Amygdalus communis*.

P. armen'aca. The *Armeniaca vulgaris*, or apricot.

P. as'pera. The same as *P. acida*.

P. a'vium. The black or bird-cherry tree, yielding a gum resembling gum-arabic.

P. cerasus. (*F. cerasier*; *G. Kirschbaum*.) The red cherry tree, whose fruit is termed *Cerasa anglica*.

P. domes'tica. The plum tree, whose dried fruit is known as prune.

P. horten'sis. The *P. cerasus*.

P. laurocer'asus. The cherry laurel, or poisonous laurel; called also Alexandrian laurel. An evergreen, from whose leaves, which contain prussic acid, is prepared *Aqua laurocerasi* (q. v.).

P. macrophyl'la. (*Μακρός*, long; *φύλλον*, a leaf.) The *P. avium*.

P. pa'dus. The bird cherry, whose bark and fruit are said to act as a tonic.

P. sebeste'na. The *Cordia myxa*.

P. sero'tina. The wild black cherry. A North American tree.

P. spino'sa. The *P. sylvestris*.

P. sylves'tris. The sloe tree. Its fruit, the sloe, is astringent.

P. virginia'na. The U.S.P. name for the bark of *Cerasus serotina*, or *C. virginiana*. It has been used in intermittent fever, and the bark is used by the Indians for the cure of syphilis. It is bitter and astringent. The bark and leaves contain hydrocyanic acid.

P. vulgar'is. The *P. padus*.

Pruriens. (L.) Itching. In *Bot.*, term applied to certain plants or parts of plants furnished with hairs, because these are readily driven into the skin and then detached, causing considerable itching. As, for example, the pods of *Mucuna pruriens*.

Prurient. See *Pruriens*.

Pruriginous. (*Prurigo*. F. *pruriginoux*; G. *pruriginös*.) Relating to, or resembling, *Prurigo*.

Pruri'go. (L. *prurio*, to itch.) A disease of the skin, commonest in elderly people, associated with the presence of papules and an altered condition of the skin, and attended by severe itching.

P. adolescen'tium. The same as *P. æstivalis*.

P. æstiva'lis. Summer prurigo. A relapsing bullous eruption breaking out in the summer.

P. ag'ria. (L. *agrius*; Gr. *ἀγrios*, severe, virulent.) Term for a very intense *Prurigo*.

P. ani. Prurigo affecting the integument round the anus.

P. clito'ridis. Prurigo affecting the folds of the clitoris; it is very intractable.

P. ferox. (L. *ferox*, wild, savage.) Syn. for *P. agria*.

P. form'icans. (L. *formico*, to feel like the creeping of ants.) A descriptive term for a variety of prurigo characterised by *formication*.

P. mi'tis. Mild *Prurigo*.

P. partia'lis. A form of *Prurigo* limited to one region of the body.

P. pedicular'is. A term for *Ptheiuriasis*.

P. pediculo'sus. The same as *P. pedicularis*.

P. plantar'is. (L. *planta*, the sole of the foot.) Prurigo affecting the sole of the foot.

P. pod'icis. (L. *podex*, the fundament.) The same as *P. ani*.

P. pub'is. Prurigo of the pubes is most commonly due to the pediculus pubis; but may be due merely to dirt.

P. puden'di mulieb'ris. Prurigo of the female external genital organs. This is similar to the *P. scroti* of men. It is usually a prominent symptom in diabetes, and it is a common symptom of the later months of pregnancy.

P. pudendo'rum. Prurigo of the external genital organs. See *P. pudendi mulieb'ris* and *P. scroti*.

P. scro'ti. Prurigo of the scrotum. This may be caused by ascarides in the rectum, excessive friction of the part, or the pediculus pubis. An apparently idiopathic variety occurs sometimes in old men, in which the itching extends to the skin of the penis and to the urethra, and is usually almost continual.

P. seni'lis. Prurigo in old people.

Pruritus. (L. *prurio*, to itch. F. *prurit*; G. *Juchen*.) Itching.

P. ana'les. The same as *P. ani*.

P. a'ni. Itching occurring in or around the anus, often associated with eczema, piles, or the presence of worms.

P. consensua'lis. Consensual pruritus.

P. flaves'cens. Syn. for *Eczema impetiginodes*.

P. genita'llum. Itching in or around the genital organs, often associated with pediculi, eczema, uterine disease, diabetes, or pregnancy.

P. hidro'a. (Ἰδρῶς, sweat.) Syn. for *Miliaria*.

P. hiema'lis. Term for *Pruritus* occurring only in cold weather.

P. loca'lis. Local pruritus.

P. of denti'tion. The itching and general sensation of uneasiness in the jaws of children cutting their teeth.

P. of pregn'ancy. In pregnancy *P. vulvæ* is not uncommon, usually starting either from a local eczema, or from the irritation of a leucorrhœal discharge. Very rarely general pruritus has occurred as a neurosis in pregnancy.

P. op'ii. Itching sometimes caused by opium when taken internally.

P. porcellan'ea. Syn. for *Urticaria*.

P. seni'lis. Pruritus occurring in old people, either neurotic or dependent on *pediculi*.

P. universa'lis. General itching over the whole surface of the body.

P. vul'væ. Pruritus of the vulva. See *P. genitalium*.

Prus'sak's cham'ber. Syn. for *P.'s space*.

P.'s fi'bres. Two small bands of fibrous tissue stretched between the tip of the short process of the malleus and the border of the notch of Rivini.

P.'s space. (After Prussak, who called attention to it.) Name for the small space in the middle ear, lying above the short process of the malleus, and internal to Shrapnell's membrane.

Prus'sian blue. $\text{Fe}_4\text{K}_2\text{Cy}_{12}$. A deep blue precipitate, soluble in water, produced by the action of *Ferric* salts upon *Potassium ferrocyanide*.

P. blue, insol'uble. An insoluble blue precipitate produced by the action of *Ferrous* salts upon *Prussian blue*.

Prus'sias. (L.) A *Prussiate*.

Prus'siate. A combination of *Prussic acid* with a base; i. e. a *cyanide*.

P. of potas'sium. *Potassium ferrocyanide*.

Prus'sic acid. *Hydrocyanic acid*.

Prus'sin. Old term for *Cyanogen*.

Psag'das. (Ψάγδας or ψάγδαν.) Name for a common ointment used by the ancient Egyptians.

Psalid'ium. (Ψαλίδιον, dim. from ψαλís, an arch.) The same as *Psalis*.

Psalido'ma. (Ψαλιδόω, to arch. F. *psalidôme*; G. *Gewölbe*.) The vault of the skull.

Psali's. (Ψαλís, an arch.) *Anat.* An old name for the *Corpus psaloïdes* or *Fornix*.

Psali'stoma. (Ψαλís, a pair of shears; στόμα, a mouth.) The cutting edge of the mandible in *Arthropoda*. (Bate.)

Psallo'id. (Ψάλλω, to twang; εἶδος, form, resemblance.) Resembling a harp in shape.

Psalloïdes. *Psalloid*.

P., cor'pus. See *Corpus psalloïdes*.

Psaloid. (Ψαλς, an arch; εἶδος, form.) Like an arch, arched.

Psalterial. Belonging to the *Psalterium*.

Psalterium. (Ψαλτήριον, a stringed instrument.) *Anat.* Another name for the *Lyra*. Also, the *Pectunculus*. Also, the third stomach of *Ruminantia*.

Psam'ma. (Ψάμμα = ψάμμος, sand.) The same as *Psammus*.

Psam'mism. (Ψάμμος, sand.) Literally, a burying in the sand. 1. Treatment by hot sand—sand baths. 2. Gravel in the urine.

Psammis'mus. *Psammism*.

Psammocarcino'ma. (Ψάμμος, sand; carcinoma.) Term for a *Carcinoma* which contains calcareous concretions.

Psammo'des. (Ψάμμος, sand.) Sandy. Epithet applied to sandy deposit in the urine. (Hippocrates.) See *Psammus*.

Psammody'tes. (Ψάμμος, sand; δύω, to inhabit.) The same as *Amnodytes*.

Psammo'ma. (Ψάμμος, sand. F. *psammome*.) A descriptive term applied to a certain form of new growth, whose usual seat is the membranes of the brain, from its containing small calcified particles resembling grains of sand.

Psammother'apy. (Ψάμμος, sand; θεραπεία, treatment.) Treatment by the hot sand-bath.

Psam'mous. (*Psammus*.) Sandy.

Psam'mus. (Ψάμμος, sand.) Another name for *Arenula*, or sand occurring as a urinary deposit.

Psapharo'sis. (Ψαφαρός.) A becoming friable.

Psapharous. (Ψαφαρός.) Friable.

Psar'on. Ancient term for an escharotic used for destroying the surface of exuberant ulcers, mentioned by Paulus Æginetæ iv, 43, Adams' Transl., vol. ii, p. 108; described by Aëtius, xiv, 36.

Psathyrosis. See *Psapharosis*.

Psathyrotès. (Ψαθυρότης.) Friability.

Psathyrous. See *Psapharous*.

Pseg'ma. (Ψῆγμα, that which is rubbed or scraped off.) Syn. for *Flos æris*, which was a name among the ancients for suboxide of copper; obtained by pouring water on freshly melted copper, or exposing the metal to a blast of air. (Pliny.) Celsus classes it among corrosives.

Pselaphe'sis. (Ψηλάφησις, a touching; also, friction.) Exploration with the finger. Also, the groping about with the hands by a patient in delirium. Also, ticklishness.

Pselaph'ia. (Ψηλαφία = ψηλάφησις.) The same as *Pselaphesis*.

Pselapho'dès. (*Pselaphia*; εἶδος, resemblance.) Adj. applied to one groping about with the hands, especially a delirious patient.

Psellism. See *Psellismus*.

Psellis'mus. (Ψελλισμός, a stammering.) Stammering. A Genus of the Order *Dyscinesia*, Class *Locales*, in Cullen's Nosology; and Order *Phonica*, Class *Pneumatica*, of Good.

P. na'sitas. A syn. for *Rhinophonia*.

P. rhotacis'mus. A syn. for *Rhotacismus*.

Psellotès. (Ψελλότης.) The same as *Psellismus*.

Psest'ina. (Ψάω, to touch.) Old term for the supposed principle which causes itching.

Pseudacacia odorata. See *Pseudocacia odorata*.

Pseudacetic acid. A syn. for *Propionic acid*.

Pseudac'oë. (*Pseudo*-; ἀκοή, hearing.) False or deceptive hearing.

Pseudaconine. $C_{27}H_{41}NO_9$. An amorphous alkaloid obtained from *Pseudaconitine* by saponification of the latter by means of an alcoholic solution of soda.

Pseudaconitine. $C_{36}H_{49}NO_{12}$. A powerful alkaloid obtained from *Aconitum ferox* (q. v.). It has been recommended as an antidote in poisoning by aconitine, and also in poisoning by atropine.

Pseudac'orus. (*Pseudo*-; ἄκωρος, the acorus.) The specific name of the *Iris pseudacorus*.

Pseudacous'ma. (*Pseudo*-; ἄκουσμα, something heard.) Syn. for *Pseudacousis*.

Pseudacu'sis. (*Pseudo*-; ἄκουσις, hearing.) The same as *Pseudac'oë*.

Pseudadenogen'esis. (*Pseudo*-; ἄδην, a gland; γένεσις, production.) Morbid glandular formation. (Ritgen.)

Pseudadeno'sis. The same as *Pseudadenogenesis*.

Pseudæmor'rhoïs. (*Pseudo*-; hæmorrhoïs.) Spurious hæmorrhoids.

Pseudæsthe'sia. (*Pseudo*-; αἰσθησία = αἰσθησις, sensation. F. *pseudæsthésie*.) Perverted sensation, i. e. imaginary sensation in organs that have been removed.

Pseudæsthe'sis. The same as *Pseudæsthesia*.

Pseudalbuminu'ria. See *Pseudoalbuminuria*.

Pseudalcani'na. Name for the red colouring-matter extracted from the roots of *Anchusa tinctoria* (q. v.).

Pseuda'lei mor'bi. (Ψευδαλέος, false.) See *Morbi pseudalei*.

Pseuda'leus trich'ina. (Ψευδαλέος, false.) See *Trichina pseudaleus*.

Pseudallan'tois. (*Pseudo*-; allantois. F. *pseudallantoïde*; G. *das unächte Harnhäutchen*.) A false allantois.

Pseudamne'sia. (*Pseudo*-; amnesia.) False memory; a memory for imaginary past occurrences.

Pseudanchylo'sis. (*Pseudo*-; ἄγκύλωσις, stiffening of the joints. G. *Pseudanchylose*.) False (i. e. not bony) anchylosis.

Pseudangid'ium. (Dim. from *Pseudangium*.) A small *Pseudangium*.

Pseudangio'sis. The formation of a *Pseudangium*, or of a number of *Pseudangia*.

Pseudangium. (*Pseudo*-; ἄγγειον, a blood-vessel.) A false blood-vessel.

Pseudangustu'ra. (*Pseudo*-; angustura.) False *angustura*. A name for the bark of *Strychnos nux vomica*.

Pseudangustu'rine. (*Pseudangustura*.) A name for *Brucine*, which is obtained from *Pseudangustura*.

Pseudaphè. The same as *Pseudaphia*.

Pseudaph'ia. (*Pseudo*-; ἀφή, the sense of touch.) Perverted sense of touch.

Pseudaposte'ma. (*Pseudo*-; ἀπόστημα, a deep-seated abscess.) A spurious abscess.

Pseudargomorpho'sis. (*Pseudo*-; ἄργός, white; μόρφωσις, a shaping.) Membranous enteritis, characterised by the passage per anum of white membranous casts.

Pseudarthrosis. (*Pseudo*-; ἄρθρωσις,

PSEUDARTICULATIO—PSEUDOCEPHALUS

jointing. *F. pseudarthrose*; *G. falsches Gelenk.*) A false joint.

P., diarthro'dial. A false joint, resembling very closely a true joint; most commonly seen after fractures of the long bones.

P., ligamen'tous. A false joint in which the fragments of bone are united by ligamentous bands.

Pseudarticula'tio. (*Pseudo-*; *articulatio.*) The same as *Pseudarthrosis*.

Pseudasth'ma. (*Pseudo-*; *asthma.*) Old term for asthmatic attacks excited by abscesses, caruncles, or other solid causes, according to Alex. Benedictus.

Pseudax'is. See *Pseudo-axis*.

Pseudecœ'a. See *Pseudacoë*.

Pseudecoë'ia. The same as *Pseudecœa*.

Pseudeco'ia. The same as *Pseudecœa*.

Pseudelmin'thes. (*Pseudo-*; *helminthes.*) See *Pseudohelminthes*.

Pseudemesis. (*Pseudo-*; *ἔμεσις*, vomiting.) Empty or ineffectual vomiting, retching.

Pseudenceph'alus. (*Pseudo-*; *ἑγκέφαλος* [*μενέλος*], the brain.) A monstrosity with a vascular tumour growing from the membranes of the brain, in place of the brain itself.

Pseudermaph'rodite. (*Pseudo-*; *hermaphrodite.*) A false hermaphrodite.

Pseuderysipelas. (*Pseudo-*; *erysipelas.*) Spurious erysipelas.

Pseuderysipelodermi'tis. (*Pseudo-*; *erysipelas*; *dermatitis* = *dermatitis*.) Spurious erysipelas, simulating dermatitis.

Pseudhæmal fluid. See *Pseudo-hæmal fluid*.

Pseudia'trus. (*Pseudo-*; *ιατρός*, a physician.) A quack.

Pseudinogen'esis. (*Pseudo-*; *ἰνές*, fibres; *γένεσις*, production.) *Pathol.* Morbid fibre-formation.

Pseudino'ma. (*Pseudo-*; *ἰνές*, fibres.) Morbid fibrous or hard tumour; *scirrhus*.

Pseudino'sis. (*Pseudo-*; *ἰνές*, fibres.) The same as *Pseudinogenesis*.

Pseudleukæ'mia. See *Pseudo-leucæmia*.

Pseu'do-. (*Ψεδής*, false.) A prefix signifying false, but applied in different senses. 1. False, because simulating something else. 2. False, because departing from the normal.

Pseudoabscessus. (*Pseudo-*; *abscessus.*) Syn. for *Pseudapostema*.

Pseudoaca'cia odora'ta. Syn. for *Robinia pseudoacacia*.

Pseu'do-ace'tic acid. A name for *Propionic acid*.

Pseudoadenogen'esis. See *Pseudadenogenesis*.

Pseudo-albuminu'ria. (*Pseudo-*; *albuminuria.*) False albuminuria. This term includes two conditions:—

1. *False albuminuria proper.* This is either (a) apparent only, from a precipitate thrown down resembling albumen; or (b) some albuminous substance other than serum-albumin is present; (c) albuminuria in which the albumen does not come from the kidneys.

2. *Physiological albuminuria* (q. v.).

Pseu'do-alcarnin. Syn. for *Anchusin*.

Pseu'do-anæ'mia. False anæmia. A syn. for *Pernicious anæmia*.

Pseu'do-angina. False angina. A syn. for *Hysterical angina*.

Pseu'do-angio'ma. False angioma. A temporary angioma, such as is in some cases formed over healing stumps after amputation.

P., ure'thral. A syn. for *Urethral caruncle*.

Pseu'do-ap'oplexy. False apoplexy. Term for a pathological condition which gives similar symptoms to true apoplexy, but in which no evidence of cerebral hæmorrhage is found post mortem.

Pseu'do-aquat'ic. *Biol.* Falsely aquatic, i. e. growing in moist places.

Pseu'do-artthro'sis. See *Pseudarthrosis*.

Pseu'do-articula'tion. False joint. The same as *Pseudarthrosis*.

Pseu'do-asthma. See *Pseudasthma*.

Pseu'do-ax'is. A syn. for *Symphodium*.

Pseu'do-bacil'lus. False bacillus.

Term for one of the minute fat-crystals sometimes found in sputum, reacting to staining reagents in a similar way to the tubercle-bacillus; but differing from the latter in being variable in size, and soluble in chloroform and ether. (Celli and Guarnieri.)

Pseu'do-bacte'rium. False bacterium. Any microscopic object mistaken for a bacterium.

Pseudoblennem'esis. (*Pseudo-*; *βλέννα*, mucus; *ἔμεσις*, vomiting.) Ineffectual vomiting of mucus.

Pseudobleps'ia. The same as *Pseudoblepsis*.

Pseudobleps'is. (*Pseudo-*; *βλέψις*, beholding. *F. pseudoblepsie*; *G. Sehfehler.*) Aberration of vision; unreal objects being imagined, or real ones misinterpreted.

Pseudoboī'na. (*Pseudo-*; *βοῖνα*.) *Vaccinia spuria*, or spurious *boīna* (cowpox).

Pseu'dobulb. *Bot.* A large bulb present in the stems of the epiphytal *Orchideæ*.

Pseu'do-bul'bar pal'sy. A disease which simulates *Bulbar palsy*; but in which the lesion is cerebral, involving the centres for the nerves of speech on both sides of the cerebrum.

Pseudocal'culi. Plur. of *Pseudocalculus*.

Pseudocal'culus. (*Pseudo-*; *calculus.*) A false calculus. Pseudocalculi are composed of various substances, e. g. coagulated blood, fibrin, &c.

Pseudocarcino'ma. (*Pseudo*; *carcinoma.*) Spurious *Carcinoma*.

P. la'bil. (*L. labium*, the lip.) An old synonym for *Cancerum oris*.

Pseudocardiog'mus. (*Pseudo-*; *cardiogmus.*) False or fancied pain in the region of the heart, or of the stomach.

Pseu'docarp. See *Pseudocarpus*.

Pseudocarpous. Having the character of a *Pseudocarp*.

Pseudocarpus. (*Pseudo-*; *καρπός*, fruit.) Mirbel's name for the kind of fruit named by Desvaux *Arcesthida* (q. v.).

Pseudocataract'a. False or spurious *Cataract*.

Pseu'docele. (*Pseudo-*; *κοῖλος*, hollow.) A term for the *fifth ventricle* of the brain.

Pseu'do-ceph'alocèle. False cephalocèle. A cephalocèle developing after birth, consequent on subcutaneous fracture or disease of the skull bones.

Pseudoceph'alus. (*Pseudo-*; *κεφαλή*,

the head.) Term for a class of foetal monsters which have a cranium hidden by the upper fleshy part of the body, there being a single mass representing head and trunk. (Désormeaux and Gervais.)

Pseudoceratogenesis. (*Pseudo-*; κέρας, horn; γένεσις, production.) Unnatural formation of horn.

Pseudoceratoma. (*Pseudo-*; κερατόω, to harden into horn.) An unnatural horny growth.

Pseudoceratosis. (*Pseudo-*; ceratosis.) The progress or formation of *Pseudoceratoma*.

Pseu'do-cer'ebri'n. $C_{44}H_{99}NO_8$. A substance which can be extracted from brain substance by means of alcohol.

Pseu'do-chore'a. False chorea; usually a variety of *Hysteria*.

Pseudochromæsthesia. (*Pseudo-*; χρώμα, colour; αίσθησις, sensation.) Name given by Chabaliér to an anomaly of visual sensations for written or printed letters and words, present in some individuals, in which the vowels appear each of a different colour, their various combinations in words giving rise to sensations of colour differing according to the vowels present.

In some cases, the vowels are perceived to have their real black colour, but the perception of them gives rise to the idea of a colour.

In other cases, the remembrance or the sound of vowels or words gives rise to the idea of certain colours, independently of the visual sensation caused by their objective representation. (Littre.)

Pseudochromia. (*Pseudo-*; χρώμα, colour. *F. pseudochromie*.) Faulty perception of colour, *achromatopsia*.

Pseudochromine. (*Pseudo-*; χρώμα, colour.) A syn. for *Strychnochromine*.

Pseudocilia. (*Pseudo-*; cilium, an eyelash.) A pathological growth of hair on the conjunctiva.

Pseu'docœle. See *Pseudocœle*.

Pseudocœlia. (*Pseudo-*; κοιλία, a hollow.) The same as *Pseudocœle*. Also, syn. for *Pseudocœlom*.

Pseudocœlom. (*Pseudo-*; κοίλωμα, a hollow.) *Biol.* False cœlom, *cœloma*. One of the interstitial spaces found in certain of the *Invertebrata*, not lined with epithelium derived from the *archenteron* or alimentary cavity of the embryo.

Pseu'do-colobo'ma. False coloboma. A minute fissure of the iris of the eye, consequent on imperfect closure of the embryonic ocular fissure.

Pseu'do-columella. A false, or parietal, *Columella*.

Pseu'do-columellar. Belonging to a *Pseudo-columella*.

Pseu'do-cort'x. A false cortex.

Pseudocos'tate. *Bot.* Having false ribs, as *e.g.* some leaves.

Pseudocotyle'don. False cotyledon. Term for a germinating thread in the spores of a *Cryptogam*.

Pseudo-coxal'gia. False, or hysterical, *Coxalgia*.

Pseu'do-cris'is. An apparent crisis occurring in the course of acute lobar pneumonia, consisting in a temporary fall of 2° F. to 7° F., with a subsequent rebound.

Pseu'do-croup. False croup. A name for *Laryngismus stridulus*.

Pseudocurar'ine. (*Pseudo-*; curare.) An alkaloid discovered by Lukowski in 1861 in the *Nerium oleander* (q. v.).

Pseudocur'cumin. (*Pseudo-*; curcumin.) A resinous substance obtained by adding hot water to a mixture of *curcumin* and boric acid. It is insoluble in water or ether, but soluble in alcohol. (Littre.)

Pseudocyclo'sis. (*Pseudo-*; κύκλος, a circle.) The apparent circulation of food-particles within the body of an *amœba*.

Pseudocye'sis. (*Pseudo-*; κύησις, conception, or pregnancy. *F. pseudocycèse*.) Spurious or imaginary pregnancy. This condition may occur at any age in women who expect or wish to become pregnant; but is commonest just before the menopause. Many superficial signs of pregnancy may be present, namely, amenorrhœa, mammary changes, prominence of abdomen, and abdominal movements, which last are really intestinal.

P. abdomina'lis. Abdominal spurious pregnancy. A syn. for *Pregnancy, abdominal*.

P. molar'is. A syn. for *Pregnancy, molar*.

P. ovar'ia. Syn. for *Pregnancy, ovarian*.

P. tubar'ia. Syn. for *Pregnancy, tubal*.

Pseudodes'ma. (*Pseudo-*; δέσμα, a bond, fetter.) A false ligament.

Pseu'do-diarthro'sis. A syn. for *Pseudarthrosis, diarthrodial*.

Pseu'do-di'ascope. (*Pseudo-*; διασκοπέω, to look through.) An optical apparatus invented by Ward, exemplifying the persistence of visual impressions received on the human retina. It consists in an opaque diaphragm, pierced by two holes through which the eyes of the observer look. One hole is made to transmit light from some luminous object, while the other is covered up with some opaque object. The arrangement for the two eyes is then reversed; and it is found that with the eye opposite the now closed-up aperture in the diaphragm, the individual receives the false impression of seeing the luminous rays through an apparent hole in the opaque object closing up the aperture. (Littre.)

Pseu'do-diphtheria. Term for membranous pharyngitis or tonsillitis closely resembling diphtheria in its symptoms, but not set up by the diphtheria bacillus (*Klebs-Löffler bacillus*).

Pseu'do-dipsoma'nia. False dipsomania. Habitual drunkenness without maniacal impulse towards drink.

Pseu'do-dipsoma'niac. An individual who is the subject of *Pseudo-dipsomania*.

Pseu'do-elephanti'asis. False elephantiasis. Term for a hypertrophy of the skin resembling *Elephantiasis*.

Pseu'do-em'bryo. False embryo. A syn. for *Proembryo*.

Pseudoencephali'tis. (*Pseudo-*; ἐγκεφαλίτις [νόσος].) An old term for *Hydrocephalus*.

Pseu'do-entozo'a. Plur. of *Pseudo-entozoön*.

Pseu'do-entozo'ön. Any body that may readily be mistaken for an *Entozoön*.

Pseu'do-epithe'lium. False epithelium. A term for the epithelium lining the serous and vascular cavities, or *endothelium*; also, the layer of germinal cells on the surface of the ovary.

Pseu'do-ero'tism. (*Pseudo-*; ἔρως, -ωτος, sexual desire.) Sexual desire in animals at an unusual season of the year.

Pseu'do-erysip'elas. False erysipelas. An inexact term for conditions resembling erysipelas.

P. subtendino'sum col'li. A syn. for *Angina Ludovici*.

Pseudoer'ythrin. (*Pseudo-*; erythrin.) A body produced by the action of boiling alcohol upon *Erythrin*. (Aeeren.)

Pseu'do-exanthe'mata. Term for a group of non-contagious eruptive diseases having symptoms very similar to those of the *Exanthemata*.

Pseu'do-fe'ver. (*Pseudo-*; fever.) Syn. for *Fever, irritative*.

Pseu'do-fi'brin. A syn. for *Bradyfibrin* (q. v.).

Pseu'do-fi'lament. *Biol.* Term for a body or mass resembling a filament. Applied to rows of bacteria.

Pseu'do-fi'laria. (*Pseudo-*; *filaria*.) E. van Beneden's name for that stage in the *Gregarina* which follows the *moneran* stage, and precedes that of full development. In this stage the *Gregarina* resembles a *filaria*.

Pseu'do-ganglion. A false ganglion. This is usually a thickening of a nerve-trunk.

P. of Boch'dalek. A circumscribed enlargement of the middle branch of the superior dental nerve from which nerve-fibres pass to the canine teeth.

P. of cir'cumflex nerve. Another name for *Ganglion of circumflex nerve*.

P. of Clo'quet. Term for an enlargement of the palatine branches of the *naso-palatine nerve*.

P. of Val'entin. A thickening present at the union of some of the branches of the middle branch of the superior dental or alveolar nerve.

Pseu'do-gastral'gia. False gastralgia. Term for a pain similar in position and characters to gastralgia, but not really proceeding from the stomach. It may be due to disease of the abdominal aorta.

Pseu'do-gas'trula. False gastrula. An embryonic stage resembling the *Gastrula* stage.

Pseudoge'nus. A spurious *Genus*.

Pseudogeus'ia. (*Pseudo-*; γεύσις, taste.) Disordered perception of taste.

Pseudogeus'tia. See *Pseudogeusia*.

Pseu'do-glio'ma. False glioma. Term for a condition of the vitreous humour consequent on inflammatory changes due to irido-choroiditis.

P. of ret'ina. Term for metastatic purulent choroiditis which gives rise to a condition resembling *glioma*.

Pseu'do-gonorrhoe'a. (*Pseudo-*; gonorrhœa.) See *Gonorrhœa spuria*.

Pseu'do-hæ'mal fluid. The nutritive fluid of certain of the *Invertebrata*, which is analogous to true blood.

Pseu'do-hæmatem'esis. False hæmatemesis. The vomiting of any fluid that has an appearance like that of blood.

Pseu'do-hæmatocele. False hæmatocele. Hæmatocele occurring outside the peritoneal cavity.

Pseu'do-hæm'orrhage. Hæmorrhage without any loss of continuity of the walls

of the blood-vessels. Also, *vicarious hæmorrhage*.

Pseudohelmin'thes. (*Pseudo-*; helminthes.) Syn. for *Ectozoa*.

Pseudo-hermaph'rodism. False hermaphrodism. The condition of a *Pseudo-hermaphrodite*.

P., fe'male. Resemblance of the female genital organs to the male; the condition may be external, internal, or complete, i. e. both external and internal.

P., male. Resemblance of the male genital organs to the female; the condition may be external, internal, or complete.

Pseu'do-hermaph'rodite. False hermaphrodite. Term for an individual with a bisexual formation of the external genital organs, but a unisexual formation of the essential reproductive glands (ovaries or testes).

Pseudohermaph'roditism. See *Pseudo-hermaphrodism*.

Pseu'do-hydropho'bia. The same as *Lyssophobia* and *Hydrophobophobia*.

Pseu'do-hy'men. (*Pseudo-*; ὑμην, a membrane.) A false membrane.

Pseudohypertroph'ia. *Pseudo-hypertrophy*.

P. musculo'rum. Pseudo-hypertrophy of the muscles. See *Paralysis, pseudohypertrophic*.

Pseu'do-hypertroph'ic. Falsely hypertrophic; only apparently, not actually, hypertrophic.

P. mus'cular para'lysis. *P. paralysis*.

P. para'lysis. See *Paralysis, pseudohypertrophic*.

Pseu'do-hyper'trophy. False or merely apparent hypertrophy; an increase of bulk accompanied by degeneration of structure.

Pseudojer'vine. (*Pseudo-*; jervine.) One of the alkaloids found in *Veratrum album* (q. v.).

Pseudoleucæ'mia. The same as *Pseudo-leucocythæmia*.

Pseu'do-leucocythæ'mia. False leucocythæmia. A term applied to *Hodgkin's disease*.

Pseudoleukæ'mia. See *Pseudoleucæmia*.

Pseudoli'en. (*Pseudo-*; lien.) False spleen. Another name for *Spleen, accessory*.

Pseu'do-lig'ament. False ligament. Term for a band of inflammatory adhesion.

Pseu'do-lipo'ma. (*Pseudo-*; lipoma. F. *pseudo-lipome*.) Potain's term for an cedematous infiltration of the subcutaneous fatty tissue, most commonly below the clavicle and in the neighbourhood of the knee, sometimes observed in rheumatic patients.

Pseu'do-lo'bar pneumo'nia. (*Pseudo-*; lobar. F. *pneumonie pseudo-lobaire*.) A syn. for *Lobular pneumonia*. See *Pneumonia, lobular*.

Pseu'do-lu'nula. False lunula. Term for a massing together of the mucous cells of a salivary gland in a lunular form.

Pseu'do-malacos'teon. False *malacosteon*. Epithet applied to a certain variety of deformed female pelvis. See *Pelvis, pseudo-malacosteon*.

Pseu'do-mal'ady. False malady. Term for imaginary disease; also, simulated disease.

Pseudoma'nia. False mania. A state of mind characterised by the patient accusing

himself of crimes which he has not committed, often associated with habitual lying or inordinate vanity. (Hack Tuke.)

Pseudomechoacana. (*Pseudo-; mechoacan* [*Convolvulus mechoacan*].) A name for the *Convolvulus panduratus*.

Pseudomedicus. (*Pseudo-; medicus*.) A false physician, or quack.

Pseudo-melanæmia. The same as *Pseudo-melanosis*, in the former of its two meanings.

Pseudo-melano'sis. (*F. pseudo-melano'se pulmonaire*.) The dark post-mortem staining of gangrenous tissues, due to the formation of ferrous sulphide.

Also, a syn. for *Phthisis, coal-miners'*.

Pseudomelanotic formation. (*Pseudo-melanosis*.) Carswell's term for *Phthisis, coal miners'*; also termed *Pseudo-melanosis*.

Pseudo-membrane. (*F. pseudo-membrane*; *G. die falsche Haut*.) The same as *Pseudomeninx*.

Pseudomembranous. Relating to, or consisting of, a *Pseudomembrane*.

P. inflammation. Any variety of inflammation which is characterised by the formation of a false membrane.

Pseudomeningitis. (*Pseudo-; μῆνις, membrane*.) An affection in which the symptoms of *meningitis* are present, without the pathological lesions.

P., dental. Term for symptoms of *meningitis* occurring consequent on dentition.

Pseudomenin'gocele. False meningocele. A tumour consisting of extravasated cerebro-spinal fluid formed beneath the scalp, as a result of a traumatic lesion of both skull and dura mater.

Pseudome'ninx. (*Pseudo-; μῆνις, membrane*.) A false membrane. See under *Membrane*.

Pseudo-men'strual. (*Pseudo-; menstruation*.) Belonging to *Pseudomenstruation*.

Pseudomenstruation. A pathological discharge of blood from the uterus, simulating *menstruation*.

Pseudomer'ic. (*Pseudo-; μέρος, a part*.) *Chem.* Epithet for unstable varieties of *tautomeric* bodies.

Pseudometritis. False or apparent *metritis*.

Pseudomne'sia. (*Pseudo-; μνήσις, memory*.) An anomaly of memory occurring in certain either spontaneous or artificially-induced psychological conditions, the subject of which believes that he remembers past occurrences, which are, in fact, imaginary.

Pseudomola. (*Pseudo-; mola, a false conception*.) A false or seeming mole.

Pseudo-monomania. False monomania. A condition resembling monomania, but not amounting to actual mania.

Pseudomorph. (*Pseudo-; μορφή, form*.) A substance exhibiting *Pseudomorphism*.

Pseudomorpha. The same as *Pseudomorphine*.

Pseudomorph'ic. Exhibiting *Pseudomorphism*.

Pseudomorphine. $C_{34}H_{36}N_2O_6$. An alkaloid of opium, discovered by Pelletier in 1835, giving some of the tests characteristic of *morphine*. A white, solid substance, insoluble in water, ether, and absolute alcohol; soluble in dilute soda solution. It is non-poisonous.

Pseudomorphism. (*Pseudomorph*.) The condition of a substance that presents other than its normal form.

Pseudomorpho'sis. (*Pseudo-; μόρφωσις, shaping*. *F. pseudomorphose*.) The increase of normal tissue; a result of local conditions, or of a particular diathesis.

Pseudomorphous. The same as *Pseudomorph'ic*.

Pseudo-mor'ula. A false *morula*; a stage in development resembling the *morula*.

Pseudo-mucin. False mucin. A substance resembling mucin, but differing from it in not being decomposed by acetic acid, formed by the epithelial cells lining proliferating ovarian cysts, and giving to the cyst-contents its gelatinous consistence.

Pseudo-myelo'ma. False myeloma. Term for a sarcoma which has a superficial likeness to the white substance of the brain.

Pseudomyxo'ma peritone'i. (*Pseudo-; μύξα, phlegm*.) Peritonitis set up by the colloid matters of ovarian cysts. (Werth.)

Pseudo-narcis'sin. Another name for *Narcissin*.

Pseudonarcis'sus. (*Pseudo-; narcissus*.) The specific name of the *Narcissus pseudonarcissus*.

Pseudo-nar'cotism. False or simulated narcotism; occurring occasionally as a manifestation of *Hysteria*.

Pseudonavicella. False navicella. Lieberkühn's term for a *navicella*-like stage in the *Gregarinæ*.

Pseudonavic'ula. The same as *Pseudonavicella*.

Pseudo-neural'gia. False neuralgia. Charcot's term for the characteristic pains of *Rickets*.

Pseudo-neuritis. False neuritis. General term for a disease whose symptoms resemble those of *neuritis*.

Pseudonoma'nia. (*Pseudo-; νόμα, a name; mania*.) An insane propensity for lying.

Pseudonym. (*Ψευδής, false; ὄνομα, a name*.) A false name.

Pseudonymal. (*Pseudonym*.) Belonging to a pseudonym. In *Biol.*, epithet applied to a popular or unscientific name.

Pseudo-osteomalacia. (*Pseudo-; ὀστέον, bone; μαλακός, soft*.) The same as *Pseudo-malacosteon*.

Pseudo-osteomalac'ic. Belonging to *Pseudo-osteomalacia*.

Pseudoparalysis. (*Pseudo-; παράλυσις*.) Spurious paralysis. A syn. for *Dystaxia*.

P. ag'itans. The same as *Dystaxia agitans*.

P. of rick'ets. The inability to walk, from great distortion of bones in bad cases of *Rickets*.

P., syphilit'ic. Impairment of motion from syphilitic inflammation of the epiphyses of long bones.

Pseudo-parano'ia. Spurious paranoia. Term for a mental condition characterised by increased cerebral activity and increased readiness of reaction to emotional stimuli.

Pseudo-parapleg'ia. Spurious paraplegia.

P., tet'anoid. A syn. for *Paralysis, spastic*.

Pseudo-par'asites. (*Pseudo-; parasite*.) The same as *Pseudohelminthes*.

Pseudoparasitic. Falsely or apparently parasitic.

Pseudoparenchyma. False parenchyma. De Bary's term for the interlacement of hyphæ which forms the tissue of *Fungi*.

Pseudoparenchymatous. Belonging to a *Pseudoparenchyma*.

Pseudoparenchyme. The same as *Pseudoparenchyma*.

Pseudoparesis. An apparent or spurious *Paresis*.

Pseudo-parthenogenesis. *Biol.* Term for a mode of reproduction which is neither *parthenogenesis* nor *metagenesis*, but is intermediate between the two.

Pseudo-pellagra. A name given to a class of sporadic cases which have been observed, presenting skin symptoms similar to those of true *Pellagra*, but considered by some observers, especially by H. Gintrac, to be quite distinct from that disease. (Littre.)

Pseudo-pelletierine. $C_{19}H_{15}NO + 2H_2O$. One of the alkaloids found in the root-bark of *Punica granatum*. It acts, together with the other alkaloids present in the root-bark, as a vermifuge to the *Ascaris lumbricoides*.

Pseudopeptone. Spurious peptone. A syn. for *Hemialbumose*.

Pseudopericular. Belonging to a *Pseudopericulum*.

Pseudopericulate. Having a *Pseudopericulum*.

Pseudopericulum. A spurious *Opericulum*.

Pseudoperipneumonia. (*Pseudo*-; *peripneumonia*.) A syn. for *Peripneumonia notha*.

Pseudophlogosis. (*Pseudo*-; *phlogosis*.) False or apparent inflammation.

P. ventriculi resolutiva et colliquativa. (Mod. L.) Resolving and colliquative pseudophlogosis of the stomach. A syn. for *Gastromalacia*.

Pseudo-phothæsthesia. The seeing of photisms; i. e. the reception of subjective sensations of light excited reflexly by stimulation of any of the special senses, or by a thought or idea.

Pseudo-phthisis. (*Pseudo*-; *phthisis*, consumption.) False or apparent consumption; i. e. wasting produced by diseases other than phthisis.

Pseudopia. See *Pseudopsia*.

Pseudoplasma. (*Pseudoplasma*. F. *pseudoplasme*; I. *pseudoplasma*; G. *Aftergebilde*.) An adventitious or new growth; more commonly termed *Neoplasm*.

Pseudoplasma. (*Pseudo*-; *plasma*.) See *Pseudoplasma*.

Pseudoplasmata. Plur. of *Pseudoplasma*.

Pseudoplegia. (*Pseudo*-; *πληγή*, a stroke.) A term for *Hysterical paralysis*.

Pseudopleuritis. (*Pseudo*-; *pleuritis*. F. *pseudopleurésie*; I. *pseudopleurisia*; G. *falsche Pleuresie*.) False pleuritis. A term for *Pleurodynia*.

Pseudopneumonia. (*Pseudo*-; *pneumonia*.) A syn. for *Peripneumonia notha*.

Pseudopneumonitis. (*Pseudo*-; *pneumonitis*.) The same as *Pseudopneumonia*.

Pseudopod. The same as *Pseudopodium*.

Pseudopodia. Plur. of *Pseudopodium*.

Pseudopodium. (*Pseudo*-; *πόδιον*, dim. from *πούς*, *ποδός*, a foot.) *Biol.* A temporary protrusion of part of the substance of an amœboid cell.

Pseudopolypus. (*Pseudo*-; *polypus*.) False polypus. An old term for the fungous excrescences without redness found in the brain, heart, and uterus, according to Bonettus, *Med. Septentr.*, i, s. 6, c. 5, par. 3. A polypoid mass of blood or mucus.

Pseudo-pregnancy. See *Pseudocyesis*.

Pseudopsia. (*Pseudo*-; *ὄψις*, vision.) The same as *Pseudoblepsia*.

Pseudopso'ra. (*Pseudo*-; *psora*. F. *pseudo-psore*.) Spurious psora. A term for *Psyracium*.

Pseudo-pterygium. A term for cicatricial *pterygium*.

Pseudo-pus. Term for certain animal fluids which have the appearance but not the composition of pus. Such, for example, are thymus fluid, chyle, &c.

Pseudopyrethrum. A name for *Achillea ptarmica*, whose flowers taste like *Pyrethrum* root.

Pseudo-quinine. Term for a white, tasteless, crystalline alkaloid, which has been obtained from an extract of some species (it is not known which) of *Cinchona*. (Littre.)

Pseudo-rachitis. False rachitis. Pozzi's term for *Osteitis deformans*.

Pseudoraphë. (*Pseudo*-; *ράφή*, a suture.) A false suture.

Pseudora'sis. (*Pseudo*-; *ὄρασις*, seeing.) The same as *Pseudoblepsis*.

Pseudorein. A syn. for *Erythrite*.

Pseudorex'ia. (*Pseudo*-; *ὄρεξις*, a longing after. F. *pseudorexie*; I. *pseudoressia*.) Perverted appetite.

Pseudo-rheumatism. False rheumatism. Term for diseases simulating rheumatism in their articular symptoms.

P., infectious. Lapersonne's term for certain cases of multiple synovitis, the cause of which cannot as yet be made out.

Pseudorh'chus. (*Pseudo*-; *rhonchus*.) False rhonchus. A sound resembling rhonchus, but generated externally to the lung, usually in the pleura, in cases of pleural effusion.

Pseudo-rube'ola. Spurious rubeola. Term for disease simulating *Rubeola*.

Pseudo-sar'cocele. A syn. for *Andrum* (q. v.).

Pseudo-scarlati'na. Spurious scarlatina. A form of blood-poisoning occurring as a result of gonorrhœa, or as a variety of puerperal fever, and characterised by its scarlatinoid rash.

Pseudo'scelus. (*Pseudo*-; *σκέλος*, the whole leg and foot.) Having imperfect or, as it were, false legs.

Pseudos'cheocele. (*Pseudo*-; *ὄσχη*, the scrotum; *κίλη*, a tumour.) Spurious oscheocele, or scrotal hernia.

Pseudosclero'sis. (*Pseudo*-; *σκληρώω*, to harden.) A term applied to cases presenting certain of the symptoms of *Disseminated sclerosis* without the pathological lesions. (Westphal.)

Pseudoscope. (*Pseudo*-; *σκοπέω*, to look at.) An instrument consisting of two rectangular prisms, arranged with their edges perpendicular to the plane of regard. The beholder looks across these two prisms, in a direction

parallel to the hypothenuse. The instrument is designed for the purpose of reversing the binocular images of objects.

Pseudoscop'ic. (*Pseudo-*; σκοπέω, to look at.) Conveying false visual impressions.

Pseudoscopy. The employment of the *Pseudoscope*.

Pseudosemat'ic. (*Pseudo-*; σῆμα, a token.) *Biol.* Belonging to protective disguises, as, e.g., the leaf-like appearance of the leaf-insect.

Pseudoseptate. Apparently *septate*.

Pseudoseptum. A false or apparent *septum*.

Pseu'do-serous mem'brane. Term for an animal membrane which has the moist, glistening surface, &c., characteristic of serous membranes, but a different histological structure; e.g. the internal epithelium, or endothelium, of the blood-vessels and lymphatics.

Pseudosi'phon. *Biol.* A false *siphon*.

Pseudosiphon'al. Belonging to a *Pseudosiphon*.

Pseudosi'phuncle. Syn. for *Pseudosiphon*.

Pseudos'mia. (*Pseudo-*; ὁσμή, smell.) The same as *Pseudosphresia*.

Pseudosper'mic. Belonging to a *Pseudospermium*.

Pseudosper'mium. (*Pseudo-*; σπέρμα, a seed.) Term for a fruit whose pericarp is so closely attached to the seed, that the whole fruit has the appearance of a simple seed.

Pseudosper'mous. The same as *Pseudospermic*.

Pseudosphinc'ter. (*Pseudo-*; σφίγγω, to bind.) An imperfect sphincter.

Pseudosphre'sia. (*Pseudo-*; ὀσφρησις, smelling.) False or imperfect sense of smell.

Pseu'do-spleen. See *Pseudolien*.

Pseud'osplen. (*Pseudo-*; σπλήν, σπληνός, the spleen.) A *Pseudo-spleen*.

Pseudosteogen'esis. (*Pseudo-*; ὀστέον, bone; γένεσις, production.) Abnormal formation of bone.

Pseudosteum. (*Pseudo-*; ὀστέον, a bone.) Any bone which is the product of *Pseudosteogenesis*.

Pseudostig'ma. A spurious *stigma*.

Pseudo'stoma. (*Pseudo-*; στόμα, any mouth-like opening. Pl. *Pseudostōmata*.) One of the deeply-stained areas seen under the microscope in a silver-stained section of endothelium. Klein believes many of them to be the stained processes of connective-tissue cells.

Also, the oral opening of an *Echinoderm* larva (*echinopædium*).

Pseudosto'ma. (*Pseudo-*; ostoma = osteoma. Pl. *Pseudostōmata*.) An abnormal bony growth.

Pseudostom'ata. Pl. of *Pseudostōma*.

Pseudostomata. Pl. of *Pseudostōma*.

Pseudostome. The same as *Pseudostōma*.

Pseudostomo'sis. The formation of a *Pseudostōma* or *Pseudostome*.

Pseudostomot'ic. Belonging to *Pseudostomosis*.

Pseudo'stomous. Having *Pseudostōmata*.

Pseudosto'sis. The formation of a *Pseudostoma*.

Pseu'do-stro'ma. A spurious *stroma*.

Pseu'do-synarthro'sis. False synarthrosis. Syn. for *Pseudarthrosis, ligamentous*.

Pseudosyph'ilis. An old term signifying false or spurious syphilis. See *Syphilis pseudosyphilis*.

Pseu'do-ta'bes. False *tabes*. Term for any disease simulating *Tabes dorsalis*.

P. mesenter'ica. A disease which is apparently only functional, occurs in neurotic subjects, and resembles in its symptoms *Tabes mesenterica*.

Pseu'do-tet'any. False tetany. A disease resembling *Tetany*.

Pseudothan'atus. (*Pseudo-*; θάνατος, death.) Apparent death. Old term used especially for *Asphyxia*.

Pseudotox'in. (*Pseudo-*; toxin.) Term for an extract of the leaves of *Belladonna*, containing a mixture of *Atropine* and other substances.

Pseudotrichino'sis. (*Pseudo-*; Trichina [τριχινος, made of hair].) A form of acute myositis, simulating *Trichinosis*.

Pseudotrichogen'esis. (*Pseudo-*; θρίξ, hair; γένεσις, production.) The same as *Pseudotrichosis*.

Pseudotricho'sis. (*Pseudo-*; θρίξ, hair; γένεσις, production.) The growth of hair in an abnormal situation.

Pseudotro'pine. (*Pseudo-*; tropine.) $C_8H_{15}NO$. A colourless liquid alkaloid, formed by the action of baryta-water upon *hyoscyamine*. It is an isomer of *tropine*.

Pseu'do-tuber'culous. Not truly tuberculous; epithet for conditions or symptoms simulating those characteristic of tuberculosis.

Pseu'do-ty'phoid. Spurious typhoid.

P. bacilli. Term for bacteria which resemble the bacillus of typhoid fever.

Pseu'do-urticaria. Spurious urticaria. A skin-disease closely resembling urticaria in its appearance.

Pseudo'val. Belonging to a *Pseudovum*.

Pseudovar'ian. Belonging to a *Pseudovarium*.

Pseudovariola. False variola. A name for *Varicella*.

Pseudovar'ium. (*Pseudo-*; ovarium.) Term for the ovary, *ovarium*, of a viviparous insect.

Pseu'do-ver'micules. (*L. vermis*, a worm.) False vermicules or minute worms. Term for the minute crescent-shaped bodies discovered by Laveran in the blood in cases of malarial fever.

Pseudovum. False ovum. Term for a parthogenically developed ovum.

Pseudoxan'thin. (*Pseudo-*; ξανθός, yellow.) $C_4H_5N_5O$. A *Leucomaine* occurring in muscle, and resembling *xanthin*. Unlike *xanthin*, it is crystalline and soluble.

Pseud'ydrops. (*Pseudo-*; ὑδρωψ, dropsy.) False or apparent dropsy.

Pseud'ymen. (*Pseudo-*; ὑμῖν, a membrane.) False membrane.

Pseusmagenne'tus equatori-en'sis. Another name for the *Gonolobus condurango* (q. v.).

Psida. An incorrect term for *Sidium*, pomegranate bark.

Psid'ium. A Genus of the *Myrtaceæ*. Also, term used incorrectly for *Sidium*.

P. pom'iferum. (*L. pomum*, an apple; *fero*, to bear.) The apple-guava tree, a native

of Tropical America. Its apple-like fruit has a pleasant acid taste, and is much cultivated in India. The leaves are used in decoction as a bath for the treatment of scabies and other skin diseases. The leaf-buds, which, like most other parts of the plant, are astringent, are used boiled with barley and liquorice as a cure for diarrhoea.

P. pyriferum. The pear-guava tree. A native of Tropical America. Action and uses, the same as those of *P. pomiferum*.

Psilo'ma. (Ψιλόω, to strip bare.) A place stripped bare; e.g. a bone laid bare of flesh. (Hippocrates.) Also, baldness.

Psilo'sis. (Ψιλόω, to strip bare.) A stripping bare; applied to flesh or hair; depilation.

Psilo'thric. (*Psilotheron*.) Depilatory.

Psilo'thron. (Ψιλόω, to lay bare.) A depilatory agent; e.g. arsenic and unslaked lime. Also, the *Bryonia dioica*.

Psilo'thrum. Latinised form of *Psilo'thron*.

Psimmy'thium. (Ψιμύθιον = ψιμύθιον.) The same as *Psimythium*.

Psimy'thium. (Ψιμύθιον.) An old term for *Cerussa*. Used to whiten the face.

Psimy'thus. The same as *Psimythium*.

Psin'cus. An old term for *Cerussa*.

Psitta'cium. (Dim. from ψίττακος, a parrot.) Old name for an emollient plaster; also for a *collyrium*. So called from the variety of its colours.

Psix. (Ψιξ.) Pharm. Crumb of bread.

Pso'a. (Ψῶα, putrid stench.) Syn. for *Dysodia*.

Pso'adic. (Ψῶα or ψῶαι, the muscles of the loins, or *psaos* muscles.) Relating to the *Psoas* muscles.

Pso'ado-tom'ia. (Ψῶαι, the muscles of the loins; τομή, a cutting.) Incision of the *Psoas* muscle.

Pso'æ. (Ψῶαι.) The muscles of the loins, or *Psoas* muscles; also, the loins themselves.

Pso'as. (Ψῶα, generally in the plur., ψῶαι, the muscles of the loins.) Lit., of the loin. A term applied to certain muscles of the loins. See *P. magnus* and *P. parvus*, &c.

P. ab'scess. A not uncommon complication of Pott's disease of the spine, in which pus makes its way into the sheath of the *psaos* muscle, and points beneath *Poupart's* ligament, or even in the popliteal space.

P. accessor'ius. A portion of muscle sometimes found external to the *P. magnus*, separated from it by the anterior crural nerve; regarded by some as a separate muscle.

P. inter'nus. The *P. magnus*.

P. mag'nus. (F. *psaos grand.*) A long fusiform muscle, arising by five tendinous slips from the last dorsal, and all the lumbar vertebræ. These slips are joined together by tendinous arches, which arch over the bodies of the vertebræ, the lumbar vessels, and sympathetic nerves. The muscle passes down into the thigh behind *Poupart's* ligament, and ends in a tendon which, after receiving fibres from the *iliacus*, is inserted into the lesser trochanter of the femur. The muscle is a flexor of the thigh upon the pelvis, and an external rotator of the femur.

P. ma'jor. The *P. magnus*.

P. mi'nor accessor'ius. An inconstant reduplication of the *P. parvus*. (Cruveilhier.)

P. par'vus. A long slender muscle, not

always present—sometimes double (Cruveilhier)—arising from the last dorsal and the first lumbar vertebra, and terminating in a flat tendon, inserted into the ilio-pectineal eminence. In certain animals it is a powerful flexor of the pelvis upon the spine.

P. quar'tus. (L. *quartus*, fourth.) Another name for the *Obturator internus*.

Psoat'ic. See *Psoadic*.

Pso'dymus. (Ψῶαι, the loins; δύω, to get into.) Syn. for *Gastrodidymus*.

Psoi'æ. See *Psoæ*.

Psoi'tis. (Fem. adj., agreeing with [νόσος]. The disease of the *psaos*.) Inflammation of the *Psoas* muscles and their sheath. The symptoms are fever, pains in the part affected, and especially on extending the thigh; the thigh on the affected side is therefore kept flexed. The inflammation often proceeds to suppuration and the formation of a lumbar abscess.

Pso'lë. (Ψῶλη, the penis with the prepuce retracted.) The penis; also, the glans when uncovered.

Psol'on. (Ψῶλων.) An individual having a large *Psolë*.

Psolon'cus. (*Psolë*; ὄγκος, swelling.) A swelling of the glans penis, or of the penis generally.

Psolus. (Ψωλός.) One who has been circumcised.

Psopho'meter. (Ψόφος, a noise; μέτρον, a measure.) A syn. for *Stethoscope*.

Psoph'us. (Ψόφος.) An inarticulate sound, a noise.

Pso'ra. (Ψώρα.) 1. The Itch (*Scabies*), a Genus of the Order *Dialyses*, Class *Locales*, of Cullen's Nosology.

Also, mange, applied to men and beasts.

2. Canker, as applied to trees.

3. A kind of moth.

P. ag'ria. A syn. for *Psoriasis inveterata*.

P. ebri'um. (L. *ebrius*, drunken.) Drunkard's itch. See under *Itch*.

P. lepro'sa. A syn. for *Psoriasis*.

P. squamo'sa. The same as *P. leprosa*.

Psora'lea. (Ψωραλέος, scabby; from the scurfy appearance of the calyx. F. *psoralier*.) A Genus of the *Leguminosæ*.

P. coryllifo'ra. Habitat, India. The seeds, termed banchee-seeds, are given in leprosy.

P. eglandulo'sa. A species native to certain parts of North America. It is a mild tonic.

P. esculen'ta. A native of Western America. The root is edible, and is known as bread-root.

P. glandulo'sa. A species native to Chili. It is vermifuge and purgative, and is also used as a vulnerary.

P. melilotoi'des. The same as *P. eglandulosa*.

P. melilotoi'des. See *P. melilotoides*.

P. pentaphyl'la. The Mexican *contrayerva*. The root is very similar in medicinal properties to that of the *Contrayerva* (q. v.).

Pso'ralin. A syn. for *Caffein*.

Psorelco'ma. (*Psora*; ἔλκωμα, a sore or ulcer.) A scabby ulcer.

Psorelco'sis. (*Psora*; ἔλκωσις, ulceration.) The formation of *Psorelcoma*.

Psorely'tria. (Ψώρα, the itch; ἔλκτρον = L. *vagina*. F. *psorélytrie*.) Ricord's term (*psorélytrie*) for the granular condition of

the vaginal mucous membrane in cases of gonorrhœa. (Littre.)

Psorenteria. *Psorentery.*

Psorentery. (*Psora*; *ἐντερὸν*, an intestine. F. *psorotérie*.) A name given to Asiatic cholera, on account of the small, pimple-like swellings in the wall of the small intestine occurring in that disease, due to a swelling of the solitary glands.

Also, term restricted to the above condition in the intestines.

Psoriasis. (*Ψωρίασις*, a condition of itch or mange. F. *psoriasis*; G. *Psoriasis*.) A disease of the skin, characterised by the appearance of papules, usually covered with glistening scales, which may increase and form patches of considerable size. There are hypertrophy and cellular infiltration of the papillæ of the *corium*. The injection is not apparent post mortem. There are many varieties of the disease. Its favourite sites are the olecranon and patella.

P. annular'is. A syn. for *P. circinata*.

P., buc'al. Syn. for *Leukoplakia buccalis*.

P. bucca'llis. *P., buccal.*

P. capill'til. Psoriasis of the scalp. A dry form in which the hair does not fall out; it usually coexists with psoriasis in other parts.

P. centri'fuga. Term for a variety in which the patches heal centrally while spreading peripherally.

P. circina'ta. (L. *circino*, to make round.) Syn. for *P. gyrata*.

P. diffu'sa. A term formerly applied to certain dry desquamative forms or phases of *Eczema*.

P. discoid'ea. The same as *P. nummularis*.

P., eczem'atous. Term for an acute variety with ill-defined, bright-red patches forming thin scales, and readily producing a discharge with any irritation.

P. empyo'des. A rare variety, in which pus forms beneath the crusts.

P. figura'ta. A form in which the patches form irregular patterns.

P. geograph'ica. Syn. for *P. figurata*.

P. gutta'ta. (L. *gutta*, a drop.) A form in which small papules, resembling drops of mortar, are scattered over the body.

P. gyra'ta. (L. *gyrus*, a circle.) A form in which the disease creeps in sinuous lines, which make up the appearance of intersecting segments of circles.

P. infant'ilis. A form of psoriasis which is said to affect infants of between two months and two years old. It occurs in irregular scaly patches, usually distributed over the face, front and back of the trunk, and the thighs.

P. invetera'ta. (L. *invetero*, to render, or become, old.) An obstinate and chronic condition of the disease, associated with a harsh, dry, and thickened state of the skin.

P. labio'rum. A term formerly used to denote *Eczema* of the lips.

P. lin'guæ. Another name for *Leukoplakia*; white patches on the tongue, often the forerunner of epithelioma; said to coexist with lichen in other parts of the body.

P. lotri'cum. (L. *lotrix*, -icis, a laundress.) Washerwoman's itch. See under *Itch*.

P. ni'gra. A variety in which there is considerable pigmentation of the skin.

P. nummular'is. (L. *nummus*, dim. from *nummus*, a coin.) A form of the disease in which the papules have been likened to small coins.

P. nummula'ta. The same as *P. nummularis*.

P. ophthal'mica. A term for squamous palpebral eczema.

P. orbicular'is. The same as *P. circinata*.

P. pal'mæ. Syn. for *P. palmaris*.

P. palmar'is. (L. *palma*, the palm.) A scaly disease of the palms, which is generally either a dry form of eczema or a scaly syphilis.

P. palmar'is et plantar'is syphilit'ica. Syphilitic psoriasis of the palm and sole. Squamous syphilide of the palm and sole.

P. pilar'is. A syn. for *Pityriasis capitis*.

P. pisto'rum. (L. *pistor*, a bread baker.) Bakers' itch. See under *Baker*.

P. puncta'ta. A form of psoriasis in which the papules are discrete and small.

P. ru'bra. Term for an acute variety occurring in bright-red patches.

P. rupioi'des. (*Rupia*; Gr. *εἶδος*, resemblance.) Term for a variety of *Lepra alphoides* in which the heaped-up epidermic scales form rupia-like crusts.

P. sim'plex. The common form of *Psoriasis*. Also, a term for *Eczema*.

P. stria'ta. Striate psoriasis. An occasional variety.

P., syphilit'ic. A term for squamous syphilide.

P. un'guis. Psoriasis of the nails. The nail is thickened, without suppuration of the matrix; this is usually coexistent with psoriasis elsewhere.

P. universa'lis. Psoriasis which spreads all over the body.

Psoriatic. Belonging to psoriasis. Also, affected with, or an individual affected with, psoriasis.

Psoric. (*Psora*.) Relating to the itch. Also, relating to the mange. Also, as a substantive, term for a medicine for curing the itch.

Psori'num. Name for a homœopathic preparation made by treating the pus from itchy pustules with alcohol.

Psorocom'ium. (*Psora*; *κομῖω*, to tend.) A hospital for patients affected with the itch.

Psoroid. (*Ψωροειδής*, itchy.) Resembling itch; also, resembling mange.

Psoroneurilym'i'tis. (*Psora*; *neurilymitis*, inflammation of the neurilyme or neurilemma.) Term introduced by F. W. Sieber to designate inflammation of the neurilemma occurring as a result of the irritation produced by *Scabies*.

Psoroneurymen'i'tis. (*Psora*; *neurymenitis*, inflammation of a nerve-sheath.) The same as *Psoroneurilymitis*.

Psorophthal'mia. (*Psora*; *ὀφθαλμός*, the eye. F. *psorophthalmie*; I. *psorottalmia*; G. *Augenlidkrätze*.) Term for inflammation of the eyelids (*Blepharitis*) accompanied by itching; it has been used to designate various kinds of blepharitis.

P. neonato'rum. Another name for *Ophthalmia purulenta infantum*.

Psorophthal'mic. Belonging to *Psorophthalmia*.

Psororheumatis'mus. (*Psora*; *rheumatismus*.) An old term for rheumatism accompanied by *Psora*.

PsorospERM. (*Psora*; σπέρμα, a seed.) A *sporozoön*. A member of the *Psorospermia*.

Psorosperm'ia. Plur. of *Psorospermium*. Also, sing. of *Psorospermia*.

Psorosperm'ia. (*Psora*; σπέρμα, a seed.) Nom. plur. Term originally employed by Müller to mean the *sporozoa* of Fishes; now used to mean the *Sporozoa* in general.

Psorosperm'ial. The same as *Psorospermic*.

Psorosperm'iasis. (*Psorosperm*.) Term employed to include several varieties of disease set up by *Psorosperms*.

Psorosperm'ic. Belonging to, or having the characters of, *Psorosperms*.

Psorosperm'ium. A *Psorosperm*.

Psorosperm'o'sis. (*Psorosperm*. F. *psorospermose*.) Term introduced by Rivolta for the diffusion of *Psorosperms* in the mucous membranes, muscles, and liver. It has been observed in man and in most of the domestic animals. The *psorosperms* are sometimes encysted, sometimes free in the tissues.

P., proliferative follic'ular. Also termed Follicular Keratosis, and Darier's disease. A chronic skin disease, beginning in the face or trunk and gradually spreading over the body, characterised by the formation of small, dirty-red papules, which finally form dark, adherent crusts. Ulceration or suppuration may occur. The etiology is obscure.

Psoroth'e'ria. (*Psora*; θεωρία, a looking at.) Old term used for Hahnemann's theory that many diseases were caused by the driving inwards of *Psora*, or scabies.

Psor'ous. Belonging to *Psora*.

Psorozo'a. (Ψώρα, the itch; ζῶον, an animal.) Animal *Psorosperms*.

Psyæ. (Ψύαι = ψόαι.) The same as *Psoæ*.

Psychago'ga. The same as *Psychagogica*.

Psychago'gia. (Ψυχαγωγία, a leading of souls to the nether world.) Excitement of the mind caused by certain impressions. (Grohmann.)

Psychago'gic. (*Psychagogia*. F. *psychagogique*; G. *psychagogisch*.) Able to arouse or restore life or consciousness. Epithet applied to restorative medicines.

Psychago'gica. Neut. Pl. (Ψυχαγωγικός, persuasive.) Old term for medicines which restore when life appears to be extinct.

Psy'chal. *Psychical*.

Psychal'gia. (Ψυχή, the soul; ἄλγος, grief.) Grief of soul. Term for intense melancholy.

Psy'chë. (Ψυχή.) The "breath of life." Also, a name for the *Satureia capitata*. Also, term used for the cerebro-spinal axis.

Psyche'ism. (Ψυχή, the soul. F. *psychisme*.) The somnolent condition induced by mesmerism; now most commonly termed the hypnotic state.

Psychenton'ia. (Ψυχή, the soul; έντονία, tension.) Straining or overtasking of the mind.

Psychia'ter. One who practises *Psychiatria*,—an *Alienist*.

Psychiatria. (Ψυχή, the mind; λατρεία, healing. F. *psychiatrie*; I. *psiciatria*;

G. *Seelenheilkunde*.) The medical treatment of mental diseases. *Psychical*, or (more usual term) *Psychological*, *medicine*.

Psychia'tric. (Ψυχή, the mind; λατρεῖκος, belonging to medicine.) Relating to the treatment of mental diseases.

Psychia'trist. The same as *Psychiater*.

Psychia'try. The same as *Psychiatria*.

Psych'ic. The same as *Psychical*.

Psych'ical. (Ψυχή, the mind. F. *psychique*; G. *psychisch*.) Relating to the mind.

P. blind'ness. The inability to interpret visual impressions received.

P. cen'tres. The nerve-centres for volition and all conscious nervous action.

P. deaf'ness. The inability to interpret auditory impressions received.

P. med'icine. Another name for *Psychological medicine* (q. v.).

P. pal'sy. See *Paralysis*, *psychical*.

P. physi'ology. Physiological psychology. See under *Psychology*.

Psych'ics. (Ψυχή.) *Psychology*.

Psych'ism. (*Psychic*.) The condition of being *Psychic* or *Psychical*.

Psych'ist. One who makes a special study of *Psychics*.

Psychlamps'ia. (Ψυχή, the mind; λάμπω, to shine.) A term for *Mania*.

Psycho-aud'itory. (Ψυχή, the mind; auditory.) A term signifying belonging to the perception of sound.

P. ar'ea. Term for that area of the cerebral cortex which is believed to be directly concerned in the conscious perception of sound.

Psychoco'ma. (Ψυχή, the mind; coma.) A term for mental stupor, or unconsciousness.

Psychodo'meter. (Ψυχή, the mind; ὁδός, a way; μέτρον, a measure.) Term for an instrument used in the estimation of the rapidity of psychical processes.

Psychodynam'ic. (Ψυχή, the mind; δύναμις, power.) Belonging to *Psychodynamics*.

Psychodynam'ics. The science of the laws governing psychical processes.

Psychodyn'amy. Another term for *Magnetism*, *animal* (q. v.).

Psychogen'es'is. (Ψυχή, the mind; genesis.) The genesis of mind.

Psycho'geny. (Ψυχή, the mind; γένος, descent.) The same as *Psychogenesis*.

Psychogeus'ic. (Ψυχή, the mind; γεύσις, the sense of taste.) Belonging to the sense of taste.

P. cen'tre. The special cerebral centre corresponding to the perception of taste, supposed to be in the *gyrus uncinatus*.

Psycho'gony. (Ψυχή, the mind; γονή, birth, descent.) The doctrine of the development of mind.

Psychograph'ic. Belonging to *Psychography*.

Psycho'graphy. (Ψυχή, the mind; γράφω, to write.) The natural history of mind in general.

Psychokine'sia. (Ψυχή, the mind; κίνησις, motion, excitement.) The pathological mental state which is characterised by defective inhibition.

Psycholog'ic. The same as *Psychological*.

Psycholog'ical. Belonging to *Psychology*.

P. med'icine. The science of *Psychology*

in its application to treatment of mental diseases.

Psycho'logist. One who makes a special study of *Psychology*.

Psycho'logy. (Ψυχή, the soul; λόγος, account. F. *psychologie*; I. *psicologia*; G. *Seelenlehre*, *Psychologie*.) The science which investigates the acts and states of the human mind, and the laws and conditions on which they depend. (Mansel.)

P., experimen'tal. See *Psycho-physics*.

Psycho'metry. (Ψυχή, the mind; μέτρον, a measure.) Measurement of the duration of psychical processes.

P., physiolog'ical. The study of *Psychometry* from a physiological standpoint.

P., transcenden'tal. Term for a branch of *Psychometry* which deals with psychical processes that are believed to take place irrespective of any cerebral function.

Psychomo'tor. (Ψυχή, the soul; L. *moveo*, *motum*, to move.) Epithet applied to certain movements considered as the visible results of psychical action.

P. ar'ea. The motor area of the cerebral cortex; i. e. that area which includes the *P. centres*.

P. cen'tres. See *Centres*, *psychomotor*.

P. nerve-f'bres. Cortical nerve-fibres of the cerebrum connected with motor nerves.

Psychoneuro'logy. (Ψυχή, the mind; νεῦρον, a nerve; λόγος, a discourse.) That branch of *Neurology* which treats of mental action.

Psychoneuro'ses. Plur. of *Psychoneurosis*.

Psychoneuro'sis. (Ψυχή, the mind; *neurosis*.) Mental disease.

P., vaso'motor. Vasomotor mental disease. A special form of Insanity which occurred in the case, described by Reich, of a child whose mother had been frightened during pregnancy. (Hack Tuke.)

Psychon'omy. (Ψυχή, the mind; νόμος, a law.) A syn. for *Psychodynamics*.

Psychonose'ma. (Ψυχή, the mind; νόσημα, a malady.) Mental disease.

Psychonoso'logy. (Ψυχή, the mind; νόσος, disease; λόγος, an account.) The classification of mental diseases.

Psycho-optic. (Ψυχή, the mind; *optic* = *optical*.) Belonging to the psychical perception of light.

P. ar'ea. That part of the cortical area of the cerebrum believed to be directly concerned in the conscious perception of light.

Psycho-os'mic cen'tre. A term for the *Olfactory centre*.

Psychopannych'ia. (Ψυχή, the soul; παννύχιος, throughout the night.) Old term, signifying sleep of the soul following upon the death of the body.

Psychopar'esis. (Ψυχή, the soul; πάρεσις, slackening.) Mental debility.

Psychopath. (*Psychopathia*.) One who is suffering from *Psychopathy*.

Psychopath'ia. (Ψυχή, the mind; πάθος, affection. F. *psychopathie*; G. *Seelenkrankheit*.) *Psychopathy*.

P. sexua'lis. Sexual psychopathia; i. e. mental disease connected with sexual disorders.

Psychopath'ic. (F. *psycopathique*.) Belonging to *Psychopathia*.

Psycho'pathist. One who makes a special study of *Psychopathia*.

Psycho-pathology. (Ψυχή, the mind; *pathology*.) The science treating of the legal aspect of insanity. Also, the pathology of insanity.

Psycho'pathy. See *Psychopathia*.

Psycho-phys'ic. The same as *Psychophysical*.

Psycho-phys'ical. Psychical and physical; having to do with *Psychology* and *Physics*.

P. law. *Physiol.* The law which expresses the relation existing between the change in intensity of a stimulus, and the resulting change in sensation.

Originally stated by Weber, in 1831, as follows:—If the first of a pair of stimuli can just be perceived as different from the second, then any other pair of stimuli will be similarly distinguishable when the objectively measured ratio of the first to the second in each pair is the same in both cases.

Stated by Fechner in 1860:—If a pair of stimuli give rise to two distinct sensations, then any other pair of stimuli, which shall differ only in intensity, will produce equally distinct sensations when the ratio of the first to the second is the same in both pairs of stimuli.

P. meth'ods. Term for certain experimental methods used for investigating the sensibility of different parts or organs of the human organism for small differences of stimulation. Those in general use are:—1. The method of just observable differences. This consists in applying a stimulus of given intensity to a sensitive surface, and then determining what is the smallest additional stimulus that can be detected.

2. The method of right and wrong cases. A record is made of the percentage of cases in which two slightly different stimuli are correctly distinguished.

3. The method of the average error. The subject experimented on is required to choose a stimulus which he considers to be equal to a certain stimulus of given intensity. (Billings.)

P. move'ment. The movement of a hypothetical agent, which may be either ponderable or imponderable, upon which all psychical processes are supposed to depend.

P. time. Term used in *Psychometry* to denote the fourth of the seven processes of Exner which together make up *Reaction-time* (q. v.).

Psycho-phys'ics. (F. *psychophysique*; G. *Psychophysik*.) Experimental *Psychology*. Divided by Fechner into *Outer Psychophysics*, comprising stimulation and apperception; and *Inner Psychophysics*, comprising the whole process of mental function, which intervenes between stimulation and apperception.

Psycho-physiolog'ical. Belonging to *Psycho-physiology*.

Psycho-physiology. A syn. for *Physiological psychology*. See under *Psychology*.

Psychoplas'm. (Ψυχή, the mind; πλάσμα, something formed.) The sentient material out of which all forms of consciousness are evolved, incessantly fluctuating, incessantly renewed. (Lewes.)

Psychoplas'mic. Belonging to *Psychoplas'm*.

Psycho'ragēs. (Ψυχοραγής or ψυχορ-

payñs. L. *in articulo mortis*.) In the act of dying.

Psychorag'ia. (Ψυχораγία or ψυχορ-
αγία.) The death-agony.

Psychorrhag'ia. See *Psychoragia*.

Psychorrhhythm. (Ψυχή, the mind;
rhythm.) An alternating or cyclic mental state.

Psycho-sensorial. The same as
Psycho-sensory.

Psycho-sensory. Belonging to con-
scious perception of sensations.

P. ar'ea. A certain cortical area of the
cerebrum believed to be directly connected with
the perception of all sensory impulses.

Psycho'ses. Plur. of *Psychosis*.

Psycho-sexual. Belonging to sexual
desires.

P. cent're. Term for the hypothetical
cortical area of the brain directly concerned in
sexual desires.

Psycho'sin. (Ψυχή, the mind.) One
of the members of the class of Cerebrosides occur-
ing in brain-tissue. It resembles *Sphingosin*.

Psycho'sis. (Ψυχώω, to animate. F.
psychose; G. *Seelenkrankheit*.) 1. A disease of
the mind. 2. The nervous act corresponding to
a mental phenomenon.

P. traumatica. Traumatic psychosis;
i. e. mental disease consequent on an injury.

Psychosomatiatri'a. (Ψυχή, the
mind; σῶμα, the body; *latreia*, a healing.)
Medicine for the mind and body.

Psychosomatic. (Ψυχή, the mind;
σῶμα, the body.) Belonging both to mind and
body.

Psychotherapeia. (Ψυχή, the mind;
therapeia.) The same as *Psychotherapeutics*.

Psychotherapeu'tic. Belonging to
Psychotherapeutics.

Psychotherapeu'tics. (Ψυχή, the
mind; *θεραπεία*, to treat.) Treatment of disease
by mental or moral influence.

Psychother'apy. (*Psychotherapeia*.)
The same as *Psychotherapeutics*.

Psychotic. Belonging to *Psychosis*.
Also, term used as synonymous with *Psycho-
gogic* or *Analeptic*.

Psychot'ica. (Ψυχώω, to give life to.)
Another name for *Analeptica*.

Psycho'tria. A Genus of the *Rubiaceæ*.

P. cro'cea. The *Palicourea crocea*.

P. emetica. The *Ipecacuanha striata*,
Peruvian or black ipecacuanha. The root is
emetic.

Psycho'trophum. (Ψυχή, the mind;
τροφός, a feeder.) Another name for the *Be-
tonica officinalis*.

Psychræ'mus. (Ψυχρός, cold; αἷμα,
blood.) Cold-blooded.

Psychral'gie. F. (Ψυχρός, cold; ἄλ-
γος, pain.) Term for a pathological state char-
acterised by painful subjective sensations of
cold. (Foster's Dict.)

Psychraposte'ma. (Ψυχρός, cold;
ἀπόστημα, a deep-seated abscess.) A cold
abscess.

Psychroceph'alë. (Ψυχρός, cold;
κεφαλή, head.) A head-cooler.

Psychrologue. (Ψυχρός, cold; λόγος,
doctrine.) Term for a physician who makes a
special use of the cold bath as a therapeutic
agent. (Littre.) See *Psychrotherapy*.

Psychrolu'sia. (Ψυχρός, cold; λουΐσις,
bathing.) Cold bathing.

Psychrolu'tron. (Ψυχρός, cold; λου-
τρόν, a bath.) A cold bath.

Psychro'meter. (Ψυχρός, cold; μέτ-
ρον, measure. F. *psychromètre*; G. *Psychro-
meter*.) Wet- and dry-bulb hygrometer. Also
termed Mason's hygrometer. An apparatus
consisting of two delicate thermometers, one of
which is kept wet by being covered with muslin
and connected with a reservoir of water, and the
other is dry. The wet bulb stands lower than
the other, unless the air be saturated; the
tension of the aqueous vapour is calculated from
the relative heights of the two bulbs.

Psychrometric. Belonging to the
Psychrometer.

Psychro'metry. The use of the *Psy-
chrometer*.

Psychropho'bia. (Ψυχρός, cold;
φόβος, fear.) Dread of, or excessive sensibility
to, cold, especially to cold water.

Psychrophore. (Ψυχρός, cold; φέρω,
to bear.) A two-way catheter for applying cold
to the urethra.

Psychropos'ia. (Ψυχρός, cold; πόσις,
drink.) A cold drink.

Psychrother'apy. (Ψυχρός, cold;
θεραπεία, treatment.) The use of the cold bath
as a therapeutic agent.

Psy'chus. (Τὸ ψύχος.) Coldness, cold.

Psychamps'ia. (Ψυχή, the soul; λάμ-
πω, to shine.) See *Psychlampsia*.

Psychopathy. See *Psychopathy*.

Psycte'rium. (Ψυκτήρ, a wine-cooler.)
A cooling-vessel, or refrigerator.

Psyc'tica. Neut. Pl. (Ψυκτικός, cool-
ing.) *Therap.* Refrigerants.

Psyc'ticus. (Ψυκτικός, cooling. F.
psyctique; I. *psittico*.) Refrigerant.

Psydra'cia. Plur. of *Psydracium*. Also,
fem. sing. substantive of same derivation and
signification as *Psydracium*.

P. a pletho'ra. *Psydracia* from plethora.
Syn. for *Acnë*.

P. acu'ta. A syn. for *Acute eczema*.

P. sponta'nea. Spontaneous *psydracia*.
Term for a variety of urticaria, forming large
wheals which occur on covered parts of the
body.

P. thermalis. The same as *Psydracium*
thermalë.

P. vulgar'is. A syn. for *Eczema simplex*.

Psydra'ci'ous. Belonging to, or resem-
bling, *Psydracium* or *Psydracia*.

Psydra'cium. (Ψυδράκιον, dim. from
ψύδραξ, a pimple, or blister.) A minute pus-
tule of the skin, terminating in a laminated
scab. (Willan and Bateman.)

The ancients used the term both for *papule*
and *vesicle*.

P. ac'në. A syn. for *Acne*.

P. thermalë. (*Therma*.) Term for a
skin eruption following, and consequent upon,
hot bathing.

Psy'drax. (Ψύδραξ, a white blister on
the tip of the tongue, supposed to be caused by
telling a lie.) A blister.

Psyg'ma. (Ψύγμα, something which
makes cool.) A refrigerant medicine. (Hippo-
crates.)

Psyl'la. (Ψύλλα.) The common flea,
Pulex irritans.

Psylli. L. (The term *Psylli* [nom. pl.]
was originally the name of a set of people in
Lybia who used certain drugs for serpent bites.)

Name used by the Romans for a set of conjurors who pretended to the art of neutralising the poison of snake-bites by sucking the wound.

Suction by a *Psyllus* was recommended by Celsus instead of a cupping-glass, for snake-bites.

Percy states that armies in the field were provided with *Psylli*, or suckers of wounds, up till the end of the eighteenth century. (Littre.)

Psyllium. (Ψύλλιον.) The Flea-wort, *Plantago psyllium*.

P. erectum. The same as *Psyllium*.

Psyllus. (L.) One of the *Psylli* (q. v.).

Psymithion. See *Psimythium*.

Ptarmic. (Πταρμικός.) Causing to sneeze. Epithet applied to medicines, and synonymous with *Sternutatory*.

Ptarmica. (Πταρμική, the yarrow or mill-foil; from πταρμικός, to cause to sneeze.)

1. A generic name for certain plants; also, the *Ptarmica vulgaris*. 2. Plur. of *Ptarmicum*.

P. montana. Another name for the *Arnica montana*.

P. vulgaris. The *Achillea ptarmica*.

Ptarmicum. (Πταρμικός, -ή, -όν, causing to sneeze.) A *Sternutatory* drug.

Ptarmigan. Common name for the *Lagopus vulgaris* (q. v.).

Ptarmus. (Πταρμός.) Sneezing.

Ptelea. A Genus of the *Xanthoxylaceæ*.

P. trifoliata. The swamp dogwood, or stinking ash; a North American tree. It is believed to be antiperiodic and anthelmintic.

Pteleorrhine. (Πτελέα, the elm—the spreading tree; ρίς, ρινός, the nose.) Term applied to the two anterior nares when they are of unequal size.

Ptenium. (Πτηνός, winged.) Term applied to *Osmium* on account of its volatility.

Ptenum. The same as *Ptenium*.

Pteral. (Πτέρων, a wing.) Belonging to the wing.

Ptere. (Πτέρον, a wing.) Any structure resembling a wing.

Pterialis. (Πτέρον, a wing.) *Anat.* The same as *Pterygoides*.

Pteric. Belonging to the *Pterion*.

P. diameter. Another name for *Frontal diameter, superior, of Davis*.

Pteridium. (Πτερόν, a wing.) A syn. for *Samara*.

Pteriogenus. (*Pteris*; γένος, origin.) Growing upon ferns.

Pterion. (Πτερόν, a wing. F. *ptéron*.) *Cranion.* The place where the tip of the greater wing of the sphenoid bone joins the frontal, parietal, and temporal bones.

Pteris. (Πτερόν, a feather; from the resemblance of its leaves to feathers.) A Genus of *Filices*.

P. aquilina. The common brake, whose root has anthelmintic properties, and is also astringent.

P. atropurpurea. The rock brake, a North American fern. Properties, similar to those of *P. aquilina*.

P. palustris. The *Asplenium filix femina*.

Pterna. (Πτέρνα, the heel.) Old name for the *Os calcis*. Also, the heel-pad in birds.

Pternium. (Πτερνιον, dim. from πτέρνα, the heel.) The same as *Pterna*.

Pternobates. (Πτέρνα, the heel;

βάτης, one that treads.) Walking on the heel, *Calcigradus*.

Ptero- (Πτερόν, a feather or wing.) A prefix denoting resemblance to a feather or wing.

Pterocarpi lignum. B. P. (Gen. of *Pterocarpus*; L. *lignum*, wood.) Red sandal-wood. The sliced or rasped heart-wood of *Pterocarpus santalinus*. Used only as a colouring agent, and contained in *Tinctura lavandule composita*, B. P.

Pterocarpine. A neutral, crystallisable substance, readily soluble in chloroform and carbon bisulphide, extracted from *Pterocarpi lignum*. (Cazeneuve.)

Pterocarpous. (*Pterocarpus*.) Having a winged fruit.

Pterocarpus. (*Ptero-*; καρπός, fruit. F. *ptérocarme*.) A Genus of *Leguminosæ*.

P. draco. A native of the East and West Indies, which yields the resinous substance known as *Dragon's blood*.

P. erinauceus. The source of *African kino*.

P. marsupium. An Indian species. It yields *Kino* (q. v.).

P. santalinus. The tree whose wood is the source of *Pterocarpi lignum*, B. P. The sap, like that of *P. draco*, affords a variety of *Dragon's blood* (q. v.).

Pterocaulon. (*Ptero-*; καυλός, a stem.) A Genus of the *Compositæ*.

P. pycnostachyum. (Πυκνός, thick; στάχυς, an ear of corn.) Black-root. Hab. Georgia. Reputed to be tonic, alterative, and emmenagogue.

Pterodium. The same as *Pteridium*.

Pteroides. (Πτερόν, a wing.) Resembling a wing.

Pterology. (Πτερόν, a wing; λόγος, a discourse.) *Ornithol.* and *Entomol.* The study of wings.

Pteropega. Plur. of *Pteropegum*.

Pteropegum. (Πτερόν, a wing; πηγός, fixed.) The articular surface on the thorax in Insects for the attachment of the base of the wing.

Ptero'spora. (*Ptero-*; σπορά, seed.) A Genus of the *Monotropeæ*.

P. andromeda. The scaly dragonclaw, or fever-root, indigenous to some parts of North America. The root is considered to be anthelmintic and diuretic.

Pterotheca. (Πτερόν, a wing;θήκη, a case.) That part of the pupa-case, in the *Insecta*, which covers the growing wings.

Pterotic. (Πτερόν, a wing.) Resembling a wing.

Pterygial. Belonging to a *Pterygium*.

Pterygium. (Mod. L. From πτέρυξ, a wing. F. *ptérygine*.) *Bot.* The wing-like, membranous appendix of certain seeds.

Pterygion. The same as *Pterygium*.

Pterygium. (Πτερύγιον [dim. from πτέρυξ], a little wing. F. *pterygion*; I. *pterygio*; G. *Pterygium*, *Flügelzell*.) 1. A diseased condition of the conjunctiva. A thickened triangular patch encroaching on the cornea, usually seated on the internal side, occasionally occurring in people who have lived in hot countries. This term was used by Galen.

2. A growth of the epidermis over the nails. (Celsus.) See *P. unguis*.

3. The ala nasi.

4. The generalised limb of *Vertebrata*.

PTERYGO-

5. *Bot.* Term applied to petals and other appendages when shaped like wings.

P. carno'sum. A fleshy-looking *Pterygium* in sense 1 of the term.

P. cras'sum. Thick pterygium. A syn. for *P. carnosum*.

P. dig'iti. (L. *digitus*.) A syn. for *Paronychia*.

P., flesh'y. See *P. carnosum*.

P. larda'ceum. (L. *lardum*, lard.) A syn. for *Pinguicula*.

P. membrana'ceum. A membranous pterygium.

P. pingüē. (L. *pinguis*, -e, fat.) The same as *P. lardaceum*.

P. sarcomato'sum. A syn. for *P. carnosum*.

P. ten'uē. Thin pterygium. A syn. for *P. membranaceum*.

P. un'guis. (L. *unguis*, the nail.) A thin, semi-transparent growth of epidermis partly covering the finger-nail, growing from the *lunula* of the nail.

P. vasculo'sum. A syn. for *P. carnosum*.

Ptery'go-. (Πτέρυξ, a wing.) Prefix denoting attachment or relation to the *pterygoid* processes of the sphenoid bone; also, belonging to a wing.

Pterygoblast. (Πτέρυξ, a wing; βλαστός, a shoot.) The primary rudiment of the fin-ray in Fishes.

Pterygobran'chiate. (Πτέρυξ, a wing; *branchia*.) Having feathery gills.

Pterygocol'pos. (*Pterygo-*; κόλπος, the lap, or any lap-like hollow.) *Anat.* A term for Meyer's *Sinus pterygodes*.

Pterygo'graphy. (Πτέρυξ, a wing; γράφω, to write.) Nitzsch's term for the description of feathers.

Ptery'goid. (Πτέρυξ, a wing; εἶδος, likeness. F. *ptérygoïde*; I. *pterygoide*; G. *flügel'förmig*.) Resembling a wing. *Anat.* Relating to the *pterygoid* processes of the sphenoid bone.

P. ar'teries. Branches of the second or pterygoid portion of the *internal maxillary* artery which supply the pterygoid muscles.

P. bone. The internal pterygoid plate of the sphenoid; a separate bone in many Vertebrates.

P. canal'. Syn. for *Vidian canal*.

P. fos'sa. (F. *fosse ptérygoïde*; G. *Flügelgrube*.) 1. The deep concavity which separates the external and internal pterygoid plates. 2. The *P. fossa* of lower jaw. A depression on the anterior surface of the condyloid process, for the attachment of the external pterygoid muscle.

P. mus'cle, external. A muscle, arising in two portions from different points on the *zygomatic fossa*, whose fibres pass horizontally backwards and outwards, and are inserted into the front of the neck of the condyle of the lower jaw, and into the inter-articular fibro-cartilage. It moves the lower jaw forwards upon the upper.

P. mus'cle, internal. A thick muscle which, arising from the *pterygoid fossa*, passes downwards, outwards and backwards to be inserted into the back portion of the inner surface of the ramus and angle of the lower jaw. It moves the lower jaw forwards upon the upper. The pterygoid muscles are muscles of mastication.

P. nerves. Two branches of the inferior maxillary nerve supplying the pterygoid muscles.

P. notch. A syn. for *P. fossa*.

P. plates. (F. *ailes ptérygoïdiennes*.) *External.* The outer portion of the *Pterygoid* process, broad and thin, and directed outwards; it forms part of the inner wall of the *zygomatic fossa*.

Internal. The inner portion of the *Pterygoid* process. A long, narrow plate, curving slightly outwards, and terminating in the *hamular* process.

P. plex'us. A network of veins formed by various branches of the *internal maxillary* vein, situated between the temporal and external pterygoid muscles, and between the external and internal pterygoid muscles.

P. pro'cesses. Two processes of bone descending on each side from the junction of the body and great wing of the sphenoid. See *Sphenoid bone*.

P. ridge. That portion of the external surface of the greater wing of the sphenoid which gives attachment to the external pterygoid muscle.

P. tu'bercle. The rough prominence on the inner surface of the lower jaw for attachment of the internal pterygoid.

Pterygoid'ean. The same as *Pterygoid*.

P. plaques. The plaques or ulcers seen on the hard palate in children suffering from *Bednar's aphthæ* (q. v.).

Pterygold'eus. (Mod. L.) Pterygoid. Used generally to denote pterygoid muscle.

P. anom'alus. An occasional muscular slip, only rarely present, arising from the spine or else from the under surface of the great wing of the sphenoid bone, and inserted either into the external pterygoid plate of the sphenoid, or into the tuberosity of the superior maxilla.

P. ma'jor. A name for the internal pterygoid muscle.

P. mi'nor. A name for the external pterygoid muscle.

P. pro'prius. Name for a band, sometimes muscular, sometimes merely tendinous, which passes from the infra-temporal crest, either to the external pterygoid plate of the sphenoid bone, or to the tubercle of the superior maxilla or the palate bone.

P. ter'tius. An occasional muscular slip, arising conjointly with the external pterygoid muscle (*Pterygoideus minor*), and inserted into the inter-articular fibro-cartilage of the temporo-maxillary joint.

Pterygo'ma. (Πτερύγωμα, a thing hanging like a wing.) 1. The lobe of the ear. (Galen.) 2. A chronic swelling of the *labia majora* or *labia minora pudendi* of women, which causes difficulty in coition.

Pter'yo-maxil'lary. Relating to the pterygoid processes of the *sphenoid* and *superior maxillary* bones.

P. fis'sure. A vertical fissure forming the inlet from the *zygomatic* to the *spheno-maxillary* fossa, bounded by the pterygoid process of the sphenoid on the one hand, and the superior maxilla on the other.

P. fold. A fold of mucous membrane in the mouth, behind the last molar tooth, formed by the projection of the pterygo-maxillary ligament.

P. lig'ament. A tendinous band attached to the internal pterygoid plate of the sphenoid and the oblique line on the inferior maxilla.

separating the buccinator muscle from the superior constrictor of the pharynx.

P. mus'cles. A name for the *Pterygoid muscles*.

Pterygo-pal'atal. *Pterygo-palatine.*

P. pro'cess. Another name for the *Palatal process*.

Pterygo-pal'atine. (*Pterygo-; palatinus*, relating to the palate. *F. pterygopalatin.*) Relating to the *pterygoid* process of the sphenoid bone, and to the *palate* bone.

P. ar'tery. A small branch of the third or sphenomaxillary portion of the internal maxillary artery, passing back through the pterygo-palatine canal, and supplying the vault of the pharynx and the Eustachian tube.

P. canal'. A groove formed by the sphenoid bone on the one hand, at the point where the pterygoid process arises, and the sphenoidal process of the palate bone on the other. Through it pass the pterygo-palatine vessels and pharyngeal nerve.

P. groove. A groove in the anterior surface of the pterygoid process of the sphenoid. Also, a groove on the vertical portion of the palate bone. See *P. palatine canal*.

P. mus'cle. Name for a separated portion of the *levator palati*, which passes from the hamular process of the sphenoid bone to the palate bone.

P. nerve. A branch arising from the sphenopalatine ganglion, passing through the pterygo-palatine canal, and distributed to the part of the pharynx which lies behind the Eustachian tube.

Also, another name for the *Sphenopalatine nerve* (Billings).

Pterygopharyn'geus. (*Pterygo-; pharyngeus.*) A name given to a portion of the superior constrictor of the pharynx which arises from the internal pterygoid plate of the sphenoid.

Also, syn. for *Palatopharyngeus*.

P. exter'nus. Name for a muscle, separate from the main portion of the superior constrictor of the pharynx, which arises from the hamular process of the sphenoid, and is inserted into the wall of the pharynx.

P. staphyll'us. (*Mod. L. staphylinus*, belonging to the *staphylē* or uvula.) The *Tensor palati*.

Pterygo-quad'rate. Belonging to the *pterygoid* plate and the *quadrate* bone.

Pterygo-salpingo-hyoid'eus. (*Pterygo-; salpinx; hyoid.*) Syn. for *Petrohyoid muscle*.

Pterygosalpingoid'eus. (*Pterygo-; salpinx.*) An occasional extra slip of origin of the *tensor palati* muscle attached to the hamular process of the sphenoid bone.

Pterygo-salpingo-staphyll'us inter'nus. (*Pterygo-; salpinx; staphylē.*) A syn. for *Levator palati*.

Pterygo-sphenoid. See *Sphenopterygoid*.

Pterygospino'sus. (*Pterygo-; spinosus*, belonging to the spine, i. e. of the sphenoid.) An occasional muscular slip, attached at one extremity to the spine of the sphenoid, and at the other to the posterior edge of the external pterygoid plate. (Thane.)

Pterygo-sp'inous lig'ament. Term for a ligamentous band which stretches from the external pterygoid plate to the spine of the sphenoid.

Pterygostaphyll'us. (*Pterygo-; staphylē.*) A name for the *Tensor palati* muscle.

P. exter'nus. The same as *Pterygo-staphylinus*.

P. inter'nus. A name for the *Levator palati* muscle.

Pterygo-syndes'mo-staphylo-pharyn'geus. A syn. for superior constrictor of pharynx.

Pterygote. (Πτερύξ, a wing.) Furnished with wings.

Pterygo-tem'poral. Belonging to the pterygoid process of the sphenoid and to the temporal bone.

Pterygo-trabec'ular. Belonging to the pterygoid portion of the sphenoid bone and to the *trabecular* region of the cranium.

Ptery'la. (Πτερόν, a feather; ὕλη, the stuff of which anything is made.) *Ornithol.* Any region of the skin on which feathers grow.

Pterylography. (*Ptery'la; γράφω*, to write.) A description of the arrangement of the feathers in birds.

Pterylo'sis. (*Ptery'la.*) The arrangement of the feathers in birds.

Pterystaphyll'us. See *Pterygo-staphylinus*.

Pter'yx. (Πτέρυξ, -υγος. *L. ala.*) A wing.

Ptilo'derus. (Πτίλος, one afflicted with *Ptilosis*; δέρη, the neck.) *Zoöl.* Having a bare neck.

Ptilogen'esis. (Πτίλον, a feather; γένεσις, production.) The growth of feathers or quills.

Ptilo'ma. The spot or region affected with *Ptilosis*.

Ptilos. (Πτίλος.) One suffering from *Ptilosis*.

Ptilo'sis. (Πτίλωσις. *F. ptilose.*) *Med.* A disease of the eyelids, attended with inflammation and loss of the eyelashes (Galen), the victim of which was called *Ptilos*. *Ornithol.* (Πτίλον, a feather.) The arrangement of plumage in birds.

Ptisan. See *Ptisana*.

Pti'sana. (Πτισάνη; from πτίσσω, to peel or winnow grain. *F. ptisane; G. Tisane.*) Peeled barley. Also, a drink made of barley, barley-water.

P. barda'næ. Also termed *Decoctum bardanæ*. A decoction of the root of the burdock, *Bardana*, which was used as a drink.

Ptochia'ter. (Πτωχός, a beggar; ιατήρ, a physician.) A physician to the poor, or to an institution for the poor.

Ptochiatri'a. (Πτωχός, a beggar; ια-τροία, healing. *F. ptochiatria; G. Armenheilung.*) The medical treatment of the poor. Also, a hospital for the poor.

Ptochocom'ium. (Πτωχός, a beggar; κομῶ, to tend.) An institution for the maintenance of the poor, a Poor-house.

Ptochodoch'ium. (Πτωχός, a beggar; δέχομαι, to receive.) The same as *Ptochocom'ium*; also, a hospital for the poor.

Ptochotroph'eum. (Πτωχός, a beggar; τρέφω, to nourish.) A syn. for *Ptochocom'ium*.

Pto'ma. (Πτώμα, a fall; also, that which has fallen, a carcase.) A corpse; also, a falling or sinking of a part of the body from its normal situation.

Ptomainæmia. (Πτώμα, a corpse; αἷμα, blood.) The pathological condition in which *ptomaines* are present in the blood.

Ptomaine. (Πτώμα, a corpse.) A term originally proposed by Selmi, now in general use, denoting certain products of putrefaction which give the reactions characteristic of the vegetable alkaloids, and which Selmi had obtained from decaying corpses and putrefying proteids. Obtained by Vaughan from bad cheese; by Brieger, in a crystalline form, under a variety of conditions; in mussel-poisoning, and from decaying meat, bad fish, from the tissues in cases of typhoid fever, tetanus, &c. These products Brieger has called *toxines*.

Some ptomaines, containing no oxygen, are liquid and have a cadaveric odour; others are crystallisable solids, containing oxygen, and are soluble in water, but insoluble in alcohol and chloroform.

Ptomain'ic. Belonging to, or due to, a ptomaine or ptomaines.

Ptomapeptone. (Πτώμα, a corpse; peptone.) One of the putrefactive alkaloids formed in certain plants—the *cereals*—by the action of vegetable parasites, *e.g.* ergot of rye, the mucorinæ, &c.

Pto'matin. (Πτώμα, a corpse.) A syn. for *Ptomaine*.

Ptomatops'ia. (Πτώμα, a corpse; ὄψις, vision.) Syn. for *Necropsy*.

Ptomatropine. (Πτώμα, a corpse; atropine.) A ptomaine which resembles atropine in its physiological action.

Pto'sis. (Πρώσις; from πίπτω, πέπτωκα.) A falling. A drooping of the upper eyelid from palsy of the *levator palpebræ superioris*.

P. diplo'pia. A syn. for *Synechia posterior*.

P. i'ridis. A syn. for *Iris, prolapse of*, or *Staphyloma of*.

P. oc'uil. A syn. for *Exophthalmos*.

P. palpebræ. (L. *palpebra*, an eyelid.) A syn. for *Blepharoptosis*.

P. palpebrar'um. The same as *P. palpebræ*.

P. sympath'ica. Sympathetic ptosis. Ptosis from paralysis of the cervical sympathetic. It is associated with myosis, and with vaso-motor paralysis on the side affected.

Pto'tic. Belonging to, or affected with, *Pto'sis*.

Ptotoster'eoscope. (Πτωτός, fallen; στερεός, solid; σκοπέω, to look at.) An apparatus designed for the determination of the existence of binocular vision (Donders).

Ptyal'agogue. (Πτύαλον, spittle; αγωγός, drawing forth. F. *ptyalagogue*; G. *speicheltreibend*.) The same as *Sialagogue*.

Pty'alín. (Πτύαλον, spittle. F. *ptyaline*; G. *Speichelstoff*.) An amylolytic ferment discovered by Leuchs (1831), present in human saliva and in that of rabbits and guinea-pigs; absent usually from dogs' saliva. Prepared from minced and dehydrated salivary gland by maceration with glycerine and precipitation with alcohol. The ferment is most active at 35°—40° C., and in an alkaline medium.

Ptyalin'ogen. A zymogen, the precursor of *Ptyalin*; it appears in the form of granules in the salivary cells at the beginning of the act of secretion.

Pty'alise. (Πτύαλον, spittle.) To induce *Ptyalism*.

Pty'alism. (Πτυαλισμός. F. *ptyalisme*; I. *ptialismo*; G. *Speichelfluss*.) Salivation.

P., mercur'ial. See *Salivation, mercurial*.

Ptyalis'mus. *Ptyalism*.

P. acu'tus mel'litus. Name for a variety of the salivation induced by the sight, smell, &c. of food in which the secretion has a sweet taste.

P. acu'tus sympathet'icus. A name for the salivation induced by the sight, smell, &c., of food.

P. hydrargyra'tus. (L. *hydrargyrum*, mercury.) Mercurial salivation.

P. iners'. (L. *iners*, inactive.) Involuntary salivation.

P. mel'litus. See *Melitoptyalismus*.

P. mercuria'lis. Mercurial salivation.

P. pyro'sicus. (*Pyrosis*.) A syn. for *Pyrosis*.

Pty'alith. (Πτύαλον, spittle; λίθος, a stone.) A salivary calculus.

Pty'alize. See *Ptyalise*.

Pty'alocèle. (Πτύαλον, spittle; κήλη, a tumour.) A cyst formed by the rupture of Wharton's duct, and the collection of extravasated saliva in the cellular tissue.

Ptyalogogue. (Πτύαλον, spittle; αγωγός, evoking.) See *Ptyalagogue*.

Ptyalophthis'is. (Πτύαλον, spittle; φθίσις, wasting.) Wasting from excessive salivation; also termed *Tabes salivalis*.

Pty'alose. The sugar formed by the action of *Ptyalin* on starch; identical with maltose (von Mering and Musculus).

Pty'alum. (Πτύαλον.) Saliva.

Pty'chode. (Πτυχή = πτύξ, a fold or layer.) The protoplasm lining the internal cellular membrane in certain vegetable woody cells.

Ptycho'tis ajowan. The *Carum ajowan* (q. v.). The oil of the fruit of this plant is the principal source of the stearoptene *Thymol*.

P. cop'tica. Another name for *P. ajowan*.

P. foeniculifo'lia. Similar in properties to *P. ajowan*.

P. verticilla'ta. Similar in properties to *P. ajowan*.

Pty'elum. (Πτύελον = πτύαλον.) *Ptyalum*.

Pty'sis. (Πτύσις.) Spitting.

Ptys'ma. (Πτύσμα.) Sputum.

Ptysmagog'ia. (Πτύσμα, sputum; ἄγω, to fetch.) Salivation. Used especially to mean treatment, of syphilis, by mercurial salivation.

Ptysmagogue. (Πτύσμα, spittle; αγωγός, bringing forth. I. *ptismagogo*; G. *speicheltreibend*.) Term used to mean *Ptyalagogue*. Also, *Expectorant*.

Ptysmatis'chesis. (Πτύσμα, sputum; ἵσχω [ἔχω], to stop.) A checking or absence of expectoration. Also, retention of saliva.

Ptysmatos'chesis. The same as *Ptysmatischesis*.

Pty'xis. (Πτύξις, a folding.) The arrangement of a single part in the bud of plants.

Pu'bal. The same as *Pubic*.

Pubeo'tomy. See *Pubiotomy*.

Pu'ber. (L.) An individual who is at the age of *puberty*.

Pu'beral. (*Puber*.) Belonging to *puberty*.

Puber'ic. The same as *Puberal*.

Puberty. (L. *puber*, of ripe age. F. *puberté*; G. *Pubertät, Geschlechtsreife*.) The

age when the male or female first acquires the power of reproduction. It is attended by a train of symptoms peculiar to each sex; in boys, by alteration of voice, appearance of hair on the face and pubes, the establishment of seminal emission, and development of the genital organs; in girls, by development of the breasts and establishment of the catamenia.

The age of puberty varies in different climates, being earlier in hot climates and later in cold climates. In England, the age of puberty is fixed by law as fourteen in boys, and twelve in girls; but the actual age varies somewhat in different individuals, and according to surroundings.

Puberulent. (L. *puber*, downy.) *Biol.* Covered with fine down.

Pubes. (L. *pubesco*, to be hairy.) 1. The hair which appears on the body at puberty; the hair covering the genital organs. 2. The part in which the external genital organs are seated, covered with hair after puberty. 3. The *Os pubis*.

The word is now used almost exclusively in the last of these meanings.

P., angle of. See *Pubic angle*.

P., crest of. The portion of bone lying between the spine and inner extremity.

P., spine of. The termination in an internal direction of the *linea iliopectinea*.

P., symphysis of. The articulation between the two pubic bones.

Pubescence. (L. *pubesco*, to reach the age of puberty.) 1. The condition of arriving at puberty. 2. The condition of being covered with down or hair, whether of plants or animals.

Pubescent. Having down or hair, of plants and animals.

Also, arriving at the age of puberty.

P. uterus. An adult uterus which has not developed beyond the period just preceding puberty.

Pubetrotomy. (*Pubes*; Gr. *ἤτρον*, the belly; *τομή*, a cutting.) Section of the pelvis through the pubes.

Pu'beus. At the age of puberty.

Pubiæ'us. (Mod. L.) *Pubic*.

Pub'ic. (*Pubes*.) Relating to the *Pubes*.

P. an'gle. The point of junction between the crest and symphysis of the pubes.

P. arch. (F. *arcade pubienne*; G. *Schambogen*.) The arch formed by the convergence towards the middle line of the two descending rami of the pubes.

P. ar'tery. 1. A branch of the *deep epigastric*, which runs in an inward direction behind the crural arch; important, because liable to be wounded in division of the stricture in femoral hernia.

2. A branch of the *obturator artery*, which anastomoses with the preceding.

P. articula'tion. The *Symphysis pubis*, formed by the two oval surfaces of the *os pubis* of either side.

P. bone. The *Os pubis*.

P. lig'aments. The five ligaments of the symphysis pubis; viz. *anterior*, *posterior*, *superior*, *sub-pubic*, and interposed *Fibro-cartilage*.

P. por'tion of fas'cia la'ta. That part of the fascia lata which, lying internal to the *saphenous opening*, covers the pectineus, and passes behind the sheath of the femoral vessels.

P. re'gion. The region of the *pubes*.

P. sym'physis. See *Symphysis pubis*.

P. vein. An anastomotic branch passing between the obturator and external iliac veins.

Pubi'gerous. (L. *pubes*; *gero*, to carry.) Bearing downy hairs.

Pu'bio-coccyge'o-annular'is.

(*Pubes*; *coccyx*; *annularis*, annular.) Term for the levatores ani and the coccygei muscles considered as a single muscle on each side, those of the two sides uniting in the middle line to form the rectal diaphragm. (Billings.)

Pu'bio-fem'oral. See *Pubo-femoral*.

Pu'bio-femora'lis. A name for the *Adductor longus* muscle.

Pu'bio-infra-abdominal'is. A name for the *Pyramidalis* muscle.

Pu'bio-infraumbilica'lis. (L. *Pubes*; *infra*, below; *umbilicus*.) A syn. for *Pyramidalis abdominis*.

Pu'bio-ischiad'ic. See *Pubio-ischiatic*.

Pu'bio-ischiat'ic. Belonging to the *pubes* and *ischium*.

Pu'bio-prostat'icus. A name for the *Compressor urethræ* muscle.

Pu'bio-sterna'lis. A syn. for *Rectus abdominis*.

Pubio'tomy. (*Pubes*; Gr. *τομή*, a cutting.) The same as *Symphysiotomy*.

Pu'bio-umbilical'is. A syn. for *Pyramidalis abdominis* (Dumas).

Pu'bis, os. (Gen. of *pubes*.) See *Os pubis*.

Publicæ par'tes. (L.) Public parts. Old term for those organs of the body whose function is the nutrition of the whole organism.

Pubocaverno'sus. Name for a detached fasciculus of the *ischiocavernosus* muscle, which arises separately, from the pubic arch.

Pu'bo-coccyge'al raph'ë. The tendinous raphë passing along the middle line from the back of the symphysis pubis to the front of the coccyx, formed by the union of the levatores ani of either side, the median raphë of the perineum, and in the male by the union of the ejaculatores urinæ muscles. It is interrupted in both sexes by the anus, in the male by the membranous portion of the urethra also, and in the female by the vagina.

Pubococcyge'us. Belonging to the *pubes* and *coccyx*. Term for that portion of the levator ani which arises from the pubes. (Savage.)

Pu'bo-fem'oral. Belonging to the *pubes* and *femur*.

P. lig'ament. The name for a thickened band of the capsular membrane of the hip-joint, which passes from the pectineal eminence of the pubes, downwards and outwards over the front of the joint, to the lesser trochanter of the femur.

Pu'bo-femora'lis. See *Pubio-femoralis*.

Pu'bo-il'iac. Belonging to the *pubes* and *ilium*.

Pu'bo-ischiat'ic. Belonging to the *pubes* and *ischium*.

P. bone. Henle's term for the pubes and ischium considered together as one bone.

Pu'bo-is'chium. The pubes and ischium considered together as one bone.

Puboperitonea'lis. Another name for the *Pubo-transversalis*.

Pu'bo-prostat'ic. Belonging to the *pubes* and the *prostate gland*.

P. lig'aments. The anterior true liga-

PUBOPROSTATICUS—PUERILE

ments of the bladder. Two ligaments passing from the back of the pubes to the anterior surface of the neck of the bladder, above the prostate gland.

Puboprostaticus. Another name for *Wilson's muscle* (q. v.).

Pubopudendus. Name for an occasional muscular slip arising from the pubes and blending with the *ischio-pubicus*.

Puborectalis. Term for the anterior fibres of the *sustentator recti* (q. v.).

Pu'bo-tib'ial. Belonging to the *pubes* and *tibia*.

Pubotransversalis. A thin muscular band which arises from the upper edge of the so-called horizontal ramus of the pubes, and is inserted into the transversalis fascia of the abdomen.

Pubotrochantericus. Another name for *Pectineus*.

Pubourethralis. (*Pubo-; urethralis*.) Term for a band of muscular fibres passing from the anterior attachment of the levator ani muscle, to the prostate gland in the male, and the base of the bladder in the female. Also, syn. for *Puboprostaticus*.

Pu'bo-vesi'cal. (L. *vesica*, a bladder.) Belonging to the *pubes* and *bladder*.

P. fos'sa. The superior false ligament of the bladder, or abdomino-vesical pouch. See *Ligaments of bladder, false*.

P. ligaments. Syn. for *Pubo-prostatic ligaments*.

P. mus'cles. Term for a band of muscular fibres arising from the back of the pubes, and passing in the substance of the anterior true ligament of the bladder, to blend with the superficial muscular layer of the latter.

Puccin'ia fa'vi. (After *Th. Puccini*, a professor of Anatomy in Florence.) A syn. for *Achorion Schönleini* (q. v.).

Puccoon'. The *Sanguinaria canadensis*.

P., red. The *Sanguinaria canadensis*.

P., yellow. The *Hydrastis canadensis*.

Puced'anum ostru'thium. (*Pucedanum = Peucedanum* [q. v.].) Koch's name for the *Imperatoria ostruthium*.

Pucella. A virgin.

Pu'cha-pat. The *Pogostemon patchouli*.

Puchury. The *Pichurim* bean.

Puckyry. The same as *Puchury*.

Puckle. A provincial name for *Papula*.

Pud'ding-grass. The *Mentha pulegium*.

Pud'dingpipe tree. A name for the *Cassia fistula*.

Puden'da. (L. *puendus*, meet to be ashamed.) The parts of shame. Term for the external genital organs of either sex.

P. mulieb'ra. (L. *muliebris*, belonging to woman.) The female external genital organs, or *vulva*.

P. viro'rum. (L. *vir*, a man.) The male external genital organs.

Pudendag'ra. (L. *puenda*; Gr. *ἀργα*, a seizure. F. *puendagré*.) Pain in the external genital organs. Also, according to some, a term for *syphilis*.

P. pru'riens. (L.) A syn. for *Prurigo* of the *vulva*.

Puden'dal. (*Pudenda*.) Relating to the *pudenda*.

P. hæ'matoccele. A syn. for *Vulva, hæmatoma* of.

P. hæm'orrhage. Hæmorrhage from the *Pudenda*.

P. her'nia. A hernia descending by the side of the round ligament in women; it forms a prominence in the lower part of the labium majus.

P. nerve, infe'rior. A branch of the lesser sciatic nerve. It pierces the fascia just above the tuber ischii, and then ascends, supplying filaments to the front and external part of the scrotum and perineum.

P. plex'us of nerves. The plexus composed of filaments from the anterior branches of the third, fourth, and fifth sacral nerves.

P. plex'us of veins. A plexus formed round the neck of the bladder and urethra.

Pudenda'lis. (Mod. L.) *Pudendal*.

P. lon'gus infe'rior. The long or inferior pudendal nerve. See *P. nerve, inferior*.

Puden'dum. (L. *puendus*, meet to be ashamed.) Term for the external genital organs; more frequently in the plural, *pudenda*.

P. mulie'brë. (L. *muliebris*, belonging to woman.) The female external genital organs.

Pudibil'ia. (L. *puibilis*.) The male external genital organs.

Pudic. (L. *pudeo*, to be ashamed. F. *honteux*; I. *puendo*.) Relating to the *pudenda*.

P. ar'tery. A branch of the anterior division of the internal iliac artery. It leaves the pelvis by the great sciatic notch, and re-enters through the lesser, then passes on the inner side of the obturator internus enclosed in a tube of obturator fascia, to supply the perineum, scrotum, and penis in the male, and the labium and clitoris in the female.

P. ar'tery, acces'sory. A vessel which occasionally exists, arising from the pudic artery before it passes through the greater sciatic notch; it passes forward to the perineum, where it gives off branches, supplying the place of certain branches of the pudic which are absent.

P. ar'tery, exter'nal, deep, or infe'rior. A branch of the femoral; it supplies the integument of the scrotum and perinæum in the male, of the labium in the female.

P. ar'tery, exter'nal, superfi'cial. A branch of the femoral; it pierces the fascia close to the saphenous opening, and supplies the penis and scrotum in the male, the labium in the female.

P. nerve. Derived from the sacral plexus; its course and branches correspond to those of the *P. artery*. It supplies the skin of the penis and corpus cavernosum.

P. vein, superfi'cial, exter'nal. This vein receives superficial factors from the external genitals and the inner part of the thigh, and opens into the internal saphenous vein.

P. veins. These veins have the same distribution as the *Pudic artery*, except that they do not receive the dorsal vein of the penis.

Pu'ericulture. (L. *puer*, a child; *culture*. F. *puériculture*; G. *Kinderpflge*.) The art of bringing up children (Caron). It includes all the physiological, chemical, and hygienic aspects which rightly bear upon the subject; together with the hygiene of the newly married and of the pregnant woman. (Littre.)

Pu'erile. (L. *puerilis*; F. *puénil*; G. *rauschend*.) Relating to, or resembling, childhood or its attributes; childish.

P. breath'ing. Breathing in the adult resembling the normal, healthy breathing of

childhood. The respiration is sharper than normal, especially during expiration, with increased total duration but unaltered relative duration of inspiration and expiration, the quality of the respiratory sounds also remaining unaltered. It indicates some pulmonary disease; but does not localise the affection nor indicate its character.

P. respira'tion. See *P. breathing*.

Pueril'itas. (L.) *Puerility*.

Pueril'ity. (*Puerilitas*.) Childishness. Term for senile dementia.

Puerit'ia. (L.) Childhood. Term applied up till the seventeenth year, or sometimes later.

Puer'pera. (L. *puer*, a child; *pario*, to bring forth. F. *puerpère*.) A woman in labour or childbed.

Puer'peral. (*Puerpera*. F. *puerpéral*.) Relating to, or consequent on, parturition.

P. colp'i'tis. See *Colpitis*, *puerperal*.

P. convul'sions. (F. *convulsions des femmes enceintes et en couche*; G. *Eklampsie in der Schwangerschaft und im Wochenbett*.) A kind of epileptiform convulsions occurring in late pregnancy, in labour, or after labour; associated with loss of consciousness, and often, though by no means always, with albuminuria. They have been variously attributed to uræmia, anæmia, a watery condition of the blood, &c.

P. diabe'tes. During the puerperium the urine is often saccharine, containing lactose, this symptom being usually contemporaneous with the beginning of lactation. Its amount generally corresponds with the quantity of milk secreted. It disappears when the formation and consumption of milk are balanced; but reappears when lactation diminishes or ceases, or if the breasts remain unemptied. (Spiegelberg.)

P. eclamps'ia. (Ἐκλάμπω, to flash forth, burst forth violently.) Syn. for *P. convulsions*.

P. fe'ver. (F. *fièvre puerpérale*. G. *Puerperalfieber*, *Kindbett-fieber*.) A continued fever beginning three or four days after delivery, sometimes later. It is a form of *Septicæmia*, is very contagious, and has frequently been spread by medical attendants. Its cause is the introduction of septic matter into the system, in connection with lesions of the genital organs, retained placenta, or a putrid fœtus, or by the hand of the medical attendant. Its symptoms vary widely. There are usually rigors, headache, high temperature (103° F., or higher), obstinate vomiting, diarrhœa, and arrest of lochia. Peritonitis is the rule; thrombosis and embolism may occur, and also signs of general pyæmia. Complications, such as pericarditis, pleurisy, and pneumonia, may arise, and sup-puration of joints. The disease runs a rapid course, ending fatally usually in about a week.

P. fe'ver, arthrit'ic. *P. fever* in which pyæmic arthritis supervenes. See main heading.

P. fe'ver, bilious. *P. fever* in which bilious vomiting is a marked symptom.

P. fe'ver, malign'ant. Another name for true *P. fever*, to distinguish it from *P. sapræmia*.

P. insan'ity. Derangement of mind connected with child-bearing; usually considered under three distinct heads, according as it occurs in gestation, childbed, or lactation. The first occurs early in pregnancy, and usually passes off soon; in case it does not, matters are not improved by premature delivery, melancholia is the

rule. The second may occur in the first few days after delivery, or at the interval of fourteen days, or later. The patient may be maniacal or melancholic. The third is the outcome of exhaustion, and is usually melancholic.

P. ma'nia. See under *P. insanity*.

P. periton'i'tis. This occurs either in connection with *P. fever*, or, independently of it, as a local inflammatory phenomenon due to the spreading of inflammation from the uterus.

P. sapræ'mia. *Sapræmia* arising in the course of the puerperium, from some focus of decomposition in the genital tract.

P. scarlatin'oid. Also termed *Erythema diffusum* (Braun) and *Purpura* (*Porphyra* of Retzius). A cutaneous rash resembling that of Scarlatina, but unaccompanied by fever, occurring occasionally in lying-in women, and apparently due to excessive perspiration. Vesication and pustulation sometimes supervene, over the parts affected. (Littre.)

P. septicæ'mia. See *P. fever*.

P. state. See *Puerperium*.

P. tet'anus. Tetanus occurring during the puerperium. It is a rare disease, and is usually fatal.

P. thrombo'sis. (Θρόμβος, a lump, a clot of blood.) Blood-clot in the right heart or pulmonary arteries, either formed *in situ* or carried thither; a possible cause of sudden death after delivery. It may occur in connection with or apart from embolism.

P. vagin'i'tis. The same as *P. colpitis*.

Puerperality. (F. *puerpéralité*.) A term for the *Puerperal state*.

Puerperium. (*Puerpera*.) 1. A lying-in, confinement—including labour, and the period of confinement subsequent to it. 2. A new-born child.

Puer'pero-gonorrhœ'al salpin-gi'tis. See under *Salpingitis*.

Puerperopyra. (*Puerperium*; πυρ, a fever.) Puerperal fever. (Eisenmann.)

Puer'pero-ty'phus. Term for the *typhoid state* when it comes on during the course of any disease of the puerperium.

Puerperous. The same as *Parturient*.

Puer'pery. The *Puerperium*.

Puff, veiled. (F. *souffle voilé*.) A modification of *cavernous breathing* described by Laennec, in which there is a sound as of the to-and-fro movement of some kind of solid partition ("veil") between the cavity and the ear listening.

P. ball. The Genus *Lycoperdon*. Common name of *Lycoperdon giganteum*.

P. fist. Syn. for *Puff-ball*.

Puffiness. Soft swelling. Applied to œdema.

Puffy swelling, Pott's. See *Pott's puffy swelling*.

Pug. An abbreviation of *pugillus*, used in prescriptions.

Pugillus. (A handful. Dim. from L. *pugnus*, the fist. F. *poignée petite*.) Pharm. A small handful, or pinch; usually estimated as about one-eighth of a complete handful.

Pugioniform. (L. *pugio*, a dagger; *forma*, shape.) Dagger-shaped.

Pug'nus. (L. *pugnus*, the fist.) The same as *Manipulus*.

Puke. Vulgar term for *Vomit*.

Puke-weed. A common name for the *Lobelia inflata*.

PUKING—PULMONARY

Pu'king. Vomiting.

P. fe'ver. *Milk fever.*

Pulas'ki. A county of Virginia, noted for its chalybeate springs.

Pulassar'i bark. Name for the bark of the *Alyxia stellata* (q. v.).

Pul'bion. Old term synonymous with *Pulvinar*.

Pulegiol'des. Resembling the *Pulegium*.

Pule'gium. (L. *pulex*, a flea. F. *pouliot*; G. *Floh-kraut*.) Penny-royal, flea-bane, or flea-wort. The pharmacopœial name of the dried herb *Mentha pulegium*.

P. cervi'num. Hart's pennywort. *Mentha cervina*, (Linn.)

Pule'ium. The same as *Pulegium*.

Pulex. (L. *pulex*, *pulicis*, the flea. F. *puce*; G. *Floh*.) A genus of the *Aphaniptera*, Class *Insecta*.

P. irri'tans. (L. *irrito*, to excite.) The common flea.

P. pen'etrans. (L. *penetro*, to enter.) The Chigoe or Jigger of the West Indies and South America. Its habitat is the cellular tissue, generally of the feet, where the female lays her eggs, and sets up irritation, often causing sloughing.

Pulicaria dysenter'ica. Syn. for *Inula dysenterica*.

Pulicaris. The same as *Pulicarius*.

P. her'nia. (L. *hernia*, a rupture.) A name for the *Plantago psyllium*.

P. mor'bus. A descriptive term for *Typhus*, from the *petechiæ* occurring in that disease.

Pulicarius. (L. *pulex*, the flea.) Having spots like flea-bites.

Pulica'tio. (*Pulex*.) The condition of being infested with fleas.

Pulicene. (*Pulex*.) Belonging to fleas.

Pulicose. (*Pulex*.) Abounding in fleas.

Pul'ler's springs. Warm mineral springs in Upper Ruby Creek, Madison County, Montana. (Billings.)

Pullna. In Bohemia. Noted for its two mineral springs.

1. *Hegrat's Rudolfsquelle* contains, in 1000 parts, 8.83 of sodium sulphate and 9.03 of magnesium sulphate.
2. The *Bitterwasser* contains, in 1000 parts, 12.87 of sodium sulphate and 15.16 of magnesium sulphate.

Pul'lulate. (L. *pullulo*.) Tosprout, or bud.

Pullula'tion. (L. *pullulo*, to sprout.) Budding, or sprouting. Also, a morbid growth or sprouting of tissue.

Pulmen'tum. (L.) The same as *Puls*.

Pul'mo. (L.) The lung.

Pul'mo-aort'ic. Belonging to the lungs and aorta, or to the pulmonary artery and aorta.

P. canal'. The *Ductus arteriosus*.

Pulmobran'chiæ. The modified gills of certain animals (Arachnida, air-breathing Mollusca) adapted for air-breathing.

Pulmo-bran'chial. See *Pulmo-branchiate*.

Pul'mo-bran'chiate. Having *Pulmo-branchiæ*.

Pul'mo-car'diac. Belonging to the lung and heart.

P. re'gion. That portion of the surface of the thorax where the lung overlaps the heart.

Pul'mo-gas'tric. Belonging to the lung and stomach.

P. re'gion. That part of the surface of the thorax where the spleen and part of the stomach are overlapped by lung.

Pul'mo-hepat'ic. Belonging to the lung and liver.

P. re'gion. That part of the surface of the thorax where the liver is overlapped by lung.

Pulmo'meter. (L. *pulmo*, the lung; Gr. μέτρον, a measure. F. *pulmomètre*.) An instrument for measuring the capacity of the lungs; see *Spirometer*.

Pulmo'metry. The determination of the capacity of the lungs in reference to the quantity of air respired.

Pulmo'nar. (L. *pulmo*, the lung.) Having lungs, or organs analogous to lungs.

Pulmonaria. (L. *pulmo*, the lung.) A Genus of plants, Order *Boraginaceæ*. Also, a syn. for *Pneumonia*.

P. arbo'rea. The *Lichen pulmonarius*.

P. gal'lica. The *Hieracium murorum*.

P. lu'tea. The *Hypochaeris maculata*.

P. macula'ta. The *P. officinalis*.

P. officina'lis. (F. *sauge de Jérusalem*, *herbe du cœur*.) The spotted lungwort, or Jerusalem cowslip or sago. Its leaves have been credited with demulcent properties, and recommended in bronchial and pulmonary affections.

P. virgin'ica. The *Mertensia virginica*.

Pulmonar'ious. (*Pulmo*.) Affected with disease of the lungs.

Pul'monary. (L. *pulmo*, the lung. F. *pulmonaire*.) 1. Belonging to the lungs. 2. Belonging to the pulmonary artery.

P. air-cells. See *Lung*, *air-cells of*.

P. alve'oli. The same as *P. air-cells*.

P. ap'oplexy. (Αποπληξίω, to cripple by a stroke. F. *apoplexie pulmonaire*; G. *Apoplexie der Lungen*.) A term which has arisen by attaching a name descriptive of a phenomenon, to one of the commoner pathological conditions with which that phenomenon is associated. Thus, the term Apoplexy denotes a sudden striking down; but the commonest cause of this condition being hæmorrhage into the brain, the word became transferred to this, in defiance of its real etymological sense, and further, to hæmorrhage in other places. The term Pulmonary Apoplexy denotes a form of hæmorrhage into the interalveolar texture of the lungs and air-cells, a condition depending usually upon thrombosis, which in its turn depends upon obstructed, or feeble circulation, or both. It occurs most commonly in heart disease, but also in Bright's disease, embolism of the pulmonary artery, pneumonia, and pyæmia. The post-mortem appearances are those of a number of dark red, airless patches, of brittle texture, and various sizes, commonest at the bases, and on or near the surface of the lung. They undergo decolourisation.

P. ar'tery. (L. *arteria pulmonaris communis*; F. *artère pulmonaire*; G. *Lungenschlagader*.) The main trunk whereby the blood is carried from the right ventricle of the heart to the lungs, about two inches in extent, dividing into *right* and *left* pulmonary arteries, which carry the blood to their respective lungs.

P. capil'laries. A minute and delicate vascular meshwork, the ultimate branches of the pulmonary arteries, which ramifies on the walls of the air-cells and intercellular passages of the lungs, directly below the mucous membrane.

P. car'tilage. *Med.* Clinical term for

PULMONATA—PULP

the second left costal cartilage, the seat of election for auscultating either the pulmonary or tricuspid valve of the heart.

P. catarrh'. (*F. catarrhe pulmonaire*; *G. Lungenkatarrh*.) Term formerly in use for *Bronchitis*.

P. circula'tion. The same as *Pulmonic circulation* (q. v.).

P. collapse'. A state of *carnification*, usually of a part or parts of the lung, the affected part becoming empty of air, and shrinking. *Atelectasis* presents a condition indistinguishable from that of true collapse, and is sometimes included under this heading.

P. consump'tion. (*Phthisis pulmonalis*. *F. phthisie*; *G. Schwindsucht*.) See *Phthisis, pulmonary*.

P. emphyse'ma. See *Emphysema of lung*.

P. fis'tula. A communication formed between the parenchyma of the lung and one of the following: a bronchus, the pleura, or the exterior of the chest, formed by the breaking down and opening into one of these of a tuberculous cavity, a pulmonary abscess, a mass of gangrene, or by a wound of the lung. A pulmonary fistula opening into the pleura forms a pyothorax, hydrothorax, hydropneumothorax, or a pneumothorax. In some cases pus has been known to pass along a pulmonary fistula into the subcutaneous cellular tissue, either simply accumulating there or bursting through the skin. In the same way, in wounds of the lung, air has been known to track beneath the skin, forming a wide tract of subcutaneous emphysema.

P. glands. Term for the lymphatic glands in relation with the bronchioles within the lung substance.

P. groove. (*L. sulcus pulmonalis*. *G. Lungenfurche*.) The deep groove on either side of the posterior wall of the thoracic cavity formed by the backward curve of the ribs between their vertebral end and angle.

P. hæmorrhage. This occurs under a variety of conditions. Its sources may be stated as follows:—Excessive hyperæmia of bronchial tubes or the walls of pulmonary cavities; bursting of aneurysms into the lungs or air-passages; laying open of arteries or veins by breaking-down of morbid growths, and especially of tubercle; and pulmonary apoplexy.

P. incom'petence. Incompetence of the pulmonary valves of the heart—the rarest form of valvular lesion. It is due either to congenital abnormality, or as a consequence of some disease, such as ulcerative endocarditis. A diastolic murmur can be heard over the region of the *pulmonary cartilage*.

P. lob'ules. See *Lung, lobules of*.

P. lymphatics. See *Lung, lymphatics of*.

P. mat'ter, black. The carbonaceous particles found distributed through the connective-tissue septa of the lung in adults who have lived in towns, or in any place where the air contains soot-particles.

P. murmur. 1. A normal phenomenon of the lungs; the vesicular murmur audible over the lungs in auscultation. 2. A morbid phenomenon of the *P. valve*; a bruit heard in the region over that valve.

P. mur'rain. A syn. for *Pleuropneumonia contagiosa*.

P. nerves. Branches of the pneumogastric nerve within the thorax. 1. The anterior pulmonary branches join with the sympathetic to

form the *pulmonary plexus*, *anterior* in front of the root of the lung. 2. The posterior pulmonary branches have the same arrangement at the back of the root of the lung, and form, with the sympathetic, the *pulmonary plexus, posterior*.

P. pleu'ra. See *Pleura, pulmonary*.

P. plex'us, ante'rior. The nerve-plexus formed on the front of the root of the lung by branches of the pneumogastric nerve, and filaments from the sympathetic.

P. plex'us, poste'rior. The nerve-plexus formed at the back of the root of the lung by the posterior pulmonary branches of the pneumogastric nerve, together with filaments from the sympathetic. It is considerably larger than the *P. plexus, anterior*. Both anterior and posterior plexuses give off branches for the supply of the lung.

P. si'nuses. Three pouches situated between the semilunar valves and the beginning of the *F. artery*. More commonly termed *Val-salva, sinuses of* (q. v.).

P. valves. The three semicircular folds of lining membrane supported by fibrous tissue which guard the orifice of the *F. artery*. Also called *semilunar valves*. Their convex margin is attached to the arterial wall, their straight margin is free.

P. veins. (*Mod. L. vena pulmonales*. *F. veines pulmonaires*; *G. Lungenblutadern*.) The four vessels by which the blood is carried from the lungs into the *left auricle* of the heart,—two opening on the right side and two on the left. They are not guarded by valves.

P. ve'sicles. Another name for *Lung, air-cells of*.

Pulmona'ta. (*L. pulmo*, the lung.) Neut. pl. Term for a Class of land or freshwater Mollusca which breathe by means of a pulmonary sac.

Pulmo'rate. (*L. pulmo*, the lung.) Having lungs, or similar organs of aerial respiration.

Pulmonec'tomy. See *Pneumonec'tomy*.

Pulmon'es. (*L.*) Plur. of *Pulmo*.

P. tartariza'ti. (*Mod. L. tartarizatus*, from *tartar*.) A term for *Lithiasis pulmonum*.

Pulmo'nia. (*Pulmo*.) Old term formerly used as syn. for *Peripneumonia*.

Pulmon'ic. (*L. pulmo*, the lung. *F. pulmonique*; *I. polmonico*; *G. pulmonisch*.) Belonging to the lungs, pulmonary.

P. circula'tion. (*G. Lungenkreislauf*.) The course of the blood from the right ventricle of the heart through the lungs, and back again to the left auricle.

P. fe'ver. A syn. for *Pneumonia, tobar*.

Pulmoni'ferous. (*L. pulmo*, a lung; *fero*, to carry.) Lung-bearing. The same as *Pulmonate*.

Pulmoni'tis. (*L. pulmo*, the lung; *Gr. termination itis*; fem. adj. agreeing with [*νόσος*]. *F. pulmonite*.) More correctly *Pneumonitis* (q. v.).

Pulmo-trache'al. Belonging to the lungs and trachea.

Pulmo-vas'cular region. That part of the thorax where the origins of the large vessels are overlapped by the lung.

Pulp. (*L. pulpa*, the fleshy part of animal bodies or fruits. *F. pulpe*; *I. polpa*; *G. Pulpa, Brei*.) The soft part of fruits; the soft part of animal organs.

PULPA—PULSATION

P., athero'matous. Term for the products of fatty degeneration enclosed in a cavity whose walls are in a state of inflammation. See also *Atheroma*.

P. cavity. (L. *cavum dentis*; G. *Zahnhöhle*.) The cavity situated beneath the crown of a tooth, continuous with the canal which runs down the centre of the fang, and contains the dental pulp.

P., den'tal. (L. *pulpa dentis*. F. *pulpe dentaire*; G. *Zahnpulpa*.) The pulp of the teeth. The soft, vascular, highly nervous substance which is contained in the *pulp-cavity*. It consists of a loose connective-tissue and cells, with blood-vessels and nerves.

P., dig'ital. See *P. of fingers*.

P., fruit. See main heading.

P., hair. A syn. for *Papilla, hair*.

P. of dig'its. See *P. of fingers*.

P. of fin'gers. Term for the bulbous, highly sensitive extremities of the fingers.

P. of hair. See *P., hair*.

P. of intervertebral discs. The soft substance occupying the centre of the intervertebral discs, the remains of the notochord.

P. of tooth. See *P., dental*.

P., spleen. See *Spleen pulp*.

P., splen'ic. The same as *P., spleen*.

Pul'pa. (L.) *Pulp*.

P. Cas'siæ. See *Cassia pulpa*.

P. cerebra'lis. Cerebral pulp. Term for the brain substance.

P. den'tis. *Pulp of tooth*.

P. digito'rum. *Pulp of fingers*.

P. e fructibus cas'siæ. Name in the French Codex for *Cassia pulpa*.

P. ile'nis. (L. *lien*, the spleen.) Spleen pulp.

P. pi'li. The pulp of a hair, or *hair-bulb*.

P. pru'ni. See *Pruni pulpa*.

P. prunorum sylvestrium con'dita. (L. *conditus*.) The *Conser'va pruni sylvestris*.

P. tamarin'di. See *Tamarindi pulpa*.

P. testic'uli. Testicular pulp. A syn. for *P. testis*.

P. tes'tis. See *Testis pulpa*.

Pulpal'gia. (*Pulpa*; Gr. *ἄλγος*, pain.) A term for pain in the pulp of a tooth.

Pulpa'men. (L. *pulpamentum*.) A syn. for *Pulpa*.

Pulpa'tion. See *Pulping*.

Pulpefaction. (L. *pulpa*; *facio*, to make.) Reduction to a pulp.

Pul'per. (*Pulp*.) See under *Pulping*.

Pulpe'zia. An old term for *Apoplexy*. (Dornæus.)

Pul'ping. (*Pulp*.) The reduction of vegetable substances, such as fruits, to pulp. The substances are crushed in a mortar, and then pressed, by means of a wooden spatula called a *pulper*, through a hair sieve.

Pulp'itis. (L. *pulpa*, Gr. adj. termin. -*itis*.) Inflammation of the pulp of a tooth.

Pulpo'sus. (*Pulpa*.) *Pulpy*.

Pulp'y. Of the consistence of, or full of, pulp.

P. degenera'tion. Another name for *P. disease*.

P. disease'. The same as *Tumor albus*.

Pul'que. (Span.) A fermented liquor prepared by the Mexicans from the juice of several species of *Agave*.

P. bran'dy. *Mescal*.

P. plant. Term applied to several species of *Agave* which are used as sources of *Fulgue*.

Puls. (L. Gen. *pultis*. Gr. *πότης*.) A thick pottage made of meal, used by the Romans for diet, and also in sacrifices.

P. ex ov'is et lac'te. Pottage of eggs and milk, *oögala*.

Pul'sate. (L. *pulsare*, to beat.) To throb.

Pul'satile. (L. *pulsatilis*, that beats. F. *pulsatile*; G. *pulsirend*.) That beats or pulsates.

Pulsatilla. (L. *pulso*, to beat; so named, because easily shaken by the air. F. *pulsatille*; G. *Küchenschelle*.) The flowering herb of several varieties of *Anemone*, especially *P. nigricans* (*Anemone pratensis*), and *Anemone pulsatilla*. The herb should not be kept longer than a year. From it are prepared *Anemonin* (*Pulsatilla camphor*), and *Tinctura pulsatilla*.

P. cam'phor. *Anemonin*. White, volatile, crumbling crystals, obtained from *P. nigricans* and other varieties of *Anemone*. Poisonous in large doses. Has been given in spasmodic affections in doses of 1-60th to 1-12th of a grain.

P. nigricans. The *Anemone pratensis*. A source of *Anemonin*.

P. pat'ens. The *Anemone patens*.

P. praten'sis. (L. *pratium*, a meadow.) The *Anemone pratensis*. A source of *Anemonin*.

P., tincture of. Dried herb one part, proof spirit to percolate 10 parts. In large doses an irritant of the alimentary canal and kidneys, and paralyser of the medulla oblongata and spinal cord. It has been recommended in orchitis and epididymitis; but it was found of no value at the Lock Hospital. (*Lancet*, 89, ii, 216.) *Dose*, 5 to 30 min.

P. vulgar'is. The *Anemone pulsatilla*.

Pulsa'ting. Throbbing, evincing a rhythmic expansile movement.

P. aor'ta. An aorta whose pulsations can be abnormally readily felt or even seen. This phenomenon occurs in thin subjects, and generally in those who are either neurotic or anæmic.

P. bron'chocele. A syn. for *P. goitre*.

P. empye'ma. An empyema exhibiting pulsation through the chest-walls. It occurs usually on the left side, very rarely on the right. The pulsation from the heart is transmitted to the pus in the pleura.

P. goitre. A goitre exhibiting pulsation.

P. pleur'isy. This phenomenon hardly ever occurs in a serous pleurisy; when present it is almost invariably in an empyema. See *P. empyema*.

P. tu'mours. See *Tumours, pulsating*.

Pulsa'tio. (L. *pulsare*, -*atum*, to beat, throb.) Pulsation.

P. cor'dis. (L. *cor*, *cordis*, the heart.) A term for *Palpitation*.

Pulsa'tion. (L. *pulsatio*, a beating, throbbing. F. *battement*; I. *pulsazione*; G. *Pulsiren*.) An expansile throb, such as that of the heart or arteries.

P., abdom'inal. This may be either *P., abdominal, idiopathic*, or consequent on the presence of a pulsating tumour. See *Tumours, pulsating*.

P., abdom'inal, idiopath'ic. Another name for *P., aortic*.

P., aor'tic. Term used in two senses, either to mean normal pulsation of the aorta in general, or *Pulsating aorta* (q. v.).

P., epigas'tric. Pulsation observable in the epigastrium, transmitted from the heart. It

PULSATIVUS—PULSE

occurs under certain pathological conditions:—enlargement of the right side of the heart, aneurysm of the aorta, tumours in connection with the aorta; and also, in health, under the influence of excitement or violent exercise.

P., hepatic. Pulsation of the liver, consequent on a backward pulse in the vena cava inferior transmitted from the heart through an incompetent tricuspid valve.

P., stair-case. Term for the increasingly long contractions of the frog's heart which has been experimentally filled with serum.

P., suprasternal. Pulsation observable in the suprasternal notch. This is an abnormal condition, and it may be due to aneurysm of the innominate artery or the aortic arch.

P., venous. See *Pulse, venous*.

Pulsativus. (Mod. L.) Pulsating.

Pulsatory. Pulsatile.

Pulse. (L. *pulsus*, beating. F. *pouls*; I. *polso*; G. *Puls*.) The expansile beat or throb felt in the arteries, corresponding with the contraction of the ventricles of the heart. It is due to an expansion-wave caused by the injection of blood into an already full aorta.

Also (L. *puls, pulsitis*; see *Puls*), general term for all kinds of grain contained in husks or shells.

P., abrupt. A syn. for *F., quick*.

P., allorhythmic. (ἄλλος, other; ῥυθμός, rhythm.) A pulse that varies in rhythm, from time to time.

P., anacrotic. See *Anacrotic*.

P., aneurysmal. The radial pulse characteristic of the presence of an aneurysm of the thoracic aorta or one of its large branches. There is a slow rise, long duration, and slow fall. The radial pulse on the affected side is often delayed.

P., angry. A syn. for *P., wiry*.

P., apoplectic. A term for the small, high-tension pulse of lithæmia and chronic interstitial nephritis.

P., arachnoid. (Ἀράχνη, a spider.) Old term for a small, feeble, flickering pulse.

P., ardent. A pulse with a quick and full wave, which seems, as it were, to rise to a point.

P., bounding. A frequent, full and tense pulse, the waves seeming to bound one after the other.

P. breath. See *Breath, pulse*.

P., capillary. A phenomenon sometimes seen in aortic regurgitation, the capillaries of the skin changing colour with every beat of the heart.

P., caprizant. (F. *pouls caprisant*.) The same as *P., goat-leap*.

P., catacrotic. See *Catacrotous*.

P., catacrotous. The same as *P., catacrotic*.

P. clock. An apparatus for recording on a dial the volume and tension of the pulse and the diameter of the artery under observation.

P., collapsing. A syn. for *P., Corrigan's*.

P., compressible. A pulse that is readily compressed, or obliterated by pressure. Also termed *P., soft*.

P., contracted. Term for a small, hard pulse.

P., convulsive. Term for a pulse which is irregular either in frequency or tension, resembling the irregular, convulsive contractions of a muscle-fibre.

P., Corrigan's. See *Corrigan's pulse*. Also known as the "Water-hammer Pulse," or "Pulse of unfilled arteries."

P., critical. A pulse which becomes full and soft after having been small, hard and frequent. It is considered to be the characteristic pulse of the *crisis* in a disease.

P. curve. The curve of the pulse (the radial being most commonly taken) as registered by the sphygmograph.

P., decurtate. (L. *decurtatus*, shortened, curtailed.) A syn. for *P., myurous*.

P., deep. Term for a pulse which cannot be felt without using firm pressure.

P., deficient. Another name for *F., flickering*.

P., depressed. A pulse which is difficult to feel and, at the same time, is weak.

P., developed. Term for a full, strong and frequent pulse.

P., dicrotic. See *Dicrotic pulse*.

P., double. Syn. for *Pulsus bigeminus* (q. v.)

P., drop'ed-beat. A syn. for *F., inter-mittent*.

P., elastic. The same as *P., supple*.

P., endopleural. Term for that degree of pulsation in a *Pulsating pleurisy* which can only be made manifest by means of the manometer.

P., entoptic. (ἔντοός, within; ὀπτικός, belonging to sight.) The phenomenon of a subjective illumination of a dark visual field corresponding with each beat of the heart. It occurs after excessive exertion.

P., epigastric. See *Pulsation, epigastric*.

P., equal. Term for a pulse that is regular in character and volume, and also in rhythm.

P., exopleural. Term for pulsation in a *Pulsating pleurisy* which is readily visible externally. (cp. *P., endopleural*.)

P., false, intermission of. See *P., intermission of, false*.

P., febrile. The feverish pulse, or pulse characteristic of fever. This, in its most marked form, is frequent, full and soft, and exhibits a well-marked dicrotism.

P., filiform. (L. *filum*, a thread; *forma*, resemblance.) The *P., thready*.

P., flickering. A pulse so feeble that some of the beats are imperceptible, and the pulsation seems about to cease.

P., formicant. (L. *formica*, an ant.) A small, feeble pulse, supposed to resemble the movements of an ant.

P., frequent. A pulse which recurs frequently or at short intervals, as distinguished from a *quick* pulse, in which the pulse-wave has a quick rise.

P., full. A pulse in which the artery becomes well filled at each pulsation.

P., gaseous. A term for *P., running*.

P., goat-leap. A form of pulse in which there is a feeble, incomplete beat, followed by a fuller, complete one; supposed to resemble the leaping of a goat.

P., guttural. (L. *guttur*, the throat.) A pulse of a certain character which was at one time considered prognostic of a fatal termination in throat affections.

P., hæmorrhagic. The pulse typical of the period immediately following a hæmorrhage. It is a *P., running*; or, if the hæmor-

PULSE

rhage has been extreme, it may be a *P.*, *flickering*.

***P.*, hæmorrhoid'al.** A variety of critical pulse (see *P.*, *critical*), irregular in force and rhythm, which was supposed to be indicative of a *hæmorrhoidal flux*.

***P.*, hard.** A pulse may feel hard either from being a high-tension pulse (see *P.*, *high-tension*), or from hardness of the arterial wall due to calcareous degeneration, whether primary or consequent upon atheroma. The former only is, correctly speaking, the hard pulse.

***P.*, hec'tic.** The feeble, soft and frequent pulse usually observed in cases of hectic fever.

***P.*, hepatic.** A certain character of pulse which was supposed to indicate affections of the liver.

***P.*, heterochron'ic.** (ἑτερος, other, different; χρόνος, time.) A syn. for *P.*, *irregular*.

***P.*, high-ten'sion.** The pulse present where the peripheral resistance of the circulation is increased, and the heart-beats still retain their force, as in lithæmia and chronic interstitial nephritis. The impulse is gradual, the duration long, the fall gradual, and the artery can be felt like a firm cord, between the pulse-beats.

***P.*, hyperdicrot'ic.** See under *Hyperdicrotic*.

***P.*, hyperdi'crotous.** The same as *P.*, *hyperdicrotic*.

***P.*, infre'quent.** A pulse in which the repetition of beats is infrequent, as distinguished from the so-called *slow* pulse, in which the pulse-wave has a slow rise.

***P.*, intercur'rent.** A form of irregular pulse in which there is an interposition of an extra beat, from time to time.

***P.*, intermis'sion of.** See *P.*, *intermittent*.

***P.*, intermis'sion of, false.** This occurs in cases in which the ventricular systole is, at certain regular or irregular intervals, too weak to give rise to a perceptible pulse.

***P.*, intermit'tent.** A pulse in which a beat is entirely dropped from time to time, usually at regular intervals. The regularly intermittent pulse is the least serious of all varieties of irregular pulse, being usually due to reflex nervous influence consequent upon some gastric disorder.

***P.*, intesti'nal.** A variety of *Critical* pulse supposed to indicate an intestinal evacuation.

***P.*, in'tricate.** Term for a small, infrequent and irregular pulse.

***P.*, irreg'ular.** A pulse may be irregular in frequency, force, or volume, or in all of these.

***P.*, jar'ring.** Another name for *P.*, *vibrating*.

***P.*, jerk'ing.** A variety of the *P.*, *sharp* which has a large wave.

***P.*, ju'gular.** Pulsation observable in the jugular veins in the neck. It may be merely transmitted from the adjacent carotid artery, or may be true venous pulsation from tricuspid regurgitation.

***P.*, lan'guid.** An infrequent, feeble pulse.

***P.*, large.** One in which the pulse-wave is an ample one.

***P.*, long.** A pulse with a long pulse-wave.

***P.*, low.** A pulse so small as to be only with difficulty perceptible.

***P.*, low-ten'sion.** A pulse that has a quick rise and quick fall, and in which the artery is collapsed and impalpable between the beats.

***P.*, meas'urer.** An instrument which communicates the movements of the pulse to a column of fluid; used to estimate the amplitude of the pulse.

***P.*, monocrot'ic.** A pulse in which there is merely a single rise and fall, without a secondary wave. It indicates circulatory failure.

***P.*, mono'crotous.** The same as *P.*, *monocrotic*.

***P.*, myu'rous.** See *Myurous* pulse.

***P.*, na'sal.** Old term for a certain kind of pulse which was rather fancifully supposed to indicate the termination of any irritation in the nasal cavity.

***P.*, nat'ural.** The pulse of health; one which, varying within fairly wide limits in different individuals, does not show any unnatural or morbid characteristics.

***P.*, of irrita'tion.** A small, frequent, hard pulse, characteristic of nervous irritation.

***P.*, of sweat.** A variety of *P.*, *critical*, supposed to indicate the onset of sweating.

***P.*, organ'ic.** A variety of pulse occurring in disease, supposed to indicate, by its characters, the organ affected.

***P.*, paradox'ical.** See *Pulsus paradoxus*.

***P.*, pec'toral.** A variety of *P.*, *critical* occurring towards the termination of pulmonary affections.

***P.*, polycrot'ic.** See *Polycrotic*.

***P.*, quick.** A pulse which has a quick-rising wave, as distinguished from a pulse which has a *frequent* rhythm.

***P.*-rate.** The number of beats of the pulse in a given time, the time taken being usually understood to be a minute.

***P.*, recur'rent.** Term for the phenomenon of the appearance of a pulse on the distal side (side further from the heart) of the point of compression of an artery, the compression being strong enough to obliterate the pulse to begin with.

***P.*, re'nal.** A term given to *P.*, *high-tension*, because it is in chronic interstitial inflammation of the kidneys that this pulse is most commonly observed.

***P.*, resist'ing.** The same as *P.*, *hard*.

***P.*, respira'tory.** Term for the pulsation observable consequent on variation in fulness with the respiratory movements of the large arteries of the neck.

***P.*, rhythm.** The relation of the successive beats of the pulse in time; whether separated by equal or unequal intervals. Variations in rhythm fall into two main classes, intermittence and irregularity.

***P.*, run'ning.** An extremely feeble, frequent pulse, with low tension in the arteries, in which one pulse-wave seems to run into the next, with no apparent interval. It is present notably after considerable hæmorrhage.

***P.*, se'nile.** The pulse characteristic of old age. The arteries are inelastic; the secondary waves on the descending line are prominent, as shown by the sphygmograph, and the first descending wave is relatively large.

***P.*, sharp.** The same as *P.*, *quick*.

***P.*, sharp-tailed.** See *Myurus*.

***P.*, short.** A pulse with a short wave.

***P.*, slow.** A pulse which has a slowly-

PULSELESS—PULSUS

rising wave, as distinguished from a pulse which has an *infrequent* rhythm.

P., small. A pulse with a wave of but small amplitude.

P., soft. An easily compressible pulse.

P., splash'ing. A syn. for *P., jerking*.

P., steel-ham'mer. Term for the abrupt full pulse in the arteries in connection with a joint affected with acute rheumatism.

P., strong. A pulse with a strong wave, indicating a powerfully contracting left ventricle.

P., subun'gual capillary. A pulsation observed in the matrix of the finger-nail by raising the free edge of the nail. It is believed to be due to a serous reflux synchronous with the cardiac systole.

P., sup'ple. Term for a soft, full pulse.

P., supradicrotic. Wolff's term for a dicrotic pulse in which the dicrotic wave is very similar in character to the wave produced by the heart-beat itself.

P., tense. See *P., high-tension*.

P., thread'y. A small, feeble, flickering pulse, feeling like a thread beneath the finger; indicative of great physical prostration.

P., throb'ing. A syn. for *P., collapsing*.

P., trac'ing. The phenomenon of the pulse as registered by the sphygmograph.

P., trem'ulous. A pulse in which a number of oscillations can be distinguished, giving to each beat a tremulous character.

P., tricrotic. Term for the normal pulse, because of its possessing a primary and two secondary waves.

P., un'dulating. Term for a full, soft pulse, in which the pulse-waves follow one another without apparent interval.

P., une'qual. A pulse which varies in strength.

P., ur'inal. Term for a pulse which was supposed to precede a flow of urine.

P., u'terine. Term for a pulse which was supposed to indicate the menstrual flow, or the onset of metrorrhagia.

P., vagi'nal. The pulsation of the vaginal artery, which becomes very marked during pregnancy.

P., ve'nous. A term applied to different conditions. 1. To a pulse carried on from the arteries through the capillaries into the veins, *e. g.* in a secreting salivary gland.

2. To the backward propagation of a pulsation, *e. g.* in tricuspid regurgitation, when pulsation is seen in the great veins and the liver.

3. To variations of pressure in the great veins due to the movements of respiration.

P., vermic'ular. Term for a pulse in a tortuous artery, which feels like the movements of a worm under the finger.

P., vibra'ting. Term for a tense pulse with a quickly-rising wave, which feels like the vibrations of a tense piece of catgut.

P., wa'ter-ham'mer. See *P., Corrigan's*.

P.-waves. The component elements of the apparently simple movement of the pulsating artery, as detected by the sphygmograph. These are chiefly the *summit* wave, in which the line of ascent ends; the *tidal* or first secondary wave, due to the distension of the arteries; and the *dicrotic* or great secondary wave, produced probably by the aortic recoil.

P., wi'ry. Term for a small, frequent,

tense pulse in which the artery feels like a wire when rolled under the finger. The characteristic pulse of peritonitis is a typically wiry pulse.

Pulseless. (*Pulse*; *less* = loose, signifying devoid of, free from.) Without pulse or pulsation.

Pulselessness. The condition of being *pulseless*.

Pulsella. Pl. of *Pulsellum*.

Pulsellum. (Dim. of *Pulsus*. Pl. *Pulsella*.) The modified *flagellum* of a spermatozoön.

Pulsi'fic. (*Pulse*; L. *facio*, to make.) Giving rise to *pulsation*.

Pulsile'gium. (L. *Pulsus*; *lego*, to read.) The same as *Pulsometer*.

Pulsilo'gium. (L. *pulsus*; *lego*, to read.) See *Pulsilegium*.

Pulsil'ogon. The same as *Pulsilogium*.

Pulsil'ogram. Term for the recorded tracing of a *Pulsilogium*; a syn. for *Sphygmogram*.

Pulsimanti'a. (L. *pulsus*; Gr. *μαντεία*, divination.) A prognostication founded on the characters of the pulse.

Pulsi'meter. See *Pulsometer*.

Puls'ograph. See *Sphygmograph*.

Pulso'meter. (L. *pulsus*; Gr. *μέτρον*, a measure.) Syn. for *Sphygmometer*.

Pulsus. (L.) The pulse.

P. abnorma'lis. Abnormal pulse. A syn. for *Pulse, irregular*.

P. acrit'icus. (L. *acritudo*, sharpness.)

The pulse of irritation.

P. æqua'lis. The *Pulse, equal*.

P. alter'nans. A variety of pulse sometimes observed in cerebral cases, where a large pulsation alternates with a small one.

P. an'nuens et circum'nuens. (L. *annuo*, to nod; *circumnuo*, to nod around.) The same as *Pulse, deficient*.

P. araneo'sus. (L. *araneosus*, full of spiders' webs.) The *Pulse, arachnoid*.

P. bi'crotus. The *Pulse, dicrotic*.

P. bife'riens. See *P. bisferiens*.

P. bigem'inus. Traube's term for an irregular pulse in which the rhythm is constituted by two pulsations followed by a pause.

P. bisfe'riens. (L. *bis*, twice; *feriens*, striking.) A syn. for *P. bigeminus*.

P. bisil'iens. A syn. for *P. bigeminus*.

P. bis pul'sans. A syn. for *P. bigeminus*.

P. cap'rizans. The *Pulse, caprizant*, or *P., goat-leap*.

P. cel'er. (L.) The *quick* pulse (see *Pulse, quick*), as distinguished from the *frequent* pulse.

P. cel'er tri'crotus. A syn. for *P. tricroticus*.

P. cerebra'lis. The cerebral pulse. Term for a slow, tense pulse sometimes observed in apoplexy. Also, term for a pulse, irregular both in volume and rhythm, observed in cerebral cases, especially in meningitis.

P. contrac'tus. Contracted pulse. Term for a small, high-tension pulse.

P. contur'nisans. Term for a double or treble compound pulse (Foster's Dict.).

P. cor'dis. (L.) "The pulse of the heart." A term for the præcordial impulse.

P. cras'sus. (L. *crassus*, thick.) Term for a strong, full pulse.

P. cre'ber. The frequent pulse.

P. de'bilis. The weak pulse.

P. defic'iens. (L.) The *Pulse, deficient*.

PULSUS—PULVERISABLE

P. dicrot'icus. The dicrotic pulse. See *Pulse, dicrotic*.

P. dicrotus. The same as *P. dicroticus*.

P. differens. The differing pulse. Term for unequal pulses on the two sides.

P. dorcad'isans. (L.) The same as *P. caprizans*.

P. du'plex. (L.) The same as *P. dicroticus*.

P. durius'culus. The somewhat harder pulse. A syn. for *Pulse, high-tension*.

P. du'rus. The *Pulse, hard*.

P. elas'ticus. The *Pulse, elastic*.

P. endopleur'icus. The *Pulse, endopleural*.

P. exopleur'icus. The *Pulse, exopleural*.

P. fi'brans. The *Pulse, jerking*.

P. fili'formis. The *Pulse, filiform*.

P. fluctuo'sus. Fluctuating pulse; another name for the *Pulse, undulating*.

P. flu'ens. Flowing pulse; the same as *P. fluctuosus*.

P. formi'cans. The *Pulse, formicant*.

P. for'tis. The *Pulse, strong*.

P. fre'quens. (L.) The *frequent* pulse (see *Pulse, frequent*), as distinguished from the *quick* pulse.

P. fusa'lis. Another name for *P. caprizans*.

P. gazellans. Another name for *P. caprizans*.

P. heterochron'icus. Heterochronic pulse.

P. hu'milis. The *Pulse, low*.

P. hyperdicrot'icus. The *Pulse, hyperdicrotic*.

P. imminu'tus. A syn. for *P. myurus*.

P. inæqua'lis. Unequal pulse. The same as *P. differans*.

P. ina'nis. Empty pulse. A syn. for *Pulse, thready*.

P. in'cidens sola'ni. A syn. for *Pulse, undulating*.

P. inflammato'rius. Inflammatory pulse. The full, tense pulse of acute inflammation.

P. inspiratio'nē intermit'tens. The pulse intermittent during inspiration. See *P. paradoxus*.

P. interci'dens. (L. *intercido*, to cut asunder part in the midst.) The *Pulse, intermittent*.

P. interci'sus. (L. *intercisus*, cut asunder in the midst.) A syn. for *P. dicroticus*.

P. intercur'rens. The *Pulse, intercurrent*.

P. intermit'tens. (L.) The *Pulse, intermittent*.

P. intestina'lis. The *Pulse, intestinal*.

P. intrica'tus. The *Pulse, intricate*.

P. irregular'is. The *Pulse, irregular*.

P. len'tus. The *Pulse, slow*.

P. mag'nus. A large, full pulse.

P. mallear'is. A term for the *Pulse, dicrotic*.

P. mol'lis. (L.) The soft pulse. See under *Pulse*.

P. myu'rus. The *Pulse, myurous*.

P. myu'rus defici'ens. A variety of *P. myurus* in which the waves become gradually so small as to be inappreciable.

P. nervi'us. (L. *nervus*, a nerve.) The *Pulse of irritation*.

P. paradox'icus. See *P. paradoxus*.

P. paradox'us. (Παράδοξος, contrary to opinion.) Paradoxical pulse. A pulse in which the natural tendency of inspiration to lessen the size of the beats, and of expiration to increase them, is markedly exaggerated.

P. ple'nus. The *Pulse, full*.

P. polycrot'icus. The polycrotic pulse. See under *Pulse*.

P. quadrigem'inus. A pulse with a longer interval after every group of four beats.

P. quinquigem'inus. A pulse with a longer interval after every group of five beats.

P. rar'us. The *Pulse, infrequent*.

P. remit'tens. Remittent pulse. The *Pulse, intermittent*.

P. resil'ens. Rebounding pulse. A syn. for *P. dicroticus*.

P. retar'dus. A delayed pulse.

P. serra'tus. (L. *serra*, a saw.) Serrate pulse. Term for a hard, full pulse.

P. serri'nus. (L. *serra*, a saw.) The same as *P. serratus*.

P. sudora'lis. (L. *sudor*, sweat.) The *Pulse of sweat*.

P. tar'dus. The *Pulse, slow*.

P. tricrot'icus. The tricrotic pulse. See under *Pulse*.

P. trigem'inus. A pulse in which every group of three beats is followed by a longer pause.

P. undo'sus. The same as *P. undulosus*.

P. undulo'sus. The *Pulse, undulating*.

P. vac'illans. Vacillating pulse. A syn. for *P. intermittens*.

P. vac'uus. The empty pulse; best exemplified in the "pulse of unfilled arteries," characteristic of aortic valvular insufficiency.

P. vagina'lis. The *Pulse, vaginal*.

P. vari'us. A various or changeable pulse.

P. venar'um. The *Pulse, venous*.

P. veno'sus. The *Pulse, venous*.

P. vi'brans. The *Pulse, vibrating*.

Pulsūs. Plur. of *Pulsus*. Also, gen. sing. of *Pulsus*.

P. priva'tio. Absence of pulse. A term for *Syncope*.

Pulta'ceous. (Puls. F. *pultacé*; I. *pultaceo*; G. *breiig*.) Relating to, or of the consistency of, *puls*; semi-fluid.

Pulta'tio. (Puls.) A reducing to the consistency of *puls*. Old term formerly used as synonymous with *Atheroma*.

Pulv. A Pharmaceutical abbreviation for *Pulvis*.

Pul'ver. (L.) Old form of word *Pulvis*.

Pulvera'ceous. (L. *pulvis*, powder.) Bot. Covered with powder.

Pulvera'tio. (Mod. L.) *Pulverisation*.

Pul'veres. (L.) Plur. of *Pulvis*. For *Pulveres* of B. Ph., see separate headings under *Pulvis*.

P. aëro'phori. Another name for *Powders, soda*.

P. effervescentes. The same as *P. aërophori*.

P. effervescentes aperientes. A name for Seidlitz powders. See *Powder, Seidlitz*.

Pulveres'cence. (L. *pulvis*, a powder.) Bot. Covered over with a powdery substance.

Pul'veris. Gen. sing. of *Pulvis*.

Pulveris'able. Capable of undergoing *pulverisation*.

PULVERISATION—PULVIS

Pulverisa'tion. (L. *pulvis*, powder. F. *pulvérisation*; I. *pulverizzazione*; G. *Pulverisierung*.) The process of reducing solids to powder. It includes a variety of methods, such as drying and grinding in a mill; bruising in mortars, grinding and trituration, with subsequent sifting through muslin or netting; addition of alcohol and trituration, &c.

Pul'verised iron. (G. *Eiserpulver*.) Triturated iron filings.

Pul'veriser. Any instrument used for reducing medicinal solid substances to powder.

Pulveriza'tion. See *Pulverisation*.

Pul'vermacher's chain. The same as *P.'s hydroelectric chain battery*.

P.'s hydroelectric chain battery. A modification of the voltaic pile which can be used as a local therapeutic agent.

Pul'verous. (*Pulvis*.) Consisting of powder.

Pulver'ulence. The state of being *Pulverulent*.

Pulver'ulent. (L. *pulvis*, *pulveris*, powder. F. *pulvérulent*.) Of the consistence of powder or dust; also, readily reducible to powder.

Pulvil'lar. (*Pulvillus*.) Resembling a cushion.

Pulvilliform. Shaped like a *Pulvillus*.

Pulvil'lus. (Dim. from L. *pulvinar*.) A small cushion or pillow. In *Surgery* (F. *bourdonnet*), a small olive-shaped mass of lint used for plugging deep wounds.

P. e linamentis confec'tus. (L. *linamentum*, lint; *confectus*, composed.) *Surg.* Another name for *Pulvillus*.

P. rotun'dus. (L. *rotundus*, round.) *Surg.* Another name for *Pulvillus*.

Pulvin'ar. (L. *pulvinar*, -*aris*, a cushioned seat.) *Anat.* Term applied to the posterior tubercle of the *optic thalamus*, which projects over the two brachia of the corpora quadrigemina.

Also, the mass of fat partly filling up the acetabulum.

Also, a medicated cushion.

P. epiglottidis. The cushion, or tubercle, of the epiglottis.

P. hum'uli. (*Humulus lupulus*.) The hop pillow. See *Humulus lupulus*.

P. medica'tum. A medicated pillow, e.g. *P. humuli*.

P. par'vum. Lit., a small pillow. *Surg.* Term for a pad.

P. ventric'uli. (L. *ventriculus*, the stomach or paunch.) A term for the *Pancreas*.

Pulvin'ate. (L. *pulvinus*, a cushion.) Belonging to, or resembling, a cushion.

Pulvin'iform. (L. *pulvinus*, a cushion; *forma*, shape.) Shaped like a cushion.

Pulvin'ulus. (L.) Syn. for *Pulvillus*.

Pulvi'nus. (L. *pulvinus*, a cushion.) *Biol.* Term for a cushion-like enlargement at the base of some leaves and leaflets.

Pul'vis. (L. *pulvis*, *pulveris*, a powder. F. *poudre*; G. *Pulver*.) *Pharm.* A powder formed of one or more medicinal substances.

P. ad gutte'tam. *Pharm.* Term for an ancient powder which was considered efficacious in epilepsy, and was composed of cassumuniar root, dittany of Crete, wild valerian, peony, human skull, elk's hoof, castor, red coral, and oil of rye.

P. ad par'tum. (L. *partus*, a bringing forth; from *pario*.) A name for *Ergot*.

P. adperso'rius. A syn. for *Cataplasma*.

P. aëro'phorus. Another name for soda powder. See *Powders, soda*.

P. alexite'rius. Another name for *P. contrayervæ compositus*; also, used for *P. ipecacuanhæ compositus*.

P. algaro'thi. Syn. for *Algaroth*.

P. alo'es compos'itus. Aloes 1½ oz., guaiac resin 1 oz., compound powder of cinnamon ½ oz. Dose, 10 to 20 gr. (Ph. L.)

P. alo'es cum canella. Aloes 1 lb., canella alba 3 oz.; rub together. Dose, 10 to 20 gr. (U.S. Ph., 1873.)

P. alo'es cum guaia'co. Syn. for *P. aloes compositus*.

P. aloet'icus. Syn. for *P. aloes cum canella*.

P. alu'minis compos'itus. The same as *P. sulphatis aluminæ compositus*.

P. alu'minis kinos'a'tus. A syn. for *P. sulphatis aluminæ compositus*.

P. alumin'o'sus. A syn. for *P. sulphatis aluminæ compositus*.

P. amygdalæ compos'itus. B.Ph. A preparation of *Amygdala dulcis*. Sweet almonds 8 parts, refined sugar 4, gum acacia 1. Dose, 60 to 120 grains.

P. angel'icus. Syn. for *P. algarothi*.

P. anody'nus. A name for *P. ipecacuanhæ compositus*.

P. antiac'idus. A name for *P. cretæ compositus*; also, for *P. de magnesia compositus*.

P. antily'ssus. (Ἀντί, against; λύσσα, raging madness.) Also called "Mead's powder against the bite of a mad dog." Invented by Dr. Mead. It was composed of ash-coloured liverwort powdered, and black pepper, equal parts. Dose, 1½ drachms.

P. antimon'ia'lis. B.Ph. A preparation of *Antimonii oxidum*. Oxide of antimony 1, phosphate of calcium 2 parts. Dose, 3 to 5 grains.

P. aromati'cus. A syn. for *P. cinnamomi compositus*.

P. arsenica'lis Cos'mi. Powder, arsenical, of Côme (q. v.).

P. aur'i. (L. *aurum*, gold.) Powder of gold. A name for metallic gold in a fine state of division. Prepared by forming an amalgam of gold with mercury, and decomposing by means of heat, when the volatile mercury is driven off. It was formerly used medicinally for the same class of cases as were the other preparations of gold. See *Gold*.

P. basil'icus. (Βασιλικός, royal.) Basilic or royal powder. Name for an ancient preparation composed of *diagrydium*, cream of tartar, and calomel, formerly used as a vermifuge for children.

P. bismu'thi compos'itus. Also termed "Ferrier's snuff." Hydrochlorate of morphia 2 grains, powdered acacia 2 drachms, subnitrate of bismuth 6 drachms. From a quarter to a half the above to be used as snuff in the twenty-four hours. (*Lancet*, '76, 525.)

P., bleach'ing. *Calx chlorinata*.

P. bonducel'læ compos'itus. Compound powder of *Bonduc seeds*. Powdered bonduc seeds deprived of shell, and mixed with an equal quantity of black pepper. Dose, 15 to 30 grains. (*Pharmacopœia of India*.)

PULVIS

P. bora'cis compos'itus. Compound borax powder. Powdered capsicum 15, borax 20, ammonium carbonate 10 parts. A snuff used in hay-fever.

P. calot'ropis. See *Calotropis pulvis*.

P. carthusiano'rum. The Carthusians' powder. A name for *Antimonii sulphuretum rubrum*.

P. cat'echu compos'itus. B. Ph. Catechu 4 parts, kino 2, rhatany root 2, cinnamon bark 1, nutmeg 1. *Dose*, 20 to 40 grains. Aromatic and astringent.

P. cathar'ticus. Syn. for *P. scammonii compositus*.

P. causticus. Caustic powder. A name for *Potassa cum calce*.

P. causticus viennen'sis. The same as *P. causticus*.

P. causticus vindobonen'sis. The same as *P. causticus viennensis*.

P. cinchoni'næ compos'itus. Ex. Ph.) Compound powder of Cinchonine. Cinchonine 12 parts, bicarbonate of sodium 1, sugar of milk 60. *Dose*, 3 to 12 grains, according to age. A tasteless febrifuge for children.

P. cinnamo'mi compos'itus. B. Ph. Cinnamon bark 1, cardamom seeds 1, ginger 1 part. *Dose*, 3 to 10 grains. Used in the preparation of *Pilula aloes et ferri*, and *Pilula cambogiæ composita*.

P. com'itis Warwicen'sis. The Earl of Warwick's powder, or *Pulvis Cornachinus*.

P. comitis'sæ. The countess' powder. A name for powdered *Cinchona*.

P. Cornachi'ni. The same as *P. Cornachinus*.

P. Cornachi'nus. See *Cornachinus pulvis*.

P. cor'nu us'ti cum o'pio. Powder of burnt hartshorn with opium. *Opii dur. cont.* ʒj, *corn. ust. præp.* ʒj, *coccor. cont.* ʒj. *Misce.* Ft. pulv. (P. L.) Action, anodyne.

P. Cos'mi. A syn. for *Powder, arsenical, of Côme*.

P. creaso'ti et am'yli. Powder of creasote and starch. Creasote 10 min., starch in powder 1 oz. Used as a dusting powder in erysipelas.

P. creta'ceus. Cretaceous powder. Another name for *P. cretæ compositus*.

P. cretæ aromaticus. B. Ph. Aromatic chalk powder. Prepared chalk 11 parts, cinnamon 4, nutmeg 3, saffron 3, cloves 1½, cardamom seeds 1, refined sugar 25. *Dose*, 10 to 60 grains.

P. cretæ aromat'icus cum o'pio. B. Ph. Aromatic chalk powder with opium. Aromatic chalk powder (*P. cretæ aromaticus*) 39 parts, opium, in powder, 1 (1 of opium in 40). *Dose*, 10 to 40 grains.

P. cretæ compos'itus. Compound chalk powder. *Cretæ præcip.* lb. ss., *cinnam. ʒiv*, *tormentillæ, acaciæ, sing.* ʒiij, *piperis long. ʒiv*. Red. ad pulv. et misce. Ft. pulv. (P. L.). Used as an antacid and stomachic. *Dose*, 20 to 40 grains.

P. cretæ compos'itus cum o'pio. Compound chalk powder with opium. *Pulv. cret. co. ʒviss*, *opii dur. cont. gr. lxxx*. *Misce.* Ft. pulv. (P. L.) An anodyne. *Dose*, 20 to 40 grains.

P. cum citra'te magne'sico et sac'charo. Name used in the French Codex for *Magnesiæ citras granulatus* (q. v.).

P. de jala'pa et scammo'nio compos'itus. A syn. for *P. scammonii compositus*.

P. de phosphat'e calc'is et stib'i compos'itus. Compound powder of phosphate of lime and antimony. A name for *P. antimonialis*.

P. de trib'us. Syn. for *P. Cornachinus*.

P. diaphoret'icus. Diaphoretic powder. A name for *P. ipecacuanhæ compositus*.

P. diapno'icus. A name for *P. ipecacuanhæ compositus*.

P. diaro'maton. A name for *P. cinnamomi compositus*.

P. diase'næ. A name for *P. sennæ compositus*.

P. diatur'pethi compos'itus. A name for *P. jalapæ compositus*.

P. Do'veri. *Dover's powder*.

P. du'cis Portlan'diæ. The Duke of Portland's powder. See under *Powder*.

P. e bo'lo compos'itus cum o'pio. A syn. for *P. cretæ compositus cum opio*.

P. e bo'lo compos'itus si'ne o'pio. A syn. for *P. cretæ compositus*.

P. efferves'cens compos'itus. A name for *Seidlitz powder*.

P. elateri'ni compos'itus. B. Ph. Compound powder of elaterin. Elaterin 1, sugar of milk 39. *Dose*, ½ grain to 5 grains.

P. escharot'icus. Escharotic powder. Another name for *P. arsenicalis Cosmi*.

P. febrifu'gus Jacobi. (L. *febris*, fever; *fugo*, to put to flight; *Jacobus* = James.) James' febrifuge powder. Another name for *James' powder*.

P. glycyrrh'izæ compos'itus. B. Ph. Compound liquorice powder. Senna and liquorice root in fine powder, of each 2 parts, fennel fruit in powder, sublimed sulphur, of each 1, refined sugar in powder 6. *Dose*, 1 teaspoonful or more for adults. A mild aperient.

P. hydrargyri cinereus. Another name for *Hydrargyri oxydum cinereum*.

P. hydrargyri cum cre'ta et bella-don'næ. Hydrargyrum cum creta 2 parts, powdered belladonna leaves 1 part, sugar in powder 2 parts. *Dose*, 5 grains. (Pharm. of Roy. Lond. Ophth. Hosp.)

P. hypnot'icus. Hypnotic powder. A name for *Hydrargyri sulphuretum nigrum*.

P. imperato'ris. (L. *imperator*, a commander.) A name for *P. cinnamomi compositus*.

P. ipecacuan'hæ compos'itus. B. Ph. Compound ipecacuanha powder. Powdered ipecacuanha 1 part, opium in powder 1, sulphate of potassium 8 (1 of opium in 10). *Dose*, 5 to 15 grains. An anodyne diaphoretic. Useful in dysentery and diarrhœa, combined in the latter case with calomel. In doses of 3 or 4 grains it relieves heartburn, apparently by allaying nervous irritability. (Squire.)

P. ipecacuan'hæ et o'pii. The U.S. Ph. name for *P. ipecacuanhæ compositus*.

P. Jacobi. (L. *Jacobus* = James.) *James' powder*.

P. jala'pæ compos'itus. B. Ph. Compound jalap powder. Jalap in powder 5 parts, acid tartrate of potassium 9, ginger in powder 1. *Dose*, 20 to 60 grains.

P. jala'pæ sali'nus. A syn. for *P. jalapæ compositus*.

P. jala'pæ tartar'icus. A syn. for *P. jalapæ compositus*.

P. Jame'sii. *James' powder*.

PULVIS—PUMEX

P. jesuit'icus. Jesuits' powder. A name for *Cinchona*. Also termed "Jesuits' bark."

P. Joan'nis de Vi'go. A name for *Hydrargyri oxidum rubrum*.

P. kalada'næ compos'itus. Compound powder of kaladana (*Pharbitis nil*). It has a similar action to *P. jalapæ compositus*.

P. ki'no compos'itus. B. Ph. Powdered kino 15 parts, powdered opium 1, powdered cinnamon 4 (1 of opium in 20). *Dose*, 5 to 20 grains.

P. lax'ans. A name for *P. jalapæ compositus*.

P. lax'ans cum sal'e. (L. *sal*, *salis*, salt.) A syn. for *P. laxans*.

P. laxat'ivus vegetab'ilis. A syn. for *P. laxans*.

P. li'ni. (L. *linum*, flax.) Powdered flax or linseed, linseed meal. See *Lini semina*.

P. li'ni sem'inum. Powdered linseed. See *P. lini*.

P. liquiri'tiæ compos'itus. P. G. Compound liquorice powder. The same as the *P. glycyrrhizæ co.* B. Ph.

P. lobelia'e compos'itus. Ex. Ph. Compound powder of lobelia. Nitrate of potassium 2 ounces, boiling distilled water 2 ounces. Dissolve, and add to lobelia in powder, stramonium leaves in powder, black tea in powder, of each 2 ounces. Mix, dry, and add 4 minims of oil of anise. The fumes of half a teaspoonful or more to be burnt on a plate and inhaled six or eight times a day, and the bedroom to be fumigated with the same.

P. mercuria'lis ciner'eus. Grey mercurial powder. A syn. used formerly for *Hydrargyri oxidum*.

P. morphi'næ compos'itus. U.S. Ph. Compound morphine powder. Sulphate of morphine 8 grains, camphor, liquorice, and precipitated chalk, of each 110 grains, alcohol a sufficiency.

P. opia'tus. A syn. for *P. cornu usti cum opio*.

P. o'pii compos'itus. B. Ph. Compound opium powder. Opium 3 parts, black pepper 4, ginger 10, caraway fruit 12, tragacanth 1; all in powder (1 of opium in 10). *Dose*, 2 to 5 grains.

P. oxy'di stib'il compos'itus. (L. *stibium*, antimony.) Compound powder of oxide of antimony. A syn. for *P. Cornachinus*.

P. pancreat'icus alkali'nus. (Benger.) A powder consisting of pancreatic enzymes mixed with bicarbonate of sodium, 20 grains in each. Used as a peptoniser of food.

P. partur'iens. (L. *parturio*, to labour with young.) A name for *Ergot*.

P. pectora'lis. (Kurellæ.) Pectoral powder. A name for the *P. glycyrrhizæ compositus*, B. Ph.

P. plum'bi olea'ti compos'ita. Compound powder of oleate of lead. Lead oleate 1, starch 4 parts.

P. prin'cipis. A syn. for *Hydrargyri oxidum rubrum*.

P. pur'gans. A syn. for *P. jalapæ compositus*.

P. querceta'nus. A name for *Calomel*.

P. quercus mar'i'næ. Powder of *Quercus marina*, or *Fucus vesiculosus*.

Also termed *Æthiops vegetabilis* (q. v.).

P. rhe'i compos'itus. B. Ph. Compound rhubarb powder, Gregory's powder.

Powdered rhubarb root 2 parts, light magnesia 6, powdered ginger 1. *Dose*, 20 to 60 grains for children.

P. salicyl'icus cum tal'co. P. G. Salicylic powder with talc. Salicylic acid 3 parts, wheaten starch 10, talc 87. Used to correct fetid or excessive sweating of the feet.

P. scammo'ni antimonial'is. A syn. for *P. Cornachinus*.

P. scammo'ni compos'itus. B. Ph. Compound scammony powder. Scammony resin 4 parts, jalap 3, ginger 1; all in fine powder. *Dose*, 10 to 20 grains.

P. scarot'icus. A name for arsenical powder.

P. Seid'litz. See *Powder, Seidlitz*.

P. sem'inum li'ni. Name in French Codex for *P. lini seminum* (q. v.).

P. sen'næ compos'itus. Compound senna powder. Sennæ, potass. supertart., aa. 3ij, scammoniae 3ss, zingib. 3ij. (P. L.) *Dose*, 20 grains to 1 drachm. A hydragogue purgative.

P. so'dæ tartara'tæ efferves'cens. B. Ph. Effervescing powder of tartarated soda. Commonly known as *Seidlitz powder*. Tartarated soda in dry powder 120 grains, bicarbonate of sodium in dry powder 40 grains; mix and wrap in blue paper. Tartaric acid in dry powder 38 grains; wrap in white paper. *Dose*, the former powder dissolved in nearly one pint of cold or warm water, and the latter powder added.

P. stan'ni. (L. *stannum*, tin.) Another name for *Stannum granulatum*.

P. stibia'tus. (L. *stibium*, antimony.) Syn. for *P. antimonialis*.

P. stypt'icus Helve'tii. See *Helvetii pulvis stypticus*.

P. terres'tris. A syn. for *P. cretæ compositus*.

P. tragacan'thæ compos'itus. B. Ph. Compound tragacanth powder. Tragacanth in powder 1 part, powdered gum acacia 1, powdered starch 1, refined sugar in powder 3. *Dose*, 20 to 60 grains.

P. tri'um diabol'o'rum. (L. *tres*, three; *diaboli*, devils.) Syn. for *P. Cornachinus*.

P. viennen'sis albus virgin'eus. (L.) Pharm. Virgin-white Vienna powder. Name for an ancient powder which was made by calcining *glacies maris* and *lapis specularis*, rubbing them together, and separating the finer parts by washing.

P. vi'tæ imperato'ris. A syn. for *P. cinnamomi compositus*.

P. zin'ci et hydrar'gyri subchlo'ridi. Powder of zinc and subchloride of mercury. Oxide of zinc, calomel, tannic acid, and starch, equal parts. (Westminster Hosp. Pharm.)

P. zin'ci olea'ti. Ex. Ph. Powder of oleate of zinc. Castile soap 1 lb., boiling water 6 pints; heat till dissolved. Sulphate of zinc 2 oz., boiling water 16 oz.; dissolve and add to above solution. Stir; separate oleate, wash with hot water to free from sulphate, then cool, dry, and reduce to fine powder. Used for dusting on eczematous surfaces and parts excreting an excess of perspiration.

Pumacu'chu. (Peruvian; signifying lion's mane.) Peruvian name for that *Rhatany* which grows in the province of Tarina. (Littre.)

Pumex. (L. Originally *spumex*, from *spumo*, to foam; from its supposed likeness to a mass of foam.) *Pumice*.

PUMICE—PUNCTUM

Pum'ice. (L. *pumex*. F. *pouce*; G. *Bimstein*.) A light, spongy, porous stone of volcanic origin, and of mixed chemical constitution, consisting mainly of silico-aluminates. Used to polish metals, as a dentifrice, and to soften hard skin.

Pum'ice-stone. The same as *Pumice*.

Pum'iceous. Belonging to, or consisting of, *pumice*.

Pumic'iform. (*Pumex*; *forma*, shape.) Resembling pumice-stone in appearance.

Pum'iline. A syn. of *Pinol* (q. v.).

Pum'ilio. (L. *pumilus*, dwarfish.) A dwarf.

Pum'mel-foot. (*Pummel*.) A name for *Club-foot*.

Pump, breast-. See *Breast-pump*.

P., dental. An apparatus for removing saliva from the mouth during dental operations.

P., lift-. Term for a suction-pump.

P., stom'ach-. See *Stomach-pump*.

Pum'pion. Common name for the *Cucurbita pepo*.

Pump'kin. (F. *potiron*; G. *Pfebe*; *Kürbis*.) The fruit of *Cucurbita pepo*.

P. seeds. (F. *semences de potirons*; G. *Kürbissamen*.) The seeds of *Cucurbita pepo*. Used as a *tæniifuge*.

Pu'na. A term used in South America to denote the mountain sickness of the Andes. See *Mountain sickness*.

Punch. (? Pers. *punji*, or Sans. *pancha*, five; from the number of its ingredients. The drink is supposed to be of oriental origin.) An alcoholic drink made of spirit or wine, lemon-juice, sugar and water, &c. There are several different kinds of punch.

Also (from the verb to *punch*), name for a now obsolete form of *dental elevator*.

Punch's voice. A peculiar nasal, resonant tone of voice, resembling that of Punch in a Punch-and-Judy show, sometimes noticeable among insane patients, and believed by some to occasionally precede homicidal attacks. (Gould's Diet.)

Pun'cha springs. Hot springs in south-west Colorado. Their temperature is 120° F. (Billings.)

Punct'a. (L.) Plur. of *Punctum*.

P. cruenta. (L. *cruentus*, bloody.) Syn. for *P. vasculosa*.

P. dolor'sa. (L.) Painful points. See *Points, painful*.

P. lachryma'lia. (Pl. of *Punctum lachrymale*. F. *pointes lachrymales*; G. *Thränenpunkte*.) The minute openings of the lachrymal canaliculi on the *papilla lachrymalis* near the inner canthus on either eyelid.

P. ossificatio'nis. Points, or centres, of ossification.

P. vasculo'sa. The minute red points which stud the surface of the white central mass of the brain, as seen post mortem; produced by extravasation from divided blood-vessels.

Punctate. (L. *puncto*, to point.) Having, or covered with, *puncta*.

Punctated. The same as *Punctate*.

Puncta'tion. (L. *punctum*, a point.) One of the four varieties of *Tapotement* (q. v.) used in massage.

Puncticula. Plur. of *Puncticulum*.

Punctic'ular. (L. *puncticulum*.) Having *puncticula* or small points.

Punctic'ulate. A syn. for *Puncticular*.

Punctic'ulose. A syn. for *Puncticular*.

Punctic'ulum. (Dim. of L. *punctum*.) A small point; used as synonymous with *petechia*.

Punc'tiform. (L. *punctum*; *forma*, resemblance.) In the form of a point or points.

Punctil'ium. The same as *Puncticulum*.

Punctio. (L.) A pricking, puncture.

Punctulate. Furnished with *Punctules*.

Punctule. (L. *punctulum*, dim. of *punctum*.) A small point or dot.

Punctum. (L. *pungo*, *punctum*, to prick. F. *point*; G. *Punkt*.) A prick, dot, or point.

P. adhæsio'nis. (L. *adhesio*, adhesion.) Point of adhesion. Term for the point of origin of a muscle.

P. alæ vo'meris. The point of the ala of the vomer. A name for the *Hormion*. (See *Hormion* in Appendix.)

P. aureum. (L. *aureus*, golden. F. *point d'or*; G. *der goldene Punkt*.) Syn. for *Macula lutea*.

P. breg'matis. (*Bregma*; *-atis*.) Another name for *Bregma*.

P. cæ'cum. (L. *cæcus*, blind.) The blind spot. The point on the retina, about one-tenth of an inch to the inner side of the *macula lutea*, where the optic nerve spreads out its fibres.

P. fix'um. Fixed point. Term for the point of origin of a muscle.

P. foram'inis incis'vi. The point of the incisive foramen. Lissauer's term for a point in the median line at the junction of the two superior maxillary bones immediately behind the incisive foramen.

P. foram'inis mag'ni ante'rius. The anterior point of the foramen magnum. Another name for the *Basion*.

P. foram'inis mag'ni poste'rius. The posterior point of the foramen magnum. Another name for the *Opisthion*.

P. insertio'nis. Point of insertion (of a muscle).

P. lachryma'lē. (L. *lachryma*, a tear.) See *Puncta lachrymalia*.

P. mo'bile. (L. *mobilis*, moveable.) Moveable point. A syn. for *P. insertionis*.

P. nasa'lē infe'rius. The inferior nasal point. Another name for the *Rhinion* (q. v.).

P. na'so-fronta'lē. Naso-frontal point. Another name for the *Nasion* (q. v.).

P. occipita'lē. The occipital point. Another name for the *Lambda* (q. v.).

P. ossificatio'nis. (F. *point d'ossification*.) Point, or centre, of ossification.

P. præmaxilla'rē. Premaxillary point. Another name for the *Alveolar point* (q. v.).

P. proxim'um. (G. *Nahepunkt*.) The nearest point. Term for the nearest point at which the smallest readable type can be clearly seen.

P. remo'tum. The far point. The farthest point of distinct vision.

P. sa'liens. (L. *salio*, to leap. F. *point bondissant*; G. *Hüpppunkt*.) The leaping point. *Embryol.* Term applied to the heart of the embryonic chick, which appears first as a slight projection below the cephalic extremity.

P. spi'næ nasa'lis ante'rioris. The point of the anterior nasal spine. Another name for the *Subnasal point* (q. v.).

P. spi'næ nasa'lis poste'rioris. The

PUNCTURA—PUPILLARY

point of the posterior nasal spine. Another name for the *Staphylion* (q. v.).

P. vegetatio'nis. Point of vegetation.

A syn. for *Point, growing*.

Punctura. (L.) A puncture.

P. aurea. Syn. for *Punctum aureum*.

P. saliens. Syn. for *Punctum saliens*.

Punctura'tion. (L. *punctura*, a pricking.) The process of puncturing.

Puncture. (L. *punctura*, a pricking. F. *piqûre*; I. *puntura*; G. *Punktur*.) A small, straight, deep wound made with a pointed instrument, either accidentally or intentionally. See also *Wounds, punctured*.

P., capillary. (L. *capillus*, a hair.) Hair-like puncture. A puncture made with a very fine needle.

P.-diabe'tes. Term for diabetes set up in animals by puncture of the medulla oblongata at the *diabetic centre*.

P., diabe'tic. Puncture of the medulla oblongata giving rise to *P.-diabetes* (q. v.).

P. doctors. A nickname applied at one time in the Paris hospitals (*piqueurs médecins*) to a school of physicians who went in extensively for acupuncture.

Punctus. (Gen. *punctus*.) The same as *Punctum*.

P. ru'ber saliens. (L. *ruber*, red; *saliens*, leaping.) A syn. for *Punctum saliens*.

Pungency. The state of being *pungent*.

Pungent. (L. *pungens*, *pungo*, to prick.) Pricking, stinging; used especially of odours and flavours.

Punica. (L. *punicus*, belonging to Carthage or to Africa; also, scarlet-red. So named either from plants of this genus having been originally brought from Africa, or from the scarlet colour of their flowers.) A Genus of the *Myrtaceæ*.

P. grana'tum. (F. *grenadier*; G. *Granat-baum*.) The pomegranate tree. Hab. Southern Europe. From it is obtained the *Granati radicis cortex*, B. Ph., and from this bark is obtained *pelletierine* (q. v.).

Puni'ceus. (L. *punicus*, of Phœnician colour.) Red.

Punicin. A variety of *mannite* obtained from the bark of *Punica granatum*.

Punico-tan'nic acid. A variety of tannic acid obtained from the bark of *Punica granatum*.

Punicum. (L. *punicus*.) A pomegranate.

P. ma'lum. The same as *Punicum*.

Pu'nicus. (L.) Punic or Carthaginian.

P. arbor. The pomegranate.

P. ar'bos. (L. *arbos* = *arbor*.) The same as *P. arbor*.

Pun'tos. (Span.) Name for an exanthematous fever which was epidemic in Spain during the sixteenth century.

Puogen'ia. See *Pyogenia*.

Pupa. (L. *pupa*, a girl; also, a puppet. F. *pupe*.) The second stage in the metamorphosis of Insects. Also termed *nympha*, or *chrysalis*; the first stage being that of the *larva*, and the third that of the *imago* or perfect insect.

Pupal. Belonging to a *Pupa*.

Pupar'ium. Term for a *Pupa* which is still enclosed in the larval skin.

Pupate. To become a *Pupa*.

Pupa'tion. The act of becoming a *Pupa*.

Pu'piform. Having the appearance of a *Pupa*.

Pu'pigenous. (L. *pupa*; *gigno*, *genitum*, to beget.) The same as *Pupiparous*.

Pu'pigerous. (L. *pupa*; *gero*, to carry.) Carrying a *Pupa*; epithet applied to a *Puparium*.

Pu'pil. (L. *pupilla*. F. *pupille*; I. *pupilla*; G. *Schloch*.) The central opening in the iris, by which light enters the eye.

P., Ar'gyll-Rob'ertson. A symptom in locomotor ataxy, usually noticeable early in the case, in which the pupils are inactive to light, but react to accommodation. This phenomenon was first described by Argyll-Robertson.

P., arti'ficial. A modification of the position or size of the pupil by the removal of a portion of the iris, e. g. in leucoma. The new pupil, where possible, is made *downwards and inwards* or *downwards*.

P., arti'ficial, opera'tion for forma'tion of. See *Iridectomy*.

P., cat's-eye. Term for a slit-like pupil resembling that of the cat's eye.

P., exclu'sion of. A condition of the eye in which the pupillary edge of the iris is adherent along the whole circumference of the pupil. In this case atropine causes little or no dilatation.

P., Hut'chinson's. Term for a phenomenon first pointed out by Hutchinson; namely, one-sided dilatation of the pupil occurring on the side of the lesion in many cases of hæmorrhage from the middle meningeal artery.

P., imper'forate. A condition sometimes seen in new-born infants, occurring as a result of persistence of the *Pupillary membrane*. More commonly termed *Synizesis pupillæ* (q. v.).

P.s, inequal'ity of. A condition which is rarely permanent except in marked difference in refraction of the two eyes, or in disease. See also *P., Hutchinson's*.

P., mul'tiple. The presence of bands dividing up the pupil into several portions. This abnormality is due to persistence after birth of portions of the fœtal *Pupillary membrane*.

P., occlu'sion of. A result of inflammatory exudation into the pupil associated with iritis, keratitis, or both, where the pupil becomes filled up by a film or dense membrane.

P., pin-hole. The same as *P., pin-point*.

P., pin-point. A term applied to extreme contraction of the pupil, associated with certain morbid conditions, e. g. *tabes dorsalis*, opium poisoning, &c.

Pupilla. (L.) *Pupil*.

P. factitia. An artificial pupil. See *Pupil, artificial*.

Pupillæ. Plur., and also gen. sing., of *Pupilla*.

P. ve'lum. The curtain of the pupil. Term for the *Pupillary membrane*.

Pupillary. (L. *pupillus*. F. *pupillaire*; G. *pupillär*.) Belonging to the pupil.

P. cata'ract. A syn. for *Synizesis, congenital*.

P. mem'brane. A vascular membrane which, in fetal life, occludes the pupil, being reflected from the lens upon the iris. See also *Persistent pupillary membrane*.

P. mem'brane, persis'tent. See *Persistent pupillary membrane*.

P. phthis'is. The same as *P. cata'ract*.

P. re'flex. See *Reflex, pupillary*.

PUPILLATE—PURKINJĚ

Pupill'ate. Furnished with a *Pupil*. Also, in *Biol.*, resembling the pupil of the eye.

Pupillo'meter. (*Pupilla*; Gr. μέτρον, a measure.) An instrument for estimating the size of the *Pupil*.

Pupillo'scopy. (*Pupilla*; σκοπέω, to view.) *Keratotomy*, or *Retinoscopy*.

Also, used in a more exact sense to mean inspection of the pupil for the purposes of diagnosis.

Pupillostato'meter. (L. *pupilla*; Gr. στατός, standing, fixed; μέτρον, a measure.) An instrument devised for measuring the distance between the centres of the two pupils.

Pupip'arous. (L. *pupa*; pario, to bring forth.) Bringing forth a pupa or pupæ.

Pup'pet-root. One of the popular names in America for the root of *Veratrum viride*.

Pup'pis. (L.) The stern of a ship. In *Anat.*, old term for the *Sinciput* or forehead.

P. os. (L. *os*, *ossis*, a bone.) A name for the *Frontal* bone.

Pup'ula. The same as *Pupilla*.

Pupulæ. Plur. of *Pupula*; but used, in Anatomy, to designate the tips or pulps of the fingers.

Pura-au. The Tahitian name for the *Cratæva religiosa*.

Pure. (L. *purus*; connected with Gr. πῦρ, fire.) Uncontaminated, unmixed.

Purgamen'ta. Plur. of *Purgamentum*; but used in the sense of *Excretions*.

P. al'ba. (L. *albus*, white.) A term for *Leucorrhœa*.

P. infan'tis. (L. *infans*, an infant.) A term for *Meconium*.

P. puerper'il. (*Puerperium*.) A term for *Lochia*.

P. uter'i. (*Uterus*.) The same as *P. puerperii*.

Purgamen'tum. (L. *purgo*, to cleanse.) A purge, a cathartic dose. Plur. *Purgamenta*, q. v.

Pur'gans. (Pres. participle of L. *purgo*, to cleanse.) Purging.

P., medicamen'tum. A purging medicine.

Purgan'tia. (L. *purgans*.) Purging medicines.

Purga'tio. Purgation.

P. al'vi. (L. *alvus*, the belly.) Purgation.

P. muliebris al'ba. (L. *muliebris*, belonging to woman; *albus*, white.) A term for *Leucorrhœa*.

P. puerpe'rii. (*Puerperium*.) A term for *Lochia*.

Purga'tion. (L. *purgo*, to cleanse. F. *puragation*; I. *purgazione*; G. *Purgiren*, *Abführung*.) The process of evacuating the bowels by means of a *purgative*.

Purgation'es. Plur. of *Purgatio*; but used in the sense of *Menses*.

P. men'strua. (L. *menstruus*, pertaining to the *menses*.) The same as *Purgation'es*.

Purg'ative. (L. *purgo*, to cleanse. F. *purgatif*; G. *purganz*.) Causing purgation.

Also (F. *purgatif*; G. *Abführmittel*), a class of drugs that increase the alvine excretions in various ways, e. g. by exciting peristaltic action, promoting mucous secretion, or checking absorption.

P. en'ema. An enema given to produce purgation.

Purge. (L. *purgo*, to cleanse.) As a *substantive*, a drug inducing purgation; as a *verb*, to induce purgation.

P. root. The same as *Purging root*.

Pur'ging. (*Purge*.) Inducing purgation; applied as an epithet to drugs which induce purgation.

Also, as a *substantive*, the act of purgation.

P. agar'ic. The *Agaric*, *white*.

P. ber'ries. Name for the fruit of *Rhamnus catharticus*.

P. cas'sia. Common name of *Cassia fistula*.

P. flax. Common name of *Linum catharticum*.

P. nut. Syn. for *Physic nut*.

P. root. A name for the root of *Euphorbia corollata*.

Pur'ificans. (L. *purifico*, to make clean.) Purifying.

Purifican'tia. (Neut. pl. of *purificans*.) Term for drugs that purify the blood.

Purifica'tion. (L. *purifico*, to make clean.) The process of purifying; in *Anat.*, applied to the process of cleaning the bones of the skeleton.

Pur'ified. (L. *purificatus*. F. *purifié*; G. *gereinigt*.) Freed from impurities.

P. an'imal char'coal. See *Carbo animalis purificatus*.

P. an'timony sulphide. *Antimonium nigrum* (q. v.).

P. bis'muth. See *Bismuthum purificatum*.

P. chlor'oform. See *Chloroform*, *purified*.

Pur'iform. (L. *pus*, *puris*, matter; *forma*, likeness. F. *puriforme*; G. *eiterförmig*.) Resembling pus in appearance or consistency.

Pur'itic. Belonging to *Pus*.

Purkinjě. A Hungarian anatomist and physiologist. Born 1787, died 1869.

P., axis-cyl'inder of. See *Axis-cylinder*.

P.'s cells. (G. *Purkinje'sche Zellen*.) The large pyramidal ganglion cells with processes, present in the deeper layers of the cortical grey matter of the brain.

P., corpuscles of. A name for *Bone corpuscles* (q. v.).

P.'s fibres. (G. *Purkinje'sche Fäden*.) Certain branching fibres occurring in the tissue beneath the endocardial epithelium of the ventricles in the foetal, and occasionally in the adult, heart.

P.'s fig'ures. (G. *Purkinje'sche Linsensbilder*.) A reversed image of the retinal vessels projected before the eye, made visible by a lighted candle moved to and fro close to the eye in a dark room, while the eyes look forwards. This phenomenon is produced by the shadows of the retinal vessels cast by the candle.

P., gan'gion cells of. Syn. for *P.'s cells*.

P.'s gran'ular lay'er. Another name for *Czermak*, *interglobular spaces of*, in dentine.

P., im'age of. Another name for *P.'s figures*.

P.-San'son's exper'iment. The exhibition of *P.-San'son's images* (q. v.).

P.-San'son's im'ages. Term for the three pairs of images of an object which can be seen in the pupil of an eye whose vision is directed upon the said object. The first is erect and virtual, and is reflected from the front surface of the cornea; the second is also erect and

PURL—PURPURA

virtual, and is reflected from the front surface of the lens; the third is inverted and real, and is reflected from the back of the lens.

P.'s vesicle. Term for the nucleus of the human ovum, or *germinal vesicle*, first discovered by Purkinjė in 1830.

Purl. Common name for a fermented malt liquor in which were infused wormwood and aromatic substances. Formerly a favourite drink in England.

Purohepatitis. (L. *pus*, *puris*, matter; Gr. *ἥπαρ*, the liver; *-itis*, Gr. fem. adjectival termination.) Purulent hepatitis.

Pur'o-mu'cous. Mucopurulent.

Purple av'ens. The *Geum rivale* (q. v.); also termed water avens.

P.-car'mine. A syn. for *Murexide*.

P. cone-flower. The *Echinacea purpurea* (q. v.).

P. fe'ver. See *Cerebro-spinal fever*.

P., min'eral. A syn. for *P. of Cassius*.

P. of Cas'sius. See under *Cassius*.

P., vis'ual. See *Visual purple*.

P. wil'low-herb. The *Lythrum salicaria* (q. v.).

Purples. A common name for *Purpura hæmorrhagica*; also, for *Swine fever*.

Pur'posive. Having a purpose.

Also, carrying out a purpose in the living organism; functional.

P. acts. Acts initiated by an effort of the will.

Pur'pura. L. (*Πορφύρα*, purple-fish; purple dye obtained therefrom. *F. purpura*; *I. porpora*; *G. Morbus maculosus Werlhofii*, *Blut-fleckenkrankheit*.) A condition depending on a morbid state of the blood or blood-vessels, characterised by the following symptoms. Small, purple, hæmorrhagic patches, not disappearing on pressure, are seen in the skin, sometimes associated also with mucous and serous hæmorrhages. Severe constitutional symptoms are observed in some cases, and fever is occasionally present, often of a remittent type. Death, in fatal cases, occurs from asthenia, syncope, or sudden and profuse hæmorrhage into the brain-substance. The disease has been divided into *P. simplex*, the mild form, in which constitutional disturbance is only slight, and *P. hæmorrhagica* (q. v.). So-called purpuric hæmorrhages occur secondarily in the course of certain diseases, *e.g.* typhus, small-pox, liver-disease, heart-disease, &c.; but these are not strictly speaking purpuric.

P. al'ba. (L. *albus*, white.) A term that has been applied by some old writers to a form of *Miliary fever* in which there are white pustules.

P. al'ba benigna et malig'na. The same as *P. alba*.

P. apyret'ica. A syn. for *P. simplex*.

P., a'queous. A syn. for *Hæmophilia*.

P. bullo'sa. Bullous purpura. A syn. for *P. hæmorrhagica*.

P. febr'ilis. Febrile purpura; purpura accompanied by a rise of temperature.

P. ful'minans. (L. *fulmino*.) Term for *Purpura* in which there is a rapid and extensive formation of ecchymoses.

P. hæmorrhag'ica. The severer form of *Purpura*, in which, in addition to the usual petechiæ, hæmorrhages occur from the mucous membranes, urinary tract, lungs, serous cavities, brain, &c., with or without fever. Death may

ensue from exhaustion, or with "typhoid symptoms." See also main heading.

P. hypertroph'ica. Hypertrophic purpura. A syn. for *P. tuberculosa*.

P. iod'ica. *Purpura* occasionally attending the internal administration of iodine or the iodides.

P. malig'na. Syn. for *P. hæmorrhagica*.

P. medicamento'sa. General term for purpura due to the action of drugs.

P. menstrua'lis. *Purpura* coming on at the menstrual periods.

P. millar'is. Syn. for *Miliary fever*.

P. minera'lis Cas'sil. Syn. for *Purple of Cassius*.

P. naut'ica. A name for *Scurvy*.

P. neonato'rum. A condition attended with the eruption of petechiæ occurring in newly-born infants.

P. neuro'tica. Neurotic purpura.

P. papulo'sa. A form of *Purpura* in which small livid papules are present between the ecchymoses.

P., pestilen'tial. A syn. for *Cerebro-spinal fever*.

P. puerpera'lis. The same as *P. puerperarum*.

P. puerperar'um. (*Puerpera*.) A purpuric rash occurring sometimes in lying-in women, and probably septicæmic in origin.

P. pulico'sa. (L. *pulex*, the flea.) A name for a flea-bite.

P. rheumat'ica. A disease resembling *P. simplex*, with the addition of stiffness, pain, and it may be redness and swelling, in the joints and limbs.

P. rub'ra. (L. *ruber*, red.) A term that has been applied by some old writers to designate a form of *Miliary fever* in which there were red pustules.

P. scorbu'tica. Term for petechiæ and blotches of *Scurvy*.

P. seni'lis. Senile purpura.

P. sim'plex. (L. *simplex*, simple.) See main heading.

P. symptomat'ica. *Purpura* complicating sundry diseases, especially some of the acute fevers, *e.g.* measles, scarlatina, typhus, small-pox, &c.; and certain other diseases—pernicious anæmia, Hodgkin's disease, splenic leukæmia, ulcerative endocarditis, &c.

P. syphilit'ica. Syphilitic purpura. It may be either localised or general in distribution.

P. thrombot'ica. *Purpura* occurring as a result of *thrombosis*.

P. tox'ica. Toxic purpura. *Purpura* occurring as a result of a poison.

P. traumat'ica. Traumatic purpura. A localised purpuric rash consequent on an injury.

P. tuberculo'sa. A rare form of purpura, also termed *P. hypertrophica*, in which the purpuric rash is associated with tubercular nodules in the skin, with surrounding œdema.

P. urtic'ans. (L. *urtica*, a nettle.) A variety of erythema, and especially of *Erythema multiforme*, in which the wheals or rings acquire a purpuric character.

P. urtica'ta. A syn. for *Urticaria*.

P. variolo'sa. A syn. for *Small-pox*, *hæmorrhagic*.

P., vas'cular. Term applied to *Purpura* because of its occurring as a consequence of changes in the vessel-walls or in the composition of the blood.

PURPURACEOUS—PUSTULA

Purpura'ceous. Purple-coloured.

Purpuræmia. (L. *purpura*; Gr. *αἷμα*, blood.) Malarial fever complicated by hæmorrhages.

Pur'purate. (L. *purpura*.) Chem. A salt of *Purpuric acid*.

Also, of a purple colour (Gould's Dict.).

Purpuric. (L. *purpura*. F. *purpurique*.) Relating to *Purpura*, or to purple.

P. acid. $C_8H_5N_5O_3$. An acid not existing in the free state, as, when freed from combination with a base, it immediately breaks up into alloxan and uramil. It is formed by the action of nitric acid on uric acid.

P. fe'ver. A term for *Cerebro-spinal fever*.

P. malign'ant fe'ver. The same as *P. fever*.

P. u'rine. Urine containing *purpurin* (q. v.), which becomes deposited on standing. The condition in which this occurs has been termed *Porphyria*.

Purpurigenous. (L. *purpura*; geno, to beget.) Giving rise to purple.

Pur'purin. (L. *purpura*.) 1. A substance contained in madder-root. It can also be artificially prepared by melting alizarin-sulphonic acid with caustic potash.

2. A red colouring-matter sometimes present in the urine, and supposed by some to be indicative of rheumatism or hepatic derangement.

Purpuriparous. (L. *purpura*; pario, to bring forth.) A syn. for *Purpurigenous*.

Purpuris'mum. A name for *Cinnabar*, the red sulphide of mercurv.

Purre'ic acid. (*Purree*, Indian yellow, in which this acid occurs.) A syn. for *Euxanthic acid* (q. v.).

Pur'ring thrill. (F. *fremissement cataire*; G. *Schnurren*.) A thrill, resembling the sensation conveyed by the purring of a cat, felt over the heart and great vessels in certain conditions; namely, aneurism, and some valvular lesions of the heart, especially mitral obstruction.

P. trem'or. The same as *P. thrill*.

Purse, shepherd's. Common name for the *Capsella bursa pastoris*.

P.-string opera'tion. A name for *Stoltz's operation*.

Purs'lane. (L. *portulaca*. Old F. *pourcelaine*; L. *porcellana*.) Common name for the *Portulaca oleracea* (q. v.).

P., milk. Name used both for the *Euphorbia corollata* and *E. maculata*.

P., speed'well. The *Veronica peregrina*.

P., water. A name for the *Ludwigia palustris*; also used sometimes for the *Veronica beccabunga*.

Purulence. (L. *pus*, matter. G. *Purulentz*.) The condition of a suppurating part.

Purulent. (L. *pus*, matter. F. *purulent*; G. *eiterig*.) Having the quality or consistence of pus; producing pus.

P. catarrh'. Inflammation of a mucous membrane, accompanied by suppuration.

P. dia'thesis. An incorrect term at one time used for *Pyæmia*.

P. fe'ver. Term for the pyrexia accompanying suppuration.

P. infec'tion. A term for *Pyæmia*.

P. œde'ma. An œdematous infiltration of pus.

Purulentia. A term for suppuration. (Dunglison.)

Pur'uloid. (*Pus, puris*; Gr. *εἶδος*, form, resemblance.) The same as *Pyoid*.

Purvain. The same as *Vervain* (q. v.).

P. U. S. Abbreviation for *United States Pharmacopœia*; more often written *U.S. P.*, or *U.S. Ph.*

Pus. (L. *pus, puris*, matter. F. *pus*; I. *marcia, pus*; G. *Eiter*.) A milky fluid of somewhat varying consistence, consisting of liquor puris and corpuscles, produced by suppuration, i.e. by a liquefactive necrosis of the intercellular part of the tissues, the cells themselves floating in the fluid and becoming fatty. Wandering leucocytes are also present in pus, and form, together with the above-mentioned cells, the pus-corpuscles.

P., blue. Pus coloured blue by the presence of the *Bacillus pyocyaneus*.

P. bo'num. A syn. for *P. laudabilē*.

P., con'crete. Term for fibrino-purulent coagula found in cases of *Infective endocarditis*.

P. cor'puscles. See main heading.

P. corrosi'vum. Corrosive pus. A syn. for *P., sanious*.

P., cur'dy. Pus containing curdy flakes which consist of broken-down tissue.

P.-disease'. A syn. for *Pyæmia*.

P. glob'ules. Syn. for *P. corpuscles*.

P., heal'thy. See *P., laudable*.

P., ichorous. (Ἰχώρ, lymph.) Pus of a thin and acrid character.

P. laudab'ilē. *P., laudable*.

P., laud'able. Also termed healthy pus. Term for normal pus (see main heading), such as is secreted in cases in which suppuration occurs in an otherwise healthy subject.

P. malign'um. Malign pus. An old term which was used to include *P., ichorous*, and *P., sanious*.

P., mu'co-. See *Muco-pus*.

P. nutriti'vum. Nutritive pus. An old term synonymous with *P. laudabilē*.

P.-poi'son. Term for a chemical compound (e.g. the proteid extracts of certain bacteria, such as *tuberculin*) which gives rise to purulent inflammation of the tissues to which it gains access.

P., san'ious. (*Sanies*.) Pus mixed with blood, as in acute abscesses.

P., se'ro-. The same as *P., serous*.

P., se'rous. Watery pus, such as that found in chronic abscesses.

P., strum'ous. Term for pus that contains flakes of tubercular matter.

P.-tube. A term occasionally used for *Pyosalpinx*.

P. ver'um. True pus. A syn. for *P. laudabilē*.

P., wat'ery. A syn. for *P., ichorous*.

Pusilla'tum. (L. *pusillus*, small.) Term for coarse powder.

Pus'sy willow. Common name in North America for the *Salix nigra*.

Pust'ula. (L. *pustula*; from *pus, puris*, matter.) A pustule. Also, *Erysipelas*.

P. aleppen'sis. Syn. for *Aleppo boil*.

P. ar'dens. Burning pustule. A term for *Eczema*.

P. gangreno'sa. Gangrenous pustule. A syn. for malignant pustule. See *Pustule, malignant*.

P. liv'ida. The same as *P. livida Esthoniæ*.

P. liv'ida Estho'niæ. "The livid pus-

PUSTULÆ—PYÆMIA

tule of Esthonia." A syn. for malignant pustule, or *Anthrax*.

P. maligna. Malignant pustule. See *Anthrax*.

P. oris. (L. *os, oris*, the mouth.) A term for *Aphthous stomatitis*. See under *Stomatitis*.

Pustulæ. Plur. of *Pustula*.

P. sic'cæ. (L. *siccus*, dry.) Dry pustules. A term for *Lichen*.

Pustulant. *Pharmacol. Adj.* Giving rise to pustulation. Also, as a *subst.*, a local irritant giving rise to pustulation.

Pustular. Consisting of, or relating to, pustules.

P. grease. A syn. for *Horse-pox* (*Variola equina*).

Pustulate. (L. *pustula*, a blister). *Bot.* Having, on a dark surface or ground, small round elevations, or round white spots, resembling in appearance pustules.

Pustulation. (*Pustula*.) The formation of pustules.

Pustulatus. The same as *Pustulous*.

Pustule. (L. *pustula*, a blister. F. *pustule*; G. *Pustel*, *Eiterbeule*.) A small globular or conical elevation of the cuticle, usually surrounded by a red areola, containing pus beneath. It is always inflammatory in origin.

P., malignant. A syn. for *Anthrax*.

Pustuliform. Having the form or appearance of a pustule.

Pustulocrusta'ceous. (*Pustulous*; *crustaceous*.) Pustular, and also covered over with a crust or scab.

Pustulose. The same as *Pustulous*.

Pustulous. The same as *Pustular*.

Pu'sula. (L.) The same as *Pustula*.

Pusulat'um. See *Pusillat'um*.

Putamen. (L. *puto*, to trim.) Trim-mings, parings. *Bot.* Bark or shell. *Anat.* A term applied to the outer portion of the *Nucleus lenticularis* of the corpus striatum.

Also, in *Bot.*, the stone of a drupe or nut-shell.

Also, term syn. with *P. ovi* (q. v.).

P., o'vi. Syn. for *Membrana putaminis*. See *Ovum*.

Putamin'eous. The same as *Putam-inous*.

Putam'inous. Belonging to the *Putamen*.

Put'chuk. (Indian.) The root of *Saussurea lappa*. Also, the root of *Aristolochia recurvilabra*.

Putium. (Πόσιον.) The prepuce.

Putre'do. (L. Gen. *putredinis*.) Rotten-ness, corruption. An old term for putrefaction; also, for hospital gangrene.

Putrefa'cient. Setting up *Putrefac-tion*. Also, any agent setting up putrefaction.

Putrefaction. (L. *putrefacio* to make rotten. F. *putréfaction*; G. *Fäulniss*.) The decomposition of nitrogenous organic matter by the action of microbes, attended with the exhalation of foul smells, which are due to the setting free of certain gases; namely, sulphuretted hydrogen, ammonia, &c.

P., gas'es of. See main heading.

Putrefactive. Giving rise to, or be-longing to, *Putrefaction*.

Putrefied. That has undergone *Putre-faction*.

Putrefy. To undergo *Putrefaction*; also, to cause to undergo *Putrefaction*.

Putres'cence. (L. *putresco*, to grow rotten.) The process of putrefying.

Putres'cent. Undergoing putrefaction; becoming putrid.

P. pois'ons. Those poisons which are of animal origin. Also termed *Septic poisons*.

Putrescentia. (L. *putresco*, to grow rotten.) Putrescence.

P. u'teri grav'idi. Putrescence of the gravid uterus. A syn. for *Hysteromalacia*.

Putres'cible. (L. *putresco*, to grow rotten; *habilis*, able.) Capable of putrefying.

Putrescibility. (L. *putresco*, to grow rotten; *habilitas*, ability.) Capacity for under-going putrefaction.

Putres'cine. (L. *putresco*, to grow rotten.) $C_4H_{12}N_2$. A poisonous ptomaine, which is an oily liquid at ordinary temperatures, and boils at 135° C.; is found in putrefying gelatin, meat, and fish, and gives rise to inflammation and necrosis.

Putrid. (L. *putridus*. F. *putride*; G. *faulig*.) Rotten, putrefied.

P. fever. A syn. for *Typhus*.

P. infec'tion. A term for *Septicæmia*.

P. sore throat. Also termed gangrenous pharyngitis. 1. As a primary disease this is extremely rare, and arises from acute blood-poisoning. It begins with sore-throat and feverishness; the breath soon becomes intensely fetid, and gangrenous spots form about the palate or tonsils. It usually ends fatally, either from syncope or coma.

2. As a secondary disease, gangrenous patches sometimes form in the throat in cases of diphtheria, scarlatina, measles, smallpox, typhoid phlegmonous pharyngitis, retro-pharyngeal abscess, scurvy, and following operations on the throat. The prognosis in all the above cases is very unfavourable.

Putrid'ity. (L. *putridus*. F. *putridité*; G. *Putridität*.) The condition of being putrid.

Putrilage. (L. *putrilago*, rottenness.) Putrid or gangrenous matter.

Putrilag'inous. (L. *putrilago*, rotten-ness. F. *putrilagineux*.) Putrid, gangrenous.

Putrila'go. (L. *putris*, rotten. F. *putrilage*.) The slough of a boil, or a carbuncle, or other form of gangrenous inflammation.

Putri'vorous. (L. *putris*, rotten; *voro*, to devour.) Obtaining sustenance from putrid matter.

Putror. (L. *putror*, rottenness.) A term for putrefaction.

Putty, Horsley's. A mixture of yellow and white wax, carbolic acid, and vasa-line, introduced by Victor Horsley for plugging bleeding vessels in cut bone.

Put'zochill. Native name for *Peruvian balsam*.

Pux'i'ri. The same as *Puchury*.

Puyse'gur, marquis of. See *Clairvoyance*, *Puysegurian*.

Puysegurian clairvoy'ance. (After the Marquis of Puysegur.) See *Clair-voyance*, *Puysegurian*.

Pyæmia. (Πύον, matter; αἷμα, the blood. F. *pyohémie*; G. *Pyämie*.) A condition of blood-poisoning attended with fever, rigors, and the severe constitutional disturbance characteristic of acute poisoning; also by other symptoms dependent upon the local lesions produced in the course of the disease, especially septic thrombosis, multiple abscesses in the connective

tissue and viscera, suppuration in joints and serous membranes, and skin eruptions. The starting-point of the disease is often some local lesion, and the efficient cause, in most cases, probably microbes of some kind. The disease may prove fatal in forty-eight hours, it may last a week or more, or may pass into a chronic condition, which last variety is often characterised by partial recoveries and relapses.

P., arter'ial. Term for a variety of pyæmia set up by the breaking down of a cardiac thrombus, with subsequent dissemination of emboli through the arterial system.

P., chron'ic. See main heading.

P., cryptogenet'ic. (Κρυπτός, hidden; γυνάω, to beget.) Term for a variety of pyæmia in which the primary suppuration occurs in the deeper tissues.

P., relap'sing. See main heading.

Pyæmic. Belonging to, or affected with, *Pyæmia*.

P. arthr'itis. *Arthritis* occurring in *Pyæmia*.

P. infarc'tus. A pyæmic infarct, i. e. an infarct formed in the course of, and consequent on, *Pyæmia*.

Pyapo'stasis. (Πύον, matter; ἀπό-στασις, a standing away from.) Old term for a collection of pus in an unusual situation.

Py'ar. (Πύαρ, -ατος.) *Colostrum*.

Pyarthro'sis. (Πύον, matter; ἄρθρω-σις, articulation. F. *pyarthrose*.) Suppurative arthritis.

Pyarthrum. (Πύον, matter; ἄρθρον, a joint.) A suppurating joint; one affected with *Pyarthrosis*.

Pyaulacome'lē. (Πύον, matter; *aulacomele* [q. v.].) *Surg.* A grooved needle or probe, used for exploring a doubtful area for pus.

Pycnan'themum. (Πυκνός, firm; ἄνθος, a flower.) A Genus of the *Labiatae*.

P. inca'num. The American mountain mint or wild basil. It is aromatic.

P. linfo'llium. The Virginia thyme. Its properties are similar to those of *P. incanum*.

Pycnicma'sia. The same as *Pycnic-masis*.

Pycnic'masis. (Πυκνός, firm; ἰκμάς, moisture). Thickening of the fluids of the body.

Pycnicmas'tica. (*Pycnicmasis*.) A syn. for *Pachyntica*.

Pycnocar'dia. (Πυκνός, thick; καρδία, the heart.) See *Tachycardia*.

Pycno'meter. (Πυκνός, firm, thick; μέτρον, a measure.) A syn. for *Hydrometer*.

Pycnophra'sia. (Πυκνός, thick; φράσις, speech.) Thickness of speech.

Pycno'sis. (Πύκνωσις.) A thickening or condensation, e. g. of the animal juices; inspissation.

Pycnot'ica medicamen'ta. (Neut. pl. of *Pycnoticus*; L. *medicamentum*.) A syn. for *Pachyntica*.

Pycnot'icus. (Πυκνός, firm.) Making firm or consistent, e. g. *Pycnotica medicamenta*.

Pyec'chysis. (Πύον, matter; ἔκχυσις, pouring out. F. *pyecchyse*; G. *Eiterergiessung*.) An effusion of pus.

Pyelit'ic. Belonging to *Pyelitis*.

Pyelit'is. (Fem. adj. agreeing with [νόσος]. From πύελος, a trough. F. *pyélite*.) Inflammation of the pelvis and calices of the

kidney. Its main causes are: bladder diseases, mechanical irritation from calculi, tumours, including tubercle, animal parasites. The symptoms are tenderness and pain in the loin, followed by the presence of a dull, semi-fluctuating swelling in the same region. The urine, which is usually acid, contains albumen and mucus, epithelial cells and pus corpuscles, and frequently blood.

P., cal'culous. *Pyelitis* set up by the irritation of a calculus or calculi.

P., hæmorrhag'ic. *Pyelitis* in which hæmaturia is a noticeable symptom.

Py'elo-cysti'tis. (Fem. adj. agreeing with [νόσος]. From πύελος, a trough; κύστις, the bladder.) *Cystitis* associated with *Pyelitis*.

Py'elo-litho'tomy. (*Pyelos*; *lithotomy*.) The removal of a renal calculus by incision into the pelvis of the kidney.

Pyelolu'trum. (Πύελος, a trough; λουτρόν, a bath.) A water-bath.

Py'elometer. (Πύελος = *Pelvis*; μέτρον, a measure.) Syn. for *Pelvimeter*.

Pyelonephrit'ic. Belonging to *Pyelonephritis*.

Py'elo-nephri'tis. (*Pyelos*; *nephritis*.) *Pyelitis* accompanied by *Nephritis*.

P., stru'mous. *Pyelonephritis* occurring in the course of strumous or tubercular disease of the urinary organs.

Py'elo-nephro'sis. (*Pyelos*; νεφρός, the kidney or kidneys.) A syn. for *Pyelonephritis*.

Py'elos. (Πύελος, a trough.) *Anat.* The pelvis of the kidney.

Py'elo'tomy. (*Pyelos*; τομή, a cutting.) Incision of the pelvis of the kidney.

Pyem'esis. (Πύον, matter; ἔμεσις, a vomiting. F. *pyémèse*; G. *Eiterbrechen*.) Vomiting of pus.

Pyenceph'alus. (Πύον, matter; ἐγκέφαλος, -ον, within the head.) Intracranial suppuration.

Py'e'sis. (Πύησις.) Suppuration. Also, pulmonary consumption (*Areteus*).

Py'e'tia. (Πυετία; Πύος, *colostrum*.) Term for *Colostrum*; also, for *Rennet*.

Pyag'ra. (Πυγή, the rump; ἄγρα, a seizure.) Pain in the anal region; also, in a narrower sense, pruritus ani.

Pyag'ria. The same as *Pyagra*.

P. granula'ta. Eczema of the anal region.

Py'gal. Belonging to the *Pygæ*.

Pyg'æ. (Πυγή.) The rump, or nates.

Pygid'ial. Belonging to the *Pygidium*.

Pygid'ium. (*Pygæ*; dim. term. -idium, from Gr. term. -ιδιον.) The hinder region of the body of certain Invertebrates.

Pygmæ'us. (Πυγμαῖος.) A *pygmæ* in length; also, dwarfish.

Pyg'mē. (Πυγμή.) The fist; also, a measure of length from the elbow to the knuckles.

Pyg'my. (*Pygmæ*.) A pigmy or dwarf.

Pygodid'y'mus. (Πυγή, the rump; δίδυμος, double.) A syn. for *Dipygus* (q. v.).

Pygo'melus. (Πυγή, the rump; μέλος, a limb.) Geoffroy St.-Hilaire's term for a monster with one or two supernumerary limbs behind or between the normal lower limbs.

Pygo'pagēs. (Πυγή, the rump; πήγνυμι, to fix.) See *Pygopagus*.

Pygo'pagus. (Πυγή, the rump; πήγνυμι, to fix. F. *pygopage*.) A foetal monstrosity

PYGO-PARASITICUS—PYCOLPOCELE

consisting of twins united together by the sacrum and coccyx.

Pygo-parasit'icus. (Πυγή, the rump; παράσιτος, one who eats at another's table.) A variety of *Pygopagus*, in which one fœtus is parasitic upon the other.

Pygo'poda. (Πυγή, the rump; πούς, ποδός, a foot.) A syn. for *Brevipennatæ* (q. v.).

Pygostyle. (Πυγή, the rump; στῦλος, a column.) The last bone in a bird's tail, which supports the tail-feathers.

Py'ic. (Πύον, matter. F. *pyique*; G. *eiterig.*) Relating to, or composed of, pus.

Py'in. (Πύον, matter. F. *pyine.*) A name given by Gütterbock to an albuminoid substance, or rather substances, found in pus. Under the influence of heat or strong acid, pyin is converted into a coagulum insoluble in an excess of acid.

Pykno'meter. See *Pycnometer*.

Pyla. (Πύλη, a gate.) Term for the orifice of communication between the mesial and lateral portions of the *Mesocœle*.

Pylæ'ma. (Pylë; αἷμα, blood. F. *pylème*; G. *Efortaderblut.*) Term for the blood of the *Vena portæ*.

Py'le. (Πύλη, a gate.) The *Vena portæ*.

Pylemphraxis. (Πύλη, a gate; ἔμφραξις, a stoppage.) Obstruction of the *Vena portæ*.

Pylephlebec'tasis. (Πύλη, a gate; φλέψ, a vein; ἑκτασις, a spreading out.) A dilatation of the portal vein; consequent either on obstruction to the circulation in the liver, or on nervous disturbance.

Pylephlebitis. (Fem. adj. agreeing with [νόσος]. Πύλη, a gate; φλέψ, a vein. I. *pylëphlébite.*) Inflammation of the portal vein. Its commonest causes are ulceration of some part in relation with the tributaries of the *Vena portæ*, and direct perforation of those vessels. The ramifications of the portal vein within the liver become filled with pus or soft friable matter. Thrombosis generally takes place.

P. adhæsi'va. Adhesive pylephlebitis. A rare affection of the *Vena portæ*; it occurs in *Cirrhus* of the liver, usually associated with thrombosis and ascites.

P., adhe'sive. See *P. adhæsiva*.

P. suppurati'va. Suppurative pylephlebitis. The common form of pylephlebitis. See main heading.

Pylethrombo'sis. (Πύλη, a gate; θρόμβος, a clot.) Thrombosis of the *Vena portæ*. See *Pylephlebitis*.

Py'lic. (*Pylicus.*) Belonging, or relating, to the *Vena portæ*.

Py'licus. (Πύλη, a gate.) *Pylic*.

Pylo'meter. (Πύλη, a gate; μέτρον, a measure.) Also termed *Cystopylometer*. An instrument designed for estimating an obstruction at the opening of the urinary bladder.

Pylophlebitis. See *Pylephlebitis*.

Pylorectomy. (Πυλωρός, the pylorus; ἑκτομή, a cutting out.) Excision of the *Pylorus*.

Pylori'c. (Πυλωρός. F. *pylorique.*) Relating to the *Pylorus*.

P. ar'tery. A branch of the *Hepatic artery*, which descends to the pylorus and runs along the lesser curvature of the stomach, anastomosing with the gastric artery.

P. ar'tery, infe'rior. Branches of the *gastro-duodenal artery*.

P. glands. The lymphatic glands seated close to the *Pylorus*.

P. plex'us. Branches of the *Hepatic plexus* accompanying the *pyloric* branch of the hepatic artery.

P. valve. See *Pylorus*.

P. vein. A vein running along the lesser curvature of the stomach, and opening into the *Portal vein*.

Pyloristeno'sis. See *Pylorostenosis*.

Pylori'tis. (*Pylorus*; -ιτις, fem. adj. termination.) Inflammation of the *Pylorus*.

Pyloroche'sis. (*Pylorus*; ὄχησις, a bearing, carrying.) A syn. for *Pylorocleisis*.

Pyloroclei'sis. (*Pylorus*; κλείσις [κλήσις], shutting.) Obstruction of the *Pylorus*.

Pylorogastroscir'rhus. (Πυλωρός; γαστήρ, the belly; σκίρος, a hardened tumour.) Scirrhus of the pyloric end of the stomach.

Pylor'oplasty. (*Pylorus*; πλαστός, from πλάσσω, to mould.) The plastic surgery of the *Pylorus*.

Pyloroscir'rhus. Scirrhus of the *Pylorus*.

Pylorostenoma. (Πυλωρός; στένωμα, a narrow pass.) The same as *Pylorostenosis*.

Pylorostenosis. (Πυλωρός; στένωσις, a narrowing.) Stenosis of the *Pylorus*.

Pyl'o'rus. (Πυλωρός, a gate-keeper. L. *pylorus*; F. *pylore*; I. *pyloro*; G. *Pfortner.*) The oval aperture formed by a fold of mucous membrane, with a ring of muscular fibres beneath (the *Pyloric valve*), whereby the stomach communicates with the duodenum. Also, the pyloric valve (see above).

P., can'cer of. See under *Stomach, cancer of*.

P., obstruc'tion of. This is due to narrowing of the pylorus, either (1) from within by cancer, hypertrophic stenosis, cicatrisation of an ulcer, or congenital stricture; or (2) from without, by pressure of a tumour or a floating kidney. The symptoms are those of dilated stomach. See *Stomach, dilatation of*.

P. pro'prius. (L. *proprior*, -us, nearer.) A term for the *Pyloric valve*.

P., stric'ture of. This may be due (1) to cancer, (2) to hypertrophic stenosis, (3) to cicatrisation of an ulcer, and (4) it may be congenital. It gives rise to obstruction. See *P., obstruction of*.

Pylosel'la. See *Pilosella*.

Py'o-. (Πύον, matter.) Prefix signifying *Pus*.

Pyoblen'na. (*Pyo*-; βλέννα, mucus.) Mucopus.

Pyoblen'nicus. (*Pyoblenna.*) Mucopurulent.

Pyoblen'no-cyst'is. (*Pyo*-; βλέννα, mucus; κύστις, a pouch.) A *vomica* in the lung.

Pyoblennorrhœa. (*Pyo*-; βλέννα, mucus; ῥέω, to flow.) A discharge of mucopus.

Pyocataract'a. (*Pyo*-; cataracta. F. *pyocataracte*; G. *Eiterstaar.*) Purulent *Cataract*.

Py'ocele. (*Pyo*-; κήλη, a tumour.) Abscess of the scrotum.

Pyoceno'sis. (*Pyo*-; κένωσις, emptying.) A discharge of pus.

Pyochez'ia. (*Pyo*-; χέζω, to ease oneself.) Purulent diarrhœa.

Pyocœ'lia. (*Pyo*-; κοιλία, the belly.) An accumulation of pus in the abdomen.

Pyocol'pocèle. (*Pyo*-; κόλπος, a fold, κήλη, a tumour.) A vaginal swelling containing pus.

PYOCOLPOS—PYOPOIETIC

Pyocol'pos. (*Pyo-*; κόλπος, a fold.) Pus in the vagina.

Pyoc'tanin. See *Pyoktanin*.

Pyocy'anin. (*Pyo-*; κύανος, a dark blue substance.) $C_{14}H_{14}NO_2$. A blue colouring-matter which has been isolated from blue-coloured pus and from cultures of the *Bacillus pyocyaneus*. It is actively chemotactic, and becomes oxidised on exposure to the air, into *pyoxanthose*. See *Suppuration*, blue.

Py'ocyst. (*Pyocystis*.) A collection of encysted pus, especially in the lung; a vomica.

Pyocys'tis. (*Pyo-*; κύστις, a pouch. *F. pyocyste*; *G. Eitersack*.) A *Pyocyst*.

Py'ocyte. (*Pyo-*; κύτος, a cell.) A pus-leucocyte.

Pyodermat'itis. (*Pyo-*; dermatitis.) A skin-disease produced by inoculation of any pyogenic material.

Pyodermi'tis. (*Pyo-*; dermatitis.) Any inflammatory skin-disease characterised by the production of pus.

Pyo'dēs. (Πύον, matter; εἶδος, resemblance.) Resembling pus.

Pyodia'thesis. (*Pyo-*; διάθεσις, disposition.) A purulent diathesis.

Pyœde'ma. (*Pyo-*; œdema.) Œdema due to infiltration of pus.

Pyoëm'esis. See *Pyemesis*.

Pyogan'grenous. Gangrenous and suppurating.

P. inflamma'tion. Term for a variety of acute inflammation characterised by the occurrence of suppuration around a gangrenous centre, or central slough.

Pyogenes. (*Pyo-*; γένος, race, descent.) Pyogenic.

Pyogen'esis. (*Pyo-*; γένεσις, production. *F. pyogénésie*; *G. Eiterbildung*.) Formation of pus.

Pyogenet'ic. (*Pyo-*; γένεσις, production.) Having the property of forming pus.

P. mem'brane. Term applied to the lining membrane of an abscess-cavity.

Pyogen'ia. (*Pyo-*; γένος, race, descent.) Syn. for *Pyogenesis*.

P. corrosi'va. A syn. for *Ulceration*.

P. simp'lex. A term for *Suppuration*.

Pyogen'ic. (*Pyogenes*.) Belonging to *Pyogenia*; the same as *Pyogenetic*.

P. fe'ver. A syn. for *Strangles*.

P. mem'brane. See *Pyogenetic membrane*.

P. microörganisms. Microörganisms that set up suppuration. The chief ones are *Staphylococcus albus*, *S. aureus* and *S. citreus*, and *Streptococcus pyogenes*. Certain other bacilli are occasionally pyogenic.

Pyohæ'mia. (*Pyo-*; αἷμα, blood.) *Pyæmia*.

Pyohæ'mic. Belonging to *Pyohæmia*; pyæmic.

Pyohæmotho'rax. (*Pyo-*; hæmothorax.) An accumulation of pus and blood in the cavity of one or both pleuræ.

Py'oid. (Πύον, matter; εἶδος, resemblance.) Resembling pus.

P. cor'puscles. Pus corpuscles.

P. glob'ules. Syn. for *P. corpuscles*.

Pyok'tanin. (*Pyo-*; κτείνω, to kill.) A term applied indiscriminately to methyl-violet and aurantin, from their power of checking suppuration, both being antiseptic. They are odourless and non-poisonous. They are

recommended for antiseptic dressings and ointments in the strength of 1 or 2 per cent. (*Gould's Dict.*).

Py'olymph. (*Pyo-*; lymph.) Term for lymph which contains pus corpuscles.

Py'oma. (Πύον, matter.) A suppuration.

Pyomal'gia. (*Pyo-*; ὤμος, the shoulder; ἄλγος, pain.) Pain in the shoulder, associated with suppuration.

Pyome'lē. The same as *Pyaulacomelē*.

Pyome'tra. (*Pyo-*; μήτρα, the womb. *F. pyomètre*.) Pus in the cavity of the uterus.

Py'on. (Πύον.) Pus.

Pyonephrit'ic. Belonging to *Pyonephritis*.

Pyonephri'tis. (Fem. adj. agreeing with [νόσος]; *pyo-*; νεφρός, kidney.) Inflammation of the kidney leading to suppuration.

Pyonephro'sis. (*Pyo-*; νεφρός, kidney. *F. pyonéphrose*.) Pus in the pelvis and substance of the kidney.

Pyonephrot'ic. Belonging to *Pyonephrosis*.

Pyono'ma. (*Pyo-*; νομή, feeding—of eating sores.) A malignant sore with suppuration.

Pyoöphori'tis. (Fem. adj. agreeing with [νόσος]; *pyo-*; ὠόν, an egg; φορέω, to carry.) Purulent *Oöphoritis*.

Pyoötorrhœ'a. (*Pyo-*; otorrhœa.) Discharge of pus from the external auditory meatus. The term *Otorrhœa* is the one generally used for this condition.

Pyopericar'dium. (*Pyo-*; pericar'dium.) Pus in the *Pericardium*.

Pyoperitonit'is. (*Pyo-*; peritonitis.) Purulent peritonitis.

Pyophthal'mia. (*Pyo-*; ophthalmia.) Purulent ophthalmia.

P. neonato'rum. Syn. for *Ophthalmia purulenta neonatorum*.

Pyophthal'mus. (*Pyo-*; ὀφθαλμός, the eye.) A collection of pus within the eyeball. See *Hypopyon*.

Pyophthisis. (*Pyo-*; φθίσις, wasting.) Wasting or loss of flesh, consequent upon suppuration.

Pyophylact'ic. (*Pyo-*; φυλακτικός, guarding.) A syn. for *Pyogenic*.

P. mem'brane. A syn. for *Pyogenic membrane*.

Pyopla'nia. (*Pyo-*; πλάνη, a wandering. *F. pyoplanie*; *G. Eiterverbreitung*.) Extension of suppuration, purulent infiltration.

Pyopneumonypo'stasis. (*Pyo-*; πνεύμων, the lung; ὑπόστασις, sediment.) Gravitation of pus to the lowest part of the lung.

Pyopneumopericar'dium. (*Pyo-*; pneumopericardium.) The presence of pus and gas or air in the cavity of the pericardium.

Pyopneumoperitonit'is. (*Pyo-*; πνεύμα, air; peritonitis.) Peritonitis complicated by the presence of pus and air.

Pyopneumotho'rax. (*Pyo-*; πνεύμα, air; θώραξ, chest.) A condition in which the pleural cavity contains air and pus. See *Pneumothorax*.

P., subphren'ic. Leyden's term for a similar condition to *Pyopneumothorax*, but beneath the diaphragm.

Pyopoie'sis. (*Pyo-*; ποίησις, a making.) The same as *Pyogenesis*.

Pyopoiet'ic. (*Pyo-*; ποιητικός, capable of making.) Belonging to *Pyopoesis*, suppurative.

PYOPTYSIS—PYRAMIDAL

Pyo'ptysis. (*Pyo-*; πτύσις, a spitting. *F. pyoptysis*; *G. Eiterauswurf.*) Purulent expectoration.

Pyorrhæ'gia. (*Pyo-*; ῥήγνυμι, to break forth.) A sudden discharge of pus.

Pyorrhœ'a. (*Pyo-*; ῥέω, to flow. *F. pyorrhée*; *G. Eiterfluss.*) Purulent discharge.

P. alveolar'is. Purulent discharge from the gums and sockets (*alveoli*) of the teeth.

P. alvina. (*L. alvus*, the belly.) Syn. for *Pyochezia*.

P. aur'ium. A syn. for *Otorrhœa*.

P. nasal'is. Syn. for *Ozœna*.

P. palpebræ. Syn. for *Blepharopyorrhœa*.

P. urin'is. Syn. for *Pyuria*.

P. viar'um lachryma'lium. Discharge of pus from the lachrymal ducts. A syn. for *Dacryopyorrhœa*.

Pyorthopnœ'a. (*Pyo-*; *orthopnœa*.) Term for *Orthopnœa* due to an empyema.

Pyos. (Πύος or πῦος.) *Colostrum*.

Pyosalpingi'tis. (*Pyo-*; *salpinx*; fem. adj. term. -ιτις.) 1. Purulent inflammation of the Fallopian tube. 2. Purulent inflammation of the Eustachian tube.

Pyosal'pinx. (*Pyo-*; σάλπιγξ, a trumpet; hence used for the Fallopian tube, from its trumpet-like shape.) Pus in the Fallopian tube.

Pyosapræ'mia. (*Pyo-*; σαπρός, rotten; αἷμα, blood.) *Sapræmia* due to infection of the blood by a collection of foul pus.

Pyos'cheocele. (*Pyo-*; *oscheocele*.) A suppurating scrotal hernia.

Pyoscope. (*Pyo-*; σκοπέω, to look at.) An instrument for estimating, by its colour, the richness of milk.

Pyosepthæ'mia. (*Pyo-*; *septhæmia* = *septicæmia*.) A syn. for *Pyosepticæmia*.

Pyosepticæ'mia. A term signifying *septicæmia* together with *pyæmia*.

Pyo'sis. (Πύσις, matter.) The process of pus-formation.

P. pec'toris. (*L. pectus*; -oris, the chest.) A syn. for *Empyema*.

Pyospermato'cyst. (*Pyo-*; σπέρμα, seed; κύστις, a box.) Accumulation of pus in one or both the *vesiculæ seminales*.

Pyoster'corous. (*Pyo-*; *L. stercus*, dung.) A term signifying belonging to purulent discharge from the bowels.

Pyotho'rax. (*Pyo-*; θώραξ, the chest.) Accumulation of pus in the chest; *empyema*.

Pyotorrhœ'a. (*Pyo-*; οὖς, ὠτός, the ear; ῥέω, to flow.) The same as *Pyoötorrhœa*.

Pyoturia. (*Pyo-*; οὖρον, the urine.) Pus in the urine; *pyuria*.

Pyoxan'thin. A syn. for *Pyoxanthose*.

Pyoxan'those. (*Pyo-*; ξανθός, yellow.) A yellow colouring-matter found, in company with *pyocyanin*, in blue suppuration. Acids turn it red; alkalies, violet. (*Littre*.)

Pyoze'mia. (*Pyo-*; ζυμή, a ferment.) The constitutional state which suppuration gives rise to.

Pyra. (Πυρά, a mass of fire.) A syn. for *Anthrax*.

P. crustumeri'na. Syn. for *Crustumina*.

P. crustumi'na. The same as *P. crustumerina*.

Pyracan'thus. (Πῦρ, fire; ἀκανθα, a thorn.) Having flame-coloured thorns, as, e.g., the *Celastrus pyracanthus*.

Pyrace'tic acid. A syn. for *Pyroligneous acid*.

Pyræ'nus. See *Pyrenus*.

Pyra'mid. (Πυραμῖς. *F. pyramide*; *G. Pyramide*.) A term applied, in *Anatomy*, to a number of structures more or less resembling a pyramid in form. Also, term for the centre-pin of a trephine. (*Dunglison*.)

P.s., ante'rior. See *Medulla oblongata*, anterior pyramids of.

P.s., corti'cal. A syn. for *P.s. of Malpighi*.

P.s., decussa'tion of. (*G. Pyramidekreuzung*.) The crossing of sundry of the innermost fibres of the lower portion of the anterior pyramids of the spinal cord, in some four or five bundles. These bundles however are not composed mainly of pyramidal fibres, but chiefly of fibres derived from the lateral columns.

P.s., gi'ant. Betz's term for the large pyramidal cortical cells of the *Paracentral convolution* of the cerebrum.

P.s., lat'eral. A syn. for *Restiform bodies*.

P. of cerebel'lum. A conical projection forming part of the *Inferior vermiform process*, seated in front of the *Commissura brevis*, and behind the *Uvula*.

P.s. of Fer'rein. (*F. pyramides de Ferrein*; *G. Ferreinische Pyramiden*.) Term for a phenomenon due to the arrangement of the renal tubules in the cortex of the kidney. The central tubes reach almost to the surface of the organ, while the external tubes are shorter; the arrangement takes the form of a number of conical masses, each having its apex towards the periphery, and its base towards the medulla.

P. of Lalouette'. Syn. for *P. of thyroid*.

P. of light. A syn. for *Cone of light*; the conical reflection of light observed at the normal *membrana tympani*.

P. of Malacarne'. See *Malacarne's pyramid*.

P.s. of Malpighi. The conical masses which compose the medullary portion of the kidney, from eight to eighteen in number, each having its base directed towards the circumference, and its apex (the *papilla* or *mamilla*), projecting into one of the *calices*.

P.s. of medulla oblonga'ta. See under *Medulla oblongata*.

P.s. of spine. From the front, the spine, or vertebral column, may be regarded as constituted by two pyramids joined at their bases, an upper one from the second cervical vertebra to the last lumbar, a lower constituted by the sacrum and coccyx.

P. of thy'roid gland. A conical lobe, occasionally present, arising from the left side of the *isthmus*, and ascending towards the hyoid bone; also called *P. of Lalouette*.

P. of tym'panum. A hollow conical eminence seated on the inner wall of the *Tympanum*, behind the *fenestra ovalis*, containing the *stapedius muscle* in its hollow interior.

P. of ves'tibule. An eminence situated on the inner wall of the *vestibule* of the internal ear, behind the *macula cribrosa*.

P.s. of Wis'tar. A syn. for *Cornua sphenoidalia*.

P.s., poste'rior. See *Medulla oblongata*, posterior pyramids of.

Pyram'idal. Shaped like, or belonging to, a *Pyramid*.

PYRAMIDALĒ—PYRETHRI

P. angle. Syn. for *Anterior parietal angle*. See *Parietal angle of Quatrefages*.

P. bone. (G. *Pyramide-bein*.) Another name for the *Cuneiform bone* of the wrist.

P. cataract. (G. *Pyramidal-staar*.) A form of *Cataract* seated at the anterior pole of the lens (hence called also *anterior polar cataract*, though this is a somewhat wider term). It starts in inflammation below the lens capsule; its character is stationary and non-progressive.

P. em'inance. See *Pyramid of vestibule*.

P. lay'er, large. (G. *Pyramid-zellen-schicht*.) The third and most important layer of the cortical grey matter of the brain, containing many large ganglion-cells, of pyramidal shape, having processes both vertical and lateral.

P. lay'er, small. The second layer of the cortical grey matter, containing numerous smaller pyramidal ganglion-cells.

P. nu'clei. Certain nuclei, seated the one on the outer, the other on the inner side of the main olivary nucleus; called pyramidal, because they lie just behind the *pyramid* of the medulla oblongata.

P. papil'læ. Syn. for *Papillæ, conical*.

P. pro'cess of cu'boid bone. The internal and inferior angle of the posterior extremity of the cuboid bone.

P. pro'cess of palate bone. (G. *Pyramiden-fortsatz*.) Another name for the *Pterygoid process*, or *tuberosity*, of the palate-bone.

P. si'nus. Syn. for *Pyriform sinus*.

P. tract. (G. *Pyramiden-bahn*.) A tract of motor nerve-fibres in the spinal cord, so called from its upper connection with the *Pyramid* of the medulla oblongata. It is usually divided into two portions:—1. The *Anterior* or *uncrossed* portion (G. *Pyramiden-vorderstrangbahn*), consisting of those fibres of the pyramids which do not decussate at the extreme top of the cord; but which, passing down on either side of the anterior median fissure, cease low down in the dorsal region. 2. The *Lateral* or *crossed* portion (G. *Pyramiden-seitenstrangbahn*), which consists of those fibres from the pyramid which decussate at the top of the spinal cord, and pass downwards in the posterior part of the lateral column, as far as the third or fourth pair of sacral nerves.

P. tract, cros'sed. See under *P. tract*.

PyramidalĒ, os. (Neut. of *Pyramidalis*.) The *Pyramidal bone*.

Pyramidalis. (Πυραμῖς, a pyramid.) Resembling a pyramid. Term applied to certain muscles.

P. abdom'inis. (L. *abdomen, -inis*, the belly.) A small, triangular muscle, seated in front of the rectus abdominis, arising from the front of the pubes and anterior pubic ligament, inserted into the linea alba midway between the umbilicus and pubes.

P. auriculæ. (L. *auricula*, the auricle or external ear.) Name for a strand of fibres of the *tragicus* muscle which passes to the process of the helix.

P. fem'oris. The *Pyriformis*.

P. nar'ium. (Nares.) Santorini's term for the *Levator labii superioris alæque nasi* muscle.

P. na'si. (F. *muscle pyramidal*; G. *Nasenrücken-muskel*.) A thin prolongation of the *Occipito-frontalis* muscle on the side of the

nose, blending with the *Compressor nasi*. It draws down the inner angle of the eye-brow.

Pyramidēs. (Plur. of *Pyramis*.) Term for *Medulla oblongata, anterior pyramids of*.

P. re'num. (L. *renes*, the kidneys.) The pyramids or papillæ of the kidney, the *Pyramids of Malpighi*.

Pyramis. (Gen. *pyramidis*. Πυραμῖς, -idos.) A pyramid. A syn. for *penis*. Also, term for the occasional *middle lobe* of the thyroid gland; see *Thyroid gland, middle lobe of*. Also, term for the anterior pyramid of the medulla oblongata. Also, for the petrous portion of the temporal bone.

P. cerebel'li. *Pyramid of cerebellum*.

P. coch'leæ. Another name for the *Modiolus* of the cochlea.

P. latera'lis. Lateral pyramid. Syn. for *Restiform body*.

P. poste'rior. The posterior pyramid. See *Pyramid, posterior*.

P. thyroïd'eï. The pyramid of the thyroid gland. See under *Thyroid gland*.

P. trigo'na. (L. *trigonus*, three-cornered.) Term for the *petrous* portion of the temporal bone.

P. ver'mis accesso'ria. The accessory pyramid of the worm, or inferior vermiform process. A small occasional accessory lobule of the inferior vermiform process of the cerebellum.

P. vestib'uli. (L. *vestibulum*, a porch or vestibule.) *Pyramid of vestibule* (q. v.).

Pyran'chonē. (Πῦρ, fire; ἀγχόνη, a strangling.) Eisenmann's term for *Isthmopyra*.

Pyrangonē. See *Pyranchonē*.

Pyrca'a. (Πυρκαϊά, a conflagration.) The same as *Incendium*.

Pyrec'tic. (Πυρεκτικός, feverish.) Belonging to, or suffering from, *Pyrexia*.

Pyrec'tica. (Πυρεκτικός, feverish.) Fevers. The first Order of the Class *Hæmatica* in Good's Nosology.

Pyrem'etin. An emetic substance obtained from impure creasote.

Py'ren. (Πυρήν, the stone of fruits.) Term used as equivalent to *Nucula*.

Pyrenæ'matous. Belonging to, or possessing, red blood-corpuscles.

Pyrenæ'mia. (Πυρήν, stone of fruit; αἷμα, blood.) The condition of blood characterised by nucleation of the red blood-corpuscles.

Py'renin. (Pyren.) Schwartz's term for the substance of which the *nucleolus* is made up, as distinguished from "amphipyrenin," the substance of which the nuclear membrane is composed.

Pyren'ocarp. (Πυρήν, the stone of fruits; καρπός, a fruit.) Bot. A syn. for *Drupe*.

Pyrenocar'pous. Belonging to a *Pyrenocarp*.

Pyre'noid. (Πυρήν, the stone of fruits; εἶδος, resemblance.) Kernel-shaped. Anat. Epithet formerly applied to the *odontoid process* of the axis vertebra. Also, as a substantive, term applied by Schmitz to the small, bright, starch-forming globules found in the chromatophores of the green Algae and certain of the Invertebrata. They give reactions identical with those given by nuclein.

Pyretætiology. (Πυρετός, fever; αἰτία, cause; λόγος, doctrine.) The *ætiology* of fevers.

Pyre'thri flo'res. *Pyrethrum* flowers. (Not official.) The powder from the flower-

heads obtained in the Caucasus from *Pyrethrum roseum* and *P. carneum*, and in Dalmatia from *P. cinerariæfolium*. The active principle is an ether-soluble resin, not a volatile oil. This powder keeps away fleas, and also ants. (Squire.) From it is prepared *Tinctura pyrethri florum* (q. v.).

P. radix. B. Ph. (Gen. of *Pyrethrum*. L. *radix*, a root.) Pellitory root. The dried root of *Anacyclus pyrethrum*, collected mainly in Algeria. It is a powerful sialogogue, and has been used, on that account, in cases of paralysis of the tongue. From it is prepared *Tinctura pyrethri* (q. v.). See also *Trochisci pyrethri*.

Pyrethrin. A soft resinous substance obtained from the root of *Pyrethrum*. It appears to be formed by the mixture of a resin, insoluble, with two oils, one brown and the other yellow, both soluble, in potash solution. (Littre.)

Pyrethrum. (Πῦρ, fire.) A Genus of the *Compositæ*. Also, the *Anacyclus pyrethrum*. Also, the root of *Anacyclus pyrethrum*. See *Pyrethri radix*.

P. carneum. (L. *carneus*, fleshy.) A species growing in Western Asia. Its flowers are used as an insecticide, under the name *Pyrethri flores*.

P. cinerariæfolium. The flowers are used for the same purpose as those of *P. carneum*.

P. parthenium. Syn. for *Matricaria parthenium*.

P. roseum. A species similar in properties and uses to *P. carneum*.

Also, the powder of the flower-heads of this species, used as an insect powder; more commonly known as *Pyrethri flores*.

P. sylvestrè. The *Achillea ptarmica*.
P. tanacetum. Syn. for *Tanacetum balsamita*.

Pyretic. (Πυρετός, fever. F. *pyretique*; G. *pyretisch*.) Belonging to fever; also, febrile.

Pyretico'sis. (Πυρετός, fever.) Feverishness.

Pyretium. (Πυρέτιον, dim. from πυρετός.) A slight fever.

Pyretogene'sia. The same as *Pyretogenesis*.

Pyretogen'esis. (Πυρετός, fever; γένεσις, generation.) The generation of fever.

Pyretogenetic. (*Pyretogenesis*.) Generating fever.

Pyretogen'ia. The same as *Pyretogenesis*.

Pyretogen'ic. (Πυρετός, fever; root of γεννάω, to beget.) Fever-producing.

Pyreto'genin. (Πυρετός, fever; root of γεννάω, to beget.) A substance produced by micro-organisms, which has been found to give rise to fever when inoculated into animals. It is probably a ptomaine.

Pyreto'genous. A syn. for *Pyretogenic*.

Pyreto'graphy. (Πυρετός, fever; γράφω, to write.) A history or description of fevers.

Pyretolog'ical. Belonging to *Pyretology*.

Pyreto'logist. (Πυρετός, fever; λόγος, an account.) One who makes a special study of fevers.

Pyreto'logy. (Πυρετός, fever; λόγος, an account. F. *pyrétologie*; G. *Fieberlehre*.) The doctrine of the causes and nature of fevers.

Pyretontology. (Πυρετός, fever; ontology.) Doctrine of the nature of fever.

Pyretophthal'mia. (Πυρετός, fever; ὀφθαλμία, disease of the eyes.) *Ophthalmia* accompanied by fever.

Pyretophysiology'ia. (Πυρετός, fever; φυσιολογία, inquiring into the nature of things.) Inquiry into the nature of fevers.

Pyretorthopnœ'a. (Πυρετός, fever; orthopnœa.) Orthopnœa accompanied by fever.

Pyretosymptomatograph'ia. (Πυρετός, fever; symptomatographia.) A description of the symptoms of fevers.

Pyretosymptomatolog'ia. (Πυρετός, fever; symptomatologia.) Doctrine of the symptoms of fevers.

Pyretotypo'sis. (Πυρετός, fever; τύπωσις, a fashioning, forming.) A term for *Intermittent fever*.

Pyretus. (Πυρετός.) *Pyrexia*.

Pyrex'ia. (Πύρεξις, feverishness.) Fever. The febrile state.

P., hyster'ical. Febrile rises of temperature are occasionally observed in hysterical patients, apparently neurotic in origin, and not depending on any inflammatory process. The temperature is often erratic and sometimes reaches a high elevation.

Pyrex'ia. (Pl. of *Pyrexia*.) Fevers. A Class in Cullen's Nosology.

Pyrex'ial. (*Pyrexia*.) Belonging to *pyrexia*, feverish.

Pyrex'ic. A syn. for *Pyrexial*.

Pyrex'y. *Pyrexia*.

Pyrgoceph'aly. (Πύργος, a tower; κεφαλή the head.) That shape of skull which is characterised by a highly-arched vertex.

Pyri martial'es. Syn. for *Boli martis*.

Pyria. (Πυρία.) A vapour-bath.

Pyria'sis. (Πυρίασις.) Warming produced by a vapour bath.

Pyria'tes. (Πυριάτης, the first milk after calving.) *Colostrum*.

Pyriate'rium. (Πυριατήριον. L. *sudatorium*.) A vapour-bath.

Pyricaus'tum. (Πυρίκαυστος, burnt in fire.) A burn.

Pyridine. C₅H₅N. A colourless, liquid, volatile alkaloid, of sp. gr. .980, and boiling at about 116° C., obtained among the products of the destructive or dry distillation of bones. It has a strong odour; its aqueous solution is alkaline. As found in commerce, it always contains *Picoline*. It is miscible with water, ether, rectified spirit, and fixed oils. Useful in asthma; 62 to 77 grains are evaporated in a flat dish, the patient inhaling the vapour for one and a half hours three times a day. (Brit. Med. Jour., 1885, ii, 1074.) It is beneficial in cardiac dyspnoea, emphysema, and angina pectoris. (*Lancet*, 1888, i, 437; 1888, ii, 438.) The vapour induces headache when freely inhaled. It resembles *nicotine* in being an insecticide.

Pyrieph'thon. (Τὸ πυρίεφθον = ὁ πυρίεφθος.) The same as *Pyriephthos*.

Pyrieph'thos. (Ὁ πυρίεφθος = πυριάτης.) Syn. for *Pyriates*.

Pyriform. (L. *pyrum*, a pear; forma, shape.) Pear-shaped.

P. si'nus. See *Sinus pyriiform*.

Pyrifor'mis. (L. *pyrum*, a pear; forma, shape.) Shaped like a pear.

P. fas'cia. The fascia covering the inner surface of the *P. muscle*.

PYRIGENEUS—PYROGUAIACIC

P. muscle. (F. *pyramidal*; G. *Birn-muskel*.) A pyramidal muscle situated partly inside and partly outside the pelvis, arising by three digitations from the front of the sacrum, and also from the margin of the great sacro-sciatic foramen, through which it leaves the pelvis to be inserted into the upper border of the great trochanter of the femur.

Pyrigen'eus. See *Pyrogenous*.

Pyrimachus. (Πῦρ, fire; μάχομαι, to fight.) That resists fire. Term applied to digested antimony, which in this form resists ordinary heat.

Pyrimania. (Πῦρ, fire; μανία, madness.) A syn. for *Pyromania*.

Pyri'ne. (Πυρίνη = πυρίν, the stone of stone-fruit.) *Chem.* Old term for a supposed compound substance made up of carbon, hydrogen, and oxygen, at one time believed to be present in rain, snow, hail, and dew.

Pharm. Name for an ancient plaster used for scirrhus, according to Paulus Ægineta, vii, 17; Adams' Transl. vol. iii, p. 560.

Pyriphleg'es. (Πυριφλεγής, violently inflamed. Hippocrates.) One suffering from intense fever.

Pyrit'es. (Πῦρ, fire; so named because it strikes fire on contact with steel. F. *pyrite*; G. *Feuerstein*.) A term for native compounds of metals with sulphur. See *Iron pyrites*, *Arsenical pyrites*.

P., hepatic. (Ἡπατικός, of the liver.) A variety of iron pyrites consisting of decomposed liver-coloured crystals.

P., liv'er. Same as *P., hepatic*.

Pyritiferus. (*Pyrites*. L. *fero*, to bear.) Containing *Pyrites*.

Pyritolog'ia. (*Pyrites*; Gr. λόγος, an account.) A treatise upon *Pyrites*. (Henkel.)

Pyr'mont. A town on the Weser, in Westphalia, noted for its chalybeate mineral spring, containing chloride and sulphate of sodium and magnesium, and carbonates of iron, magnesia, and calcium, with carbonic acid. Season, June to September.

P. water, artificial. Composition:—Sulphate of magnesia 15 grains, chloride of sodium 5 grains, oxide of magnesium 10 grains, iron filings 5 grains; and water 3 pints, containing the carbonic acid gas generated from sulphuric acid and powdered marble, of each 7 drachms. (Dunglison.)

Pyro-. (Πῦρ, fire.) A prefix used in Chemistry, denoting that the objects to which it is applied are obtained through the application of heat.

Pyro-acetic acid. Syn. for *Pyro-ligneous acid*.

P. ether. A syn. for *Acetone*, given on account of its formation by dry distillation from acetates.

P. spir'it. The same as *Pyro-acetic ether*.

Pyro-ac'id. Term for a product obtained on heating certain of the organic acids.

Pyroamarin. A substance obtained by the dry distillation of *Amarin*.

Pyrocatechu'ic acid. A syn. for *Pyrocatechin*.

Pyrocatechin. $C_6H_6O_2$. Orthodihydroxy-benzene. A product of the dry distillation of *Catechu*, or of melting raisins with caustic potash. It is crystalline, melts at $110^{\circ} F.$, and is soluble in water, alcohol, and ether. It

is an isomeride of hydroquinone and resorcin, and is antipyretic.

Pyrocatechin'ic ac'id. A syn. for *Pyrocatechin*.

Pyrocatechu'ic ac'id. A syn. for *Pyrocatechin*.

Pyrochemi'a. (*Pyro-*; χημεία, chemistry.) Old term for that division of Chemistry which treated of fire.

Pyrochl'nic ac'id. See *Pyrokinic acid*.

Pyrodextrin. $C_{46}H_{74}O_{37}$. A product of the action of a high temperature (220° to $230^{\circ} C.$) upon starch. It is brown, tasteless, soluble in water, insoluble in alcohol.

Pyrodin. A substance obtained from coal tar, composed mainly of acetyl-phenyl-hydrazin ($C_6H_5N_2H_2[C_2H_3O]$), recently used in doses of $\frac{1}{2}$ to 4 grains, as an antipyretic. The results obtained have been uncertain and variable.

Pyro-electric. Epithet applied to the phenomenon of electric polarity developed in certain crystalline bodies by the effect of heat.

Pyro'eus. (Πῦρ, fire; οἶνος, wine.) Old term for brandy or strong spirit.

Pyrogallate. A salt of *Pyrogallic acid*.

Pyrogall'ic acid. $C_6H_3(OH)_3$. Trihydroxy-benzene. (F. *acide pyrogallique*; G. *Brenzgallsäure*.) A product of the dry distillation of gallic or tannic acid. It crystallises in needles or plates, which are soluble in water, alcohol, and ether. It darkens very rapidly in alkaline solutions, through absorption of oxygen, hence it affords a very delicate test for oxygen, being used for this purpose in gas analysis. Therapeutically, it has been used in chronic skin affections, e.g. *Psoriasis*, as an ointment (3j pyrogall'ic acid to 3j lard); also in internal hæmorrhages. It darkens the skin and hair, and is used, together with silver nitrate, for blackening the hair.

Pyrogallol. Another name for *Pyrogall'ic acid*.

Pyrogen. (*Pyro-*; γεννάω, to produce.) An old name for *Electricity*.

Pyrogen'eous. (*Pyro-*; γέννω, to produce.) *Chem.* Produced from fire, or by means of heat. *Pharm.* Epithet applied by Berzelius to empyreumatic oils and resins, i. e. to those oils and resins prepared by distillation of organic substances.

Pyrogenesia. The same as *Pyrogenesis*.

Pyrogen'esis. (*Pyro-*; γένεσις, generation.) The generation of heat or fever.

Pyrogenet'ic. (*Pyrogenesis*.) Heat-producing or fever-producing.

Pyrogen'ic. (*Pyro-*; γέννω, to produce.) The same as *Pyrogenetic*.

Pyro'genous. (*Pyro-*; γέννω.) 1. *Geol.* Fire-producing. Epithet applied first by Brongniart to those earths forming the volcanic and igneous strata. 2. *Med.* Fever-producing. *Pyrogenetic*.

Pyroglu'cic ac'id. A syn. for *Pyrodextrin*.

Pyroglyc'erin. (*Pyro-*; glycerin.) $C_{12}H_{14}O_{10}$. Also termed *diglycerin*. A thick liquid, miscible with alcohol, formed when glycerin is heated to $220^{\circ} F.$

Pyrognos'tic. (*Pyro-*; γνωστικός, good at knowing.) *Chem.* Epithet applied to those blow-pipe experiments which are made to discover the nature of some substance.

Pyroguaiac'ic acid. A syn. for *Guaiacol*.

Pyroguai'acin. (*Pyro*; *guaiac*.) $C_{23}H_{22}O_5$. A crystallisable red body, soluble in alcohol, and melting at $183^\circ F$., obtained by the distillation of guaiac resin. (Pelletier and Deville.)

Pyrokin'ate. A salt of *Pyrokinic acid*.

Pyrokin'ic acid. Name for an acid, discovered by Pelletier and Caventon, obtained in the distillation by means of heat of *Kinic acid*.

Pyrola. (*L. pyrus*, a pear-tree. *F. pyrole*.) 1. A division of the *Ericaceæ*, according to some authorities; according to others, a distinct Order (*Pyrolaceæ*).

2. Name in the Pharm. Edin. for the *Chimaphila umbellata*, or *Pyrola umbellata*.

P. macula'ta. The *Chimaphila maculata*.

P. rotundifolia. (*F. Pyrole à feuilles rondes*.) Round-leaved wintergreen, whose leaves have astringent properties.

P. umbella'ta. (*F. pyrole ombellée*.) The *Chimaphila umbellata*.

Pyroleum. (*Pyro*-; *oleum*, oil.) An oil obtained or separated by means of heat.

Also, *Petroleum*.

P. anima'lë. An animal oil.

P. junip'eri. (*L. juniperus*, the juniper.) Oil of cade.

P. os'sium rectifica'tum. Rectified bone oil. A syn. for *Oleum cornu cervi*.

P. oxyced'ri. The same as *P. juniperi*.

P. pet'ræ. Name in Dan. Ph. for crude *petroleum*.

P. pi'ni. (*L. pinus*, the pine.) A name for tar.

P. succi'ni. (*L. succinum*, amber.) Oil of amber.

Pyrolig'neous. (*Pyro*-; *L. lignum*, wood.) Obtained from wood by the action of heat.

P. ac'id. (*F. acide pyroligneux*; *G. Holzessigsäure*.) The crude acid obtained by the dry distillation of wood. Purified from tarry matters, oils, &c., it yields the acetic acid of commerce.

P. al'cohol. A syn. for *Methyl alcohol*.

P. spir'it. The same as *P. alcohol*.

P. vin'egar. *Wood vinegar*.

Pyro-lith'ic ac'id. The same as *Pyro-uric acid*.

Pyrology. (*Πύρ*, fire; *λόγος*, a discourse.) The study of the application, especially the Surgical application, of heat.

Pyrolusite. (*Pyro*-; *λύσις*, a loosening.) A name for *Manganic dioxide*.

Pyro'lysis. (*Pyro*-; *λύσις*, a loosening.) Decomposition by heat.

Pyrolytic. Belonging to *Pyrolysis*.

Pyroma'late. A salt of *Pyromalic acid*.

Pyroma'lic ac'id. Also called *pyrosorbic acid*. An acid obtained by distilling *malic acid* in a retort, the acid crystallising out in the receiver on evaporation.

Pyromancy. (*Pyro*-; *μαντεία*, divination. *F. pyromancie*.) That branch of Astrology which foretold the future by signs drawn from meteors, or burning bodies.

Pyromania. (*Pyro*-; *μανία*, madness. *F. pyromanie*; *I. piromania*; *G. Feuerwuth*.) A propensity to incendiarism, the result of mental derangement; it has been claimed as a special form of insanity.

Pyromania. A subject of *Pyromania*.

Pyromecon'ic ac'id. (*F. acide pyro-*

méconique; *G. Brenzmekonsäure*.) $C_{10}H_4O_6$. A crystalline bitter acid, obtained by heating *meconic acid*; soluble in water and alcohol.

Pyromel. (*Pyro*-; *μελί*.) A name for treacle.

Pyro'meter. (*Pyro*-; *μέτρον*, a measure.) An instrument for measuring those higher degrees of temperature which the thermometer is incapable of registering.

P., elec'tric. An instrument devised by Pouillet, and since modified for registering very high temperatures. It consists of two wires, one of platinum, the other of palladium, tied together at one end which is placed where the temperature is to be measured, the other ends are attached to the copper wires which lead to a galvanometer by the deflection of which the amount of heat is calculated.

Pyromet'ric. Belonging to a *Pyrometer*.

Pyromu'cate. A salt of *Pyromucic acid*.

Pyromu'cic ac'id. A product of the distillation of *mucic acid*. It forms white glistening scales, soluble in boiling water and in alcohol, and melting at $127^\circ F$.

Pyro-o'leous ammo'nium car'bonate. See *Ammonium carbonicum pyro-oleosum*.

Pyropem'phigus. (*Pyro*-; *πέμφιξ*, a blister.) Febrile pemphigus.

Pyrophlyc'tis. (*Pyro*-; *φλυκτίς*, a blister.) Malignant pustule. (Alibert.) See under *Pustule*.

P. endem'ica. A syn. for *Aleppo evil*.

P. syr'aca. The same as *P. endemica*.

Pyropho'bia. (*Pyro*-; *φόβος*, dread.) Unnatural dread of fire.

Pyrophos'phas. (*Mod. L.*) *Pyrophosphate*.

Pyrophos'phate. (*F. pyrophosphate*; *G. Pyrophosphat*.) A salt of *Pyrophosphoric acid*.

P. fer'ri et so'dii. See *Ferri et sodæ pyrophosphas*.

P. fer'rico so'dicus. The same as *P. ferri et sodii*.

P. na'tricus. (*L. natrium*, sodium.) Name in Neth. Ph. for *Sodii pyrophosphas*.

P. of i'ron and so'dium. See *Ferri et sodæ pyrophosphas*.

P. of so'dium. See *Sodium pyrophosphate*.

P. so'dicus. Name in French Codex for *Sodii pyrophosphas*.

P. so'dii. See *Sodii pyrophosphas*.

Pyrophosphoric ac'id. $H_4P_2O_7$. A tetrabasic acid, formed as the result of heating tribasic phosphoric acid to $210^\circ F$.

Pyrophos'phorous ac'id. An acid obtained in the same way from phosphorous acid that *pyrophosphoric* is from *phosphoric acid*.

Pyroptothym'ia. (*Πύρ*, fire; *πτοίω*, to be frightened; *θυμός*, the mind.) A form of insanity characterised by the delusion of the subject that he is constantly enveloped in flame.

Pyropunc'ture. (*Pyro*-; *L. pungo*, to prick. *F. pyropuncture*.) Puncture by means of red-hot needles, with the object of producing partial cauterisation in tumours.

Pyropus. (*Pyro*-; *ὤψ*, the eye.) *Med.* Having fiery eyes.

Pyroscope. (*Pyroscopium*.) The same as *Pyrometer*.

Pyroscop'ium. (*Pyro*-; *σκοπέω*, to look at.) The *Pyroscope*.

PYROSIS—PYXACANTHA

Pyro'sis. (Πυρώω, to burn. F. *pyrosis*; G. *Sod-brennen*.) Water-brash. An affection characterised by a burning pain in the stomach and œsophagus, followed by the eructation of a few ounces of insipid fluid. Rare before puberty; commonest in females. It is uncertain whence the fluid comes; probably, however, from the stomach.

Also, term used by the ancients to signify:—
1. Inflammation. 2. Gangrene. 3. A burn.

P. sue'cica. Another name for *Pyrosis* (in the sense of water-brash).

Pyroso'ma. (Pyro-; σώμα, body.) A name for the *Lampyrus noctiluca*, or glow-worm.

Pyrosoph'ia. (Pyro-; σοφία, wisdom.) The knowledge of the properties of heat.

Pyrosor'bic acid. (Pyro-; sorbic.) Another name for *Pyromalic acid*.

Pyrosphy'ra. (Pyro-; σφύρα, a hammer.) An instrument shaped like a hammer; it was heated in fire or hot water, and used as a cautery.

Pyrotartar'ic ac'id. (F. *acide pyrotartarique*; G. *Pyroweinsäure*.) An acid obtained by the action of heat on tartaric acid. Crystalline. Soluble in water, ether, and alcohol. Melts at 112°.

Pyrotar'trate. A salt of *Pyrotartaric acid*.

Pyrotech'nia. (Pyro-; τέχνη, art.) Old term for *Chemistry*; more recently applied to the art of making fireworks, *Pyrotechny*.

Py'rotechny. The art of making fireworks. The term has been used in France ("pyrotechnie chirurgicale") for the application of the actual cautery in Surgery.

Pyroth'onide. (Pyro-; ὀθόνη, fine white linen.) Termed also rag-oil or paper-oil, according to its source. An empyreumatic oil formed by the combustion, in a copper vessel, of cotton, hemp, or linen stuffs. Its therapeutic action is said to resemble that of creasote. (Dunglison.)

Pyrotic. (Πυρώω, to burn up. F. *pyrotique*; G. *pyrotisch*.) Able to burn up, caustic.

Pyrotoxic. (Pyro-; τὸ τοξικόν, poison for smearing arrows with.) Belonging to, or of the nature of, a burning or caustic poison.

Pyrotoxin. (Pyro-; τὸ τοξικόν, poison for smearing arrows with.) Term for a toxic body generated during the course of febrile processes.

Pyro-ur'ic ac'id. A syn. for *Cyanuric acid*.

Pyrovi'nic ac'id. A syn. for *Pyrotartaric acid*.

Pyroxan'thin. A yellow, crystallisable substance, melting at 176° F., found in crude wood-vinegar (pyroligneous acid). It is soluble in alcohol, ether, and strong acetic acid.

Pyroxyl'ic spir'it. (Πῦρ, fire; ξύλον, wood.) Wood-naphtha, or *Methyl alcohol*.

Pyrox'ylin. (Πῦρ, fire; ξύλον, wood. F. *fulmi-coton*; G. *Collodium-wolle*.) Dinitro-cellulose, $C_6H_5(NO_2)_2O_5$. Prepared by immersing 1 part of cotton wool in a mixture of 5 of sulphuric acid and 5 of nitric, and then draining and thoroughly washing and drying the wool. Pyroxylin is readily soluble in a mixture of rectified spirit and ether, whereas gun-cotton (trinitrocellulose) is insoluble in any mixture of ether and alcohol. Used in the preparation of *Collodium* and *Collodium vesicans*.

Pyrox'ylon. The same as *Pyroxylin*.

Pyrox'ylum. *Pyroxylin*.

Pyrozone. (Πῦρ, fire; ozone.) An antiseptic substance, which contains three parts of peroxide of hydrogen in a hundred parts of water. It acts rapidly as an antiseptic, and is non-poisonous.

Py'rrol. (Πυρρός, red; ἔλαιον, oil.) $C_8H_{13}N$. A feebly basic, colourless, volatile liquid, with an odour resembling that of chloroform, becoming brown on exposure, which can be separated from the oil obtained by the destructive distillation of bones. (Dippel's oil.) It boils at 133°; is soluble in water, alcohol, and ether. Its vapour reddens fir-wood which has been previously moistened with hydrochloric acid.

P. tetri'odide. *Iodol*.

Pyrur'ic ac'id. See *Pyro-uric acid*.

Pyrus. (L. *pyrus*, a pear tree. F. *poirier*; G. *Birnbaum*.) A Genus of the *Rosaceæ*. Also (*πυρός*), wheat. See under *Triticum*.

P. acer'ba. The *P. cydonia*.

P. commu'nis. The common pear-tree. By fermentation of its juice is formed the drink known as *perry*.

P. cydo'nia. (F. *coignassier*; G. *Quitzenbaum*.) The *Cydonia vulgaris*, or quince-tree, whose seeds have been used therapeutically for aphthous affections.

P. domes'tica. A syn. for *Sorbus domes-tica*.

P. ma'lus. (F. *pommier*; G. *Apfelbaum*.) The apple-tree. By fermentation of the juice of the apple is made the drink *cider*. In the United States of America, apple brandy is a liquor in common use.

Pythogen'esis. (Πύθω, to make rot; γένεσις, origin.) Production by means of putrefaction.

Pythogenet'ic. (Πύθω, to make rot; γένεσις, origin.) The same as *Pythogenic*.

Pythogen'ic. (Πύθω, to make rot; γεννάω, to produce.) Giving rise to putrefaction.

P. fe'ver. A syn. for *Typhoid fever*.

P. pneumo'nia. See under *Pneumonia*.

Py'tia. (Πυτία, a sort of cake.) Old term synonymous with *Coagulum*, according to Gorræus; with *Colostrum*, according to Kraus.

Pytis'ma. (L. Gen. *pytismatis*; from πύτισμα, that which is spit out.) *Sputum*.

Pul'ca. Plur. of *Pyulcum*.

Pyul'cum. (Πυυλκόν, πύον, matter; ἔλκω, to draw.) An ancient instrument mentioned by Galen (*de C. M. per Gen.* ii, 5; *Meth. Med.* v, 8), for drawing off pus from deep sinuses.

Pyul'cus. (Πύον, matter; ἔλκω, to draw.) An ancient oblong silver canula, with one end merely perforated, and the part which remained outside the wound dilated.

Pyr'ia. Discharge of pus with the urine.

P. chylo'sa. A syn. for *Chyluria*.

P. lac'tea. The same as *P. chylosa*.

P. muc'o'sa. A syn. for *Cystirrhæa*.

P. rena'lis. Pyuria in which the pus comes from the kidney, as in cases of renal calculus, &c.

P. sero'sa. The same as *P. mucosa*.

P. urethra'lis. Pyuria in which the pus comes from the urethral mucous membrane, as in gonorrhœa.

P. vesica'lis. Pyuria in which the pus comes from the bladder.

P. vis'cida. The same as *P. mucosa*.

Pyr'ic. Belonging to *Pyuria*.

Pyxacan'tha. (Πύξος, the box-tree;

ἀκανθα, a thorn.) A name of the *Berberis vulgaris*.

Pyxidar'ia macrocar'pa. (*Pyxus*. Μακρός, long; καρπός, fruit.) A Brazilian tree (native name *Jiquitiba*), Order *Scrophulariaceæ*. The bark is astringent.

Pyxidate. (Πύξις, a box of box-wood.) *Bot.* Having a lid; also, resembling a *Pyxidium*; also, bearing a *Pyxidium* or *Pyxidra*.

Pyxid'ia. Plur. of *Pyxidium*.

Pyxid'ium. (Dim. from Πύξις, a box of box-wood.) *Bot.* A *Capsule* which dehisces transversely, so as to open like a lid.

Pyx'inum. (Πύξιμος, belonging to the box-tree.) An ancient *collyrium*, mentioned by Celsus, which was kept in boxes made of box-wood.

Pyx'inus. (Πύξιμος, belonging to the box-tree.) Made of box-wood.

Pyx'is. (Πύξις, a box of box-wood.) A small box for holding salves, medicines, &c. Also, old term applied to the *Acetabulum*, from its likeness in shape to a small box.

Also, *Bot.*, syn. for *Pyxidium*.

Pyx'us. (Πύξος.) The Greek name for the *Buxus*, or box-tree.

Q.

Q. l. An abbreviation for *Quantum libet*.

Q. p. A contraction for *Quantum placet*.

Q. q. h. An abbreviation for *Quæque quarta horâ*.

Q. s. An abbreviation for *Quantum sufficit*.

Q. v. An abbreviation for *Quantum vis*.

Qin'bil. (Pronounced *Kimbil*.) Arabic name for *Kamala*.

Quabe'ba. The *Piper cubeba*.

Quack. (An English imitative word. *G.* *quacken*; from Teut. base *kak*, to cackle.) 1. *As a verb.* To make a noise like a duck.

Also, as a transferred use, to boast of skill or power not possessed, especially medical.

2. *As a substantive.* (*F.* *charlatan*; *I.* *ciarlatano*; *G.* *Quacksalber*.) A person vaunting himself and his skill, as above.

Q. medicine. Medicine sold by a quack.

Quack'ery. (*Quack*. *F.* *charlatanisme*; *I.* *ciarlatanismo*; *G.* *Quacksalberei*.) The imposture of a quack; the practice of medicine by those who are ignorant of the subject, and who publicly advertise their ability to cure disease.

Quack'salver. (*G.* *Quacksalber*.) A syn. for *Quack*.

Quadrang nut. The fruit of *Fusanus acuminatus*. It is edible, and resembles almonds in flavour.

Quadrang'ular. (*L.* *quatuor*, four; *angulus*, a corner. *F.* *quadrangulaire*; *I.* *quadrangolato*; *G.* *viereckig*.) Having four angles or corners.

Q. mem'brane of lar'ynx. See *Membrana quadrangularis*.

Q. lobe of cerebel'lum. Syn. for *Lobe of cerebellum, antero-superior*.

Quad'rans. (*L.* *quatuor*, four.) The fourth part of a pound by weight.

Quad'rant. (*Quadrans*.) The fourth part of a circle, or of any circular area.

Q. of Wilder. A circular area of the ventral aspect of the *Crus cerebri*, after Burt Wilder, who first described it.

Quadrantal. (*L.* *quadrantal*; from *quadrans*.) A liquid measure containing eight *congi*. See *Congius*.

Quadrate. (*L.* *quadratus*, squared; from *quadro*, to make square.) Having four sides; square.

Also, the *Quadrate bone*.

Q. bone. A distinct bone present in the skull of Birds and Reptiles, which articulates with the squamosal above, the mandible below,

the quadratojugal externally, and the pterygoid internally.

Q. car'tilages. See *Cartilages, quadrate*.

Q. lobe of cerebel'lum. Syn. for *Lobe of cerebellum, antero-superior*.

Q. lobe of liver. See *Lobe of liver, quadrate*.

Q. lob'ule. Syn. for *Præcuneus*.

Quadratiformis. (*L.* *quadratus*; *forma*, shape.) A syn. for *Quadratus femoris*.

Quadratiprona'tor. (*L.* *quadratus*; *pronator*.) A syn. for *Pronator quadratus*.

Quadratoju'gal. Belonging to the quadrate and malar bones.

Quadratmandib'ular. Belonging to the quadrate bone and the *maxilla inferior*, or *mandible*.

Quadratopter'ygoid. Belonging to the quadrate and pterygoid bones.

Quadratosquamo'sal. Belonging to the quadrate and squamosal bones.

Quadra'tum. (*L.* *quadratus*.) The *Quadrate bone*.

Q. os. The *Quadrate bone*.

Quadra'tus. (*L.* *quadratus*, square; from *quadro*, to make square. *F.* *carré*; *I.* *quadrato*; *G.* *viereckig*.) *Quadrate*.

Q. dor'si. (*L.* *dorsum*, the back.) The same as *Q. lumborum*.

Q. fem'oris. (*L.* *femur*, the thigh. *F.* *tuberischio-trochantérien*, *ischio-sous-trochantérien*, *carré de la cuisse*; *G.* *viereckiger Schenkelmuskel*.) A muscle acting upon the hip-joint. It is oblong in shape, and its fibres are horizontal in direction. It arises from an impression upon the outer border of the ischial tuberosity, and is inserted into the thickened upper part of the posterior intertrochanteric ridge of the femur, and the back of that bone below this as far as the level of the small trochanter. The muscle rotates the thigh outwards, and assists in its adduction. It receives its nerve supply from the sacral plexus by a special branch.

Q. ge'næ. (*L.* *gena*, the cheek.) A syn. for *Platysma myoides*.

Q. lab'ii inferior'is. The *Depressor labii inferioris*.

Q. lab'ii superior'is. (*L.* *labium*, the lip; *superior*, upper.) Henle's term for the combined *levator labii superioris alæque nasi*, *levator labii superioris proprius*, and *zygomaticus minor*.

Q. lumbo'ram. (*L.* *lumbus*, the loin.)

QUADRI—QUADRIGEMINAL

F. ilio-costal, ilio-lumbi-costal, carré des lombes; G. viereckiger Lendenmuskel.) A muscle situated in the loin between the last rib and the crest of the ilium, close to the vertebral column. It is attached below to the crest of the ilium for two inches, and to the ilio-lumbar ligament, and on the inner side to the transverse processes of two, three, or four lumbar vertebræ; its upper attachment is to the lower border of the last rib for half of its length, as well as to the transverse processes of the upper four lumbar vertebræ, by tendinous fibres lying behind those ascending from the same processes. The muscle is enclosed in a sheath derived from the anterior and middle layers of the lumbar fascia. The muscles of the two sides acting together fix and depress the last rib, one of them, acting unilaterally, assists in producing lateral movements of the spine. Its nerve-supply is from the last dorsal and first lumbar nerves.

Q. men'ti. (L. *mentum*, the chin.) A syn. for *Depressor labii inferioris*.

Q. plan'tæ. (L. *planta*, the sole of the foot.) A syn. for *Flexor accessorius*.

Q. ra'dii. Syn. for *Pronator radii quadratus*.

Q. supe'rior. The same as *Q. labii superioris*.

Quad'ri-. (L. *quatuor*, four.) A prefix signifying four, or four times.

Quadria'late. (L. *quatuor*; *ala*, a wing. F. *quadriailé*; I. *quadrialato*; G. *viergeflügel*.) Having four wings, or wing-like appendages.

Quadriartic'ulate. (L. *quatuor*; *articulus*, a joint. F. *quadriarticulé*; I. *quadriarticulato*; G. *viergelenkartig*.) Having four joints.

Quadriba'sic. (L. *quatuor*; *basic*.) See *Tetrabasic*.

Quadricap'sular. The same as *Quadricapsulate*.

Quadricap'sulate. (L. *quatuor*, four; *capsula*, a small box. F. *quadricapsulaire*; I. *quadricapsulare*; G. *viercapselig*.) A term applied to a fruit formed by the union of four capsules.

Quadricari'nate. (L. *quatuor*, four; *carina*, a keel. F. *quadricarène*; I. *quadricarenato*; G. *vierkielig*.) Having four carinæ, or keels.

Quadricel'lular. *Biol.* Made up of four cells.

Quadriceps. (L. *quatuor*; *caput*, a head.) Having four heads.

Q. exten'sor cru'ris. (F. *muscle triceps crural*; G. *vierköpfige Schenkenmuskel*.) A term applied to the conjoined muscles, *rectus femoris*, *vastus externus*, *vastus internus* and *crureus*, which have a common tendon attached to the upper border of the patella, and send some tendinous fibres to the ligamentum patellæ. The muscle extends the knee-joint; the *rectus femoris* in addition assists in flexing the thigh. All divisions of the muscle are supplied by the anterior crural nerve.

Q. su'ræ. (L. *sura*, the calf.) The combined *gastrocnemius* (which arises by two heads), *soleus*, and *plantaris* muscles.

Quadricil'iate. (L. *quatuor*, four; *cilium*, an eyelash.) *Biol.* Having four cilia.

Quadricip'ital. (L. *quatuor*, four; *caput*, a head.) Having four heads or points of origin.

Quad'ricorn. The same as *Quadricornate*.

Quadricor'nate. (L. *quatuor*, four; *cornu*, a horn. F. *quadricorné*; I. *quadricorneo*; G. *vierhörnig*.) Having four horns, or projections resembling horns.

Quadricor'nous. The same as *Quadricornate*.

Quadricos'tate. Having four *costæ* or ribs.

Quadricotyle'donous. (L. *quatuor*; *cotyledon*. F. *quadricotylédoné*; I. *quadricotyledoneo*; G. *viersaamenlappig*.) See *Tetradcotyledonous*.

Quadricus'pitate. (L. *quatuor*; *cuspis*, a point. F. *quadricuspité*; I. *quadricuspidato*; G. *vierespitzig*.) Having four points or *cusps*.

Quadriden'tate. (L. *quatuor*, four; *dens*, a tooth. F. *quadridenté*; I. *quadridentito*; G. *vierzähmig*.) Having four teeth, points, or divisions.

Quadridig'itate. (L. *quatuor*; *digitus*, a finger. F. *quadridigité*; I. *quadridigitato*; G. *vierfingerförmig*.) Epithet applied to a leaf which consists of four leaflets attached to a common petiole.

Quadridigitatopin'nate. (L. *quatuor*; *digitus*; *pinnatus*, winged. F. *quadridigitipinné*; I. *quadridigitatopennato*; G. *vierfingerförmigegeflügel*.) Epithet applied to a leaf which has four secondary petioles, on the sides of which the leaflets are attached.

Quadrifar'ious. (L. *quadrifariam*, fourfold. F. *quadriforié*; G. *vierreihig*.) Epithet applied to a plant the leaves of which are arranged in four rows.

Quadrifas'ciate. (L. *quatuor*; *fascia*, a band. F. *quadrifascié*; I. *quadrifascio*; G. *vierbandirt*.) Marked with four bands.

Quad'rifid. (L. *quatuor*, four; *findo*, to cleave. F. *quadrifide*; I. *quadrifido*; G. *vier-spaltig*.) *Bot.* Having four clefts.

Quadriflori'gerous. (L. *quatuor*, four; *flos*, a flower; *gero*, to bear. F. *quadriflore*; I. *quadrifloro*; G. *vierblumig*.) Bearing four flowers.

Quadriflo'rous. The same as *Quadriflorigerous*.

Quadrifo'cal. (L. *quatuor*, four; *foculus*.) Having four foci.

Quadrifo'liate. (L. *quatuor*, four; *folium*, a leaf.) Having four leaves.

Quadrifo'liolate. (L. *quatuor*, four; *foliolus*, dim. of *folium*, a leaf. F. *quadrifoliolé*; I. *quadrifogliolinato*; G. *vierblätterig*.) Having four folioles or leaflets.

Quadri'forous. (*Quatuor*; *foro*, to pierce. F. *quadriforé*; I. *quadriforato*; G. *vierlochig*.) Presenting four apertures.

Quadrifur'cate. (L. *quatuor*, four; *furca*, a fork.) Having four subdivisions.

Quadri'ga. (L. *quadriga*, a team of four horses; contracted from *quadrijugæ*; from *quatuor*, four; *jugum*, a yoke.) A bandage used by Galen. See *Cataphracts*.

Quadrige'mina. Nom. and acc. neuter plur., and nom. sing. fem. of *Quadriginus*.

Q. tuber'cula. (L. *tuberculum*, a small swelling.) The *Corpora quadrigemina*.

Quadrige'minal. (*Quadriginus*.) In two pairs.

Q. bod'tes. The *Corpora quadrigemina*.

QUADRIGEMINATE—QUADROXALATE

Quadrigeminate. The same as *Quadrigeminal*.

Quadrigeminous. The same as *Quadrigeminal*.

Quadrigeminus. (L. *quatuor*, four; *geminus*, twins. F. *quadrigéminé*; I. *quadrigeminato*; G. *viergezweit*.) In two pairs.

Q. bra'chii. (L. *brachium*, the arm.) See *Biceps flexor cubiti*.

Q. cap'itis. (L. *caput*, the head.) A syn. for *Sterno-cleido mastoideus*.

Q. pri'mus et super'ior. (L. *primus*, first; *et*, and; *superior*, upper.) A syn. for *Pyramidalis*.

Q. quar'tus quadra'tus. (L. *quartus*, fourth.) Syn. for *Quadratus femoris*.

Q. secun'dus et ter'tius. (L. *secundus*, second; *et*, and; *ter'tius*, third.) The *Gemellus inferior* and *G. superior*.

Quadriglan'dular. (L. *quatuor*, four; *glandular*.) Bot. Having four glands.

Quadrigut'tate. (L. *quatuor*; *gutta*, a drop. F. *quadrigoutté*; I. *quadrigoccio*; G. *viertropfig*.) Bearing four spots or drops.

Quadrifu'gate. (L. *quatuor*, four; *jugum*, a yoke. F. *quadrifugué*; I. *quadrifugato*; G. *vierpaarig*.) Epithet applied to a leaf that has four pairs of leaflets.

Quadrilam'inar. (L. *quatuor*, four; *lamina*.) Having four *laminae* or layers.

Quadrilam'inate. The same as *Quadrilaminar*.

Quadrilat'eral. (L. *quatuor*, four; *latus*, a side. F. *quadrilatéral*; I. *quadrilaterale*; G. *vierseitig*.) Four-sided.

Q. space. Term for the anterior and posterior triangles of the neck together.

Quadrilob'ate. (L. *quatuor*, four; Gr. *λοβός*, a lobe. F. *quadrilobé*; I. *quadrilobato*; G. *vierlappig*.) Having four lobes.

Quadrilob'ular. (L. *quatuor*, four; *lobulus*.) Having four lobules.

Q. brain. Term for a rare malformation of the brain, consisting in subdivision of each hemisphere into two.

Quadriloc'ular. (L. *quatuor*, four; *loculus*, a compartment. F. *quadriloculaire*; I. *quadriloculare*; G. *vierfächerig*.) Bot. Having four compartments or locules.

Quadrimamma'tus. (L. *quatuor*; *mamma*, the female breast. F. *quadrinamillé*; I. *quadrinammellato*; G. *vierbrustig*.) Four-breasted.

Quadri'manous. See *Quadrumanous*.

Quadrime'm'bral. (L. *quatuor*, four; *membrum*, a limb.) Four-limbed.

Quadri'rate. (L. *quatuor*, four. F. *quadriné*; G. *vierzählig*.) Epithet applied to a leaf composed of four leaflets.

Quadrinu'cleate. (L. *quatuor*, four; *nucleus*.) Having four nuclei.

Quadri'para. (L. *quatuor*, four; *pario*, to bear.) A woman who has borne four children.

Quadri'parous. Belonging to a *Quadripara*; also, belonging to a fourth confinement.

Quadripa'rtite. (L. *quatuor*, four; *partitus*, divided. F. *quadrupartite*; I. *quadrupartito*; G. *viertheilig*.) Divided into four parts.

Quadrifen'ate. (L. *quatuor*; *penna*, a feather, a wing. F. *quadrifenné*; I. *quadrifennato*; G. *viergefiedert*.) Having four wings.

Quadripa'talous. (L. *quatuor*; *petal*.) See *Tetrapetalous*.

Quadriphyl'lous. (L. *quatuor*; *φύλλον*, a leaf.) See *Tetraphyllous*.

Quadriplum'bic. (L. *quatuor*; *plumbum*, lead. F. *quadrilombé*; I. *quadrilombato*; G. *vierbleisig*.) Term applied by Berzelius to a subsalt of lead.

Quadripunc'tate. (L. *quatuor*, four; *punctum*, a point. F. *quadripunctiforme*; I. *quadriforacchiato*; G. *vierspitzig*.) Having four spots or points.

Quadrira'diate. (L. *quatuor*; *radius*, a spoke. F. *quadriradié*; I. *quadriraggiato*; G. *viergeskahl*.) Having four rays.

Quadrisele'nate. (L. *quatuor*; *selenium*. F. *quadrisélenate*.) A selenate having four equivalents of selenic acid to one of base.

Quadrisept'ate. (L. *quatuor*; *septum*.) Having four *septa*.

Quadrise'rial. (L. *quatuor*; *series*, a row.) Presenting four rows.

Quadrise'tose. (L. *quatuor*; *seta*.) Having four *setae*.

Quadrisil'icate. (L. *quatuor*; *silex*, a flint. F. *quadrisilicate*; I. *quadrisilicato*; G. *vierkieselsäures Salz*.) A silicate having four equivalents of acid to one of the base.

Quadrisp'iral. (L. *quatuor*; *spiral*.) Epithet for a spiral structure presenting four turns of the spire.

Quadristri'gate. (L. *quatuor*; *striga*, a furrow. F. *quadristrié*; I. *quadristriato*; G. *viergestreift*.) Having four ridges or bands.

Quadrisol'cate. (L. *quatuor*; *sulcus*, a furrow. F. *quadrissilloné*; I. *quadrisolcato*; G. *vierogefurcht*.) Having four furrows. Epithet applied to those ungulate mammalia which have their feet divided into four hoofs.

Quadrisol'phuret. (L. *quatuor*; *sulphuret*. F. *quadrisolfure*; I. *quadrisolfuro*; G. *Vierschwefelverbindung*.) A sulphuret containing four equivalents of sulphur to one of base.

Quadriu'rate. (L. *quatuor*; *urate*.) Term for mixed urates found in urinary deposits.

Quadri'valent. (L. *quatuor*; *valens*, powerful.) Chem. Having a combining power equivalent to that of four atoms of free hydrogen.

Quadrival'vate. See *Quadrivalvulate*.

Quadrival'vular. (L. *quatuor*; *valvular*.) Bot. Having four valves.

Quadrival'vulate. (L. *quatuor*; *valvula*, a valve. F. *quadrivalvé*; I. *quadrivalvato*; G. *vierklappig*.) A syn. for *Quadrivalvular*.

Quad'ro. The same as *Quadri*.

Quadroon'. (L. *quartus*, fourth. F. *carteron*, *carteroone*; I. *quaterone*; G. *Quarteron*.) Originally, a name given to the offspring of parents one of whom is white and the other has a negro grandfather or grandmother. Latterly the word has been applied to the offspring of a white with a mulatto, i. e. to a child who has one grandfather or grandmother a negro. Thus, quadroon has become synonymous with *terceroon*.

Q. black. One parent of a quadroon black is a pure negro and the other is white, save that he or she has had a negro grandfather or grandmother. The mixture in this case is 7-8ths negro and 1-8th white.

Quadrox'alate. (L. *quatuor*; *oxalate*. F. *quadroxalate*; I. *quadrossalato*; G. *vieroxalsäures Salz*.) An oxalate containing four equivalents of oxalic acid to one of the base.

QUADRUNANA—QUARTAN

Quadru'mana. (L. *quatuor*, four; *manus*, the hand. F. *quadrumanes*; I. *quadrumanì*; G. *Quadrumanen*; *vierhändige Thiere*.) Cuvier's term for an Order of *Mammalia* having the hallux, and often the pollex, opposable to the digits. Now used more commonly as a descriptive term.

Quadru'manous. (L. *quatuor*; *manus*. F. *quadrumanie*; G. *vierhändig*.) Four-handed. Belonging to the *Quadrunana*.

Quad'ruped. (L. *quatuor*; *pes*, a foot. F. *quadrupède*; I. *quadrupedo*; G. *Quadruped*, *Vierfüßler*.) A four-footed *Mammal*.

Quadru'ple. (L. *quadruplex*.) Fourfold.

Quadru'plets. (L. *quadruplex*, fourfold; from *quatuor*; *plico*, to fold.) Four children at one birth.

Quæ ex quib'us. (L. *quæ*, fem. plur. of *qui*, who; *quibus*, abl. plur. of *qui*.) "Which out of which." A phrase used by Hippocrates to indicate the changes, succession, and transmutation of diseases; there being four different varieties:—*Epigenesis*, *Metaptosis*, *Metastasis*, *Apoptasis*.

"*Quæ ex quibus de morborum vicissitudinibus*" is the title of a book by Stephanus Rodericus.

Quaf'adil. The *Melanthium virginianum*.

Quahoil'. Native term for *Cacao*.

Qual. Another name for *Akazga*.

Quail. (Low L. *qualea*. F. *caille*; I. *quaglia*; G. *Wachtel*.) Common name for the *Tetrao columix*.

Quain's degenera'tion. (After Dr. Quain, who first described it.) A degeneration of the cardiac muscle, accompanied by increase of connective tissue, and leading to hypertrophy of the heart.

Q's fatty heart. (After Dr. Quain.) See *Quain's degeneration*.

Quake grass. The *Briza media*.

Q. grass, com'mon. The *Briza media*.

Q. grass, les'ser. The *Briza minor*.

Qua'ker black drop. A syn. for vinegar of opium.

Q. but'tons. A common name in America for nux vomica seeds.

Qualitative. (L. *qualitas*. F. *qualitatif*; I. *qualitativo*; G. *qualitativ*.) Having to do with the quality of anything.

Q. ana'lysis. See *Analysis, qualitative*.

Quality. (Mid. E. *qualite*, *qualitee*. F. *qualité*, from L. *qualitas*, kind, sort; I. *qualità*; G. *Beschaffenheit*.) The peculiar or special characteristics or properties of a body. The natural attributes of anything.

Qua'mash. The *Camassia esculenta*. Used by the North American Indians as a food.

Q., eas'tern. The *Scilla esculenta*.

Quan'dros. A gem or stone which was supposed to exist in the brain of a vulture, and to which was ascribed the power of filling the breasts with milk and preventing injury or accident.

Quanti. An old name for *lead*.

Quanta'tion. (L. *quantus*, how great.) The estimation of quantity or volume.

Quantitative. (Quantity. F. *quantitatif*; I. *quantitativo*; G. *quantitativ*.) Belonging to quantity.

Q. ana'lysis. See *Analysis, quantitative*.

Quantities, neg'ative. Hypothetical quantities having a negative value, i. e. a value of less than zero.

Quantity. (Mid. E. *quantite*, *quantitee*; from F. *quantité*; L. *quantitas*.) Size; amount; bulk; mass.

Quantivalence. (L. *quantitas*; *valeo*, to be strong. F. *valence*; I. *quantivalenza*; G. *Quantivalenz*.) Syn. for *Atomicity* (q. v.).

Quan'tum lib'et. (L.) Usually abbreviated, in prescriptions, to Q. l. As much as is required.

Quan'tum plac'et. (L.) Usually abbreviated, in prescriptions, to Q. p. As much as is thought fit.

Quan'tum sufficit. (L.) Usually abbreviated, in prescriptions, to Q. s. As much as is necessary.

Quan'tum vis. (L.) Usually abbreviated to Q. v. As much as you wish.

Quā'que quartā ho'rā. (L.) Usually abbreviated, in prescriptions, to Q. q. h. Every fourth hour.

Quarantine. (Old F. *quarantaine*; Low L. *quarantina*, a space of forty days. F. *quarantaine*; I. *quarantena*; G. *Quarantäne*, *vierzig-tägige Gesundheitprobe*.) A space of forty days. Used to denote the period, originally forty days, during which certain regulations were observed. (In England, quarantine regulations are only in force against yellow fever, though the law applies equally to all infectious diseases.) Quarantine consists of the isolation of all persons, clothing, ships, and goods coming from an infected or presumably infected place, until the authorities shall be satisfied that there is no risk of infection. Quarantine establishments and hospitals in which detained persons are obliged to remain are called lazarets. Hippocrates is credited with the opinion that forty days is a sufficient time for a disease to run its course. The quarantine laws (6 Geo. IV, cap. 78) are now virtually obsolete, their place being taken by a system of medical inspection under direction of the Local Government Board.

Q., land. Isolation of a person on land, or of a district, to prevent the spread of infection. Carried out in a similar way to ordinary quarantine (see main heading).

Q. per'iod. The length of time necessary to establish immunity after exposure to infection. Also, the length of time necessary, after an attack of an infectious disease, to ensure freedom from liability to spread infection.

Quars. An old name for a gall-stone. (Ruland and Johnson.)

Quart. (Mid. E. *quarte*; F. *quarte*; L. *quartus*, the fourth.) A measure containing two pints; the fourth part of a gallon.

Quar'tan. (L. *quantum*, the fourth; from *quartus*. Mid. E. *quarteyne*; F. *quartaine*, *quarte*; I. *febbre quartana*; G. *Viertägigesieber*, *Quartanfeber*.) A quartan ague is one in which a paroxysm occurs once in every three days, there being two clear days of interval. It is one of the most intractable varieties of ague; but is rarer than the others. A *double quartan* presents a severe paroxysm one day, and a slight one the next, whilst there is complete intermission on the third day; the sequence is then repeated. A *triple quartan* is very rare; it exhibits three different paroxysms, each once every three days, but only one attack occurring on any one day. A *repeating* or *redoubling quartan* consists of two quartan agues, both paroxysms appearing upon the same day, leaving two days free from fever.

QUARTARIUS—QUASSIN

Q., doub'le. See main heading.

Q., redoub'ling. See main heading.

Q., repeat'ing. A syn. for *P.*, redoub'ling.

Q., trip'le. See main heading.

Quartar'ius. (L. *quartarius*, a fourth part.) A Roman measure of capacity, which is equivalent to 5 ounces 45 grains of English measure, and is the fourth part of the Roman *Sextarius*.

Quartation. (L. *quartare*, four. F. *quartation*; I. *quartazione*; G. *Quartirung*.) A Chemical operation which signifies reduction to a quarter, and which is practised on an alloy of gold and silver, when it is desired to free the gold by means of nitric acid. If the alloy does not contain three parts of silver, exactly that quantity is added which, in reducing the gold to a quarter of the mass, favours the action of the acid.

Quar'tene. A syn. for *Butylene* (q. v.).

Quar'ter. (Old F. *quarter*, *quartier*; from L. *quartarius*, a fourth part. F. *quart*; I. *quarto*; G. *Viertel*.) A fourth part.

Q.-crack. A cleft on the inner side of the fore-hoofs of the horse.

Q. e'vil. A popular name for *Bovine anthrax*. Also, for an inflammation of part of the udder.

Q. ill. The same as *Q. evil*.

Quarteroon'. The same as *Quadroon*.

Quar'tine. (L. *quartus*.) 1. *Chem.* A syn. for *Crotonylene*. 2. *Bot.* A membrane sometimes found surrounding the ovule between the *tercine* and the *embryc-sac*.

Quar'tio. (L. *quartus*.) An old name for the *Astragalus*.

Quarti'para. (L. *quartus*, fourth; *pario*, to bring forth.) A woman who has borne four children.

Quartister'num. (L. *quartus*; *sternum*, the breast-bone.) That part of the sternum which corresponds to the fourth intercostal space; it has a separate centre of ossification.

Quartz. (Perhaps from G. *Quarz*, *gewarz*, warty. F. *quartz*; I. *quarzo*.) SiO_2 . A mineral crystallizing generally in hexagonal prisms with pyramidal terminations. Its cleavage is rhombohedral, and is very rarely perfect. Plates cut at right angles to the vertical axis exhibit circular polarisation. It consists of silica, with various impurities. When pure, it occurs in transparent, colourless masses of crystals, sp. gr. 2.66. Many of its varieties are coloured, owing to metallic impurities, and some are valuable gems, e. g. onyx, amethyst, topaz, agate, &c. It is an important constituent of many rocks, e. g. granite, gneiss, &c.

Quartziferous. (*Quartz*; L. *fero*, to bear.) Epithet applied to rocks that contain quartz.

Quassa'tion. (L. *quassatio*, a shaking. F. *quassation*; I. *quassazione*; G. *Zerquetschung*.) A shaking. In *Pharmacy*, the action of reducing roots and tough bark to pieces, to facilitate the extraction of their chief active principles. See also *Conquassation*.

Quas'sia. (A word formed by Linnæus from *Quassi*, the name of the negro who first described the use of the bark so named.) A Genus of the *Simarubaceæ*.

Also, *Quassia wood* (q. v.).

Q. ama'ra. (Linn.) (L. *amarus*, bitter. F. *bois amer*; G. *Bitterholz*.) Yields *Surinam quassia* (see *Q.*, *Surinam*), and is indigenous in

that country. The name *Quassia amara* at one time was used synonymously with *Picræna excelsa*.

Q. bark. From *Picræna excelsa*. It is about a quarter of an inch in thickness, externally rough, and furrowed longitudinally, and of a blackish-grey colour; internally it is yellowish-white and smooth. It has the same bitter taste as the wood.

Q. bark from Surinam'. The bark of the *Q. amara*. It is about 1-20th of an inch thick, is fragile, smooth on both surfaces; externally has a grey colour, internally is whitish; and it yields the same bitter principle as the wood.

Q. cups. Drinking-cups turned out of quassia wood. When they are filled with water, the bitter principle is taken up; hence quassia cups are used medicinally as a convenient method of administering small doses of quassia.

Q. excel'sa. Syn. for *Picræna excelsa*.

Q. poly'gama. A syn. for *Picræna excelsa*.

Q. simaru'ba. A syn. for *Simaruba officinalis*.

Q., Surinam'. Common name for *Q. wood from Surinam* (q. v.).

Q. wood. See *Quassia lignum* (B.P.); also, see *Q. wood from Surinam*.

Q. wood from Surinam'. Official in Germany as well as the wood of *Picræna excelsa*. It is derived from *Q. amara*. It closely resembles the quassia wood of the B.P., but is somewhat less porous.

Quas'siæ lig'nium. B.P. and U.S.P. (F. *quassie, bois amer*; I. *quassia, quassio*; G. *Bitterholz, Fliegenholz*.) Quassia wood. The chips or shavings of the wood of *Picræna excelsa*. Indigenous to Jamaica. The wood is imported in billets, covered with a dark grey bark, and is dense and tough. It has a pale yellowish white colour. The bitter principle, *Quassin*, is easily extracted by means of cold water. The wood contains no tannin, and its infusion may therefore be prescribed with salts of iron. Quassia is a pure bitter, and is a valuable stomachic tonic. In small doses it causes an increase of appetite; but large quantities irritate the stomach, and may produce vomiting.

In addition to its action upon the stomach, in moderate doses it increases the secretion of the saliva, bile, and urine, and perhaps of the milk. In very large doses its action is like that of the convulsive poisons. It causes a feeling of burning in the throat, headache, restlessness, vertigo, vomiting, diarrhœa, and spasms in the muscles of the lower limbs.

Quassia has a destructive effect upon low forms of life; the infusion is useful as an enema to destroy ascarides, and when sweetened is of great service in killing flies. Quassia yields *Extractum quassia*, B.P., dose, 3 to 5 grains; *Infusum quassia*, dose 1 to 2 ounces; and *Tinctura quassia*, dose $\frac{1}{2}$ to 2 fluid drachms.

Quas'sin. The same as *Quassin*.

Quas'sin. A neutral substance obtained from quassia wood, of which it is the active principle. It is prepared by neutralising an infusion of quassia with soda, and precipitating with tannin. This precipitate is then decomposed by lead oxide. It is said to have the composition $\text{C}_{31}\text{H}_{42}\text{O}_9$ (Christensen). It crystallises in rectangular plates or silky needles, having an intensely bitter taste. It dissolves slowly in water

QUASSIT—QUERCUS

and easily in hot alcohol. Dose, from 1-30th to 1-10th of a grain.

Quassit. The same as *Quassin*.

Quassitura. (L. *quassitura*; from *quasso*, to shake.) An injury done by shaking.

Quaternary. (L. *quaterni*, four together. F. *quaternaire*; I. *quaternario*; G. *gefiert*.) Four together. In Chemistry, quaternary compounds are those chemical substances which are formed by the union of four simple bodies. In Geology, the term is applied to strata later than the tertiary.

Q. age. That geological era during which were deposited the quaternary strata (see main heading).

Quaternate. (L. *quaterni*, four by four. F. *quaterné*; I. *quaternato*; G. *vierzählig*.) Bot. Epithet applied to leaves arranged four by four; also, to crystals having forty-four faces; as, e. g., one form of barium sulphate.

Quaternifoliate. (L. *quaterni*, four each. F. *quaternifolié*.) The same as *Quadri-foliolate*.

Quaternio. (L. *quaternio*, the number four, in dice.) An old name for the *Astragalus*.

Quatrefages, angle of. (After *Quatrefages*, the French anatomist.) See *Parietal angle of Quatrefages*.

Quatrio. The same as *Quaternio*.

Quau'li. An alchemical name for *Lead*.

Quebrachamine. An alkaloid derived from *Quebrachine*.

Quebrachine. An alkaloid obtained from *Quebracho*, occurring in crystals which are colourless when formed, but become yellow on exposure to light.

Quebra'cho. (Sp. *quebrar hacho*, breaking the axe; the wood being very hard and tough.) White *Quebracho* bark. The bark of the *Aspidosperma quebracho*, imported from the Argentine Republic. It occurs in flattish pieces of about half to one inch in thickness; the outer surface is grey and deeply fissured, the inner is usually brown, or, sometimes, yellow. It is extremely bitter, and has a faint aromatic odour. It contains aspidospermine, and five other alkaloids: aspidospermatine, aspidosamine, quebrachine, quebrachamine, hypoquebrachine. As to its physiological action, there is at present direct conflict between authorities; Penzoldt considering that it acts upon the blood alone, enabling it to take up more oxygen and, in poisonous doses, causing retention of oxygen in the blood; thus producing deficiency of oxygenation of the tissues. Gutmann, on the other hand, concludes that aspidospermine is a cardiac and respiratory poison, from its action upon the medulla oblongata and cardiac ganglia. Therapeutically, quebracho is a valuable remedy for dyspnoea, particularly in spasmodic asthma and uremic dyspnoea; and also, according to some authorities, in cardiac dyspnoea and in respiratory distress from actual pulmonary disease, such as phthisis pulmonalis. Its medicinal preparations are *Tinctura quebracho* and *Vinum quebracho*.

Q. colorado is the local name for *Loxopterygium Lorentzii*, Nat. Ord. *Terebinthinaceæ*. It contains much tannin.

Quebrachomine. An alkaloid resembling *quebrachamine*, and found, together with the latter, in *Quebracho*.

Quebricum. A mediæval term for a mineral, thought by some to have been arsenic, by others, sulphur.

Que'brith. An old name for sulphur. (Ruland, Johnson.)

Queen of the mead'ow. Common name for *Spiræa lobata*.

Q.'s delight. Common name for the *Stillingia sylvatica*.

Q.'s metal. (G. *Weissmettall*.) Syn. for *pewter*, which is a mixture of tin with lead, copper, or antimony.

Q. of the prairie. The *Spiræa ulmaria*.

Q.'s root. Common name for the root of *Stillingia sylvatica*.

Quelles. Elixir.

Quenuthoracoplas'ty. (*Quenu*, the surname of the inventor; *θήραξ*, the chest; *πλάσσω*, to mould.) Term introduced by Richelot for an operation for the treatment of empyema devised by Quenu, and consisting in making an opening into the pleura and effecting a simple section, without resection, of two or three ribs, to allow of the desired falling-in of the affected side of the chest-wall.

Querce'ra. (*Καρκαίρω*, to quake.) The same as *Epialos*.

Quercetic acid. $C_{15}H_{10}O_7$. A derivative of *Quercetin* (q. v.).

Querce'tin. $C_{24}H_{16}O_{11}$ (Liebermann). A yellow crystalline principle obtained from the bark of *Quercus tinctoria*. Ferric chloride changes it to a dark green colour. Alkalies resolve quercetin into phloroglucin and quercetic acid. See also *Quercitrin*.

Querci'colous. (L. *quercus*, the oak; *colo*, to inhabit. F. *quercicole*; G. *eichbewohnen*.) Growing as a parasite upon the oak.

Quercimeric acid. $C_6H_6O_5H_2O$. Obtained by fusing quercitrin with caustic potash. It is readily soluble in water.

Querci'næ. See *Cupuliferæ*.

Quercini her'ba. The *Lichen plicatus*.

Quer'cite. $C_6H_7(OH)_6$. The so-called acorn-sugar or oak-sugar. A sweet, crystallisable, optically active, carbohydrate obtained from acorns.

Quercitol. $C_6H_7(OH)_6$. An alcohol found in acorns, and also obtained by the oxidation of quinone. It is crystalline and has a sweet taste; it is sparingly soluble in water.

Quercitrin. A term for the colouring matter of the *Quercus tinctoria*; it is not a pure principle. It is deposited from a decoction of black oak bark as a yellow crystalline powder. When treated with acids, it yields a sugar—Isodulsite,—quercetin, and quercetic acid.

Quercitron bark. Derived from the *Quercus tinctoria* (q. v.).

Querci'vorous. (L. *quercus*, the oak; *vorō*, to devour.) Biol. Feeding on the oak.

Quercotan'nic acid. An acid derived from the bark of various species of *Quercus*. It is yellowish brown and amorphous; when anhydrous, has the composition $C_{28}H_{24}O_{12}$ (Lôine); is distinct from gallotannic acid, as it does not yield gallic or pyrogallic acids. It is doubtful whether quercotannic acid is a glucoside.

Quercula mi'nor. (Dim. of *Quercus*.) Syn. for *Teucrium chamædrys*.

Quer'curon bark. The bark of *Quercus tinctoria*; used as a yellow dye.

Quercus. (L. *quercus*, the oak.) A Genus of dicotyledonous trees or shrubs, Order *Amentaceæ*.

Q. ægilops. A native of the Levant; the source of *Valonia*.

QUERCUS—QUILLAIA

Q. al'ba. The white oak. Order *Cupulifera*. A tree 60 to 80 feet high, a native of Canada and the United States. The wood is light-coloured and durable, becomes sinuately lobed and smooth. The acorn-cup is saucer-shaped, rough and tuberculate.

The bark of the *Quercus alba* is used in the United States instead of that of the *Quercus robur*. It occurs in nearly flat pieces, about a quarter of an inch thick, the inner surface of which is pale-brown. Its astringent properties are due to the same principles as those of *Quercus cortex*, B.P.

Q. al'ba coccin'ea. Syn. for *Q. tinctoria*.

Q. ambig'ua. Syn. for *Q. tinctoria*.

Q. ballo'ta. Hab. Morocco. The acorns are edible, and yield an oil resembling olive oil.

Q. cer'ris. Syn. for *Q. lusitanica*, the Turkey oak.

Q. coccif'era. See *Kermes*.

Q. coccin'ea. Syn. for *Q. tinctoria*.

Q. elonga'ta. Syn. for *Q. falcata*.

Q. f'alca'ta. The Spanish oak of the United States. The bark is rich in tannin.

Q. f'lex. The evergreen oak of Southern Europe.

Q. infecto'ria. See *Q. lusitanica*.

Q. lusitan'ica. (Var. *infectoria*.) A native of Asia Minor. It yields the oak galls, *Gallæ*, B.P., from which tannic acid is extracted.

Q. mari'na. Syn. for *Fucus vesiculosus*.

Q. peduncula'ta. A var. of *Q. robur* (q.v.).

Q. ro'bur. The British oak. It flowers in spring, when the leaves are coming out. There are two varieties; *Q. pedunculata* is the commonest, especially in the southern parts of England; *Q. sessiflora* is more hardy, and in hilly districts may be more common than *Q. pedunculata*.

In both varieties the bark is astringent, containing gallic acid, quercitannic acid, and quercite. The acorns, and to a less extent the leaves, are also astringent.

Q. sessiflo'ra. A variety of *Q. robur* (q.v.).

Q. sub'er. The cork oak, a native of Southern Europe. Its bark yields the cork of commerce. Finely powdered cork has been used as a dusting powder under the name of *suberin*.

Q. tincto'ria. The black oak. A native of North America. The bark yields a yellow dye—*Quercitrin* (q.v.).

Quercūs'. Gen. sing. of *Quercus*.

Q. cor'tex. (F. *Ecorce de chêne*; G. *Eichenrinde*.) Oak bark. The dried bark of the smaller branches of *Quercus robur*, Nat. Ord. *Cupulifera*. It occurs in quills, the outer surface of which is shining and silvery, the inner brownish-red. It is tough, and it has a strongly astringent taste. Oak bark contains a variety of tannin called quercotannic acid, but not gallic acid. The bark is used to prepare the *Decoctum quercus*, B.P. When applied externally, it is a mild local astringent, and is used in sore throat, and sometimes as an injection in gonorrhœa and leucorrhœa; but as a vaginal injection there is some danger of peritonitis. It has been maintained that workers in tan-pits are exempt from phthisis and ague.

Q. decoct'um. See *Decoctum quercus*.

Querque'ra. See *Quercera*.

Quetschen. (G.) The dried *Prunus domestica*. An inferior kind imported from Germany.

Queven'ne and Homolle's dig'i-talin. See *Digitalin of Homolle and Quevenne*.

Q.'s i'ron. A name for *Ferrum redactum*.

Qui'brith. See *Quebrith*.

Quick. (M.E. *quick*, alive.) 1. As an adj., old term signifying alive; also, in the more modern and now usual sense of rapid, speedy. 2. As a subst., the living or sensitive part, i.e. the bed of the finger-nails or toe-nails.

Q. consump'tion. A syn. for *Galloping consumption*. (Gould's Dict.)

Q. with child. Old term, still used in legal phraseology, signifying pregnant beyond the time of quickening.

Quick-in-the-hand. *Impatiens*.

Quick'en. 1. As a verb. To show the first signs of life, to sprout; also, to experience the sensations of quickening. 2. As a subst., also, as an adj. That which shows the first signs of life; showing the first signs of life. A popular term for the *Triticum repens*; also, for the *Pyrus aucuparia*.

Q. tree. The *Pyrus aucuparia*.

Quick'ening. (Ang. Sax. *civician*, to make alive.) About the eighteenth week of intra-uterine life, the movements of the fœtus are first perceptible to the mother; this is called quickening. It is sometimes accompanied by some neurotic disturbance. At one time, it was thought that this was the moment that the fœtus received a soul—*Animatio fœtus*.

Also, showing the first signs of life (see *Quicken*).

Quick'lime. (Ang. Sax. *civic*, living; *lim*, cement. F. *chaux vive*; I. *calce vive*; G. *gebrannter Kalk*.) The common term for calcium oxide (CaO), unslaked lime. It is prepared by roasting limestone or chalk at a great heat. See also *Calcium monoxide*.

Quick'silver. (Ang. Sax. *criceæolfer*; F. *hydrargyre*; I. *idargiro*; G. *Quecksilber*.) See *Hydrargyrum*. The common name for mercury, so called because of its extreme mobility giving the idea of a living body.

Quid'dany. Old term for a confection of quinces (*Cydonia vulgaris*).

Qui'es. (L. *quies*, rest.) A syn. for *Acinesia*.

Quies'cence. (*Quiescent*.) The state of being *Quiescent*.

Quies'cent. (L. *quiescens*, resting, sleeping.) In an immobile, resting state. In *Physiol.*, in a state of functional inactivity.

Qui'et. (L. *quies*, -etis, rest, ease.) 1. As an adj. Noiseless; also, in a state of rest, or of comparative rest. 2. As a subst. Noiselessness; a state of rest, or comparative rest.

Q.-disease'. A term for latent hip-joint disease in children.

Quig'ila. A syn. for *Ainhum* (q.v.).

Quill-su'ture. See *Suture*, *quilled*.

Quilla'ga. See *Quillaia*.

Quilla'ia. U.S.P. (F. *ecorce de quillaia*; G. *Seifenrinde*.) Chilian *quillaia*. A Genus of the *Rosaceæ*. Also, the bark of the *Quillaia saponaria*; soap bark. It occurs in large flat pieces, outer surface brownish-white, generally smooth, inner surface also whitish. It is very acrid to the taste. Its properties are due to a glucoside, *Saponin*, which is probably identical with *cyclamin* and *primulin*. The powder produces violent sneezing, and an infusion froths easily, and is used in making emulsions. For
